December, 2009

SUMMARY

This report documents the methodology and results of a geochemical work program conducted on the Yukon Gold property by Equity Exploration Consultants Ltd. in the period September 17-23, 2009. The property is helicopter accessible, located in west-central Yukon, approximately 135 km south of Dawson City.

The Yukon Gold property was staked subsequent to a significant gold discovery at the neighboring White property of Underworld Resources Ltd. The discovery led to a staking rush during which Habanero Resources Ltd. acquired a significant land package within the district. The program described in this report is the first significant work program documented on the property.

The Yukon Gold claims are located within the Yukon-Tanana terrane and are underlain by undivided metamorphic rocks of the Nasina sub-terrane. Limited bedrock mapping indicates the property is dominantly underlain by quartz-muscovite and chlorite-muscovite schist.

A total of 1178 soil samples were collected in September 2009. Sampling was accomplished along ridge tops and spurs at a spacing of approximately 75 meters between samples. Reconnaissance geologic mapping and prospecting accompanied the soil sampling program. Work was based out of a tent camp located at the nearby Thistle Creek airstrip and was helicopter supported.

Results from the 2009 program on the Yukon Gold property have identified four soil geochemical anomalies with elevated values of Au, As, Mo and/or Sb. No significant surface mineralization was observed during the program. Further work in the form of prospecting, mapping, and soil geochemical sampling are warranted to follow-up the anomalies delineated during the work program described in this report.

1.0 INTRODUCTION

Equity Exploration Consultants Ltd. (“Equity”) was contracted by Habanero Resources Inc. (“Habanero”) and four other companies to carry out a soil sampling program during September of 2009. This program was carried out under the author’s direction and Equity was requested by Habanero to compile and interpret its results. The literature used in compiling this report consisted of assessment reports filed with the Yukon Ministry of Energy, Mines and Resources, government reports and maps. Information on property ownership was supplied by Habanero. The author worked on the Yukon Gold property during the 2009 exploration program and has first-hand knowledge of its geology and mineralization.

2.0 RELIANCE ON OTHER EXPERTS

The authors have not relied on a report, opinion or statement of an expert for information concerning legal, environmental, political or other issues.

3.0 PROPERTY DESCRIPTION AND LOCATION

The Yukon Gold property lies within the Whitehorse and Dawson Mining Districts, in the North Dawson Range of west-central Yukon, approximately 135 km south of Dawson City (Figure 1). It is centered at 63° 07' north latitude and 139° 39' west longitude.

The property can be accessed by helicopter from Dawson City, and staging areas for supplies can be flown to the Thistle airstrip along Thistle Creek, which lies 10-58 kilometers east of the Yukon Gold property. Alternatively, several boat operators in Dawson City and a barge operating out of Minto Landing are available for hire to transport supplies to points along the Yukon and/or White River where they can be subsequently mobilized by helicopter to the property.

The topography of the area is characterized by rolling hills typical of the Dawson Ranges, with elevations ranging between 600 and 1250 m. Vegetation is sparse, with lower elevations covered by spruce, birch, aspen, alder and willow, whereas higher elevations have thick moss, grasses and scrub birch. Further south, hills are generally more subdued and more thickly vegetated with spruce on slopes and thick willow and alder in creek valleys. North-facing slopes locally exhibit permafrost, which complicates soil sampling. South-facing slopes are more typically vegetated by deciduous trees such as aspen and birch. Drainage systems vary from well channeled, discrete streams to swamps in broader, flat-bottomed valleys.

The area has a sub-arctic continental climate, with cold winters and cool, wet summers. Exploration can be carried out on the Yukon Gold property from June until October.

4.0 PROPERTY TENURE

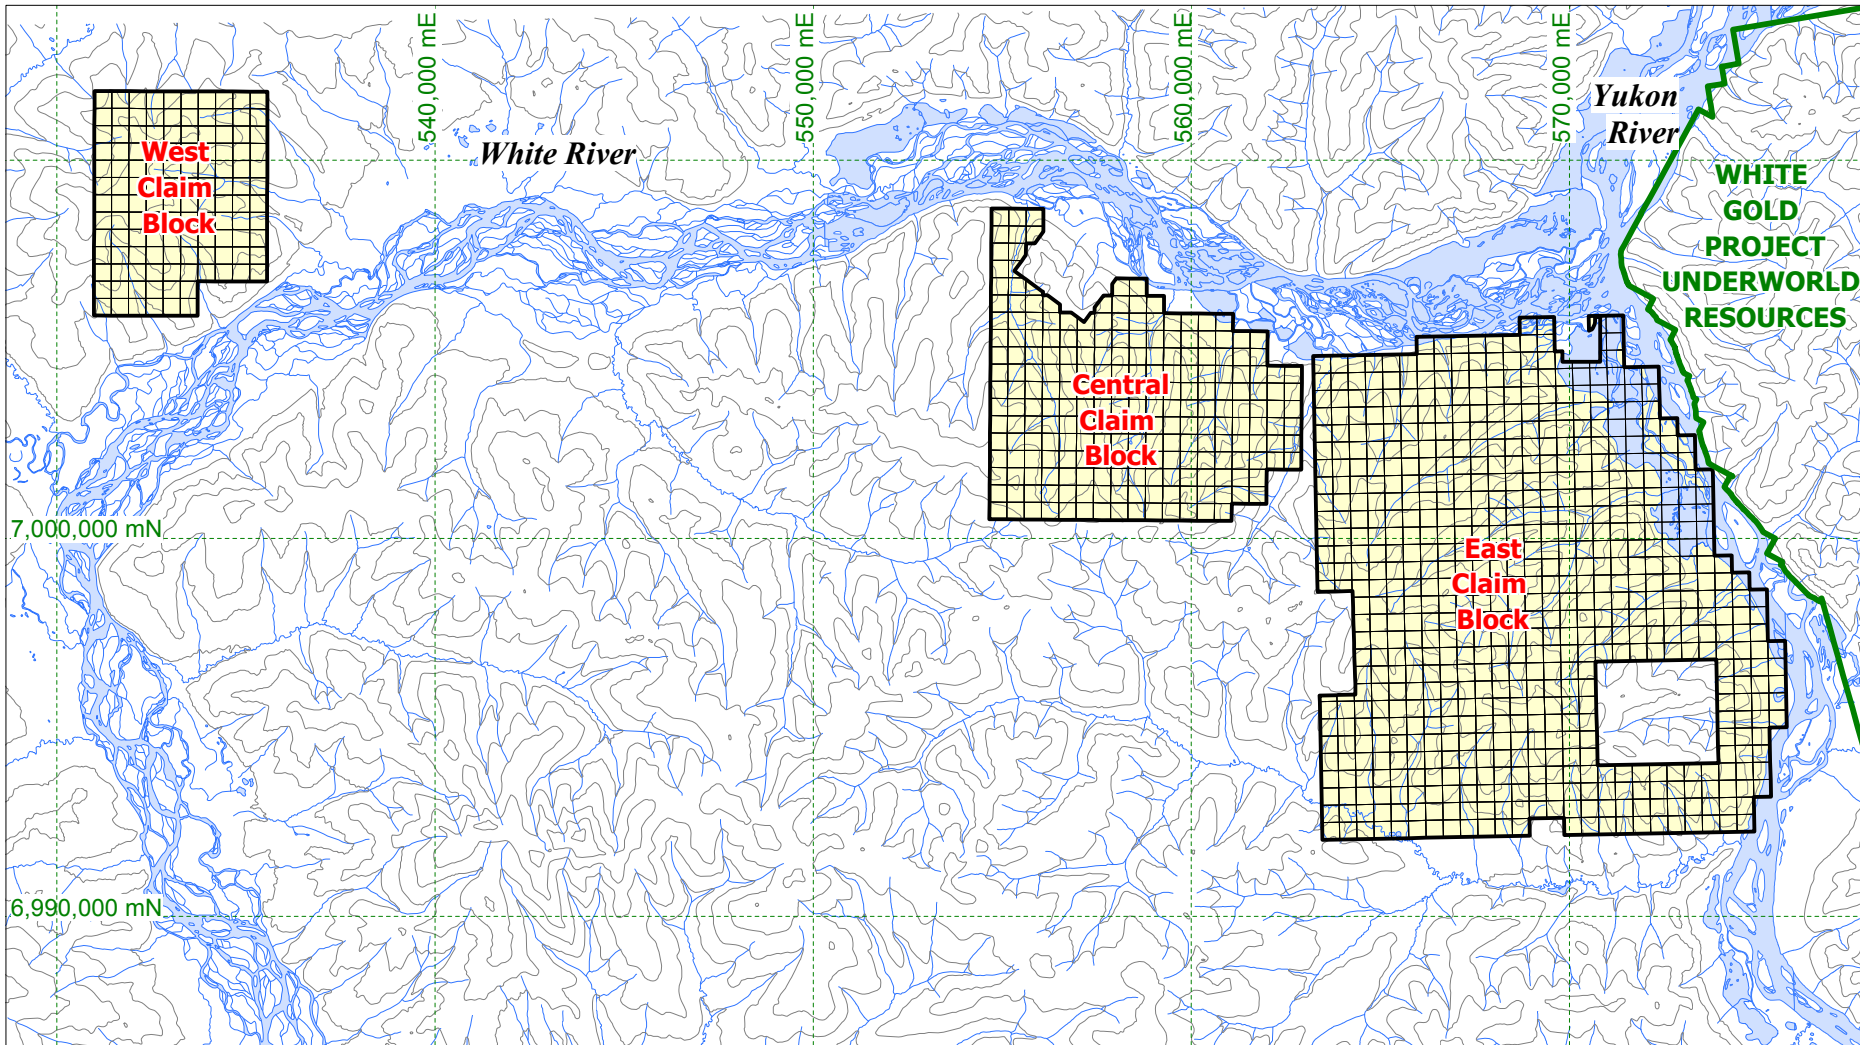

The Yukon Gold property consists of 979 quartz mineral claims covering 205 km² within three separate blocks of contiguous claims, as summarized in Appendix C (Figure 2). The claim boundaries are defined by the locations of claim posts on the ground, which have not been surveyed. Claim ownership information is provided in Appendix C.

Surface rights over the Yukon Gold property are owned by the Yukon Territory. No significant surface disturbance or any major environmental liabilities was noted during the author’s field visits. Depending on the nature of the program, exploration permits may be required from the Yukon Department of Energy, Mines and Resources prior to carrying out further exploration on the property.

5.0 HISTORY

Very little is documented about the exploration history in the area of the Yukon Gold property. In 1970, a small sampling program was conducted on the Nick Claims (Findlay, 1970), which were located along the northern edge of the central claim block of the Yukon Gold property. A total of six soil and seven stream silt samples were collected during the program with no significant results noted.

The area came to prominence in 2007 when Underworld Resources Ltd. acquired the White Gold property and defined several gold-bearing showings within a 1.2 x 7.5 kilometre soil geochemical anomaly. Initial trenching and drilling results were encouraging and in May 2009, Underworld announced a drill hole with 104 metres grading 3.4 g/tonne Au. In the ensuing staking rush, the Yukon Gold claims were staked in June 2009 immediately west of Underworld's White Gold property.

Several current and historic placer gold operations occur near the Yukon Gold property including on Thistle and Kirkman creeks.

5.1 2009 Exploration Program

The 2009 Yukon Gold exploration program, consisting of soil sampling, prospecting, and geologic mapping, was designed as a reconnaissance investigation of the entire property for its gold potential. All fieldwork was helicopter-supported and based out of a tent camp at the Thistle Creek airstrip. Sampling totals for the program are shown in Table 1. Equity Exploration Consultants Ltd. of Vancouver were contracted to manage and execute the exploration and have been retained to report on the results as described herein.

Table 1: Surface Samples Collected during the 2009 Program

Sample Type	Total	ALS Chemex Analytical Codes
Soil	1178	SCR-41; ME-ICP41; Au-AA23

Soil samples were marked in the field by orange flagging and a tyvex tag with the sample number written on it with a China Marker. All soil samples were located using a hand-held GPS.

Samples were shipped to the ALS Chemex Laboratories preparation facility in Terrace, British Columbia. All samples were analyzed for gold by 30 g Fire Assay with an Inductively Coupled Plasma Atomic Emission Spectrometry (ICP-AES) finish. Samples were also submitted for a multi-element analysis package that utilized an aqua regia digestion and an ICP-AES technique. Certificates of Analysis are presented in Appendix D. The procedures, results and conclusions of the sampling QA/QC program are summarized in Appendix E.

A magnetic declination of 22°49' E was used for all compass measurements. Structural measurements are all reported utilizing the right-hand rule. All maps and UTM coordinates in this report are referenced to the 1983 North American Datum (NAD-83; Zone 7).

6.0 REGIONAL GEOLOGY

The Yukon Gold claims are located within the Yukon-Tanana terrane (Figure 3) in west-central Yukon (Colpron et al., 2006), a pericratonic terrane of continental affinity that occupies a position between the ancestral continental margin of North America and outboard accreted terranes. The pericratonic terranes were accreted in the Early Jurassic, while subsequent outboard exotic terranes began accreting in the Early to mid-Cretaceous. At this time, the pericratonic package was intruded by a voluminous, northwest-to southeast-trending plutonic suite, referred

Yukon Regional Geology 1:250 000
Gordey, S.P. and Makepeace, A.J. (comp.) 1999

Habanero Resources Inc.

**Yukon Gold
Regional Geology**

Date:	NOV 2009	Scale:	1:200,000	Figure
U.T.M. Zone	UTM 7 - NAD83	Mining District	Dawson	3
N.T.S.	1150/04	Province	Yukon	

to as the Dawson Range plutonic belt by Hart et al. (2004) (Klotassin batholith of Tempelman-Kluit and Wanless, 1975), which lies south of the Yukon Gold property.

Regional-scale geological compilation maps (Gordey and Makepeace, 1999) show that the Yukon Gold claims are underlain by undivided metamorphic rocks of the Nasina sub-terrane that include pre- to late-Devonian rocks of the continental margin. The Nasina Assemblage consists of graphitic quartzite and muscovite quartz rich, \pm chlorite, \pm feldspar augen, schist.

Examples of regional mineralization styles observed on the White Gold property include: quartz veins, hydrothermal breccias and disseminated sulphide targets. The main mineralization style at the Golden Saddle zone is described as quartz, albite, carbonate breccias with low volumes of disseminated pyrite while at the Arc zone mineralization consists of breccias with a matrix of sulphides including pyrite and arsenopyrite. Soil geochemical surveys provide an effective exploration method with Au \pm As \pm Mo \pm Sb useful pathfinder elements.

7.0 PROPERTY GEOLOGY

No detailed geologic mapping has been carried out on the Yukon Gold property to date. Minor reconnaissance mapping during the 2009 program generally confirmed the published regional geology.

Limited mapping indicates the property is underlain by metamorphic rock units likely belonging to the Nasina Assemblage. These units are dominantly quartz-muscovite and chlorite-muscovite schist. A small unit of unfoliated intermediate volcanic rocks likely belonging to Nisling Range Suite was noted in the north central portion of the middle claim block, near the White River.

8.0 SOIL GEOCHEMISTRY

During the 2009 program, 1178 soil samples (including blanks and duplicates) were collected from the Yukon Gold property. Sampling was accomplished along the major ridges and spurs of the property area, at a spacing of approximately 75 m between samples, in an effort to give a fairly uniform, property-wide coverage. Samples were taken from a depth between 5-50 cm and from the B-horizon. Figures 5-8 shows results from these samples. Percentiles and the correlation matrix for the 2009 soil data are shown in Table 2 and Table 3.

Table 2: 2009 Soil Geochemistry Percentiles

Percentile	Au (ppb)	Ag (ppm)	As (ppm)	Cu (ppm)	Mo (ppm)	Pb (ppm)	Sb (ppm)	Zn (ppm)
50th	-	-	7	16	-	8	-	45
75th	-	0.2	10	24	-	10	-	55
90th	5	0.4	13	36	2	12	2	73
95th	7	0.5	17	43	2	14	2	94.5
98th	11	0.8	34.4	60.4	2	20.4	3	128.8
Max Value	69	1.9	237	170	7	174	16	278
Population	1131	1131	1131	1131	1131	1131	1131	1131

Table 3: 2009 Soil Geochemistry Correlation Matrix

	Au	Ag	As	Cu	Mo	Pb	Sb	Zn
Au								
Ag	0.05							
As	0.37	0.13						
Cu	0.14	0.01	0.17					
Mo	0.07	0.23	0.30	0.30				
Pb	0.32	0.02	0.21	0.10	0.44			
Sb	0.22	0.13	0.75	0.38	0.16	0.14		
Zn	0.08	0.17	0.26	0.37	0.47	0.40	0.22	

A moderate correlation exists between As-Sb, a weak correlation is seen between Pb-Mo, Zn-Pb, and Zn-Mo values while no metals correlate well with Au values.

Several soil geochemical anomalies have been identified within the 2009 work area and are summarized below.

Anomaly 1: A multi element (As-Mo-Sb) anomaly occurring along a north-south ridge top, over a length of approximately 2 km, in the north region of the central claim block. Although Au is not anomalous over most of the anomaly, a single highly anomalous (69 ppb) sample does occur within the anomaly. No geologic mapping was completed during the current work program in this area. Regional mapping (Gordey and Makepeace, 1999) shows the anomaly is underlain by Nasina Assemblage rocks, with an Early Tertiary (Nisling Range Suite) intrusion at the northern edge of the anomaly.

Anomaly 2: This Au-As anomaly occurs along the southern boundary of the central claim block with Au values up to 42 ppb. The anomaly is spread over approximately 4.5 km of ridge top mapped as chlorite-muscovite schist belonging to the Nasina Assemblage.

Anomaly 3: Irregular anomalous Au values up to 35 ppb occur along 6 km of ridge top in the southern portion of the eastern claim block. Mapping in this area found chlorite-muscovite±quartz schist of the Nasina Assemblage.

Anomaly 4: A low-level As-Mo-Sb anomaly lies along the easternmost kilometre of a ridge soil line near the Yukon River in the northeast region of the eastern claim block. Only one sample returned detectable gold (10 ppb) from this anomaly. No geologic mapping was completed during the current work program in this area. Regional mapping (Gordey and Makepeace, 1999) shows the anomaly is underlain by Nasina Assemblage rocks.

9.0 INTERPRETATION AND CONCLUSIONS

The Yukon Gold property covers 205 square kilometres (979 claims) in the Dawson Ranges near the White Gold property of Underworld Resources Ltd. This area came into prominence in May 2009, when Underworld announced a drill hole with 104 metres grading 3.4 g/tonne Au from the White Gold property's Golden Saddle Zone. The Golden Saddle and Arc zones (best hole: 6.0 metres @ 8.26 g/tonne Au) and several other showings lie within a 2 x 11 kilometre Au±As±Sb±Mo soil geochemical anomaly which lies immediately east of the Yukon Gold property. Exploration on the White Gold property progressed quickly from initial ridge-and-spur soil sampling to grid soil sampling to mechanical trenching to diamond drilling and resulted in the current discovery.

Ridge-and-spur soil samples were taken across the Yukon Gold property in 2009 as an initial reconnaissance to determine its prospectivity for White Gold-style gold mineralization. The goal was to identify regions of anomalous Au and other pathfinder element (As-Mo-Sb) values in soils, giving a focus for future exploration. Several reconnaissance soil geochemical anomalies were identified from the 2009 work

program. Each of these anomalies should be refined with grid-based soil geochemistry and investigated by more detailed geological mapping and prospecting.

Anomaly 1 represents a multi-element (As-Mo-Sb) soil anomaly within an area that was not mapped during the current program. Regional mapping shows an Early Tertiary intrusion within the northern portion of this anomaly and the anomalous metal values may be related to hydrothermal activity associated with the intrusion. Only a single anomalous gold value was returned from within this anomaly, but it was the highest value (69 ppb Au) from the entire survey.

Anomaly 2 occurs over a broad area (4.5 km) with moderately anomalous Au and As values. Although somewhat inconsistent and without exceedingly high values, this anomaly is significant due to its size and the coincidence of Au and As values.

The third anomaly identified in the 2009 sampling program is again a broad (6 km) area of erratic anomalous samples; however, this anomaly is restricted to dominantly Au values, with only a few anomalous As values.

Anomaly 4 is relatively small and lacks elevated gold values, but it deserves further investigation due to its proximity to the large soil geochemical anomaly on the White Gold property, located on the opposite side of Yukon River.

Although results from the 2009 sampling program on the Yukon Gold property did not return results indicative of a significant discovery, several multi-element anomalies were identified. Due to the reconnaissance nature of the 2009 work, each of the anomalies detailed in this report have aspects which encourage follow-up work.

Respectfully submitted,

Neil W. Perk

CERTIFICATE VA09111201

Project: HAO09-01
P.O. No.: HAO09-01
This report is for 180 Soil samples submitted to our lab in Vancouver, BC, Canada on 6-OCT-2009.

The following have access to data associated with this certificate:

EQUITY ENG E-MAIL
NEIL PERK

HENRY AWMACK

MURRAY JONES

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-24	Pulp Login - Rcd w/o Barcode
SCR-41	Screen to -180um and save both
LOG-22d	Sample login - Rcd w/o BarCode dup
SCR-41d	Screen to -100um, save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
Au-AA23	Au 30g FA-AA finish	AAS

To: EQUITY EXPLORATION CONSULTANTS LTD.
ATTN: NEIL PERK
700 - 700 PENDER ST.
VANCOUVER BC V6C 1G8

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA09111205

Project: HAO09-01

P.O. No.: HAO09-01

This report is for 240 Soil samples submitted to our lab in Vancouver, BC, Canada on 6-OCT-2009.

The following have access to data associated with this certificate:

EQUITY ENG E-MAIL
NEIL PERK

HENRY AWMACK

MURRAY JONES

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-24	Pulp Login - Rcd w/o Barcode
SCR-41	Screen to -180um and save both
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-34	Pulp Splitting Charge

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
Au-AA23	Au 30g FA-AA finish	AAS

To: EQUITY EXPLORATION CONSULTANTS LTD.

CERTIFICATE VA09111206

Project: HAO09-01
P.O. No.: HAO09-01
This report is for 221 Soil samples submitted to our lab in Vancouver, BC, Canada on 6-OCT-2009.

The following have access to data associated with this certificate:

EQUITY ENG E-MAIL
NEIL PERK

HENRY AWMACK

MURRAY JONES

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41	Screen to -180um and save both
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-34	Pulp Splitting Charge
LOG-24	Pulp Login - Rcd w/o Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
Au-AA23	Au 30g FA-AA finish	AAS

To: EQUITY EXPLORATION CONSULTANTS LTD.
ATTN: NEIL PERK

Method	CERTIFICATE COMMENTS
ALL METHODS	NSS is non-sufficient sample.

Appendix E: Quality Control / Quality
Assurance

QUALITY CONTROL / QUALITY ASSURANCE

I Chain of Custody

All samples were packed in rice sacks and sealed with uniquely-numbered non-resealable security straps. Rice sacks were flown to Dawson then trucked to Whitehorse. Samples were then shipped via Byers Transportation System Inc. to ALS Chemex Labs Ltd. in Terrace, British Columbia, an ISO 9001 registered laboratory. ALS Chemex reported that all bags were received in good condition, with all security straps intact, and with no evidence of tampering.

II Blanks

Blanks are samples which are known to be barren of mineralization and are inserted into the sample stream in the field to determine whether contamination has occurred after sample collection. A total of 25 soil blanks were inserted into the sample sequence (approximately every 40th sample) and submitted for analysis. Blank material for the program comprised commercially available silica silt from the same company that supplies ALS Chemex Labs with their blank material. Low analytical values indicate no contamination within the lab and no tampering of the samples.

III Field Duplicate Analysis

Field duplicates are collection and analysis of two separate samples from the same field location. They are used to measure the reproducibility of sampling, which includes both laboratory variation and sample variation. A total of 37 soil sample duplicates were collected during the 2009 program by collecting two samples from the same location. Results are generally good with 20% reproducibility for Au-Cu, 30% for Ag-Pb-Zn, 40% for Sb, and 60% for As-Mo.

The above graph shows an example for the reproducibility of Cu with all samples falling below the 90% confidence line for 20% precision.

VI Conclusions

- There is no evidence of tampering with the samples between collection and the laboratory.
- Low analytical values for the blank material submitted indicate no contamination within the lab for soil samples.
- Field duplicate analysis show generally good reproducibility for the elements of interest.
- ALS Chemex carries out their own in-house laboratory QA/QC program, including blanks, duplicates and standards, and ensures that laboratory QA/QC is satisfactory prior to certifying their analyses.

GEOLOGIST'S CERTIFICATE

Neil W. Perk
406-518 Beatty St.
Vancouver, BC, Canada

I, Neil Perk, am a Project Geologist with Equity Exploration Consultants Ltd., with offices at Suite 700–700 West Pender Street in the City of Vancouver, B.C., in the Province of British Columbia.

I am a graduate of the University of Victoria (2006) with an Honours Bachelor of Science degree in Earth Science, and I have practiced my profession continuously since 2006.

Since 2006 I have been involved in mineral exploration for gold, silver, copper, lead and zinc, and uranium in Canada, Argentina, and Peru.

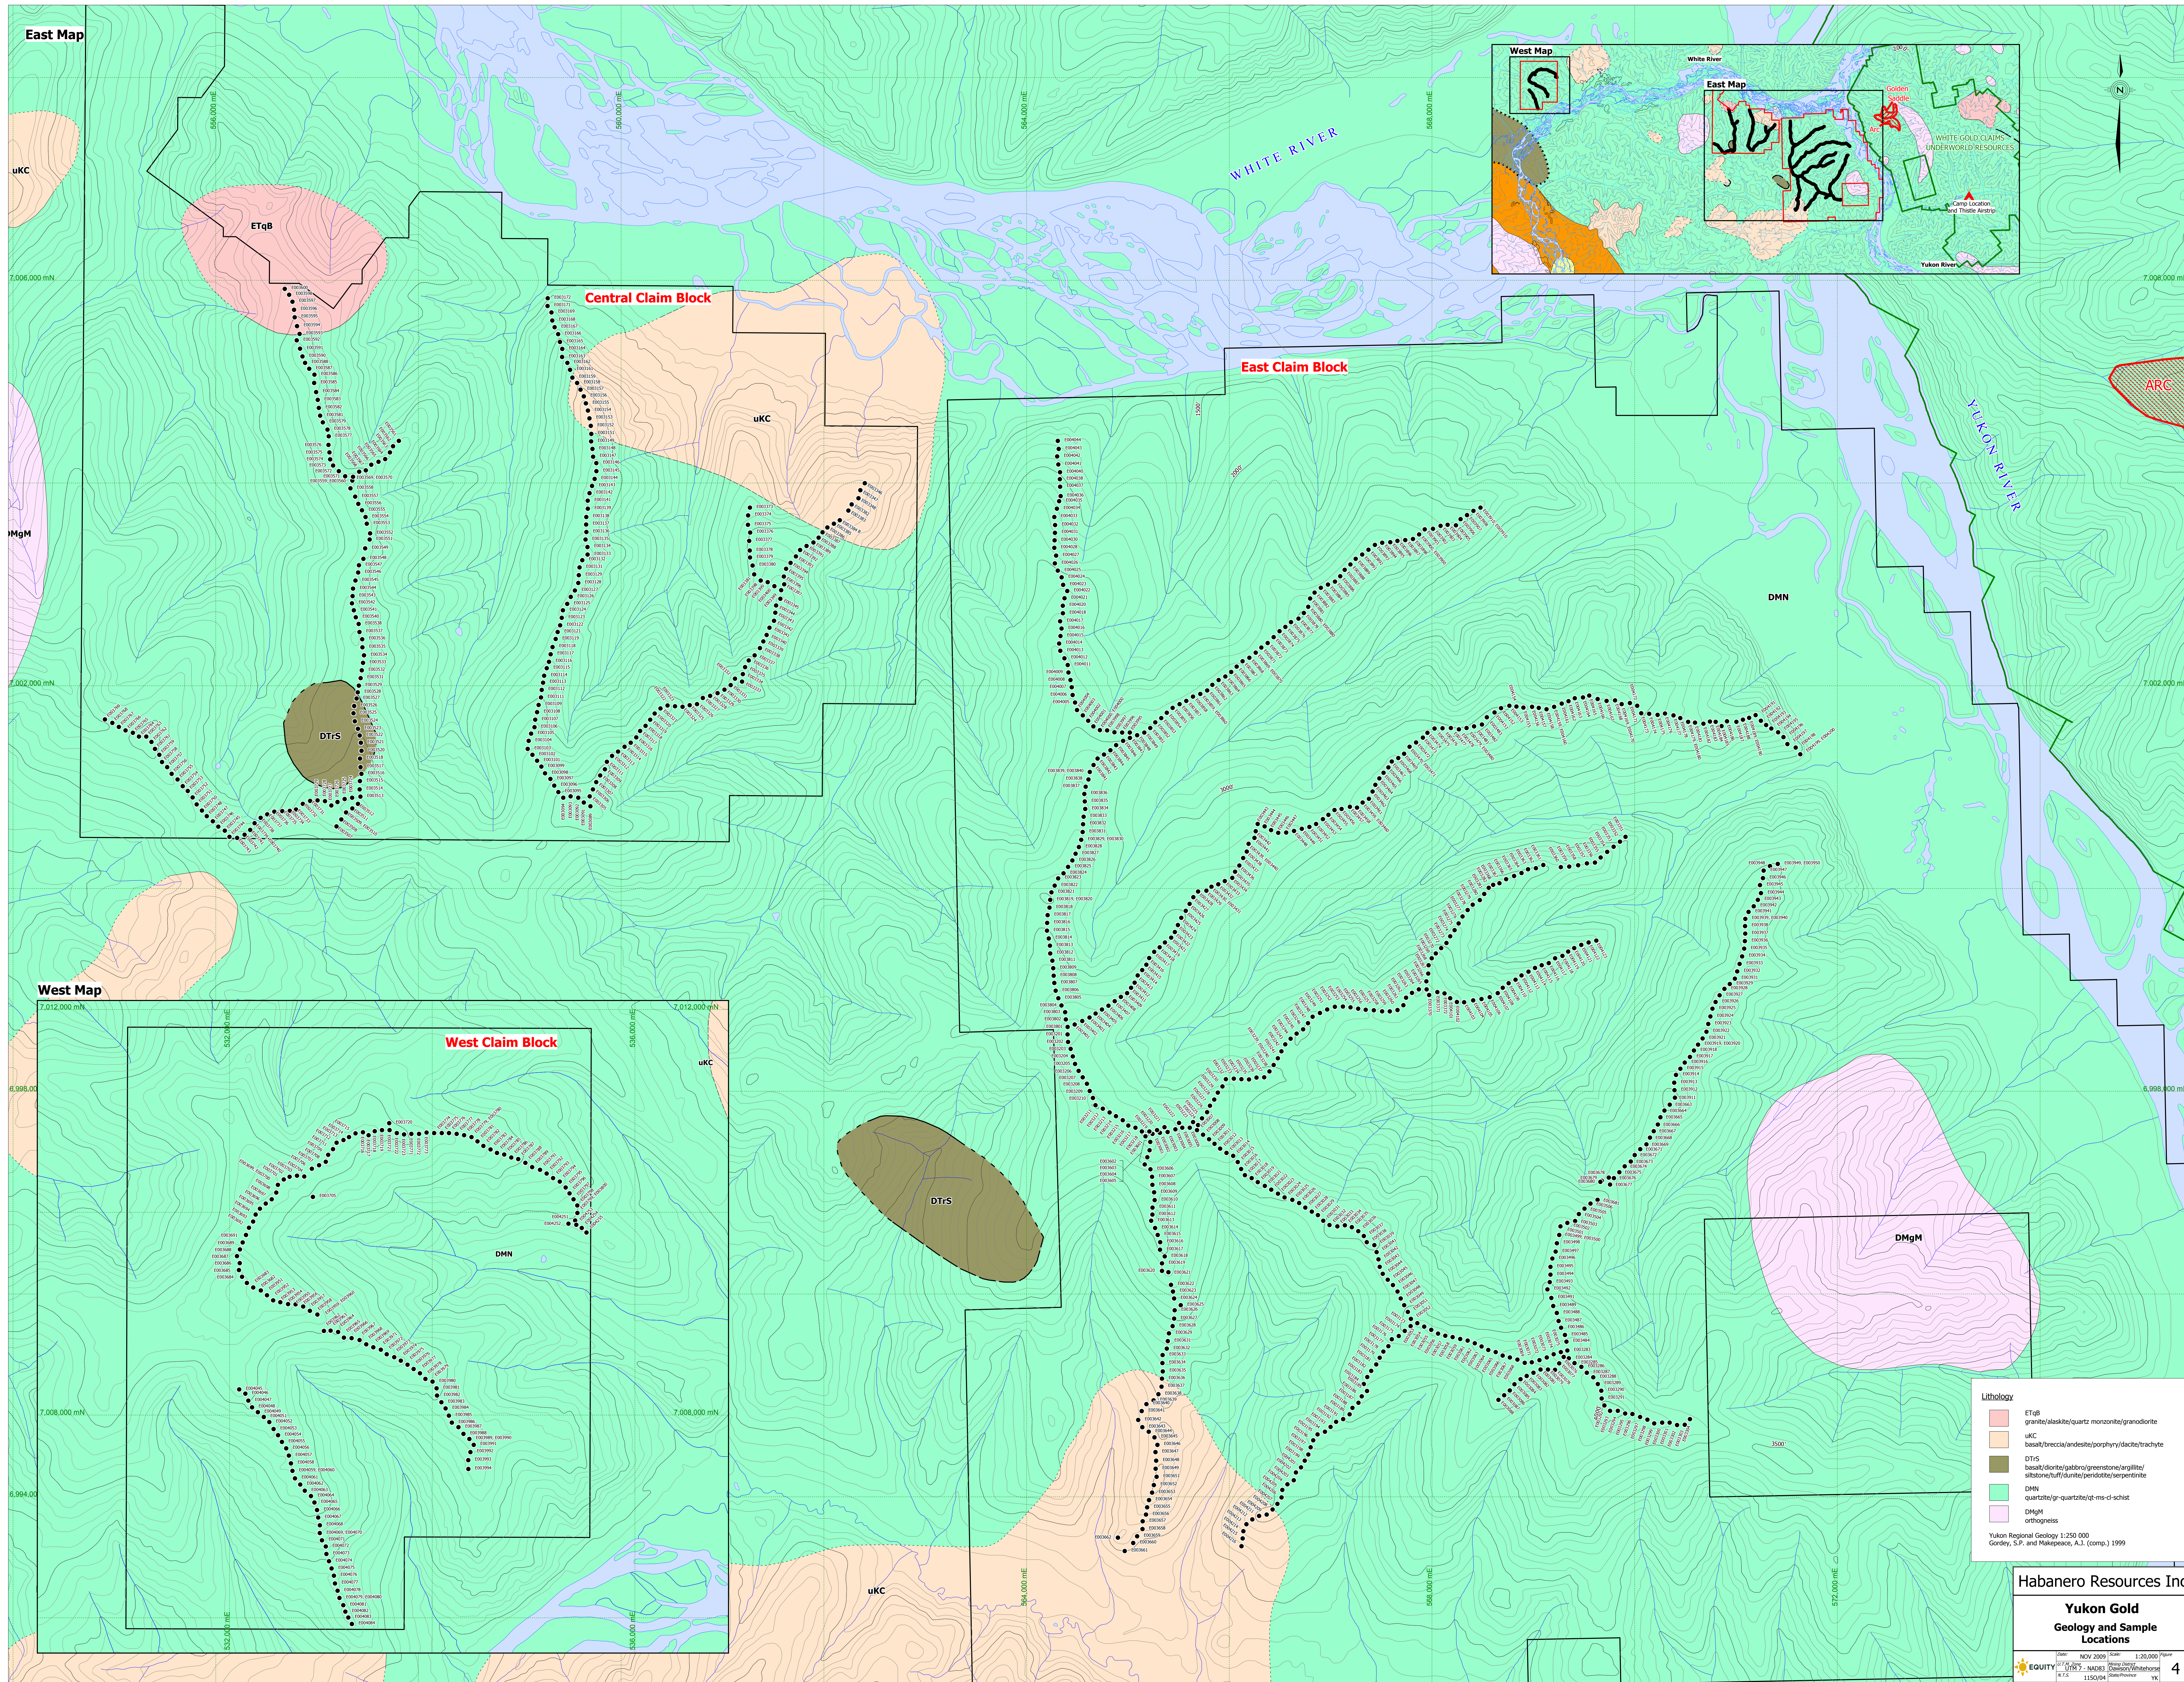

I am presently a Consulting Geologist and have been so since March 2007.

I supervised the September 2009 exploration program on the Yukon Gold property and have examined the property in the field.

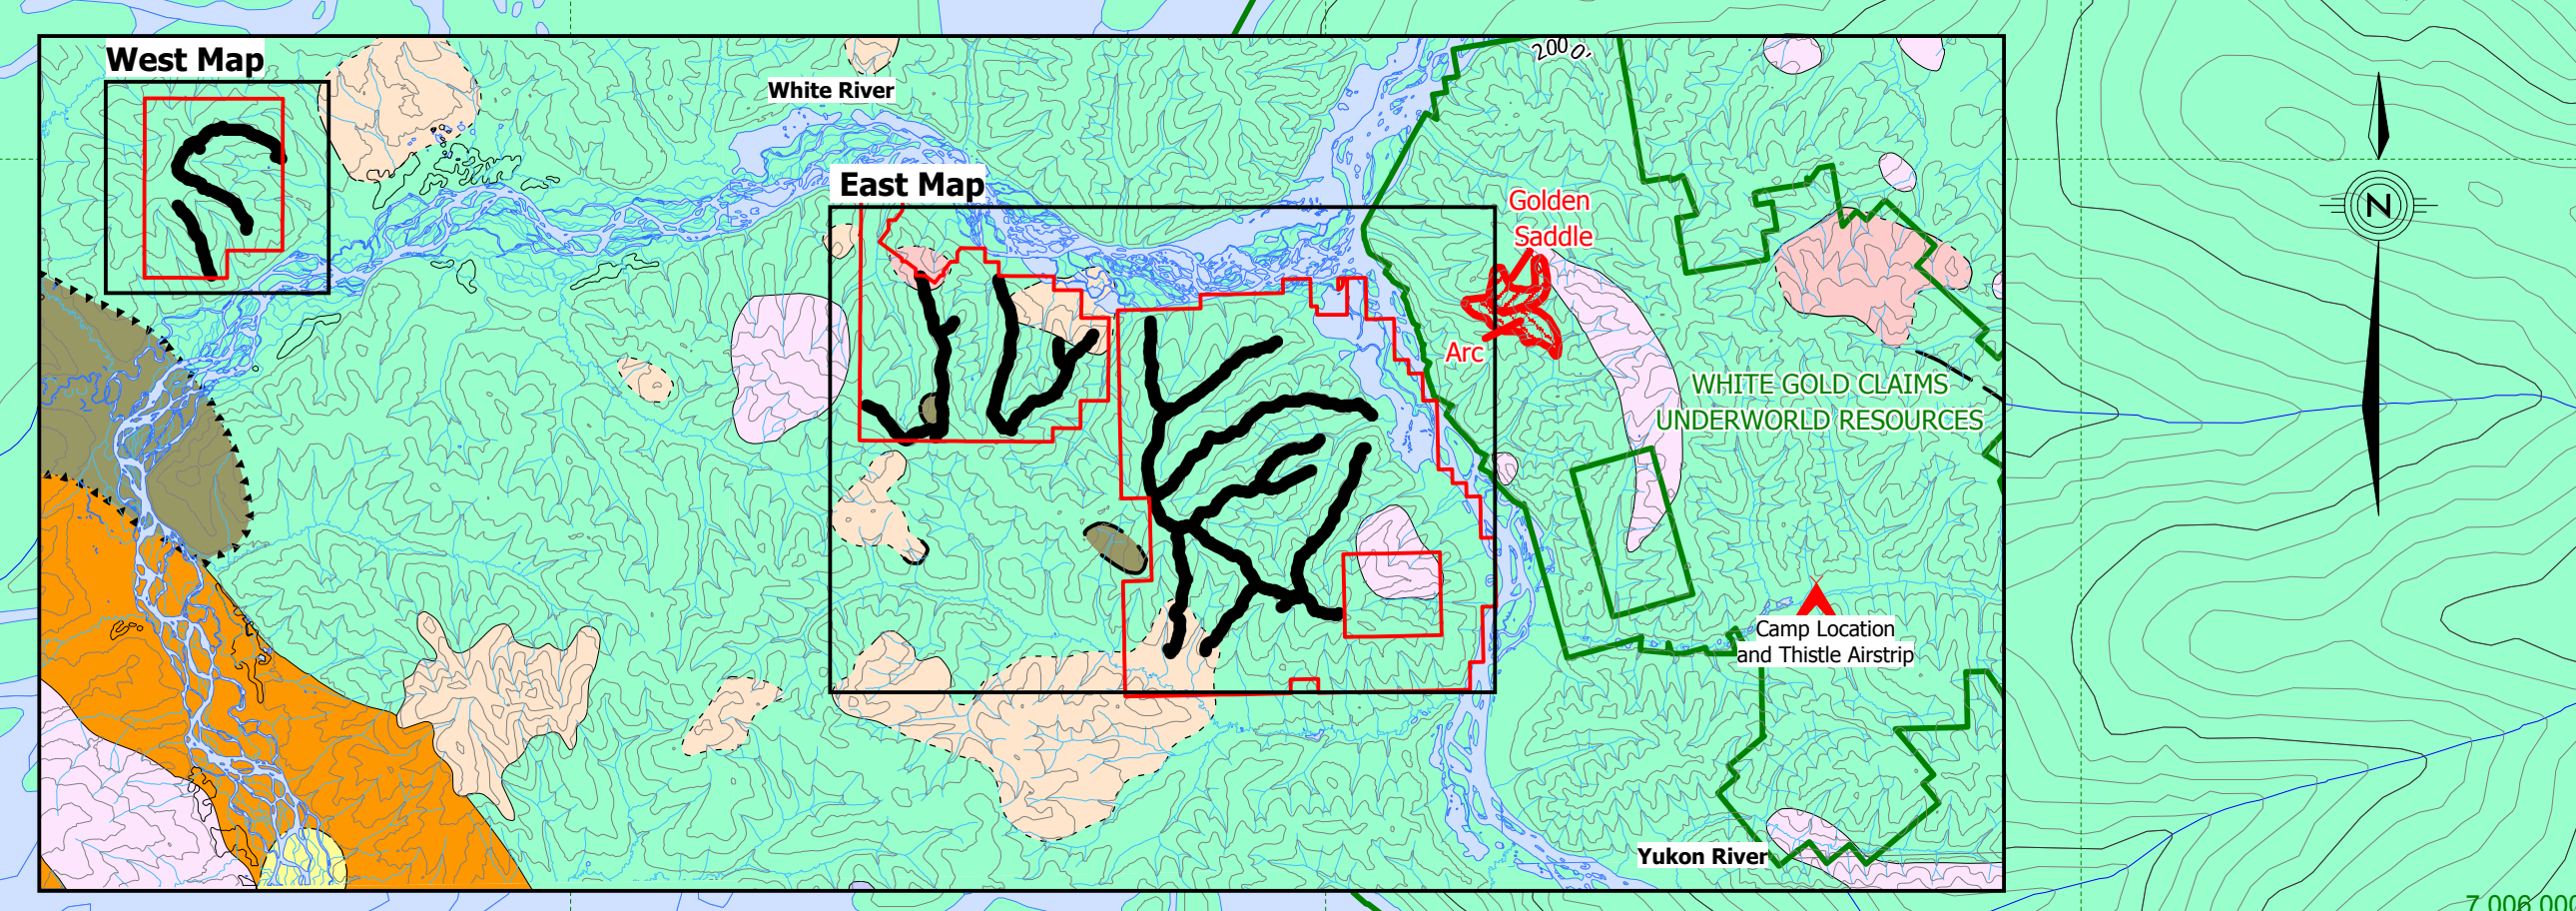

Dated at Vancouver, British Columbia, this 9th day of December, 2009.

Neil Perk, B.Sc.
