Introduction

This document is written to fulfill the requirements of the Yukon Mineral Exploration Program (YMEP) grant application submitted in March, 2017 for an exploration program on the Kings Ransom Property, Dawson Mining District, Yukon. The Kings Ransom claims are owned by Goldstrike Resources Inc. of Vancouver, BC.

Location

The Kings Ransom Property is located within the Dawson Mining District, approximately 73 km southwest of Dawson City, Yukon Territory (Figure 1). The Property is 37 km northwest of Kinross Gold Corporation's Golden Saddle deposit, 64 km northwest of Goldcorp Inc.'s Coffee deposit, 25 km northwest of the QV Property. The Property is on the western slope of the Yukon River and is coincident with Sestak Creek.

Figure 1- Property Location

Access

There are two airstrips along the eastern border of the Property. The Lammer's gravel airstrip to the northeast is 500 m long and suitable for small to medium fixed-wing aircraft. The nearest major road is the Top of the World Highway which is approximately 57 km north. Active placer mining at Matson Creek is served by an all-weather road that provides access to the Matson Creek Placer Mine from the Sixty Mile Creek area and the Top of the World Highway. Rough limited-use trails run from the North Ladue River airstrip to the centre of the Kings Ransom claims. Access via helicopter or barge from Dawson City is also available. Helicopter access is available from Dawson City.

Claims

There are 702 contiguous claims within the Kings Ransom Property totalling approximately 1461 hectares. The list of claims and their statuses is in the Appendix B. Maps are provided as follows in: Figure 2; Figure 3; Figure 4, and Figure 5.

Figure 2- Claim Map

Figure 5- Claim Map

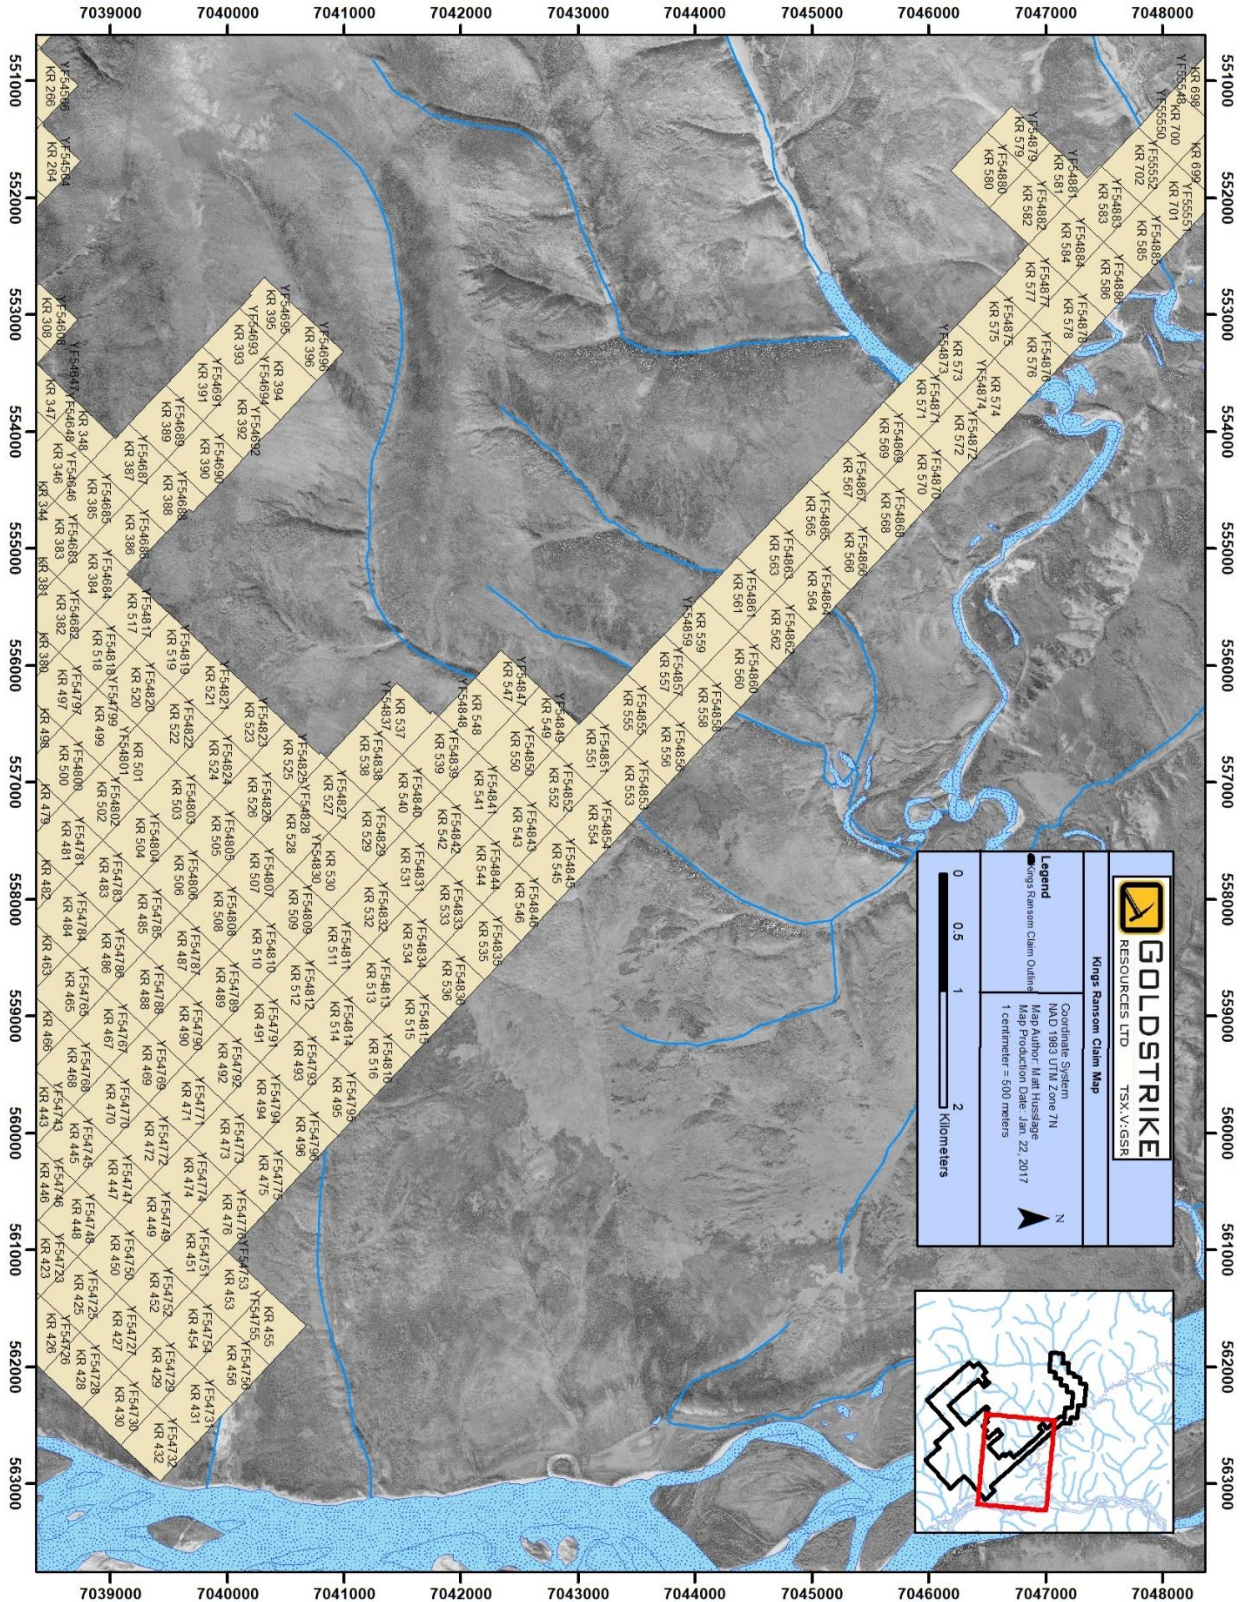

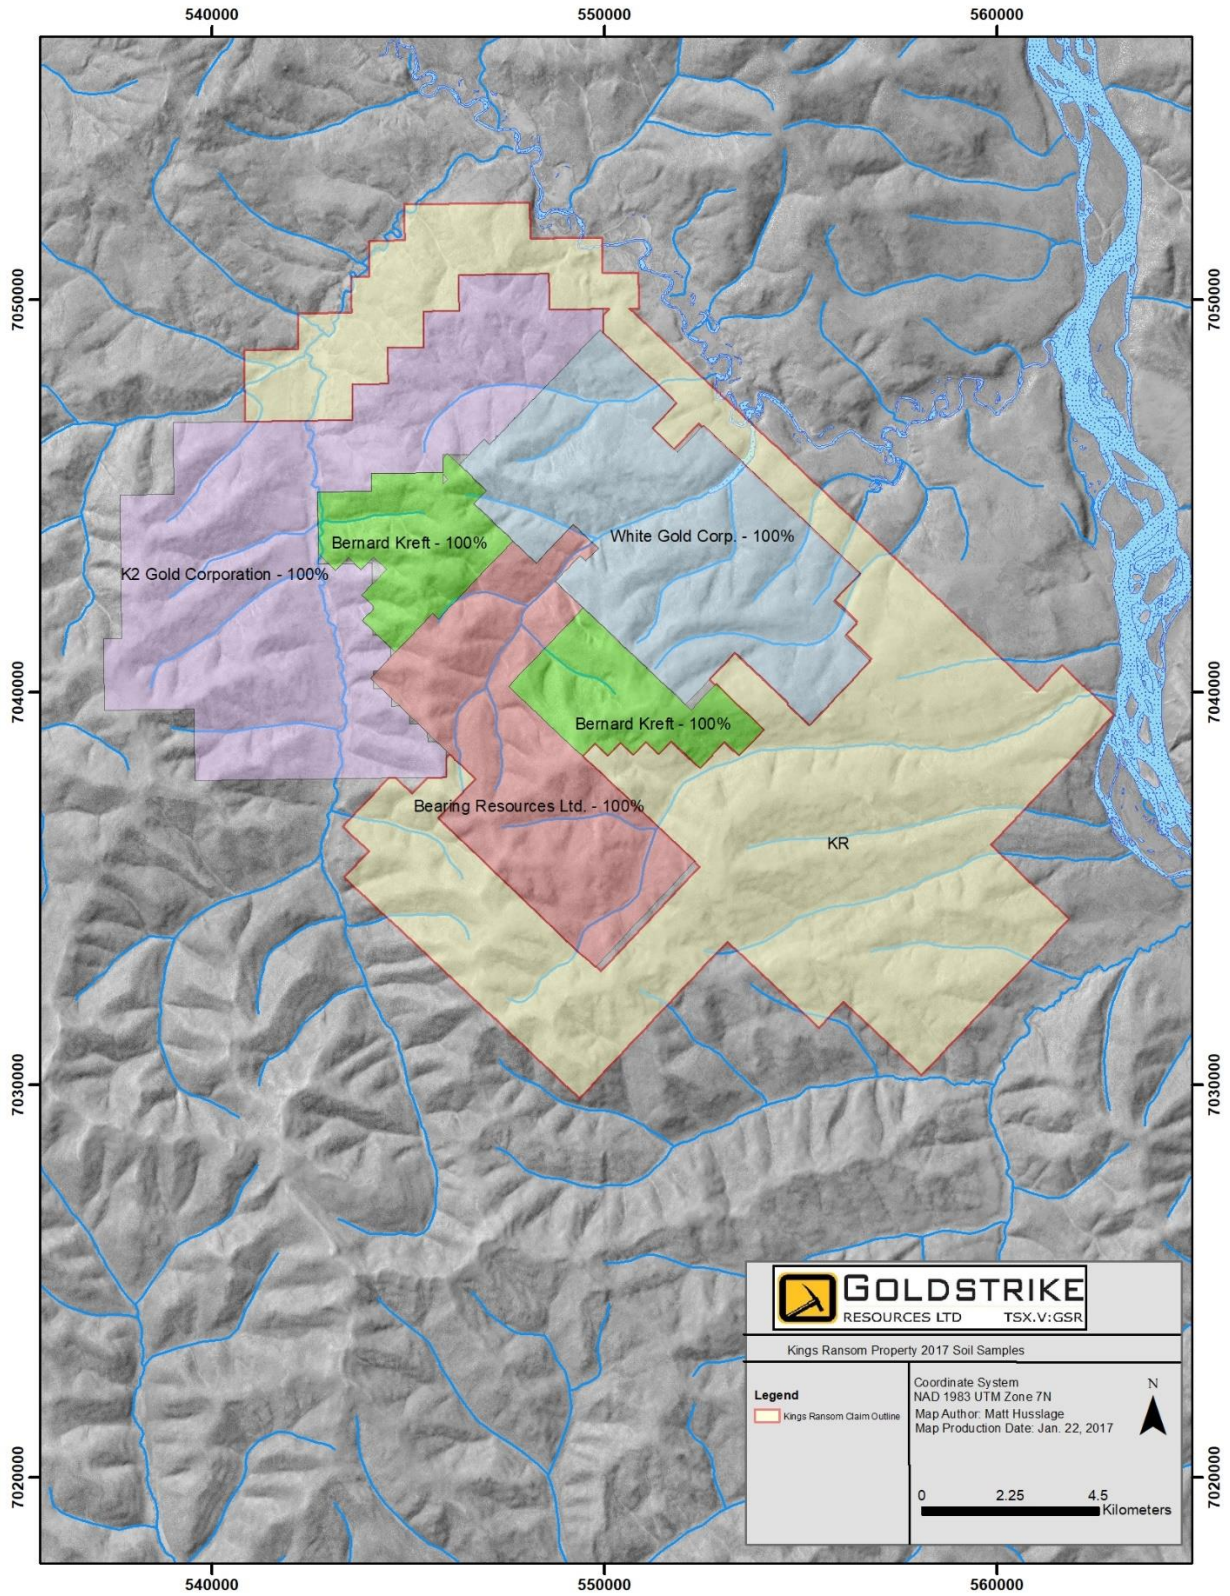

Figure 6- Kings Ransom and Adjacent Claims

Property Geology

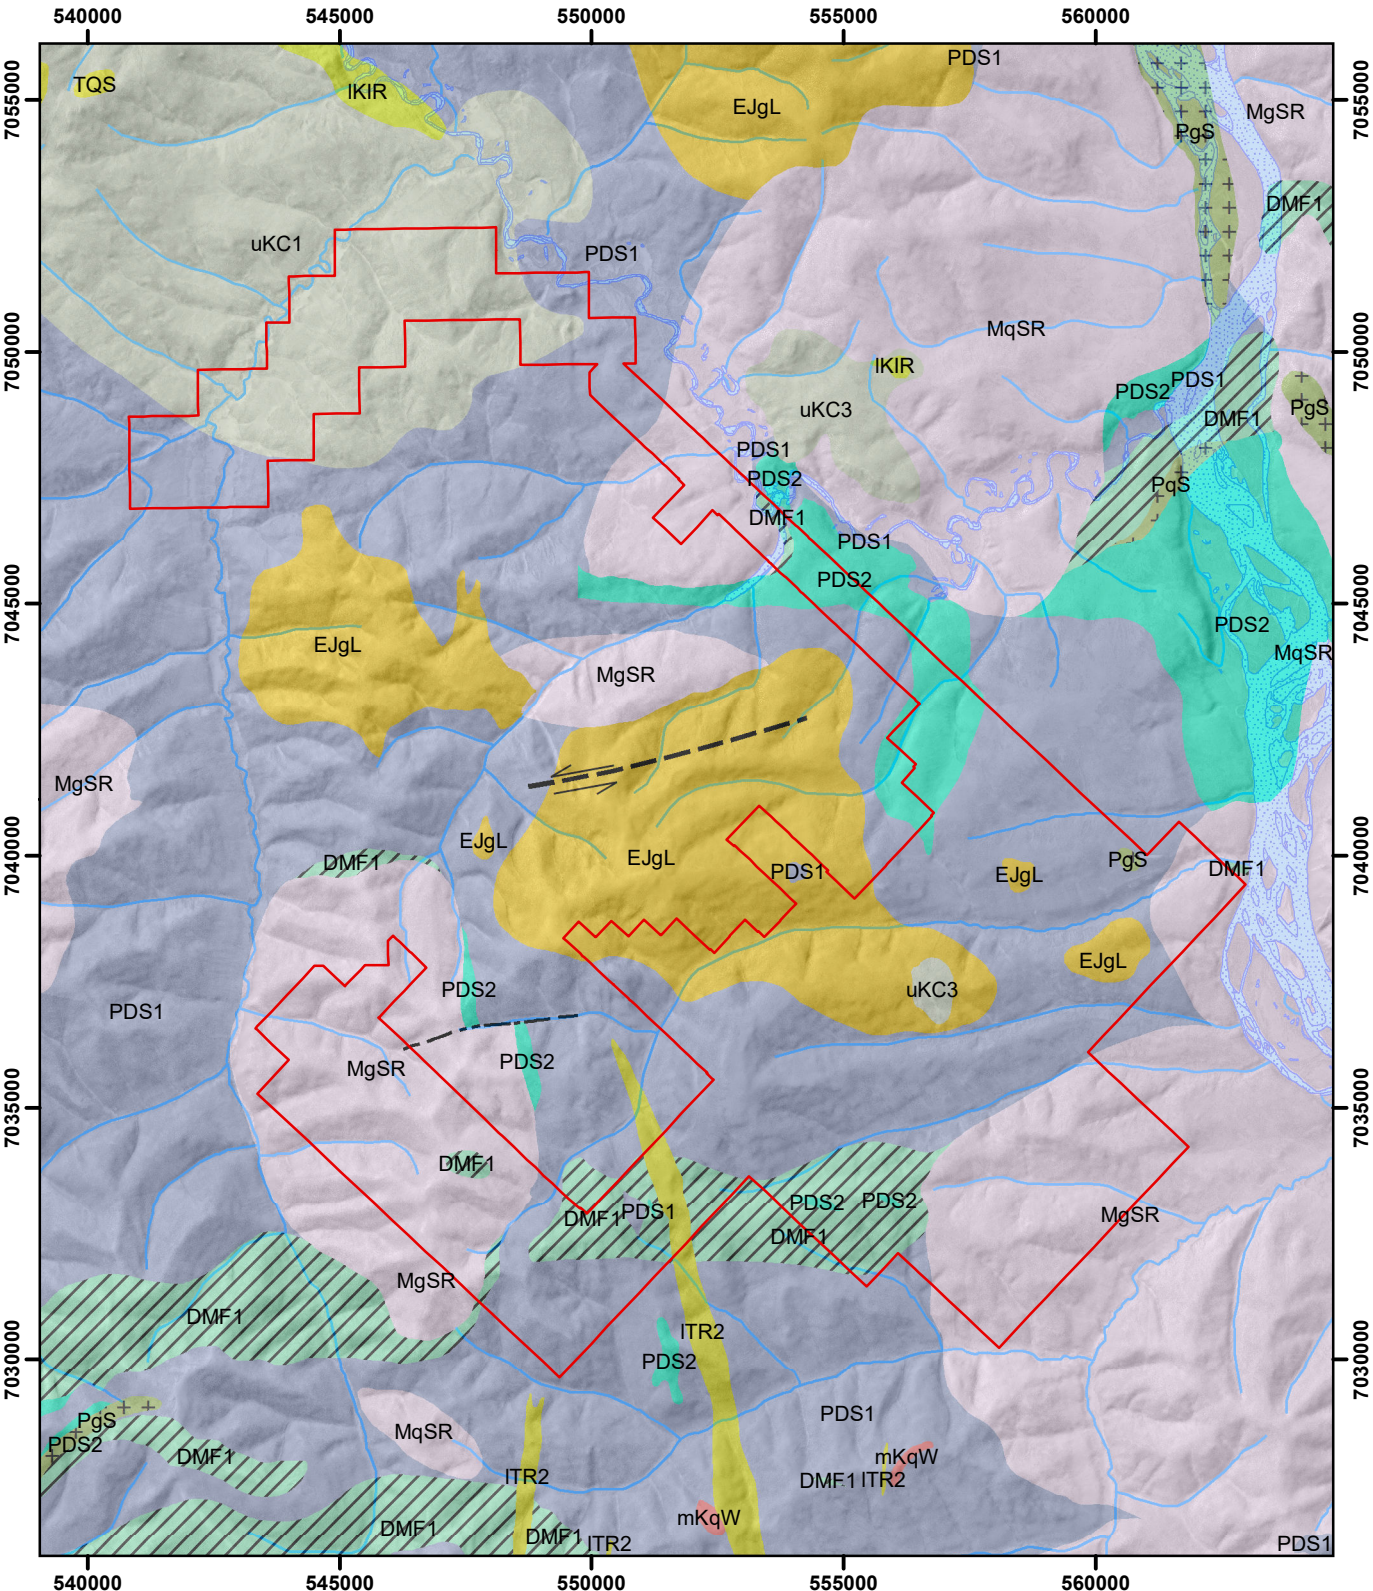

The Kings Ransom claims are underlain by the Yukon-Tanana Terrane which spans part of the Yukon Territory and eastern Alaska (Colpron et al., 2016). This terrane is fault-bounded to the northeast and southwest by the right-lateral Tintina-Kaltag and Denali-Farewell fault systems and serves as the basement for Mesozoic to Cenozoic plutons and batholiths such as the Dawson Range and Cassiar Intrusive Suites. These Cretaceous intrusive rocks are spatially associated with several gold-bearing mineral deposits in this region such as the White Gold and Coffee Projects. Four main lithological units underlay the Kings Ransom Property: Proterozoic and/or Paleozoic psammites and quartz-mica schists with minor marble and graphitic calc-silicates (DMq-Snowcap); Paleozoic orthogneiss (DMt, DPg-Simpson Range); unfoliated Jurassic to Cretaceous intrusions and Late Cretaceous dykes (EJgd-Tenmile Pluton). See Figure 7 for a map of the property area geology. Regional assessment reports have mapped the area as underlain by four units: Proterozoic and/or Paleozoic metasediments, Paleozoic orthogneisses, unfoliated Jurassic to Cretaceous intrusions, and Late Cretaceous dykes (Harris, 2004).

	PDS2: SNOWCAP: light grey to buff weathering marble
	Kings Ransom Claim Outline

Property Description and History

Gold mineralization in this area has been found to be mainly hosted within Jurassic-Cretaceous intrusive rocks or in metasediments proximal to the intrusions (Harris, 2004). Alteration is comprised of silica replacement, limonite- and silica-carbonate altered felsic intrusive. Base metal mineralization occurs in skarns and calc-silicates. Gold is also found within both shallow and steeply-dipping quartz \pm sulfide veins ranging from 1 cm to 1 m in width. Gold-As associations are consistent with anomalous Au \pm As in soils.

The Kings Ransom claims area is situated on a regional magnetic high and is associated with high contrast anomaly similar to the Coffee gold deposit (Figure 8 and Figure 9). Local MINFILE occurrences include: Cardiff-1150 031 (As-Pb-Au-Cu plutonic related Au), Comet-1150 034 (downstream of significant placer deposit with gold and heavy metal characteristics suggesting a locally-derived bedrock source) and Tenmile-1150 035 (Au quartz vein). Anomalous Au, Cd and As stream sediment samples, similar to QV, Golden Saddle and the Coffee deposit, also occur within this area (Figure 10 and Figure 11).

Figure 8- Regional Lineaments

Figure 9- Regional Magnetic Intensity

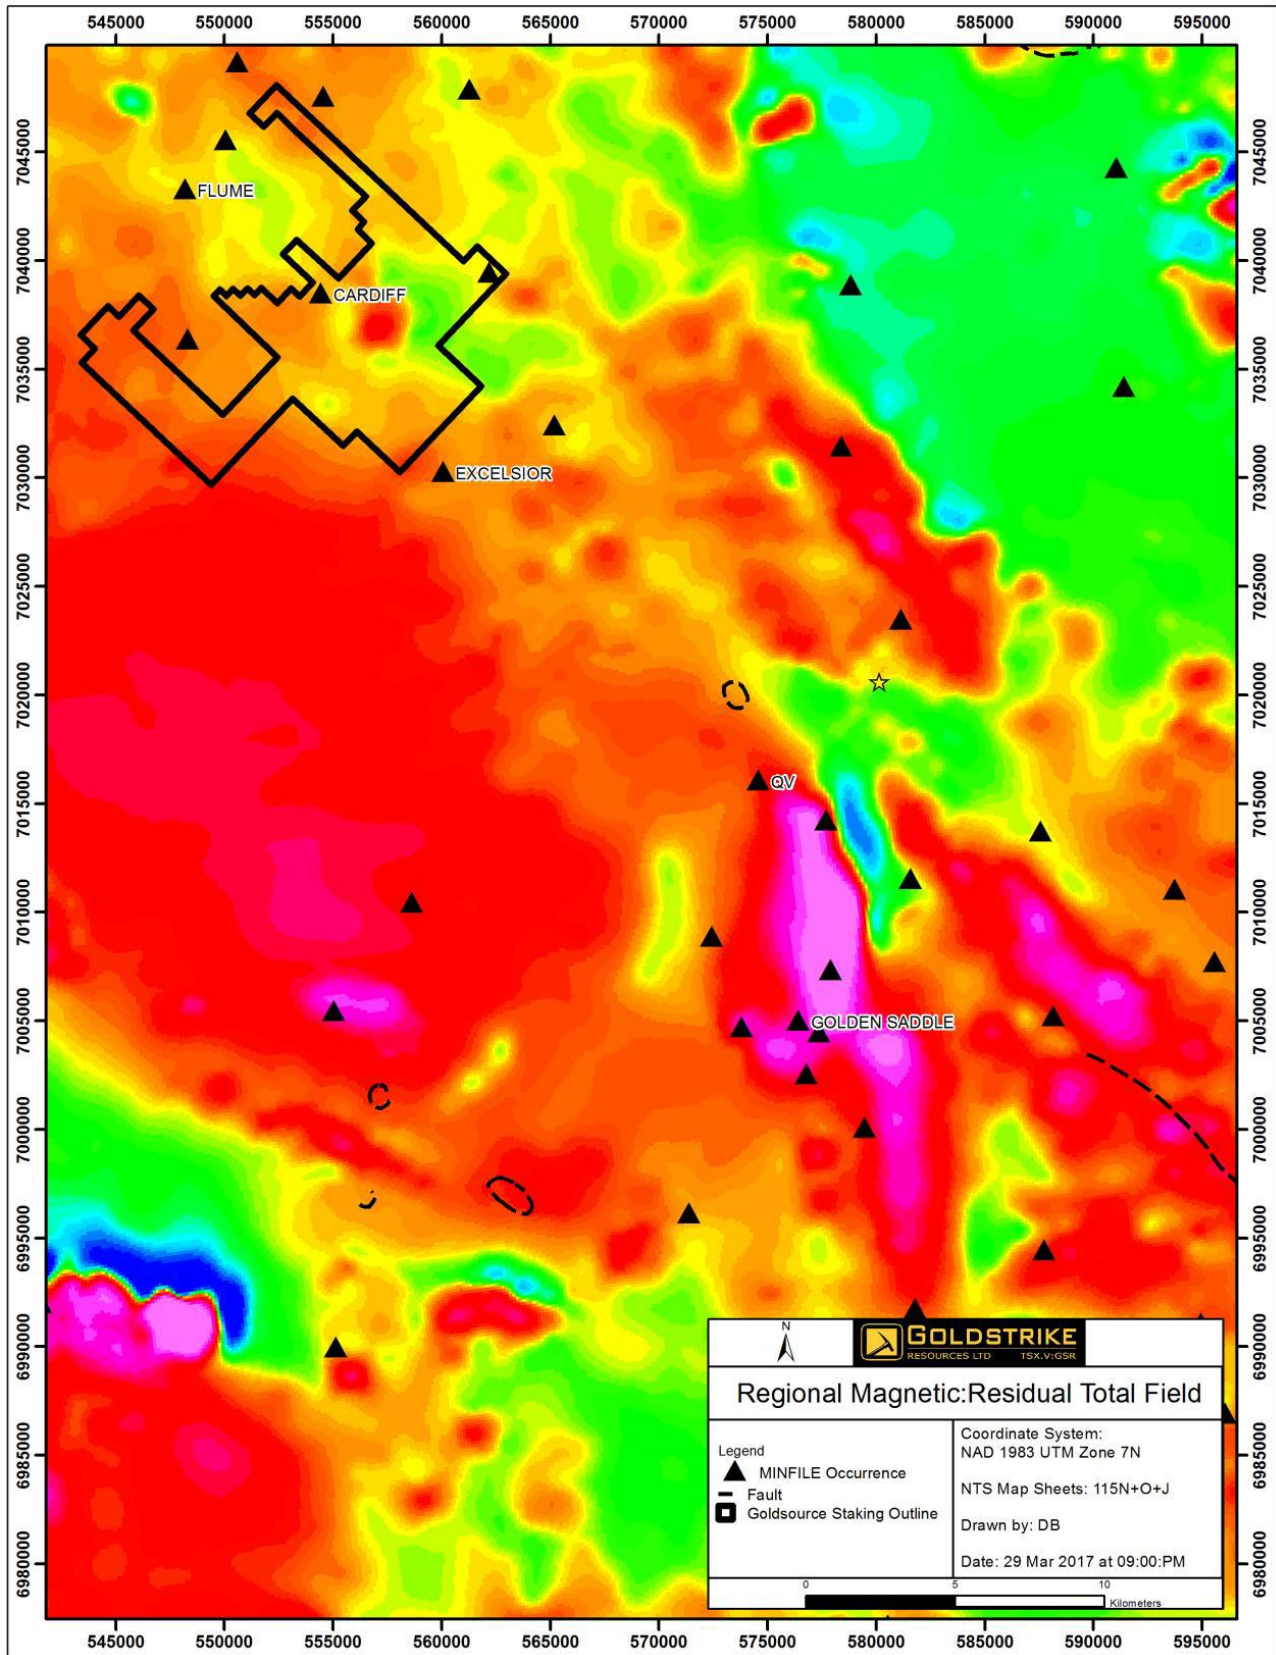

Figure 10- Regional Stream Sediment Au-Ag-Cd Associations

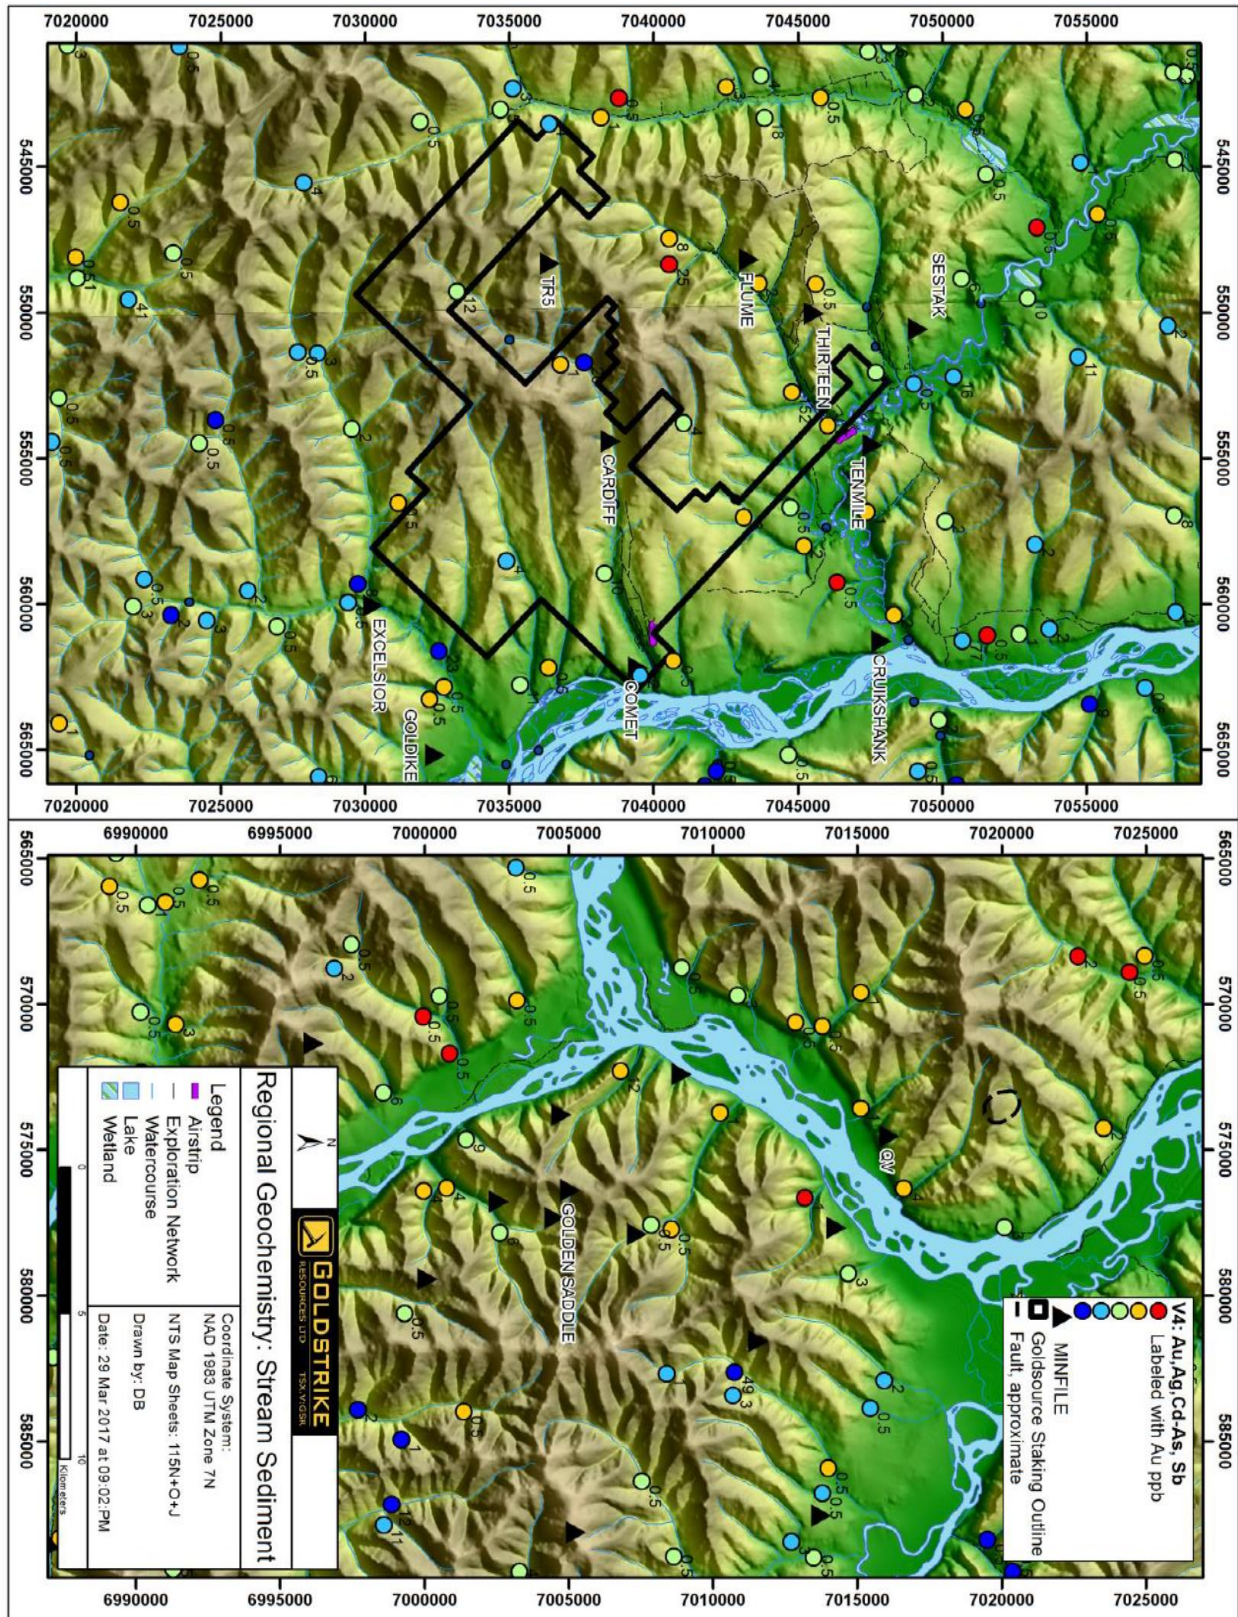

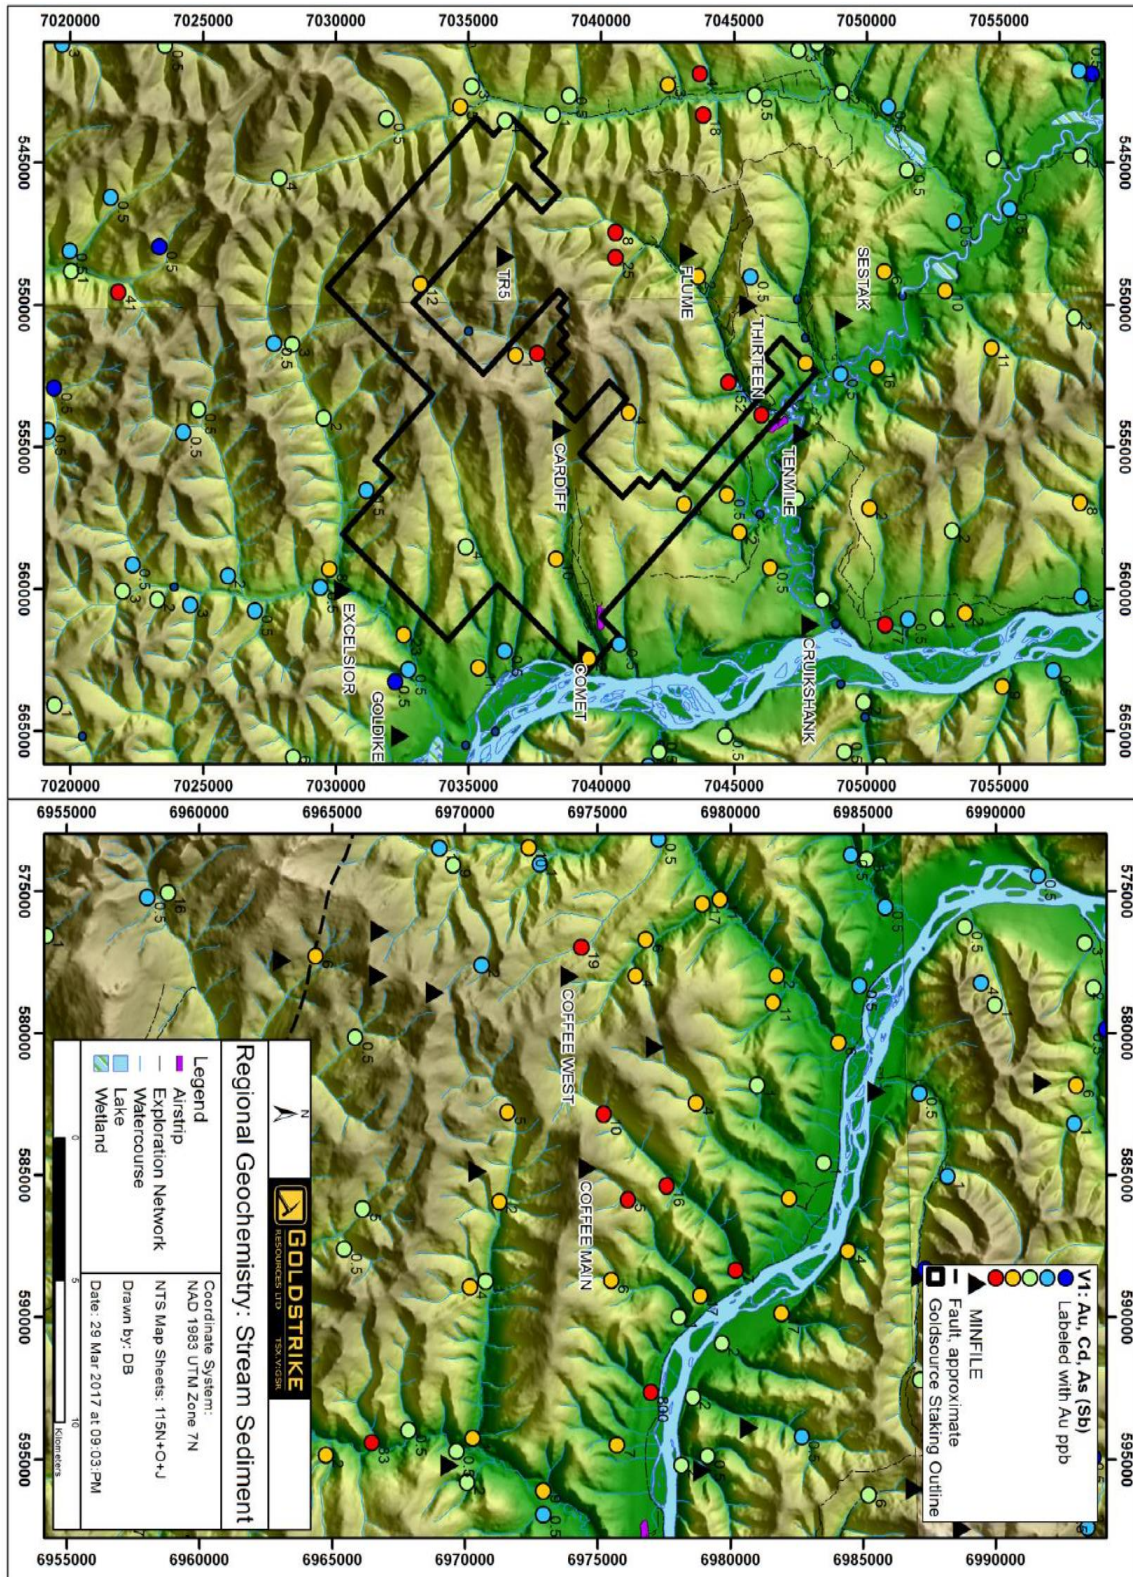

Figure 11- Regional Stream Sediment Au-Cd-As (Sb) Associations

Portions of the Flume-Ten claims workings and assessment reports are associated with the ground in which the Kings Ransom Property is staked. Government sponsored programs include two regional mapping surveys Ryan and Gordey (2003 OF-1772 and 2004 OF-4641), a 2006 compilation by M Colpron, a 2001 airborne geophysical program and work undertaken by the Geo-mapping for Energy and Minerals (GEM) Program. Claims adjacent to the Kings Ransom Property include the Bearing Resources Ltd.'s Flume claims, Bernard Kreft's RDU/Ten claims, White Gold Corp.'s Dime/Dine claims, K2 Gold Corp.'s Storck claims. **(Error! Reference source not found.)**.

The Flume-Ten Property consists of an area of anomalous Au-As geochemistry related to Jurassic or Cretaceous monzonitic intrusion that cut metasedimentary rocks (Harris, 2004). This vicinity of the Flume-Ten claims has seen staking in the early 1900's and the 1980's but there is a lack of information available regarding commodities and assessment reports from these activities. The Tenmile MINFILE occurrence (1150 035-Au quartz veins) to the northwest was first explored prior to 1901. The Cardiff MINFILE occurrence (1150 031-plutonic related Au), at the centre of the Kings Ransom claims, was originally staked in 1907, then again in 1988 and 1997, although no work has been recorded. The Comet MINFILE occurrence was staked in 1906 and drove a 12.8 m adit in 1907 although no gold production was recorded.

In 1998, Teck Corporation (Teck Comino Ltd.) staked the Ten claims and conducted geological mapping and prospecting as well as stream sediment, rock and soil reconnaissance surveys. Concurrently, Phelps Dodge Corporation of Canada Ltd. staked the Flume claims, under option to Fjordland Exploration, and performed geological mapping, prospecting, stream sediment, soil and rock sampling. In 1999, Teck and Phelps Dodge conducted similar exploration programs including geological mapping and prospecting, as well as stream sediment, grid and traverse soil and excavator trench sampling (and Wetherup, 2000). Also, in 1999, Prospector International Resources Inc. performed a soil and silt sampling program on their Premo and Gogo claims (Jaworski, 2000). They found anomalous multi-element anomalies in soil and Au-As-Sb and Hg in the silt samples. Teck performed soil, rock and excavator trench sampling again in 2000 (Paulter, 2001), while Phelps Dodge carried out geological mapping and prospecting, as well as excavated trenches and test pits (Kulla, 2001). In 2003, Fjordland optioned the Ten and Val claims from Teck and the Flume claims from Phelps Dodge and conducted an exploration program consisting of geological mapping, prospecting and infill grid soil sampling with rock grab sampling. Fjordland allowed the claims to lapse and Bernard Kreft staked the area in 2009. A small soil sampling program was conducted by Radius Gold Inc./Solomon Resources Ltd. who optioned the Ten claims in 2010 and portion of the claims were allowed to lapse in 2015. No anomalous Au soil samples were found which is thought to have been hampered by the amount of scree and permafrost in the area (Potts, 2011). To the south, a ridge line and spur soil sampling program was conducted by Bernard Kreft on the Silt and Tak claims (Kreft, 2011 and Kreft, 2011b). They located a weak Au stream sediment anomaly on the Silt claims and a 61-ppb soil anomaly on the Tak claims (which are located upstream of the Comet MINFILE occurrence). Two northwest-southeast trending lineaments were also mapped on the Tak claims using air photos.

Table 1- Property History Work Summary

Company	Claims	Year	Exploration Activities
Teck Corporation (Teck Cominco Ltd.)	Ten	1998	Prospecting, stream sediment sampling (19), rock sampling (35), soil sampling (53), soil traverse line (5 km)
Phelps Dodge Corporation of Canada Ltd.	Flume	1998	Geological mapping, prospecting, stream sediment sampling (25), rock sampling (11), soil sampling (172)
Teck	Ten	1999	Geological mapping, prospecting, stream sediment sampling (9), rock sampling (164), soil sampling (310), two soil grids (13.4 line-km) and 10 soil traverse line (23 km), 4 excavator trenches (191 m)
Phelps Dodge	Flume	1999	Geological mapping, prospecting, stream sediment sampling (5), rock sampling (58-Au, As, Ag anomalies), soil sampling (685-Au, As anomaly)
Prospector International Resources Inc.	Premo, Gogo	1999	Gogo: 25 soil samples (25, As-Sb-Cu), rock samples (2, W- Th-Mo), silt (2, Au-As-Cu-Hg anomalies) Premo: soil sampling (33, Bi-Te-Pb-Ag anomaly, silt sampling (7, Au-As-Sb, anomalous Hg)
Teck	Ten	2000	Rock sampling (1), soil sampling (115), soil lines (5.6 km), 13 trenches (8-16 gpt Au in quartz veins); Au-As anomalies in soil
Phelps Dodge	Flume	2000	Geological mapping, prospecting, stream sediment sampling (15), rock sampling (443), soil sampling (646), soil grid and 10 traverse line (63 km), excavator trenches (8) and pits (28); identified 1.5 km long silicified Au zone crossing Ten Mile Creek and

			1.2 gpt Au over 6 m in chip samples from skarn
Fjordland Exploration Inc.	Ten	2003	Geological mapping, prospecting, infill grid soil sampling (105, Au-As anomalies), rock sampling (23, Au-Ag-As-Pb-W anomalies)
Bernard Kreft/Radius Gold Inc./Solomon Resources Ltd.	Ten	2010	Soil line sampling (125-no Au anomalies)
Bernard Kreft	Silt	2010	Soil line sampling (133-weak Au anomaly)
Bernard Kreft	Tak	2010	Soil line sampling (125-61 ppb Au anomaly), mapped two NW-SE trending lineaments

2017 Work Program

Goldstrike Resources Ltd. soil sampled the Kings Ransom claims on July 5, 11, 12, 13 and 17th of 2017. A total of 555 soil samples were taken across the property. On July 13 and 17, 2017, 8 rock samples were taken as prospectors traversed portions of the Kings Ransom property. A list of rock sample locations and descriptions are provided in Appendix C. A map of all rock sample location plotted with gold is available in Figure 12. A list of soil samples locations and descriptions are provided in Appendix D. Maps of soil locations plotted in with gold values (Figure 13) and arsenic values (Figure 14). Affixed with the digital copy of the report is an excel sheet database of all samples taken during the 2017 program. Assay certificates are appended in Appendix E.

Figure 12- Rock Sample Locations

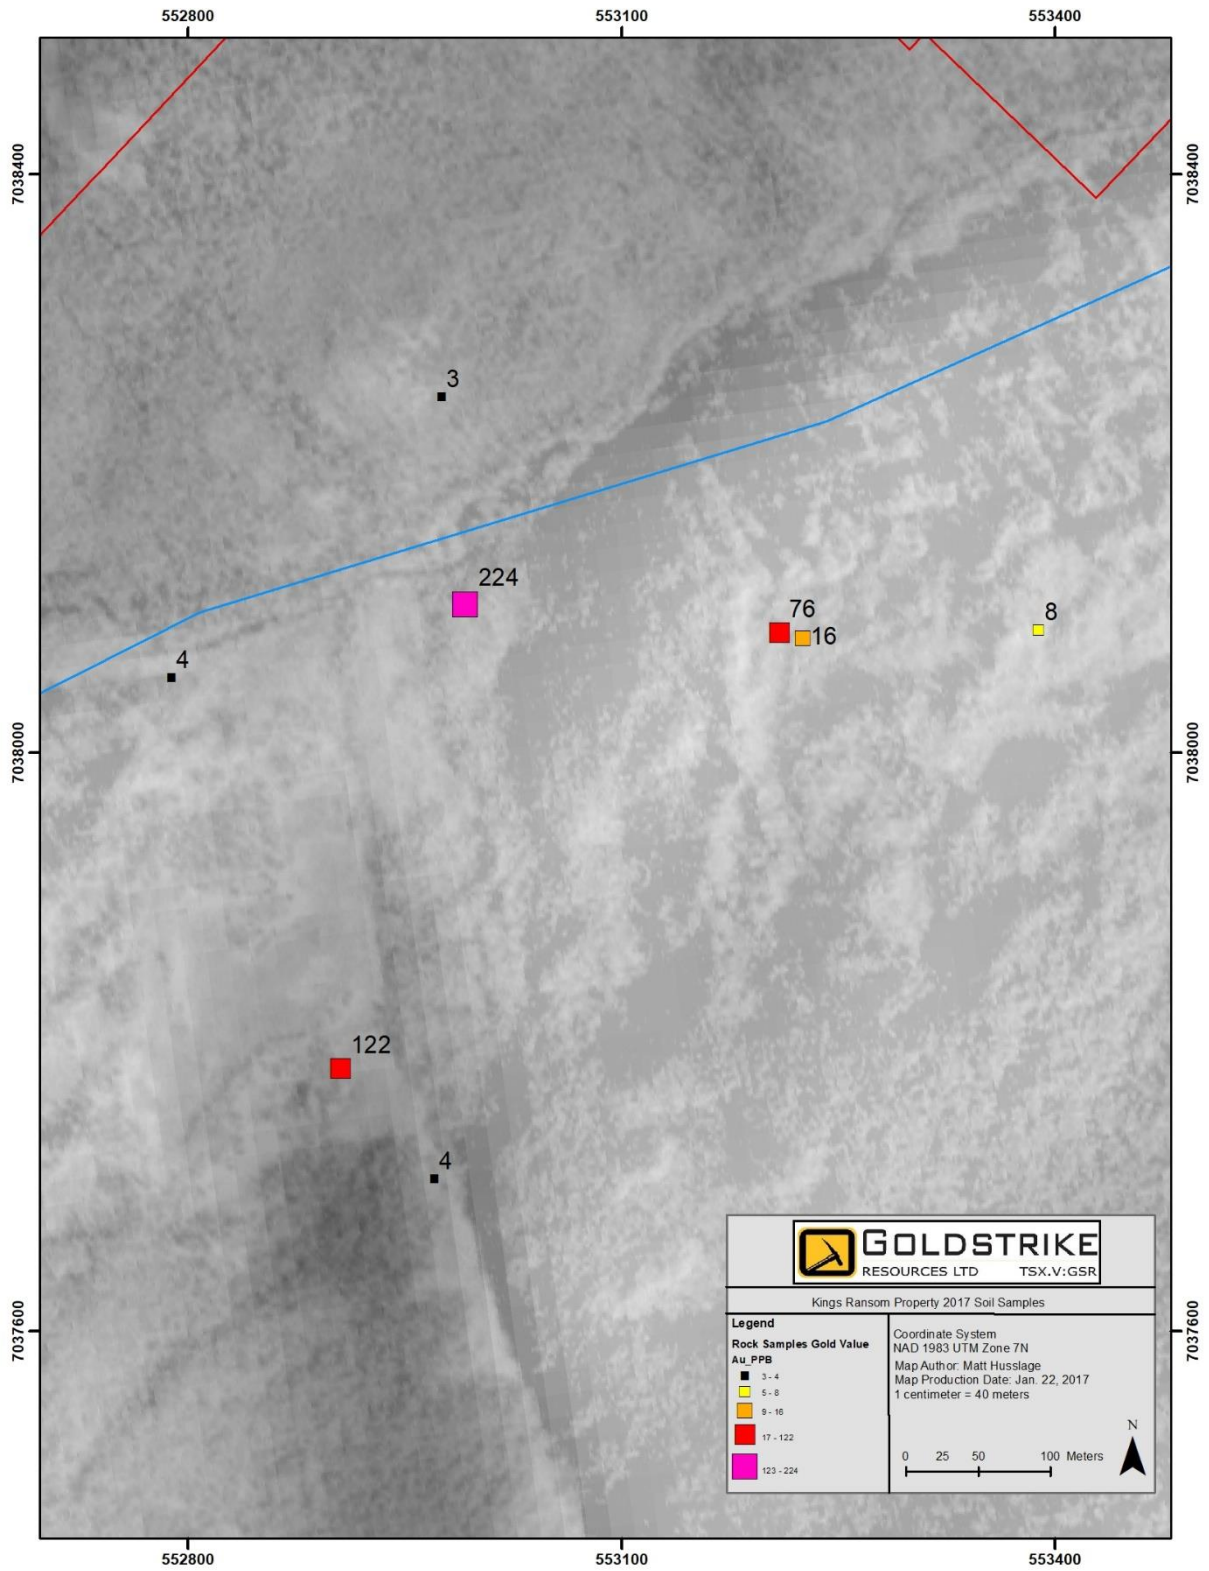

Figure 13- Soil Sample Locations (Au plot)

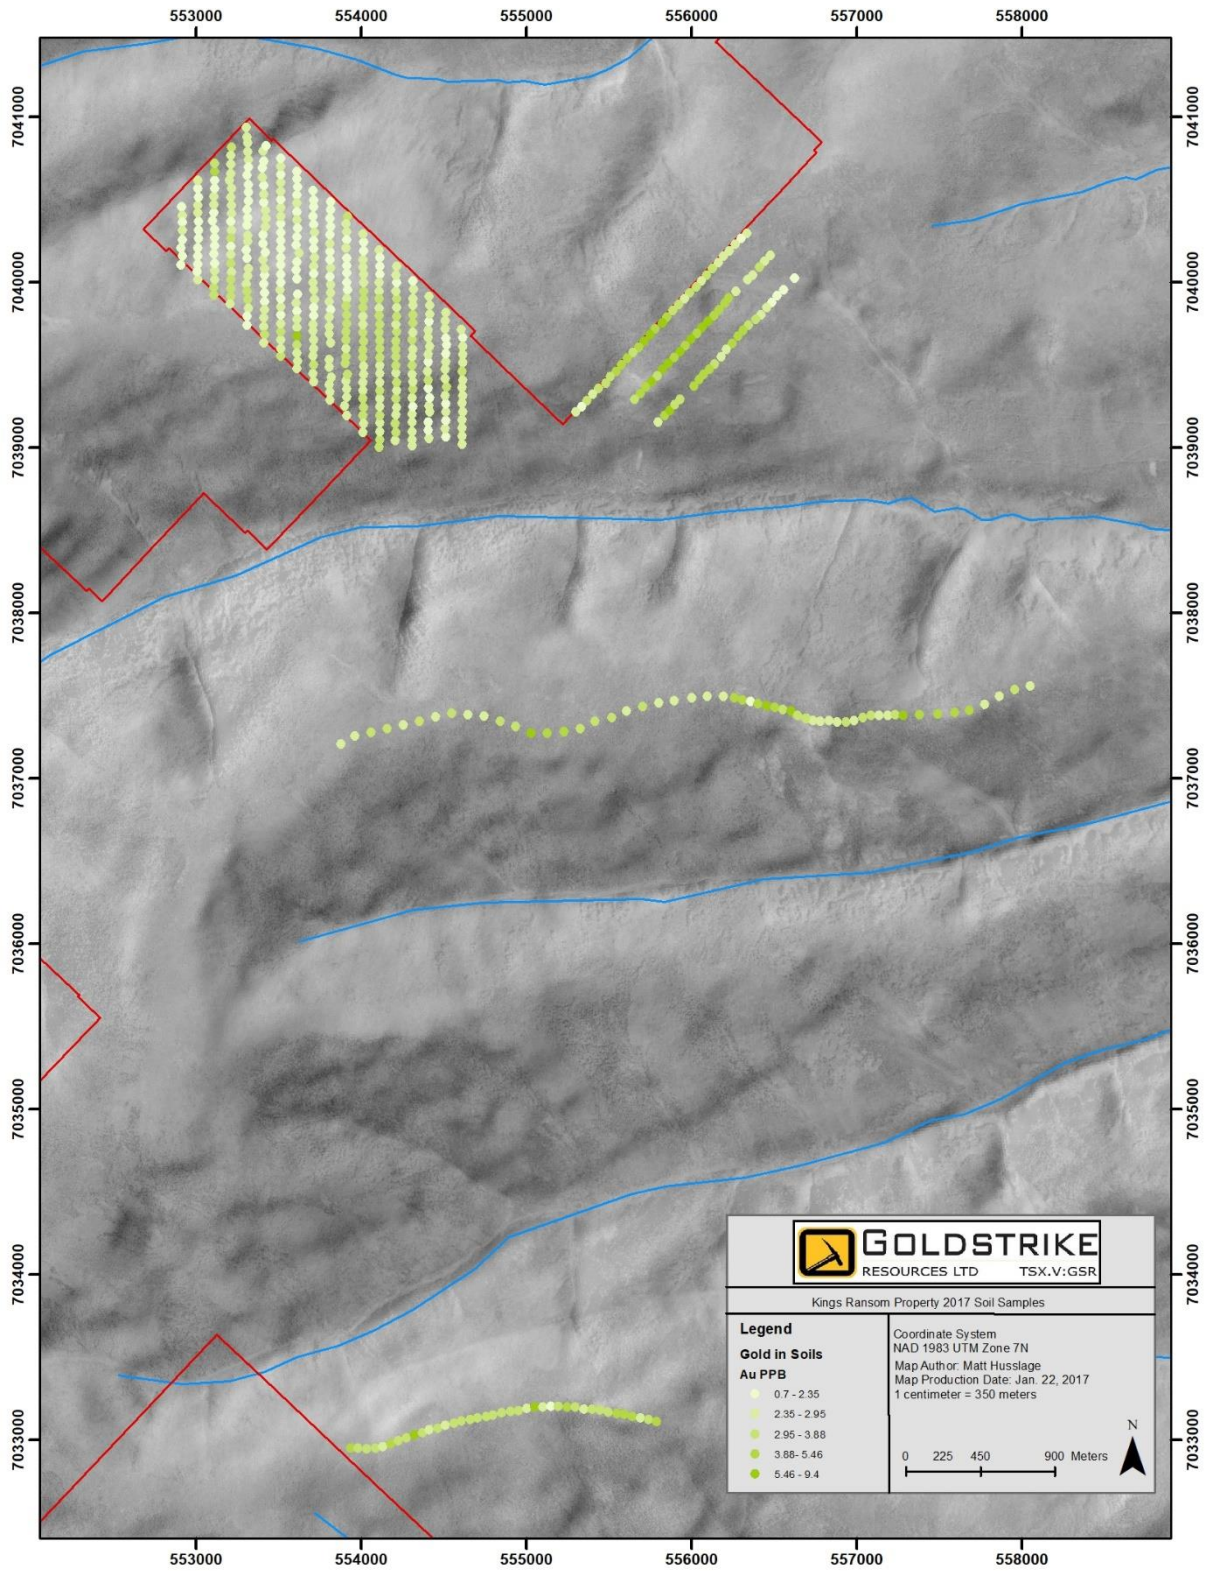

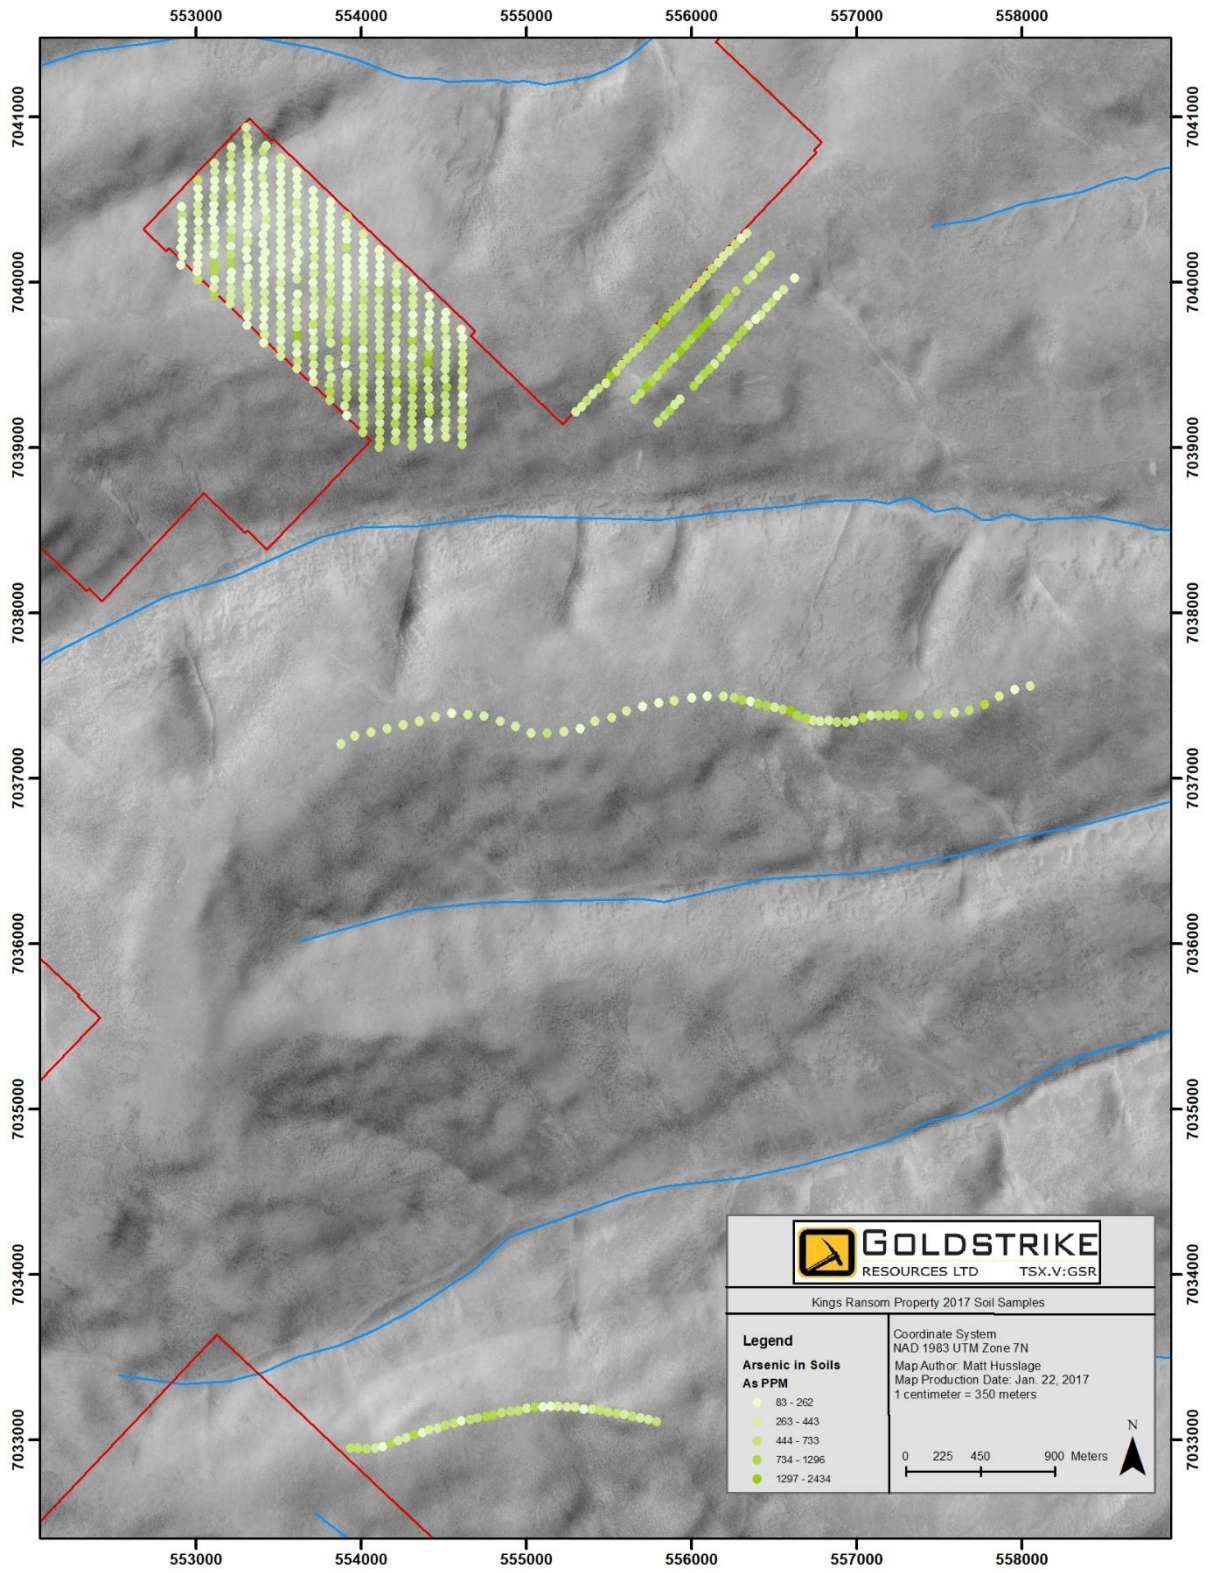

Figure 14- Soil Sample Locations (As plot)

All the samples were selected by trained geologist and technician, sealed and shipped to Bureau Veritas Minerals (BVM) in Vancouver, BC. All rock samples will be selected by Druid Exploration site geologists and photographed in situ and as a hand sample prior to sealing in a sample bag. Representative rock samples will also be selected by the site geologist for future reference. The soil samples were sealed within a durable, labeled Kraft sample bag.

Individual rock was placed in labeled plastic sample bags, sealed with a cable tie and stored on-site before transport. Individual soil samples will be placed in labeled Kraft paper sample bags, sealed with flagging in the field and stored on-site to dry. On-site samples followed a rigorous chain of custody, monitored by the site geologist but not stored in a locked facility due to the remoteness of the camp location. Groups of rock and soils samples was then placed into sturdy, labeled, woven-polyethylene bags, sealed with a cable tie and stored for shipping to a secure location in Dawson City, YT then directly to a BVM facility in Whitehorse, YT. All sample packaging for transport was overseen by the site geologist and documented with sample names, sample type, assay type, shipping date, shipping ID, and the number of woven-polyethylene bags.

All samples were crushed, pulverized and the resulting sample pulps will be analyzed by BVM in Vancouver, BC. The remaining coarse reject portions of the samples remain in storage at the BVM storage facility in Vancouver, BC and are scheduled for return to a secure facility in Dawson City, YT. The samples were analyzed using the BVM assay procedure AQ200, a 1:1:1 Aqua Regia digestion with an inductively-coupled plasma mass spectroscopy (ICP-MS) finish. The rock samples were also analyzed by BVM FA330-Au lead-collection fire assay fusion procedure with an inductively-coupled plasma emission spectroscopy (ICP-ES) finish.

Rock grab samples were collected by foot with helicopter assistance. The rock sampling locations are chosen by geologists based on the potential source areas of MINFILE locations, placer creek occurrences and regional stream sediment Au-Cd-As (Sb) anomalies. The tops of ridges are typically chosen for the easier location of rock outcrops, subcrops, felsenmeer and float. The rock grab sample sites were chosen in the field by a geologist or prospector based on changes in lithology and/or the potential for mineralization.

The rock grab samples are extracted using a rock hammer to expose fresh surfaces and to liberate a sample of approximately 0.5 kg. All sample sites are flagged with biodegradable flagging tape and marked with the sample number. All sample sites were recorded using hand-held GPS units (accuracy 1-10 m) and the following information is recorded on all-weather paper: sample ID, easting, northing, elevation, type of sample (outcrop, subcrop, float), and a brief description.

Soil samples are collected by foot with helicopter assistance at the start and end of proposed sampling lines. The soil sampling lines are chosen by geologists based on the potential source areas of MINFILE locations, placer creek occurrences and regional stream sediment anomalies. The tops of ridges are also typically chosen to allow for easier access to the desired soil horizon. The proposed sampling locations are located at 50 m to 100 m intervals and are uploaded into a GPS. The final sample site was chosen in the field by a soil sampler based on soil availability within 20 m of the proposed sample location.

Soil samples are extracted using a Dutch Auger to collect material within the C horizon. All sample sites were flagged with biodegradable flagging tape and marked with the sample number. All sample sites were recorded using hand-held GPS units (accuracy 1-10 m) and the following information is recorded

on all-weather paper: sample ID, easting, northing, elevation, sample depth (cm), horizon sampled, sample colour, sample composition in percent (organic, angular rock, gravel, sand, silt and clay), parent material, moisture content, vegetation cover and topographic position.

All GPS units were downloaded daily to a laptop using DNR Garmin®. The GPS information was transferred into a Microsoft Excel® spreadsheet and the remaining sample information undergoes manual data entry. The database was checked by the site geologist while in the field, and again in the office prior to submission to the project geologist. The database is checked by trained employees a third time against the sample booklets for errors and omissions. A fourth check of the database is conducted when the results are merged with the database. The fifth and final check of the database is performed by the geologist writing of this report on the property.

All the rock and soil samples were processed and analyzed by BVM in Vancouver, BC. Verification of assays is performed by BVM using internal QA/QC procedures of duplicates, blanks and proprietary reference standards.

Conclusions and Recommendations

The Kings Ransom property presents an excellent opportunity for a mineral exploration target. One bedrock sample of quartz monzonite returned 122 ppb and one float sample of quartz monzonite returned 224 ppb with sulphides. The soil sampling grid returned no significant values. This report recommends more rigid and spur soil sampling lines across the property to delineate any possible gold anomalies. This report also recommends completing a ground magnetometer survey over the property. Goldstrike Resources Ltd would like to thank the Yukon Government for the approval of this project for YMEP funding.

Qualifications

I, Matthew Husslage, of 919 Dunsmuir Rd., Victoria, British Columbia, Canada, certify that:

I am a graduate of Lakehead University, 2008, and hold a B.Sc. Geology degree.

I am an independent geological consultant.

I have been employed as a geological assistant for the Geological Survey of Canada during the summer of 2007.

I have been working in the mineral exploration industry since 2008 consulting for East West Resource Corporation, HTX Minerals, Spider Resources, Sabina Gold and Silver Corporation, Harte Gold Corporation, and Wesdome Gold Mines Ltd.

This report was prepared by myself.

I have no personal knowledge from the data of this certificate of any material fact or change not reflected in this report.

A handwritten signature in blue ink, appearing to read 'MH', is centered on a light blue rectangular background.

Matthew Husslage, B.Sc.

Date: January 30, 2018

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
*** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	13	Crush, split and pulverize 250 g rock to 200 mesh			WHI
FA350-Au	13	50g Fire assay fusion Au by ICP-ES	50	Completed	VAN
EN002	13	Environmental disposal charge-Fire assay lead waste			VAN
AQ200	13	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN
SHP01	13	Per sample shipping charges for branch shipments			VAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
*** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

Page: 1 of 5

CERTIFICATE OF ANALYSIS

WHI17000379.1

CLIENT JOB INFORMATION

Project: KR
Shipment ID: KR-2017-SOIL_2
P.O. Number
Number of Samples: 98

SAMPLE DISPOSAL

STOR-PLP Store After 90 days Invoice for Storage
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Goldstrike Resources Ltd.
1300 - 1111 West Georgia Street
Vancouver British Columbia V6E 4M3
Canada

CC:

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
DY060	98	Dry at 60C			WHI
SS80	98	Dry at 60C sieve 100g to -80 mesh			WHI
AQ201	98	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN
SHP01	98	Per sample shipping charges for branch shipments			VAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
*** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.
