SUMMARY

The Evelyn Creek Property is located 30 km North of Johnson's Crossing and consists of 197 claims staked under the Yukon Quartz Mining Act. The property covers Minfile Showings 105G 019 and 105G 041. It was gradually staked from 1991 to 1996 and is owned by Bruno and Antoinette Poulin (Evelyn Exploration). Prior to this, parts of the property had been staked and explored by A. Nelson, J. Grant and M. Peshke. This report documents results of the work program that consisted of overburden stripping (in view of future trenching), road repair work and a prospecting/sampling survey conducted between April and September, 2008.

The Evelyn Creek Property is underlain by quartzites, marble and amphibolites related to the Nasina Assemblage and to the west by a mid-Cretaceous pluton of the Cassiar Suite. It is covered by a thick layer of talus and boulder till.

To date, no economic mineralization has been identified on the property. Work conducted during 2008 included mechanical stripping of 35,000 cubic yards of overburden in view of future trenching and repair work to the property access road.

Five float samples were collected, four of which were sent in for assay. Assay data did not indicate any significant mineralization.

The results of the work conducted to date, considered with historical data, are inconclusive. A work program consisting of professionally directed property scale geological mapping as well as extensive sampling should be completed before doing further physical work on the property.

1.0 INTRODUCTION

This report describes overburden stripping, rock sampling and road maintenance work conducted on the Evelyn Creek Property, held by Evelyn Exploration, in the Whitehorse Mining District, Yukon Territory. This work was conducted with the intent to locate precious metal veining on the property.

2.0 LOCATION AND ACCESS

The Evelyn Creek Property is located near Evelyn Creek in the Whitehorse Mining District, Yukon and is centred at approximately 60° 46' N, 133° 15' W (Figure 1). There is a very large log cabin as well as a fully equipped mechanical shop on site. The property is accessible by 4x4 vehicle via a dirt road starting at km 44 of the South Canol Road, north of Johnson's Crossing. The road route to the property is as follows:

Table 1 - Driving directions

From / to	Distance	Remarks
Whitehorse - Johnson's Crossing	110km	Eastbound on Alaska Highway
Johnson's Crossing - Evelyn Creek Bridge	44km	Drive to km 44 northbound on the South Canol Road
Evelyn Creek Bridge - Property	10km	Dirt road

3.0 PHYSIOGRAPHY & CLIMATE

The Evelyn Creek Property is located in the Pelly Mountains of the Yukon Plateau. Topography in the area consists of mountains with elevations ranging from 750m to 1250m. The property area is covered by open pine forest at lower elevations and dense sections of pine-spruce forest at higher elevations. The climate in the property area consists of long, cold winters, short dry summers and short spring and fall seasons. At Johnson's Crossing, the closest nearby community, temperatures range from -55 to 34°C and precipitation averages 23.1 cm of rain and 145.1 cm of snow annually.

4.0 PROPERTY DESCRIPTION

The Evelyn Creek Property consists of 197 unsurveyed Quartz Claims (Figure 2) staked under the Yukon Quartz Mining Act and recorded in the Whitehorse Mining District. Claim information is summarized below¹:

Table 2 - Claim Information

Claim name	Record Number	Expiry date	Owner
Bobo 1 - 16	YA86641 - YA86656	20/02/2012	Antoinette Poulin 50% - Bruno Poulin 50%

The claims can be maintained in good standing indefinitely by performing \$100 per claim per year of assessment work or paying the same amount in lieu and paying associated filing fees of \$5 per claim. The claims are located on Crown Land and surface rights are retained by the Crown.

5.0 EXPLORATION HISTORY

The Evelyn Creek Property covers Yukon Minfile showings 105G 019 and 105G 041. Original claims in this area were staked based on rumours that silver-rich float was found in the area. The Fay claims, staked in February 1968 by A. Nelson and J. Grant, covered the western portion of the property., These were restaked in December 1991 by B. Poulin. The eastern portion of the property was originally staked as the Ed claims in July 1983 by M. Peshke, who added the BOBO 1 claim in May 1985. B. Poulin added further BOBO claims in May 1990, July 1991 and December 1991. All BOBO claims were transferred to Tonycastle Ltd. in January 1992 and to A. Poulin in

September 1992. A. Poulin added further BOBO claims (91-94) in March 1996. The BOBO 95 claim was added in May 1998.

B. Poulin added the RAE 86 - 93 claims to the northwest in December 1991. In May and July 1992, RAE 94 - 109 were added. In February 1995, B. Poulin added the RAE 110 - 117 claims. In March 1999, the RAE 118 - 171 claims were added. The RAE 172 - 175 and 177 claims were added July 2000. In January 2007, the RAE 176 and 178 - 189 claims were added.

Table 2 summarizes the claim ownership status. Antoinette and Bruno Poulin are 50/50 partners in an entity registered as Evelyn Exploration.

Exploration work by way of bulldozer overburden stripping was done during 1992. In May 1994, a work program consisting of 9,740 m³ of trenching and road work was completed on the property. Minimal mapping was done on the property and details of the work program are summarized in an assessment report submitted by Tonycastle Ltd. (Shearer, 1995).

6.0 DESCRIPTION OF WORK PROGRAM

This section describes the stripping and road work conducted on the Evelyn Creek Property in 2008.

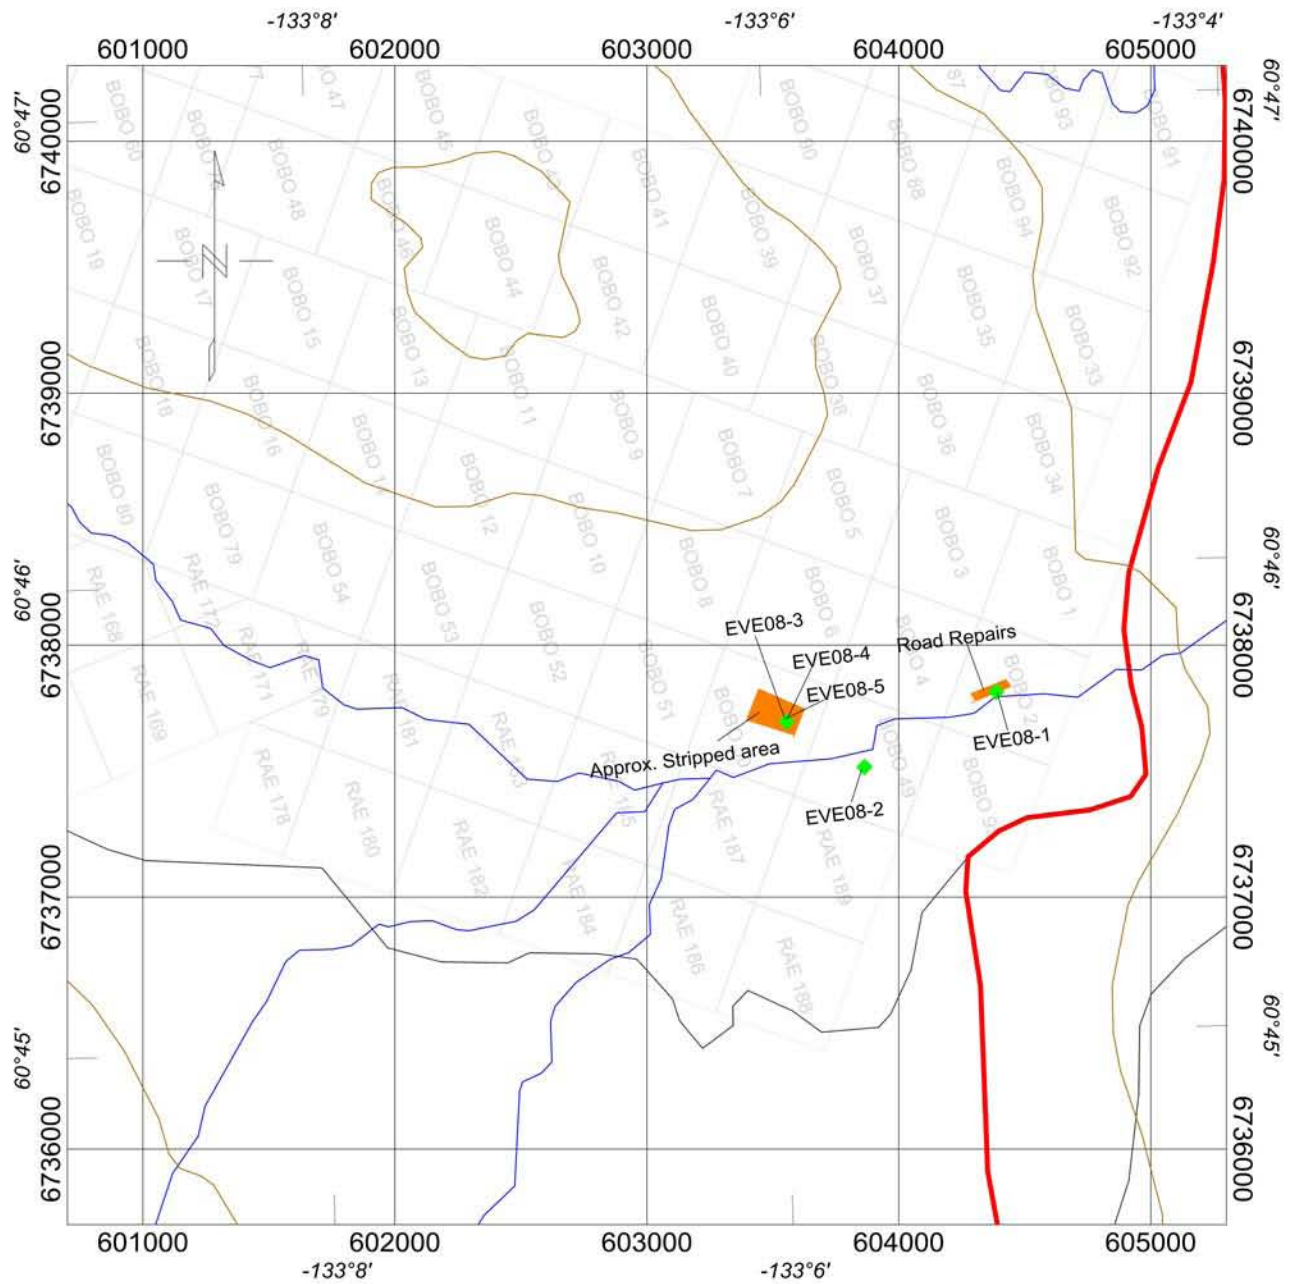

6.1 Personnel & equipment.

The work program was conducted by the following personnel:

<u>Crew chief:</u>	Bruno Poulin
<u>Field assistants:</u>	Antoinette Poulin

The crew were equipped with the following instruments and equipment:

<u>Equipment:</u>	1 - Track hoe 1 - D7 Caterpillar Bulldozer
<u>Vehicles:</u>	2 - ATV's 1 - 1 Ton truck

- Work area
- Sample Location

Evelyn Exploration

AURORA GEOSCIENCES LTD.	

Appendix B includes the names and addresses of all persons employed. A statement of expenditures is compiled in Appendix C.

6.2 Specifications.

A 30 foot stretch of the claims access road (Figure 3) was washed away in the spring of 2008. B. Poulin used his own heavy equipment to repair the road and re-establish access to the property.

Overburden stripping, in anticipation of trenching, was performed on the Bobo 50 claim by B. Poulin (Figure 3). An area approximately 700 feet long by 200 feet wide was stripped to a depth of up to 70 feet (213m x 61m x 21m). Altogether, 35,000 cubic yards (26,760 m³) of earth were moved.

Bruno Poulin collected five rock samples from the property. Approximate sample locations as indicated by B. Poulin are shown in Figure 3. All samples were float of unknown origin.

6.3 Sample analysis.

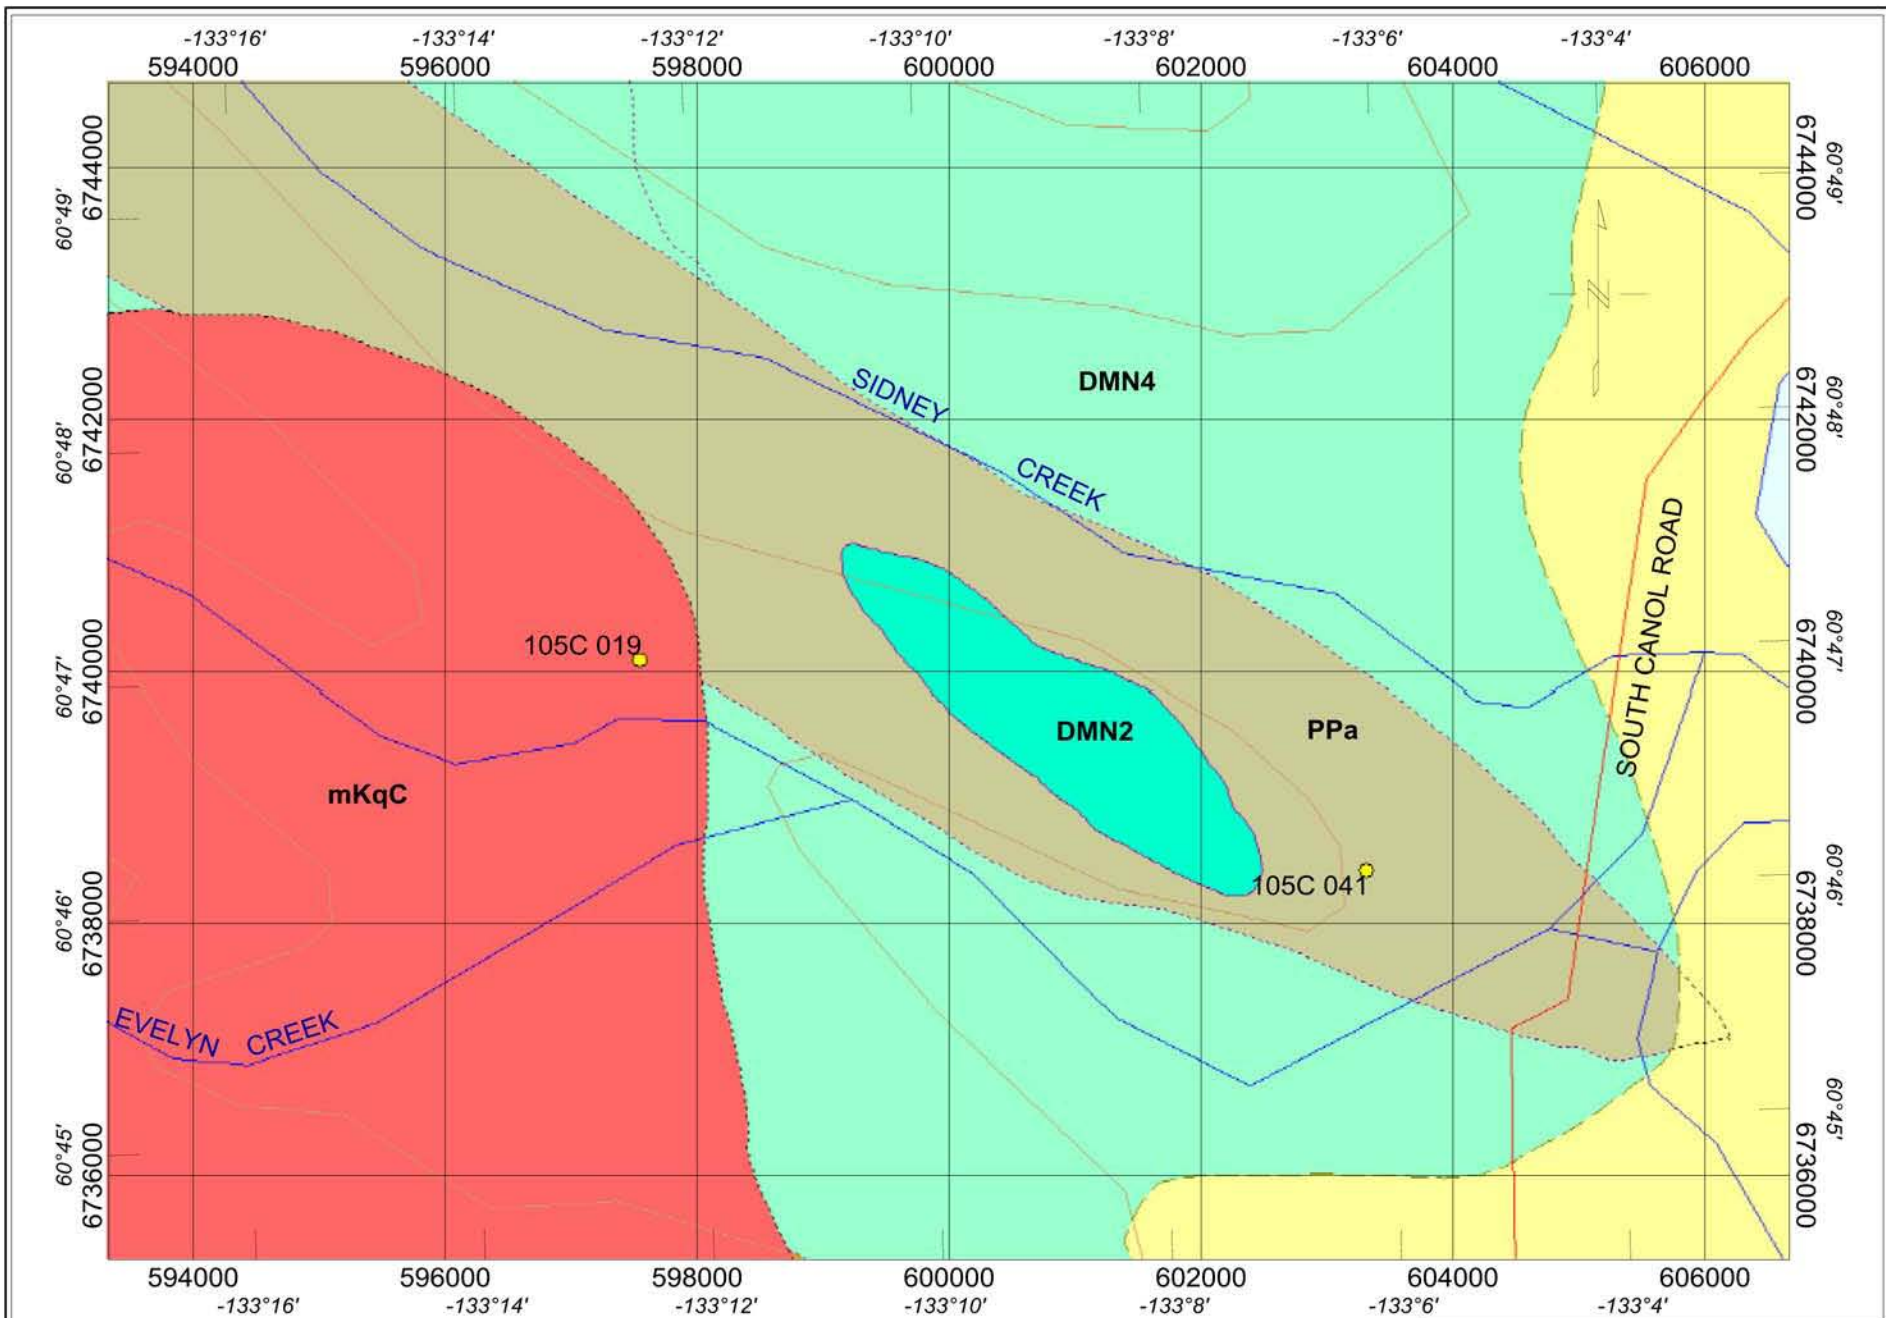

Four rock samples (EVE08-1, EVE08-3, EVE08-4, EVE08-5) were analyzed by Eco Tech Laboratory Ltd. of Kamloops, BC, using an aqua regia digestion followed by a 28 element ICP package. Fire assays for gold were also done on these four samples.

6.4 Data

Rock sample descriptions are presented in Appendix D. Assay certificates are in Appendix E. Assay results are discussed in section 10 of this report.

7.0 REGIONAL GEOLOGY

The regional geology of the property area is summarized by Gordey and Makepeace (Gordey & Makepeace, 2003). The property lies to the northeast of the Teslin Fault in the pericratonic Yukon Tanana terrane of the Canadian Cordillera. Earlier workers associated these rocks with the Kootenay Terrane (Gordey & Stevens, 1994) and the Big Salmon Metamorphic Complex.

AURORA GEOSCIENCES LTD.	

The regional geology of the property area, modified after Gordey & Makepeace (2003), is shown in Figure 4. The following formations are mapped in the property area:

Table 3 - Lithologies

Formation (Age)	Description
Overburden (Quaternary - Holocene)	Talus, organic and alluvial soil, boulder till.
Cassiar Suite (mid-Cretaceous) [mKqC]	Medium to coarse grained, equigranular to porphyritic (K-feldspar) granite and biotite quartz monzonite; biotite-hornblende quartz monzonite and granodiorite.
Nasina Assemblage (Devonian, Mississippian) [DMN2 & DMN4]	Marble [DMN2] as well as [DMN4] quartzite, micaceous quartzite, quartz muscovite (+/- chlorite, +/- feldspar augen) schist, and minor metaconglomerate and metagrit, may locally include significant Klondike Schist Assemblage.
Mafic-ultramafic intrusions (Proterozoic and/or Paleozoic) [PPa]	metamorphosed mafic rocks including amphibolite and ultramafic rocks of unknown association (may belong in part of entirely to Nisling, Nasina and Slide Mountain assemblages) and mafic-ultramafic intrusions within Nasina Assemblage.

Yukon Minfile showing 105C 017 is located to the southwest of the property. Lenses of manganese-rich skarn are hosted by Nasina assemblage rocks similar to those mapped on the Evelyn Creek property. Rhodonite from these lenses has been mined intermittently since 1984. As of 1994 reserves were estimated at 362.9 tonnes of gem quality rhodonite (MINFILE Database).

8.0 PROPERTY GEOLOGY

No detailed property scale mapping has been documented.

9.0 ECONOMIC MINERALIZATION

To date, no economic mineralization has been reported on the property.

10.0 ASSAY RESULTS

None of the four samples assayed had Au values above the detection limit of 0.03 g/t. Elevated Mg (>10%) and Fe (3.21%) in sample EVE08-1 suggests this sample might be representative of a skarn. Arsenic is slightly elevated (10 ppm) in sample EVE08-5.

11.0 CONCLUSIONS

Bulldozer stripping of overburden failed to reach bedrock. No new information was obtained from this exercise.

Rock samples analyzed did not return any significant results. The hand specimens collected by B. Poulin were predominantly sub-angular. This could be evidence that overburden is of local origin.

12.0 RECOMMENDATIONS

Professionally directed property scale geological mapping as well as extensive sampling should be completed before doing further physical work on the property.

Respectfully submitted,
AURORA GEOSCIENCES LTD.

Gabriel Fortin, B.Sc., Geol.I.T.
Geologist

APPENDIX A. STATEMENT OF QUALIFICATIONS

I, Gabriel Fortin, B.Sc., certify that:

- 1) I currently reside at 67B Stope Way, Whitehorse, Yukon Territory.
- 2) I am a graduate geologist currently employed by Aurora Geosciences Ltd. of Whitehorse, Yukon Territory.
- 3) I graduated from the University of Alberta in Edmonton, Alberta in 2007 with a Bachelor of Science Specialization Degree in Geology.
- 4) Since my graduation I have practiced my profession continually.
- 5) I have prepared this report based upon data collected by Bruno Poulin from the Evelyn Creek property, in addition to other third party, unpublished sources.
- 6) I do not hold any shares or other interests of any type in Evelyn Exploration.
- 7) I am a current member in training of APEGGA (Association of Professional Engineers, Geologists and Geophysicists of Alberta, registration number 78970).
- 8) I am unaware of any material fact or change with respect to the subject matter of this assessment report that is not reflected in the report, and the omission of which would cause this report to be misleading.

Dated this 15th day of December, 2008, at Whitehorse, Yukon Territory

Gabriel Fortin, B.Sc., Geol.I.T.

APPENDIX D. ROCK SAMPLE DESCRIPTIONS

Sample #	Easting_NAD83_ UTM Zone 8	Northing_NAD83_ UTM Zone 8	Sample Type	Description
EVE08-1	604280	6737800	Grab/Float	Sub-angular. Very strongly and pervasively altered. Exhalative appearance. ~10-15% biotite define foliation. ~5-8% late quartz veining cross cuts (nearly perpendicular to) foliation. Possible trace fine grained arsenopyrite. Strongly silicified throughout. 5% pink blebby mineral (manganese alteration?), probably rhodochrosite. 'Interstitial' carbonates.
EVE08-2	603840	6737480	Grab/Float	Angular. Dark greenish-grey chert. ~1% cubic pyrite in a thin stringer.
EVE08-3	603500	6737700	Grab/Float	Sub-angular. Talc concretion, no apparent mineralization.
EVE08-4	603500	6737700	Grab/Float	Sub-angular. Muscovite rich Phyllite with massive white quartz 'lens' parallel to cleavage. 2% blebby rusty pyrite throughout.
EVE08-5	603500	6737700	Grab/Float	Sub-angular. Exhalative similar to EVE08-1 with only trace biotite, no rhodochrosite and ~45-50% late quartz.

Sample locations are approximate, as provided by B. Poulin.
