Author:

David Clark, M.Sc., P.Geo.

1. Abstract

The STW property is located approximately 190 km east-northeast of Mayo, Yukon Territory. The STW claims, subject of this report, consist of 230 two-post Yukon Quartz claims. Together, the claims make up the STW property and collectively cover an area of approximately 4800 hectares. The property is 100% owned by Rackla Metals Inc.

Access to the property can be gained by helicopter from the Rackla River airstrip, which is itself accessible by fixed wing aircraft either from the Mayo or Whitehorse airports. The nearest road is at Mayo.

The STW claims overlie sedimentary rocks of the Selwyn Basin, transitional from deep water clastic rocks to platform carbonates. The rocks underlying the STW claims are part of the Hyland Group, the oldest exposed rocks in the Selwyn Basin. These same strata host the Atac Resources' Nadaleen-trend Au-targets, recently identified as Carlin-type Au systems. The STW property abuts Atac's property, and its Osiris, Conrad, and Isis targets are less than 4 km away from the northwestern boundary of the STW property. The Dawson thrust and Kathleen lakes fault, both important mineralization-bounding structures identified by Atac Resources, appear to strike onto the STW property.

A significant soil, stream, and rock sampling program was undertaken in the summer of 2011, in addition to geological mapping, and a magnetic and radiometric airborne geophysical survey. A total of 7803 samples were collected: 7577 soils, 95 silts, 8 BLEG, and 123 rocks. Soil samples contained anomalous values for Au (up to 220 ppb), Tl (up to 50 ppm), As (up to 8468 ppm), as well as anomalous Sb and Hg. The soil samples define a long > 3 km geochemical anomaly in the eastern half of the property, associated with limestones in a complex folded domal feature, with local anomalous highs associated with fold hinges or fault structures. Rock samples from the same area returned values up to 292 ppb Au.

Proposed future work consists of additional geological mapping and prospecting to better define existing anomalies with a view to defining trenching targets. Mechanized trenching is recommended over targets defined by the proposed follow-up work. Should the above work yield positive results, diamond drilling is recommended.

3. Introduction

The purpose of this report is to fulfill Yukon Government mineral claim assessment requirements on the STW 1 – 230 claims. The STW property consists of 230 two-post mineral claims (Yukon quartz claims), staked in 2010 and owned 100% by Rackla Metals Inc.

Work in 2011 consisted of initial ridge-and-spur reconnaissance soil sampling and stream sediment sampling, and was followed up by detailed grid soil sampling, where the results warranted. In total, 7803 surface samples collected from the property and sent for assay. In addition, an airborne magnetic and radiometric survey was undertaken, as well as preliminary geological mapping of property. Total eligible expenditures on the property amount to \$694,000.

This report describes the location, access, history and geological setting of the STW claims, the known property geology, the work performed and results of the 2011 work program, a statement of costs, as well as an outline of a proposed exploration program to further explore the property.

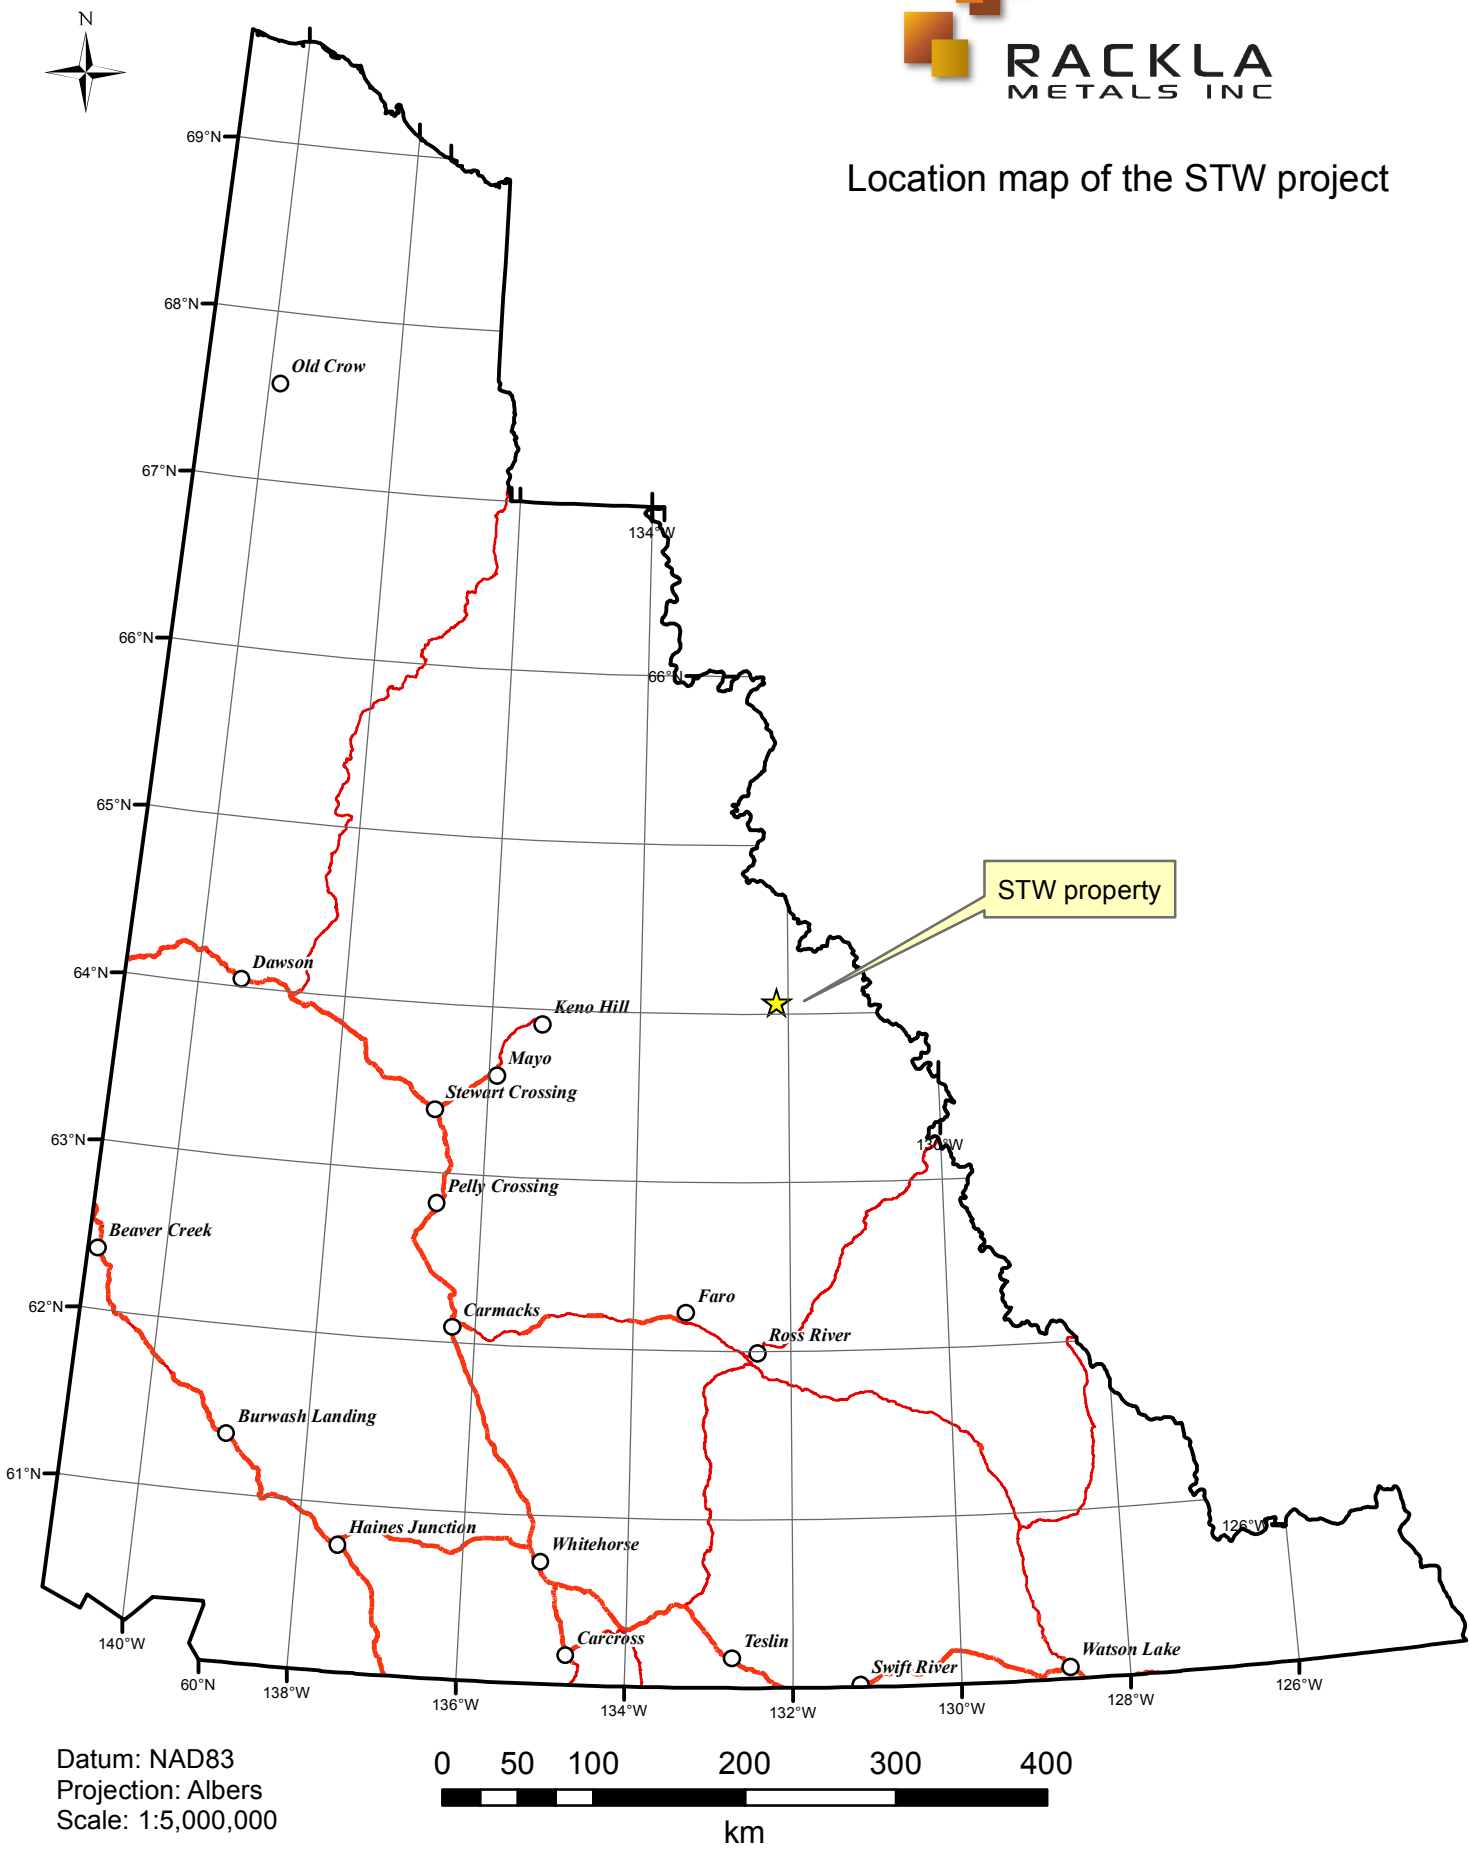

a) Location and access

The STW property is located in the Mayo Mining District, in the Selwyn Mountains approximately 190 km east-northeast of Mayo, Yukon Territory, some 3 km north of the Stewart River, and 46 km east-southeast of the Rackla River airstrip (Fig. 1). The property covers NTS map sheets 106C/01 and 106B/04, and spans UTM zones 8 and 9.

Access to the property can be gained by small fixed-wing aircraft from Whitehorse or Mayo to the Rackla River airstrip, and from there by helicopter to the property. The Mayo airstrip is located in Mayo, Yukon Territory, 407 km by maintained 2-lane paved highway to the north of Whitehorse. Mayo is reached by taking the Klondike Highway (YT-2 N) from Whitehorse to Stewart Crossing, and highway YT-11 E from Stewart Crossing to Mayo. From Whitehorse, daily jet airplane service can be gained to Vancouver, British Columbia, and other points south.

Location map of the STW project

b) Topography, vegetation, and climate

Terrain in the region is rugged and mountainous, with elevations ranging from 800 m on the Stewart River to 1675 m on the highest mountain tops on the property. The hillsides are steep and covered with a veneer of locally-derived colluvium and talus. Drainages are incised and steep. The property drains into the Stewart River, which is part of the Yukon River drainage system.

Vegetation in the valley bottoms consists of alders and often thick black spruce. The higher elevations are largely treeless, with alpine plants, moss, and small alders and buck brush dominating. Both black and grizzly bears are common, as are caribou and moose.

Climate is sub-arctic, characterized by cool, short summers with temperatures between 5 °C and 20 °C, and long, cold winters, with temperatures frequently below -30 °C. The window for exploration is generally between June and September.

c) History

The region surrounding the STW claims has been explored for base metals since the mid-1970s, and several occurrences are documented in Yukon Minfile reports. The closest of these to the STW claims is the Birkeland occurrence (Yukon Minfile 106B 024), explored by McIntyre Mines Ltd. (1974 ###). The occurrence is located 6 km north of the eastern edge of the STW property, and was staked as the Tom & Mom claims in 1974 by McIntyre Mines Ltd. Mapping and follow up trenching and drilling proceeded in both 1974 and 1975. Numerous stratabound carbonate-hosted sphalerite-galena showings were discovered, with trench assays of up to 25% combined Pb-Zn. The best intersection in drill core assayed 4.4% Zn, 0.5% Pb, and 2.7 ppm Ag over 1.8 m.

More recently, the region has seen renewed interest in gold exploration, with Atac Resources staking a large position across the east-west informally-named Rackla belt. The Osiris, Conrad, and Eaton showings are located 4 km to the NNW of the western edge of the STW property. Highlights from the 2010 and 2011 exploration drill programs on these showings include: 65.2 m of 4.65 ppm Au (Osiris) and 114.93 m of 3.15 ppm Au (Conrad). The showings have been interpreted as being true Carlin-type, and the possibility of a new Carlin-type district in the Selwyn Basin sparked a staking and exploration rush in 2010 and 2011.

The STW claims were staked by Radius Gold Inc. in 2010, as the significance of the Atac Resources discoveries at Osiris, Isis, and Conrad had begun to be understood, with plans to explore for Carlin-type gold systems in the summer of 2011. Radius subsequently spun out its Yukon portfolio of properties into a new corporation, Rackla Metals Inc., in the fall of 2011, including the STW property. The work described in this report was conducted by Radius prior to the spin-out.

d) Claim status

The STW property covers an area of approximately 4800 ha, and consists of 230 un-surveyed contiguous 2-post Yukon 'Quartz' claims (Fig. 2). A summary of claims is given in Table 1, with a full claim list in Appendix 1. The claims were staked in accordance with the Yukon Quartz Mining Act and are located in

the Mayo Mining District. They are shown on claim sheets 106C/01 and 106B/04. Hard copy claim maps are available for viewing at the Mayo Mining Recorder's office, or via the Yukon Mining Recorder's website.

It should be noted that on Fig. 1, and on all subsequent maps of the STW property, the easternmost ~ 3 km of the claims lie in UTM zone 9, whereas the rest of the property lies in zone 8. For ease of plotting, all maps are projected in UTM zone 8, projecting zone 8 into zone 9. Samples falling in zone 9 thus appear to have zone 8 coordinates. All location coordinates reported in the appendices and elsewhere are given in their proper native UTM zone, however.

Table 1: STW Summary claim list

* Expiry date subject to acceptance of this report

Name	Grant numbers	Expiry date *
STW 1 – 146	YD69503 – YD69648	2016-03-31
STW 146 – 230	YD90316 – YD90399	2016-03-31

4. Regional geology

The STW claims lie in the northeastern part of the Selwyn Basin, a paleo-geographic feature consisting of Neoproterozoic to Paleozoic slope-to-basin facies sedimentary strata. These represent sediment accumulation in a spreading margin environment, deposited on the northwestern margin of ancient North America. They have been interpreted as the slope-to-basin sediments on the lower plate of an asymmetric rift system associated with the breakup of the Rodinia supercontinent, (cf. Lister et al., 1986) and range from deep water shales, turbidite sequences, to transitional carbonate shelf sediments. Basement rocks are presumed to be thinned continental crust (Armstrong, 1988).

The Selwyn Basin rocks are variably folded and faulted and merge to the northeast with the Mackenzie platform foreland fold-and-thrust belt, representing the furthest inboard components of the passive margin sediments overthrust onto the North American craton, and to the southwest are juxtaposed to the accreted and dextrally offset Yukon—Tanana and Cassiar terranes (Mair et al., 2005).

Orogeny commenced in the Late Jurassic, with the closure of the passive margin basin and with the collision of the allochthonous units of the composite Yukon-Tanana terrane with the North American margin. Folding and thin-skinned thrust sheets accompanied by intense internal deformation were developed within the Selwyn Basin rocks (possibly in part along pre-existing extensional structures), the most important of which are, from north to south, the Dawson, Tombstone, and Robert Service thrust faults. The Dawson thrust, which marks the transition between the Mackenzie Platform and the Selwyn Basin, is thought to represent a major pre-thrust deformation basin-bounding structure. Orogenesis was ongoing into the Cretaceous; magmatism followed, emplacing plutons and volcanic units in both the Yukon—Tanana terrane and the Selwyn Basin (Woodsworth et al., 1991).

The initiation of subduction of the Kula plate during the late Cretaceous introduced orogen-parallel stress to the accreted and passive margin terranes, causing 400-500 km of dextral displacement along the Tintina fault, which separates the Yukon-Tanana exotic terranes from the Selwyn Basin rocks (e.g. Mortensen et al., 2000). Reconstructions to dextral-displacement place the Selwyn Basin rocks adjacent to what is now the Yukon-Tanana terrane rocks in east-central Alaska.

5. Property geology

Stratigraphically, the STW property is located within some of the oldest exposed sediment sequences in the Selwyn Basin, and in general consists of alternating sequences of clastic and carbonate rocks belonging to the Hyland Group. The close proximity of the Dawson fault, suggests that the rocks underlying the STW property are represent transitional sedimentary facies from the carbonate platform to the deeper water environment. The exact geometry and location of the Dawson thrust with respect to the STW property is currently unknown; existing maps show it to terminate approximately 1.5 km west of the STW property boundary. Atac Resources have identified both the Dawson thrust and the regional (and parallel) Kathleen Lakes fault as important structures bounding the Osiris, Conrad, and Isis deposits. Both the faults should strike onto the STW property, if their expression continues eastwards, but further mapping work is necessary to determine this. The Yukon Geological Survey is expected to map the area in detail in the summer of 2012, which will no doubt help future interpretations.

Mineralization at Atac Resources' neighbouring Nadaleen-trend deposits (Osiris, Isis, Conrad) is described as stratabound in silty carbonate hosts, and associated with deep-seated ancient faults. Gold is cryptic, with a high correlation of pathfinder elements arsenic, antimony, mercury, and thallium. The arsenic minerals realgar and orpiment are observed in core, in trench, and occasionally as flecks in soil and talus (Atac 2012).

Au-in-soil anomaly maps over the Nadaleen trend targets show a range in concentrations, from maximums of 100-200 ppb over the centre of the buried Conrad showing, to > 1000 ppb Au over the exposed-at-surface Osiris showing.

6. 2011 Work program

The 2011 work program on the STW claims was carried out by Radius Gold Inc. personnel and sub-contractors between June 10, 2011, and August 26, 2011. A 20-man exploration camp consisting of wall-tents and temporary wooden structures was established on the northeastern side of the Rackla airstrip, located approximately 46 km west-northwest of the geographic centre of the STW property. Archer Cathro, operators of the Atac Resources projects, ran a large exploration camp located on the southwest side of the airstrip. Other nearby stake holders also used the airstrip as a staging point at various times during the summer.

Access to the property was by Bell 206L helicopter, provided by Peak Helicopters of Parksville, British Columbia. Provisions, equipment, and crew-changes were flown in from Whitehorse and Mayo by Alkan Air, operating a variety of chartered fixed-wing aircraft. Radius personnel designed and oversaw the work program, providing geologists and samplers, and Casselman Geological Services of Whitehorse, Yukon, built and operated the camp, and provided the camp manager, cook, and soil sampling crews.

The 2011 work program consisted of a helicopter-borne magnetic and radiometric survey, contracted to Precision Geophysics, of Vancouver, British Columbia, geological mapping, and soil, stream sediment, and rock sampling.

a) Geological mapping

In 2011, the STW property was mapped by Grant Abbott (formerly with the Yukon Geological Survey) over the course of a two-day site visit (Fig. 3). He describes the geology as follows (Abbott, 2011):

“The STW Claims are underlain by a sequence of clastic and carbonate rocks at least 2 km thick that correlates with the Early Cambrian and Neoproterozoic Hyland Group. The Hyland Group includes the oldest exposed rocks in the Selwyn Basin and is at least 3 km thick. The STW sequence includes two distinct carbonate packages separated by recessive shale-dominated clastic rocks. The uppermost unit of maroon and green shale and siltstone closely resembles the Narchilla Formation, the highest member of the Hyland Group. Underlying carbonates are assigned to the Algae Lake Formation. Strata below the Algae Lake Formation do not closely resemble the Yusezu Formation which underlies the Algae Lake Formation elsewhere and are therefore not named, but are still considered to belong to the Hyland Group. The siliciclastic rocks beneath the Algae Lake Formation contain lithologies like those in the Yusezu Formation but shale is dominant and coarser clastic rocks only form a single horizon about 50 m thick. In contrast, the Yusezu Formation is more than 2 km thick and consists primarily of arkosic sandstone and grit interbedded with lesser amounts of siltstone and shale. The orange and grey carbonates near the base of the sequence are not known to occur in the Hyland Group elsewhere, but other equivalent strata are also not known.

Structures on the property can be divided into an eastern and a western domain separated by a north trending vertical fault near the center of the claim block. The western domain consists of a simple east-west trending, steeply south dipping, upright panel comprised of the Narchilla Formation, the Algae Lake Formation and underlying unnamed shales. The eastern domain consists of a complex domal feature bounded to the southwest and southeast by the Narchilla Formation, with the oldest strata in the center.

The configuration to the north remains undefined. Smaller scale structures consist primarily of tight northwest to westerly trending folds with wavelengths of about 100 m. Strata along the southeast margin of the property strike consistently northeast at right angles to the folds suggesting an interference pattern resulting from two phases of deformation. It is unclear which phase came first."

b) Soil, stream, and rock sampling

A total of 7803 samples were collected: 7577 soils, 95 silts from stream sediments, 8 BLEG (bulk leach extractable gold) from stream sediments, and 123 rock hand samples from outcrop or float. Hand-held GPS units were used to record sample locations. Figs. 4a and 4b show sample locations for all samples. Soil, stream, and rock samples were shipped to Acme Analytical's sample preparation facility in Whitehorse for preparation and processing, and forwarded to their Vancouver laboratory for analysis for all samples except the BLEG samples, which were analysed at their laboratory in Santiago, Chile.

First pass sampling consisted of ridge and spur collection of soils. At elevations above treeline, very little O or A horizon soils exist, with most samples consisting of fine-grained talus material from uphill outcrop or subcrop, or more or less in place C horizon material. Below tree level, the generally thick organic cover made it difficult to obtain any kind of quality B or C horizon soil, so sampling in deep valleys or in southern third of the property, which slopes down towards the Stewart River, is limited. The early summer soil sampling showed the property's potential, and a follow-up grid-based soil sampling program was designed for mid-summer. The complex domal feature in the eastern third of the property was sampled on a 50m x 50m grid. The western domain was sampled at 50 m intervals along 100 m spaced north-south lines. All soil samples were obtained by either a trowel or hand auger, as required, stored in paper Kraft soil sample bags and dried at camp prior to shipping. All soil samples were sent to Acme Analytical's sample preparation facility in Whitehorse, Yukon, where they were dried at 60C and sieved to 80-mesh. Samples were analysed in the Vancouver laboratory. A 15 gram aliquot were digested in Aqua Regia and analysed for a 53 element suite by ICP-MS (Acme method code 1F05).

Most drainages on the property were sampled for stream silts. Silts were collected from potential heavy mineral trap sites, sieved to 80-mesh, and stored in plastic sample bags. In addition, particular sites were chosen for BLEG (bulk leach extractable gold) analysis in addition to the regular silt analysis. Silts were forwarded to Acme's preparation facility in Whitehorse, Yukon, where they were dried and sieved to 150-mesh. Samples were analysed in the Vancouver laboratory. A 30 gram aliquot was digested in Aqua Regia and analysed for a 37 element suite by ICP-MS (Acme method code 1F03). In addition, a 50 g aliquot was fused by lead collection fire assay and analysed for Au by ICP-ES (Acme method code 3B01+3B04).

Rocks were collected from outcrop, subcrop and float. These were sent to Acme's sample preparation facilities in Whitehorse for crushing. Samples were pulverized to 200-mesh, and analysed in the Vancouver laboratory. A 30 g aliquot was fused by lead-collection fire assay and analysed for Au by ICP-ES finish (Acme method code 3B01). A 0.5 aliquot was digested in Aqua Regia and analysed for a 36 element suite by ICP-MS (Acme method code 1DX1). Any overlimits were digested by hot 4-acid digestion, with ICP-ES finish (Acme method code 7TD).

Maps with results for selected elements are presented in Section 7 of this report, a table of coordinates and geochemical results for selected elements is given in Appendix B, and analytical certificates are included in Appendix C.

c) Geophysical survey

Precision GeoSurveys Inc., of Vancouver, British Columbia, was contracted to undertake a helicopter-borne magnetic and radiometric survey of the STW property. The survey was performed between July 25th and July 28th, 2011. The full report from Precision Geophysics for this survey is reproduced in Appendix D.

7. Geochemical results

The bulk of the 2011 exploration effort was directed towards a comprehensive and tightly spaced soil grid over the property, with particular emphasis on areas of structural complexity. As such, the western half of the property was covered by 50 m spaced samples on 100 m spaced lines, whereas the domal feature in the eastern half of the property was covered by a 50 x 50 m grid.

Maps showing results for the elements Au, As, Tl, Sb, and Hg for all soil samples collected during the 2011 field season are shown in Figs. 5a to 5e. The underlying lithologies, as described in Section 6a of this report, are also shown in outline for comparison with the geological map. Symbol levels were chosen by Jenks natural breaks optimization, then rounded to the nearest convenient whole multiple for ease of discussion and presentation.

The soil results show good spatial correlation for anomalies for all the elements of interest. The domal feature mapped in the eastern part of the property shows the largest areas of anomalous geochemistry, with the limestone lithologies (NPgl and the Algae Lake formation, NPAL) and/or associated shales appearing to be hosts of coincident Au-As-Tl-Sb-Hg anomalies, particularly associated with fold hinges and/or potential fault structures. Au-in-soil concentrations in this zone reach up to 220 ppb; however, consistent with exploration results reported on the Atac Resources' Nadaleen property (Atac, 2012), Au-in-soil concentrations of > 10 ppb are considered anomalous. The magnitude of the aggregate soil anomaly (in all geochemical spaces) is uncertain due to the steep topography and potential for mobility of surficial materials, but appears to be > 3 km long, and that mostly along strike of the favourable limestone lithologies.

Rock and stream sediment sampling was much more limited in scope than soil sampling. Results for Au are shown in Fig. 6. Stream sediment results were not considered to be significant, and the limited rock sampling results were generally low, with the exception of a cluster of Au-anomalous samples (up to 135 ppb Au) located near the southern fold hinge of the domal feature, also associated with a significant Au-As-Tl-Sb-Hg soil anomaly. One other sample from the domal feature, located near the northern property boundary, assayed 292 ppb Au.

8. Recommendations for future work

Analytical results from the 2011 soil sample geochemical program located a number of gold in soil anomalies. These anomalies may indicate the presence of a significant precious metal hydrothermal system with the best results and most favorable area being the east side of the property where a broad (approximately 3 km by 2 km multi element anomaly) was identified. Anomalous analytical results from soil samples for gold and pathfinder elements arsenic, mercury and thallium are focused in and around the limestones in the domal feature in the eastern portion of the property, and around cross cutting fault zones. Taken together, the geological setting and geochemical results are favorable for the location of a sediment hosted gold (Carlin type) deposit on the property.

Additional rock geological mapping, prospecting and concurrent rock sampling are recommended to both better define the existing anomalies and to explore areas, not sampled in 2011, on the margins of anomalies identified in 2011. In particular, on the east side of the property, the area to the east and southeast of the broad multi element soil geochemical anomaly needs further definition. All of the above work should be directed towards defining trenching targets. Mechanized trenching, utilizing a helicopter portable excavator such as a `Can-Dig` excavator is recommended over targets defined by the above follow up geological mapping and geochemical sampling. Should the above work yield positive results, diamond drilling is recommended.

9. Statement of costs

Total expenditures for the 2011 exploration program on the STW property are given in the following table:

Helicopter	\$195,000
Jet-A Fuel	\$40,000
Fixed wing aircraft support	\$65,000
Labour & contractors	\$194,000
Geochemistry	\$150,000
Camp and supplies	\$50,000
Total	\$694,000

10. Statement of qualifications

I, David Clark, of:

402 – 2336 York Avenue
Vancouver, British Columbia
V6K 1C7

hereby certify that:

1. I am a mineral exploration geologist with over 10 years of experience, of which 2 have been in the Yukon Territory.
2. I hold an M.Sc. in geology and a B.Sc. (Hons.) in planetary science, both granted by McGill University, Montreal, Canada.
3. I am a registered as a professional geoscientist (#37081) with the Association of Professional Engineers and Geoscientists of British Columbia
4. I am the principle author of this report on the STW 1 – 230 claims in the Mayo Mining District, Yukon Territory.
5. I have been on the ground covered by the STW 1 – 230 claims. This report is based on both my work and the work of my colleagues, and on referenced sources.

Appendix C: Analytical certificates

Acme Analytical Laboratories (Vancouver) Ltd.
1020 Cordova St. East Vancouver BC V6A 4A3 Canada

www.acmelab.com

Client: **Radius Gold Inc.**
830 - 355 Burrard St.
Vancouver BC V6C 2G8 Canada

Submitted By: Roger Hulstein
Receiving Lab: Canada-Whitehorse
Received: June 16, 2011
Report Date: July 04, 2011
Page: 1 of 2

CERTIFICATE OF ANALYSIS

WHI11000240.1

CLIENT JOB INFORMATION

Project: SCARLETT
Shipment ID: 2011-01
P.O. Number: NA-11330
Number of Samples: 22

SAMPLE DISPOSAL

STOR-PLP Store After 90 days Invoice for Storage
STOR-RJT Store After 90 days Invoice for Storage

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Radius Gold Inc.
830 - 355 Burrard St.
Vancouver BC V6C 2G8
Canada

CC: Simon Ridgway
database backup
Scott Turton

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
R200-250	21	Crush, split and pulverize 250 g rock to 200 mesh			WHI
3B01	22	Fire assay fusion Au by ICP-ES	30	Completed	VAN
1DX1	22	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN
7TD	1	4-acid Digestion ICP-ES Finish	0.5	Completed	VAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CERTIFICATE OF ANALYSIS

WHI11000241.1

CLIENT JOB INFORMATION

Project: SCARLETT
Shipment ID: 2011-02
P.O. Number: NA-10337
Number of Samples: 278

SAMPLE DISPOSAL

STOR-PLP Store After 90 days Invoice for Storage
STOR-RJT Store After 90 days Invoice for Storage

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Radius Gold Inc.
830 - 355 Burrard St.
Vancouver BC V6C 2G8
Canada

CC: database backup
Simon Ridgway
Scott Turton

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Table with 6 columns: Method Code, Number of Samples, Code Description, Test Wgt (g), Report Status, Lab. Rows include SS80, Dry at 60C, 1F05, and RJSV.

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
S150	41	Sieve to 150 mesh			VAN
RJSV	41	Saving all or part of Soil Reject			VAN
3B01+3B04	41	lead collection fire assay - ICP-ES finish	50	Completed	VAN
1F03	38	1:1:1 Aqua Regia digestion Ultratrace ICP-MS analysis	30	Completed	VAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
S150	20	Sieve to 150 mesh			VAN
RJSV	20	Saving all or part of Soil Reject			VAN
3B01+3B04	20	lead collection fire assay - ICP-ES finish	50	Completed	VAN
1F03	20	1:1:1 Aqua Regia digestion Ultratrace ICP-MS analysis	30	Completed	VAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only.

** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CLIENT JOB INFORMATION

Project: Scarlet
Shipment ID: 2011-07
P.O. Number: NA-10337
Number of Samples: 293

SAMPLE DISPOSAL

PICKUP-PLP Client to Pickup Pulps
PICKUP-RJT Client to Pickup Rejects

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Radius Gold Inc.

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CERTIFICATE OF ANALYSIS

WHI11000352.1

CLIENT JOB INFORMATION

Project: Scarlet
Shipment ID: 2011-08
P.O. Number
Number of Samples: 38

SAMPLE DISPOSAL

STOR-PLP Store After 90 days Invoice for Storage
STOR-RJT-SOIL Store Soil Reject - RJSV Charges Apply

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Radius Gold Inc.
830 - 355 Burrard St.
Vancouver BC V6C 2G8
Canada

CC: database backup
Simon Ridgway
Scott Turton

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
S150	38	Sieve to 150 mesh			VAN
RJSV	38	Saving all or part of Soil Reject			VAN
3B01+3B04	38	lead collection fire assay - ICP-ES finish	50	Completed	VAN
1F03	38	1:1:1 Aqua Regia digestion Ultratrace ICP-MS analysis	30	Completed	VAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CERTIFICATE OF ANALYSIS

WHI11000353.1

CLIENT JOB INFORMATION

Project: Scarlet
Shipment ID: 2011-09
P.O. Number
Number of Samples: 13

SAMPLE DISPOSAL

STOR-PLP Store After 90 days Invoice for Storage
STOR-RJT-SOIL Store Soil Reject - RJSV Charges Apply

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Radius Gold Inc.
830 - 355 Burrard St.
Vancouver BC V6C 2G8
Canada

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
Dry at 60C	13	Dry at 60C			VAN
SS80	13	Dry at 60C sieve 100g to -80 mesh			VAN
RJSV	13	Saving all or part of Soil Reject			VAN
5L	13	BLEG leach CN, Au, Ag, Cu, Pb and Zn	1000	Completed	SAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

Acme Analytical Laboratories (Vancouver) Ltd.

www.acmelab.com

Client: Radius Gold Inc.
830 - 355 Burrard St.
Vancouver BC V6C 2G8 Canada

Submitted By: Roger Hulstein
Receiving Lab: Canada-Whitehorse
Received: July 01, 2011
Report Date: July 20, 2011
Page: 1 of 2

CERTIFICATE OF ANALYSIS

WHI11000383.1

CLIENT JOB INFORMATION

Project: Scarlet
Shipment ID: 2011-10
P.O. Number: NA-10330
Number of Samples: 30

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Table with 6 columns: Method Code, Number of Samples, Code Description, Test Wgt (g), Report Status, Lab. Rows include R200-250, 3B01, and 1DX1.

SAMPLE DISPOSAL

PICKUP-PLP Client to Pickup Pulps
PICKUP-RJT Client to Pickup Rejects

ADDITIONAL COMMENTS

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Radius Gold Inc.
830 - 355 Burrard St.
Vancouver BC V6C 2G8
Canada

CC: Simon Ridgway

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CERTIFICATE OF ANALYSIS

WHI11000454.2

CLIENT JOB INFORMATION

Project: Scarlet
Shipment ID: 2011-11
P.O. Number: NA-10337
Number of Samples: 319

SAMPLE DISPOSAL

PICKUP-PLP Client to Pickup Pulps
PICKUP-RJT Client to Pickup Rejects

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
SS80	318	Dry at 60C sieve 100g to -80 mesh			WHI
Dry at 60C	318	Dry at 60C			WHI
1F05	318	1:1:1 Aqua Regia digestion Ultratrace ICP-MS analysis	15	Completed	VAN
7TD1	2	4-acid Digestion ICP-ES Finish	0.5	Completed	VAN
RJSV	318	Saving all or part of Soil Reject			WHI

ADDITIONAL COMMENTS

Version 2 : 7TD-Pb Zn included.

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CERTIFICATE OF ANALYSIS

WHI11000869.1

CLIENT JOB INFORMATION

Project: Scarlet
Shipment ID: 2011-17
P.O. Number: NA-11330
Number of Samples: 10

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Table with 6 columns: Method Code, Number of Samples, Code Description, Test Wgt (g), Report Status, Lab. Rows include R200-250, 3B01, and 1DX1.

SAMPLE DISPOSAL

PICKUP-PLP Client to Pickup Pulps
PICKUP-RJT Client to Pickup Rejects

ADDITIONAL COMMENTS

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Radius Gold Inc.

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CERTIFICATE OF ANALYSIS

WHI11000886.1

CLIENT JOB INFORMATION

Project: Scarlet
Shipment ID: 2011-19
P.O. Number: NA-11330
Number of Samples: 35

SAMPLE DISPOSAL

PICKUP-PLP Client to Pickup Pulps
PICKUP-RJT Client to Pickup Rejects

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Radius Gold Inc.
830 - 355 Burrard St.
Vancouver BC V6C 2G8
Canada

CC: Simon Ridgway
database backup
Scott Turton

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Table with 6 columns: Method Code, Number of Samples, Code Description, Test Wgt (g), Report Status, Lab. Rows include R200-250, 3B01, 1DX1, and G6Gr.

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CLIENT JOB INFORMATION

Project: Scarlet
Shipment ID: 2011-15
P.O. Number: NA-10337
Number of Samples: 320

SAMPLE DISPOSAL

PICKUP-PLP Client to Pickup Pulps
PICKUP-RJT Client to Pickup Rejects

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Radius Gold Inc.

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CERTIFICATE OF ANALYSIS

WHI11000950.1

CLIENT JOB INFORMATION

Project: Scarlet
Shipment ID: 2011-16
P.O. Number: NA-10337
Number of Samples: 321

SAMPLE DISPOSAL

PICKUP-PLP Client to Pickup Pulps
PICKUP-RJT Client to Pickup Rejects

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Table with 6 columns: Method Code, Number of Samples, Code Description, Test Wgt (g), Report Status, Lab. Rows include methods like Dry at 60C, SS80, RJSV, and 1F05.

ADDITIONAL COMMENTS

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Radius Gold Inc.
