1 Introduction

White Gold Corporation commissioned Groundtruth Exploration Ltd. (“Groundtruth”) of Dawson, Yukon to perform a Soil Sampling Survey Program on their Pilot Gold Property (the “Property”) located approximately 40 km northeast of Beaver Creek, YT in the Whitehorse Mining District on NTS Map Sheet 115K/09 (Figure 1) for both the 2016 and 2017 field seasons.

714 Soil samples were collected on the Pilot 1-50 claims during the 2016 field program.

3452 Soil samples were collected on the property during the 2017 field program.

Results and interpretation of these surveys form the basis of this report. Appendices to this report are attached as digital files.

2 Property Description, Location, Accessibility, Climate

The Pilot Project area is located 40 km North-East of the community of Beaver Creek. The Pilot Project is located in the Whitehorse Mining District on NTS 115 K 09 Lat 62°35’57N and Longitude 140°14’42W. It is located 10km west of the White River at the confluence of the White and Donjek Rivers.

The property is located in an unglaciated region of the Dawson Range. Elevations range from 580m to 1250m. Vegetation is typical of the Boreal forest, with mixed white and black spruce forests in valley bottoms, stunted black spruce and moss matt forests underlain by permafrost on north facing slopes and as elevation increases, transitioning into moss, talus and felsenmeer with increasing elevation. The typical climate of the area is moderate precipitaiton, warm summers, and cold winters.

The Pilot Property can be reach via helicopter from the community of Beaver Creek (40 km Southwest) or Dawson City (160 km northeast).

3 Claim Information

The Pilot Gold Project is registered in the Whitehorse Mining district on mapsheet NTS 115 K 09 (Figure 2, Appendix A). It encompasses 5406 hectares and is composed of the following 260 claims:

Claim name	Grant Number	Owner	Operator
PILOT 1-50	YF01811-1860	White Gold Corp. - 100%	White Gold Corp. - 100%
PILOT 51-146	YF00521-0616	White Gold Corp. - 100%	White Gold Corp. - 100%

4 History

The Pilot claims were origonally staked following a major regional silt program by Teck in 1998 searching for Pogo style mineralization. Other claims staked during this study include the White deposit area. Teck collected 52 soil samples and identified a 900m linear Au+/-As soil anomaly and a 500m Cu-Pb-Zn soil nomaly (Baxter, 2002).

Shawn Ryan staked the property in 2009 and collected 100 soil samples with encouraging resuls; values up to 193 ppb Au, 214 ppm As, and 14.4 ppm Sb. The claims lapsed and were re-staked in 2016 and later sold to White Gold Corp (Ryan, 2010).

4.1 Regional Geology

The Pilot area is underlain by rocks of the Ordovician and Devonian Scottie Creek (Quartzose Psammite) and White River (Carbonaceous Schist) Formations which have been locally intruded by Cretaceous Katrina Creek Suite (Granodiorite) and Galena Suite (Gabbro). 20km to the North of the Pilot Property is the Cretaceous Dawson Range Batholith (Granodiorite).

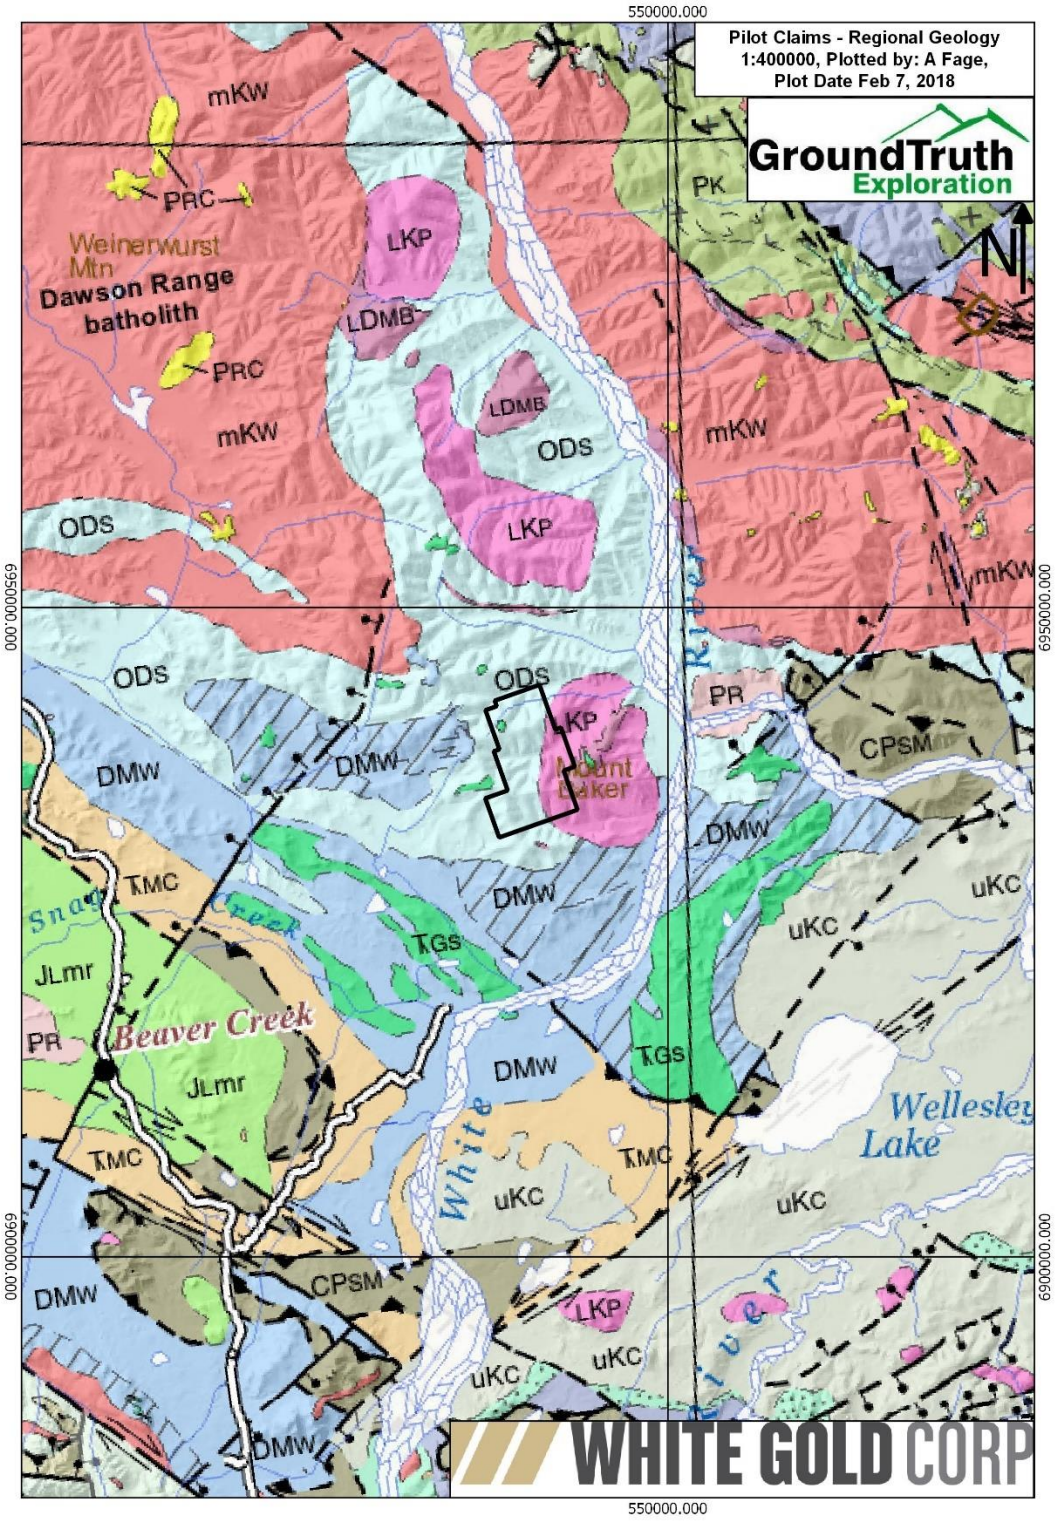

Figure 3: Regional Geology of the Pilot Property (From Colpron et al., 2016)

4.2 Property Geology

The Western 2/3 of the property is underlain by quartzose psammite of the Scottie Creek Formation intruded by a 600x700m plug of Katrina Suite Gabbro. The Eastern third of the property is intruded by a pluton of the Katrina Creek Suite (Granodiorite) which is then in turn intruded by Mount Baker Suite (Granodiorite) through it's centre.

5 Geochemical Sample Preparation and Analysis

Samples were shipped to Bureau Veritas (BV) sample preparation facility in Whitehorse. Prepared samples where shipped by BV to Vancouver where final analysis was completed.

Soil samples are prepared using the SS80 method. Samples are dried at 60 degrees Celsius and sieved until up to 100 grams of material passes 180 microns (80 mesh). The samples are then analyzed by the AQ201+U method which involves dissolving 15 grams of material in a hot Aqua Regia solution and determining the concentration of 37 elements of the resulting analyte by the ICP-MS technique.

6 Soil Sampling Program

6.1 Introduction

The 2016 soil program consisted of sending a 5-man crew from Dawson City for a 4-day sampling program to collect 715 soil samples with the objective of sampling ridges and spurs throughout the property.

2016 sampling of the Pilot 1-50 claims took place on September 16-19, 2016.

The 2017 soil program consisted of sending a 12-man crew from Dawson City for a 14-day detailed sampling program to collect 3551 soil samples with the objective of sampling grids over anomalous gold in soil anomalies encountered during ridge and spur sampling programs.

2017 sampling took place on September 16-29, 2017.

6.2 Personnel

The 2016 survey was conducted by the following GroundTruth Exploration personnel:

1. Brian Hyde
2. Dan Brown Hozjan
3. Jack Taforo
4. Mark Severinsen
5. Yoann Voyer

The 2017 survey was conducted by the following GroundTruth Exploration personnel:

1. Ben McGrath
2. Candace Mazerolle

3. Donnel Dacillo
4. Johnny Girons
5. Jascha Wille
6. Dan Brown-Hozjan
7. Kurt Behnson
8. Kendra Franks
9. Riley Dean
10. Roy Hutton
11. Sean Babcock
12. Veronica Valdron

6.3 Soil Sampling Survey Procedure

The survey is completed in the field according to the following procedure:

All sampling traverses are pre-planned, with pre -specified sampling intervals, typically 50m. Field technicians navigate to sample site using handheld GPS units. The soil sampler arrives at each sample site, identifies the most appropriate location to collect the sample and lays out a sheet of plastic (12”x20” ore bag). The soil sample is taken using an Eijkelkamp brand hand auger at a depth of between 20cm and 110cm. Samplers strive to consistently collect C-Horizon sample material. Where necessary (rocky or frozen ground) a prospector's pick ('mattock') is used to obtain the sample.

The soil is laid out on the sheet of plastic in the order it was recovered from the sample hole. Two Standardized photos are taken at each sample site- 1) Sample Location photo: across slope, 5m from sample hole with auger inserted and 2) Sample Profile photo: Close up of sample laid out on ore bag with barcode tag and munsell color chart in photo.

The sampler places the necessary amount of soil (400-500 grams) from the bottom of the hole into a kraft sample bag. The bag labeled with the 3-letter project and tagged with a plastic barcode ID tag containing a unique 7 digit sample identification number is inserted. A plastic barcode ID tag with the sample identification number is attached to a rock or branch in a visible area at the sample site along with a length of pink flagging tape.

A field duplicate sample is taken once for every 25 samples. Both samples are given unique Sample identification number. The data for both samples is recorded and a note is made indicating the duplicate and its corresponding sample identification number. At client’s discretion, standard reference material is inserted into the sample stream at an interval of 1:50.

The GPS location of the sample site is recorded with a Garmin GPSMap 60cx or 76cx GPS device in UTM NAD 83 format, and the waypoint is labeled with the project name

and the sample identification number. A weather-proof handheld device equipped with a barcode scanner is used in the field to record the descriptive attributes of the sample collected. This includes: sample identification number (scanned into device at sample site), soil colour, soil horizon, slope, sample depth, ground and tree vegetation and sample quality and any other relevant information. As well, the GPS coordinates are entered into the handheld device as a secondary backup in case of GPS failure.

6.4 Soil Survey Results

A location map of soil samples collected in 2016 and 2017 is shown below in Figure 5.

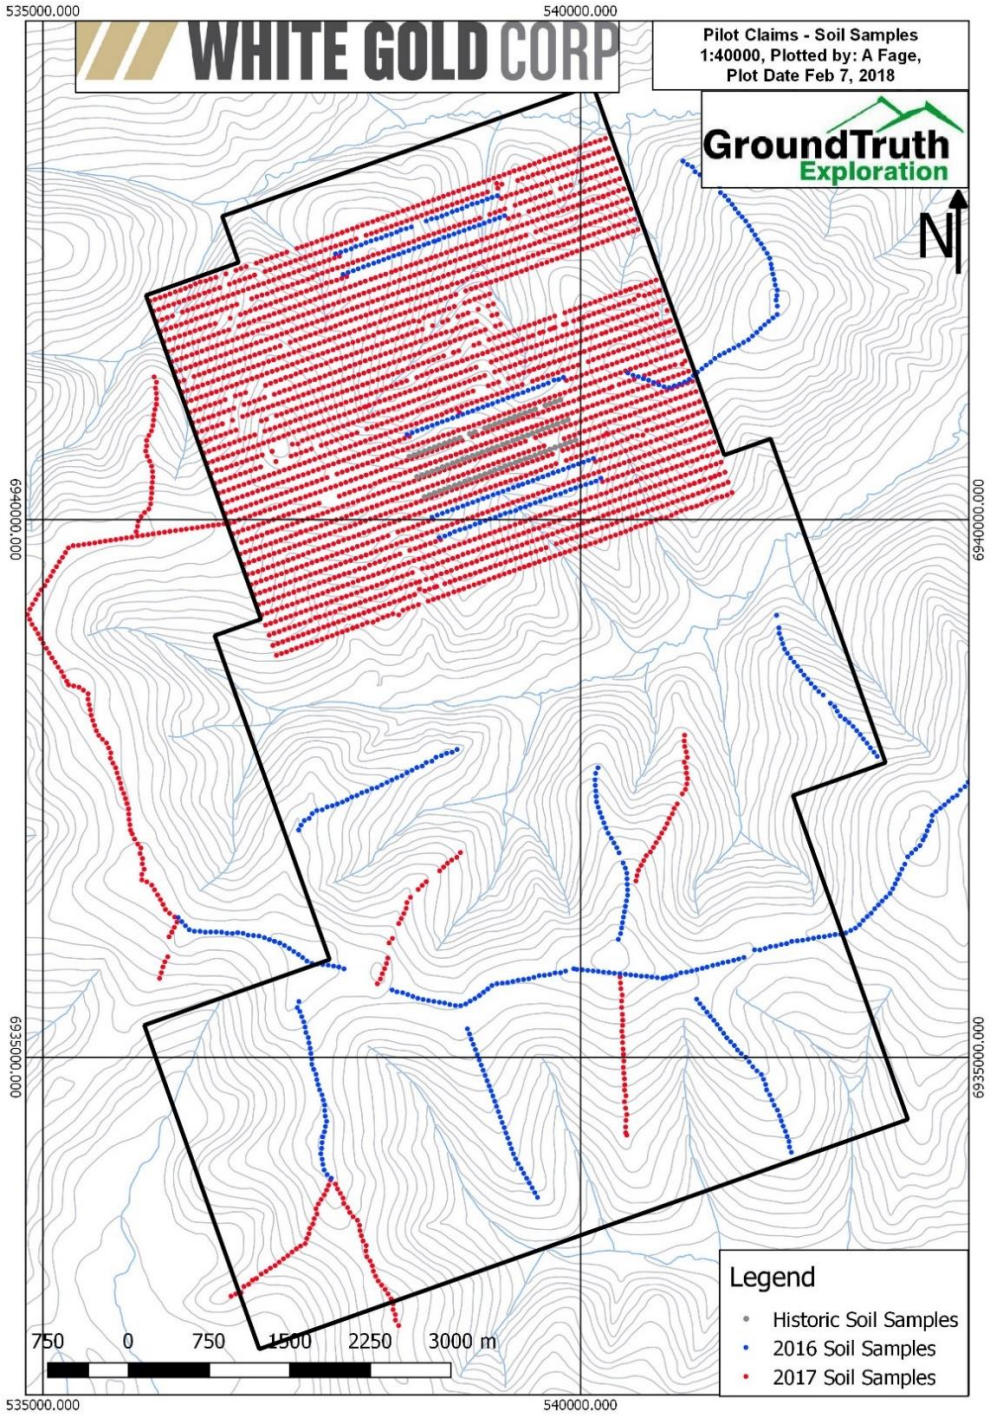

Figure 5: Location of 2016, 2017 Soil Samples

Maps shown below in Figures 6-10 are plotted with break points at 80th, 90th, 95th, 98th and 99th percentile for all samples on the property. Several samples anomalous for gold and/or multiple base metals were encountered in the 2016/2017 sampling programs

7 Discussion and Interpretation

7.1 Soil Sampling Program

The soil anomalies encountered in the eastern part of the Pilot grid area are comprised of elevated Au + As +/- Sb and are trending north and north-northwest. On the western portion of the grid, soil anomalies are comprised of either Pb + Zn or Cu, both sometimes containing As or Sb and minor anomalous Au.

7.2 Interpretation

It is interpreted that the soil anomalies encountered thus far on the Pilot property are prospective as a structurally controlled gold deposit. The linear character of the gold in soil anomalies is similar to the recently discovered White Gold and Coffee deposits 50 and 75km to the northwest, respectively. The metal zonation between soil anomalies on the east and west portions of the main soil grid may share more in common with intrusion related gold deposits that have been found throughout the Tintina Gold Belt in Yukon and Alaska (Fort Knox, Donlin Creek, Dublin Gulch, Pogo). Further work is recommended in order to determine the geological significance of these anomalies.

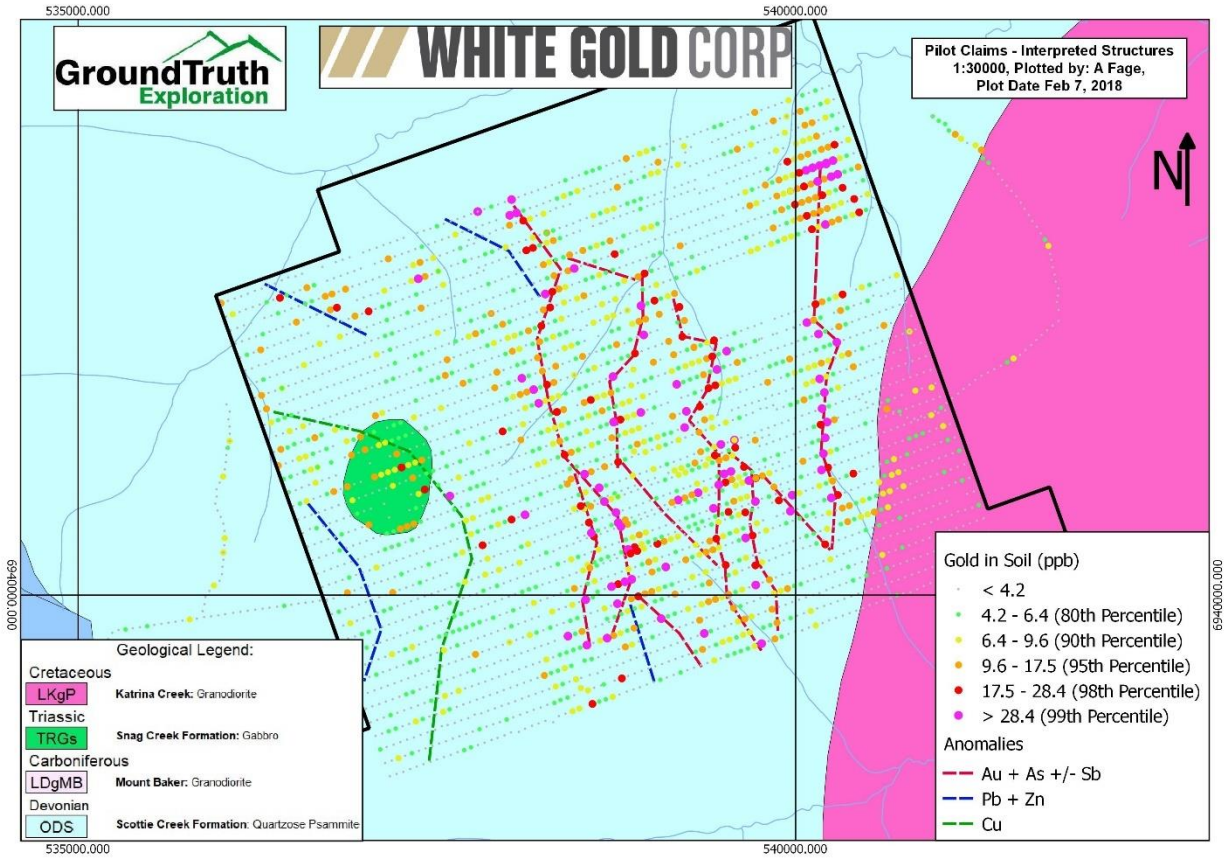

Figure 11: Interpreted Structures, Pilot property.

8 Recommendations

1. Grid Soil sampling over any area found to be anomalous in Au, As, Sb, Cu, Pb, or Zn (2 or more consecutive samples) from the ridge and spur sampling program.
2. Extension of the main grid to the South.
3. Geological Mapping and prospecting over the current Pilot grid area.
4. An airborne magnetic survey over the entire Pilot property.
5. Either a drone or XCAM aerial photography survey and lineament study over the entire property.

9 Costs

2016 Assessment is to be applied to the Pilot 1-50 claims only.

Pilot Expenditures	
2016 Soil Sampling 694 Samples	$50,960.97
Total 2016 expenditures on the Pilot Property	$50,960.97

2017 Soil Sampling Program 3452 Samples	$246,918.75
Total 2017 expenditures on the Pilot Property	$246,918.75
