1.0 SUMMARY

On behalf of Silver Quest Resources Ltd. (“Silver Quest”), Equity Exploration Consultants Ltd. (“Equity”) completed geochemical sampling at the TAK property in August, 2010. The TAK comprises 82 quartz claims covering a tributary (herein named Tak Creek) of Ballarat Creek in the White Gold district of the Yukon Territory.

Work in 2010 consisted of three days of surface geochemical sampling by a crew of three people. Three rock, eight silt and 195 soil samples were collected but results generally returned low values of precious metals and gold pathfinder elements. One small gold-in-soil anomaly occurs near the headwaters of the main drainage within the property and is defined by values of 7 to 14 ppb Au. Silt samples from creeks nearby also returned elevated Ag but below detection Au. Elsewhere, a single soil returned 36 ppb Au but nearby samples returned low values. A single silt sample returned 9 ppb gold.

These results suggest that little potential for a significant gold discovery exists at the TAK property. Some minor follow-up sampling and prospecting, however, is warranted near the higher gold value samples.

2.0 INTRODUCTION

During the 2010 field season, Equity was contracted by Silver Quest to carry out the sampling work at on the TAK property as part of a larger exploration program focused at the Boulevard Property located 35 km to the southwest. This report describes the work completed and summarizes the results.

3.0 PROPERTY DESCRIPTION AND LOCATION

The TAK property is located in the Dawson Range of the west-central Yukon Territory, on the northeastern side of the Yukon River (Figure 1). It is centered at 63°56’ N latitude and 138°54’ W longitude. The property is centred on an unnamed tributary which drains south-westerly into Ballarat Creek. This unnamed creek is herein referred to as Tak Creek.

The property claim block comprises 82 contiguous quartz claims covering 1704 hectares (Figure 2). Sixteen of these claims were staked in June 2009 and are owned equally by Farrell Andersen, Hinterland Minerals Inc., Carl Schulze and Jackie Ziehe (Table 1) and are under option to Silver Quest. The remaining 66 claims are owned 100% by Silver Quest and were staked in June 2009.

Table 1: TAK Claims

Grant Numbers	Claim Names	Recording Date	Staking Date	Expiry Date*	Owners
YC95227 – YC95242	TAK 1 – TAK 16	June 5, 2009	June 4, 2009	June 4, 2011	Hinterland Minerals Inc. - 25%, Farrell J. Andersen - 25%, Carl Michael Schulze - 25%, Jackie Ziehe - 25%
YC98377 – YC98333	TAK 17 – TAK 82	July 2, 2009	June 24, 25, 2009	June 4, 2011	Silver Quest Resources Ltd. – 100%

4.0 ACCESSIBILITY, CLIMATE, LOCAL RESOURCES, INFRASTRUCTURE, PHYSIOGRAPHY

The TAK property is located 130 km to south of Dawson City. The topography of the area is characterized by rolling hills typical of the Dawson Ranges. Vegetation is sparse, with lower elevations covered by spruce, birch, aspen, alder and willow, whereas higher elevations have thick moss, grasses and scrub birch. Creek valleys are filled with thick willow and alder thickets. North-facing slopes locally exhibit permafrost, which complicates soil sampling. South-facing slopes are more typically vegetated by deciduous trees such as aspen and birch. Drainage systems vary from well channelled, discrete streams to swamps in broader, flat-bottomed valleys.

The area has a sub-arctic continental climate, with cold winters and cool, wet summers. Exploration can be carried out on the property from June until October.

Direct access to the property is via helicopter and several helicopter bases are located in Dawson City. A gravel airstrip just off the property has recently been used by aircraft as large as a Shorts Skyvan and Cessna Caravan so this is a good option for mobilizing drills, camp equipment and supplies. Alternatively, several boat operators in Dawson City and a barge operating out of Minto Landing are available for hire to transport supplies to points along the Yukon (such as the Ballarat Landing) where they can be subsequently mobilized by helicopter to the property. During the 2010 program, personnel were mobilized from the Boulevard camp via Hughes 500D helicopter.

5.0 HISTORY

5.1 Previous Work

No historic work or Minfile occurrences are documented on the ground now covered by the TAK claims. Ballarat Creek has seen placer gold mining in the past.

The TAK property was staked in June and July, 2009 and the first known work on the property was completed in the same year (Johnston, 2010). This program comprised collection of 23 stream sediment samples collected every 50 m along Tak Creek and a larger tributary at the southern end of the property. Results of elements of interest were low.

The bedrock geology of the region was most recently compiled by Godrey and Ryan (2005); the section of this map which shows the geology surrounding the TAK property is shown in Figure 3.

5.2 2010 Exploration Program

During August 1-3, 2010, three samplers were dispatched to the TAK property. Soil sampling was completed along contour-type traverse lines about 250 m to the north and south of Tak Creek. Samples were collected at 50 m intervals along these lines. Silt samples were collected on tributary creeks and float rock samples of quartz veined material were also collected. In total, three float rock samples, eight silt samples and 195 soil samples were collected during the 2010 program.

Samples were submitted to the ALS Laboratory Group preparation facility in Whitehorse and were analysed for a 51-element high precision suite (ME-MS41) and gold by 30 g fire assay (Au-AA23). Assay certificates of analysis are presented in an Appendix at the end of this report. Rock and silt sample sites are marked with blue and pink flagging tape, and a metal tag inscribed with the sample number. Soil sample sites are marked with blue and orange flagging and a Tyvek tag. All sample locations for silt, soil and rock samples were recorded by hand-held GPS.

A magnetic declination of 22° E was used for all compass measurements. All maps and UTM coordinates are referenced to the 1983 North American Datum (NAD-83; Zone 7).

6.0 REGIONAL GEOLOGY AND MINERALIZATION

6.1 Geology

The TAK claims are located within the Yukon-Tanana Terrane in west-central Yukon (Colpron, 2006), a pericratonic terrane of continental affinity that occupies a position between the ancestral continental margin of North America and outboard accreted terranes. The pericratonic terranes were accreted in the Early Jurassic, while subsequent outboard exotic terranes began accreting in the Early to mid-Cretaceous. At this time, the pericratonic package was intruded by a voluminous, northwest-to southeast-trending plutonic suite, referred to as the Dawson Range plutonic belt by Hart et al. (2004) (Klotassin batholith of Templeman-Kluit, 1974), which lies south of the TAK property.

Regional-scale geological compilation maps (Gordey and Makepeace, 1999) show that the TAK claims are underlain by Devonian-Mississippian orthogneiss superposed on Nasina and Klondike schist rocks (Figure 3).

6.2 Mineralization

The nearest good example of gold mineralization to the TAK property is the Coffee property of Kaminak Gold located 25 km to the west-southwest where significant gold discoveries were announced in spring 2010 (Carpenter, 2011). No resource has been calculated for the Coffee but early drill results include intercepts of 17.1 g/t Au over 15.5 m and 6.3 g/t Au over 35 m within a 15 km long Au in soil anomaly. At Coffee, gold is hosted in both N-S and E-W trending structures at Coffee (Carpenter, 2011) but at both locations gold-bearing structures overprint regional gneissic and schistose deformation fabrics indicating that gold is tectonically late. Gold-bearing zones at Coffee are characterised by silicification plus sericite-clay alteration with variable As-Ag-Sb-Ba-Mo enrichment but the dominant sulphide phase is arsenic-rich pyrite. Gold mineralization at Coffee is hosted by many different rock-types including augen orthogneiss, hornblende-biotite granite, schist and dacite dykes.

The TAK property is underlain by similar orthogneiss rocks which comprise a good host rock at Coffee, although no detailed mapping has been completed at TAK.

7.0 GEOCHEMISTRY

7.1 Rock Geochemistry

None of the three float rock samples collected returned significant values for Ag, As, Sb or Mo (Figures 5a – 5d). Geochemical values for Au were all below detection (<0.005 ppm).

7.2 Soil Geochemistry

Soil results for the 2010 TAK program have been compared with the larger (14,000+) database of soil analyses from numerous Silver Quest properties across the Dawson Range. Based on this larger dataset, only one zone of anomalous soil is delineated. This anomaly is about 200 m by 200 m, covers the headwaters of Tak Creek and is defined by a group of six soil samples four of which returned greater than 90th percentile Au and range from 7 to 12 ppb Au. A single sample 500 m to the south returned 36 ppb Au. Apart from some adjacent samples near the south of the property that returned elevated Zn, all other metals of interest (e.g. Ag, As, Bi, Mo, Sb) returned low values (Figures 5a – 5d).

7.3 Silt Geochemistry

Eight silt samples were collected from creeks on the TAK property in 2010 (Figures 4, 5a – d). Compared with results from Silver Quest's proprietary database of 752 silt samples from across the region, most samples rank below the 70th percentile in Au, Ag, As, Bi, Sb and Mo and are thus not judged to be anomalous. A single sample returned 9 ppb Au (~75th percentile) and three samples near the gold-in-soil anomaly at the headwaters of Tak Creek returned elevated Ag (0.10 to 0.19 ppm) which ranks as 70th to >90th percentile based on the larger dataset.

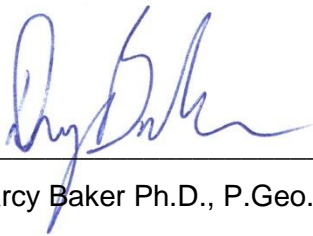

8.0 PROPERTY GEOLOGY AND MINERALIZATION

No mapping was conducted on the TAK property in 2010.

9.0 DISCUSSION AND CONCLUSIONS

Though the number of samples taken from the TAK property in 2010 was relatively few, good reconnaissance level coverage was achieved. Based on the samples taken, there are no obvious indications of a widespread gold mineralizing system. Two small areas are, however, worthy of follow-up work: the small drainage returning 9 ppb Au and the area near the headwaters of Tak Creek with low-level elevated Au-in-soils and nearby elevated Ag in silt samples. The ridge line along the north-eastern part of the property could also be soil sampled at a reconnaissance level.

Respectfully submitted,

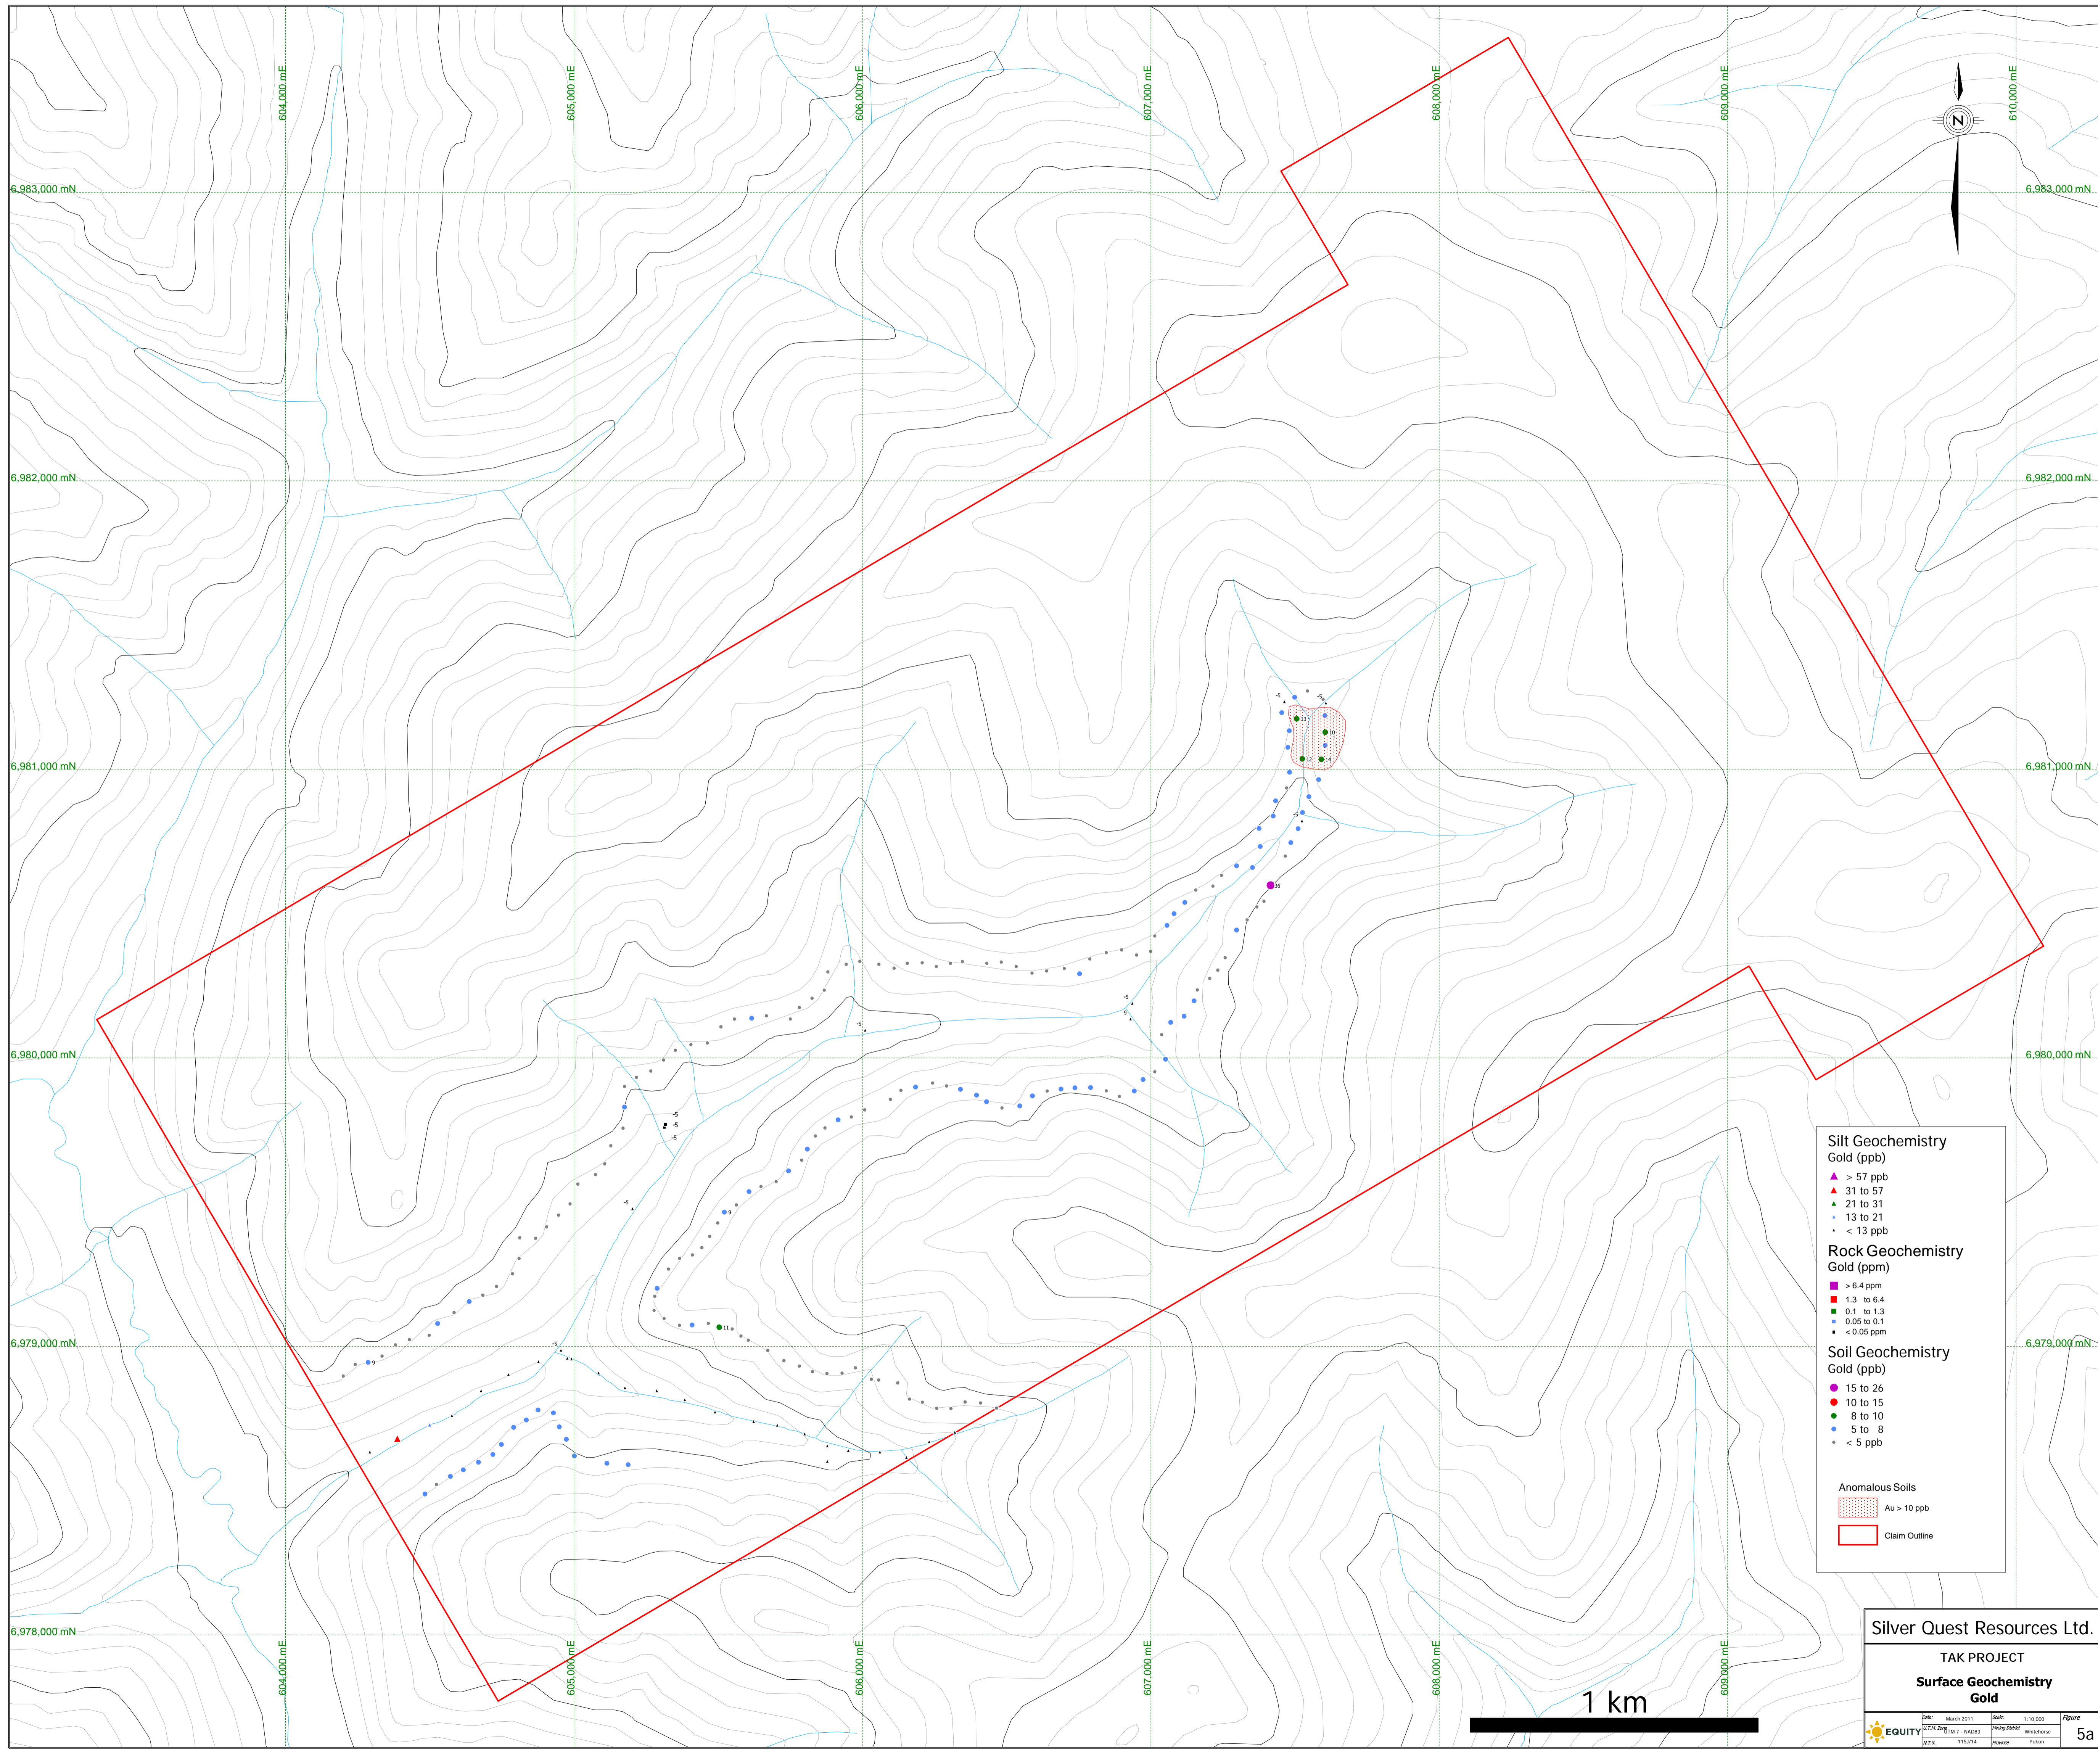

Darcy Baker Ph.D., P.Geo.

CERTIFICATE WH10122484

Project: SQI10-06
 P.O. No.: SQI10-06_22
 This report is for 184 Soil samples submitted to our lab in Whitehorse, YT, Canada on 26-AUG-2010.
 The following have access to data associated with this certificate:
 EQUITY ENG E-MAIL DARCY BAKER

SAMPLE PREPARATION	
ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-24	Pulp Login - Rcd w/o Barcode
LOG-22	Sample login - Rcd w/o BarCode
SCR-41	Screen to -180um and save both

ANALYTICAL PROCEDURES		
ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
ME-MS41	51 anal. aqua regia ICPMS	

To: EQUITY EXPLORATION CONSULTANTS LTD.
 ATTN: DARCY BAKER

CERTIFICATE OF ANALYSIS WH10122485

Method	CERTIFICATE COMMENTS
ALL METHODS ME-MS41	NSS is non-sufficient sample. Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g).

CERTIFICATE WH10122489

Project: SQI10-06
 P.O. No.: SQI10-06_23
 This report is for 220 Soil samples submitted to our lab in Whitehorse, YT, Canada on 26-AUG-2010.
 The following have access to data associated with this certificate:
 EQUITY ENG E-MAIL DARCY BAKER

SAMPLE PREPARATION	
ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
EXTRA-01	Extra Sample received in Shipment
LOG-22	Sample login - Rcd w/o BarCode
SCR-41	Screen to -180um and save both

ANALYTICAL PROCEDURES		
ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
ME-MS41	51 anal. aqua regia ICPMS	

To: EQUITY EXPLORATION CONSULTANTS LTD.
 ATTN: DARCY BAKER

CERTIFICATE OF ANALYSIS WH10122489

Method	CERTIFICATE COMMENTS
ALL METHODS ME-MS41	NSS is non-sufficient sample. Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g).

Appendix D: Data Disc

Report text, geochemical databases, drafting and plot files

Appendix E: Geologist's Certificates

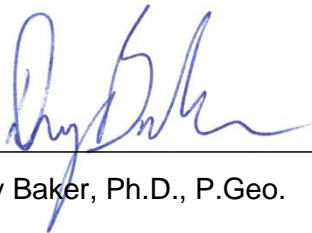

GEOLOGIST'S CERTIFICATE

Darcy E.L. Baker
Suite 114 – 2635 Prince Edward Street,
Vancouver, BC, Canada

I, Darcy Baker, P.Geol. do hereby certify that:

- I am a Geologist and President of Equity Exploration Consultants Ltd., with offices at Suite 200–900 West Hastings Street in the City of Vancouver, B.C., in the Province of British Columbia.
- I am a member in good standing (#33,448) of the Association of Professional Engineers and Geoscientists of British Columbia.
- I am a graduate of Dalhousie University (1997) with an Honours Bachelor of Science degree in Geology, and am a graduate of the University of Newcastle, Australia (2003) with a Doctor of Philosophy degree in Geology, and I have practiced my profession continuously since 1997.
- Since 1997 I have been involved in mineral exploration for gold, silver, copper, uranium, molybdenum, lead and zinc across Canada and in Alaska, Nevada and Australia.
- I am a Consulting Geologist and principal of Equity Exploration Consultants Ltd. (a geological consulting and contracting firm) and have been so since May 2003.
- I managed the Yukon field exploration campaigns for Silver Quest during 2010.
- I am independent of Silver Quest.

Dated at Vancouver, British Columbia, this _____ day of _____, 2011.

Darcy Baker, Ph.D., P.Geol.
