SUMMARY

Xennex Development Corporation contracted Aurora Geosciences Ltd to conduct an exploration program on the Wild Rose Property in the Clear Creek area, Yukon, during the summer of 2006. The program consisted of claim staking a ground magnetic survey and a single line of VLF-EM surveying. Aurora provided a crew of two persons to conduct the exploration program. This report documents the work conducted by Aurora Geosciences Ltd and includes a review of historical exploration work conducted in the area by other operators.

The Wild Rose Property lies within the "Tintina Gold Belt" a region that has many intrusion-related gold occurrences and some significant gold deposits. Clear Creek has had historic placer gold production within 6 km of the property. Outcrop exposure on the property is limited.

The 2006 exploration program consisted of staking the Reid 1 – 3 and Lena 1 and 2 claims on the first day of work, prior to conducting any exploration work on the property. These claims were recorded the following day. After recording the claims a total magnetic field survey was conducted over the property using a hand-held GPS for guidance. A grid was not established on the property. Line spacing was 100 m (nominally) and magnetic field measurements were taken at 12.5 m intervals. A single VLF-EM survey line was completed along the claim boundary between the Reid 1, 2 and Rose 1, 2 claims to determine if there was an electromagnetic response. The magnetic survey covered 0.9 by 0.9 km for a total of 9 line km of magnetics and the VLF-EM survey covered 0.9 km.

The magnetic survey returned a relatively flat response with the development of a magnetic low towards the southwest edge of the survey area. There appears to be a slight magnetic gradient from a low in the southwest to a high in the north. The range of readings is 114 nano Teslas.

Recommendations for future work on the property are to:

- 1 Expand the magnetic survey to cover the remainder of the property.
- 2 Soil sampling over the complete property with 200 m line spacing and 50 m station spacing.
- 3 Prospecting and geological mapping over the property.

An estimated budget for the proposed program is \$25,000.

1.0 INTRODUCTION

Xennex Development Corporation contracted Aurora Geosciences Ltd to conduct an exploration program on the Wild Rose Property in the Clear Creek area, Yukon, during the summer of 2006. The program consisted of claim staking a ground magnetic survey and a single line of VLF-EM surveying. Aurora provided a crew of two persons to conduct the exploration program. This report documents the work conducted by Aurora Geosciences Ltd in 2006 and includes a review of historical exploration work conducted in the area by other operators.

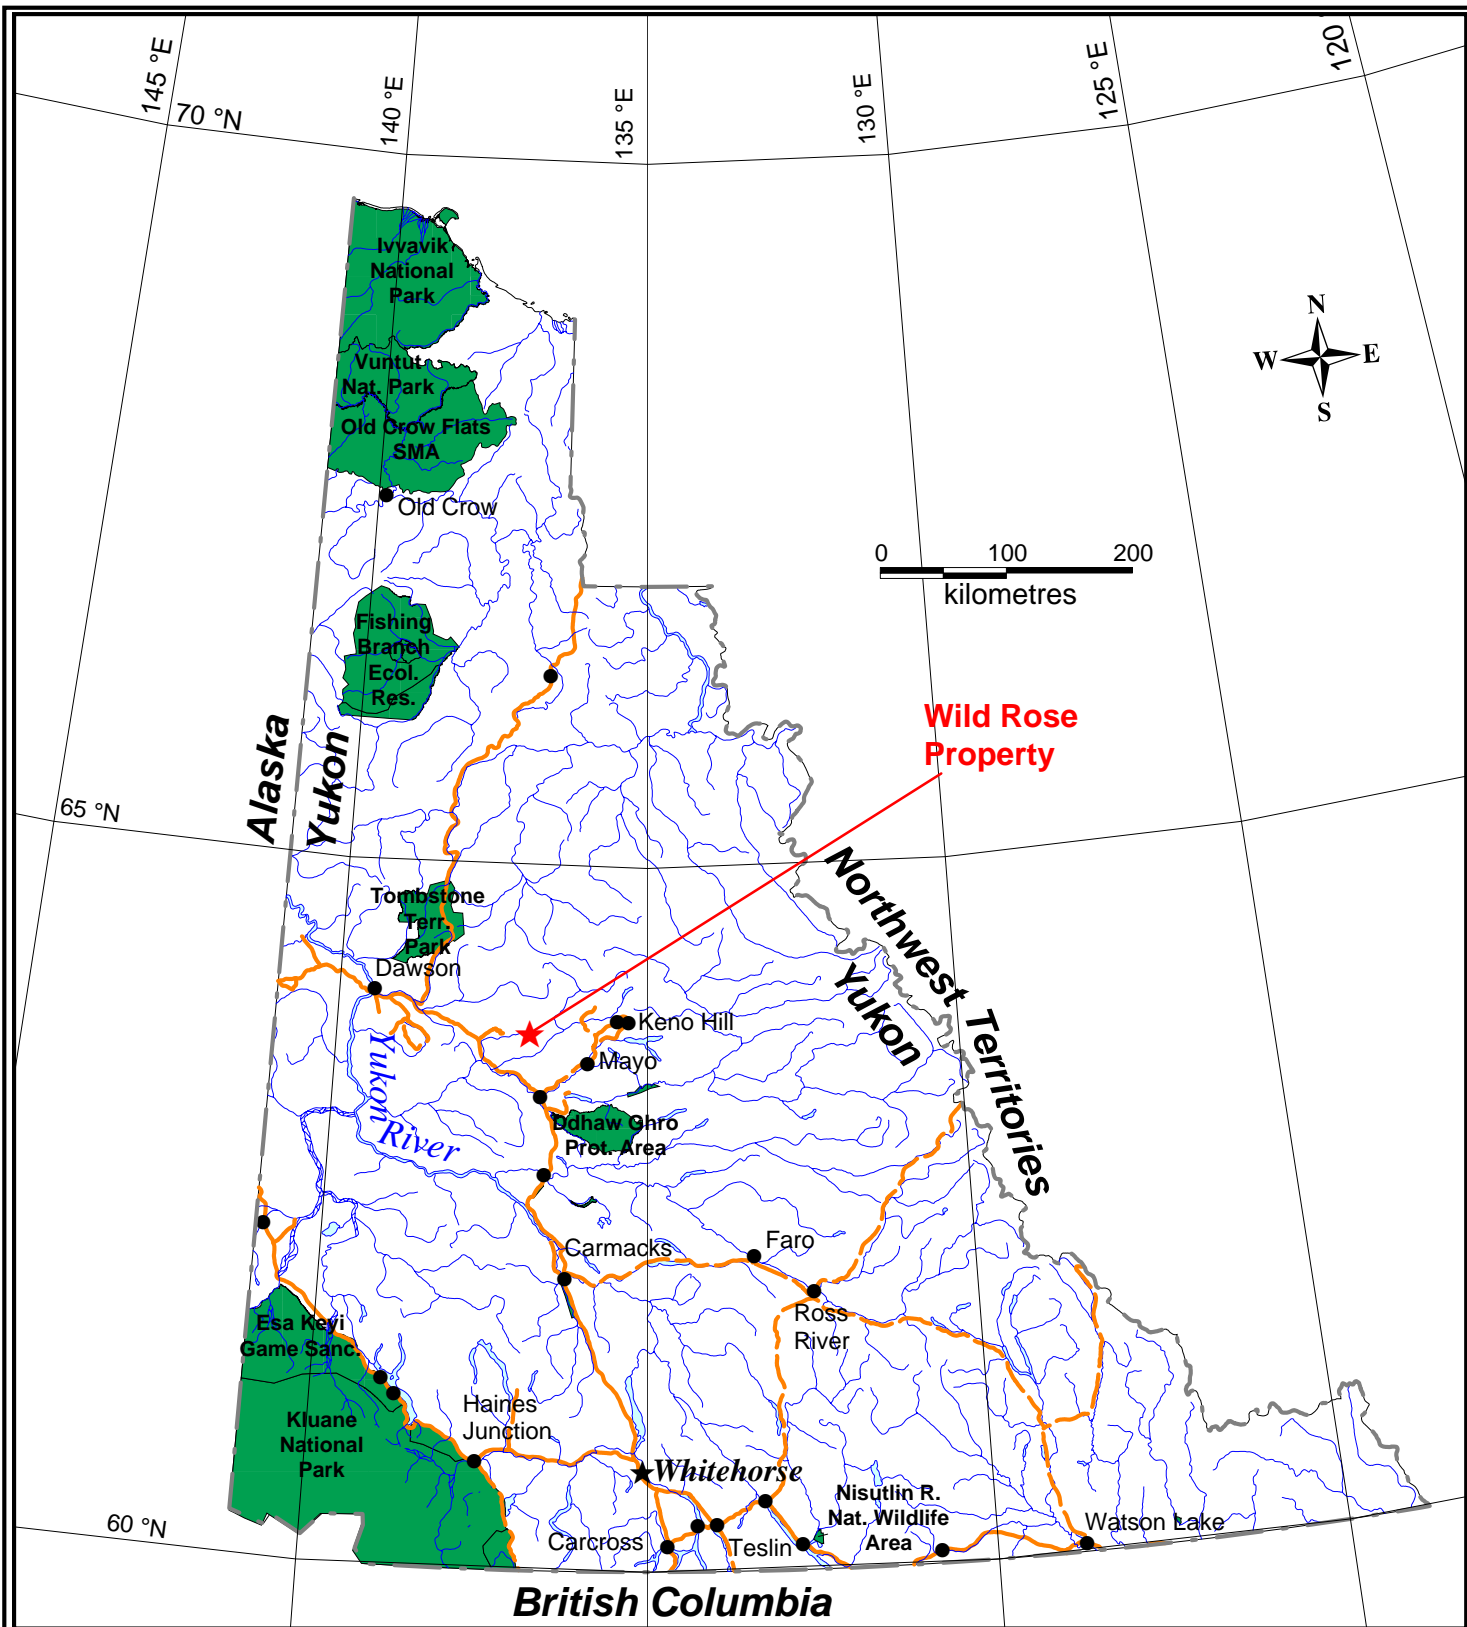

The crew consisted of Gabe Fortin (geologist) and Cody Woodman (field assistant). The crew mobilized from Whitehorse to the area June 30, 2006 and had some difficulties locating the access road. They made it to the property the following day. The Reid and Lena claims were staked on July 13 and were recorded the next morning. During this period the crew was also working on other claims for other companies. The crew conducted the magnetic survey and VLF-EM survey on Red Rose Property on July 8 and demobilized from the area on July 9, 2006. All expenditures in the area are prorated amongst the various projects based on amount of time worked on each project.

This report includes a review of historical exploration work conducted in the area by other operators. The author is a professional geologist and supervised the field crew. The author has not set foot on the property. The author has relied on data, interpretation, and information supplied by others noted above and listed in the References: primarily assessment reports on record with the Yukon Territorial Government (previously federal Department of Indian and Northern Affairs).

2.0 PROPERTY LOCATION AND ACCESS

The Wild Rose Property is located 360 km north of Whitehorse or 75 km west-northwest of Mayo, Yukon. The claims are on Squaw Creek, a small tributary of Clear Creek on NTS map sheet 115P/14 and are centred at 63° 49' 07" latitude and 137° 23' 14" longitude (Figure 1).

The project area is accessible by the Barlow Dome Road, a narrow gravel road that runs along the ridge on the north side of Clear Creek from the North Klondike Highway near Barlow Lake, for approximately 20 km to the property area.

3.0 CLAIM INFORMATION

The Wild Rose Property consists of 10 quartz claims in the Dawson Mining District. The claims are plotted on Figure 2. Claim information is as follows:

Table 1. Claim Information

| Claim Name | Grant Number | Expiry Date * |
|------------|-------------------|--------------------|
| Red 1, 2 | YC21867, YC21868 | September 25, 2010 |
| Rose 1, 2 | YC21869, YC21870 | September 25, 2010 |
| Larry 1 | YC28866 | September 17, 2010 |
| Lena 1-3 | YC44618 - YC44620 | July 4, 2011 |
| Reid 1, 2 | YC44621, YC44622 | July 4, 2011 |

*Pending acceptance of this report for assessment purposes.

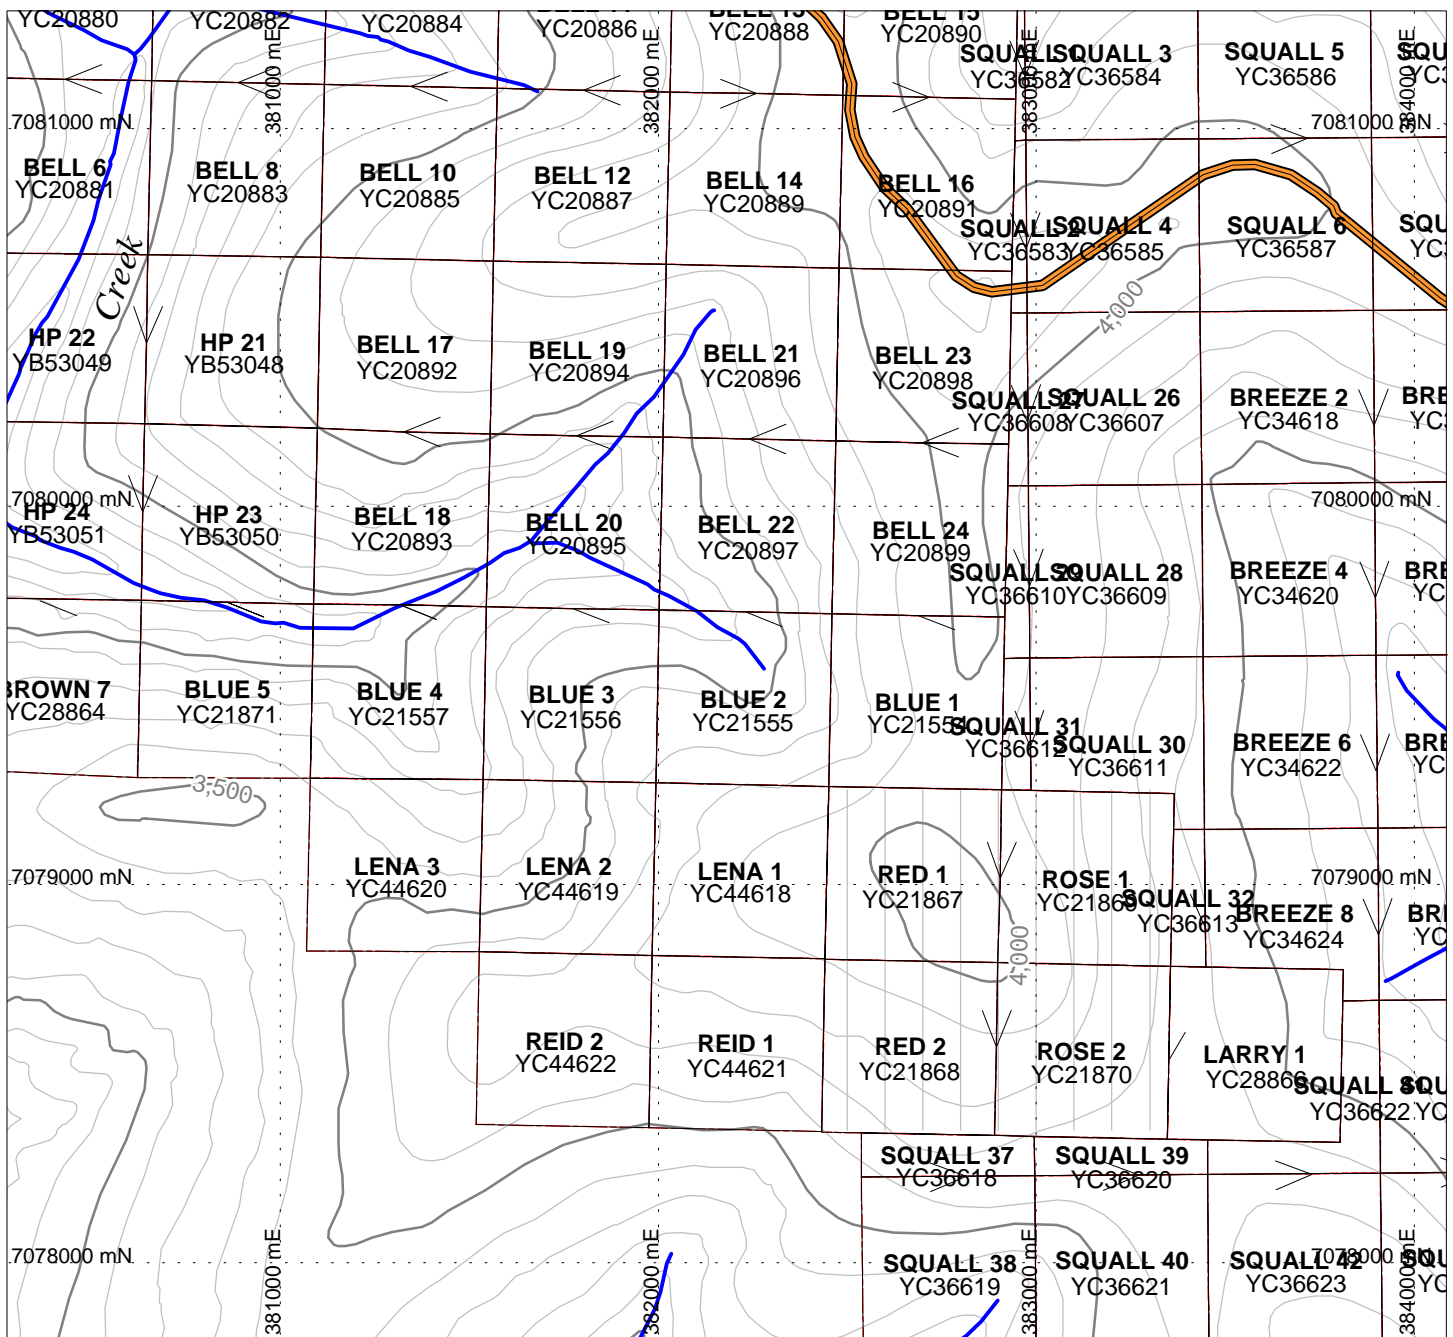

The Red, Rose and Larry claims are owned 100% by Robert S. Adamson and Lena and Reid claims are owned 100% by Colin Adamson. The claims are in good standing with expiry dates as listed above, based on the 2006 exploration work being accepted for assessment credits.

4.0 PHYSIOGRAPHY AND CLIMATE

The project area is in the Syenite Range Mountains on the north side of the Tintina Trench. The property covers a south-facing slope in gentle rounded mountainous terrain. Elevations range from about 2000 feet to 4000 feet above sea level. The property area is sparsely treed, with spruce, pine, birch, alder, and locally with considerable buck brush.

The area experiences cold dry winters and hot dry summers. Snow usually begins accumulating in late September or early October and is generally melted by late May to early June. Temperatures range from highs in the mid 30^os in summer to lows of -50^o C in winter. North facing slopes are generally underlain by permafrost.

The nearest major city centre is Dawson, a supply centre for this region with an ample labour force. Power is available along the North Klondike Highway. Water resources are abundant in the project area in flowing streams.

AURORA GEOSCIENCES LTD

5.0 HISTORY

The Clear Creek area has a long history of placer gold production and mineral exploration for silver, gold, antimony, copper, tin and tungsten. The majority of work has been conducted on the Clear Creek Property located on Left Clear Creek, 7 km east of the Red Rose Property.

In 1971, a joint venture between Silver Standard Mines Ltd and Canada Tungsten Mining Corp staked claims in the area following the release of GSC Open File 51 indicating anomalous tungsten, gold and tin in the area. United Keno Hill Mines Ltd and Standard Oil Company of B.C. Ltd also acquired land in the area during this time. The staking generally occurred in the Left Clear Creek area. These companies conducted soil sampling and geological mapping programs on their properties.

In 1978 and 1979, Cominco Ltd conducted programs of stream sediment sampling, soil sampling and prospecting on their NEL claims at the headwaters of Forty Mile Creek, 25 km to the northeast of the Red Rose Property. They were focused on anomalous tin and silver values indicated on government regional stream sediment geochemical samples in the area. They obtained very anomalous Sn values up to 18,100 ppm from stream sediment samples.

In 1980 - 81 Canada Tungsten Mining Corporation Ltd. acquired large blocks of claims through staking and options in the Dublin Gulch and Clear Creek areas and carried out extensive programs, in search of tungsten and, to a much lesser extent, tin and gold. On Left Clear Creek, Canada Tungsten did extensive mapping and geochemical surveys. Some trenching and sampling was done on tungsten bearing skarns but no work was done to follow up on geochemical gold anomalies. The original claim group was gradually reduced to the Rain and Wind claims, which consisted of several non-contiguous claims covering various mineral showings and anomalies. Canada Tungsten later dropped its option.

In 1986, prospector Scottie Thom discovered gold-bearing massive pyrite float on the south side of Left Clear Creek. In 1987, placer operations conducted by Blackstone Placer Mining Company encountered heavy pyrite mineralization in a deep trench cutting into bedrock. The showing and properties were later optioned by Secret Pass Minerals Corp and, in 1987, they conducted a program of line cutting, geophysical surveying, soil and rock sampling. The property was later optioned to Cambridge Resources Ltd, who in 1989 conducted trenching and drilled 276 m in 4 diamond drill holes. The drill program encountered one significant intersection containing 0.546 oz/t gold over 0.49 m.

In 1995, Kennecott Canada Inc optioned the Clear Creek Property and conducted an extensive program of soil sampling, geological mapping, trenching, road construction and reverse circulation drilling on the Rhosgobel Stock. Kennecott dropped its option later that year. In 1996, New Millenium Mining Inc acquired the project and in the fall 2004 it signed a deal to vend the project to Stratagold Corp.

6.0 REGIONAL GEOLOGICAL SETTING

The Red Rose Property lies within the Selwyn Basin, which is comprised of Late Proterozoic to Mid-Paleozoic continental margin sediments. The basal rocks in the area of the property consist of an inlier of Upper Proterozoic to Lower Cambrian rocks of the Hyland Group overlain by Upper Cambrian and Ordovician Rabbitkettle Formation, which is in turn overlain by the Ordovician to Lower Silurian Road River Group and capped by the Devonian to Mississippian Earn Group.

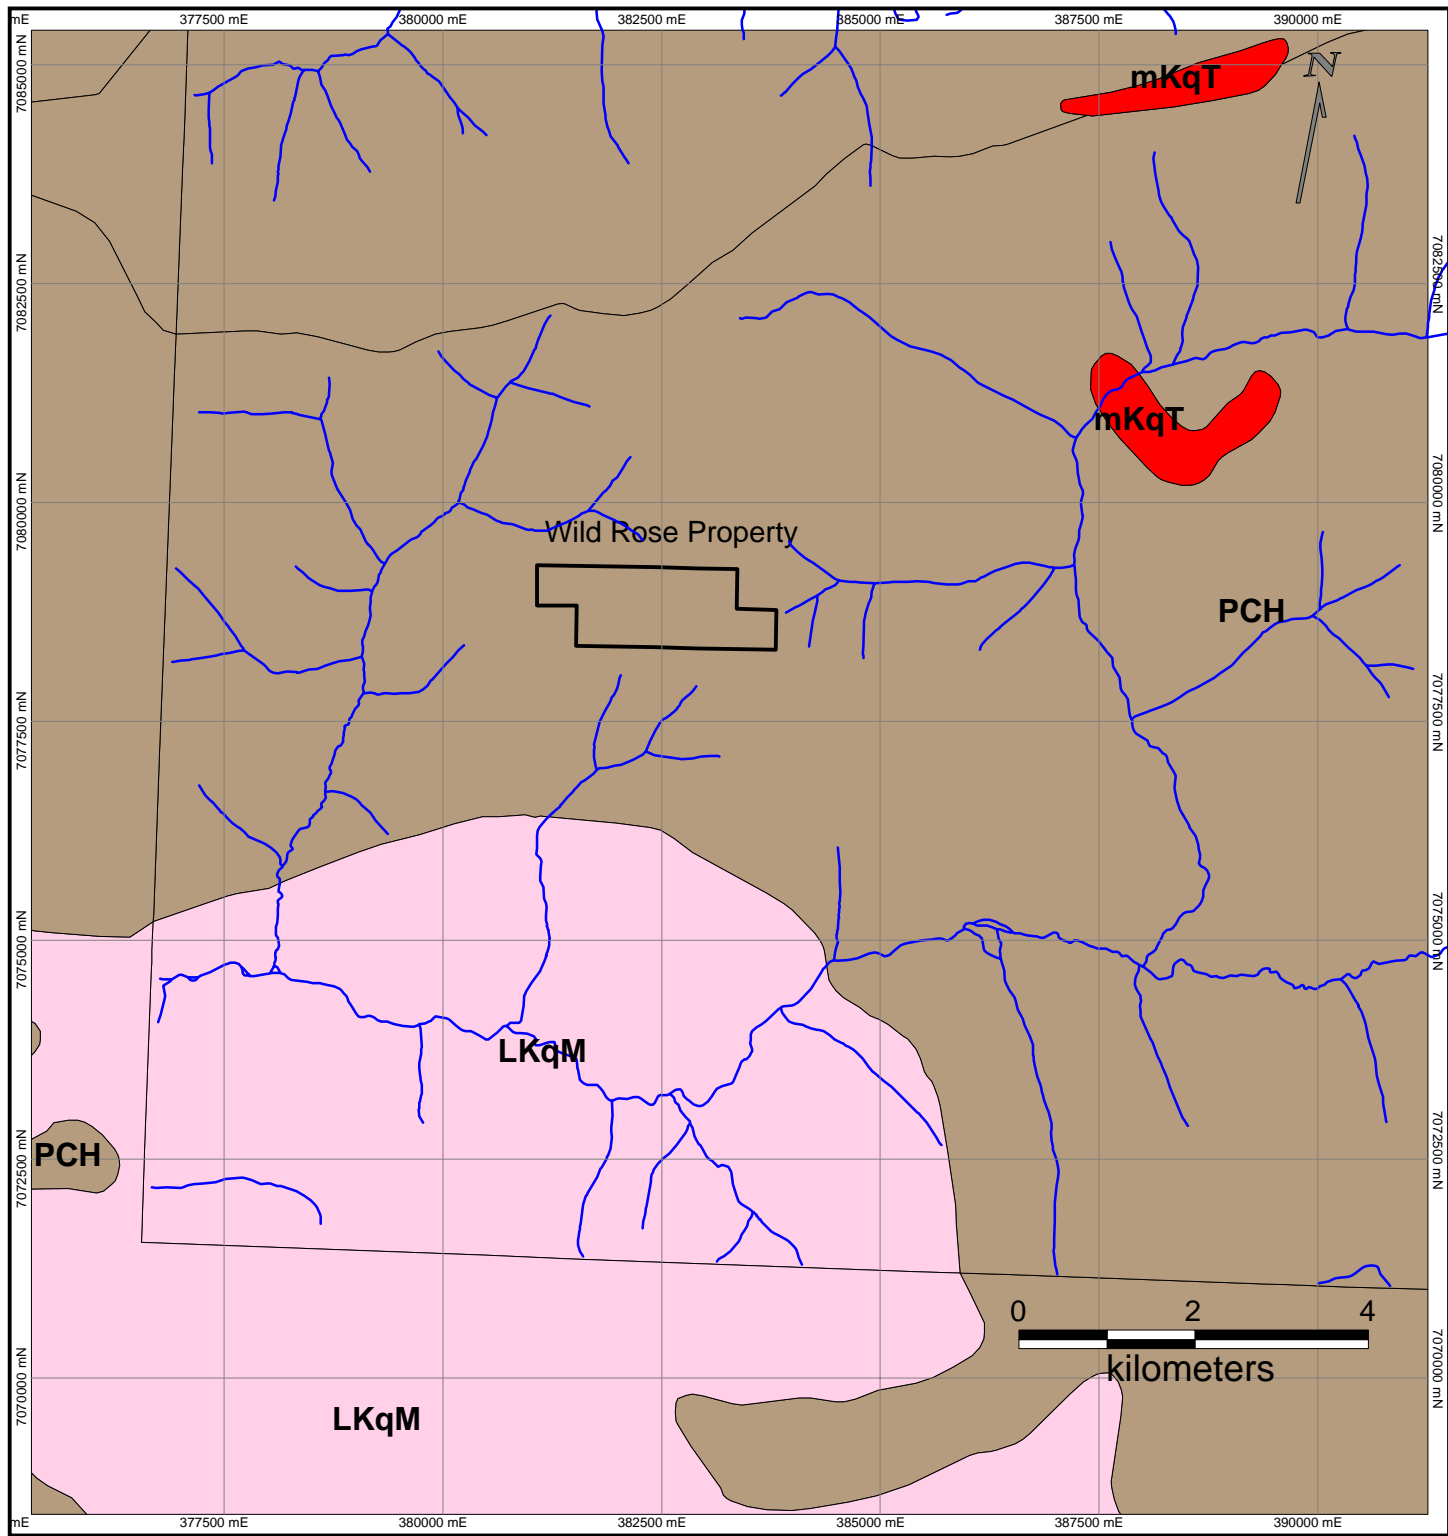

The Hyland Group (**PCH**) is comprised of thin to thick bedded, brown to pale green shale, fine to coarse grained quartz-rich sandstone, quartz pebble conglomerate, argillaceous limestone, phyllite, psammite and minor marble (Gordey, et. al., 1999). The Rabbitkettle Formation (**COR**) consists of thin bedded, wavy banded, silty limestone and grey lustrous calcareous phyllite, limestone breccia and conglomerate, laminated grey siltstone, chert, slate and local mafic flows, breccia and tuff. The Road River Group (**ODR**) is comprised of black graptolitic shale and chert, minor argillaceous limestone and dolomitic siltstone. The Earn Group (**DME**) consists of thin-bedded slate with interbedded chert-quartz arenite and wacke, chert pebble conglomerate, black siliceous siltstone, nodular and bedded barite and rare limestone.

The layered rocks are intruded by mid-Cretaceous Tombstone Suite intrusions to the north and east and by lower Cretaceous McQueston Suite intrusions to the south. Two types of Tombstone Suite intrusion are recognized in the area; medium to coarse-grained biotite-hornblende-clinopyroxene syenite, quartz syenite, granite, monzogranite, diorite and tinguaite (**mKyT**); and medium- to coarse-grained, locally porphyritic biotite hornblende, clinopyroxene quartz monzonite and granodiorite (**mKqT**). The McQueston Suite is comprised of medium- to coarse-grained, locally porphyritic and k-feldspar megacrystic biotite ± muscovite granite and quartz monzonite.

The Clear Creek area is within the "Tintina Gold Belt", which is an intrusion-related, gold-bearing system that stretches in an arc from central Alaska through to southern Yukon. In Yukon, this belt is known as the Tombstone-Tungsten Magmatic Belt. Within this belt many gold discoveries are spacially related to mid-Cretaceous alkalic plutonic intrusions of the Tombstone series. A wide variety of disseminated, skarn and vein-type mineral occurrences both within and near the intrusions have been identified containing gold, tungsten, lead, zinc, copper and tin. The most significant discovery in the Clear Creek area is the Dublin Gulch Deposit, located 80 km east of the Red Rose Property. The Dublin Gulch deposit has reserves of 50.8 million tonnes containing 0.93 g/t gold. Other Tintina Gold Belt occurrences in the area are the Clear Creek Property located 8 km east of Red Rose and the Sheelite Dome Property located 55 km to the east. The Clear Creek area also has a long history of placer gold production.

No mineralization has yet been discovered on the Red Rose Property. However in the Left Clear Creek valley a number of quartzite boulders have been discovered containing abundant pyrite in quartz-sericite-clay altered rocks. On the Clear Creek Property scheelite and auriferous arsenopyrite are found in quartz veined granite stocks at the

Rhosgobel, Josephine, Lewis and Pukelman minfile occurrences. Scheelite and molybdenite are also found in sheeted quartz and potassium feldspar veins at Pukelman. The Red Rose Property has not been subject to any detailed property scale mapping.

AURORA GEOSCIENCES LTD

7.0 2006 EXPLORATION PROGRAM

The 2006 exploration program on the Wild Rose Property consisted of first staking the Lena and Reid claims and recording them. A few days after recording the claims a total magnetic field survey was completed on the Red and Rose claims using GPS for guidance and a single VLF-EM line was surveyed.

For the magnetic survey the crew was equipped with the following instruments and equipment:

Field unit: 2 - Gem GSM-19 Overhauser magnetometers.
Base unit: 1 - Gem GSM-19T proton precession magnetometer.
Data processing: P-800 laptop and colour printer. Data processing with Geosoft software and proprietary data conversion software.

The magnetometer survey was conducted according to the following specifications:

Station spacing: 12.5 m nominal.

Base station magnetometer: Installed near the camp and cycled at 5 second intervals. Variations exceeding 3 nT over the 5 seconds interval were rejected.

Levelling: The operators levelled to a common datum by surveying, on a daily basis, a 150 m interval and calculating the mean difference.

Station Coordinates: All geographic coordinates are in NAD 83 UTM, zone 8N coordinates and were determined by Garmin GPS 72.

The total magnetic field data was corrected for temporal geomagnetic variation relative to the base station unit using software incorporating linear interpolation. Any data taken during intervals when the base station magnetometer varied by 3 nT or greater over 5 s were rejected.

The station locations were determined by non-differential GPS recording the track during the survey. The track data was dumped and merged with the magnetic data using the time stamps to synchronize the two data sets.

The VLF-EM survey recorded 2 stations, Jim Creek, Washington (24.8 kHz) and Cutler, Maine (24.0 kHz). The data was recorded manually in a notebook and transcribed into a computer later.

8.0 CONCLUSIONS and RECOMMENDATIONS

The total magnetic field data was processed by first correcting the rover magnetometer data for diurnal variations with the base station data. Next the GPS survey coordinates were merged with the station reading coordinates to register all readings in NAD 83 UTM coordinates. This data was then imported into Oasis Montaj software to create the plot of Shaded Relief Total Magnetic Field in Figure 4. The VLF-EM data was also manipulated in Oasis Montaj to obtain the profile plot in Figure 5.

The magnetic survey returned a relatively flat response throughout the survey area. The magnetic field range for the survey area varies by 114 nanaTeslas. There is a slight magnetic gradient from a low in the southeastern part of the survey area to a high in the north.

The VLF-EM survey shows a weak cross over along the ridge at the north end of the survey line. This feature can be attributed to topographic effects. With sparse data there is limited interpretation of the VLF-EM data that can be performed. Additional VLF-EM surveying may be useful to determine if there are any structures in the property area.

Recommendations for future work on the property are to:

- 1 Expand the magnetic survey to cover the remainder of the property.
- 2 Soil sampling over the complete property with 200 m line spacing and 50 m station spacing.
- 3 Prospecting and geological mapping over the property.

An estimated budget for this program is \$25,000.

Respectfully Submitted,

Scott Casselman, B.Sc., P.Geo
Geologist

CREW LOG

CREW LOG
Xennex Development Corp.
XDC-06-01-YT
Red-Rose PROPERTY - 2006
Magnetics / Staking / VLF

Crew: Gabe Fortin (Geologist, crew chief)
Cody Woodman (Field assistant)

Friday, June 30: Buy groceries in Dawson City then attempt to locate Barlow Dome Road. Get truck stuck and spend rest of day digging it out. Return to Dawson City, arrive at midnight, stay at Triple J again. Mostly sunny and warm. – 50% Xennex, 50% Curlew.

Saturday, July 1: Canada Day! Leave Dawson in AM, get directions from Scott and locals near McQuestan River, drive up Clear Creek Road ~ 20 Miles, almost get hit head on by pick-up truck around a corner and then replaces a flat tire. Set up camp at 0387254 7079153. Mostly sunny. – 50% Xennex, 50% Curlew.

Sunday, July 2: GPS school for Cody. Work on Curlew's Typhoon property rest of day.

Monday, July 3: Gabe stakes Lena 1, Lena 2, Lena 3, Reid 1 and Reid 2.

Tuesday, July 4: Gabe drives to Dawson to register claims and get the tire fixed (have to wait a few hours). Long delays for construction on the way in and back out. Cody stays at camp.

Wed July 5 – Fri, July 7 Cody and Gabe Work on Curlew Property.

Saturday, July 8: Heavy Rain in AM, wait until noon to start, showers for rest of day. Cody mags L3833E, L3832E, L 3831E, L3830E, L3829E, L3828E and north part of L3827E. Gabe mags L3824E, L3825E, L3826E and south part of L3827E and does VLF on L3829E both ways. ~90% of day on property.

Production : 9.0 km of Mag / 1.8 km VLF

Sunday, July 9: Pack-up camp and move-on to Mayo. – 50% Xennex, 50% Curlew.

Xennex Development Corp. - Red-Rose Property

WILD ROSE PROPERTY
TOTAL MAGNETIC FIELD SURVEY
Figure 4 - Shaded Relief Total Magnetic Field Map

NTS: 115P/14 Mining District: Dawson
Datum: NAD 83 Projection: UTM Zone 8
Date: July 29, 2006 Job: XDC-06-01-YT

AURORA GEOSCIENCES LTD

**LEGEND
FRASER FILTERED VLF**

INSTRUMENT : GEONICS EM-16 VLF
 PROFILE SCALE : 1 cm = 10%
 IN PHASE :
 QUADRATURE :

FREQUENCY = 24.8 kHz, Jim Creek, Washington
 FREQUENCY = 24.0 kHz, Cutler, Maine

IN-PHASE DATUM : 0%
 DATA FILE : REDROSEVLFJuly2006.gdb
 OPERATORS : GF
 STATION SEPARATION : 25 m
 LINE-KM SURVEYED THIS SHEET : 900 m
