DATA COLLECTED: DESCRIPTION & METHOD

DESCRIPTION

The data collected was soil, silt and rock sample for the geochemical survey as well as for general prospecting purposes.

METHOD:

Soil samples were taken at "C" horizon at fifty (50) pace intervals.

Silt samples were taken at such depths as were permissible due to the underlying slate bed, but in no cases at less than depths of 10 inches.

EMPLOYMENT INFORMATION:

The survey was performed soley by James Carson who between June 10 - 20/1980 resided on the claim site and devoted all of his time to the surveying of the claims excepting such time as was needed for rest and relaxation.

GEOCHEMICAL SURVEY RESULTS:

(a) References to available geology:

The geology of the area was mapped by the Department of Northern Affairs and National Resources and is published on Map 105-J-9. A portion of this map indicating the location of Dancer 1 - 6 is enclosed at Schedule "B".

(b) Methods:

Samples were sent to Barringer Magenta Limited of Calgary where standard analytical methods were used. See Schedule "A" for copies of the reports by Barringer Magenta indicating the results of the geochemical survey. Specific note should be made of the several significant gold and silver values. Primarily this property can be regarded as scheelite intrusive. But more work on the site is required to prove up significant scheelite showings.

This same property was known as "Joy and Ajax Group" in 1973. At that time it was optioned by James Carson to Dynasty Exploration Ltd. and a geochemical report was prepared by Collin Godwin of Dynasty Exploration Ltd. and submitted to the Department of Indian and Northern Affairs Mining Division.
