INTRODUCTION

The Scarlet East property lies within a district of recently discovered Carlin-type gold occurrences, located in east-central Yukon. The property covers favourable, structurally complex, carbonate stratigraphy, which hosts several strong gold-arsenic±mercury±thallium± antimony soil anomalies. Follow up of similar soil anomalies elsewhere in the district led to the discoveries of ATAC Resources Ltd.'s Osiris and Conrad zones and Anthill Resources Ltd.'s Venus Zone. The property is owned by Rackla Metals Inc. and is under option to Strategic Metals Ltd. It is one of several claim blocks comprising Strategic Metals Ltd.'s Midas Touch Project.

This report describes geochemical sampling, geological mapping and diamond drilling (1167.68 m in five holes) that was conducted from June 13 to 17, June 19 to 21 and July 8 to August 5, 2012 by Archer, Cathro & Associates (1981) Limited on behalf of Strategic Metals. The author supervised and participated in the program and interpreted all resulting data. Her Statement of Qualifications is in Appendix I. The work was conducted at a cost of $213,750.92, as shown on the Statement of Expenditures in Appendix II.

PROPERTY LOCATION, CLAIM DATA AND ACCESS

The Scarlet East property consists of 230 contiguous mineral claims located in east-central Yukon at latitude 64°04′ north and longitude 132°07′ west, on NTS map sheets 106B/04 and 106C/01 (Figure 1). The property covers an area of approximately 4650 ha (46.5 km^2). The claims are registered with the Mayo Mining Recorder in the name of Rackla Metals. Specifics concerning claim registration are tabulated below, while the locations of individual claims are shown on Figures 2 and 3.

Claim Name	Grant Number	Expiry Date*
STW 1-146	YD69503-YD69648	March 31, 2020
147-230	YD90316-YD90399	March 31, 2020

* Expiry dates include 2012 work that has been filed for assessment credit but not yet accepted.

The Scarlet East property lies 190 km east-northeast of the town of Mayo, the nearest supply centre. The closest road access is at the community of Keno City, which is situated 46 km by road northeast of Mayo.

In 2012, crew access to and from the Scarlet East property involved fixed-wing aircraft to Strategic Metals' camp at the Rackla airstrip, located about 50 km west-northwest of the property. From there, daily flights to and from the property were performed with a Bell 206 LongRanger helicopter and a Hughes 500D helicopter, both operated by Fireweed Helicopters from Strategic Metals' Rackla camp. Drill support involved transportation of equipment and fuel by fixed-wing aircraft from Mayo to a temporary staging area at the Stewart airstrip and then to the property by the LongRanger and 500D helicopters.

HISTORY AND PREVIOUS WORK

In 2001, the GSC completed low-density stream sediment and water sampling surveys on NTS map sheet 106B and 106C (Héon, 2003). Seven samples collected from creeks on the property returned background values for gold and most Carlin-type pathfinder elements, with the exception of a weakly elevated mercury and antimony signature in the eastern half of the property.

In 2009, ATAC followed up strong arsenic stream sediment anomalies reported by the GSC's 2001 regional sampling program in an area about 10 km northwest of the Scarlet East property. Reconnaissance sampling by ATAC returned a string of moderately to very strongly anomalous results ranging from 12 to 1775 ppb gold and 123 to 155,000 ppm arsenic (Eaton, 2010). As a result, a very large claim block was staked by ATAC in that area (the Nadaleen Trend Project).

In 2010, ATAC discovered Carlin-type gold mineralization on its Nadaleen Trend Project. Work that year included stream sediment and grid soil sampling, geological mapping, prospecting and diamond drilling (Lane, 2011). This work identified four gold-bearing showings featuring decalcification and silicification of carbonate strata with visible realgar, orpiment and dark grey sooty pyrite, which are characteristic of deposits in the Carlin Trend of Nevada (Lane, 2011).

In November 2009, Strategic Metals purchased ATAC's regional exploration data base and starting in late 2010, it staked several properties in the area to cover stratigraphic units and structural features believed to resemble those associated with ATAC's Nadaleen Trend discoveries.

In November 2010, Radius Gold Inc. staked the Scarlet East property to cover the eastern extension of the stratigraphic sequence that hosts ATAC's discoveries (Rackla Metals, 2010).

In 2011, Radius Gold completed stream sediment and grid soil sampling, prospecting, property-scale geological mapping and airborne magnetic and radiometric surveys. It collected 164 rock, 239 stream sediment and over 8700 soil samples from the property. This work identified several localized to sizeable, gold-arsenic-mercury-thallium-antimony soil anomalies hosted within favourable carbonate stratigraphy. In December 2011, Radius Gold completed a spin out transaction in which its Yukon holdings were transferred to the newly formed Rackla Metals Inc. (Rackla Metals, 2011).

On April 2, 2012 Strategic Metals optioned the Scarlet East property from Rackla Metals.

GEOMORPHOLOGY AND CLIMATE

The Scarlet East property is situated in the Selwyn Mountains and is drained by creeks that flow south into the Stewart River, which connects to the Pacific Ocean via the Yukon River.

The property covers the southern parts of three northeasterly trending ridges that are separated by two sub-parallel drainages. Elevations on the property range from 800 to 1850 m above sea level (asl). Approximately one quarter of the property lies above treeline, which is at about 1400 m asl. Grass, moss, talus slopes and outcrop characterize alpine terrain on the property, while subalpine areas are typically devoid of outcrop and densely vegetated with stands of black spruce, willow and alder. Steep, north facing slopes are usually unvegetated. Creeks on the property have sufficient water for camp and drilling purposes throughout the summer and early fall.

The Scarlet East property lies within the limits of the McConnell glaciation, which affected the region approximately 20,000 years ago. Regional ice movement in the area was westerly to west-northwesterly.

Soil development and thickness are highly variable on the property. Maximum depths are reached near the valley floors. Glacial transport, fluvial processes and mass wasting have all affected soil development.

The climate in the Scarlet East property area is typical of northern continental regions with long, cold winters, truncated fall and spring seasons and short, mild summers. Although summers are relatively warm, snowfall can occur in any month. The property is mostly snow free from mid June to late September.

REGIONAL GEOLOGY

The Scarlet East property is located at the eastern end of the Rackla Belt, which is an 18 by 120 km belt defined by a variety of mineral occurrences, including recently discovered Carlin-style gold mineralization.

The Rackla Belt spans the southern portion of the Nadaleen map sheet (106C) and southwestern corner of the Nash Creek (106D) map sheet. The Geological Survey of Canada published 1:250,000 scale geological maps of the Nash Creek and Nadaleen map sheets in 1972 (Green) and 1974 (Blusson), respectively. In 1990, Indian and Northern Affairs Canada released a 1:50,000 scale geological map of NTS map sheet 106D/01 (Abbott, 1990).

In 2010, the Yukon Geological Survey (YGS) initiated a project to better understand the geology of the Rackla Belt as a result of the recent discoveries in the area. Work to date has included 1:50,000 scale mapping of the: 1) Mount Mervyn map area (106C/04) in 2010 (Chakungal and Bennett, 2011); 2) Mount Ferrell map area (106C/03) in 2011 (Colpron, 2012); and 3) Ortell Lake and Mount Stenbraten map areas (106C/02 and 01) in 2012 (Colpron et al, 2013). It also included integrating structures and stratigraphic units across map sheets 106C/01 to 106C/04 and 106D/01 (Colpron et al, 2013).

Geology of the Rackla Belt presented in the following paragraphs is summarized from the YGS's recent work (Colpron et al, 2013).

The Rackla Belt straddles the boundary between deep water, dominantly clastic rocks of the Selwyn Basin to the south and shallower water shelf strata of the Mackenzie Platform to the north.

The Rackla Belt is divided into three main structural panels – Richardson fault array, Mackenzie fold belt and Selwyn fold belt (Figure 4). Both the north-trending Richardson fault array and the northern edge of the northwest-trending Selwyn fold belt have prolonged histories of Proterozoic and Paleozoic faulting (mainly extensional and strike-slip) that were reactivated during Mesozoic compression.

The three main structural panels are separated by the Dawson Thrust and Kathleen Lakes faults (Figure 4). The Dawson Thrust Fault is a crustal break that may date back to late Neoproterozoic rifting and was subsequently reactivated as a north-directed thrust fault during Paleozoic extension and Mesozoic compression. The direction of movement along Mesozoic thrust faults in the region is generally towards the north. The Kathleen Lakes fault is an enigmatic structure with uncertain kinematics. It likely has a long history that may have begun as a normal fault in the Neoproterozoic and has since been reactivated, possibly accommodating strike-slip and normal movement.

Both extensional and apparent sinistral strike-slip faults cross-cut structures associated with compression and characterize some of the youngest deformation in the Rackla Belt. Some strike-slip reactivation may have occurred along both the Kathleen Lakes and Dawson Thrust faults; however, the amount of motion is likely very small and appears to die out to the east. The youngest cross-cutting structures may play an important role in Carlin-style gold mineralization.

The Rackla Belt can be divided into five stratigraphic and facies domains that are generally bounded by the Dawson Thrust and Kathleen Lakes faults (Figure 4).

1) Neoproterozoic to Paleozoic Selwyn Basin: The southern part of the belt (hanging wall of the Dawson Thrust Fault) comprises Neoproterozoic to Upper Paleozoic predominantly off-shelf clastic sedimentary rocks of Selwyn Basin;
2) Paleozoic Off-shelf: To the north of the Selwyn Basin, Ordovician to Permian off-shelf carbonate and shale (including abundant debris flow and turbidite deposits) are bound by the Dawson Thrust and Kathleen Lakes faults;
3) Neoproterozoic Off-shelf (Windermere Supergroup?): In the northeastern part of the belt, rocks in the footwall of the Dawson Thrust Fault consist of fine-grained siliciclastic and carbonate rocks. Ediacaran fossils in this sequence suggest correlation with the upper part of the Neoproterozoic Windermere Supergroup;
4) Paleozoic Platform: Platformal carbonate rocks of Ordovician to Devonian age occur mainly north of the Kathleen Lakes Fault in the central part of the belt. A notable exception is a window of this package at the west end of the belt; and
5) Proterozoic: Older Proterozoic rocks of the Wernecke Supergroup and Pinguicula Group occupy the region north of the Kathleen Lakes Fault in the northwestern part of the belt.

The transition between platformal and basinal facies varies around Selwyn Basin. Its eastern boundary exhibits a more typical facies transition that migrates through time. By contrast, the northern boundary of Selwyn Basin is strongly localized and was apparently controlled by the Dawson Thrust Fault. Figure 5 illustrates an idealized cross-section through Rackla Belt stratigraphy, along the northern boundary of Selwyn Basin.

RACKLA BELT REGIONAL GEOLOGY

SCARLET EAST PROPERTY

FILE: .../SE/Figures/Nad-Regional_Domains.wor	DATE: APRIL 2013

The Scarlet East property lies within the Neoproterozoic off-shelf domain, approximately one to three kilometres north of the projected Dawson Thrust Fault (Figures 4 and 5). In this area, the Neoproterozoic sequence generally consists of fine grained siliciclastic and carbonate rocks, including two prominent carbonate marker horizons and locally abundant debris flow deposits (Figure 6). The lower carbonate marker divides this sequence into two informal successions – the Nadaleen and Stenbraten assemblages. Occurrences of Ediacaran fossils in this marker horizon confirm its late Neoproterozoic age and suggest correlation with the upper part of the Windermere Supergroup in the Mackenzie Mountains. The upper carbonate marker is overlain by maroon shale – this carbonate/shale sequence is identical to the upper part of the Hyland Group (Algae and Narchilla formations) and provides a stratigraphic tie across the Dawson Thrust Fault and broad correlations between Windermere and Hyland strata. Sub-units of Nadaleen and Stenbraten assemblages and Hyland Group mapped in the vicinity of the property are described in Table I.

Table I – Regional Lithological Units (*after Colpron et al, 2013*)

Unit Name	Age	Map Unit	Description
Quaternary	Quaternary	Q	Unconsolidated glacial, glaciofluvial and glaciolacustrine deposits; fluviatile silt, sand and gravel, and local volcanic ash, in part with cover or soil and organic deposits.
Narchilla Formation (Hyland Group)	Neoproterozoic (Ediacaran) to Lower Cambrian	PCHn	Maroon and green shale and siltstone, locally bioturbated; locally grey, brown shale; locally green and white sandstone; yellowish-buff weathering dolomitic limestone.
Algae Formation (Hyland Group)	Neoproterozoic (Ediacaran)	PHa	“Upper carbonate marker” - Light grey to yellowish-buff weathering dolomitic limestone and dolostone, variably dolomitized and variably silty/sandy; locally fine grained, dolomitic sandstone; commonly graded and cross-bedded; minor grey and/or maroon shale; local debris flow units- generally limestone pebble to cobble breccia and conglomerate; some polymictic breccia, locally boulder size.
Stenbraten Assemblage (Upper)		PSs	"Upper mixed clastic sequence" - Brown weathreing, grey shale and siltstone; minor sandstone and grit; rhythmically bedded, brown weathering, grey limestone and shale; calcareous shale; thinly bedded, grey limestone.
Stenbraten Assemblage		PSq	Grey, medium bedded quartzite.
Stenbraten Assemblage (Lower)		PSc	"Lower carbonate marker" - Grey, buff, tan and orange weathering dolostone, dolomitic sandstone and limestone, commonly planar and/or cross laminated; calcareous shale and siltstone; maroon shale; carbonate-clast diamictite and congolmerate; pink weathering siltstone at base of unit.
Nadaleen Assemblage		PNu	Orange weathering, greenish-brown, rhythmically bedded, fine grained sandstone, siltstone, mudstone;

Nadaleen Assemblage (Lower)		PNc	Grey limestone.
Nadaleen Assemblage (Lower)		PNd	Diamictite, conglomerate (debris flow deposit); clasts of carbonate and quartzite, pebble to boulder, locally megaclasts up to 100 m long; matrix locally sandy; grey limestone.
Nadaleen Assemblage (Basal)		PNw	Black, grey and greenish quartz wacke, quartz-pebble conglomerate, siltstone, mudstone.

PROPERTY GEOLOGY

The Scarlet East property is primarily underlain by mixed clastic and carbonate rocks belonging to upper Stenbraten Assemblage and Algae Lake and Narchilla formations (Figure 6). A window of underlying carbonate and fine grained clastic rocks belonging to lower Stenbraten and Nadaleen assemblages is exposed by topography and folding in the eastern half of the property. Quaternary sediments blanket rocks in the southern part of the property, along the Stewart River valley.

Two northwesterly and northerly trending, steeply dipping normal faults bisect the property. These faults dip in opposite directions away from the centre of the property and caused a structural block at the centre of the property to be raised relative to rocks at the western and eastern ends. The western and central blocks are structurally simple compared to the eastern block, where complex folding and faulting has affected the stratigraphic package. Bedding in the western and central blocks dominantly strikes easterly and dips steeply to the south. Structure within the eastern block is characterized by several large- and small-scale fold and fault sets (many of which are too minor to appear on Figure 6). A northeasterly trending, southeasterly dipping thrust fault was mapped at the east end of the property.

In 2012, Strategic Metals performed detailed geological mapping at a 1:2500 scale (Figure 7) in the eastern structural block to define drill targets within an approximately 2000 by 500 m area that encompasses several gold-arsenic±mercury±thallium±antimony soil anomalies. This work better defined the YGS's regional-scale lithological contacts and identified additional structural complexities and units and sub-units. The primary stratigraphic difference between the YGS and Strategic Metals maps is the presence of lower Nadaleen Assemblage (PNu) orange-weathering, locally limey siltstone on the detailed map. Descriptions of the units observed within the

detailed map area are listed in Table II, with the stratigraphic top of the sequence corresponding to the top of the table.

Table II – Detailed Area Lithological Units

Unit Name	Age	Map Unit	Description
Stenbraten Assemblage (Upper)	Neoproterozoic (Ediacaran)	PSs(l)	Dark grey, swaley, shaley, fine grained, dirty limestone.
		PSs(s)	Dark brown weathering, recessive shale. Local shaley to gritty limestone and narrow siliceous grit interbeds.
Nadaleen Assemblage (Basal)		PSq	Medium grained, moderately resistant, siliceous grit to quartz pebble conglomerate. Grit is limey along contact with overlying PSs(l).
Stenbraten Assemblage (Lower)		PSc(t)	Tan weathering, moderately recessive, platey to medium bedded, grey limestone.
		PSc(g)	Light grey weathering, moderately resistant, well bedded, grey limestone grades into overlying PSc(t). Distinct debris flow horizons near the boundary between grey and tan limestone. Debris flows hosts small (centimetre scale) to large (approx. 50 cm) limestone clasts in a carbonate matrix. Debris flow horizons anywhere from 5 to 10 m wide.
Nadaleen Assemblage (Upper)		PNu	Orange weathering, moderately recessive, platey to massive, grey siltstone. Concoidal fracture. Approximately 10 m wide gradational zone of orange weathering, silty limestone at contact with overlying PSc(g).
Nadaleen Assemblage (Lower)		PNl	Orange to brown weathering, recessive, silty shale. Thinly bedded to shaley and shattered.

In the southwest portion of the detailed map area, the nose of a southwest-trending and southwest-plunging anticline is exposed. Near the fold nose, numerous small-scale, sympathetic, tight (open to chevron) folds are present within more recessive, strongly cleaved units (shale and thinly bedded limestone), while more resistant units (siltstone, medium bedded limestone, debris flows and grit) are moderately to strongly fractured. Bedding along the northeastern limb of the anticline strikes northeasterly and dips moderately to the southeast, while bedding along the northwestern limb strikes northwesterly and dips moderately to steeply to the southwest.

Several northwesterly trending faults cut the fold nose and all units in the detailed map area. These faults caused local stratigraphic offsets and are typically characterized by recessive gullies with abundant calcite veining/flooding and brecciation of the host rocks. Tight, local folds were observed in close proximity to most faults.

Calcite veins are common within and adjacent to fold hinges and fault zones. Locally significant quartz veins are present within grit and quartz pebble conglomerate (PSq) in the structurally complex (southwest) part of the map area.

No mapping was carried out in the western or central blocks or in Algae Lake and Narchilla formations within the eastern block due to time constraints.

REGIONAL MINERALIZATION

The Rackla Belt is host to a range of mineralization types, including various styles of base metal and gold occurrences (Colpron et al, 2013). The majority of mineral occurrences lie in close proximity to the Dawson Thrust Fault. Notable occurrences include the Marg volcanogenic massive sulphide deposit and the Tiger carbonate-replacement gold deposit in the western part of the belt, the Craig Mississippi Valley type(?)/replacement-style zinc-lead deposits in the central part of the belt and the district of recently discovered Carlin-type gold occurrences in the eastern part.

The Scarlet East property covers the eastern extension of the stratigraphic sequence that hosts four of ATAC's drill-confirmed, Carlin-type gold discoveries – Osiris, Conrad, Isis and Isis East zones – collectively known as the Nadaleen Trend (Figures 4 and 5). Gold mineralization is best developed within limestone sequences where alteration is characterized by decalcification accompanied by peripheral calcite flooding (ATAC Resources, 2013). Mineralization within non-calcareous rocks is generally hosted within brittle fractures and is directly associated with fault breccia and/or intense fracture development. Gold mineralization is most commonly associated with black, fine grained, sooty pyrite, and is sometimes accompanied by realgar and orpiment.

The Scarlet East property lies approximately eight kilometres northwest of Anthill Resources' recent Carlin-type gold discovery (Venus Zone). Anthill Resources' initial exploration targeted prospective Algae Lake stratigraphy. This work identified gold values up to 8.52 g/t in soil, 87.2 g/t in bedrock and 9.76 g/t over 38.7 m in drill core (Anthill Resources, 2013).

PROPERTY MINERALIZATION

In 2011, Rackla Metals collected 164 rock samples across the property and in 2012, Strategic Metals collected an additional 25 rock samples, primarily from the two carbonate marker horizons (Lower Stenbraten Assemblage and Algae Lake Formation) in the eastern structural block. The bulk of the 2011 sampling was conducted prior to the availability of soil geochemical results, while the 2012 sampling targeted known anomalies. The 2012 sample locations are plotted on Figure 8, while results from both years for gold, arsenic, mercury thallium and antimony are illustrated thematically on Figure 9. Rock Sample Descriptions are provided in Appendix III and Certificates of Analysis are given in Appendix IV.

In 2012, rock sample sites were marked with orange flagging tape labelled with the sample number. The location of each sample was determined using a handheld GPS unit. Rock sample preparation and multi-element analyses were carried out at ALS Minerals laboratories in Whitehorse, Yukon Territory and North Vancouver, BC. Each sample was dried, fine crushed to better than 70% passing 2 mm and then a 250 g split was pulverized to better than 85% passing 75 microns. The fine fraction was then analyzed for 51 elements using an aqua regia digestion followed by inductively coupled plasma combined with mass spectroscopy and atomic emission

spectroscopy (ME-MS41). An additional 30 g charge was further analysed for gold by fire assay with inductively coupled plasma-atomic emissions spectroscopy finish (Au-ICP21).

Many rock samples collected on the property yielded subdued results for the elements of interest. Six isolated samples or sample clusters in the eastern structural block returned variably elevated results for gold, arsenic, mercury, thallium and/or antimony (Figure 9). Two elevated gold values (0.153 and 0.292 g/t) were obtained from samples of siliceous grit, while all anomalous pathfinder element results were from the two carbonate horizons. Anomalous values for pathfinder elements ranged from 500 to 38,400 ppm arsenic, 237 ppm mercury (only one strongly elevated value), 10 to 270 ppm thallium and 100 to 1440 ppm antimony. Sample descriptions are not available for the 2011 samples. Anomalous 2012 samples comprised rusty-grey-green, pervasively altered, vuggy, decalcified, lower Stenbraten Assemblage limestone rarely with realgar (Showing A); strongly calcite and silica veined and brecciated Algae Lake Formation limestone; and limonite within Algae Lake Formation.

SOIL GEOCHEMISTRY

In 2011, Rackla Metals collected over 8700 soil samples from the property. In 2012, Strategic Metals took five soil samples from a grass-covered, linear gully in the southwest part of the detailed geological map area.

The 2012 sample locations are illustrated on Figure 8, while all results for gold, arsenic, mercury thallium, antimony and calcium are illustrated thematically on Figures 10 and 11. Certificates of Analysis are given in Appendix IV.

The 2012 soil sample locations were recorded using hand-held GPS units. Sample sites are marked by aluminum tags inscribed with the sample numbers and affixed to 0.5 m wooden lath that were driven into the ground. Soil samples were collected from 10 to 45 cm deep holes dug by hand-held auger. They were placed into individually pre-numbered Kraft paper bags. The soil samples were sent to the ALS Minerals laboratory in Whitehorse, where they were dried and screened to -180 microns. The samples were then shipped to the ALS Minerals laboratory in North Vancouver where they were analyzed for 51 elements using an aqua regia digestion followed by inductively coupled plasma combined with mass spectroscopy and atomic emission spectroscopy (ME-MS41). An additional 30 g charge was further analysed for gold by fire assay with inductively coupled plasma-atomic emissions spectroscopy finish (Au-ICP21). Anomalous thresholds and peak values for the metals of interest are listed in Table III.

Table III – Threshold and Peak Values for Soil Samples

Element	Anomalous Thresholds				
	Weak	Moderate	Strong	Very Strong	Peak

DATE: APRIL2013

The bulk of the anomalous gold and pathfinder element soil results were obtained from the eastern structural block, primarily from the lower Stenbraten Assemblage and Algae Lake Formation carbonate horizons. Samples with elevated results for the elements of interest are plotted along with simplified geology on Figures 12 and 13.

Several discrete clusters of samples with an elevated gold, arsenic and antimony signature with minor mercury and thallium support are hosted within the lower Stenbraten Assemblage horizon (and rarely strongly silicified grit (PSq)) over an approximately 3000 m strike length. At least three of these anomalies appear to be directly related to fault zones, while the others have yet to be mapped in detail.

An irregularly shaped, approximately 2000 by 500 m, gold-arsenic-antimony anomaly is hosted by thrust faulted Algae Lake Formation limestone at the eastern end of the property. Clusters of weakly to moderately elevated gold and antimony with minor arsenic and rare, strongly elevated thallium values are associated with Algae Lake Formation limestone in the central and western structural blocks.

Calcium results were plotted to confirm the mapped positions of carbonate units on the property. The results support the mapped lithological contacts.

DIAMOND DRILLING

In 2012, a five hole diamond drill program was completed in the detailed map area to test arsenic±gold±mercury±thallium±antimony soil anomalies primarily hosted within structurally complex lower Stenbraten carbonate stratigraphy. A total of 1167.68 m of diamond drilling was completed.

The first hole was collared on July 10, 2012 and the final hole was completed on August 4. The work was contracted to Beaudoin Diamond Drilling Ltd. of Courtenay, BC and was completed using NTW equipment with a heli-portable JKS-300 drill. The drill was set up on a platform of 6” by 6” timbers covered with 2” by 8” planks, on sites that were levelled by hand.

Drill core was flown by helicopter to a temporary camp site on Strategic Metals’ nearby Crag East property where it was logged and processed and it is currently stored. Drill collars were marked with logs, to which metal tags listing the hole number were secured. Survey control was established by differential GPS and chain and compass measurements. All holes were sampled top to bottom. The core was split with one-half bagged and sent for analysis and the other half returned to the core box. Two blank, two standard and two duplicate samples were randomly included in every batch of 36 core samples. From the processing site, the bagged samples were transported by helicopter, fixed-wing aircraft and truck to the Archer Cathro lot in Whitehorse, where chain of custody paperwork was checked and sample integrity verified.

Analytical work was done by ALS Minerals with sample preparation in Whitehorse and assays and geochemical analyses in North Vancouver. The samples were dried, fine crushed to better than 70% passing -2mm and then a 250 g split was pulverized to better than 85% passing 75 microns. All samples were analyzed for 51 elements by aqua regia digestion followed by

The holes were drilled at various orientations and locations within the favourable carbonate stratigraphy to test beneath soil geochemical anomalies, realgar mineralization (Showing A) and prospective structural zones. Although the expected lithological and structural features were intersected in all holes, no mineralization was observed and geochemical results were relatively subdued for all elements of interest. Cross-sections showing lithology and results for gold, arsenic, mercury, thallium, antimony, calcium, magnesium and iron are provided in Appendix VI. The calcium, magnesium and iron plots confirm the observed lithological breaks. The following paragraphs describe the purpose of drilling each hole and the general lithological and structural observations.

Hole SE-12-01 was drilled to evaluate the main anticlinal fold nose within the southwestern part of the detailed map area. The fold nose comprises a sequence of siltstone (PNu), tan and grey limestone with minor debris flows (PSc), and shale (PSs). The hole was oriented to test a part of the fold nose that is cut by several faults. The folding and faulting are accompanied by gold-arsenic-mercury-thallium soil anomalies and rare realgar mineralization (Showing A) hosted within locally decalcified limestone. Two short intervals of weakly elevated gold were intersected – 0.128 g/t over 3.05 m (from 18.29 to 21.34 m) and 0.105 g/t over 1.37 m (from 206.13 to 207.50 m).

Hole SE-12-02 was designed to test beneath a gold-arsenic soil anomaly hosted in the upper part of a steeply dipping, strongly quartz veined siliceous grit to quartz pebble conglomerate horizon (PSq) and into the overlying limestone (PSs(l)). Grit with increased silicification towards the limestone contact was intersected.

Hole SE-12-03 was collared in the eastern part of the main anticlinal fold nose and explored beneath arsenic and gold soil anomalies that appear to be associated with a cross-cutting fault zone. Variably sheared, tan and grey limestone with local debris flows (PSc) and underlying siltstone (PNu) were intersected.

Hole SE-12-04 was drilled further along the eastern limb of the main anticline to test across a strong, fault-related, linear arsenic soil anomaly. A wide fault zone with brown clay bands and brick red gouge was intersected within limestone (PSc).

Hole SE-12-05 was drilled even further east along the eastern fold limb, beneath a fault-related, gold-arsenic soil anomaly hosted within the favourable limestone (PSc) horizon. The hole was drilled perpendicular to stratigraphy and parallel to the fault to check for mineralization within limestone immediately adjacent to the fault zone.

DISCUSSION AND CONCLUSIONS

The Scarlet East property is located within a recently discovered district of Carlin-type gold occurrences that lies at the eastern end of the prospective Rackla Belt. The general geological setting, mineralization and geochemistry of occurrences within this district are consistent with gold deposits in the Carlin Trend of Nevada.

Despite the property's favourable stratigraphic position along strike from ATAC's Carlin-type gold deposits, strongly elevated soil geochemical results and structural complexity, the 2012 drill results were disappointing. Only a small portion of the geochemical anomalies and prospective stratigraphy was tested in 2012 and, thus, the property warrants additional work. This work should include: 1) detailed prospecting of geochemical anomalies, particularly within Algae Lake Formation limestone in the eastern structural block; 2) detailed geological mapping of geochemically anomalous areas; and 3) hand pitting or trenching to test overburden-covered, anomalous soil sample sites. Diamond drilling should be considered if a significant mineralized zone is discovered.

STATEMENT OF QUALIFICATIONS

STATEMENT OF QUALIFICATIONS

I, Sarah Drechsler (née Eaton), geologist, with business addresses in Whitehorse, Yukon Territory and Vancouver, British Columbia and residential address in Squamish, British Columbia, hereby certify that:

1. I graduated from the University of British Columbia in 2007 with a B.Sc. in Honours Geological Sciences.

2. From 2002 to present, I have been actively engaged in mineral exploration in Yukon Territory, British Columbia and Northwest Territories.

3. I am a Professional Geoscientist (P.Geo.) with the Association of Professional Engineers and Geoscientists of British Columbia (Member Number 154922).

4. I have personally interpreted all data resulting from this work.

S. Drechsler, B.Sc., P.Geo.

ROCK SAMPLE DESCRIPTIONS

Rock Sample Descriptions

Project: Midas Touch   Property: Scarlet East

Sample Number	Grid East	UTM East	Elevation	Grid North	UTM North	Type	Sample Width	Dimension	Abundance
I079719		643587 E	m		7107800 N	Float			

Comments: Green-brown weathering, strongly altered limestone(?). In float below fault zone with massive calcite veining.

Sample Number	Grid East	UTM East	Elevation	Grid North	UTM North	Type	Sample Width	Dimension	Abundance
I079720		643575 E	m		7107778 N	Composite			

Comments: Several cobbles of rusty-green-grey weathering, pervasively altered, weakly limonitic limestone(?) in float, in float below fault zone with massive calcite veining.

Sample Number	Grid East	UTM East	Elevation	Grid North	UTM North	Type	Sample Width	Dimension	Abundance
I079721		643519 E	m		7107832 N	Float			

Comments: In talus, 1 cobble of green-brown-grey weathering, vuggy, non-calcareous breccia with minor limonite pockets.

Sample Number	Grid East	UTM East	Elevation	Grid North	UTM North	Type	Sample Width	Dimension	Abundance
I079722		643795 E	m		7107822 N	Composite			

Comments: Several cobbles of pervasively orange to red carbonate with calcite veins or highly altered limestone clasts. Matrix is strongly calcareous. No source located.

Sample Number	Grid East	UTM East	Elevation	Grid North	UTM North	Type	Sample Width	Dimension	Abundance
I079723		643638 E	m		7108085 N	Grab			

Comments: Small talus train of orange weathering, calcite-veined and brecciated limestone(?). Sample is of porous, orange-green breccia. Non-calcareous.

Sample Number	Grid East	UTM East	Elevation	Grid North	UTM North	Type	Sample Width	Dimension	Abundance
I079730		643683 E	m		7107503 N	Composite			

Comments: Composite sample of 10 pieces of very strongly silicified, coarse grained grit in talus. Trace to minor limonite. Near top of Au-in-soil anomaly. Area of silicifed talus is 20 by 20 m.

Rock Sample Descriptions Project: Midas Touch Property: Scarlet East

Sample Number:	Grid East:	E	Grid North:	N	Type: Grab	Dimension:
I079731	UTM:	644264 E	UTM:	7108113 N	Sample Width:	Abundance:
	Elevation:	m				

Comments: Massive calcite and quartz vein with few limonite pockets along probably fault. At least 50 cm wide. At top of As-Au in soil anomaly.

Sample Number:	Grid East:	E	Grid North:	N	Type: Composite	Dimension:
I079732	UTM:	644251 E	UTM:	7108122 N	Sample Width:	Abundance:
	Elevation:	m				

Comments: 6 piece composite sample of orange-white weathering, strongly calcite>>silica veined and brecciated silty limetone. Collected from talus below 2 m gap in outcrop with strong calcite veining (fault?).

Sample Number:	Grid East:	E	Grid North:	N	Type: Composite	Dimension:
I079734	UTM:	644524 E	UTM:	7108586 N	Sample Width:	Abundance:
	Elevation:	m				

Comments: 5 piece composite of orange-white weathering, rarely pale yellow stained, quartz carbonate vein talus. Comprises about 2-5% of rocks within 50 m long by 6 m wide talus train.

Sample Number:	Grid East:	E	Grid North:	N	Type: Float	Dimension:
C386160	UTM:	643516 E	UTM:	7107773 N	Sample Width:	Abundance:
	Elevation:	m				

Comments: Very fine grained, brown/tan/green weathering, light grey fresh, vuggy de-calcified limestone. Pervasive, fine grained, realgar and orpiment mineralization on fresh surfaces. Brecciated.

Sample Number:	Grid East:	E	Grid North:	N	Type: float	Dimension:
C386161	UTM:	644127 E	UTM:	7108377 N	Sample Width:	Abundance:
	Elevation:	m				

Comments: Brown/rusty weathering, quartz vein material with shale clasts. Locally pitted with minor limonite.

Sample Number:	Grid East:	E	Grid North:	N	Type: float	Dimension:
C386162	UTM:	644263 E	UTM:	7108461 N	Sample Width:	Abundance:
	Elevation:	m				

Comments: Tan to brown weathering, quartz matrix supported breccia with fine grained grey siliceous clasts up to 2 cm in diameter. Minor limonite.

Sample Number:	Grid East:	E	Grid North:	N	Type: Float	Dimension:
C386163	UTM:	644063 E	UTM:	7108309 N	Sample Width:	Abundance:
	Elevation:	m				

Comments: Dark grey to brown waethering, rusty, clast-supported shale breccia. Minor limonite.

Rock Sample Descriptions Project: Midas Touch Property: Scarlet East

Sample Number	Grid East	UTM East	Elevation (m)	Grid North	UTM North	Type	Sample Width	Dimension	Abundance
L836151		354000 E			7110082 N			15m wide recessive zone	very

Comments: Graphitic limestone at a fold nose

Sample Number	Grid East	UTM East	Elevation (m)	Grid North	UTM North	Type	Sample Width	Dimension	Abundance
L836152		645216 E			7109576 N				5%, 3m wide talus

Comments: Limonite

Sample Number	Grid East	UTM East	Elevation (m)	Grid North	UTM North	Type	Sample Width	Dimension	Abundance
L836153		645170 E			7109562 N				

Comments: Calcite vein with black sooty material

Sample Number	Grid East	UTM East	Elevation (m)	Grid North	UTM North	Type	Sample Width	Dimension	Abundance
L836154		645080 E			7109637 N				

Comments: Limonite

Sample Number	Grid East	UTM East	Elevation (m)	Grid North	UTM North	Type	Sample Width	Dimension	Abundance
L836166		643676 E			7107745 N	Composite			

Comments: 4 piece composite sample of orange, knubbly weathering, strongly brecciated, pervasive red-yellow carbonate matrix with quartz clasts. Fault breccia. Several blocks at centre of 4 m wide corridor in outcrop.

Sample Number	Grid East	UTM East	Elevation (m)	Grid North	UTM North	Type	Sample Width	Dimension	Abundance
G286056		646044 E			7109794 N	Float			

Comments: Weathered brown, fresh dark grey to black, carbonate (limestone?), comprised of very coarse subhedral grains of black calcite. Rock smells sulferous when broken or scratched.

Sample Number	Grid East	UTM East	Elevation (m)	Grid North	UTM North	Type	Sample Width	Dimension	Abundance
G286057		646046 E			7109791 N	Float			

Rock Sample Descriptions Project: Midas Touch Property: Scarlet East

Comments: Weathered tan to brown, fresh light grey, limestone crackle breccia with a vuggy texture and a fine grained orange matrix. Clast sizes about 4.0 mm in diameter. Vugs containing a red/maroon earthy haematite.

Sample Number:	Grid East:		E	Grid North:		N	Type:	Float	Dimension:
G286058	UTM:	354602	E	UTM:	7109751	N	Sample Width:		Abundance:
	Elevation:		m						

Comments: Punky/pitted and earthy, orange to red to maroon, fine grained, intensely altered limestone (?). Effervesces readily with HCl.

Sample Number:	Grid East:		E	Grid North:		N	Type:	Outcrop grab	Dimension:
G286059	UTM:	354598	E	UTM:	7109756	N	Sample Width:		Abundance:
	Elevation:		m						

Comments: Weathered tan to brown, fresh medium grey, clast supported limestone breccia, with a calcite matrix.

Sample Number:	Grid East:		E	Grid North:		N	Type:	Outcrop grab	Dimension:
G286060	UTM:	354258	E	UTM:	7109808	N	Sample Width:		Abundance:
	Elevation:		m						

Comments: Weathered earthy yellow to tan, fresh light grey, clast supported limestone breccia.

Sample Number:	Grid East:		E	Grid North:		N	Type:	Outcrop grab	Dimension:
G286061	UTM:	354188	E	UTM:	7109592	N	Sample Width:		Abundance:
	Elevation:		m						

Comments: Weathered white, fresh black, carbonate, composed of radiating masses of crystals. Rock smells sulferous when broken or scratched.

Sample Number:	Grid East:		E	Grid North:		N	Type:	Outcrop	Dimension:
G286062	UTM:	354392	E	UTM:	7109231	N	Sample Width:		Abundance:
	Elevation:		m						

Comments: Altered limestone, outcrop dug from pit.

CERTIFICATE WH12166696

Project: Scarlet East

P.O. No.: Batch 2

This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 18-JUL-2012.

The following have access to data associated with this certificate:

SARAH EATON	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70%<2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-MS41	51 anal. aqua regia ICPMS	
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Ag-OG46	Ore Grade Ag - Aqua Regia	VARIABLE
Pb-OG46	Ore Grade Pb - Aqua Regia	VARIABLE

To: **STRATEGIC METALS LTD.**
ATTN: JOAN MARIACHER

CERTIFICATE WH12168815

Project: Scarlet East

P.O. No.: Batch 3

This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 20-JUL-2012.

The following have access to data associated with this certificate:

SARAH EATON	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70%<2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-MS41	51 anal. aqua regia ICPMS	
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Ag-OG46	Ore Grade Ag - Aqua Regia	VARIABLE
Pb-OG46	Ore Grade Pb - Aqua Regia	VARIABLE

To: **STRATEGIC METALS LTD.**

CERTIFICATE WH12171260

Project: Scarlet East
P.O. No.:
This report is for 6 Rock samples submitted to our lab in Whitehorse, YT, Canada on 22- JUL- 2012.
The following have access to data associated with this certificate:

SARAH EATON	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI- 21	Received Sample Weight
LOG- 22	Sample login - Rcd w/ o BarCode
CRU- QC	Crushing QC Test
PUL- QC	Pulverizing QC Test
CRU- 31	Fine crushing - 70%<2mm
SPL- 21	Split sample - riffle splitter
PUL- 31	Pulverize split to 85%<75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au- ICP21	Au 30g FA ICP- AES Finish	ICP- AES
ME- MS41	51 anal. aqua regia ICPMS

Project: Scarlet East
P.O. No.: Batch 7
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 28-JUL-2012.
The following have access to data associated with this certificate:

SARAH EATON	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70%<2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-MS41	51 anal. aqua regia ICPMS	
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Ag-OG46	Ore Grade Ag - Aqua Regia	VARIABLE

CERTIFICATE WH12174437

Project: Scarlet East

P.O. No.: Batch 4

This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 25-JUL-2012.

The following have access to data associated with this certificate:

SARAH EATON	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70%<2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-MS41	51 anal. aqua regia ICPMS	
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Ag-OG46	Ore Grade Ag - Aqua Regia	VARIABLE
Pb-OG46	Ore Grade Pb - Aqua Regia	VARIABLE

CERTIFICATE COMMENTS

Method	CERTIFICATE COMMENTS
ME-MS41	Interference: Ca>10% on ICP-MS As, ICP-AES results shown.
ME-MS41	Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g).

CERTIFICATE WH12174438

Project: Scarlet East

P.O. No.: Batch 5

This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 25-JUL-2012.

The following have access to data associated with this certificate:

SARAH EATON	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70%<2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-MS41	51 anal. aqua regia ICPMS	
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Ag-OG46	Ore Grade Ag - Aqua Regia	VARIABLE

To: **STRATEGIC METALS LTD.**
ATTN: JOAN MARIACHER

CERTIFICATE WH12174452

Project: Scarlet East
P.O. No.: Batch 6
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 25-JUL-2012.
The following have access to data associated with this certificate:

SARAH EATON	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70%<2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-MS41	51 anal. aqua regia ICPMS	
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Ag-OG46	Ore Grade Ag - Aqua Regia	VARIABLE
Pb-OG46	Ore Grade Pb - Aqua Regia	VARIABLE

CERTIFICATE OF ANALYSIS WH12174452

Method	CERTIFICATE COMMENTS
ME-MS41	Interference: Ca>10% on ICP-MS As,ICP-AES results shown.
ME-MS41	Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g).

CERTIFICATE WH12179904

Project: Scarlet East
P.O. No.: Batch 8
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 1-AUG-2012.
The following have access to data associated with this certificate:

SARAH EATON	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70%<2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-MS41	51 anal. aqua regia ICPMS	
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Ag-OG46	Ore Grade Ag - Aqua Regia	VARIABLE
Pb-OG46	Ore Grade Pb - Aqua Regia	VARIABLE

To: STRATEGIC METALS LTD.
ATTN: JOAN MARIACHER

CERTIFICATE WH12179906

Project: Scarlet East

P.O. No.: Batch 9

This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 1-AUG-2012.

The following have access to data associated with this certificate:

SARAH EATON	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70%<2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-MS41	51 anal. aqua regia ICPMS	
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Ag-OG46	Ore Grade Ag - Aqua Regia	VARIABLE

CERTIFICATE OF ANALYSIS WH12179906

Method	CERTIFICATE COMMENTS
ME-MS41	Interference: Ca>10% on ICP-MS As, ICP-AES results shown.
ME-MS41	Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g).

CERTIFICATE WH12179907

Project: Scarlet East
P.O. No.: Batch 10
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 1-AUG-2012.

The following have access to data associated with this certificate:

SARAH EATON	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70%<2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-MS41	51 anal. aqua regia ICPMS	
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Ag-OG46	Ore Grade Ag - Aqua Regia	VARIABLE
Pb-OG46	Ore Grade Pb - Aqua Regia	VARIABLE

To: **STRATEGIC METALS LTD.**
ATTN: JOAN MARIACHER

CERTIFICATE OF ANALYSIS WH12179907

Method	CERTIFICATE COMMENTS
ME-MS41	Interference: Ca>10% on ICP-MS As,ICP-AES results shown.
ME-MS41	Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g).

CERTIFICATE WH12179910

Project: Scarlet East

P.O. No.: Batch 11

This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 1-AUG-2012.

The following have access to data associated with this certificate:

SARAH EATON	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70%<2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-MS41	51 anal. aqua regia ICPMS	

To: **STRATEGIC METALS LTD.**
ATTN: JOAN MARIACHER

CERTIFICATE WH12185223

Project: Scarlet East
P.O. No.: Batch 13
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 7-AUG-2012.
The following have access to data associated with this certificate:

SARAH EATON	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70%<2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-MS41	51 anal. aqua regia ICPMS

CERTIFICATE OF ANALYSIS WH12185223

Method	CERTIFICATE COMMENTS
ME-MS41	Interference: Ca>10% on ICP-MS As,ICP-AES results shown.
ME-MS41	Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g).

CERTIFICATE WH12185224

Project: Scarlet East
P.O. No.: Batch 14
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 7-AUG-2012.
The following have access to data associated with this certificate:

SARAH EATON	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70%<2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-MS41	51 anal. aqua regia ICPMS	

To: **STRATEGIC METALS LTD.**
ATTN: JOAN MARIACHER

CERTIFICATE WH12185225

Project: Scarlet East

P.O. No.: Batch 12

This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 7-AUG-2012.

The following have access to data associated with this certificate:

SARAH EATON	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70%<2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-MS41	51 anal. aqua regia ICPMS	

To: STRATEGIC METALS LTD.
ATTN: JOAN MARIACHER

CERTIFICATE OF ANALYSIS WH12185225

CERTIFICATE COMMENTS

Method	Certificate Comments
ME-MS41	Interference: Ca>10% on ICP-MS As, ICP-AES results shown.
ME-MS41	Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g).

CERTIFICATE WH12188774

Project: Scarlet East
P.O. No.: Batch 15
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 13-AUG-2012.
The following have access to data associated with this certificate:

SARAH EATON	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70%<2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-MS41	51 anal. aqua regia ICPMS

Finalized Date: 31- AUG- 2012
Account: MTT

CERTIFICATE OF ANALYSIS WH12188774

CERTIFICATE COMMENTS

Method	
ME- MS41	Interference: Ca> 10% on ICP- MS As, ICP- AES results shown.
ME- MS41	Gold determinations by this method are semi- quantitative due to the small sample weight used (0.5g).

CERTIFICATE WH12188775

Project: Scarlet East

P.O. No.: Batch 16

This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 13-AUG-2012.

The following have access to data associated with this certificate:

SARAH EATON	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70%<2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-MS41	51 anal. aqua regia ICPMS	

To: **STRATEGIC METALS LTD.**
ATTN: JOAN MARIACHER

CERTIFICATE OF ANALYSIS WH12188775

Method	CERTIFICATE COMMENTS
ME-MS41	Interference: Ca>10% on ICP-MS As, ICP-AES results shown.
ME-MS41	Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g).

CERTIFICATE OF ANALYSIS WH12193300

CERTIFICATE COMMENTS

Method	
ME-MS41	Interference: Samples with Ca>10% on ICP-MS As. ICP-AES As results reported (2 ppm DL)
ME-MS41	Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g).

SUMMARY

From (m)	To (m)	Interval	Unit	Comments
0.00	0.50	0.50	OVB	Overburden, no recovery
0.50	14.58	14.08	SLT	laminated siltstone.
14.58	75.33	60.75	SLT	Bedded to sheared siltstone.
75.33	118.54	43.21	LST	Well bedded brown to grey limestone. Debrite and breccia seen throughout.
118.54	221.31	102.77	LST	Well bedded dark grey limestone. Debrite and breccia seen throughout.
221.31	298.70	77.39	SLT	interbedded siltstone and limestone/limemudstone.

SAMPLES

Numbers:	L842014 to L842049, L860301 to L860408
Total:	144
Batch:	1, 2, 3, 4
Date Sent:	
Certificate:	WH12166695, WH12166696, WH12168815, WH12174437

COMMENTS

Hole targeted elevated As-Hg-Tl with mod. Au in soil within LST, near anticlinal hinge and fault. Hole intersected expected units but no mineralization was seen. Batch 3 rerun as WH12189731.

0.00	0.50	0.50					OVB														Overburden/casing, no recovery
0.50	14.85	14.35					SLT	FG	MD	BN	BD			CLY	3	0.01					Medium brown to grey, fine grained interbedded siltstone. Beds laminated up to 2.5 cm thick, patchy clay alteration on fractures. Bedding generally 50-85 degrees to core axis and undulate at times. Brown beds persist to 11.20 m; absent below. Sand sized quartz grit zones locally up to 15 cm thick. Oxidation seen locally on some fracture surfaces. Manganese dendrites on some fracture surfaces until 13.00 m. Core blocky throughout up to 30 cm. Trace pyrite - very fine grained and dull - seen along bedding planes.
										GY		1									
14.85	75.33	60.48					SLT	FG	LT	GY	BD		3	CLY	3						Light to dark grey, interbedded to laminate siltstone. Core typically laminated to thinly bedded silts to fine sands, with dark grey bands of jasperoid (?) alteration up to 1.3 m wide. Small amounts of soft sediment deformation generating undulatory beds and laminations. Quartz grit segments throughout up to 10 cm. Clay alteration variable with patches of strong alteration where core is highly fractured (brecciated?). Where jasperoidal (?) narrow irregular white quartz veinlets of random orientations. Core generally blocky throughout, fractures preferentially along bedding.
									DK	GY	BD										
			20.93	24.18	3.25		SLT	FG	LT	GY	BN			CLY	4						Light to medium grey strongly clay altered siltstone. Clay alteration strong, at times pervasive altering whole core, to along margins of box-work like fractures. Segments of up to 10 cm of gouge, with the rest of the segment small rubble with gouge on fracture surfaces. Coarse grained quartz vein 25 cm wide at top of interval. Angular grey clasts of siltstone within vein material. Oriented at 45 degrees to core axis.
									MD												
			39.27	70.76	31.49		SLT	FG	LT	GY	BD			CLY	3	0.01					Weakly to intensely sheared, fine grained, light to medium grey, moderately clay altered siltstone. Clay alteration strong at times, altering whole core. Shear fabric is exhibited by undulating bedding to cataclastic zones to minor breccia. Pyrite seen along darker beds - very fine grained and greenish blebs. Zones up to 1 m of unsheared laminated siltstone. Carbonate veinlets and blebs seen in highly sheared/cataclastic zones. Quartz and carbonate veinlets also often seen perpendicular to shear direction. Dolomite seen locally with quartz veins.
									MD		SH										
			70.76	74.32	3.56		SLT	FG	MD	GY	BD	1									Medium grey bedded siltstone with rusty brown-orange oxidation alteration on fracture surfaces. Very little to no clay alteration. Interval strongly fractured.
			74.32	75.33	1.01		SLT	FG	LT	GY	SH			CLY	3						Light to medium grey sheared, bedded siltstone. Sharp upper contact, gradual lower contact. Clay alteration moderate but pervasive throughout core. No brown beds.
									MD		BD

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite		Type	Conc. (%)	Photo	
75.33	118.54	43.21					LST	FG	MD	BN	BD	1		CLY	2	0.01				x	Well bedded fine grained, light to medium brown, well bedded limestone. Beds laminated to 2.5 cm thick. Patchy clay alteration, mainly on fracture surfaces only. Oxidation seen locally on fracture surfaces and patches altering whole core. Small segments of folded/sheared beds throughout. Shear/deformation is typically seen in the finer grained brown beds. Trace pyrite seen along bedding planes - very fine grained and dull. Bedding angle varies from 25 to 70 degrees. Small carbonate stringers 1-2 mm throughout - undulatory with no preferred orientation.
										GY											
			75.33	80.92	5.59		LST	FG	LT	GY	RB	3									Light to medium brown to grey moderately rusty-brown to brown oxidized limestone. Oxidation seen on fracture surfaces and patches of strong oxidation altering whole core. Zone of mudstone/turbididte(?) From 75.33-75.87 m. Clasts are 0.5-3 cm in size and edges are deformed/ragged. Select clasts oxidized.
									MD	BN											
118.54	221.31	102.77					LST	MG	LT	GY	BD	1				0.01					Light to medium grey fine grained limestone. Texture is laminated/bedded to clastic (turbidity?). Clastic segments have clasts 0.2 mm to 2 cm and are subrounded. Clasts typically lighter than the dark grey matrix. All calcareous, occasionally a silicified clast is found. Laminated beds also often have limemudstone (very fine grained) layers and segments up to 2.00 m throughout. Zones of mild breccia due to calcite stringers throughout. Trace very fine grained pyrite seen along bedding planes.
									MD	BL	DB										
			118.54	121.89	3.35		LST	MG	LT	GY	DB	1									Clastic limestone debris flow with clasts 2 mm to 10 cm. Clasts typically subrounded to rounded. Clasts lighter than matrix. Some zones of finer grained/smaller clast limestone. Looks like jagged edges of clasts generated from dissolution seams
									MD	BL											
			122.51	122.76	0.25		LST	FG	DK	GY	BD	4									Strongly oxidized - medium brown in colour - lime mudstone. Heavily folded.
									MD												
			126.68	127.90	1.22		LST	MG	MD	GY	BX										Brecciated limestone - brecciated from calcite veinlets and veins throughout at random orientations (typically shallow to core axis) Calcite veinlets often yellowish to orange in colour - mild oxidation?
			140.61	141.61	1.00		LST	FG	DK	GY	BD										Fine grained, dark grey lime mudstone. Beds range from very fine sand to mud up to 5 cm thick. A few calcite stringers throughout, more pervasive in coarser grained lighter beds

SCARLET EAST

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite		Type	Conc. (%)	Photo	
			141.61	143.73	2.12		LST	MG	LT	GY	DB	1				0.01					Clastic debrite limestone. Light to medium grey (matrix medium to dark grey). Clasts subrounded to rounded, occasionally with irregular edges (dissolution seams?). Zones of the debrite are folded and sheared elongating the clasts - fabric is 30 degrees to core axis. Weak oxidation seen on some fracture surfaces.
									MD												
			143.73	146.34	2.61		LST	FG	DK	GY	BD					0.01					Dark grey very fine grained lime mudstone. Laminations and beds up to 2 cm thick. Folded and sheared with pervasive calcite stringers throughout. Dissolution seams <1-2 mm throughout often quite undulatory. 10-15 cm zones of multiple up to 1 cm thick dissolution seams creating an area of solution collapse breccia. Large amounts of calcite veining/blebs throughout these zones, often truncated by dissolution seams. Pyrite seen in blebs in these zones.
											BX										
			146.34	150.96	4.62		LST	FG	LT	GY	BD	2									Light grey limestone with oxidation seen enveloping fractures and veins. This segment is slightly more rubbly. Calcite veinlets throughout.
			150.96	152.76	1.80		LST	FG	LT	GY	BX	2		CLY	2						Light to medium grey brecciated limestone. Brecciated texture generated by calcite and quartz stringers and veinlets. Increased number of 1-2 mm thick dissolution seams - aiding in breccia generation. Weak clay and oxidation alteration throughout, mainly on fracture surfaces and dissolution seam surfaces.
									MD												
			180.04	181.24	1.20		LST	FG	LT	BN	BD	4									Light brown to grey strongly oxidized, bedded limestone. Interval is rubble to grit. Less oxidation down interval.
										GY											
			184.43	186.20	1.77		LST	FG	LT	GY	BD										Increase in number of dissolution seams in limestone. Typically along bedding planes and undulatory.
									MD												
			186.20	187.43	1.23		LST	FG	LT	GY	BX										Light to medium grey limestone with calcite stringers, veinlets and blebs throughout creating a breccia texture. Calcite overprinting dissolution seams.
									MD												
			187.43	202.77	15.34		LST	FG	LT	GY	BD	1		CLY	1						Light to medium grey bedded limestone with small debrite zones and soft sediment deformation. Beds fining uphole. An in crease in number of dissolution seams 10-20 per metre, typically along undulating bedding planes. Mild clay and oxidation seen on fracture surfaces. Calcite veins and veinlets throughout.
									MD

General Interval From (m)	General Interval To (m)	General Interval Interval (m)	Detailed Interval From (m)	Detailed Interval To (m)	Detailed Interval Interval (m)	Lithology Unit	Lithology Rock Type	Lithology Grain Size	Lithology Shade	Lithology Colour	Lithology Texture	Alteration Oxidation	Alteration Silicification	Alteration Other Type	Alteration Other Intensity	Minerals Pyrite	Minerals	Minerals Other Type	Minerals Other Conc. (%)	Photo	Detailed Description
			202.77	206.13	3.36		LST	MG	LT	GY	DB										Light to medium grey debrite limestone. Top of interval finer grained clasts (sand size) and bottom of interval up to 2-3 cm pebble sized. Heavily calcite veined generating a mild breccia texture. Clasts vary in colour throughout with very little matrix material. Dissolution seams often seen rimming clasts.
									MD		BX										
			206.13	207.50	1.37		LST	FG	DK	GY	BD										Dark grey to black finely laminated/bedded limestone/limemudstone. Small calcite veinlets throughout.
										BK											
221.31	298.70	77.39					LST	FG	MD	GY	BD		1			0.01					Well bedded fine grained limestone and siltstone interbedded. Zones of silicification and small debrite segments. Very few dissolution seams throughout. Beds range in thickness from 0.2-30.0 cm, fining uphole. The siltstone is much darker grey than the calcareous layers. Soft sediment deformation throughout. Trace pyrite along bedding planes, typically round (radial?), bright crystals.
									DK		LA										
			228.60	234.00	5.40		LST	FG	LT	GY	BX										Calcite veinlets and stringers generating mild breccia texture in bedded limestone.
									MD		BD										
			260.78	262.16	1.38		LST	FG	LT	GY	BD		3								Slightly brecciated silicified limestone with calcite veins and veinlets throughout. Small darker stringers defining bedding and breccia throughout.
									MD		BX										
			282.93	290.45	7.52		SLT	FG	DK	GY	BD										Very dark grey very fine grained siltstone with small <10 cm bands of more calcareous lighter lime-mudstone. A few calcite veinlets and stringers throughout as well as soft sediment deformation.
											LA										
			290.45	292.70	2.25		LST	FG	LT	GY	BX					0.01					Light to medium grey brecciated debrite to bedded limestone and siltstone. Calcite stringers and a few dissolution seams generating breccia texture overprint of debrite. Pyrite seen throughout - medium grained splashy and bright pyrite - seen in debrite matrix and preferentially along bedding planes.
	EOH								MD		DB										EOH, reached targeted depth. Hole intersected expected units but no mineralization was seen.

SCARLET EAST

Hole: SE-12-01 **Logger Name: H. Friday** **Date: July 13, 2012**

2° Structure Type	From (m)	To (m)	Attitude (to core axis)	Attitude (TRFE)	Count	MINERALS		DESCRIPTION	Photo
						Type	Conc. (%)		
VN	21.12	-	45	0	1	Qz		Centred at 21.12 m, coarse grained white quartz vein 45 degrees to core axis, 28 cm wide with irregular but sharp margins. Supporting dark grey silicified siltstone clasts and irregular rusty orange stringers.	
BX	41.52	41.69	-	-	1			Zone of brecdcia with upto 1cm subangular silstone clasts. Matrix quartz and carbonate.	
VT	51.05	54.32	-	-	30	Qz		Series of rangomly oriented quartz veinlets and stringers, often truncated by shear fabric. Typically low angle to core axis.	
VT	55.29	59.86	-	-	4	Qz		upto 2cm thick undulatory quartz veins - undulatory due to shear? Follow no prefered orientation. Milky to crystalline grey quartz	
VT	67.26	68.80	25	-	7	Qz		White quartz veinlets upto 8mm thick. Often heavily folded/sheared. Typically low angle to core axis. Milky white.	
VT	72.11	72.89	65	-	5	Ca		upto 5mm thick iron carbonate (?) veinlets. Peach coloured veinlets with dark pink/red stringers throughout.	
VT/SR	75.22	77.17	50	-	30	Ca		Reddish-pink iron carbonate veinlets and stringers often perpendicular to bedding orientation, but a variety of orientations is also noticed	
VT	76.24		50	0	20	Ca		Upto 8mm thick white calcite veinlets following bedding plane, typically seen where grain size changes.	
VT/SR	77.17	80.92	60	-	40	Ca		White carbonate veinlets and stringers perpendicular to bedding. Higher concentration seen in the darker grey, finer grained layers.	
VN	93.33	-	30	-	1	Ca		3cm thick white calcite vein. Often darker grey crystals throughout. Sharp contacts.	
FD	98.20	-	55	-	1			Fold hinge - low angle and undulatory (cant get measurement of axial plane) bedding changes from 65 degrees in one limb to 45 degrees the opposite direction in the other limb. Photo taken.	x
VT/BX	123.44	127.90	45	-	50			Series of undulatoary calcite veinlets and stringers generating mild breccia of limestone. Calcite often yellow-orange (oxidized?)	
VN	125.97	134.21	40	0	10	Ca		Series of 1-3cm thick calcite veins with very undulatory contacts generally following bedding orientation.	
FD	121.19	-						Short limb long limb fold axis. Long ilmb 60 degrees to core axis, short limb 25 degrees to core axis. Fold too open to accurately tell axial orientation.	
VT	134.69	135.09	20	120	2	Ca		2 6mm thick very planar calcite veinlet. Slightly offset due to folding	
VN	136.56	136.81	60	180	1	Ca		Large calcite vein with jagged but sharp contacts into limestone. Light peach to white in colour	
VT	148.62	172.10	40	245	3/m	Ca		1-5mm thick calcite veinlet. Planar with uneven but sharp contacts	
VT	153.74	165.27	80	-	4/m	Ca		small 1-3mm calcite veinlets. Planar.	
VN	156.36	167.01	70	180	6	Ca		1-2cm thick calcite veins. Planar with uneven/rough edges.	
VN	162.79	-	10	-	1	Ca		1.2 cm thick calcite vein. Undulatory with planar sharp contacts	
VN	181.52	191.74	15	245	8	Ca		1-2cm thick calcite veins that often branch off into smaller 2-7mm veinlets. Shallow angle to core axis, often quite undulatory.	
VN	184.10	-	50	0	1	Ca		7cm thick calcite vein parallel with bedding plane.	
VN	189.92	211.10	-	-	7	Ca		Upto 4cm thick calcite "floods" with dark grey material rimming the calcite crystals.	
VN	199.43	202.93	15	180	4	Ca		2-10cm thick calcite veins that brecciate the limestone into angular clasts. Sharp contacts. Veins often branch out along. Occasional pink staining seen in calcite.	

SCARLET EAST

2° Structure Type	From (m)	To (m)	Attitude (to core axis)	Attitude (TRFE)	Count	MINERALS Type	MINERALS Conc. (%)	DESCRIPTION	Photo
VN	210.13	-	20	320	1	Ca		3cm thick calcite vein with dissolution seams throughout and peach staining.	
VN	222.35	-	30	180	1	Ca		2 cm thick calcite vein with sharp but undulatory contacts into limestone.	
VN	223.46	223.88	-	-	2	Ca		2 thick (10cm) calcite veins brecciating the limestone. Large 1-3cm limestone angular clasts throughout. veinlet offshoots at random orientations from the veins.	
VN	254.94	257.16	20	90	3	Ca		Three 1.5cm to 15cm thick calcite veins. Very undulatory edges and are comprised of white to grey calcite crystals.	
VN	259.79	265.23	30	180	11	Ca		0.5 to 1.5 cm thick very planar calcite veins. Sharp contacts into limestone.	
VN	276.91	282.70	35	270	10	Ca		1-3 cm thick very planar calcite veins. Sharp contacts into limestone.	
BX	290.45	292.78	-	-	-	Ca		Calcite vein and veinlets at random orientations to core axis generating breccia texture. Often very jagged edges and undulatory.	
VN	292.78	298.70	-	-	50	Ca		Planar calcite veinlets at random orientations to core axis with upto 20cm zones of calcite floods/brecciated limestone.

TARGET: Elevated Au-As in soil values within silicified grit near steep contact with overlying LST

SUMMARY

From (m)	To (m)	Interval	Unit	Comments
0.00	2.25	2.25	OVB	Overburden/casing, no recovery
2.25	255.47	253.22	QGT/SLT	Interbedded siliceous quartz grit and well bedded
				mudstone. Small rubbly patches throughout.
255.47	264.26	8.79	LST/QGT	Interbedded siliceous quartz grit with a calcarous
				matrix and well bedded limestone.
264.26	264.87	0.61	SLT	Fault contact into well bedded dark grey siltstone.

SAMPLES

Numbers:	L860409 - L860542
Total:	134
Batch:	5, 6, 7 and 8
Date Sent:	July 23rd, 26th and 28th, 2012
Certificate:	WH12174438, WH12174452, WH12173274, WH12179904

COMMENTS

Grit with increased silicification towards LST contact. Hole shutdown shortly after LST contact. Batches 5 and 6 rerun as WH12202651 and WH12202650 respectively.

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION		Other		MINERALS		Other			DETAILED DESCRIPTION
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite		Type	Conc. (%)	Photo	
0.00	2.25	2.25					OVB														8' casing and overburden
2.25	255.47	253.22					SLT	FG	LT	GY	BD	2									Interbedded medium grey to brown siltstone beds with medium grey to brown quartz grit unit. Bedding throughout siltstone not visible. Brownish-red oxidation seen enveloping all fractures and veins. Quartz grit grains <1 mm to 5 mm in size and tend to grade from 5 mm to <1 mm uphole in repeated sequences. Oxidation seen enveloping fracture surfaces and veins in grit unit also. Calcite and quartz veins and veinlets throughout both siltstone and quartz grit. Segments of quart grit have feldspars(?) throughout - often weathered.
									MD	BN	GT										
			2.25	10.25	8.00		SLT	FG	MD	BN	GO	4									Strongly oxidized interbedded siltstone and quartz grit. Entire interval gouge to rubble - with rubble typically 0.5-1 cm, angular and coated in gouge.
			10.25	17.77	7.52		SLT	FG	MD	BN	RB	3									Moderately oxidized interbedded siltstone and quartz grit. Entire interval rubble - typically 3-10 cm pieces, angular and select pieces coated in a fine gouge layer.
										GY											
			17.77	19.84	2.07		SLT	FG	MD	GY	BD	2									Grey to brown siltstone. Very soft. Oxidation around fractures and veins/veinlets. Gouge seen on some fracture surfaces.
									LT	BN											
			19.84	24.49	4.65		GRT	CG	MD	GY	BD	2									Medium grained <1-1 mm quartz grit. Oxidation seen enveloping fractures and veins/veinlets. Generally quartz veinlets throughout, with a few calcite veinlets.
											GT										
			24.49	25.01	0.52		GRT	CG	MD	BN	RB	4									Strongly oxidized quartz grit. Entire interval rubble. Grit to gouge seen on fracture surfaces.
											GT										
			25.01	35.02	10.01		GRT	CG	MD	GY	MA	3									Medium to coarse grained quartz grit with small zones of rubble/more heavily oxidized quartz grit. Quartz and calcite veinlets seen throughout.
			35.02	37.67	2.65		GRT	CG	MD	BN	RB	3									Moderately oxidized quartz grit. Entire interval rubble. Pieces 2-10 cm and angular. Grit to gouge seen on fracture surfaces - ranging from orange-brown to grey-brown.
											GT										
			37.67	48.03	10.36		GRT	CG	MD	GY	GT	2									Weakly oxidized medium grey to brown quartz grit. Oxidization seen enveloping fractures and veinlets. Quartz and iron carbonate(?) veinlets throughout. Sharp lower contact into siltstone at 30 degrees to core axis.
										BN	BD										

SCARLET EAST

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite		Type	Conc. (%)	Photo	
			48.03	56.75	8.72		SLT	FG	MD	BN	BD	3		CLY	2						Interbedded brown to grey siltstone with quartz grit bands. Bands up to 1.00 m thick fine downhole. Clay alteration seen on fracture surfaces and stringers throughout. Oxidation weak to strong and pervasive. Quartz blebs and veinlets seen infrequently throughout. Manganese-stained dendrites seen on some fracture surfaces.
										GY											
			56.75	57.26	0.51		SLT	FG	MD	GY	RB	2		CLY	2						Weakly oxidized and clay altered bedded siltstone. Majority of interval is angular rubble to highly fractured rock. Clay seen on fracture surfaces.
										BN	BD										
			57.26	84.69	27.43		SLT	FG	MD	GY	BD	2		CLY	1						Well bedded medium grey to brown siltstone. Oxidation seen enveloping fracture surfaces and veinlets/stringers throughout. Clay alteration on select fracture surfaces and occasionally surrounding veinlets. Beds 0.2-10 cm thick typically. Occasional very reddish-orange brown beds which are only up to 1.5 cm thick.
										BN											
			84.69	88.50	3.81		SLT	FG	MD	GY	BD	2		CLY	3						Moderately clay altered and oxidized bedded siltstone. Oxidization seen enveloping fractures and veinlets. Clay seen on fracture surfaces and generating netted clay stringers throughout segments of core. Interval rubbly to highly fractured (fault?). A few small quartz stringers throughout.
										BN	RB										
			88.50	89.46	0.96		SLT	FG	MD	GY	BD	2									Bedded siltstone with milky white quartz veins throughout. Oxidation seen in select beds and as small orange-brown stringers throughout. Some soft sediment deformation. Quartz veins typically parallel to bedding. 1 cm thick.
										BN											
			89.46	93.91	4.45		GRT	FG	MD	GY	FX	1		CLY	2						Interbedded siltstone and quartz grit. Interval is highly fractured to rubble. Clay seen on fracture surfaces. Oxidation on fracture and vein surfaces. Quartz veinlets throughout. Rip-up siltstone clasts seen in the quartz grit.
										BN	BD										
			93.91	94.79	0.88		SLT	FG	MD	GY	RB	1		CLY	2						Bedded siltstone. Interval rubble to grit (Fault?). Clay seen on fracture surfaces.
										BN	BD										
			94.79	98.92	4.13		GRT	CG	MD	GY	BD	2									Interbedded siltstone and quartz grit. Oxidation enveloping fracture surfaces.
										BN	MA										
			98.92	101.76	2.84		GRT	CG	MD	BN	BD	4		CLY	2						Interbedded siltstone and quartz grit with pervasive oxidation throughout. Interval highly fractured. Quartz stringers and veinlets throughout. Typically 60 degrees to core axis and approximately 180 degrees to bedding angle. Quite undulatory. Clay alteration seen on some bedding planes of the siltstone. Quartz grit has small 1-2 mm clasts throughout.
										GY	FX										

SCARLET EAST

			101.76	103.49	1.73		GRT	MG	LT	GY	BD	2									Light grey to tan bedded quartz grit. Oxidation seen enveloping fractures. Bedding defined by slightly darker grit bands.
										TN											
			103.49	104.69	1.20		GRT	CG	LT	TN	SD	1									Heavily soft sediment deformed siltstone and quartz grit. Rip-up clasts from each seen throughout. Quartz grit very coarse grains. Slight oxidation throughout interval.
									MD	GY	BD										
			104.69	108.55	3.86		GRT	CG	LT	GY	MA	1									Light grey to tan quartz grit. Small quartz veinlets throughout typically at 60 degrees to core axis.
										TN											
			108.55	109.04	0.49		GRT	CG	LT	TN	BX	1									White quartz veins brecciating quartz grit. Quartz grit clasts 0.5-2 cm and angular throughout segment. Slight oxidation.
										WH											
			109.04	133.21	24.17		GRT	CG	LT	GY	MA	1									Light grey to tan quartz grit. Quartz veinlets throughout - typically 40-60 degrees to core axis, 10 per metre. Some larger quartz veins down interval. Slight oxidation seen on some fracture surfaces.
									MD	TN											
			133.21	136.52	3.31		SLT	FG	MD	GY	BD	2									Interbedded siltstone and quartz grit. Interval rubble to highly fractured for most of interval. Oxidation seen enveloping select fracture surfaces. Rubble segments approximately 30 cm long. Dolomite veinlets and veins seen throughout as well as quartz veins and veinlets. Some soft sediment deformation seen in the siltstone, furthermore, siltstone rip-up clasts seen in the quartz grit beds.
										BN	GR										
			136.52	137.84	1.32		GRT	CG	MD	GY	MA	1									Quartz grit. Slight oxidation on some fracture surfaces. Quartz stringers throughout.
											BD										
			137.84	140.34	2.50		SLT	FG	MD	GY	BD	3		CLY	1						Interbedded siltstone and quartz grit. Interval moderately oxidized with pervasive but patchy oxidation throughout. Siltstone clasts seen throughout quartz grit. Interval highly fractured to rubble. Clay seen on some fracture surfaces.
										BN	RB										
			140.34	144.92	4.58		GRT	CG	MD	GY	MA	1									Medium grey quartz grit with oxidation seen enveloping some fracture surfaces and veins. Small siltstone rip-up clasts seen throughout. Often quite elongate and thin. Some darker grains/beds visible defining a bedding fabric locally.
										BN	BD										
			144.92	156.59	11.67		SLT	FG	MD	BN	BD	4		CLY	4						Strongly oxidized interbedded quartz grit and siltstone. Beds of each up to 1.00 m. Soft sediment deformation seen in the siltstone. Rip-up clasts of siltstone seen in the quartz grit.
										GY

GENERAL INTERVAL From (m)	GENERAL INTERVAL To (m)	GENERAL INTERVAL Interval (m)	DETAILED INTERVAL From (m)	DETAILED INTERVAL To (m)	DETAILED INTERVAL Interval (m)	LITHOLOGY Unit	LITHOLOGY Rock Type	LITHOLOGY Grain Size	LITHOLOGY Shade	LITHOLOGY Colour	LITHOLOGY Texture	ALTERATION Oxidation	ALTERATION Silicification	ALTERATION Other Type	ALTERATION Other Intensity	MINERALS Pyrite	MINERALS	MINERALS Other Type	MINERALS Other Conc. (%)	Photo	DETAILED DESCRIPTION
			156.59	168.55	11.96		GRT	CG	LT	GY	MA	1									Light to medium grey quartz grit. Slight/weak oxidation seen on and enveloping select fracture surfaces. Medium grey bands and patches throughout. Small quartz stringers and veinlets as well as calcite veinlets and stringers seen throughout.
									MD		BD										
			168.55	170.58	2.03		SLT	FG	MD	GY	BD	1									Interbedded quartz grit and siltstone. Soft sediment deformation seen in both. Oxidation seen on some fracture surfaces and bedding surfaces. Quartz and carbonate stringers throughout - generally non-continuous and perpendicular to bedding. Interval is highly fractured. Quartz vein 15 cm thick and heavily oxidized at upper contact.
									DK		SD										
			170.58	183.68	13.10		GRT	CG	MD	GY	MA	2									medium grey quartz grit with weak oxidation seen enveloping fracture and veinlets. Quartz stringers and veinlets throughout ranging from 50-75 degrees to core axis at 20 per metre.
			183.68	200.86	17.18		SLT	FG	LT	GY	BD	3				0.01					Interbedded quartz grit and siltstone. Moderately oxidized throughout - often quite patchy and primarily seen around veins, fractures and veinlets. Interval moderately fractured with some small 20 cm zones of rubble in the siltstone. Trace pyrite seen in very fine grained dull blebs. Quartz and dolomite stringers throughout - often perpendicular to bedding. Larger quartz veins seen throughout also, often oxidized and vuggy.
									MD	BN	MA										
			200.86	214.01	13.15		GRT	CG	LT	GY	MA	2									Weakly oxidized quartz grit. Oxidation seen enveloping fracture surfaces. Segments of feldspar(?) rich quartz grit. Milky white grains often oxidized. Increased quartz veins and veinlets, particularly the 2nd half of the interval. Typically 60 degrees to core axis and planar - 3 per metre up to 207.00 m then 10 per metre for rest of interval. Darker grey 3 mm thick beds throughout defining bedding - often quite undulatory. Small segments of high abundance of quartz stringers generating netted textures.
									MD		BD										
			214.01	217.31	3.30		SLT	FG	MD	GY	BD	3		CLY	2						Interbedded siltstone and quartz grit. Beds up to 10 cm and often soft-sediment deformed. Moderate oxidation throughout. Entire interval grit to rubble to highly fractured rock. Weak clay/gouge seen on fracture surfaces. Dolomite and quartz stringers throughout.
										BN	SD										
											RB										
			217.31	218.56	1.25		GRT	CG	LT	GY	MA	1									Weakly oxidized quartz grit. Heavily silicified with numerous quartz veinlets and stringers throughout. Oxidation seen in patches throughout, typically around fractures and veinlets.
										TN											

SCARLET EAST

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite		Type	Conc. (%)	Photo	
			218.56	220.33	1.77		SLT	FG	MD	GY	BD	3		CLY	3						Interbedded siltstone and quartz grit. Beds up to 15 cm thick with large amounts of soft sediment deformation. Moderate oxidation throughout as well as moderate clay alteration. Oxidation mainly seen on fractures and veinlet surfaces along with the clay alteration. Interval is rubble to highly fractured with quartz and dolomite veins and veinlets throughout.
										BN	SD										
											RB										
			220.33	221.49	1.16		SLT	FG	DK	GY	BD					0.01					Interbedded siltstone and quartz grit with 0.5-15 cm thick beds. Grain size in beds decreasing downhole. Soft sediment deformation seen throughout. Trace very fine grained dull pyrite blebs seen.
									MG		SD										
			221.49	255.47	33.98		GRT	CG	LT	GY	MA	1									Very weakly oxidized quartz grit. Oxidation seen on some fracture surfaces. Moderate quartz veining - approximately 5 quartz veins or veinlets per metre - typically quite planar. Fine grained silty beds start to appear at 251.60 m and are approximately 10 cm thick and quite infrequent. Contact into calcareous grit and limestone is gradational. Sand grit has a calcareous matrix starting at 255.47 m. Quartz and calcite veins throughout - majority being calcite.
									MD		BD										
255.47	264.26	8.79					GRT	CG	MD	BN	BD	2									Interbedded siliceous quartz grit with a calcareous matrix and well bedded limestone - with occasional tan beds.
									LT	GY	MA										
			255.47	260.14	4.67		GRT	MG	MD	GY	MA	2									Quartz grit with carbonate matrix. Beds of light grey to brown limestone near lower contact. Oxidation seen enveloping select fracture surfaces. Extensive calcite stringers and veinlets throughout - often discontinuous. Quartz grit ranges from medium to light grey.
									LT												
			260.14	264.26	4.12		LST	CG	LT	BN	BD	2		CLY	2						Interbedded tan limestone beds and quartz grit with a calcareous matrix. Weak oxidation and clay alteration seen mainly on fractures throughout. Limestone beds mainly oxidized to a light brown. Calcite veins and veinlets and stringers throughout. Lower contact rubble to gouge.
									MD	GY	MA										
264.26	264.87	0.61					SLT	FG	DK	GY	BD	1				0.01					Well bedded siltstone.
									MD		SH										
			264.26	264.87	0.61		SLT	FG	DK	GY	BD	1				0.01					Bedded to laminated dark to medium grey siltstone. Sheared. Weak oxidation seen on fracture surfaces. Trace very fine grained dull pyrite seen throughout. Calcite blebs and discontinuous stringers throughout. Gouge / rubble on upper contact (fault?)
	EOH								MD		SH										EOH, hole terminated shortly after intersecting limestone.

2° Structure Type	From (m)	To (m)	Attitude (to core axis)	Attitude (TRFE)	Count	MINERALS Type	MINERALS Conc. (%)	DESCRIPTION	Photo
VT	12.18	12.73	80	-	7			Quartz-calcite veinlets 5-8mm thick. Sharp contacts. Slight oxidation throughout - stronger on edge of veinlets.	
VT/SR	20.42	27.75	65-80	-	15/m			Quartz and carbonate veinlets and stringers 1-8mm thick. Typically steep angles to core axis. No oxidation seen bordering these.	
VN	20.92	22.22	50	-	4			Quartz veins 1-4cm thick at 50 degrees to core axis. Envelope of oxidation (0.5-1cm thick). Iron carbonte (?) grains 2-3mm throughout - oxidized.	
VN	25.37	25.52	25	-	1			Quartz vein with quartz grit clasts (2-4mm) throughout. Small carbonate stringers throughout - often oxidized.	
VT	38.67	43.92	45	-	10			2-5mm thick planar quartz veinlets.	
VN	40.67	-	65	-	1			3cm thick quartz vein. Planar with oxidation seen throughout.	
VN	44.09	-	35	-	1			1cm thick quartz vein with dark grey stringers throughout. Sharp but undulatory contacts.	
GO	48.36	-	50	0	1			1.3cm wide gouge zone following bedding.	
GO	53.86	-	30	0	1			1.5 cm wide gouge zone. Oxidized following bedding.	
VT	57.43	58.53	40	180	5			2-4cm thick slightly oxidized quartz veinlets. Planar.	
VT	59.75	76.52	60	180	6			0.5cm thick crystalline quartz veinlets. Pitted and oxidized on crystal surfaces. Oxidation envelope 1cm thick surrounding.	
VN	65.79	67.34	50	0	2			2cm thick oxidized quartz veins. Oxidized stringers throughout with strong oxidiation surrounding vein.	
BX	67.20	67.37	-	-	-			Breccia generated by quartz stringers. Zone heavily oxidized.	
BX	67.87	68.17	-	-	-			Breccia generated by quartz stringers. Zone heavily oxidized.	
VT	99.23	-	-	-	5			10 cm interval of interconntected quartz veinlets, all at random orientations to core axis and undulatory and uneven thickness. Grey quartz rimmed by milky white quartz.	
BX	108.55	109.04	-	-	-			White quartz veins brecciating quartz grit. Quartz grit clasts 0.5-2cm and angular throughout segment. Slight oxidation.	
VT	109.04	133.21	60	-	10/m			Small 2-4mm planar quartz veinlets.	
VN	128.10	130.26	45	0	8			1-3cm thick quartz veins. Occasional quartz grit clasts brecciated in veins.	
VN	133.59	135.04	45	-	3			1-3cm thick quartz dolomite veins. White to peach in colour. Planar. Cant tell fabric of rock.	
VN	138.91	-	40	-	1			1.5 cm thick quartz calcite vein. Oxidation of the calcite throughout.	
VN	140.64	-	5	-	1			1cm thick undulatory quartz-calcite vein. Calcite oxidized.	
VN	142.89	-	40	170	1			1cm thick peach coloured quartz carbonate vein. Rough edges into quartz grit.	
VN	168.55	168.70	25	0	1			15cm thick quartz vein. Heavily oxidized with oxidized gouge seen on upper contact.	
VN	184.02	198.50	30	330	10			1-4cm thick quartz veins that are vuggy and oxidized. Edges quite undulatory and rough. Spots of dolomite occasionally seen in these veins.	
VT	197.20	199.10	5	-	3			4-8mm thick very vuggy very oxidized undulatory quartz veinlets.	
VN	205.99	213.17	40	180	12			1-8cm thick quartz veins. Planar with sharp contacts. Oxidation seen around some veins.	
VN	219.79	221.94	40	-	3			Quartz-calcite and dolomite veins and blebs upto 8cm thick. Calcite heavily oxidized. Edges into surrounding rock quite jagged.	

SCARLET EAST

TARGET: Test beneath fault with strong As-Hg-Tl and mod Au in soil within LST

SUMMARY

From (m)	To (m)	Interval	Unit	Comments
0.00	0.84	0.84	OVB	Overburden/casing, no recovery
0.84	110.36	109.52	LST	Well bedded limestone with variable oxidation throughout. An increase in calcite veining/brecciation towards lower contact
110.36	148.77	38.41	LST	Bedded limestone with abundant dissolution seams and occasional small decalcified segments and ASO alteration on select fracture surfaces. Large rubble patches throughout. Extensive shear textures seen near lower contact.
148.77	185.62	36.85	MST	Well bedded variably oxidized mudstone

SAMPLES

Numbers: L860543 - L860641

Hole: SE-12-03 **Logger Logger Name: H. Friday** **Date: July 28, 2012**

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite		Type	Conc. (%)	Photo	
0.00	0.84	0.84					OVB														Overburden/casing, no recovery.
0.84	110.36	109.52					LST	FG	LT	GY	BD	2									Well bedded limestone with variable oxidation throughout. An increase in calcite veining/brecciation is seen towards lower contact.
									MD	BN											
			0.84	10.04	9.20		LST	FG	LT	GY	BD	3									Light to medium grey to brown well bedded limestone. Select beds are more oxidized, as well as tan to brown oxidation enveloping fracture surfaces and veinlets and veins. Entire interval highly fractured to rubble. Calcite blebs and veinlets throughout. Often very planar.
									MD	BN	RB										
											FX										
			10.04	12.46	2.42		LST	FG	LT	GY	BD	2		CLY	2						Light to medium grey to brown well bedded limestone. Lighter beds throughout typically coarser grained. Oxidation seen enveloping fracture surfaces and veinlets/veins. Calcite veinlets and blebs throughout.
									MD	BN											
			12.46	14.35	1.89		LST	FG	MD	GY	BD	2		CLY	2						medium grey to brown moderately clay altered well bedded limestone. Clay alteration on fracture surfaces and surrounding veins/veinlets. Extensive calcite veining throughout - typically generating mild breccia in select limestone beds. Oxidation seen enveloping fracture surfaces and veinlets.
										BN											
			14.35	29.13	14.78		LST	FG	LT	GY	BD	1				0.01					Light to medium grey to brown well bedded limestone. Interval heavily folded with bedding angle changing from 0 to 60 degrees. Calcite stringers and veinlets seen frequently along the bedding plane. Oxidation seen on fracture surfaces and as small seamlets following bedding. Trace very fine grained dull pyrite blebs throughout.
									MD	BN											
			29.13	33.58	4.45		LST	FG	LT	GY	BD	1		CLY	2						Well bedded, folded limestone with weak oxidation on fracture surfaces. Moderate clay alteration also seen on fracture surfaces. Entire interval highly fractured to rubble.
									MD	BN	FX										
			33.58	52.99	19.41		LST	FG	MD	GY	BD	1									Medium grey well bedded and folded limestone. Oxidation seen on fracture surfaces and at the top of the interval to approx. 45.50 m. Occasional oxidized beds also seen in this section. Calcite stringers and veinlets throughout.
			52.99	54.47	1.48		LST	FG	MD	GY	BD	1									Medium grey bedded and heavily sheared/brecciated limestone. Truncated calcite veinlets and veins throughout - often grey. Dissolution seams seen throughout breccia zone. Oxidation seen on fracture surfaces and occasionally seen enveloping veinlets/veins - number of veinlets and veins are increased compared to the surrounding limestone.
											SH

											BX										
			54.47	69.97	15.50		LST	FG	LT	GY	BD	2				0.01					Light to medium grey bedded and sheared limestone. Oxidation seen on fracture surfaces and enveloping some fractures and veinlets. Occasional beds in limestone oxidized. Occasional dissolution seams throughout. Small 10 cm zones of breccia are scattered throughout. Calcite blebs and veinlets throughout. Trace very fine grained, dull pyrite seen along bedding planes.
									MD		SH										
			69.97	72.06	2.09		LST	FG	LT	GY	BX	1									Calcite veins and veinlets generate a breccia texture. Shear fabric and dissolution seams furthering the breccia texture. Oxidation seen on fracture surfaces. Segments of debrite throughout.
									MD		DB										
			72.06	74.92	2.86		LST	FG	LT	GY	DB										Interbedded bedded limestone and debrite. Dissolution seams throughout and calcite veining throughout bedded limestone generating mild breccia.
									MD		BD										
			74.92	101.28	26.36		LST	FG	LT	GY	BD	2		CLY	1						Light to medium grey bedded limestone. Shear fabric overprinting bedding. Extensive calcite veining generating breccia texture throughout most of interval. Oxidation seen on fracture surfaces and occasionally altering a limestone bed. 1-3 cm thick calcite veins throughout - jagged edges into limestone (and often non-continuous like calcite floods) approximately 1 every 2 metres - often seen with dissolution seams.
									MD	BN	BX										
											SH										
			101.28	110.36	9.08		LST	FG	LT	GY	BX	3		CLY	1						Light to medium grey brecciated and sheared limestone. Brecciation generated from extensive calcite veins, veinlets and stringers throughout. Shear fabric defined by large (up to 8 mm thick) dissolution seams throughout, often at low angles to core axis. Brown oxidized beds and stringers throughout at 10 per metre, which are often found along with dissolution seams.
									MD	BN											
110.36	148.77	38.41					LST	FG	MD	GY	BD	2		CLY	1						Bedded limestone with abundant dissolution seams and occasional small decalcified segments and arsenic oxide alteration on select fracture surfaces. Extensive shear textures seen near lower contact.
									DK	BN				ASO	1						
			110.36	111.62	1.26		LST	FG	DK	GY	BD	2		CLY	1						Bedded dark grey limestone with the occasional dark brown bed throughout. A few small calcite stringers throughout - very undulatory and randomly oriented. Clay alteration seen with the oxidized brown beds and on fracture surfaces.
										BN											
			111.62	112.47	0.85		LST	FG	BN	GY	BD	2		CLY	1						Bedded dark grey limestone with the occasional dark brown bed throughout. A few small calcite stringers throughout. Clay alteration is seen on all fracture surfaces with oxidized brown beds. Interval highly fractured to rubble.

											FX										
			112.47	114.69	2.22		LST	FG	DK	GY	BD	2		CLY	1						Bedded dark grey limestone with the occasional dark brown bed throughout. A few small calcite stringers throughout - very undulatory and randomly oriented. Clay alteration seen with the oxidized brown beds and on fracture surfaces.
										BN											
			114.69	116.39	1.70		LST	FG	DK	GY	BD	1	2	CLY	2	0.01					Dark grey bedded sheared limestone/limemudstone. Quartz and calcite veinlets and stringers throughout. Dissolution seams throughout and occasionally seen oxidized. Dark grey clay/grit seen on majority of fracture surfaces. Stringers creating mild breccia locally. Trace very fine grained dull pyrite blebs seen close to lower contact. Last 70 cm of interval weakly to moderately silicified.
											SH										
			116.39	117.69	1.30		LST	FG	MD	GY	SH		2	CLY	3						Heavily sheared silicified limestone. Seams of clay and dissolution seams throughout. Quartz and calcite stringers throughout locally generating mild breccia - which are typically truncated by dissolution seams. Light yellow-green to yellow orange oxidation (arsenic oxide?) seen on fracture surfaces and throughout the more rubble/heavily sheared rock. Zones of very black sooty (decalcified?) limestone.
									DK	TN											
			117.69	119.26	1.57		LST	FG	LT	GY	BX										Heavily brecciated limestone. Calcite stringers and veinlets generating breccia. Dissolution seams throughout, typically 5-8 mm thick and very undulatory.
									MD												
			119.26	121.40	2.14		LST	FG	MD	GY	BX										Heavily brecciated debrite limestone with calcite stringers and veinlets generating breccia. Dissolution seams throughout. Segments of 20 cm of dark grey to black limemudstone (?) that is sheared.
									DK		DB										
											SH										
			121.40	122.29	0.89		LST	FG	MD	GY	BD	1									Bedded limestone to bedded dark grey limemudstone. Interval rubble to highly fractured. Yellow-orange oxidation seen on fracture surfaces.
									DK		RB										
			122.29	127.54	5.25		LST	FG	DK	GY	SH	1	2								Heavily sheared and brecciated limestone and lime mudstone (and/or decalcified limestone) with moderate silicification. Heavily brecciated with calcite stringers and veinlets. Intensely sheared ones also have quartz veins and veinlets throughout. Trace pyrite - dull and very fine grained - blebs throughout. Slight orange-yellow oxidation on select fracture surfaces.
									MD		BX										
			127.54	130.38	2.84		LST	FG	MD	GY	BD	1	2	ASO	1	0.01					Medium to light grey silicified bedded limestone. Quartz and calcite stringers throughout. Slight yellow-orange oxidation seen on select fracture surfaces (As-oxide?). Trace very fine grained pyrite seen typically along bedding planes.

									LT												
			130.38	131.42	1.04		LST	FG	MD	GY	BD	2	2	ASO	1	0.01					Medium to light grey silicified bedded limestone. Quartz and calcite stringers throughout. Slight yellow-orange oxidation seen on fracture surfaces (As-oxide?). Trace very fine grained pyrite seen typically along bedding planes. Entire interval rubble to highly fractured.
									LT		RB										
											FX										
			131.42	134.87	3.45		LST	FG	MD	GY	BX	1									Medium to light grey bedded to brecciated limestone. Breccia generated by calcite stringers. Dissolution seams seen with small shear zones. Weak oxidation seen on fracture surfaces - tan to yellow. Dark grey limemudstone segments throughout approx. 20 cm thick.
									LT		BD										
											SH										
			134.87	140.66	5.79		LST	FG	MD	GY	BD	1				0.01					Bedded to mildly brecciated limestone. Breccia generated by calcite stringers and veinlets throughout. Dissolution seams throughout. Oxidation is a light tan-yellow and seen on fracture surfaces throughout. Trace pyrite, fine grained and bright.
											BX										
			140.66	141.73	1.07		LST	FG	MD	GY	BX	2									Brecciated limestone. Breccia generated from shearing dissolution seams and extensive calcite veinlets and stringers. Moderate oxidation seen on and surrounding fracture surfaces and dissolution seams.
										TN	SH										
			141.73	144.81	3.08		LST	FG	MD	GY	BX	3		CLY	2						Moderately oxidized (light yellow-tan colour) and clay altered limestone. Competent segments brecciated with calcite stringers. Up to 20cm segments of oxidized grit. Clay to grit seen on all fracture surface - potentially As-oxide. Core is slightly sheared.
										TN	RB			ASO	1						
											SH										
			144.81	145.75	0.94		LST	FG	MD	GY	BX	1		CLY	2						Brecciated and mildly clay altered limestone. Breccia from calcite veinlets and stringers. Grey to slightly tan clay alteration seen on all fracture surfaces.
			145.75	146.24	0.49		LST	FG	MD	GY	BX	3		CLY	2						Moderately oxidized (light yellow-tan colour) and clay altered limestone. Competent segments brecciated with calcite stringers. Up to 20cm segments of oxidized grit. Clay to grit seen on all fracture surface - potentially As-oxide? Slightly sheared.
										TN	RB			ASO	1						
											SH										
			146.24	148.77	2.53		LST	FG	LT	GY	SH	2		CLY	2						Heavily sheared limestone, almost cataclastic in texture with a visible fabric. Clasts white to light grey with a dark grey matrix (very fine grained). Oxidation seen in patches throughout, primarily in the matrix. Oxidation a light yellow-tan colour. Sharp contact into lower mudstone.
									MD

2° Structure Type	From (m)	To (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS Type	MINERALS Conc. (%)	DESCRIPTION	Photo
VN/VT	12.16	14.01	-	-	5.00			Calcite veins/veinletts/breccia zones 5-10cm wide. Calcite veins/veinletts in random orientations through these zones.	
VN	15.62	17.38	35.00	-	3.00			1-5cm thick calcite veins. Relatively planar with angular limestone clasts throughout. Often deformed due to folding. Calcite grey with lighter grey to white calcite crystals throughout.	
VT	16.52	16.89	40 - 10	200.00	1.00			2-8mm thick very undulatory and shallow to core axis oxidized calcite veinlett. Veinlett light brown-orange with some un-oxidized calcite around the edges.	
VT	23.63	26.49	50.00	270.00	6.00			1-10mm thick veinletts grouped together into a 10cm thick breccia vein. Veinletts brecciate limestone. White calcite.	
VN	27.60	30.56	50.00	90.00	2.00			2-15cm thick calcite veins with irregular edges into limestone. Calcite white with pink stringers/spots throughout. Veins have angular clasts throughout.	
VT	29.90	34.90	10 to 30	-	6.00			2-5mm thick calcite veinletts at 10 to 30 degrees TCA often branching out along bedding planes. Typically almost perpendicular to bedding.	
VN	34.10	34.34	50.00	0.00	3.00			Grey calcite veins 1-2.5cm thick, irregular edges into limestone. Rimmed by small oxidized stringers.	
VN	36.60	37.17	20.00	0.00	1.00			Calcite flood/vein with dissolution seams throughout. Angular to subangular limestone clasts throughout.	
VN	39.77	40.09	-	-	3.00			Series of undulatory calcite "floods" veins. Random orientations with dissolution seams bordering.	
VN	41.52	41.75	10.00	-	1.00			Low angle to core axis undulatory 5-10cm thick calcite vein bounded by dissolution seams.	
VN	42.44	42.61	25.00	0.00	1.00			White calcite vein. Occasional red stringers/blebs throughout.	
VT	69.11	69.97	-	-	20.00			Randomly oriented calcite veinletts with sharp contacts. Random orientations generating mild breccia textures. Range in thickness from 1-10mm. Often low angle to core axis.	
VN	70.77	70.87	-	-	1.00			Calcite flood vein. Uneven edges into limestone. Dark stringers throughout.	
VN	95.67	95.73	20.00	180.00	1.00			4cm thick relatively planar calcite vein. Black stringers throughout.	
VN	96.81	-	20.00	90.00	1.00			2cm thick planar, white calcite vein with sharp contacts into limestone.	
VN	99.55	99.85	40.00	-	2.00			2-8 cm thick calcite flood veins. Black stringers throughout. Jagged edges into limestone.	
VN	104.27	104.39	60.00	0.00	1.00			Thick calcite flood vein. White to light grey calcite. Sharp contacts into limestone.	
VN	109.92	109.97	30.00	-	1.00			3cm thick white planar calcite vein. Sharp contacts.	
VN	133.80	133.98	-	-	1.00			Sheared calcite flood vein. White to light grey with darker grey stringers throughout.	
VN	138.35	140.48	10 to 15	-	4.00			1-3cm thick calcite veins. Undulatory but sharp contacts into limestone.

COMMENTS

Hole intersected bedded and debris flow LST with brown clay bands with variable brick red OX gouge.

SCARLET EAST

Hole: SE-12-04 **Logger Name: H. Friday** **Date: July 28, 2012**

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Realgar	Type	Conc. (%)	Photo	
0.00	5.50	5.50					OVB														Casing
5.50	161.24	155.74					LST		MD	GY	BD										Well bedded limestone with debrite and breccia zones. Gouge to rubble for majority of interval.
			5.50	23.94	18.44		LST	FG	MD	GY	RB	3									Medium grey, bedded to mildly brecciated, limestone. Moderate oxidation is seen throughout. Typically a medium grey-brown colour but locally a bright brick-red. Calcite stringers and veinlets are present throughout competent segments of core. Entire interval is rubble to very heavily fractured.
										BN	BD										
											BX										
			23.94	26.30	2.36		LST	FG	LT	TN	RB	4									Reddish brown bedded limestone that has been strongly oxidized. Entire interval rubble. Sharp contacts into surrounding intervals.
									MD	BN	FX										
										RD	BD										
			26.30	27.13	0.83		LST	FG	LT	GY	DB	2									Light to medium grey-brown debrite to bedded limestone. Moderate oxidation. Debrite has 0.3-2 cm clasts, rounded and often elongate. Clasts lighter are grey and brown (occasional oxidized clast) within a dark grey matrix. Small oxidized beds throughout the bedded limestone. Calcite stringers and veinlets throughout.
									MD	BN	BD										
			27.13	33.36	6.23		LST	FG	LT	BN	RB	5I									Light tan-brown heavily oxidized limestone. Entire interval is rubble to gouge. Gouge seen on all fracture surfaces.
										TN	GO										
			33.36	36.76	3.40		LST	FG	LT	BN	BD	3									Light tan-brown well bedded limestone. Entire interval moderately oxidized with slight gouge seen on most fracture surfaces. Patches of rubble throughout. Quartz and calcite veinlets and stringers seen throughout.
										TN	RB										
			36.76	45.26	8.50		LST	FG	LT	GY	BD	2		BLE	2						Light grey to tan bleached bedded limestone. Moderate oxidation throughout and bleaching throughout. Entire interval gouge to rubble to highly fractured. Gouge seen on most fracture surfaces.
										TN	RB										
											FX										
											GO										
			45.26	49.18	3.92		LST	FG	LT	GY	DB	2		BLE	1						Light grey to tan bleached limestone debrite. Debrite has rounded to subrounded elongate clasts from light to medium grey and tan. Little to no matrix throughout and matrix is typically oxidized. Medium-tan oxidation throughout generating gouge zones and altering debrite clasts. A few quartz grains seen in debrite (2-5 mm). Calcite stringers and veinlets throughout.
										TN	GO										

SCARLET EAST

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION		Other		MINERALS		Other			DETAILED DESCRIPTION
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Realgar	Type	Conc. (%)	Photo	
			49.18	50.80	1.62		LST	FG	LT	OR	BD	3									Light to medium orange-red to tan well bedded limestone. Oxidation pervasive throughout, generating zones of gouge (typically 15 cm thick). Gouge seen on all fracture surfaces. Calcite-quartz stringers, veinlets and veins seen throughout at 4 per metre.
									MD	RD	GO										
										TN											
			50.80	53.17	2.37		LST	FG	LT	BN	DB	3		BLE	1						Light to medium grey to tan-brown debrite limestone. Peachy bleaching throughout. Debrite clasts 2-10 mm and often elongate and rounded. Little to no oxidization within matrix. Gouge zones throughout - typically 10-30 cm and heavily oxidized.
									MD	GY	GO										
										TN											
			53.17	58.91	5.74		LST	FG	LT	GY	BX	2		BLE	1						Light to medium grey to tan brecciated to debrite to bedded limestone. Majority of interval breccia and debrite. Breccia generated by calcite stringers and veinlets. Debrite only has medium-grey limestone clasts (different than the polylithic debrite up hole) and are quite jagged clasts with a medium grey to tan matrix. Small 15 cm zones of well bedded limestone throughout. Oxidation and bleaching seen throughout. Bleaching is patchy. Oxidation generating zones of gouge 10 cm. Interval is generally competent core with zones of rubble up to 1.00 m long. Reddish staining seen on some fracture surfaces. Calcite veinlets throughout.
									MD	TN	DB										
											BD										
			58.91	63.52	4.61		LST	FG	LT	GY	BX	2									Light to medium grey to tan brecciated to massive limestone. Breccia generated from calcite stringers. Oxidation pervasive throughout generating small 10 cm zones of gouge. Interval is highly fractured to rubble.
									MD	TN	MA										
											RB										
			63.52	72.98	9.46		LST	FG	LT	TN	BD	3		BLE	2						Light tan to grey bedded limestone. Interval highly fractured with segments of gouge up to 1.00 m. Oxidation pervasive throughout interval, and gouge seen on fracture surfaces throughout. Interval moderately to strongly bleached. Patches of more brick-red oxidation. Calcite stringers and veinlets throughout.
										GY	GO										
			72.98	76.08	3.10		LST	FG	LT	GY	DB	2		BLE	2						Light grey to tan fine grained debrite limestone. Grains 2-8mm and typically monolithic. Calcite stringers throughout generating mild breccia. Interval highly fractured to rubble. Oxidation throughout typically on fracture surfaces with some more pervasive segments. Dark brown grungy oxidation also seen on select fracture surfaces.
										TN	BX										
											RB										

SCARLET EAST

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Other Type	Other Intensity	Pyrite	Realgar	Other Type	Other Conc. (%)	Photo	
			76.08	77.99	1.91		LST	FG	LT	OR	BD	3		BLE	2						Light orange-red to tan bedded limestone. Oxidation is pervasive throughout with 2 large 30 cm segments of gouge. Gouge seen on all fracture surfaces. Small 10 cm zones of rubble. Moderate bleaching throughout interval.
										RD	GO										
										TN											
			77.99	79.21	1.22		LST	FG	LT	GY	DB	2		BLE	1						Light to medium grey to tan debrite limestone. Clasts 0.2-10 cm and often rounded and elongate. Little to no matrix - clasts are oxidized and polylithic. Calcite stringers throughout. Oxidation patchy throughout generating a 25 cm segment of oxidized gouge at the lower contact. Weakly bleached.
									MD	TN	GO										
			79.21	82.17	2.96		LST	FG	MD	GY	DB	2									medium to light grey-tan limestone debrite. Clasts 2-5 cm and angular near top of interval, and gradually decreasing in size to the end of the interval. Calcite flood veins and stringers throughout. Moderate oxidation patchy throughout with mild oxidation seen on fracture surfaces.
									LT	TN	BX										
			82.17	88.94	6.77		LST	FG	LT	TN	BX	4									Light tan to pink to grey brecciated limestone. Entire interval rubble to highly fractured to gouge. Oxidation pervasive throughout with a brick-red oxidation seen on select fracture surfaces. Calcite stringers throughout.
										PK	RB										
										GY	GO										
			88.94	116.20	27.26		LST	FG	LT	GY	RB	4									Strongly oxidized limestone. Entire interval rubble to gouge. Breccia (from calcite veinlets) seen on select pieces. Oxidation light tan-brown in colour. Poor recovery.
									MD	TN	GO										
											BX										
			116.20	126.15	9.95		LST	FG	LT	GY	BD	4		BLE	2						Light tan to grey moderately bleached limestone. Interval rubble to highly fractured with zones of gouge. A few small calcite stringers throughout. Pervasive oxidation. Sharp contact into less altered limestone below.
										TN	RB										
											GO										
											FX										
			126.15	129.11	2.96		LST	FG	LT	GY	BD	2									Light to medium grey, brecciated limestone. Brecciation caused by calcite stringers throughout. Oxidation seen on all fracture surfaces - tan to orange-red. Interval mostly highly fractured with small rubble patches. Sharp contact at 30 degrees to core axis into the heavily oxidized limestone below.
									MD		BX										
											FX										
			129.11	131.58	2.47		LST	FG	LT	TN	BD	3									Moderately oxidized well bedded light to tan to grey limestone. Gouge seen on select fracture surfaces. A few small calcite stringers throughout, occasionally following bedding plane.
										GY	GO										

SCARLET EAST

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Realgar	Type	Conc. (%)	Photo	
			131.58	134.85	3.27		LST	FG	LT	GY	BD	3		BLE	1						Well bedded light grey to tan limestone. Brown/tan oxidized beds seen throughout. Beds 1-30 cm thick. Oxidation seen on select beds and on fracture surfaces. Calcite stringers throughout. Interval is weakly bleached. Small amounts of folding/soft sediment deformation throughout.
										TN											
			134.85	139.99	5.14		LST	FG	MD	GY	BD	1									Medium to dark grey thinly bedded limestone. Some shearing seen locally throughout interval - typically associated with calcite veinlets. Weak oxidation seen on select fracture surfaces, last 30 cm of interval moderately oxidized.
									DK		SH										
			139.99	146.84	6.85		LST	FG	LT	GY	BD	3		BLE	1						Well bedded light grey to tan limestone. Brown/tan oxidized beds seen throughout. Beds are 1-30 cm thick. Oxidation seen on select beds and on fracture surfaces. Calcite stringers throughout. Interval minorly bleached. Small amounts of folding/soft sediment deformation throughout. Small 10 cm segments of rubble throughout.
										TN											
			146.84	155.71	8.87		LST	FG	MD	GY	BD	2									Medium to light grey bedded limestone. Beds are <1-20 cm thick. Localized soft sediment deformation seen. Calcite stringers seen throughout, typically at 60 degrees to core axis. Light oxidation seen on fracture surfaces. Small 10 cm segments of breccia generated from calcite stringers.
									LT		BX										
			155.71	156.80	1.09		LST	FG	LT	GY	BD	3		BLE	2						Moderately oxidized light tan to grey bedded to brecciated limestone. Calcite stringers, blebs and veins pervasive throughout typically undulatory with no preferred orientation. Interval weakly bleached.
										TN	BX										
			156.80	161.24	4.44		LST	FG	LT	GY	BX	1		CLY	1						Light to medium grey brecciated to bedded limestone. Brecciated to bedded limestone. Brecciation generated by extensive calcite veins and stringers throughout. Weak clay alteration seen on fracture surfaces. Small undulatory dissolution seams throughout. Very weak oxidation seen on select fracture surfaces.
				EOH					MD		BD										EOH, hole terminated at target depth having intersected well bedded and debris flow limestones. Patchy red clay alteration seen throughout. No mineralization intersected.

				throughout.
242.04	246.70	4.66	LST	Dark grey well bedded limestone.
246.70	257.25	10.55	SLT	Well bedded dark grey siltstone with a few limey beds
				throughout.

SAMPLES

Numbers:	L860722 - L860750 and N832201 - N832299
Total:	128
Batch:	13, 14, 15, 16 and 17
Date Sent:	
Certificate:	WH12185223, WH12185224, WH12188774, WH12188775, WH12193300

COMMENTS

Batch 15 and 17 rerun, WH12210385 and WH12219774 respectively. Hole intersected variable sheared and well bedded limestone and siltstone. No visible mineralization seen.

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION		Other		MINERALS		Other			DETAILED DESCRIPTION
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite		Type	Conc. (%)	Photo	
0.00	2.44	2.44					OVB														Casing/overburden, no recovery
2.44	201.90	199.46					LST	FG	MD	GY	BD										Well bedded grey limestone with debrite beds throughout, zones of brecciation and shear seen locally.
			2.44	27.40	24.96		LST	FG	MD	GY	BD	2				0.01					Medium grey to brown well bedded silty limestone. Brown beds throughout (oxidized) and oxidation envelopes seen around select fracture surfaces. Beds 0.2-3 cm thick and vary from dark to light grey depending on grain size (finer grained are dark grey coarser grained are lighter grey). Siltyer layers throughout - less reactive with HCl. Calcite stringers infrequently throughout - often oxidized and occasionally folded. Small microfolds in some layers more frequently towards end of interval. Trace pyrite along bedding - very fine grained and dull.
									DK	BN											
			27.40	31.45	4.05		LST	FG	MD	GY	BD	3									Medium to dark grey to brown folded and sheared to brecciated bedded silty limestone. Folding visible throughout interval with 2-30 cm segments of heavily brecciated limestone. Brecciation generated from calcite veins and floods and dissolution seams. Brecciated zones more highly oxidized. Rest of interval the oxidation seen surrounding/enveloping fracture surfaces and alterating select beds. Small calcite stringers throughout - typically high angle to core axis.
									DK	BN	SH										
											BX										
			31.45	39.65	8.20		LST	FG	MD	GY	BD	3									Medium to dark grey to brown folded and sheared well bedded silty limestone. Folding seen in thin beds throughout and on a larger scale in the drastic changes of bedding angle. Oxidation seen enveloping fracture surfaces and altering beds. Calcite stringers throughout often seen along bedding planes and folded. Small segments 10-15cm of more pervasively oxidized core, rubble seen with these.
									DK	BN	SH										
			39.65	45.88	6.23		LST	FG	MD	GY	SH										Medium to dark grey heavily folded and sheared well bedded silty limestone. Dissolution seams throughout associated with heavily sheared segments. A noticeable increase in calcite stringers and veinlets throughout this interval - typically 50 degrees to core axis. Dissolution seams crosscut bedding and are generally 2-3 mm thick. Bedding angles change drastically throughout interval, with minor breccia zones in the heavily sheared segments.
									DK		BD										
			45.88	48.64	2.76		LST	FG	MD	GY	SH	1									Medium to dark grey moderately to heavily sheared bedded to brecciated silty limestone. Oxidation seen on fracture surfaces and shear bands throughout. Heavily calcite veining/stringers throughout generating zones of breccia. Reddish pink staining seen on the larger calcite blebs/veins. Dissolution seams seen throughout, 1-3 mm thick.
									DK		BD										

SCARLET EAST

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite		Type	Conc. (%)	Photo	
			48.64	54.56	5.92		LST	FG	MD	GY	SH	3		CLY	1						Medium to dark grey to brown heavily sheared silty limestone. Oxidation moderate and pervasive. Oxidation seen in Medium brown-tan bands throughout shear zone. Mild clay alteration seen on some fracture surfaces. Calcite floods and veins throughout, often truncated/bordered by dissolution seams. Dissolution seams typically 2-4 mm, thick and undulatory throughout interval.
									DK	BN											
			54.56	59.85	5.29		LST	FG	MD	GY	BD	1				0.01					Medium to dark grey moderately sheared bedded silty limestone. Oxidation seen on some shear surfaces and fracture surfaces throughout. Calcite stringers, veins and floods throughout. Stringers typically along bedding plane or perpendicular to shear. Dissolution seams throughout, typically truncating/bordering calcite veins and floods. Occasional orange-tan oxidation of calcite stringers/veins. Trace very fine grained dull pyrite blebs seen along bedding planes.
									DK		SH										
			59.85	62.04	2.19		LST	FG	MD	GY	DB	1				0.01					Medium to dark grey sheared debris flow limestone. Clasts 2-10 mm and subrounded. Matrix typically darker grey and clasts polylithic. Dissolution seams and dark shear bands throughout. Calcite veins and floods throughout, typically truncated and bordered by dissolution seams. Trace very fine grained pyrite along bedding.
									DK		SH										
			62.04	65.47	3.43		LST	FG	MD	GY	SH	1									Medium to dark grey sheared and brecciated bedded limestone. Calcite veins and floods pervasive throughout, exhibiting shear fabrics and often bounded/truncated by dissolution seams. Weak oxidation seen bordering heavily sheared zones. Dissolution seams throughout typically 1-3 mm thick. Brecciation generated by calcite stringers and dissolution seams/shear bands.
									DK		BD										
											BX										
			65.47	93.74	28.27		LST	FG	MD	GY	BD	1				0.01					Medium to dark grey bedded silty limestone. Small, up to 20 cm segments of heavily sheared limestone, with the majority of the interval mildly sheared. Segments of breccia seen in the heavily sheared segments. Weak oxidation seen on select fracture surfaces. Calcite veining more prominent around heavily sheared segments, with moderate veining/stringers throughout interval. Dissolution seams seen around intensely sheared segments. Select calcite veinlets/veins oxidized. Trace very fine grained pyrite along bedding.
									DK		SH										
			93.74	97.27	3.53		LST	FG	LT	GY	DB	1									Light to Medium grey sheared debris flow limestone. Dissolution seams and dark grey shear bands throughout, often truncating calcite veins and blebs. Clasts in debrite are 1-20 mm in size and subrounded. Matrix is darker than clasts. Slight oxidation seen on select fracture surfaces and shear surfaces - bright orange-brown in colour.
									MD		SH										

SCARLET EAST

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite		Type	Conc. (%)	Photo	
			97.27	104.42	7.15		LST	FG	MD	GY	BD	1									Medium to dark grey well bedded and weakly sheared limestone. Weak oxidation seen on select fracture surfaces and rimming select calcite veins. Small 20 cm zones of moderate shearing - typically minor breccia and calcite floods with shear bands and dissolution seams. Calcite stringers, veinlets and veins throughout interval. Bedding often sheared and folded.
									DK		SH										
			104.42	129.49	25.07		LST	FG	MD	GY	BD										Medium grey bedded and weakly sheared and brecciated limestone. A significant increase in the number of calcite veins and veinlets throughout (up to 30 per metre). Select calcite veins oxidized on the edges - typically an orange brown colour. Calcite floods throughout interval with more intensely sheared segments. Weak oxidation also seen on fracture surfaces and select beds throughout. Shearing seen locally - typically mild deformation of beds. Mild breccia generated from shearing and calcite stringers/veins throughout. Zones of rubble throughout approx. 10 cm and typically oxidized on fractures.
										TN	SH										
											BX										
			129.49	130.99	1.50		LST	FG	MD	GY	BD	1									Medium to dark grey well bedded silty limestone. Weak oxidation seen on select fracture surfaces. Calcite stringers and veins throughout. Occasional vein weakly oxidized.
									DK												
			130.99	138.80	7.81		LST	FG	MD	GY	SH	2									Medium to dark grey heavily sheared and brecciated bedded limestone. 2-4 mm thick dissolution seams throughout, typically seen with calcite floods and intensely sheared zones. Calcite stringers, veins and floods throughout generating mild breccia. Slight oxidation seen around fracture surfaces and dissolution seams and shear bands throughout.
									DK		BX										
											BD										
			138.80	151.94	13.14		LST	FG	MD	GY	BD	1				0.01					Medium to dark grey well bedded limestone. Minor breccia generated from calcite stringers and veinlets throughout. A few small undulatory dissolution seams throughout. Weak oxidation seen on select fracture surfaces and surrounding select calcite veins. Trace pyrite seen along bedding planes throughout. Very fine grained dull blebs. Calcite veinlets and stringers quite undulatory and jagged with no preferred orientation.
									DK		BX										
			151.94	153.42	1.48		LST	FG	MD	GY	BX										Medium grey bedded limestone that has been heavily brecciated by a large calcite flood vein - limestone clasts throughout that are angular to subangular. Small black seams and dissolution seams throughout vein.
											BD

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite		Type	Conc. (%)	Photo	
			153.42	160.50	7.08		LST	VFG	LT	GY	BD	1									Light to medium grey well bedded and minorly brecciated limestone. Brecciation generated by calcite stringers and veinlets throughout. Slight brown-grey oxidation seen on select fracture surfaces. Darker grey beds throughout, typically less reactive.
									MD		BX										
			160.50	179.53	19.03		LST	FG	LT	GY	BD	1									Light to medium grey interbedded well bedded limestone and debris flow. 70% of the interval bedded limestone, 30% debrite. Beds 2 mm to 20cm thick with occasional deformational features present. Debrite clasts 2-20 mm, subrounded to subangular and coarsening downhole. Debrite beds typically 20-100 cm thick and polylithic. Debrite has very little matrix and typically a light tan-brown colour. Oxidation seen on select fracture surfaces and surrounding select stringers. Calcite veins and stringers throughout at 10 per metre, often seen along bedding planes. Small dissolution seams seen in the bedded limestone typically parallel to bedding.
									MD		DB										
			179.53	187.98	8.45		LST	FG	LT	GY	BD	1				0.01					Light to medium grey well bedded limestone with small 10cm segments of debrite infrequently throughout. Bedded limestone often has quite undulatory bedding and sediment deformational features such as crossbedding seen. Dissolution seams seen locally throughout. Trace fine grained bright pyrite seen along bedding planes. Weak oxidation seen on select fracture surfaces and surrounding select stringers. Stringers throughout at 5 per metre.
									MD		DB										
			187.98	193.20			LST	FG	LT	GY	BD										Light to medium grey well bedded limestone. Moderate folding throughout interval - soft sediment deformation? A noticeable increase in the number of calcite veins/veinlets and stringers generating zones of mild breccia throughout interval. Beds 2 to 20 mm thick. Dissolution seams associated with the calcite flood veins throughout interval - often bordering them.
									MD		SH										
											BX										
			193.20	200.15	6.95		LST	FG	LT	GY	BD										Light to medium grey well bedded limestone. Beds defined by 1-3 mm thick dark grey beds throughout. Slight undulatory bedding/soft sediment deformation throughout. Calcite blebs and stringers throughout.
									MD												
			200.15	201.90	1.75		LST	FG	MD	GY	BD										Medium grey bedded limestone. Beds not clearly defined - only by gradational colour change. A few thin black/dark grey beds seen. Much less calcareous than previous interval. Calcite stringers and veinlets throughout.
201.90	204.86	2.96					MST	VFG	DK	GY	BD										Dark grey bedded mudstone.
			201.90	204.86	2.96		MST	VFG	DK	GY	BD										Dark grey bedded mudstone. Beds not well defined. A few medium-grey beds throughout. 4 calcite stringers/interval -- much less than surrounding limestone.

VT	23.42	-	20.00	270.00	1.00	Ca		8mm thick planar calcite veinlet. Oxidized around edges.	
BX	27.78	28.13	-	-	-	Ca		Calcite flood/breccia. Dissolution seams throughout.	
VN	30.74	31.05	30.00	0.00	1.00	Ca		Thick calcite flood with folded limestone clasts throughout. Calcite white to grey with dark grey stringers surrounding grains.	
VN	31.45	-	65.00	-	1.00	Ca		2cm thick planar, white calcite vein.	
VN	36.42	36.67	10.00	-	1.00	Ca		Thick white calcite flood vein. Small oxidized limestone clasts seen. Jagged edges into limestone.	
VT/VN	41.53	43.62	50.00	140.00	20/m	Ca		Planar 2-12mm calcite veinlets and veins. Veins often have angular limestone clasts throughout. Occasional sheared.	
VN	48.82	-	40.00	-	1.00	Ca		3cm thick, planar calcite vein. Oxidation seen around contacts.	
BX	45.88	52.49	-	-	-	Ca		Intensely calcite stringer heavy/calcite flood throughout shear zone. Oxidation seen bordering most calcite floods and/or dissolution seams.	
VN	51.62	51.96	-	-	1.00	Ca		Large calcite flood. Uneven/undulatory edges into limestone. White with a few small black stringers throughout.	
VN	52.93	53.00	-	-	1.00	Ca		White calcite flood. Uneven contacts.	
VN	53.91	54.03	-	-	1.00	Ca		White calcite flood. Uneven contacts. Black stringers throughout.	
VN	56.04	56.28	-	-	1.00	Ca		White calcite flood. Uneven contacts. Black stringers throughout.	
BX	61.02	65.47	-	-	-	Ca		Intensely calcite stringer heavy/calcite flood throughout shear zone. Oxidation seen bordering most calcite floods and/or dissolution seams.	
VN	62.04	62.32	-	-	1.00	Ca		White calcite flood. Uneven contacts. Black stringers throughout.	
VN	74.92	74.94	15.00	0.00	1.00	Ca		2cm thick white, planar calcite vein bordered by dissolution seams.	
VN	91.34	91.76	20.00	0.00	1.00	Ca		Thick calcite flood vein generating mild breccia in limestone.	
VN	93.44	105.14	65.00		8.00	Ca		1-1.5cm thick, planar white calcite veins.	
VT/VN	104.42	129.49	-	-	30/m	Ca		Intense calcite stringers and veinlets throughout interval. Larger veinlets oxidized. Typically 40 - 60 degrees to core axis. Often quite undulatory.	
VN	110.39	123.89	-	-	15.00	Ca		2-5cm thick uneven and undulatory white calcite flood veins. Non-measurable contacts. Oxidation often seen on contacts.	
VT/VN	130.99	138.80	-	-	20/m	Ca		Intense calcite stringers, veinlets and calcite floods throughout.	
VN	139.44	139.55	30.00	-	1.00	Ca		Thick white calcite vein. Jagged contacts into limestone.	
VN	148.76	151.96			7.00	Ca		Calcite flood veins - jagged and undulatory contacts into limestone. Typically mottled white and grey calcite.	
VN	152.36	153.26			1.00	Ca		Thick breccia calcite vein. Mottled white to light grey. Jagged contacts into limestone.	
VN	153.72		25.00	30.00	1.00	Ca		Planar white calcite vein. 1cm thick.	
VN	154.08		50.00	0.00	1.00	Ca		2.5cm thick planar, white calcite vein.	
VN	155.11	155.82			1.00	Ca		Calcite flood/breccia. White to grey mottled calcite. Dark stringers throughout.	
VN	159.48	162.47	60.00	0.00	3.00	Ca		1 to 3cm thick calcite veins following bedding plane. Edges to veins very jagged into limestone and rimmed with dissolution seams and dark limestone.	
VN	166.31	168.06	10 to 25		4.00	Ca		1-2cm thick calcite veins at very low angle to core axiz. White calcite to mottled grey. Sharp to blurry contacts into limestone.	

SCARLET EAST

2° Structure Type	From (m)	To (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS Type	MINERALS Conc. (%)	DESCRIPTION	Photo
VN	175.52	184.85	20.00	250.00	4.00	Ca		0.5cm to 1cm thick undulatory white calcite veins/veinlets shallow to core axis.	
VN	186.05	186.11			1.00	Ca		Calcite flood vein with very jagged uneven edges into surrounding limestone. Slight pink colouring in select parts of the vein.	
VN	190.16	192.00			2.00	Ca		2 large calcite flood veins at low angle to core axis generating mild breccia and often bounded by dissolution seams. Calcite white to mottled grey.	
VN	198.85	199.20	10.00		1.00	Ca		0.5 to 2cm thick very shallow to core axis, broken up calcite vein offset by slight shear?	
VN	201.21	202.26	5.00		6.00	Ca		0.3 to 0.8cm thick, planar, white calcite veinlets. Undulatory contacts into limestone.	
VN	205.56	205.65	55.00	0.00	1.00	Ca		Thick, white planar calcite vein. A few small limestone clasts in vein.	
VN	212.39	214.21	45.00	0.00	4.00	Ca		3-15cm thick calcite veins. Jagged edges into limestone and following bedding direcdtion, but sometimes shallower than bedding.	
VN	215.75		50.00	180.00	1.00	Ca		Planar, white 1.2cm thick calcite vein.	
VT/VN	225.70	230.60	5.00		3.00	Ca		2mm - 1.2cm thick white, planar calcite veins approximately running along the core axis, often branching off and splitting.	
VN	244.55		20.00		1.00	Ca		1.2cm thick white planar calcite vein. Sharp contacts.	
VN	247.32		20.00	330.00	1.00	Ca		1.1cm thick pinkish dolomite vein. Planar, sharp contacts.
