1.0 Introduction

This report presents a summary of previous work and results of a reconnaissance soil sampling program on the ELP claims, central Yukon. This work was funded by Golden Predator Canada Corporation. Total expenditures were \$53,266.64.

Soil sampling was performed by Aurora Geosciences Ltd. of Whitehorse, YT. Logistics were provided by Aurora and the Predator Mining Group. Soil samples were assayed by Acme Labs.

The ELP claims were staked in April and May of 2011 on behalf of Golden Predator. Golden Predator Canada Corp. is listed on the TSX (TSX:GPD) and is based in Vancouver and Whitehorse. This report presents results and discussion with recommendations for future work on the property.

In addition to soil sample information, data was collected from public regional geoscience maps, published reports, and previous assessment reports.

2.0 Property and Description

The ELP property consists of 530 contiguous quartz claims, representing approximately 110 square km, in the Whitehorse mining district. The center of the claim block is located approximately 30 km northwest of the town of Faro, YT (see table 1). The property is located within NTS map sheets 105L08, 105K05, and 105K04.

See Appendix 2 for a complete list of claims and ownership information. Expiration dates are subject to the acceptance of this report.

3.0 Access, Infrastructure, Climate and Physiography

The property is located 30 km northwest of Faro, YT. No airstrips or roads access the property, but claims parallel and abut the Pelly River. Access in 2011 was by helicopter, but historically has included helicopter and boat.

No infrastructure is currently available on the property. The Robert Campbell highway and transmission lines are 2.5 km away from the claim block at their closest point.

The property was last glaciated during the McConnell glaciation (ca. 22 ka). It is located within the Glenlyon mountains, which range in elevation from 1050 to 1400 m above sea level. The property is drained by numerous creeks to the northeast into the Pelly River. These creeks tend to flow through steep canyons. Surficial deposits on the property have not been mapped in detail, but work by Bond (1999) might indicate that cover is primarily till and colluvium.

4.0 Previous Work

Table 2: Summary of Previous Work

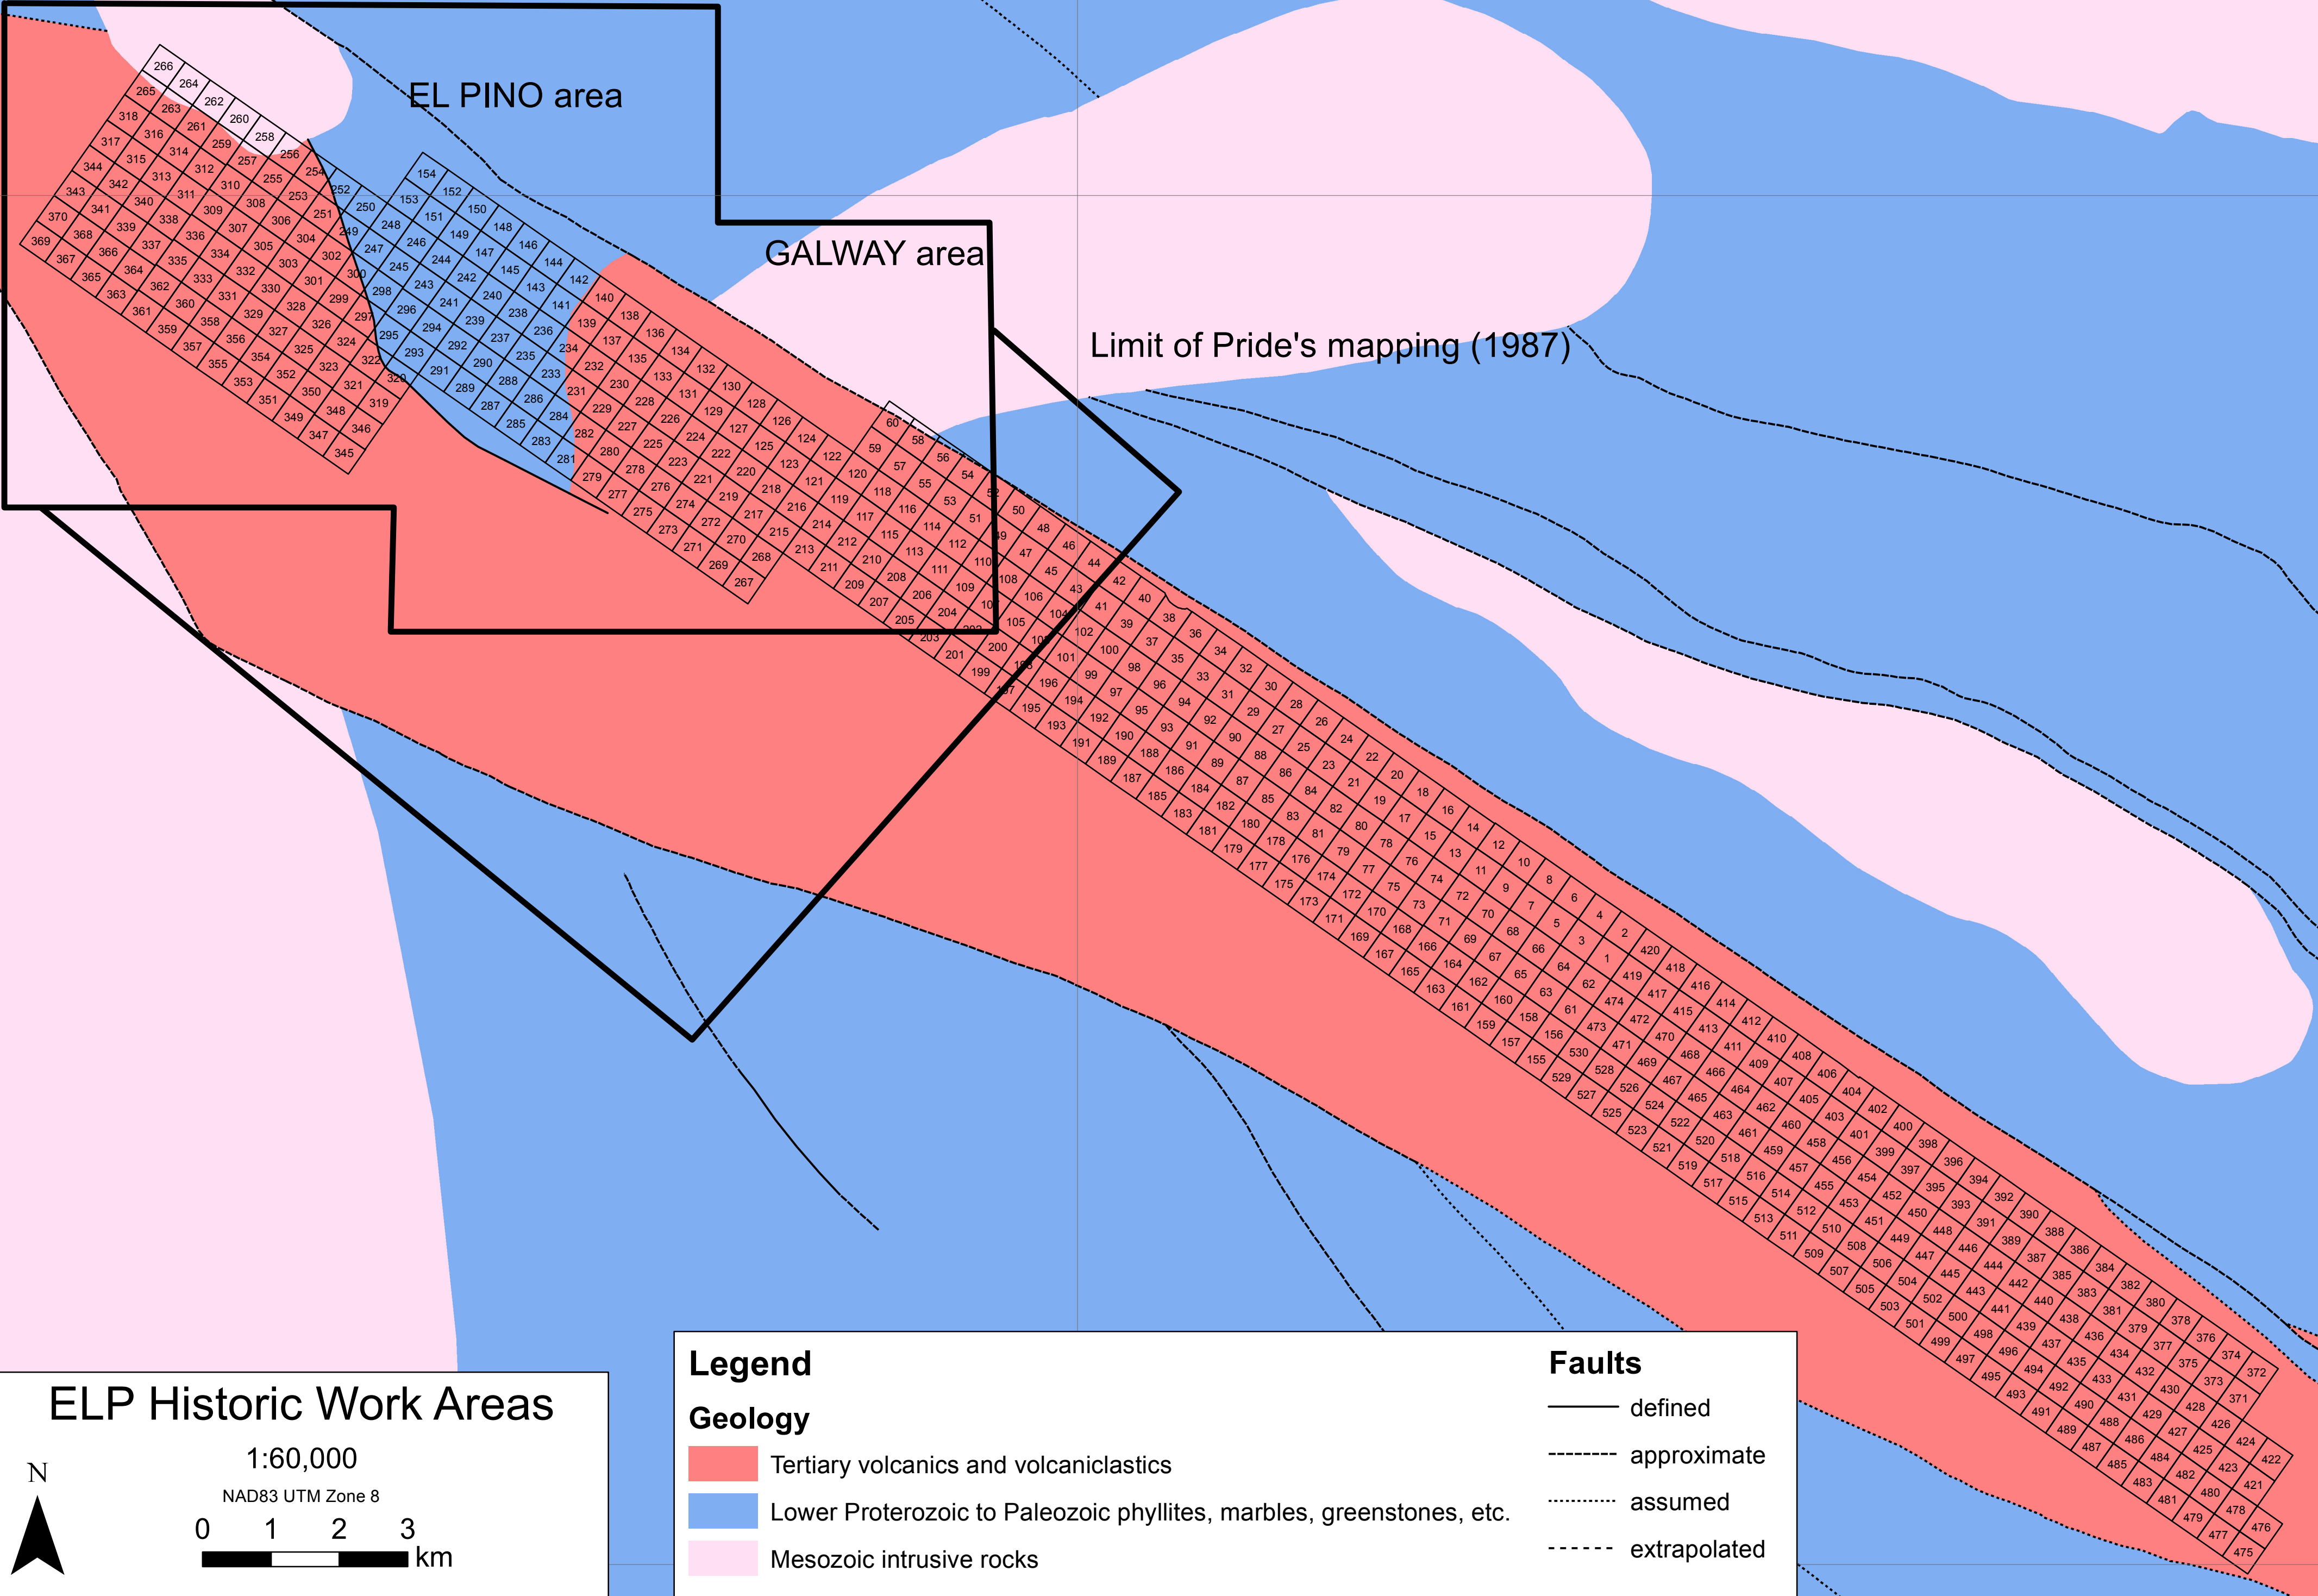

Year	Company	Report #	Minfile	Work
1984	Hudson Bay Exploration	091597	Galway	17 pan concentrate samples, 16 rock samples, VLF-EM and ground magnetic over a quartz vein occurrence. Limited mapping.
1985	Noranda Exploration	091779	El Pino	68 soil, 9 silt, 13 rock and 4 pan concentrate samples. Mapping. Identified creek with 2300 ppb Au pan concentrate and 80 ppb Au silt sample.
1986	Noranda Exploration	091902	El Pino	167 soil, 13 silt, 29 rock and 4 pan concentrate samples. Focused on fluorite-quartz veining on top of ridge (see Pride, 1988). Failed to explain anomalous creek from 1985 program, but mapping indicates it drains Paleozoics.
1989	Comaplex Minerals Corp.	092745	Galway	10 soil, 3 stream and 44 rock samples. Focused on handful of creeks in area worked by Hudson Bay. Results disappointing.

5.0 Regional and Property Geology

The property contains a package of Eocene volcanics, volcanoclastics and related basinal sedimentary rocks found elsewhere along the Tintina trench (Gordey and Makepeace, reference) and similar to those of the "Canyon graben" at the Grew Creek deposit to the southeast. These extrusives and their derived deposits represent a period of rift-related basaltic to felsic calc-alkaline volcanism (Pride, 1988). Cambrian to Mississippian metasedimentary rocks occur in fault contact with the Eocene package and Cretaceous plutons cut these older rocks. See Regional Geology map.

The ELP claims were staked to cover an area underlain by similar Tertiary volcanics to those at the Grew Creek epithermal gold deposit. The Grew Creek deposit consists of a quartz-carbonate vein stockwork in a fault-bounded Eocene ignimbrite sequence. Basaltic flows, turbidites, and rhyolite occur adjacent to the mineralized zone, indicating an active bimodal volcanic system. Elongated lobes of quartz porphyry rhyolite parallel the Tintina trench, and at Grew Creek have proven barren. See Claim Geology map.

Based off previous geological mapping in the area, the claims are underlain by predominantly quartz porphyry rhyolite in fault contact with Cretaceous plutons and Paleozoic metasedimentary rocks to the southwest (Hart, 1987). Units generally strike at around 290 degrees and dip to the northeast. Relatively narrow bands of basalts, debris flows and crystal tuffs occur up section to the northeast, and are truncated by the Pelly River valley (Pride, 1988).

6.0 Mineralization

The exploration target at ELP is epithermal gold hosted within Eocene volcanoclastics, as at the Grew Creek deposit.

At Grew Creek, mineralization is essentially pure Au-Ag and does not have a strong association with normally effective indicator elements As-Sb-Hg. High Hg values in previous work are associated with naturally elevated background levels in rhyolite porphyry, which has yet to contain any gold-bearing veins.

The Grew Creek deposit occurs as a quartz-carbonate-chalcedony stockwork in an Eocene felsic tuff sequence, interpreted as an ignimbrite. Mineralization dips steeply to the northeast, as does bedding. It is truncated by basinal sedimentary rocks to the northeast. Along trend to the southeast, the Knoll prospect contains an Au-chalcedony stockwork hosted in sedimentary rocks, which suggests that deposition of basinal sediments was contemporaneous with or slightly older than Au mineralization.

The thickness of the ignimbrite sequence and presence of significant gold mineralization have so far been unique to Grew Creek. Quartz-carbonates veins and even stockworks occur elsewhere along the trench in other host rocks, but are usually barren. Grew-like ignimbrite sequences are thus a target lithology - whether due to rheology, high local heat flow, or depositional level and its effects on boiling.

7.0 Exploration

496 soil samples were collected at ELP from September 28 to October 10, 2011. Access was by helicopter from Faro, YT. No camp was maintained on site.

Samples were collected using a tulip-style auger from the B-horizon where available (see example, figure 5). Collection was hampered by the presence of felsenmeer, thick organic layers, and steep canyons (figure 6). Samples were stored at the Golden Predator field office in Faro and shipped to Acme Labs of Whitehorse for processing.

Samples were dried at 60° C and a 100 g split was sieved to -80 mesh. Samples were digested in a 1:1:1 Aqua Regia solution and analyzed by ICP-MS. For sample coordinates and complete geochemical data including detection limits, see Appendices 3 and 4. Au values for soil samples are shown in sample maps A to E.

8.0 Discussion

Contour soil samples were collected along the upper drainages of historically interesting creeks. Reconnaissance lines parallel to ridges were designed to explore poorly drained or exposed ground. Conditions were difficult and many planned samples were not collected.

Several anomalous gold values occur across the sampled area and warrant further prospecting, especially given their interpreted stratigraphic level, the likelihood that they were collected from colluvial material, and the fact that the entire southeast portion of the claim block has seen virtually no exploration in the past.

Further work in the area will focus on prospecting and mapping along the numerous canyons at ELP, with a goal of identifying target lithologies and following up on anomalous soil samples. Tighter soil grids are recommended near anomalous Au values, and hand trenches and pits may be useful in areas of cover.

9.0 Conclusions

A late-season soil sampling program was conducted at the ELP property, generating several anomalous areas for follow-up. Future work should focus on stratigraphic mapping and prospecting along steeply incised canyons.

Appendix 4 - Assay Certificates

1020 Cordova St. East Vancouver BC V6A 4A3 Canada

Acme Analytical Laboratories (Vancouver) Ltd.

www.acmelab.com

Client: Golden Predator Canada Corp.

11th Floor, 888 Dunsmuir Street
Vancouver BC V6C 3K4 Canada

Submitted By: M. Burke

Receiving Lab: Canada-Whitehorse

Received: October 25, 2011

Report Date: November 08, 2011

Page: 1 of 12

CERTIFICATE OF ANALYSIS

WHI11001828.1

CLIENT JOB INFORMATION

Project: ELP
Shipment ID: ELP-2011-S-001
P.O. Number
Number of Samples: 320

SAMPLE DISPOSAL

RTRN-PLP Return
RTRN-RJT Return

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Golden Predator Canada Corp.
11th Floor, 888 Dunsmuir Street
Vancouver BC V6C 3K4
Canada

CC: Jack Cote

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
Dry at 60C	320	Dry at 60C			WHI
SS80	320	Dry at 60C sieve 100g to -80 mesh			WHI
1DX2	320	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN
RJSV	320	Saving all or part of Soil Reject			WHI

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.
