## 1.0 SUMMARY

---

A 16 day exploration program was conducted on the VIP Property between August 23<sup>rd</sup> and September 7<sup>th</sup>, 2017, consisting of mechanical trenching, geoprobe drilling, prospecting, and soil sampling. The property is owned 100% by Generic Gold Corporation (previously Nevada Zinc Corp. and Goldspike Exploration Inc.) and consists of 839 quartz claims located in the Whitehorse Mining District.

The VIP property is located within NTS mapsheet 115J13 and parts of 115O/4 and 115K/16 in western Yukon. The property is situated ~120km south of Dawson City, to the east of the White River. Access to the property at present is only by helicopter. A narrow, gravel airstrip at Thistle Creek, just north of the Yukon River is ~25km north of the VIP property.

Geologically, the property lies within the Yukon-Tanana Terrane, which extends from British Columbia through the Yukon into Alaska. This terrane is bounded to the northeast by the Tintina Fault and to the southwest by the Denali Fault. The VIP property geology is dominated by 'Klondike Schist': middle to late Permian quartz feldspar muscovite and chlorite schist and Sulphur Creek Suite orthogneiss and granodiorite of the same age. The south of the property is underlain by Mid-Cretaceous, Whitehorse Suite granite and diorite. Small slivers of Finlayson Formation limestones and volcanoclastic rocks are present on the east side. Multiple faults run through the property from the southeast to the northwest.

The 2017 work program consisted of a crew of 4 geologists, 1 excavator operator, 1 geoprobe driller, 1 geoprobe helper, and 2 soil samplers conducting mechanical trenching, geoprobe sampling, prospecting, and soil sampling. The crew collected a total of 658 soil samples and 220 rock samples, consisting of 46 geoprobe samples, 91 trenching samples, and 83 prospecting samples. Sampling targeted geochemical and geophysical anomalies from previous surveys as well as unexplored or underexplored areas on the large property.

The most prospective area on the property is the Big Creek Target: a 700m long, NW gold-in-soil geochemical anomaly which is open in both directions. The anomaly is up to 250m wide, but is only constrained to the south (uphill) by permafrost which resulted in poor sampling. Gold values reach up to 61.4 ppb which is quite anomalous for this area. Gold correlates well with Te-Bi-Se-Cu-Ag-Mo-Hg-Pb-Sb-Zn. The Big Creek target was the focus of the 2017 trenching and geoprobe programs.

The second-most prospective area is the Wolf Creek area. This is a newly discovered 700m long Te-Bi-Mo soil anomaly northwest along strike of Big Creek. This anomaly is only composed of first pass soil samples, so a large, 50x50m soil sample grid is proposed over top of the anomalous samples. The Wolf Creek area was the focus of prospecting and detailed soil sampling during the 2017 exploration program.

The Contact Zone lies at the contact of Cretaceous-aged granite and Klondike Schist. Soil samples taken here are weakly anomalous in gold, molybdenum and base metals. Arsenopyrite-rich float was located here in 2016; likely from the source of the soil anomalies. The Contact Zone was the focus of prospecting during the 2017 exploration program.

## 2.0 INTRODUCTION

---

The report describes the 2017 exploration program on the VIP Property. It has been written to fulfill the requirements of the Yukon Mineral Exploration Program (YMEP) grant application submitted in March, 2017 as well as the requirements of the Yukon Mining Recorder. Field work was performed by K. Malcom, Aurora Geosciences, and Stewart Basin Exploration. The report text and maps were written by K. Malcolm and D. Ferraro.

## 3.0 PROPERTY LOCATION AND ACCESS

---

The VIP property is located within NTS mapsheet 115J13 and parts of 115O/4 and 115K/16 in western Yukon. The property is situated ~120km south of Dawson City, to the east of the White River (Figure 1). The claim group lies within the Whitehorse Mining District. Access to the property at present is only by helicopter. A narrow, gravel airstrip at Thistle Creek, just north of the Yukon River is ~25km north of the VIP property. There is river access (five months of the year) provided by a barge landing on the Yukon River, approximately five km west of the Thistle airstrip. Winter road access to Thistle airstrip may be available from Pelly Farm.

Figure 1: General location of the VIP Property

#### 4.0 TOPOGRAPHY, VEGETATION, AND CLIMATE

The VIP property falls within the Dawson Range which is a northwest-trending mountain range in western Yukon, stretching for over 100km. The area consists mostly of broad, rounded, unglaciated valleys (Figure 2). Permafrost is commonly found on north-facing slopes, particularly where there have been no recent forest fires. Bond and Lipovsky (2011) recently completed a three year study to provide baseline surficial geology applicable to mineral exploration in the northern Dawson Range. The authors suggest that widespread Pleistocene eolian loess deposits, (wind-blown silt), form close to the White River and may complicate the collection and interpretation of geochemical data. The VIP property is protected from this wind-blown silt from the White River and is therefore an effective area for soil sampling residual soils.

The climate of the region is described as cold and semi-arid. Mean annual temperature is between -4 and -8 deg C and annual precipitation estimated at 300mm (Bond and Lipovsky, 2011).

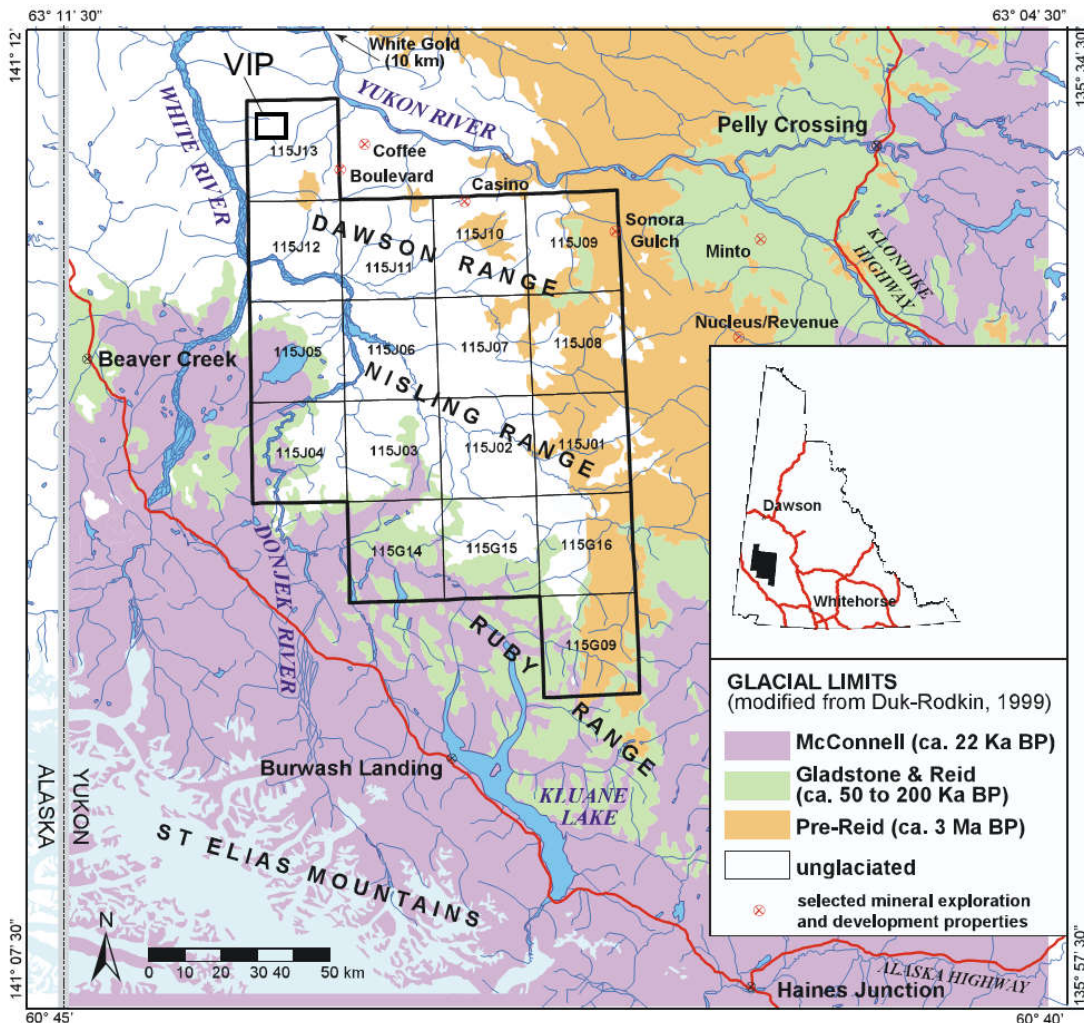

Figure 2: Glaciation in the Dawson Range (modified from Bond and Lipovsky, 2011).

## **5.0 PROPERTY DESCRIPTION**

---

The VIP property is comprised of 839 quartz claims in the Whitehorse Mining District. There are 756 'VIP' claims, 16 'XT' claims, 3 'VP' claims, and 64 'NZ' claims. All claims are contiguous and are owned 100% by Generic Gold Corporation (purchased from Nevada Zinc Corp. who was previously Goldspike Exploration Inc.). The XT claims were acquired as part of an agreement with adjoining property holder SilverQuest Resources. The VP claims were staked in 2015. The NZ claims were staked in 2016 over the MICK claims, previously held by Ryan Gold Corp. All claims listed within the block of VIP claims were ground staked and conform to regulations under the Yukon Quartz Mining Act. The locations of posts were recorded in NAD83 with handheld global positioning units.

Claim status and particulars are listed in Appendix 1. Figure 3 displays claim locations.

## **6.0 PROPERTY HISTORY**

---

### **6.1 Historical Exploration**

The VIP property has had no previous documented hardrock or placer claim activity, or fieldwork reported in Yukon assessment files prior to 2011. While no placer work was reported, Tom Morgan, a Dawson prospector and staker of the VIP claims, noted boulders placed along the edge of a tributary flowing into Big Creek. Morgan interpreted the stacking of these boulders as reasoning for early, undocumented placer activity within the VIP property.

There are many documented 'Minfile' mineral occurrences in the region. In the late 90s-early 2000s Prospector International Resources Inc. working in the Coffee Creek area delineated a gold anomaly of 400 x 900 meters defined by gold-in-soil values up to 694ppb Au with co-incident As, Sb and Hg, (Jaworski and Vanwermeskerken, 2001). That area is now part of the Coffee Gold project which has an indicated resource of 2.9 million ounces gold and was recently purchased by Goldcorp for 520 million dollars.

Other significant projects in the immediate vicinity include Independence Gold's Boulevard Project discovered in 2009 and Arcus Development's Danman Property (previously held by ATAC Resources) discovered in 2009.

### **6.2 Work Performed by Nevada Zinc on the VIP Property**

Nevada Zinc Corp. has staked and held the property since 2010. The company has carried out a variety of surveys and studies since that time (Table 1).

Table 1: Summary of Work Performed by Nevada Zinc and Generic Gold Corp.

Year	Area	Description of Exploration Work
2010	Property-wide	<p>Airborne total magnetic field and radiometric survey over VIP claim block. A total of 1055 line kilometers were flown including tie lines and survey lines. Survey lines were flown at 100m spacings at a 020/200 degree heading. Tie lines were flown at 1000m spacings at a 110/290 degree heading.</p> <p>The survey outlined multiple structures and small rhyolitic plugs as well as a large portion of a granodiorite unit to the south.</p>
2011	Property-wide	<p>Extensive geochemical program totalling 324 rock samples, 1184 soil samples, and 60 silt samples.</p> <p>A structure northeast of the Mick Claims (now NZ claims) was recognized with multiple associated copper occurrences - malachite and azurite in silicified schist and oxidized quartz veining. No significant gold results were uncovered by prospecting, however. Soil sampling uncovered multiple low-grade gold-arsenic anomalies as well as base metals, primarily copper and antimony.</p>
2015	Big Creek area, Moose Creek area	<p>4 day geochemical program conducted on SE portion of property. 33 rock samples and 322 soil samples taken.</p> <p>Multiple gold-in-soil anomalies including a ~400m long Au-As-Ag-Bi-Cu-Pb-Mo-Hg-Se-Te soil anomaly just south of Big Creek.</p> <p>3 VP claims staked.</p>
2016	Big Creek area, Wolf Creek area, eastern border of claims.	<p>64 NZ claims staked over the recently lapsed MICK claims in the center of the property.</p> <p>Prospecting and soil sampling conducted producing 279 soil samples and 28 rock samples.</p> <p>Big Creek anomaly extended to a &gt;700m long trend. Another 700m Te-Bi-Mo anomaly revealed in the Wolf Creek area.</p>

2017	Big Creek area, and property-wide	<p>Mechanical trenching was completed in the Big Creek target area, consisting of 150 metres in four separate trenches.</p> <p>Geoprobe drilling/sampling was completed in the Big Creek target area, consisting of one line of sampling at five metres spacings across the width of the anomaly.</p> <p>Prospecting was completed in areas identified as anomalous in previous exploration campaigns, resulting in collection and submission of 83 rock samples.</p> <p>Soil sampling was completed on unsampled ridges and spurs, as well as focused sampling in areas identified as anomalous in previous exploration campaigns, resulting in the collection and submission of 658 samples.</p>

## 7.0 GEOLOGICAL SETTING

---

### 7.1 Regional Geology

The VIP property lies within the Yukon-Tanana Terrane, which extends from British Columbia through the Yukon into Alaska. This terrane is bounded to the northeast by the Tintina Fault and to the southwest by the Denali Fault (Figure 4).

The Yukon Tanana Terrane was accreted to the western North American craton between the late Paleozoic and early Cenozoic. During middle Paleozoic time, this terrane rifted southward causing a right lateral displacement of greater than 125km along this major fault. Quartz-rich schists and gneisses make up much of this terrane with amphibolitic grade metamorphism.

Mid-Cretaceous intrusive rocks such as the Klotassin Batholith to the south of the VIP property (Tempelman-Kluit, 1974) have been associated with mineralization within the Tintina Gold belt which forms an arcuate belt extending from Alaska through central Yukon and including deposits such as Pogo, Fort Knox and Dublin Gulch. More recently these Cretaceous intrusions host gold mineralization which is interpreted to be structurally controlled as at the Goldcorp Coffee Creek project within what is now referred to as the White Gold District, Yukon.

The VIP Property sits 20 km west of the Coffee Creek project. In his unpublished master's thesis, Buitenhuis (2014) described the Latte Zone at Goldcorp's Coffee deposit as an orogenic gold deposit that is epizonal, early-brittle as well as structurally- and lithologically-controlled. Gold mineralization in the Latte Zone was found to be hosted by steep, brittle structures dipping 65-85° to the south-southwest. These structures belong to the Coffee Creek fault system which is composed of west-northwest to northwest trending dextral strike-slip structures. This fault system is thought to splay off of the regional-scale Big Creek Fault located south of the Coffee Deposit.

### 7.2 Property Geology

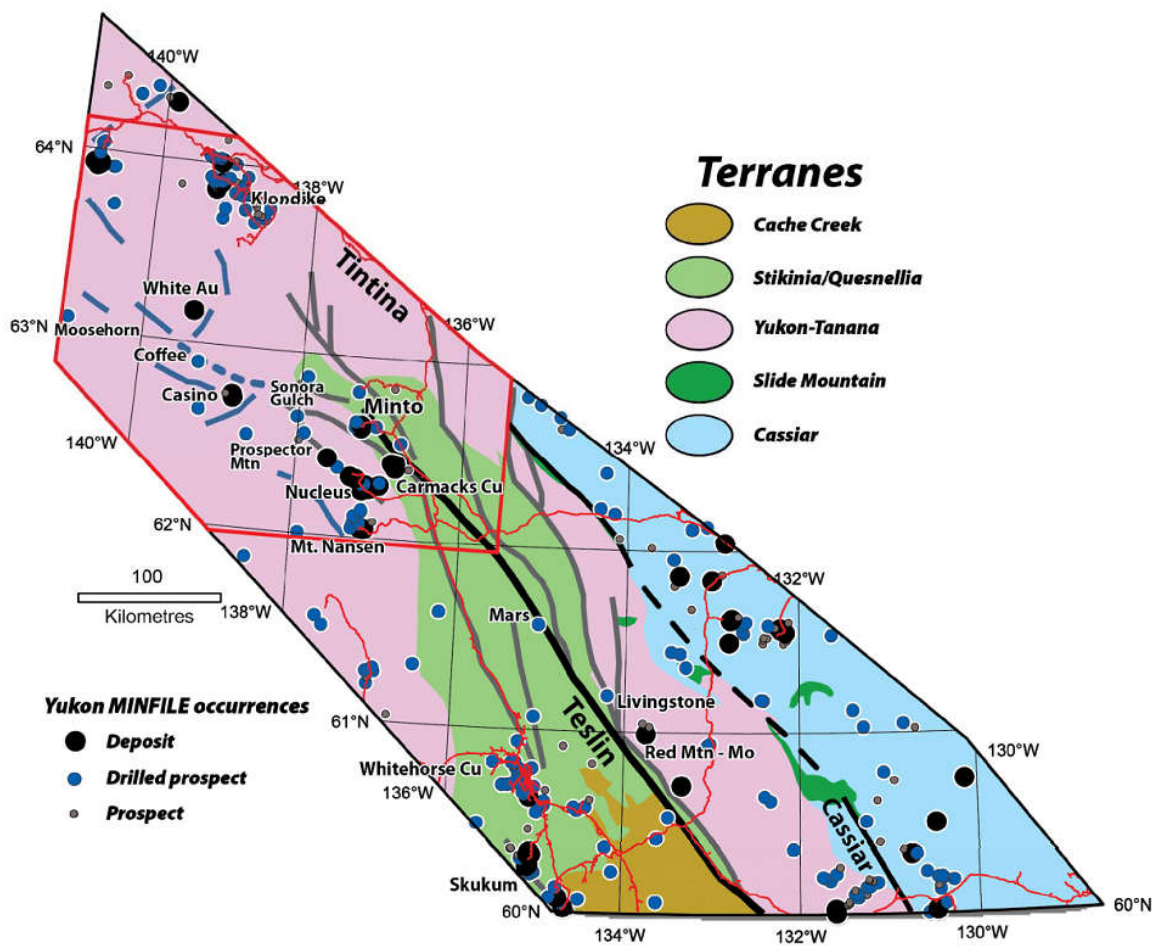

The VIP property geology is dominated by Middle to Late Permian quartz, feldspar, muscovite and chlorite schist ('Klondike schist'), local biotite gneisses, and mafic schists (Figure 5). The northeastern quadrant of the property is underlain by Proterozoic, Snowcap Formation quartzite and amphibolite. Intrusive rocks, including biotite granodiorite to granite, have been identified as well as ultramafic rocks including variably serpentinized peridotite. The southeast of the property hosts a Coffee Creek-phase monzogranite of the Whitehorse Suite dated at 99 Ma (McKenzie et al., 1999). This granite is mapped next to a Whitehorse Suite diorite or gabbro. In the northern part of the property, granodiorite has been mapped and its continuance to the east is not clear.

From the geophysics, it is very clear there are northwesterly structures which show magnetic trends with co-incident magnetic lows. Foliation attitudes within the quartz muscovite +

feldspar-bearing schists typically reflect these attitudes (generally 300-320 degrees). A marble unit mapped up to 10m thickness, is shown on our mapping and is consistent with this same 320 degree attitude. A small, unmapped carbonate unit was also found just north of the monzogranite in the southeast corner of the property.

Folding is also apparent and is also illustrated from Tempelman-Kluit's (1974) fieldwork where he documents folding within the present NZ (formerly MICK) claims and on the VIP ground north of the NZ claims (see Frasier, 2011 for further information and photos).

The property is cut by a large, dextral fault which separates the Snowcap Formation to the northeast from the Klondike schist to the southwest. From geophysics and field observations, it is likely there are additional northwest trending faults through the property, especially running along Big Creek.

**Figure 4** Simplified terrane map of the central Yukon. Red polygon outlines the Dawson Range Mineral Belt of western Yukon (Bennett et al., 2010).

### 7.3 Geophysics

In December, 2010, Precision GeoSurveys of Vancouver, BC carried out an airborne geophysical survey on the VIP Property. The survey collected magnetic and radiometric data. A total of 1055 line kilometers were flown including tie lines and survey lines. Survey lines were flown at 100m spacings at a 020/200 degree heading. Tie lines were flown at 1000m spacings at a 110/290 degree heading.

Initial interpretation was done on the data by Ron Sheldrake in 2011 (Vivian, 2011). Sheldrake interpreted northwesterly structures from magnetic trends with co-incident magnetic lows. Foliation attitudes within the quartz muscovite + feldspar-bearing schists typically reflect these attitudes (generally 320 degrees).

In addition to these structures, Sheldrake inferred a peridotite intrusion with from strong magnetic signature. He also interpreted an alteration zone within the MICK claims (now NZ claims) which he suggests extends north into the VIP claims. Sheldrake based this possible alteration or breccia zone on disruption of linear features in this area. Sheldrake further interpreted a fold structure from the linear features.

In May, 2016, Precision GeoSurveys was contracted to re-interpret and process the magnetic data from the 2010 survey. Data quality was evaluated, additional processing was performed, new results were analysed, and additional maps were produced (Ferraro, 2016).

The interpretation of the data was beneficial at this point since it took into account geochemical sampling and geological measurements done between 2011 and 2015.

Like Sheldrake, many NW-SE lineations were interpreted. On the southern corner of the block, there is a large magnetic high. This would indicate a large resistive unit. However, the offset and rotation of the unit with the lineations immediately to the west indicate that there may be faulting around the unit. Geological mapping and field observations show that this magnetic high represents a Coffee Creek-phase granite body in the southeast corner and an adjacent Whitehorse-suite gabbro body to the west.

On the northeastern section of the grid are two magnetic highs that would indicate intrusive bodies. The larger, western anomaly also cross cuts some of the NW/SE lineations, indicating that it is a younger unit.

Along the western edge of the survey area are two anomalies that are somewhat circular in shape but with a much lower residual magnetic intensity. The shape would indicate that they could possibly be intrusive units, while the lower magnetic signature would indicate that they may be much older and more heavily altered.

Figure 6 displays the interpreted structure identified from the residual magnetics mpa. As in the White River area of Kinross, it is assumed the structural N-NW trending features may well be

shears and these structures are likely delineating this area as a prominent shear zone. The more westerly to slightly northwesterly trends appear to document prominent offset in some of the magnetic features and as such these are interpreted to be faults. A very prominent east-west trending fault structure occurs within the high magnetic area in the southern portion of the claim block. This is considered to be the most prominent off setting structure on the property. The ground preparation for this area appears significant, in allowing hydrothermal fluids to move through large volumes of rock.

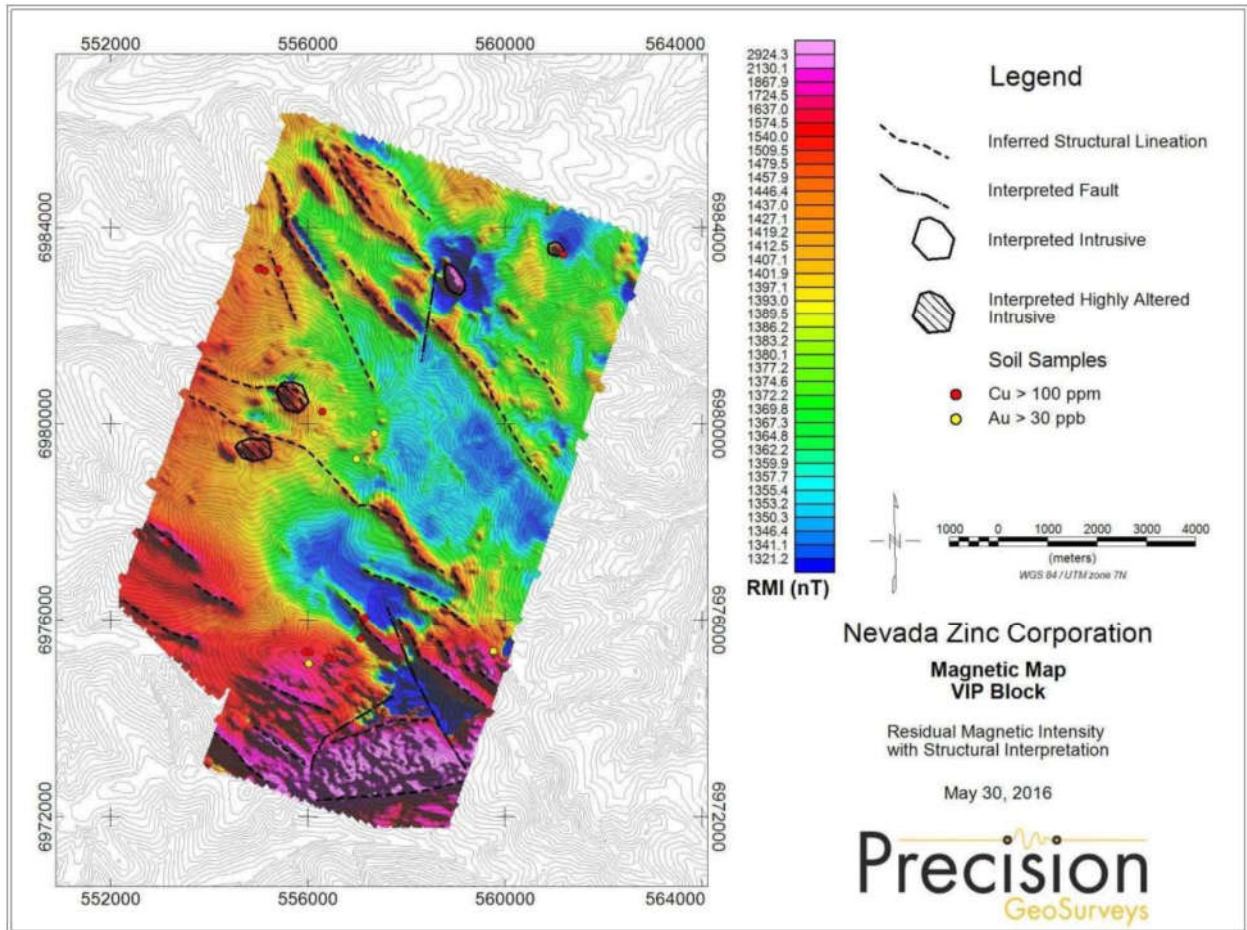

Figure 6: VIP residual magnetic intensity with interpreted structure

## **7.4 Geochemistry**

Between 2011 and 2017, extensive geochemical surveys were conducted on the VIP Property which includes 605 rock samples, 2443 soil samples, and 43 silt samples.

Multiple base metal (copper, lead, and zinc) anomalies have been identified in the north of the property, however very little gold correlates in this area. Malachite, galena, and sphalerite are not uncommon minerals to find around these geochemical anomalies. Much follow-up prospecting was done in 2011 when showings were found, but no significant gold assays were returned. It is suspected that permafrost conditions during the 2011 program (done in May and June) affected soil sample assays. The 2015 and 2016 programs were greatly beneficial in outlining new targets, specifically in the south of the property and on the new Wolf Creek area claims. In general, the southern targets appear to have an Au-Te-Bi-Cu-Ag-Mo-Pb-Sb correlation. The 2017 program was intended to follow up on anomalies identified in earlier programs, specifically in the Big Creek and Wolf Creek areas. Prospecting was completed in the area of the Coffee Creek granitic intrusion as well.

These targets are discussed in detail in section 8.3 (Results). Geochemical maps of select elements can be found in Figures 8 through 12.

## **8.0 2017 WORK PROGRAM**

---

### **8.1 Sampling Method and Approach**

A 16 day geochemical sampling program was conducted on the VIP claims from August 23<sup>rd</sup> to September 7<sup>th</sup> of 2017. Working from a small camp on the VIP property, a crew of 4 geologists, 1 excavator operator, 1 geoprobe driller, 1 geoprobe helper, and 2 soil samplers conducting mechanical trenching, geoprobe sampling, prospecting, and soil sampling. The crew collected a total of 658 soil samples and 220 rock samples, consisting of 46 geoprobe samples, 91 trenching samples, and 83 prospecting samples. Sampling targeted geochemical and geophysical anomalies from previous surveys as well as unexplored or underexplored areas on the large property. Rock and soil sample descriptions can be found in appendices II and III and a map of sample locations on Figure 7.

Mechanical trenching was completed using a heli-portable low-ground-pressure Kubota excavator, operated by Stewart Basin Exploration of Whitehorse, YT. Trenching was originally intended to cross the Big Creek anomaly, in order to assess the width and grade of bedrock underlying the soil anomaly. Unfortunately, permafrost and topography limited the area in which trenching was effective and the trenching was focused on the northern edge of the anomaly on a small plateau. Trenches were mapped and sampled at 3 metre intervals. A total of 91 rock samples were submitted to the lab.

Geoprobe sampling/drilling was completed using a track-mounted heli-portable geoprobe drill supplied by Krtotech Arctic Innovations of Whitehorse, YT. The geoprobe drilling was completed due to the limited area of trenching, in order to assess the width of the bedrock expression of the Big Creek soil anomaly. One line was completed at 5 metres spacings for a total of 46 mixed rock and soil samples (“top of bedrock” sampling).

Prospecting samples were taken based on mineralogy, structure and lithology. Many samples were of outcrop or float. Due to the lack of outcrop in some areas, some samples were taken by digging small pits and sampling the talus. Samples were placed inside labeled plastic poly bags with the corresponding sample tag. Sample descriptions were recorded in a field notebook and the location recorded by GPS unit. Sample locations were marked with flagging tape labeled with the sample number.

Soil sample locations were based on three methodologies:

- Typical ridge and spur lines in unexplored areas;
- Follow-up lines paralleling known geochemical anomalies;
- Downslope lines over unexplored geophysical anomalies.

Soil samples were generally taken at 50m spacings. Samplers used Dutch augurs to collect an adequate soil sample, preferably from the ‘C’ horizon, and placed them in a Kraft paper bag. Locations were marked with a handheld GPS and flagging tape labeled with the sample number was left at the site. Sample conditions, environment and attributes were recorded in a field notebook. The GPS units were downloaded daily for plotting in ArcGIS. Soil samples were hung up to dry, then packed and shipped to the lab.

## **8.2 Sample Preparation, Analysis, and QA/QC**

Samples were shipped to ALS’ prep lab Whitehorse, YT facility shortly after the completion of the program. ALS is a globally accredited lab meeting and exceeding ISO standards and utilizing industry standard preparatory and analytical packages.

The soil samples were prepped with ALS’ PREP-41 package and analysed with ALS’ AuME-TL43 package, which is a 25 gram Au & multielement package using an aqua regia digest and an ICP-MS finish.

The rock samples were prepped with ALS’ PREP-22 package and analyzed with ALS’ Au-ICP22 and ME-ICP61 packages.

Quality control samples from the lab include control blanks, duplicates and standards. Sample blanks, pulp duplicates, and standards were inserted with the batch analysis; no problems were noted with analytical accuracy or precision.

### 8.3 Results

The 2017 program had several objectives:

- trench and further investigate the Big Creek Target discovered in 2015
- prospect the Contact Zone
- prospect the Wolf Creek area

All objectives were completed with much room left for follow-up work. Since the 2017 sampling was mostly follow-up work, results have been combined with data from earlier exploration campaigns in Figures 8 to 12. Figures 13 and 14 display trenching and geoprobe results, respectively. Assay results for the 2017 samples can be found in appendices IV and V.

#### Big Creek Target:

This area was trenched and sampled with a geoprobe to follow-up on a grid of anomalous soil samples done in 2015. Trenching was very successful in providing a better understanding of the bedrock geology underlying the anomalous soils. Geoprobe drilling provided a definitive understanding of the width of the oxidized material underlying the anomaly, increasing the prospectivity of the target. Although gold values in the rock samples were not economic, each oxidized rock sample returned anomalous gold values from the lab. This represents a well defined RC or diamond drilling target. This work was successful in outlining and confirming a 700m long, NW gold-in-soil geochemical anomaly which is open in both directions (Figure 13). The anomaly is up to 250m wide, but is only constrained to the south (uphill) by permafrost which resulted in poor sampling. Gold values reach up to 139 ppb which is highly anomalous for this area. Gold correlates well with Te-Bi-Se-Cu-Ag-Mo-Hg-Pb-Sb-Zn.

Geologically the zone occurs within Klondike Schist of Paleozoic age. It occurs 2.4km WNW on trend from a Cretaceous, Coffee Creek-phase monzogranite body, and 1.4km north of Cretaceous, Whitehorse Suite gabbro body. The Coffee Creek-phase monzogranite body is one of a series continuing to the ESE all the way to the Coffee Creek deposit (2.9M oz Au indicated), and which host a large portion of the deposit.

The airborne magnetic survey completed by Nevada Zinc in 2010 indicates additional buried intrusions under 1km away on trend with the Coffee Creek-phase intrusions. A prominent northwest structure is also indicated directly underneath and within 200m of the geochemical anomaly.

#### Contact Zone:

The Contact Zone is located in the southeast of the property. It describes a small saddle where the Cretaceous, Whitehorse Suite granite to the south contacts Klondike schist and orthogneiss to the north. There is a minor Au-As-Mo-base metal anomaly here. Follow-up prospecting yielded arsenopyrite-rich gneiss float. Sample 1541704 assayed 19 ppb Au, 5637 ppm As, 64 ppm Bi and 4.2 ppm Te. Followup prospecting was completed in 2017; results were disappointing with all samples returning gold values below detection limits.

### Wolf Creek Area:

2016 soil sampling on the new Wolf Creek area claims uncovered a 700m long Te-Bi-Mo anomaly with weak base metal associations. While there is very little gold and arsenic, the tellurium signature is significant as it shows similar levels to the Big Creek Target. There is almost no Te above detection limits present in any other areas, save for 1 area to the northwest which also correlated with Bi and base metals (although in lower concentrations). In combination with the Big Creek Target, the 3 Te anomalous zone form a general NW trend which corresponds to structures interpreted from the magnetic survey. The 2017 prospecting and soil sampling program consisted of contour sampling around the gossanous ridge present on the property, which encompasses the Wolf Creek, North Wolf Creek, and the gossan described below. The results from prospecting and detailed soil sampling were disappointing, with the highest soil sample reaching 12 ppb Au.

North of Wolf Creek exists a 450m long Au-Pb-Cu-Zn geochemical anomaly with galena-bearing quartz. Additionally, northeast of Wolf Creek is Cu-Zn -bearing structures up to 4 km long where bedrock assays up to 0.43% Cu, 0.91% Zn were found.

There is also a large gossan unit just east of the Te-Bi-Mo samples. Three soil lines cover it yielding up to 51 ppb Au, however there is very little correlation with other elements in this area. Prospecting did not yield significant results in either the gossan or hand dug pits at 2011 soil sample sites.

Photo 1: Pyritiferous and oxidized rock sample W641310 assayed 43 ppb Au and was anomalous in pathfinder elements.

Photo 2: Trench 3 looking north.

Photo 3: Trench sites after reclamation (VIP camp white tents in background).

Photo 4: Geoprobe sampling on Big Creek target.

## 9.0 CONCLUSIONS AND RECOMMENDATIONS

---

The 2017 program at VIP was successful in advancing the project through follow-up on anomalies from 2011-2016 and finding new potential targets.

### Big Creek Target:

The Big Creek Target is the most prospective area on the VIP Property so far. The suite of elements present in the rock and soil assays, size of target, and regional position all support the necessity to follow-up this area. The pyritic oxidized rock material is indicative of a hydrothermal fault system, as at the neighbouring Coffee project, where “the mineralized structures at the Coffee Project have undergone extensive preferential weathering and oxidation of iron-bearing minerals as a result of meteoric fluids percolating from surface downwards through the permeable structural corridors. Conversely, unfractured and unaltered country rock is typically fresh (unoxidized) at surface. As a result of this preferential weathering, oxidation is channelized along the structural corridors. ... Oxidation appears to be channeled along the structural corridors that host the deposits.” (Coffee Gold Project Feasibility Study, 2016). A program of high-resolution IP geophysics should be completed during the next season, followed by an RC drilling program.

#### Wolf Creek Target:

The Wolf Creek Target lies roughly on strike with Big Creek. The 2017 work program on this target consisted of contour soil sampling and prospecting around the gossanous ridge. Future work on this prospect should include ground IP geophysics should budgets allow.

#### Moose Creek area:

This area was first sampled in 2015 and was revisited in 2017. It is located in the southeast corner of the property south of the Contact Zone and characterized by granite and orthogneiss in contact with schists, quartzite and carbonate rocks with anomalous Au-As and base metal geochemistry. Ridge and spur soil sampling showed anomalous Au-As and base metal soil geochemistry within gossanous Coffee Creek-phase monzogranite unit with aplite dikes. Followup prospecting was completed in 2017; results were disappointing with all samples returning gold values below detection limits. Due to prospective geology and similarities to that of the Coffee Gold deposit, significant ground cover, and compelling soil anomalies, future work should include geoprobe sampling and IP geophysics should budgets allow.

#### Grassroots exploration:

There are also numerous unexplored ridges and spurs in the eastern areas of the property. Due to the location of the VIP Property in relation to Coffee Creek, every unexplored ridge should have a soil sample line and prospecting; especially those on a northwesterly trend with the Wolf Creek and Big Creek anomalies. There is also some unexplored area at the headwaters of a creek with a 1.2 g/t Au silt sample just west of the Big Creek Target. Another target is the eastern edge of the claim boundary with the YCS Property. There is some Snowcap Formation rock that is the same unit that hosts Independence Gold's Denali showing.

Generic Gold Corp. would like to thank the Yukon government for this YMEP grant. The company looks forward working in the Yukon on future programs.

## CERTIFICATE OF QUALIFICATIONS

---

I, Kelly Malcolm, of 410-1005 King St West, Toronto, Ontario, Canada, certify that:

- I am a graduate of Laurentian University and hold an honours B.Sc. degree in Earth Sciences.
- I am a Professional Geologist registered with the Association of Professional Geoscientists of Ontario.
- I am the President and Chief Executive Officer of Generic Gold Corporation.
- I am a Director of Ateba Resources Inc. and Technical Advisor to Amex Exploration Inc., both of which are involved in mineral exploration within Canada.
- I have worked in the exploration industry for companies such as Detour Gold Corp, St Andrew Goldfields Ltd, Amex Exploration Ltd, Generic Gold Corp, Cobalt Power Group, Okak Bay Cobalt & Nickel Corp, and as an independent prospector and geologist, in Ontario, Quebec, Newfoundland & Labrador, and the Yukon Territory of Canada.
- This report was prepared by myself and Dan Ferraro.
- I have no personal knowledge from the date of this certificate of any material change not reflected in this report.

Kelly Malcolm, P.Geol

Date: Feb. 28, 2018

Rock Grab Sample Descriptions  
NAD 83 Zone 7

Sample ID	Easting	Northing	Elevation (m)	Date	Type	Sampler	Source	Description
W641201	557357	6974344	1266	26-Aug-17	grab	Andreas	Bedrock	Gneissic rock with 3cm thick quartz vein cross-cutting foliation. No significant oxidation/sulfides visible.
W641202	557410	6974124	1255	26-Aug-17	grab	Andreas	Float	Gneissic rock with foliform quartz crack seal veining no visible sulfides alteration
W641203	563105	6976148	952	27-Aug-17	grab	Andreas	Float	Mica schist with cross-cutting quartz veining. Moderate sericitic and oxidation.
W641204	563105	6976148	952	27-Aug-17	grab	Andreas	Float	Mica schist with cross-cutting quartz veining. Moderate sericitic and oxidation.
W641205	563186	6975881	942	27-Aug-17	grab	Andreas	Float	Ambphobilite, moderately foliated. Moderate biotite alteration. Near outcrop source.
W641206	563097	6975966	961	27-Aug-17	grab	Andreas	Bedrock	Moderately silicified and oxidized felsic rock with potential trace sulphide.
W641207	563017	6976020	970	27-Aug-17	grab	Andreas	Float	Angular float at top of ridge. 2-5% disseminated potential sulphides. Moderate foliation and sericite/hematite alteration.
W601501	559805	6972821	1406	26-Aug-17	grab	Emma	rubble crop	Biotite granodiorite. Oxidized
W601502	559912	6972572	1407	26-Aug-17	grab	Emma	rubble crop	Granodiorite. Very crumbly and fractures easily.
W601503	559969	6972673	1429	26-Aug-17	grab	Emma	rubble crop	Biotite granodiorite 130/70.
W601504	560079	6972824	1474	26-Aug-17	grab	Emma	rubble crop	Granodiorite. 1 m area of rusty rock in rubble crop. Trace sulphides. Crumbly unit
W601505	559656	6972925	1363	27-Aug-17	grab	Emma	rubble crop	Medium grained intermediate to mafic igneous rock
W601506	559656	6972925	1363	27-Aug-17	grab	Emma	rubble crop	Granodiorite. Oxidized. Trace pyrite and possibly chalcopyrite. Siliceous in part
W601507	559697	6972923	1365	27-Aug-17	grab	Emma	rubble crop	Granodiorite. Magnetite staining, oxidized quartz, trace pyrite, siliceous in part
W601508	559732	6972924	1374	27-Aug-17	grab	Emma	rubble crop	Amphibole-biotite granodiorite. Very oxidized. Sampled soil (W602181) next to subcrop
W601509	559752	6972922	1382	27-Aug-17	grab	Emma	float/rubble crop	Area of float rock within rubble crop. Very oxidized granodiorite. Sample has contact with fine grained intermediate igneous unit
W601510	559891	6972982	1415	27-Aug-17	grab	Emma	float/rubble crop	Area of float rock within rubble crop. Very oxidized granodiorite. 0.5 cm pink vein
W601511	560062	6973025	1472	27-Aug-17	grab	Emma	float/rubble crop	Oxidized granodiorite. Siliceous in part. Headwaters of small drainage area
W601512	560084	6973128	1474	27-Aug-17	grab	Emma	rubble crop	Granodiorite. Siliceous in part.
W601513	560144	6973121	1497	27-Aug-17	grab	Emma	float/rubble crop	Oxidized granodiorite. More mica than usually seen in same unit
W601514	558063	6980413	1561	28-Aug-17	grab	Emma	rubble crop	Quartz vein in schist. Rusted out sulphides. Very oxidized
W601515	558003	6980696	1483	28-Aug-17	grab	Emma	float	Quartz vein in float. Slight oxidation
W601516	554873	6982487	1098	29-Aug-17	grab	Emma	float	Chlorite schist. Oxidized. Area of potential weathered sulphides.
W601517	555382	6982741	1201	29-Aug-17	grab	Emma	outcrop	Chlorite schist. Very oxidized, silicified. Weathered sulphides. Close to quartz vein and malachite/azurite face.
W601518	555196	6972985	1284	02-Sep-17	grab	Emma	outcrop	Chlorite schist with small quartz vein sets
W601519	555199	6972981	1281	02-Sep-17	grab	Emma	outcrop	Oxidized gneiss, with some weathered out sulphides
W601520	555186	6972989	1281	02-Sep-17	chip	Emma	outcrop	Chip sample of quartz vein. 2 m
W601521	555186	6972989	1281	02-Sep-17	chip	Emma	outcrop	Chip sample of host rock next to quartz vein - gneiss
W601522	553812	6977145	1018	03-Sep-17	grab	Emma	float	Mica schist boulder. Orange and red. Weathered out sulphides. Quartz clasts or part of quartz vein
W641223	557900	6981476	1440	28-Aug-17	grab	Emma	outcrop	Quartz vein in chlorite schist. Very oxidized. Significant mineralization. Specular hematite, galena, sphalerite
W601552	559351	6972620	1287	25-Aug-17	grab	Kel	float	perched swamp/swale headwaters Moose Creek. Quartz vein fragments.
W601553	559351	6972620	1287	25-Aug-17	grab	Kel	float	Perched swamp/swale headwaters Moose Creek. Fine to med grained dark grey schist with 2 mm grey translucent quartz stringers.

Sample ID	Easting	Northing	Elevation (m)	Date	Type	Sampler	Source	Description
W601554	560603	6972740	1574	25-Aug-17	grab	Kel	talus train	Soil sample followup. Med grained massive diorite/granodiorite with 2% clots and disseminated granular pyrrhotite. Dike within gneiss?
W601555	560603	6972740	1574	25-Aug-17	grab	Kel	talus train	Gneiss as above. Photo
W601556	560577	6972766	1566	25-Aug-17	grab	Kel	talus train	Sucrosic quartz vein with minor iron oxide staining.
W601557	560551	6972814	1555	25-Aug-17	grab	Kel	talus train	Soil sample followup location not found. Ptygmatic quartz schist with cross cutting felsite dike. Photo.
W601579	556721	6975796	893	27-Aug-17	grab	Kel	float	Dark grey green subptygmatic fine grained schist, with disrupted quartz carbonate veinlet. Disseminated and clots fine grained pyrrhotite.
W601580	557117	6980084	1500	28-Aug-17	grab	Kel	talus	100m upslope from Pb anomaly rock float boulder. White quartz vein cobbles with minor iron oxide staining, in talus between cliffy outcrops of "quartzite", blocky meta feldspar porphyry: subtle augens and proto-boudens feldspar and quartz grains in wispy chalcedonic matrix. Planar foliation 52-28.
W601581	557347	6979809	1400	28-Aug-17	grab	Kel	talus	Au SOIL Gossan 1: Light green grey to buff weathering, fine grained platy felsic schist. Locally brick to rose weathering (hence 'gossan') after micas and rare pyrite(?) pits. Sample taken of the orange to brick weathering, white to pale grey quartz brecciated stockwork cobble.
W601582	557273	6979658	1347	28-Aug-17	grab	Kel	outcrop	Felsic schist as 582, foliation 30-72. Sample taken of discontinuous quartz vein breccia, with minor rust and trace tetrahedrite?
W601583	557163	6979568	1342	29-Aug-17	grab	Kel	talus	Cobble of light grey and white, subsucrosic quartz vein breccia, with minor vugs, about 10% iron oxides, and 1% black very fine grained sulphide?
W601584	557163	6979568	1342	29-Aug-17	grab	Kel	outcrop	As 583, with 5% hematite, 2% limonite in a discontinuous quartz vein within quartz feldspar schist, isoclinal fold axis = foliation = 126-40. Quartz vein about 188-82.
W601585	557281	6979043	1170	29-Aug-17	grab	Kel	outcrop	Outcrop: medium grey green fine grained and finely planar banded biotite quartz feldspar schist with minor quartz boudens. One quartz vein, 10 cm, with minor iron oxides and stibnite? (faint blue tinge).
W601586	557276	6979026	1165	29-Aug-17	grab	Kel	outcrop	Outcrop: medium grey green fine grained and finely chaotic banding biotite chlorite quartz feldspar schist with large clots biotite, and disrupted quartz veinlets.
W601587	557897	6981473	1430	01-Sep-17	chip	Kel	outcrop	10cm hangwall chip. Coarse grained biotite feldspar quartz gneiss, moderate foliation 144-78 to vertical. Black, striated, fine grained, diamond shaped (stibnite?) 2%, feldspar 40%, quartz 50% minor iron oxides and chlorite on fractures.
W601588	557897	6981473	1430	01-Sep-17	chip	Kel	outcrop	12 cm chip. Quartz vein parallel to subparallel foliation of 587. Pyrite pits, minor hematite and malachite staining in weakly vuggy translucent white to light grey quartz vein; appears anastomosing, verging on stockwork.
W601589	557897	6981473	1430	01-Sep-17	chip	Kel	outcrop	20cm footwall chip. As 587, a little more chlorite, and some quartz augens appear blueish.
W601590	557897	6981473	1430	01-Sep-17	chip	Kel	outcrop	20cm footwall chip, 2m west. Coarser grained gneiss, one rootless brecciated quartz veinlet. Minor amphibole phenocrysts.
W601591	557897	6981473	1430	01-Sep-17	chip	Kel	outcrop	10cm chip across 2cm vuggy quartz vein with chlorite and trace arsenopyrite. Weakly bleached and altered wall rocks.
W601592	557897	6981473	1430	01-Sep-17	chip	Kel	outcrop	20cm chip across quartz vein and altered wall rocks, as 591. Black, massive chlorite and/or quartz veinlets less than 1cm along regularly spaced joints 262-58.
W601593	557909	6981456	1443	01-Sep-17	chip	Kel	outcrop	15cm chip. 5 cm hanging and foot wall, 5 cm quartz vein with minor hematite and 1% stibnite.
W601594	557837	6981620	1442	02-Sep-17	chip	Kel	outcrop	10cm chip quartz vein with hematitic pits rimmed with very fine grained tetrahedrite? Quartz gneiss wall rock, foliation 150-84.
W601595	557837	6981620	1442	02-Sep-17	chip	Kel	outcrop	Quartz gneiss vein selvages of 594 – bleached and silicified.

Sample ID	Easting	Northing	Elevation (m)	Date	Type	Sampler	Source	Description
W601596	557751	6981735	1424	02-Sep-17	grab	Kel	outcrop	Rusty 2cm quartz vein in altered chlorite feldspar quartz schist, pyrite pits and cubes 5%, very fine grained tetrahedrite? 1%.
W601597	557468	6982778	1410	02-Sep-17	grab	Kel	rubblecrop	Sheared and altered quartz vein? Subsaccharoidal finely foliated, vuggy, minor iron oxides, 1% arsenopyrite and trace stibnite?
W601598	557075	6982875	1434	02-Sep-17	grab	Kel	rubblecrop	Silicified with minor chlorite and sericite alteration of quartz schist with minor quartz and feldspar augens. Pyrite cubes to 2mm, and clots medium grained arsenopyrite.
W601599						Kel	blank	Blank
W601600						Kel	standard	Standard: Oreas 61E
W641315	557051	6975561	1500		test pit		float (pit)	Oxidized subcrop similar to trenches. Depth 1m until permafrost
W641316	557065	6975569	1500		test pit		float (pit)	1.5m to permafrost. Strange soil-like rocks. Can break with hands but retains primary texture. Intense clay alteration?? Yellowish clay-rich samples with minor qtz xtals.

VIP Property  
Trench Sample Descriptions  
NAD 83 Zone 7

Sample ID	Eastings	Northing	Elevation	Type	Trench ID	From (m)	To (m)	Description
W601558	557044	6975589	1500	trench	GGVIP-17-TR01 - A	0.4		At 0.4m: 1m chip across foliation 150-76. Dark green grey on fresh (rare), hematite and limonite 30%, remnant pyrite pits to 2mm, finely planar to weakly crenulated muscovite quartz schist.
W601559	557046	6975589	1500	trench	GGVIP-17-TR01 - A	1.0	3.0	As above, along trench wall.
W601560	557048	6975590	1500	trench	GGVIP-17-TR01 - A	3.0	3.6	Fault 126-68. Sharp upper contact, gouge and breccia fragments. Iron oxides about 50%.
W601561	557050	6975590	1500	trench	GGVIP-17-TR01 - A	3.6	5.0	Footwall. Bouden and vuggy qtz in strongly crenulated muscovite qtz schist.
W601562	557052	6975590	1500	trench	GGVIP-17-TR01 - A	5.0	8.0	Fine grained, black, variable altered qtz musc schist, iron oxides up to 50%. F1 156-30. F2 130-90. F3 180-38.
W601563	557054	6975591	1500	trench	GGVIP-17-TR01 - A	8.0	8.8	True width 0.6m. Fault; strong sericite and muscovite alteration, vuggy qtz stringers along foliation which undulates, but average 112-28.
W601564	557056	6975591	1500	trench	GGVIP-17-TR01 - A	8.8	11.8	As 562
W601565	557058	6975592	1500	trench	GGVIP-17-TR01 - A	11.8	13.0	Fault, true width 0.6 with strong hematite, sericite and clay alteration.
W601566	557060	6975592	1500	trench	GGVIP-17-TR01 - A	13.0	15.0	Footwall; strong pervasive hematite, sericite, muscovite, and clay alteration attenuate slightly down section. Crenulated vuggy sheeted qtz stringers 80%, about 2mm wide.
W601567	557062	6975592	1500	trench	GGVIP-17-TR01 - A	15.0	18.0	As 566, plus minor chlorite alteration. And occasional qtz boudens to 5cm.
W601568	557063	6975593	1500	trench	GGVIP-17-TR01 - A	18.0	21.0	As 566
W601569	557065	6975593	1500	trench	GGVIP-17-TR01 - A	21.0	24.0	Strong hematite, sericite, muscovite alteration continues. Qtz boudens to 20cm, massive black hematite on fractures, qtz stringers 30%.
W601570	557067	6975593	1500	trench	GGVIP-17-TR01 - A	24.0	27.0	Light green grey and orange qtz muscovite schist, as at the head of the trench. Strong to moderate sericite alteration, with crenulated qtz stringers 2mm, 80%.
W601571	557069	6975594	1500	trench	GGVIP-17-TR01 - A	27.0	30.0	As 570. Dominant foliation 120-32. 5cm quartz vein brecciated by earlier foliation.
W601572	557071	6975594	1500	trench	GGVIP-17-TR01 - A	30.0	33.0	As 571
W601573	557073	6975595	1500	trench	GGVIP-17-TR01 - A	33.2		33.2: Felsic dike, 20cm wide, at 276-70. Weak foliation 24-16. Light green grey, subsucrosic quartz 90%.
W601574	557075	6975595	1500	trench	GGVIP-17-TR01 - A	33.0	35.0	Muscovite quartz schist, moderate sericite alteration.
W601575	557077	6975595	1500	trench	GGVIP-17-TR01 - A	35.0	36.0	As 574. End of trench.
W601576	557081	6975595	1500	trench	GGVIP-17-TR01 - A	22.2		22.2: 10 cm quartz vein.
W601577				BLANK	GGVIP-17-TR01 - A			BLANK
W601578				OREAS 61E	GGVIP-17-TR01 - A			OREAS 61E
W641301	557044	6975589	1500	trench	GGVIP-17-TR01 - B	0.0	1.5	Qtz-pyrite-mica schist. Reddish yellow. Strong foliation defined by mica. Euhedral pyrite throughout (rusting out aka completely oxidized). 10% pyrite, 10% quartz veins as boudins & foliform stringers.
W641302				BLANK	GGVIP-17-TR01 - B			BLANK
W641303	557045	6975589	1500	trench	GGVIP-17-TR01 - B	1.5	3.0	as previous
W641304	557047	6975590	1500	trench	GGVIP-17-TR01 - B	3.0	4.5	as prev
W641305	557048	6975590	1500	trench	GGVIP-17-TR01 - B	4.5	6.0	as prev, with lesser pyrite. 5% py, 15% qvs
W641306	557050	6975590	1500	trench	GGVIP-17-TR01 - B	6.0	7.5	as prev
W641307	557051	6975590	1500	trench	GGVIP-17-TR01 - B	7.5	9.0	as prev
W641308	557053	6975591	1500	trench	GGVIP-17-TR01 - B	9.0	10.5	as prev
W641309	557054	6975591	1500	trench	GGVIP-17-TR01 - B	10.5	12.0	as prev, sample contains abundant vuggy pyritic qtz nodules

W641313	557058	6975592	1500	trench	GGVIP-17-TR01 - B	15.0	16.5	as prev but lesser oxidation & associated pyrite voids. Transition to more micaceous (muscovite/chlorite) zone
W641314	557061	6975592	1500	trench	GGVIP-17-TR01 - B	16.5	18.0	as prev. In micaceous zone. Pyrite ~2% now, increased qtz as fine crystals within mica matrix and stringers/veinlets
W641451				OREAS 252	GGVIP-17-TR02			OREAS 252

Sample ID	Easting	Northing	Elevation	Type	Trench ID	From (m)	To (m)	Description
W641452	557048	6975604	1500	trench	GGVIP-17-TR02	0.0	1.5	Highly Oxidized red-yellow quartz sericite schist. Vuggy with 5% fully oxidized pyrite cubes to 0.5cm. Quartz to 20% as boudained veins and folliform veinlets/eyes
W641453	557049	6975604	1500	trench	GGVIP-17-TR02	1.5	3.0	Highly oxidized quartz ser schist. Red-yellowish highly foliated. 3% py oxidized cubes. 10% qtz as pinched veins & folliform veinlets
W641454	557051	6975605	1500	trench	GGVIP-17-TR02	3.0	4.5	qtz-ser schist. Ox & limonite rich. Yellowish/rusty. 5% qtz, 5% py pits. Texture destruction. Strong FO
W641455	557052	6975605	1500	trench	GGVIP-17-TR02	4.5	6.0	yellowish rusty qtz-muscovite-sericite schist. Strong-medium oxidzation/limonite. 5% py voids, 15% qtz as boudains, breccia clasts, veinlets
W641456	557053	6975605	1500	trench	GGVIP-17-TR02	6.0	7.5	as prev. qtz to 25%, py to 5%
W641457	557055	6975605	1500	trench	GGVIP-17-TR02	7.5	9.0	as prev. Increased schistosity, vuggy (epithermal-like) textures. 15-20% qtz, 3-5% Py voids
W641458	557056	6975606	1500	trench	GGVIP-17-TR02	9.0	10.0	as prev. 5% qtz, 3% py
W641459	557057	6975606	1500	trench	GGVIP-17-TR02	10.0	11.5	as prev. increased pyrite to 5%, crenulations visible in less altered sections indicating polyphase deformation. Qtz to 5%
W641460	557059	6975606	1500	trench	GGVIP-17-TR02	11.5	13.0	as prev. Qtz nodules/clasts present. 3-5% py, 10-15% qtz
W641461				BLANK	GGVIP-17-TR02			BLANK
W641462	557060	6975607	1500	trench	GGVIP-17-TR02	13.0	14.5	as prev but lesser oxidation. More hematite than limonite. 3% py, 10% qtz
W641463	557061	6975607	1500	trench	GGVIP-17-TR02	14.5	16.0	as prev, lesser oxidation and more greenish sericite. 20% qtz as folliform veinlets and spaced cm-scale veins. 5% py voids
W641464	557063	6975607	1500	trench	GGVIP-17-TR02	16.0	17.5	as prev, slight return of hematite oxidation. Quartz 30\$ pyrite 2-3%
W641465	557064	6975608	1500	trench	GGVIP-17-TR02	17.5	19.0	as prev, slight return of hematite oxidation. Quartz 30\$ pyrite 2-3%
W641466	557065	6975608	1500	trench	GGVIP-17-TR02	19.0	20.5	as prev, not much oxidation, vuggy qvs present. 20-25% qtz vns, 2-3% py
W641467	557067	6975608	1500	trench	GGVIP-17-TR02	20.5	22.0	as prev, very little oxidation, vuggy qvs, strong greenish muscovite with crenulations in clusters, rare unoxidized sulfides present (silvery pyrite/arsenopyrite) at vein margins. 30% qvs, 3% pyrite voids
W641468	557068	6975608	1500	trench	GGVIP-17-TR02	22.0	23.5	as prev, increased pyrite at vein margins. More greenish and micaceous than previous clay-rich samples. 10% qtz vns, 5% py
W641469	557069	6975609	1500	trench	GGVIP-17-TR02	25.0	26.5	Vuggy qvs present. Lesser pervasive WR alteration. Fresh rock visible with chlorite clots present instead of previous muscovite/sericite and saucerized feldspars
W641470	557071	6975609	1500	trench	GGVIP-17-TR02	23.5	25.0	as prev, lesser foliation, lesser clay, coarser grain sizes
W641471				OREAS 502B	GGVIP-17-TR02			OREAS 502B
W641472	557072	6975609	1500	trench	GGVIP-17-TR02	26.5	28.0	increased pervasive sericite/muscovite, lesser chlorite, slight increase in oxidation.
W641473	557073	6975610	1500	trench	GGVIP-17-TR02	28.0	29.5	return to strong oxidation, much less quartz veining to only around 3-5% as fine folliform veinlets. Pyrite 2-5% as oxidized voids.
W641474	557075	6975610	1500	trench	GGVIP-17-TR02	29.5	31.0	Occasional chlorite but still dominant sericite/muscovite. Boudinaed qtz vns to 10%, 3% pyrite voids
W641475	557076	6975610	1500	trench	GGVIP-17-TR02	31.0	32.5	Increased silicification & more competent rock. Mica flakes throughout and able to peel out of rock. Qtz texture more blocky/friable than previous. Brittle texture. Very little oxidation. 10-25% qtz, 2-4% pyrite voids
W641476	557077	6975610	1500	trench	GGVIP-17-TR02	32.5	34.0	Still increased silicification. Blockier rock. Increase in coarse grained qtz to 25%. Pyrite voids at 2%
W641477	557080	6975611	1500	trench	GGVIP-17-TR02	34.0	35.5	end of trench. Same as prev. qvs 15% py 2%
W641478	557040	6975639	1500	trench	GGVIP-17-TR03	0.0	1.5	start of trench. highly foliated mica-qtz schist. Strike 110, Dip ~50. Lesser oxidation than previous trenches. Quartz to 20% as boudins, breccia clasts, veinlets. Pyrite to 5% as oxidized voids
W641479	557041	6975638	1500	trench	GGVIP-17-TR03	1.5	3.0	as prev
W641480	557043	6975638	1500	trench	GGVIP-17-TR03	3.0	4.5	As prev but increased qtz as large (10cm) boudains (metamorphic gneissosity??). Not much oxidation (hematite) but development of limonite
W641481				BLANK	GGVIP-17-TR03			BLANK
W641482	557044	6975637	1500	trench	GGVIP-17-TR03	4.5	6.0	as prev. Slight increase in hematite staining along foliation planes and qtz vein margins
W641483	557046	6975637	1500	trench	GGVIP-17-TR03	6.0	7.5	as prev. continued increase in hematite oxidation
W641484	557047	6975636	1500	trench	GGVIP-17-TR03	7.5	9.0	similar to previous, but more slaty-textures with sericitic and siliceous bands
W641485	557049	6975636	1500	trench	GGVIP-17-TR03	9.0	10.5	as prev, increased vuggy qtz veins and oxidation
W641486	557050	6975635	1500	trench	GGVIP-17-TR03	10.5	12.0	as prev, increased crenulations & vuggy qtz
W641489	557052	6975635	1500	trench	GGVIP-17-TR03	12.0	13.5	as prev, beginning of transition to blocky silica zone w/ increased pyrite to 3%

Sample ID	Easting	Northing	Elevation	Type	Trench ID	From (m)	To (m)	Description
W641490	557053	6975634	1500	trench	GGVIP-17-TR03	13.5	15.0	increased blockiness, more silica, less pervasive alteration, more chloritic

**CERTIFICATE WH17196379**

Project: VIP  
 P.O. No.: GGVIP-S01  
 This report is for 220 Rock samples submitted to our lab in Whitehorse, YT, Canada on 13-SEP-2017.  
 The following have access to data associated with this certificate:  
 DEIRDRE HEFFERNAN                      KELLY MALCOLM

SAMPLE PREPARATION	
ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode

ANALYTICAL PROCEDURES		
ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP22	Au 50g FA ICP-AES finish	ICP-AES
ME-ICP61	33 element four acid ICP-AES	ICP-AES

To: **GENERIC GOLD CORPORATION**  
**ATTN: KELLY MALCOLM**  
**SUITE 1660, 141 ADELAIDE STREET WEST**  
**TORONTO ON M5H 3L5**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

**CERTIFICATE WH17198144**

Project: VIP  
 P.O. No.: GGVIP-S02  
 This report is for 222 Soil samples submitted to our lab in Whitehorse, YT, Canada on 14-SEP-2017.  
 The following have access to data associated with this certificate:

DEIRDRE HEFFERNAN	KELLY MALCOLM
-------------------	---------------

SAMPLE PREPARATION	
ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41	Screen to -180um and save both

ANALYTICAL PROCEDURES		
ALS CODE	DESCRIPTION	INSTRUMENT
AuME-TL43	25g Trace Au + Multi Element PKG	ICP-MS

To: **GENERIC GOLD CORPORATION**  
**ATTN: KELLY MALCOLM**  
**SUITE 1660, 141 ADELAIDE STREET WEST**  
**TORONTO ON M5H 3L5**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

Project: VIP  
 P.O. No.: GGVIP-S02  
 This report is for 215 Soil samples submitted to our lab in Whitehorse, YT, Canada on 14-SEP-2017.  
 The following have access to data associated with this certificate:

DEIRDRE HEFFERNAN	KELLY MALCOLM
-------------------	---------------

SAMPLE PREPARATION	
ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41	Screen to -180um and save both

ANALYTICAL PROCEDURES		
ALS CODE	DESCRIPTION	INSTRUMENT
AuME-TL43	25g Trace Au + Multi Element PKG	ICP-MS

To: **GENERIC GOLD CORPORATION**  
**ATTN: KELLY MALCOLM**  
**SUITE 1660, 141 ADELAIDE STREET WEST**  
**TORONTO ON M5H 3L5**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

Project: VIP  
 P.O. No.: GGVIP-S02  
 This report is for 221 Soil samples submitted to our lab in Whitehorse, YT, Canada on 14-SEP-2017.  
 The following have access to data associated with this certificate:

DEIRDRE HEFFERNAN	KELLY MALCOLM
-------------------	---------------

SAMPLE PREPARATION	
ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41	Screen to -180um and save both

ANALYTICAL PROCEDURES		
ALS CODE	DESCRIPTION	INSTRUMENT
AuME-TL43	25g Trace Au + Multi Element PKG	ICP-MS

To: **GENERIC GOLD CORPORATION**  
**ATTN: KELLY MALCOLM**  
**SUITE 1660, 141 ADELAIDE STREET WEST**  
**TORONTO ON M5H 3L5**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

Appendix VI: YMEP Final Submission Form

# YMEP Final Submission Form

Your feedback on any aspect of the program:

The Department of Energy, Mines and Resources may verify all statements related to, and made on this form, in any previously submitted reports, interim claims and in the Summary or Technical Report which accompanies it.

I certify that;

1. I am the person, or the representative of the company or partnership, named in the Application for Funding and in the Contribution Agreement under the Yukon Mineral Exploration Program.
2. I am a person who is nineteen years of age or older, and I have complied with all the requirements of the said program.
3. I hereby apply for the final payment of a contribution under the Yukon Mineral Exploration Program (YMEP) and declare the information contained within the Summary or Technical Report and this form to be true and accurate.
