GEOLOGICAL AND GEOCHEMICAL REPORT

ON KL MINERAL CLAIM (1 to 9 inclusive) GROUP

61° 29' N, 136° 45' W, LONG LAKE AREA 115-H-7

WHITEHORSE MINING DISTRICT, YUKON TERRITORY
(The work done between May 28 to 29, 1970)

FOR

MITSUBISHI METAL MINING CO. LTD.

This report has been examined by the Geological Evaluation Unit and it is recom-

mended to the Commissioner to be consid-

ered as a geological work in the amount of

$3,041.47

Resident District Inspector

Considered as representation work under
Section 53 (d) Yukon Quartz Mining Act

Toru Kikuchi, P. Eng., Ph.D.,
Consulting Geological Engineer

Report on Geological and Geochemical Assessment Work
Area KL Mineral Claim Grp - Long Lake - Whitehorse M.D.
By Toru Fukuchi, Ph. D., P. Eng.
For Mitsubishi Metal Mining Co. Ltd.

Attached is the report in triplicate on the subject claim group. It has been recommended as acceptable for assessment purposes in the amount of $ 3,011.42.

N. G. Needham, Resident Mining Engineer, for Yukon Territory.

GEOLOGICAL AND GEOCHEMICAL REPORT
ON KL MINERAL CLAIM (1 to 9 inclusive) GROUP
61° 29' N, 136° 45' W, LONG LAKE AREA, 115-H-7
WHITEHORSE MINING DISTRICT, YUKON TERRITORY

I. INTRODUCTION

At the request of Mitsubishi Metal Mining Co. Ltd., which is a mining company legally incorporated in Japan having its main office in Tokyo (No. 6, 1-chome, Otemachi, Chiyodaku, Tokyo, Japan) and one of its branch offices in Vancouver (404 - 900 West Hastings Street, Vancouver 1, B.C.), the writer visited the property on May 28, 1970 in the company of Mr. H. Sato, geologist of the said company, and supervised the work herein.

This report is based on the data obtained by the work described in II-3 of this report and on the writer's previous knowledge.

II. GENERAL STATEMENT

1) Location, Access, and Geographical Features. (See Fig. 62-1-1.)

The property is situated at about 61° 29' N, 136° 45' W, in Long Lake Area of Claim Sheet 115-H-7, in Whitehorse Mining District, Yukon Territory. It is about 75 air miles NW of Whitehorse.

There is no access road into the property, though there is an Aishihik road about 10 air miles west of the property.

The mineral claim group is approximately 4,000' to 4,800' elevation on a steep hill with some vegetation at the bottom and less at the top.
2) **History and Mineral Claims.** (See Fig. 62-1-2.)

There had not been any mineral claim located to the writer's knowledge, and Takaaki Kashiwagi and W.E. Fraser located first on May 31, 1969, and transferred to Mitsubishi Metal Mining Co. Ltd. as in the following Table 62-1-1.

Mitsubishi Metal Mining Co. Ltd., the present owner of the property, did not do any representation work on the said claims during the summer season of 1969. In the summer season of 1968, before the claims were located, Mitsubishi Metal Mining Co. Ltd. carried out some geochemical soil sampling on the ground of this area, summary of which will be found in Paragraph IV. They have carried out a helicopter supported geological and geochemical survey as representation work on the ground of the property by the company geologists and others under the supervision of the writer in May of 1970 before the claim expiration date, June 11, as reported herein. An application will be made to group these nine (9) mineral claims, according to the Yukon Quartz Mining Act, before applying for a Certificate of Work.
3) **Work Done.**

The representation work covered by this report was completed during the period May 28 and 29, 1970, by Mitsubishi Metal Mining Co. Ltd., with field crews as follows:

- **Toru Kikuchi, P. Eng., Ph.D.** Consulting Geological Engineer Supervising the work.  
  (702 - 402 West Pender St., Vancouver, B.C.)

- **Noritaka Sato, B.Sc.** Geologist, Mitsubishi Metal Mining Co. Ltd. Managing the work.  
  (19 - 1111 East 27th St., North Vancouver, B.C.)

- **Hiroshi Mori, B.Sc.** Geologist, Mitsubishi Metal Mining Co. Ltd.  
  (131 - 5925 Tisdall St., Vancouver, B.C.)

- **Basant K. Mansinghka, M.Sc.** Temporarily employed geologist Mitsubishi Metal Mining Co. Ltd.  
  (c/o Mitsubishi Metal Mining Co. Ltd.  
  404 - 900 West Hastings St., Vancouver, B.C.)

- **William R. Lewis** Temporarily employed prospector, Mitsubishi Metal Mining Co. Ltd.  
  (St. Regis Hotel, 602 Dunsmuir St., Vancouver, B.C.)

- **Nairn Grundy** Temporarily employed student helper Mitsubishi Metal Mining Co. Ltd.  
  (2969 Mathers Ave., West Vancouver, B.C.)

(Certificate of Qualification for the first two above mentioned will be found at the end of this report.)

These crew members stayed at a motel in Carmacks, and a helicopter (Klondike Helicopter Ltd. - Bob Murphy, pilot) was used to carry them in and out between Carmacks and the property every day.

A geological survey and a geochemical survey were carried out there at the same time, as described in the following separate items respectively.
III. GEOLOGY AND MINERALIZATION

The ground surface condition of the property is very good for geological survey because of slight overburden and vegetation and much rock outcrop.

The geological survey was made by the geologists along the geochemi soil sampling lines (See Fig. 62-1-3 and Fig. 62-1-4 a & b.)

A fine to medium grain andesite of so-called Mount Nansen Group (Jurassic or Cretaceous) as the underlying rock which is located mainly in the east half of the property, and the later diorite (or granodiorite) intrusive which is located mainly at the west half of the property, are the main rocks of the property.

Some thermal metamorphism by the dioritic intrusion is observed in the andesite, and there are some contaminated (hybridized) rocks at the contact part of those two kinds of rocks. Near the contact, inside the diorite, comparative fine grain texture as marginal facies of the diorite are observed. The contact is usually not clear. Some kind of quartz porphyry dike at the northeastern corner of the property in andesite, and another later andesite dike at the northern side of the property were observed.

Some mineralization of pyrite, magnetite and chalcopyrite are seen at the center of the property mainly in altered dioritic rock near andesite. The elongation of the mineralization seems to be N 20° E. Assay from the rock sample taken by the writer from this area is contained in Table 62-1-2 following.

DIVISION OF TECHNICAL SERVICE LABORATORIES
IV GEOCHEMICAL SURVEY

A helicopter supported geochemical soil sampling program has been carried out in the KL claim group area by the company crews. Red plastic ribbon has been used to mark the soil sampling point, but no line cutting has been done because the bush was not thick except on part of the ground. The timing of the work was a bit early, especially on the north-facing hill, as there was some winter frost where it was difficult to take a good soil sample. The results are shown in Table 62-1-3, and Fig. 62-1-4a & b.

The result of geochemical survey carried by the same company on the claims area in 1968 before the claims were located is also shown in Fig. 62-1-4a, compiled with the result of 1970.

V. CONCLUSION AND RECOMMENDATION

An indication of so-called Porphyry Type Deposit has been found in the KL claims. At present, there has been insufficient work done on the property to determine its full potential. However, with further exploration, a more detailed picture can be obtained.

IP survey and cat stripping are recommended for the next stage of the exploration programme. The scale and expenses will be studied by the company.

Respectfully submitted,

Toru Kikuchi, P. Eng., Ph.D.
STATEMENT OF QUALIFICATIONS

I, Toru Kikuchi of the City of Vancouver, B.C. hereby certify that:

1. I am a graduate of the Hokkaido University, Japan (B.Sc., Geology and Mineralogy, 1946) and of the Tohoku University, Japan (Ph.D., Economic Geology, 1963).

2. I am a "GIJUTSUSHI" (a qualification for a consulting engineer authorized by the Japanese Government) and a member in good standing of The Association of Professional Engineers of the Province of British Columbia and of the Yukon Territory.

3. I am a member of The Society of Mining Geologists of Japan, and of The Canadian Institute of Mining and Metallurgy and of The Engineering Institute of Canada.

4. I have been practising my profession continuously for the past twenty-three years, and am an independent Consulting Geological Engineer with my office at Room 702 - 402 West Pender Street, Vancouver 3, B.C.

5. I have no direct or indirect interest in the property, nor do I anticipate receiving any such interest.

6. This report is based on my personal study and work at the property on May 28, 1970.
