BREAKAWAY EXPLORATION MANAGEMENT INC.

Summary

In August 2011 Stakeholder Gold Corp. completed a deep auger-type soil geochemical reconnaissance survey on the 82-claim (1697.4ha) Tak property located 5km north of the Yukon River, some 130km southeast of Dawson City, Yukon. The goal of the work was to identify gold-in-soil anomalies that would potentially lead to gold mineralization in bedrock.

The Tak property is held 100% by Stakeholder Gold Corp. under an option agreement with a prospecting syndicate. The Property is presently only accessible by helicopter and is located in an isolated part of the Yukon with no local resources or infrastructure. Fuel, supplies and equipment can be flown in from Dawson City or shipped in on the Yukon River to a staging area by barge.

The 2011 survey was done to follow up results of previous stream sediment, soil and rock geochemical surveys completed on the Property by Silver Quest Resources Ltd. in 2010 and 2009. There is no documented work prior to Silver Quest.

The Property lies within the Yukon-Tanana Terrane which consists of several successions of complexly deformed Late Proterozoic to Late Permian sedimentary and volcanic rocks episodically intruded by various intrusive rocks in the Permian, Jurassic, Cretaceous, and Tertiary periods. The intrusive events have been accompanied by volcanic activity especially in the Upper Jurassic to Lower Cretaceous. Limited mapping on the Property indicated that it is underlain by quartzites and quartz-biotite schists of the Nasina Terrane.

The Property lies in the underexplored Klondike-White Gold district of the loosely defined Tintina Gold Belt. Stakeholder's exploration effort at Tak is based on practical survey methods that generate drill targets and have led to discoveries in the area including Kaminak's Supremo discovery on its Coffee property located approximately 25km southwest of Tak and Kinross's Saddle and Arc zones on the White property located approximately 45km northwest of Tak. Detailed geochemical surveys and closely spaced, low altitude, helicopter-borne geophysical surveys have been proven to be effective in the area. Due to the deeply weathered nature of the soils in this unglaciated area, it is very important to take samples from the deeper C-horizon.

The 533 soil samples were collected with hand augers at 50m sample intervals along predetermined GPS ridge and spur traverse lines. The samples were analyzed for 36 elements by ISO 9001-accredited Acme Analytical Laboratories Ltd.

The soil samples returned gold values ranging from below detection limit (i.e. <0.5ppb Au) to a maximum of 32.2ppb Au. The results were poor and only one weakly anomalous soil sample was found southeast from the center of the property. There were no gold-in-soil trends defined by the soil sampling.

It appears that the Tak holds little gold potential based on the poor ridge and spur soil sample results obtained on the Property in 2011 and the poor stream sediment, contour soil and float rock results obtained by Silver Quest in 2010 and 2009. No further work is recommended at this time except perhaps to send a prospecting crew into the Property for one day to investigate the several weak arsenic-in-soil anomalies.

Certificate of Qualifications

I, Mark Fekete, having my place of residence at 178 Dennison Boulevard in Val d'Or in the Province of Quebec do hereby certify that:

1. I obtained a Bachelor of Science Degree in Geology from the University of British Columbia in 1986, I have been engaged as a Geologist continuously since 1986 and I am a Member in good standing of the Order of Geologists of Quebec (OGQ #553) and the Association of Professional Engineers and Geoscientists of British Columbia (APEGBC #31440), and I am a "qualified person" as defined in Section 1.2 in and for the purposes of National Instrument 43-101;

2. I have visited the Tak property on numerous occasions including most recently in July 2011;

3. I co-wrote and I am, as the senior author and qualified person, responsible for the contents of this technical report entitled "2011 soil geochemical survey on the Tak property, Dawson Mining District, Yukon, NTS Sheet 115J15, 138°54'W. Long., 62°56'N. Lat.," based on my professional experience, a review of relevant reports and maps made available to me from government and corporate sources and my participation in the work programs described in the report;

4. I am not aware of any material fact or material change with respect to the subject matter of the report that is not disclosed in the report which, by its omission, makes the report misleading;

5. I am an Officer and Director, and I beneficially hold a number of shares in Stakeholder Gold Corp.;

6. I hold no direct interest in the Tak property as a result of any prior involvement with the property; and

7. I have read, and this report has <u>not</u> been prepared for the purposes, nor in full compliance with, National Instrument 43-10, 1 and according to Form 43-101F1.

Respectfully submitted this 2nd day of April 2012,

(s) "Mark Fekete"

Certificate of Qualifications

I, Drew MacPhail, having my place of residence at 610 Church St. Port Williams, NS do hereby certify that:

1. I obtained a Bachelor of Science Degree in Geology from Acadia University in January 2012, I have been engaged as a Geologist in Training ("GIT") continuously since January 2012 and I am not a "qualified person" as defined in Section 1.2 in and for the purposes of National Instrument 43-101;

2. I have not visited the Tak property;

3. I co-wrote this technical report entitled "2011 soil geochemical survey on the Tak property, Dawson Mining District, Yukon, NTS Sheet 115J15, 138°54'W. Long., 62°56'N. Lat.," under the supervision of Mark Fekete, P.Geo.;

4. I am not aware of any material fact or material change with respect to the subject matter of the report that is not disclosed in the report which, by its omission, makes the report misleading;

5. I do not beneficially hold a number of shares in Stakeholder Gold Corp.;

6. I hold no direct interest in the Tak property as a result of any prior involvement with the property; and

7. I have read, and this report has not been prepared for the purposes, or in full compliance with, National Instrument 43-10, 1 and according to Form 43-101F1.

Respectfully submitted this 2nd day of April 2012,

(s) "Drew MacPhail"

List of Tables

1. Introduction and Terms of Reference

Breakaway Exploration Management Inc. ("Breakaway") was retained by Stakeholder Gold Corp. ("Stakeholder") to write a technical report (the "Report") describing the surface exploration work carried out on the Tak property ("Tak" or the "Property") in Yukon in 2011. The Report describes the soil geochemical sampling survey completed.

The goal of the surface work was to identify areas of anomalous gold-in-soil that may be related to the gold bearing structures similar to Kaminak's Supremo discovery on its Coffee property located approximately 20km west of the Property.

The Report is based primarily on the results of the work completed on Tak in 2011 but also contains information obtained from a review of relevant reports and maps cited throughout the Report. The Report was prepared by Geologist in Training Drew MacPhail (the "Junior Author") under the supervision of Professional Geologist Mark Fekete (the "Senior Author"). The Senior Author has visited and personally inspected the Property on numerous occasions most recently in July 2011. The Senior Author is the designated "qualified person" as defined in Section 1.2 in and for the purposes of National Instrument 43-101. The main purpose of the Report is to complete statutory assessment work filings required under the Yukon Quartz Mining Act. It is not intended to and does not fully comply with National Instrument 43-101. The Report contains specific recommendations and proposes a budget for further work.

The metric system is used for all units of measure mentioned in the Report and all dollar amounts are in Canadian funds unless otherwise stated. All figures presented in the Report are plotted in map projection UTM NAD 83, Zone 7 unless otherwise stated.

2. Reliance on Other Experts

The Authors may have relied on technical data and interpretations found in various sources cited throughout the report. The Authors may not have verified this information and take no responsibility for its accuracy or completeness. Reference to the compliance or non-compliance with NI 43-101 standards of historical information and data referred to in this Report are made where appropriate. The Authors do not offer any opinion concerning legal, title, environmental, political or other non-technical issues that may be relevant to the Report. The Report may contain links to several web-sites. The Authors take no responsibility for the functionality or content of these websites.

3. Location and Property Description

The Property covers an approximate area of 1697.4 hectares within the Dawson Mining Division of Yukon. It consists of 82 claims making up one contiguous claim block. The block is located 5 km north of the Yukon River and covers the headwaters of the first major tributary of Ballarat Creek herin referred to as "Tak" creek (Figure 1). The approximate center of the block is described by 62°56' North Latitude and 138°53' West Longitude on N.T.S. Sheet 115J15. The Property's un-surveyed mineral titles (Figure 2) are more fully described in Table 1 below.

Table 1 - List of Claims

Tak Property
Figure 2. Claim Map
Stakeholder Gold Corp.
NTS Sheet: 115J/15
Date: November 10, 2011

The claims are operated by Stakeholder Gold Corp under the terms of an option agreement signed on December 1, 2011 with the recorded holders Farrell Andersen, Carl Schulze, Hinterland Metals Inc. and Jackie Ziehe (the "Vendors") each holding a 25% interest in the claims. In order to earn a 100% interest in the Property, Stakeholder must pay the Vendors an aggregate of $40,000 and issue 400,000 shares staged over a three year period. In the event that Stakeholder exercises its option, the Vendors will retain a 2.5% Net Smelter Returns royalty on smeltable materials, of which it will have the right to buy back the first 1.5% of the royalty for $1,000,000.

The mineral claims included in the Property were acquired under the Yukon Quartz Mining Act which grants only the hard rock mineral rights to the claim holder. The surface rights for the area of the Property are held by the Crown. To maintain the claims in good standing, a minimum of $100 assessment work per claim must be completed annually. There are provisions to apply for more than one year work at a time up to a maximum of five years, to apply work from one claim to other adjoining claims (grouping) up to a maximum of 750 contiguous claims and to pay cash in lieu of work up to a maximum of five years. The Quartz Mining Land Use Regulations consist of a classification system based on varying levels of specific activities. These threshold levels categorize exploration activities into four classes of operation. Classes 1 through 4 represent activities with increasing potential to cause adverse environmental impacts.

Activities within a Class 1 program are defined as "grassroots" exploration with low potential to cause adverse environmental effects, and where activities and reclamation are completed within a year. A Class 1 program does not require government approval but the operator must comply with the certain operating conditions. An assessment under the Yukon Environmental and Socio Economic Assessment Act ("YESAA") is not required for a Class 1 program.

Class 2 programs are considered to represent the upper level of "grassroots" exploration activities. A notification submitted through the Mining Lands Office which outlines the activities and how they will be reclaimed is required. These programs comprise activities that have a moderate potential to cause adverse environmental effects and therefore require an assessment through YESAA. All work and reclamation must be completed within one year.

All Class 3 and Class 4 programs require submission of a detailed "Operating Plan" to the Mining Lands Office. A YESAA assessment is required. The Operating Plan must be approved before any exploration activities can be undertaken. Operating Plans may entail multi-year exploration programs to allow greater flexibility for the operator.

The work described in this Report was completed as a Class 1 Program.

4. Accessibility, Local Resources, Infrastructure, Physiography and Climate

Access to the Property is restricted due to a lack of usable roads on or adjacent to the Property. The primary means of access is by helicopter from Dawson City or by airplane to either the Ballarat of Thistle airstrips followed by helicopter to the Property.

The Tak property is located in an isolated part of Yukon with relatively few local resources or infrastructure. The Property can be worked from Dawson City by helicopter or from an exploration camp set up on or near the Property. A camp can be supported from Dawson City, where services are limited, or from Whitehorse where a full range of services are available including line-cutting, geophysics, drilling, assaying, aircraft charters etc.

Unlike most parts of Yukon, the Dawson Range was not affected by the last period of continental glaciations and so it is characterized by low rolling hills incised with steep sided, V-shaped valleys. Bedrock is typically deeply weathered and there is very little (perhaps less than 5%) outcrop exposed; usually on ridges above tree-line or in rare canyons in the creek valleys. Elevations on the Property range from 600m to 1000m above sea level. Most of the Property lies below the tree-line and is covered by a typical boreal forest mix containing black spruce aspen and alder brush. North and west slopes are often covered with thick moss blanketing permafrost.

The Dawson City area is characterized by a semi-arid, sub-arctic continental climate with mild to hot summers and cold winters. Precipitation is generally light in the summer and overall clear skies and warm temperatures prevail. Heavy morning fog can be a problem for aircraft especially towards the end of the summer season. Forest fires are common and thick smoke at times may impede exploration work. Maximum snow accumulations in the winter are typically less than one meter. Due to the northerly latitude of the region, summer days are long and winter days very short. The best season for exploration is during the summer months from mid-May to mid-October. Although it is possible to work during the winter months, costs rise exponentially due to cold temperatures, inclement weather and short daylight hours.

5. Exploration History

The following exploration history of the Property has been compiled from the Yukon Energy and Mines and Resources Library and Yukon Geological Survey MINFILE database. There are no assessment reports available from these sources for any work completed on the present Property. However, Property was previously held under an option agreement between the Vendors and Silverquest Resources Ltd. ("Silverquest"). Siverquest collected 31 stream sediment, 195 soil and 3 float rock samples in two separate work programs completed in 2009 and 2010 (Johnston, 2010 and Baker, 2011). The steam sediment samples were collected at 50 m intervals moving down Tak Creek, and at the junction and 200m upstream form the junction of each tributary entering Tak Creek. The soil samples were collected at 50m intervals along contour lines about 250m to the north and south of Tak Creek. Float rock samples were collected at random. Traditional prospecting and rock sampling is limited by the lack of exposed bedrock. There is one showing documented just beyond the westernmost point of the Property listed in Table 2 below:

Table 2 - MINFILE Showings

MINFILE No.	MINEFILE Name	Link
115J 108	Total	115J 108

6. Geology

The Property lies within the Yukon-Tanana Terrane (Figure 3) which, due to large areas with little or no bedrock exposure and limited modern regional or detailed mapping, remains very poorly understood. Generally it consists of several successions of layered sedimentary and volcanic rocks ranging from Late Proterozoic to Late Permian age that overlay the older Nisling Terrane. These complexly deformed layered rocks have been episodically intruded by various intrusive rocks in the Permian, Jurassic, Cretaceous and Tertiary periods. The intrusive events have been accompanied by volcanic activity especially in the Upper Jurassic to Lower Cretaceous. The Yukon-Tanana has been subjected to numerous prolonged deformational events including subduction and accretion that has led to significant structural thickening. Imbricated allochthonous terranes such as Slide Mountain Terrane are evidenced by altered ultramafic fragments.

The Property lies within the White Gold district which is underlain primarily by Devonian to Mississippian quartzites and quartz-biotite schists and Late Devonian to Mississippian intermediate to mafic orthogneiss (Figure 4). The area is cut by numerous intrusions that are for the most part classified as Cretaceous. Limited mapping on the Property indicated that it is underlain by quartzites and quartz-biotite schists (DMPW) or "Pelly Gneiss" of the Nasina Terrane (Figure 5).

7. Deposit Types

The Property lies within an underexplored part of the loosely defined Tintina Gold Belt. This metallurgical province has past production of 29.9 million ounces and 39.3 million ounces of resources for total gold resources of 69.2 million ounces. Notable gold deposits are Donlin Creek, Ft. Knox, Pogo and Brewery Creek. The underexplored nature of the Klondike-White Gold district was highlighted by Kaminak's Supremo discovery on its Coffee property in 2010 located approximately 20km southwest of Tak and by Underworld's discovery of the Saddle and Arc zones in May 2009 on the White property located approximately 45km northwest of Tak.

The Klondike-White Gold district lies within the larger Dawson Range area where a number of known gold and porphyry copper deposits show a wide range of styles, geological settings and geochemical associations. Stakeholder's exploration effort at Tak is not adhering to any firm deposit model but is instead based on practical survey methods that generate drill targets and have led to discoveries by other groups working in the area.

Detailed deep auger-type soil geochemical surveys have proven to be effective in the area, as shown by prospector Shawn Ryan's success on the Coffee and White properties. The Dawson Range generally shows deeply weathered, oxidized soils in an unglaciated environment. This simply means that in order to collect soils that best represent the underlying bedrock it is necessary to take relatively deep soil samples that are likely less weathered and less oxidized. Another useful exploration tool is to fly closely spaced, low altitude, helicopter-borne geophysical surveys to assist in interpreting bedrock units, structure, and alteration.

8. Adjacent Properties

No gold deposits are known to exist on the properties immediately adjacent to the Property. Significant gold mineralization has been reported approximately 20km southwest of Tak at Kaminak's discovery hole of 15.5m over 17.1gpt Au at the Supremo zone (Kaminak Press Release - May 26, 2010). Approximately 45km northwest of Tak lies Kinross's White Gold deposit with a current resource estimation at the Golden Saddle zone of 1,004,570 indicated ounces at 3.2gpt Au and 407,413 inferred ounces at 2.5gpt Au; and at the Arc Zone of 170,470 inferred ounces at 1.2gpt Au (Underworld Press Release - January 19, 2010).

The Authors have not verified the information made public on these adjacent properties and cautions that **any such information is not necessarily indicative of the mineralization on the Tak property.** However, this information does indicate that the White Gold district is an underexplored area that has solid potential for hosting significant gold deposits.

9. Mineralization

Very little *in situ* mineralization has been identified on the Property to date due primarily to the lack of outcrop. A number of quartz veins and quartz breccias have been uncovered with or without disseminated sulphides.

10. 2011 Exploration Work

10.1. Introduction

Exploration work in 2011 consisted of a reconnaissance deep auger-type soil geochemical survey. Field work was done from August 16, 2011 to August 18, 2011 and the analytical work was done from September 8, 2011 to October 17, 2011. A detailed Statement of Work is included herein as Appendix A. The Junior Author compiled the field data into digital maps and wrote this Report up to January 20, 2012.

10.2. Sampling and Analytical Procedures

The work was done on foot by a team flown to the Property by helicopter daily from a camp located on Kirkman Creek approximately 20km to the west. A total of 533 soil samples, including field duplicates, were collected. Soil samples were taken at stations 50m apart along predetermined GPS lines that followed the ridges and spurs over the entire Property in order to provide a preliminary assessment of the potential for gold mineralization.

Sample locations were tagged in the field and recorded with HP iPAQ 200 series field computers running GeoInfoMobile and Tierra Mapper software paired with Holux GPS receivers in map datum UTM WGS 84 Zone 7. Sample locations (Figure 6) and descriptions are included as Appendix B. A data CD is also included. Soil sample material varied from clay to sand with some humus samples. Sample depth varied from 20 to 100cm with an average depth of 48cm.

Soil samples were placed in Kraft-type paper bags with the appropriate sample numbers marked in indelible ink. Batches of samples were subsequently dried, sealed in rice bags and shipped to Acme Analytical Laboratories Ltd. ("Acme") in Vancouver, B.C. for analysis. Samples were dried and sieved to -80 mesh size and analyzed for 36 elements (including gold) by 15 gram Aqua Regia digestion, ICP-MS finish (Appendix C). Acme is accredited under ISO 9001.

10.3. Data Verification

It is the Authors' opinion that the sampling procedures, security measures, sample preparations and analytical methods applied to the soil samples were diligently followed and are adequate to meet industry standards commonly accepted for this level of exploration. The Authors have relied upon the adequacy and accuracy of the analytical results provided by Acme. Independent verification of those results has not been undertaken. The Authors reconciled the field data with the analytical results and found no discrepancies.

10.4. Results

The soil samples returned gold values ranging from below detection limit (i.e. <0.5ppb Au) to a maximum of 32.2ppb Au. The results were poor and only one weakly anomalous soil sample was found southeast from the center of the property. There were no gold-in-soil trends defined by the soil sampling (Figure 7).

11. Mineral Processing and Metallurgical Testing

To date no mineral processing or metallurgical testing has been completed at Tak.

12. Mineral Resource and Mineral Reserve Estimates

To date no mineral resource or mineral reserve estimates have been completed at Tak. The Property is at a "grassroots" level of exploration such that it is too early to make any resource or reserve estimates.

13. Other Relevant Data and Information

The Authors are not aware of any other relevant data and information or explanation to make this report more understandable and not misleading.

14. Interpretation of Results and Conclusions

Overall the 2011 gold-in-soil soil results were not outstanding with the exception of one result of 32.2ppb Au. There are some weak arsenic anomalies that should be followed up.

15. Recommendations

It appears that the Tak holds little gold potential based on the poor ridge and spur soil sample results obtained on the Property in 2011 and the poor stream sediment, contour soil and float rock results obtained by Silver Quest in 2010 and 2009. No further work is recommended at this time except perhaps to send a prospecting crew into the Property for one day to investigate the several weak arsenic-in-soil anomalies.

Appendix C - Analytical Certificates

Acme Analytical Laboratories (Vancouver) Ltd.
1020 Cordova St. East Vancouver BC V6A 4A3 Canada

www.acmelab.com

Client: **Stakeholder Gold Corp.**
203 - 680 Third Ave.
Val D'Or QC J9P 1S5 Canada

Submitted By: Mark Fekete
Receiving Lab: Canada-Whitehorse
Received: August 29, 2011
Report Date: November 05, 2011
Page: 1 of 9

CERTIFICATE OF ANALYSIS WHI11001312.1

CLIENT JOB INFORMATION

Project: TAK
Shipment ID: 20110821112527
P.O. Number
Number of Samples: 217

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
SS80	217	Dry at 60C sieve 100g to -80 mesh			DAW
Dry at 60C	217	Dry at 60C			DAW
1DX2	217	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN

ADDITIONAL COMMENTS

Invoice To: Stakeholder Gold Corp.
203 - 680 Third Ave.
Val D'Or QC J9P 1S5
Canada

GENERAL MANAGER

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only.
All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
"*" asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CERTIFICATE OF ANALYSIS WHI11001326.1

CLIENT JOB INFORMATION

Project: TAK
Shipment ID: 20110819105610
P.O. Number
Number of Samples: 316

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
SS80	316	Dry at 60C sieve 100g to -80 mesh			DAW
Dry at 60C	316	Dry at 60C			DAW
1DX2	316	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN
