2017 ASSESSMENT REPORT
QV GOLD PROJECT
DIAMOND DRILLING PROGRAM and
SOIL SAMPLING PROGRAM

Prepared For:

Comstock Metals Ltd.
#310 – 850 West Hastings Street
Vancouver, British Columbia, Canada
V6C 1E1

Prepared by:

APEX Geoscience Ltd. [1]
#110, 8429 – 24 Street NW
Edmonton, Alberta, Canada
T6P 1L3

Approximate Property Location:

Dawson Mining District
Latitude: 63.16.2° N Longitude: -139.32.8° W

Claims:

QV 1-10	YC61008-017	QV 343-494	YE21103-254
QV 11-24	YC88221-234	QV 495-524	YE76847-876
QV 25-72	YD13837-884	QV 525-714	YF03605-794
QV 73-188	YD13885-14000	QV 715-791	YF76235-311

1 Summary

This assessment report (the "Report") is written for the QV Property (the "Property"), owned 100% by Comstock Metals Ltd ("Comstock"). The Property comprises 822 mineral claims covering an area of 16,031 hectares, located within the White Gold District in the Yukon Territory. APEX Geoscience Ltd. ("APEX") was retained by Comstock during 2017 as consultants to complete a diamond drilling and soil sampling program at the Property. The diamond drilling program was designed to follow up on the successful 2016 rotary air blast (RAB) drilling program and test the western extent of the VG deposit. Soil sampling was completed in 3 areas of interest: the VG Zone, the Korat-Tetra area, and the Shadow area. The 2017 exploration program was completed between September 10th, 2017 and October 19th, 2017.

Exploration work to date by Comstock since acquiring the Property in 2010 comprised 10,039 grid and regional soil samples, prospecting and rock sampling, geological mapping, a 773 line-kilometre airborne magnetic and radiometric geophysical survey, ground magnetic surveys, 32 induced polarization lines over the VG, Stewart and Shadow zones, 3,570 m of trenching in 28 trenches, direct push and GeoProbe sampling on the QV, Stewart and Shadow grids, an aerial drone survey over the VG Zone, and 4,323.4 m of diamond drilling in 23 holes at the VG zone. Gold is the primary commodity of interest on the property, and the most significant work to date has focused on the VG Zone. The VG Zone hosts structurally-controlled, gold mineralization, with strong similarities to the Golden Saddle Deposit, located 10 km south.

The QV Project is underlain by Devonian to Mississippian (and possibly older) metasedimentary rocks, which interfinger with, and are stratigraphically overlain by, Devono-Mississippian felsic to mafic metavolcanic rocks, with coeval intrusions and rare ultramafic lenses. The above units have been intruded by minor felsic feldspar augen gneiss (orthogneiss) of probable Permian age, an Early Jurassic granodiorite intrusion, which is exposed in the eastern Property area, and syenite crowded feldspar porphyry sills and quartz eye granite dykes and sills of possible Permian or Early Jurassic age. Mafic dykes, possibly of the Upper Cretaceous Carmacks Group and minor late fine-grained quartz ±feldspar porphyry dykes of probable Eocene age (primarily evident in the northern property area) transect all lithologies and cut east-northeast trending, apparently post- mineral faults (Pautler and Shahkar, 2014).

The same package of rocks underlies the Golden Saddle Deposit at the White Gold Project, which includes a Devono-Mississippian, to possibly older, metavolcanic (mafic with lesser felsic) and metasedimentary package and Permian orthogneiss, extends northwards across the QV Project. The QV Project is also underlain by Jurassic aged intrusive rocks, which host mineralization at the Ten/Dime and Jual gold occurrences 20-30 km to the northwest (Pautler, 2001). The deposit types for mineralization on the QV Project include orogenic gold at the VG zone, which is the current deposit model for mineralization at the Golden Saddle deposit (Bailey et al., 2012), and intrusion related and/or orogenic gold at the Shadow and Stewart zones.

Visible gold was initially discovered on the southern QV Project by Comstock Metals Ltd. on June 10, 2012 while conducting follow up prospecting of a gold in soil anomaly;

an initial grab sample returned 16.28 g/t gold (Au) and 47 g/t silver (Ag) with anomalous bismuth, tellurium, mercury, molybdenum and lead. The VG zone consists of quartz ±carbonate veins, stockwork and breccia zones, as well as pyrite veinlets, including cubic pyrite and visible gold, associated with intense-quartz-carbonate-sericite (or possible illite) alteration, with albite, pervasive K-spar and hematite. Overall gold is associated with anomalous silver, mercury, bismuth, tellurium, molybdenum, antimony, and barium. This style of mineralization and alteration is analogous to that at the Golden Saddle deposit at the White Gold Project (Pautler and Shahkar, 2014).

An independent NI 43-101 resource estimate for the VG Zone was completed by Ali Shahkar, P.Eng. of Lions Gate Geological Consulting Inc., Sechelt, British Columbia. The Inferred Mineral Resource estimated, with an effective date of June 30th, 2014, an inferred resource of 4,390,000 tonnes at 1.65 g/t Au, resulting in 230,000 ounces of gold using a 0.5 g/t Au cut-off grade (Pautler and Shahkar, 2014).

The 2017 drill holes QV17-018 and QV17-019 both encountered wide zones of gold mineralization associated with pyrite mineralized quartz veins, stockworks and breccias. The mineralized zones are contained within a broader envelope of sericite-illite ±chlorite alteration. Silicification is observed locally, and is generally correlated with stockwork zones. Significant anomalous gold mineralization occurs in both drill holes, including 45.5 m averaging 1.42 g/t Au, starting at 67.5 m in QV17-018, and 51.2 m averaging 1.48 g/t Au, starting at 98 m in QV17-018. This confirms that the VG deposit extends greater than 125 m down dip of hole QV13-12 and 45 m west of holes QV12-06 and QV12-08. Significant weighted average drill intercepts are listed in Table 4.

Drill hole QV17-021 intersected a broad zone of veining, stockwork and breccia, associated with sericite-illite ±chlorite alteration and variable pyrite mineralization; however, the stockwork and breccia zones appear less developed than the mineralized zones in QV17-018 and QV17-019, with generally lower volumes of quartz material and pyrite mineralization. Widespread weak-moderately anomalous gold mineralization occurs between 87 m and 173 m down hole, including 4 m averaging 0.81 g/t Au starting at 139 m down hole. This is consistent with the interpreted western projection of the VG deposit but characterized by a rock package disrupted by considerable faulting and oxidation. Drill holes QV17-020, QV17-022 and QV17-023 encountered extensive faulting and were terminated prior to target depth.

The soil samples collected during 2017 returned few anomalous results in any of the three areas of interest. Out of the 620 samples, 14 returned values above 10 ppb Au, with the highest value at 32 ppb Au, found in Shadow area.

Results to date indicate that further diamond drilling is warranted at the VG Zone to test the western, eastern and down-dip extent of the VG deposit. Approximately 2,000 m of diamond drilling is recommended. Prior to drilling, geological and mineralization modelling should be completed incorporating all diamond drilling, RAB drilling and trenching results. These models should be used to inform and refine drill targeting. Additional soil sampling should be completed in the northern part of the Property.

The recommended exploration program is estimated to cost $1,570,000 CAD.

2 Introduction and Terms of Reference

This assessment report (the "Report") is written for the QV Property (the "Property"), currently held 100% by Comstock Metals Ltd. ("Comstock"). This technical report presents the results of exploration work conducted by Comstock at the Property between September 10th, 2017 and October 19th, 2017. The total cost to complete the 2017 exploration program was $846,268.06.

APEX Geoscience Ltd. ("APEX") was retained by Comstock during 2017 as consultants to complete a diamond drilling program, soil sampling program, and an assessment report specific to the Property. Mr. Christopher Livingstone, P.Geo, Project Geologist of APEX, supervised the program. Mr. Livingstone and Ms. Robyn Christian, G.I.T., Geologist of APEX, are the authors of this report.

Unless otherwise indicated, all coordinates are referenced to the North American Datum (NAD) 1983, Universal Transverse Mercator (UTM) Zone 7N coordinate system. All dollar ($) amounts referred to in this report are in Canadian currency.

3 Property Description and Location

The QV Property is in the Yukon's White Gold district, approximately 80 km South of Dawson City, YT, within the 1:50,000 scale NTS map sheet 115O/05. It is centred at approximately latitude 63°16.2' N and longitude 139°32.8' W (Figure 1). The Property is registered in the Dawson Mining District on map sheet 115O/3-6 and is composed of 822 quartz mining claims, totaling 16,031 hectares (Table 1; Figure 2). All claims are 100% owned by Comstock.

Table 1 QV Property Claims

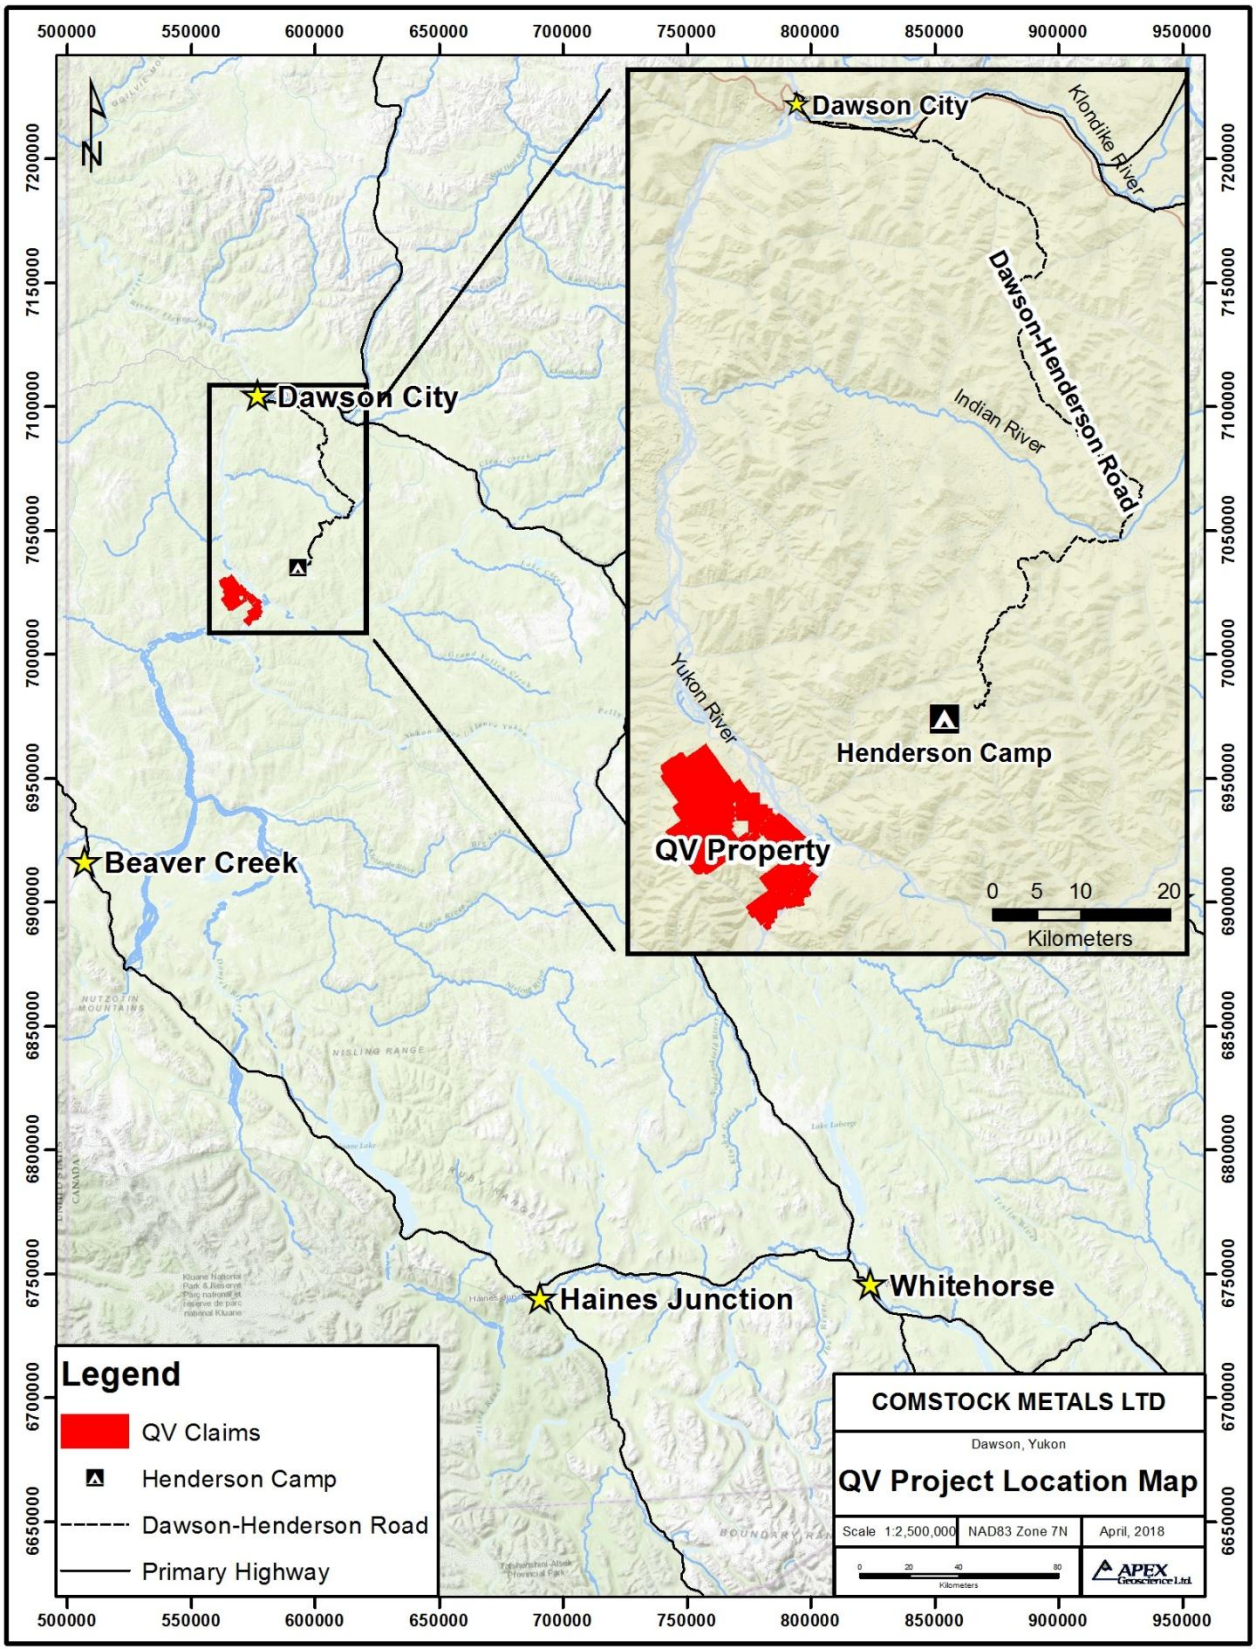

Figure 2 QV Property Claims

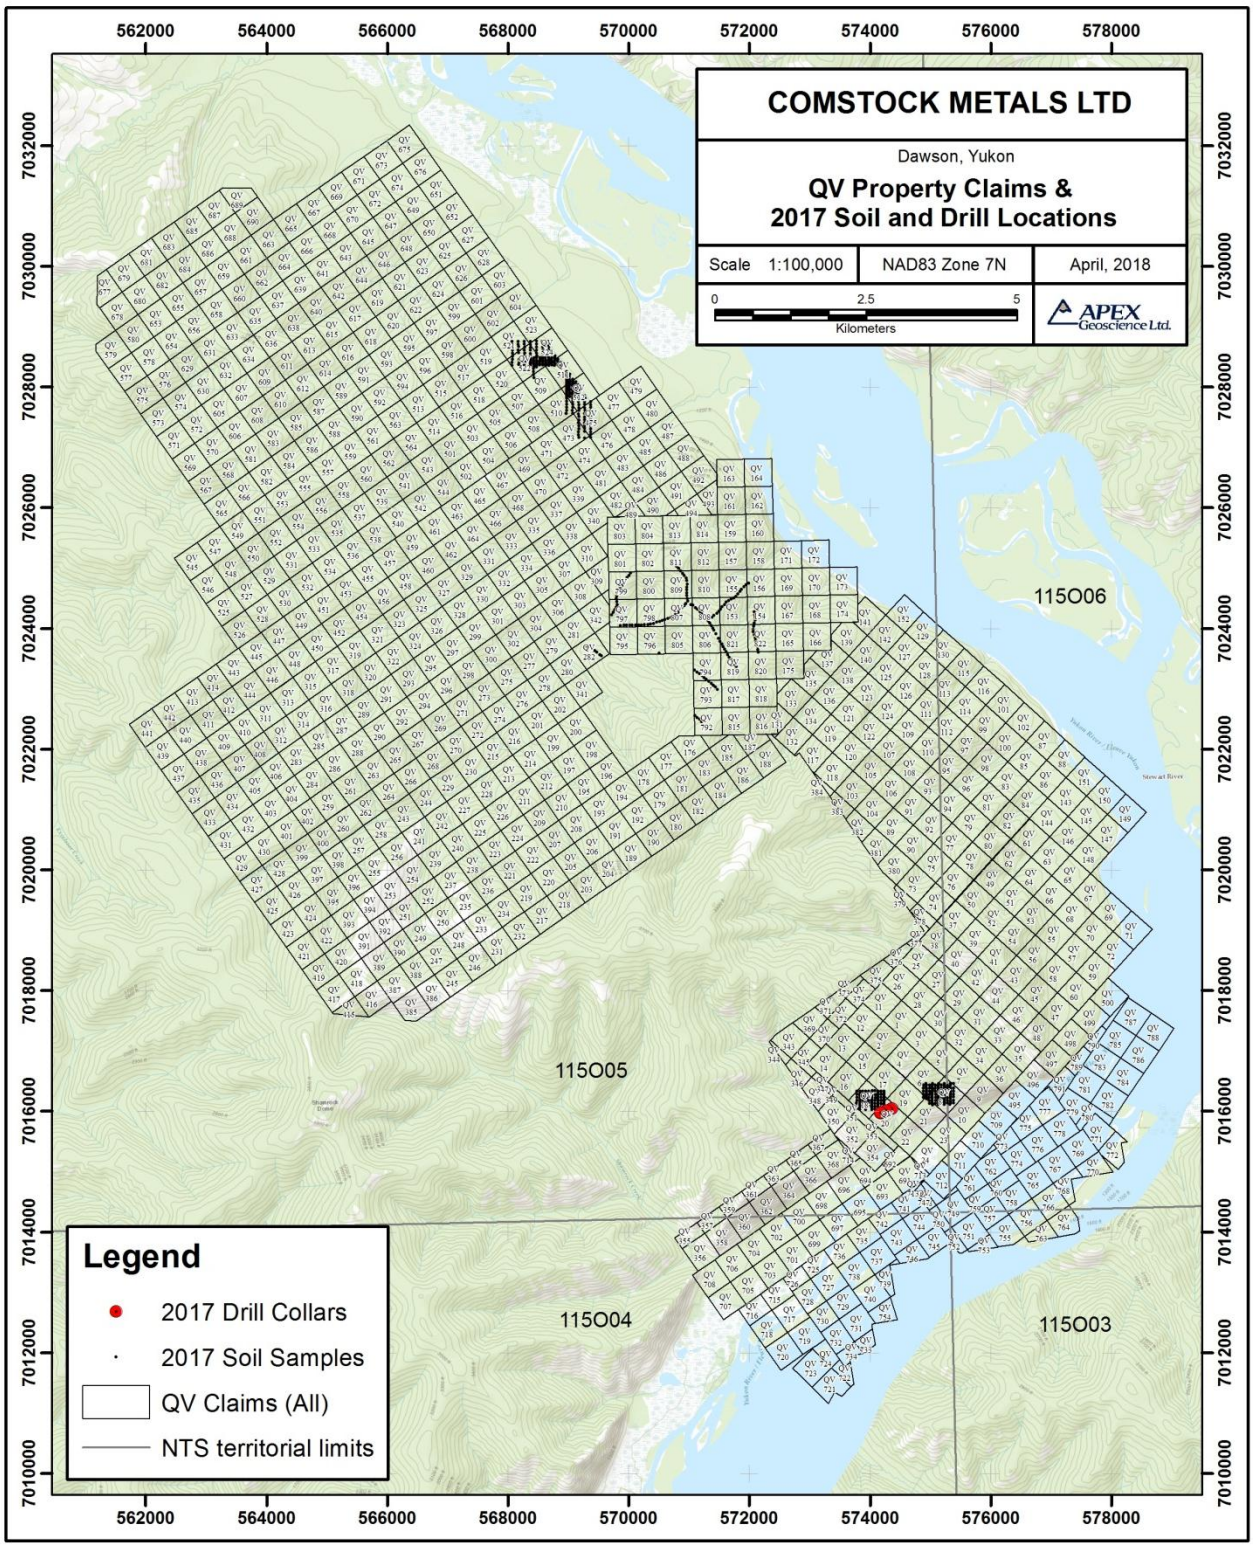

4 Accessibility, Climate, Local Resources, Infrastructure and Physiography

The QV Property is located approximately 80 km south of Dawson City straddling the western bank of the Yukon River. Access to the Property is typically by helicopter chartered out of Dawson City. An extensive network of back roads serves the Dawson gold fields on the east side of the Yukon River, providing many potential staging points for mobilization of drill equipment and field supplies. The 2017 exploration program was staged from Henderson Camp, located approximately 20 km northwest of the Property (Figure 1). A helicopter was used to mobilize the drill to site, and field crews were transported daily to and from Henderson.

Two airstrips are located in the Henderson Camp area; each can accommodate small aircraft such as the Cessna Caravan and DHC-2 Beaver or Turbo Beaver. During summer months, fuel, heavy equipment and supplies can be barged to the Property along the Yukon River from Dawson City.

The following description has largely been paraphrased from Comstock's report titled, "43-101 Technical Report on the QV Project", written by Pautler and Shahkar (2014).

Dawson City, with a population of approximately 1,375, contains most resources and infrastructure needed to supply an exploration program. Facilities include an airport, two helicopter bases, a health center, police station, service stations, two grocery stores, accommodation and restaurants. Industrial services include tire repair, propane sales, welding and machine shops, heavy equipment repair and rental, a lumber mill, and freight and trucking companies. Heavy equipment and a mining oriented labour force are available for contract exploration and mining work. More complete facilities and a larger mining oriented labour force are available in Whitehorse.

The Property has a northern interior climate characterized by a wide temperature range with warm summers, long cold winters and light precipitation. Summer temperatures have daily averages in July of 23°C, dropping to 8°C at night. Winter month averages temperatures of -22.5°C during the day, dropping to an average of -31°C overnight and -45°C is not uncommon. Annual precipitation averages about 325 millimetres, including close to 200 mm of rain and 160 mm of snow.

The claims cover low steep sided hills along the west side of the Yukon River, across from the mouth of the Stewart River and just north of the confluence of the White and Yukon Rivers, within the unglaciated Yukon Plateau. Elevation ranges from just below 1200 feet along the Yukon River to 3600 feet on QV 231 & 232. Vegetation is typical boreal forest consisting of white spruce, birch and poplar on well-drained slopes and black spruce on poorly drained frozen north facing slopes.

5 History

5.1 Historical Work by Previous Companies

The following description has largely been paraphrased from Comstock's report titled, "43-101 Technical Report on the QV Project", written by Pautler and Shahkar (2014).

Claims including the North Star and Black Diamond were staked on a bluff above the Yukon River in 1901 by J. McGillivray and C.J. Hahneman, who drove a 4.6 m adit (Figure 3) later that year (Deklerk, 2010, Minfile 115O 010). The claims, documented under the Treva Minfile occurrence (Minfile 115O 010), probably related to Ogilvie's report of an 1887 rumour that an extensive gold bearing quartz vein had been found on the west side of the Yukon River, 2 miles (3.2 km) south of the Stewart River (Department of the Interior, 1889). The adit was located at 576290mE, 7016305mN in the fall of 2012, driven on quartz veins at the base of a bluff on the QV property, along the Yukon River. No significant gold results were obtained from the adit, but anomalous arsenic (maximum 1465 ppm) and antimony (maximum 14 ppm) are evident, suggestive of the signature of the VG zone within metasedimentary host rocks, and the surrounding area, which exhibits alteration, has not been explored.

There is no subsequent work reported until staking of the initial QV 1-10 claims by Shawn Ryan in 2007. A 62 sample soil geochemical survey was conducted by RyanWood Exploration Inc. for Shawn Ryan in 2008 (Ryan, 2008). The soil survey outlined spotty anomalous gold values up to 20.6 ppb Au, 1.09 ppm Hg (with adjacent anomalous arsenic, antimony and nickel) flanking the same aeromagnetic high, similar to the original geochemical and magnetic signature closely associated with gold mineralization on the White Gold Project (White claims), which now hosts the Golden Saddle deposit, owned by White Gold Corp., 11 km to the south.

Additional QV claims were staked in 2009 to 2013. Comstock Metals Ltd. optioned the claims from Shawn Ryan in June 2010, largely based on the similar geochemical and geophysical signatures and proximity to the Golden Saddle deposit.

5.2 Work by Comstock Metals Ltd., 2010-2016

Comstock completed multiple exploration programs since acquiring the Property in 2010. All soil and ground geophysical surveys, trench sampling, GeoProbe lines and sampling, and aerial drone surveys up to 2016 were completed by GroundTruth Exploration Inc. of Dawson City, Yukon. Table 1 summarizes the work completed, and the cumulative drill hole and sample locations are shown in Figures 3 to 5.

Table 2 Comstock Metals Ltd History of Work Summary

Year	Survey	Quantity	Target
2011	Ridge & Spur and Grid Soil Sampling	4096 samples	QV, Stewart, Tetra, Excelsior
	Rock, Soil and Stream Prospect Sampling	23 samples	QV, Stewart, Tetra, Excelsior
	Airborne Magnetic and Radiometic Survey	733 line km	Project wide
2012	Ridge & Spur and Grid Soil Sampling	2537 samples	QV, Stewart, Tetra, Excelsior, Shadow, Shamrock, VG Zone, QV West, VG East, QV North
	Excavator Trenching	3570 m over 28 trenches	VG, QV North, Stewart, Shadow, Tetra
	Direct Push Geochemical Sampling	116 samples over 620m	VG North
	Rock, Soil and Silt Prospect Sampling	80 samples	Project wide
	Diamond Drilling	1330 m over 8 holes	VG Zone
2013	Ridge & Spur and Grid Soil Sampling	2009 samples	Shadow, North Project Area
	Aerial Drone Survey	115 hectares	VG Zone
	Geoprobe Geochemical Sampling	507 samples	VG Zone, VG East, VG North, Shadow, Stewart
	Rock and Soil Prospect Sampling	108 samples	Project wide
	Ground Magnetic Survey	7.875 km^2	VG, Stewart, Shadow
	IP Survey	6.8 line km	VG, Stewart, Shadow
	Diamond Drilling	2089 m over 9 holes	VG Zone
2014	*43-101 Report + VG Zone Resource Estimate*		
2016	Grid Soil Sampling	464 samples	Stewart, Shadow
	Geoprobe Geochemical Sampling	360 samples over 12 lines	VG Zone, Stewart, Shadow
	DC IP-Resistivity Surveys	5.04 line km	VG Zone, Shadow
	RAB Drilling	2423 m over 34 holes	VG Zone, Shadow, Stewart

Visible gold was initially discovered on the southern QV Project by Comstock Metals Ltd. on June 10, 2012 while conducting follow up prospecting of a gold in soil anomaly on the southern QV grid. An initial grab sample returned 16.28 g/t Au and 47 g/t Ag. The area, known as the VG Zone, was subsequently trenched and drilled during 2012 and 2013.

Trenching delineated a 450 m by 65 m, 250° trending zone of gold mineralization.

The 2012 trench results (reported as length along the trench, not true widths) include:

- 3.52 g/t Au over 80 m from QVTR12-6,
- 1.63 g/t Au over 95 m from QVTR12-12, and
- 2.18 g/t Au over 85 m from QVTR12-13

The drill program delineated an open ended 250˚/20-30°N trending, near surface tabular body of gold mineralization at the VG zone with a strike extent of 325 m, traced up to 275 m down dip from surface, and averaging 35-40 m true thickness. Mineralization remains open to the west, down dip and beneath the mafic hornblende gneiss to the east. The most favourable drill orientation is 160°/-60 to -70°.

Figure 3 QV Project Cumulative Ridge and Spur and Grid Soil Samples with Exploration Target Areas Shown

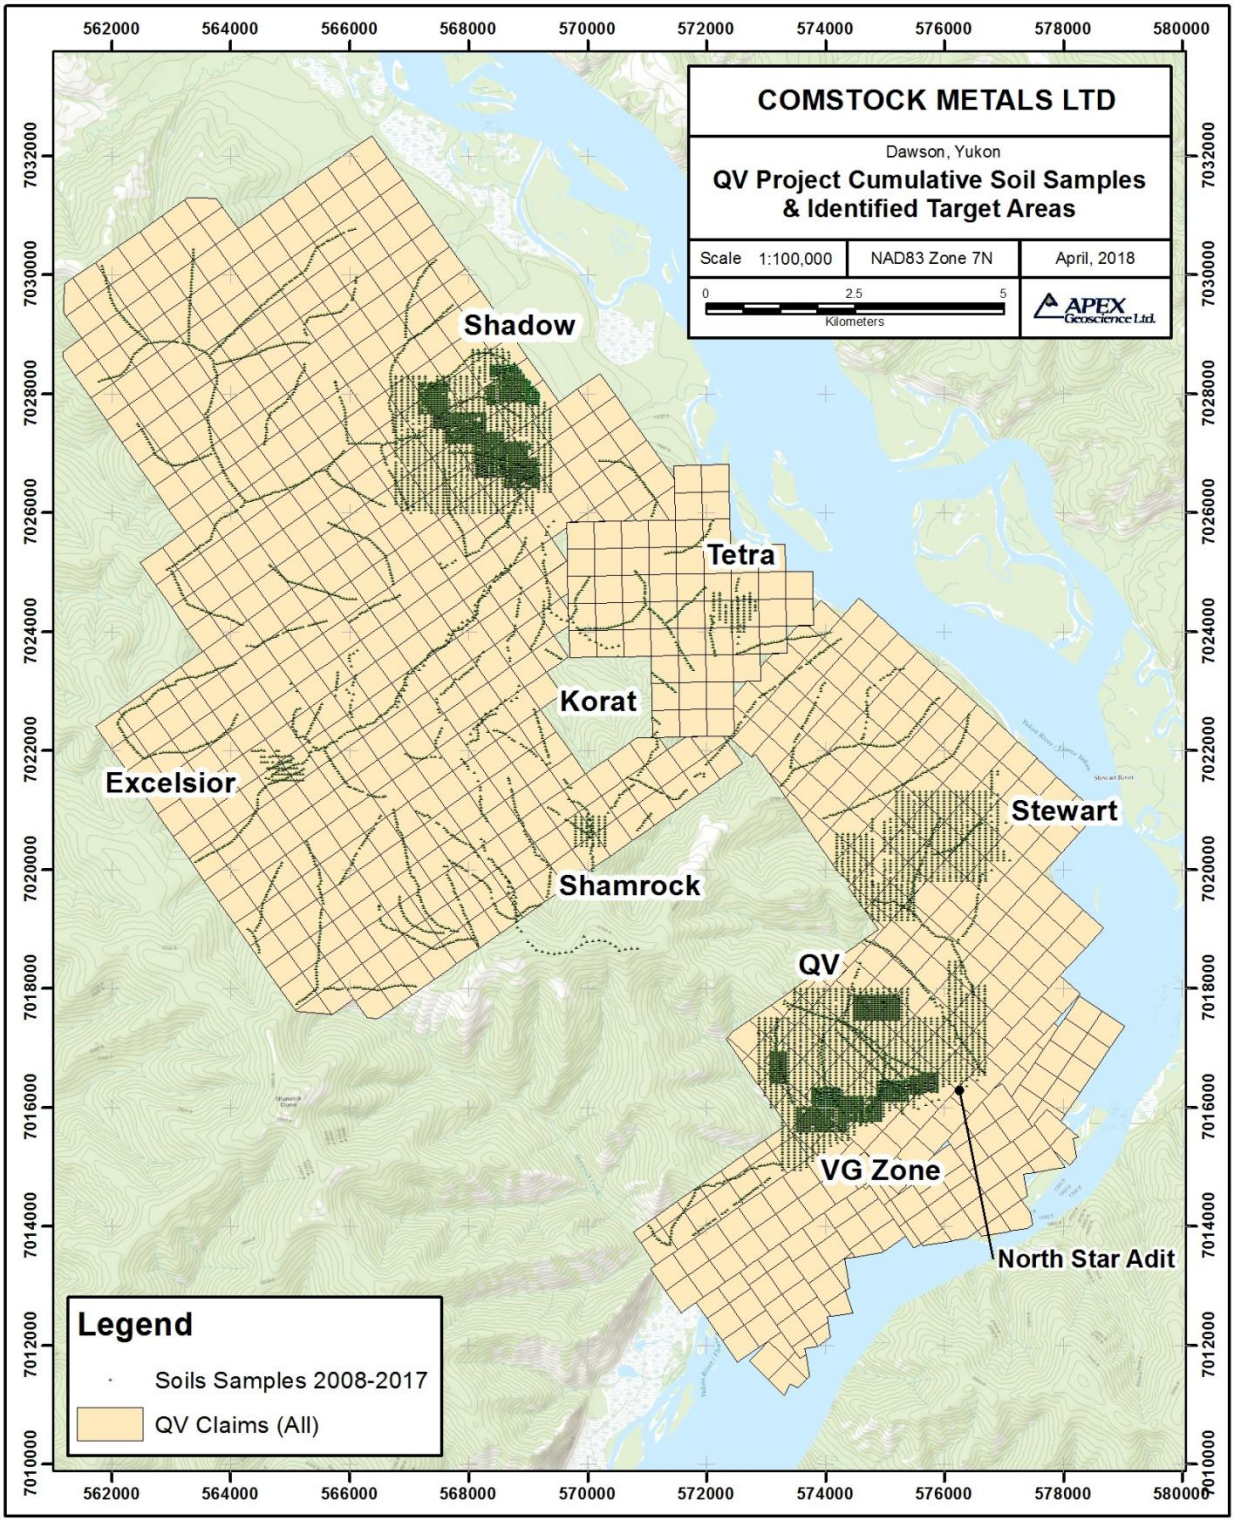

Figure 4 QV Project Cumulative Rock Samples Including Trenching and GeoProbe Sample Locations

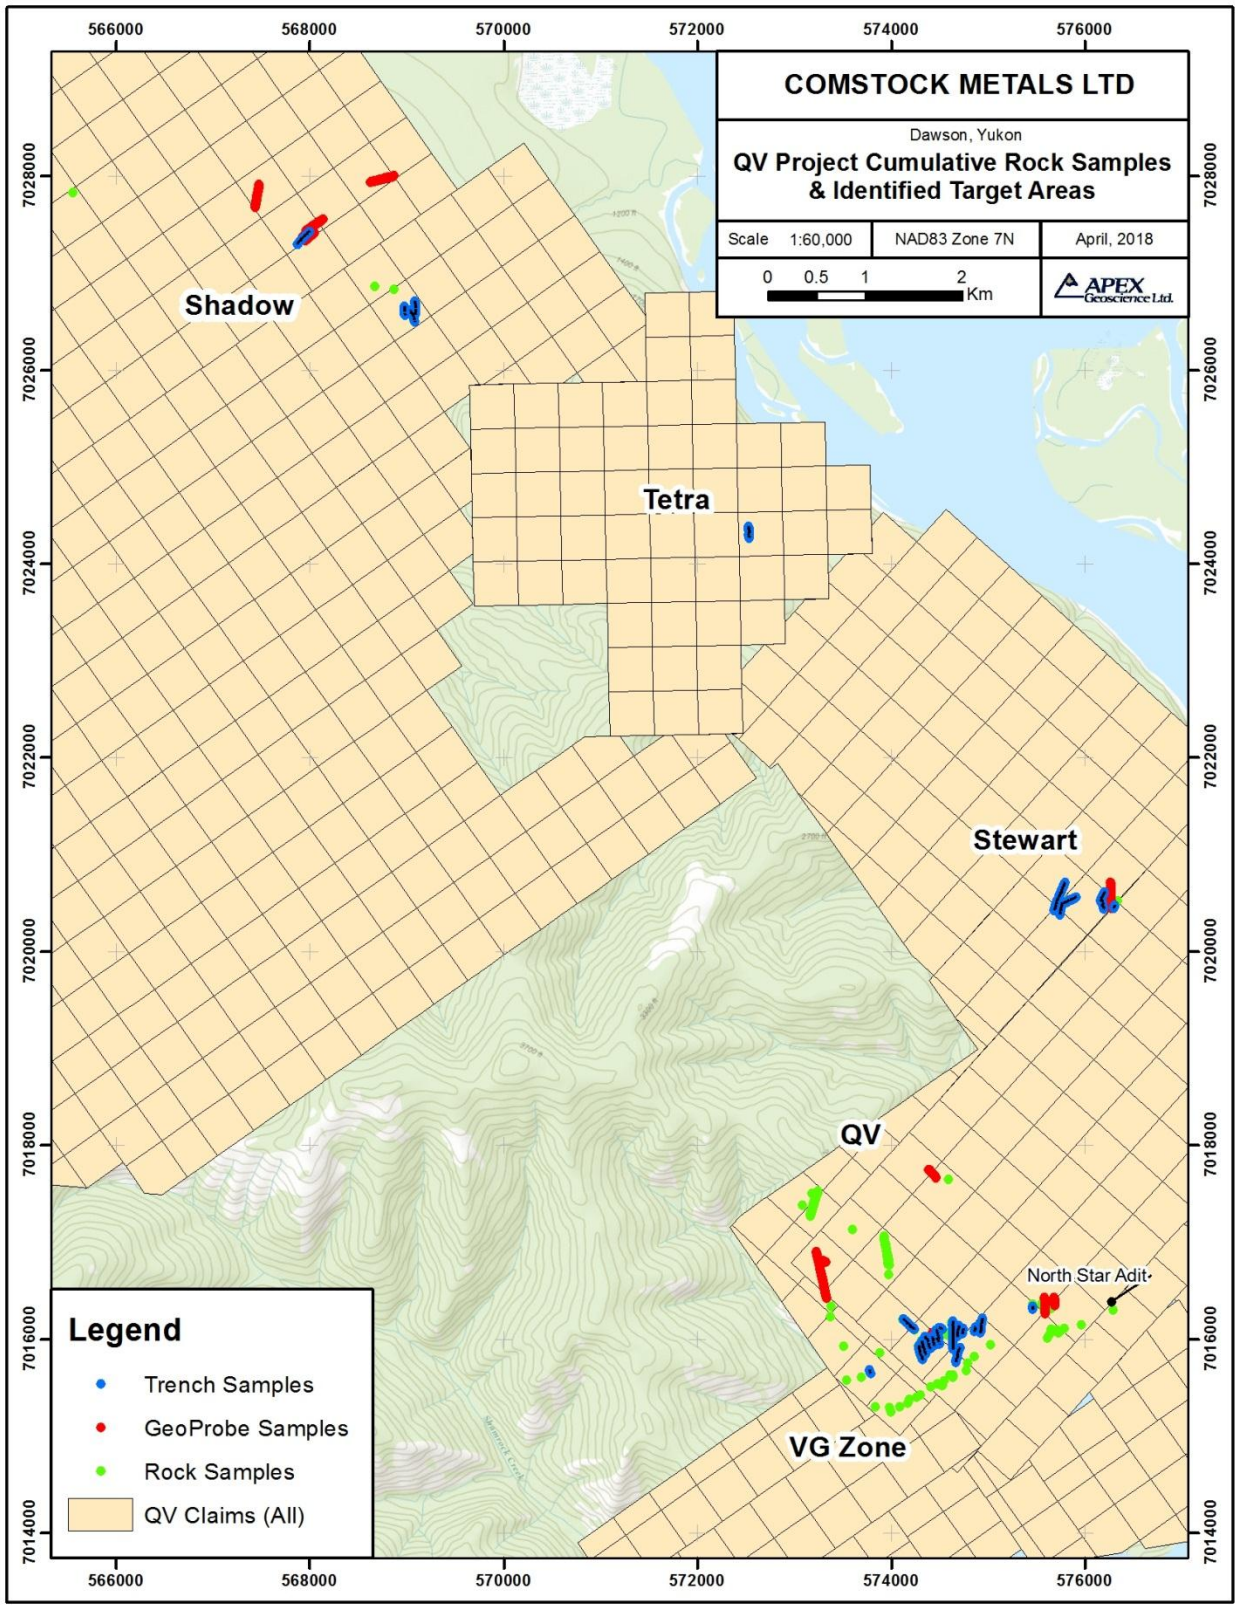

Figure 5 QV Project – VG Zone Cumulative Diamond Drill Holes

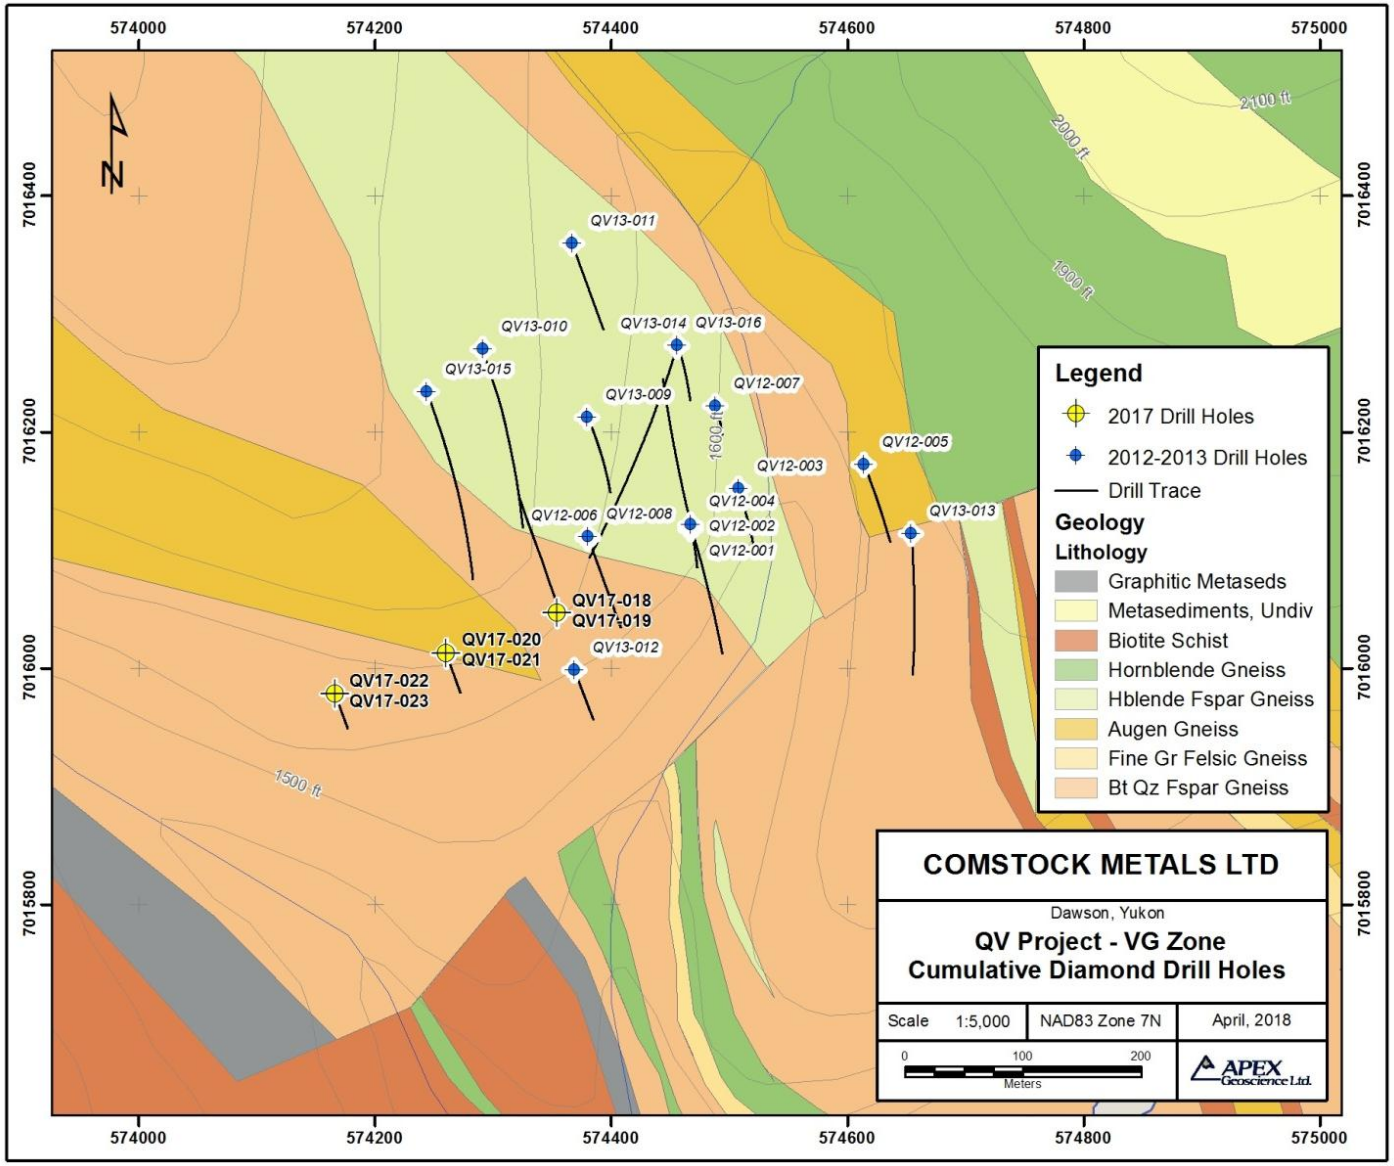

The 2012 and 2013 drilling on the VG zone intersected true widths of:

- 2.23 g/t Au over 42 m in QV12-004,
- 1.45 g/t Au over 60 m in DDH QV12-6,
- 1.03 g/t Au over 78 m in DDH QV12-1, including 6.15 g/t Au over 5.6 m,
- 1.36 g/t Au over 42.6 m in DDH QV13-11 (275 m down dip of the mineralized zone in the discovery trench, QVTR12-6), and
- 1.76 g/t Au over 42.3 m in DDH QV13-12 (at the open ended western limit of the zone)

The VG zone occurs along the Telegraph Fault, and consists of quartz ±carbonate veins, stockwork and breccia zones, as well as pyrite veinlets, including cubic pyrite and visible gold, associated with intense-quartz-carbonate-sericite (or possible illite) alteration, with albite, pervasive K-spar and hematite. Overall, gold is associated with anomalous silver, mercury, bismuth, tellurium, molybdenum, antimony, and barium. This style of mineralization and alteration is analogous to that at the Golden Saddle deposit on the White Gold Project (Gibson and Fage, 2017).

An independent resource estimate for the VG zone, prepared to NI 43-101 standards, was completed by Ali Shahkar, P.Eng., of Lions Gate Geological Consulting Inc. ("LGGC"), Sechelt, British Columbia. The estimate was prepared using inverse distance method with commercially available software, GEMS. Sixteen of the seventeen drill holes at the VG Zone were used in the estimate. LGGC completed an independent audit and validation of the data and found it suitable to support the resource model. The Inferred Mineral Resource estimate, with an effective date of June 30th, 2014, was reported using 0.5 g/t Au cut-off grade (Table 2). Mineral resources are not Mineral reserves and do not have demonstrated economic viability.

Table 3 VG Zone Inferred Mineral Resource Estimate Reported Using a 0.5 g/t Gold Cut-off Grade (after Pautler and Shahkar, 2014)

Deposit	Category	Tonnes	Gold Grade (g/t)	Contained Gold (ounces)
VG	Inferred	4,390,000	1.65	230,000

Notes to accompany Mineral Resource table:

1. The Qualified Person responsible for the estimate is Ali Shahkar, P.Eng., of LGGC.
2. The assumed mining method is open pit mining.
3. Reported Mineral Resources are constrained by an open pit shell using a gold price of US$1300/ounce, mining cost of US$2/tonne, process and general administration cost of US$20/tonne, and a gold recovery of 94% (based on the neighbouring Golden Saddle deposit).
4. Mineral Resources are reported as undiluted.

In 2016, a comprehensive work program including DC IP-Resistivity surveys, GT Probe sampling, soil sampling, and RAB drilling was conducted on the QV property. The RAB drill program was designed to inexpensively and rapidly screen numerous prospective targets within the QV Property for subsequent follow-up with a diamond drill program. The prospective target areas included the VG deposit area, primarily focussed on

identifying extensions, as well as the Shadow and Stewart targets, which were based on a combination of GT probe results, soil geochemical anomalies and resistivity low anomalies. Resistivity lows in many cases correlate well with mineralized zones intersected in the 2012/2013 core drilling program and the 2016 RAB drilling on the VG zone (Gibson and Fage, 2017).

The RAB drilling program has successfully demonstrated that the QV deposit is open to expansion to the southwest and northeast, and, that further drilling on the Shadow and Stewart targets is required to evaluate their potential. Highlights of the program included in Comstock's December 19th, 2016 News Release:

- Potential new zone discovered 150-200 m south of main VG deposit, 3.05 m averaging 7.79 g/t Au starting at 4.57 m below surface in 16QVRAB001.
- VG zone extended 55 m east of hole QV13-013 by holes 16QVRAB011& 12 on the south side of the Telegraph fault, 16.76 m averaging 1.43 g/t Au and 18.29 m averaging 1.81 g/t Au, respectively, both from surface.
- VG mineralized zone extended at least 200 m to the northeast on the north side of the Telegraph fault, as evidenced by 16QVRAB006, 35.05 m averaging 0.46 g/t Au starting at 59.44 m below surface; and 16QVRAB014, 10.67 m averaging 1.65 g/t Au starting at 16.76 m below surface in 16QVRAB014 within a wider interval of 64.01 m averaging 0.52 g/t Au.
- VG deposit expanded 100 m down dip of hole QV13-12 and 45 m west of holes QV12-06,-08 by holes 16QVRAB017 (12.19 m averaging 5.53 g/t Au starting at 83.82 m below surface in 16QVRAB017, within a wider interval of 57.91 m averaging 1.89 g/t Au); and 16QVRAB018 (18.29 m averaging 1.14 g/t Au starting at 85.34 m below surface).
- Step out hole 16QVRAB024, drilled 750 m WSW along strike of VG deposit on an extension of the gold-in-soil anomaly, intersected 9.15 m averaging 0.326 g/t Au
- Initial drilling along a 460 m section of the Spirit fault at the Shadow zone intersected anomalous gold in a number of holes including 16QVRAB029 with 9.14 m averaging 0.662 g/t Au starting at 53.34 m down hole and ending in mineralization.
- Three holes completed from a single pad on the eastern side of the Stewart zone intersected widespread anomalous gold ranging up to 0.318 g/t.

6 Geological Setting

The Regional Geology, Property Geology, and Mineralization sections are largely paraphrased from Comstock's report titled, "43-101 Technical Report on the QV Project", written by Pautler and Shahkar (2014).

6.1 Regional Geology

The QV Project occurs within the unglaciated Yukon Plateau portion of the Paleozoic Yukon-Tanana terrane, southwest of the Tintina and northeast of the Denali faults, dominated in the regional area by Devonian to Mississippian (and possibly older) metasiliciclastic rocks, which interfinger with, and are stratigraphically overlain by hornblende bearing schists and gneisses and amphibolite (intermediate to mafic metavolcanic rocks). The metasiliciclastic rocks include metamorphosed fine clastic rocks, quartzite and conglomerate. The above lithologies include marble horizons and are metamorphosed to amphibolite grade. Devonian to Mississippian metasedimentary rocks (quartzite and metapelite) of the Nasina Assemblage lie structurally above and/or may partly be equivalent to the above metaclastic unit.

Abundant orthogneiss bodies of Devonian to Mississippian and Permian ages, with compositions ranging from granite to K-spar augen bearing, to tonalite and diorite, occur within Yukon-Tanana Terrane. Narrow bodies of Paleozoic ultramafic rocks, commonly serpentinized, also occur within the area.

The above units are interpreted to represent two arcs, an older Devonian to Mississippian arc consisting of predominantly amphibolite and associated subvolcanic intrusions built on a siliciclastic basement and a Permian arc of granitic orthogneiss and coeval metavolcanic rocks built on the Devono-Mississippian arc.

The above lithologies are intruded by plutons and stocks of early Jurassic aged granodiorite, and quartz monzonite and unconformably overlain by massive andesite flows and breccias of the Late Cretaceous Carmacks Group, locally with Early Cretaceous coarse clastic sedimentary rocks at the base of the sequence. Eocene feldspar ±quartz porphyry dykes intrude the above.

6.2 Property Geology

Only limited property scale mapping has been undertaken on the QV property, but regional (1:250,000) scale government mapping was completed through the area in 2005 and a compilation of the White Gold district was completed by the Mineral Deposit Research Unit, University of British Columbia (MDRU) in 2011. A 3 km by 3 km and adjoining 1 km by 2.5 km area on the southern QV property (QV grid), incorporating the VG zone, was mapped at a 1:10,000 scale, with 1:5,000 detail of the VG zone, by Leatherman and Cooley (2013) and Cooley and Leatherman (2013b). A preliminary 1.5 by 2.5 km area over the Stewart zone was mapped at a 1:20,000 scale by Cooley and Leatherman (2013a). Minor reconnaissance prospecting/mapping in gold in soil anomalous areas was completed by Ms. Pautler. The detailed geology and reconnaissance mapping has been integrated with the government geology. Detailed geology of the QV grid, and the VG and Shadow zones are summarized from Cooley and Leatherman, Leatherman and Cooley (2013), and Leatherman (2013), respectively.

Outcrop is limited on the property, generally confined to bluffs along the Yukon River. Exposure on the remaining property area is less than 1%, and generally restricted to south facing, bare to poplar vegetated hillsides, ridge tops and creek exposures.

The southern, eastern and western property areas are primarily underlain by Devonian to Mississippian (and possibly older) metasedimentary rocks, which interfinger with, and are stratigraphically overlain by, intermediate to mafic amphibolite and hornblende gneiss (metamorphosed intermediate to mafic volcanic rocks) and minor felsic metavolcanic rocks. Marble horizons, commonly altered to calc-silicate and occasionally skarn due to regional metamorphism, locally occur at the contact between the metavolcanic and metasedimentary units; the latter include micaceous quartzite ±graphitic, biotite schist and muscovite schist.

A mafic (tonalitic) orthogneiss has been observed in the southeastern property area and may underlie the central property area. Granitic orthogneiss is shown to underlie the northwest property area and minor exposures were noted in the Shadow zone. Felsic feldspar augen gneiss of probable Permian age occurs within the VG and Shadow zones but may be more extensive than mapped due to poor exposure. An ultramafic lens is exposed along the bluffs above the Yukon River east of the VG zone and just west of the property on Shamrock Dome. These are interpreted to occur along thrust faults.

The above units are intruded by an Early Jurassic granodiorite intrusion, which is exposed in the eastern property area, and intrusions of probable Jurassic age underlie the Stewart, Tetra and Shadow zones.

Coarse grained crowded potassium feldspar syenite porphyry sills, with apparent zoned feldspars, and quartz eye granite dykes and sills intrude the Devonian (±older) to Mississippian package but are pre-mineralization. They have been observed in the southern QV area and at the Shadow zone. The age may be Early Jurassic and related to the intrusion in the eastern property area, similar to the Jual and Ten stocks further north (dated as Jurassic), or Permian. A persistent mafic dyke probably of the Upper

Cretaceous Carmacks Group has been mapped west of the VG and Shadow zones. Minor late fine grained, quartz ±feldspar porphyry dykes of probable Eocene age are evident in the northern property area, including at the Tetra and Shadow zones.

The VG zone is underlain by an east-northeast dipping package of primarily felsic gneiss, commonly interlayered with biotite schist and less common mafic gneiss. The section appears to consist of a lower sequence of metamorphosed felsic volcanic rocks with minor mafic intervals, overlain by a thick mafic and intermediate volcanic rock unit which is in turn overlain by a thin limestone, followed by abundant interbedded sandstone and shale with locally high organic content. The section does not appear to be overturned (as suggested by the average foliation dipping more steeply than the lithological contact measured in cross sections). Average foliations for the VG area trend 343°/53°NE and lithology contacts at 332°/33°NE. (Cooley & Leatherman, 2013).

6.3 Mineralization

Mineralization at the VG zone occurs as stacked or en-echelon lenses hosted along west-southwest, gently north-northwest dipping sheared zones (average orientation of 250°/20°N), which are common throughout the southern part of the QV property. The shear zones occur as one or more stacked and intersecting horizons. Subsequent brittle reactivation of these shallowly north-northwest dipping structures has included local fracturing of the adjacent felsic rocks, which has permitted the flow of hydrothermal fluid that caused sericite (illite) - pyrite alteration of the adjacent wallrock, and local gold mineralization. The primary host rock is biotite-feldspar (±augen)-quartz gneiss, which occurs structurally below a hornblende-biotite-feldspar-quartz gneiss; the latter constitutes a distinct marker horizon identified by stubby hornblende crystals and anomalous chromium. Mineralized ore shoots may be parallel to the intersection lineation of S1 and S2, which is oriented at 347°/10°NE. The intersections of foliations (343°/53°NE) and lithological contacts (332°/33°NE) with the mineralizing structures (250°/20°N) may also control ore shoots.

The original soil anomaly over the VG zone on the QV grid consisted of a 2 km long (with a 500 m gap through the hornblende gneiss unit) and up to 400 m wide >10 ppb gold anomaly with maximum values of 395.6 ppb Au and 8.7 ppm Ag from a south facing slope, with better soil development than most of the property area. Infill soil sampling returned a maximum of 1277 ppb Au. At the VG zone and overall on the QV property anomalous gold in soils is associated with anomalous mercury, bismuth, tellurium, molybdenum, moderately high barium, antimony ±lead soil geochemistry.

7 Exploration

The 2017 QV Property exploration program was completed between September 10th, 2017 and October 19th, 2017 at the VG Zone, Korat-Tetra area, and Shadow area. The program comprised 620 soil samples from the three target areas, and 6 diamond drill holes totalling 904.4 m at the VG Zone. The total cost to complete the 2017 exploration program was $846,268.06. A detailed breakdown of the program expenditures is provided in Appendix 1.

A summary of the 2017 exploration program is presented below. Soil sample descriptions and original laboratory certificate are presented in Appendix 2. Diamond drill hole collar and survey information are presented in Appendix 3. Detailed drill hole lithologies are presented in Appendix 4. Analytical results, keyed to drill hole and depth interval, and copies of original laboratory certificates are presented in Appendix 5.

7.1 Soil Sampling

A total of 620 soil samples were collected during the 2017 exploration program to infill previous grid sampling and test for mineralization in 3 areas of interest: the VG Zone, the Korat-Tetra, and Shadow. The QV Property soil sampling program was completed by APEX personnel.

Two north-south oriented grids were completed at the VG Zone, totalling 217 soil samples. The lines were spaced 50 m apart, with sample spacing at 25 m or 50 m, infilling and extending previous 100 m by 50 m spaced sampling. The eastern grid was completed to test for mineralization along the surface trace of the Telegraph Fault. The western grid was completed to expand soil coverage immediately west of the VG zone, test evidence of alteration in drone imagery, and investigate potentially mineralized cross-faults or splays found in RAB and diamond drilling.

Ridge and spur sampling was completed in the Korat-Tetra area at 50 m spacing, totalling 148 soil samples. The samples were collected to test a west-northwest trending magnetic low that is coincident with the Tetra anomaly in the east and a 135.6 parts-per-billion (ppb) Au in soil sample in the west. Previous work done by Northern Tiger Resources included wide spaced soil sampling (~700 m spaced lines and 100 m spaced samples) and an airborne geophysical survey. The results returned weakly anomalous gold (up to 15 ppb) coincident with the magnetic low, but were noted to be B-horizon soils, which are less effective in the region and could represent more significant anomalies at the C-horizon.

Two north-south oriented grids were completed in the Shadow area, totalling 254 samples. The lines were spaced 50 m or 100 m apart, with sample spacing at 25 m or 50 m, expanding a previous grid with 50 m by 25 m spaced sampling. The 2 grids tested a possible northwest and southeast trending anomaly identified by past sampling.

The soil samples collected during 2017 returned few anomalous results in any of the three areas of interest. Out of the 620 samples, 14 returned values above 10 ppb Au, with the highest value at 32 ppb Au, found in Shadow area. Mapped results are shown in Figures 8 to 10.

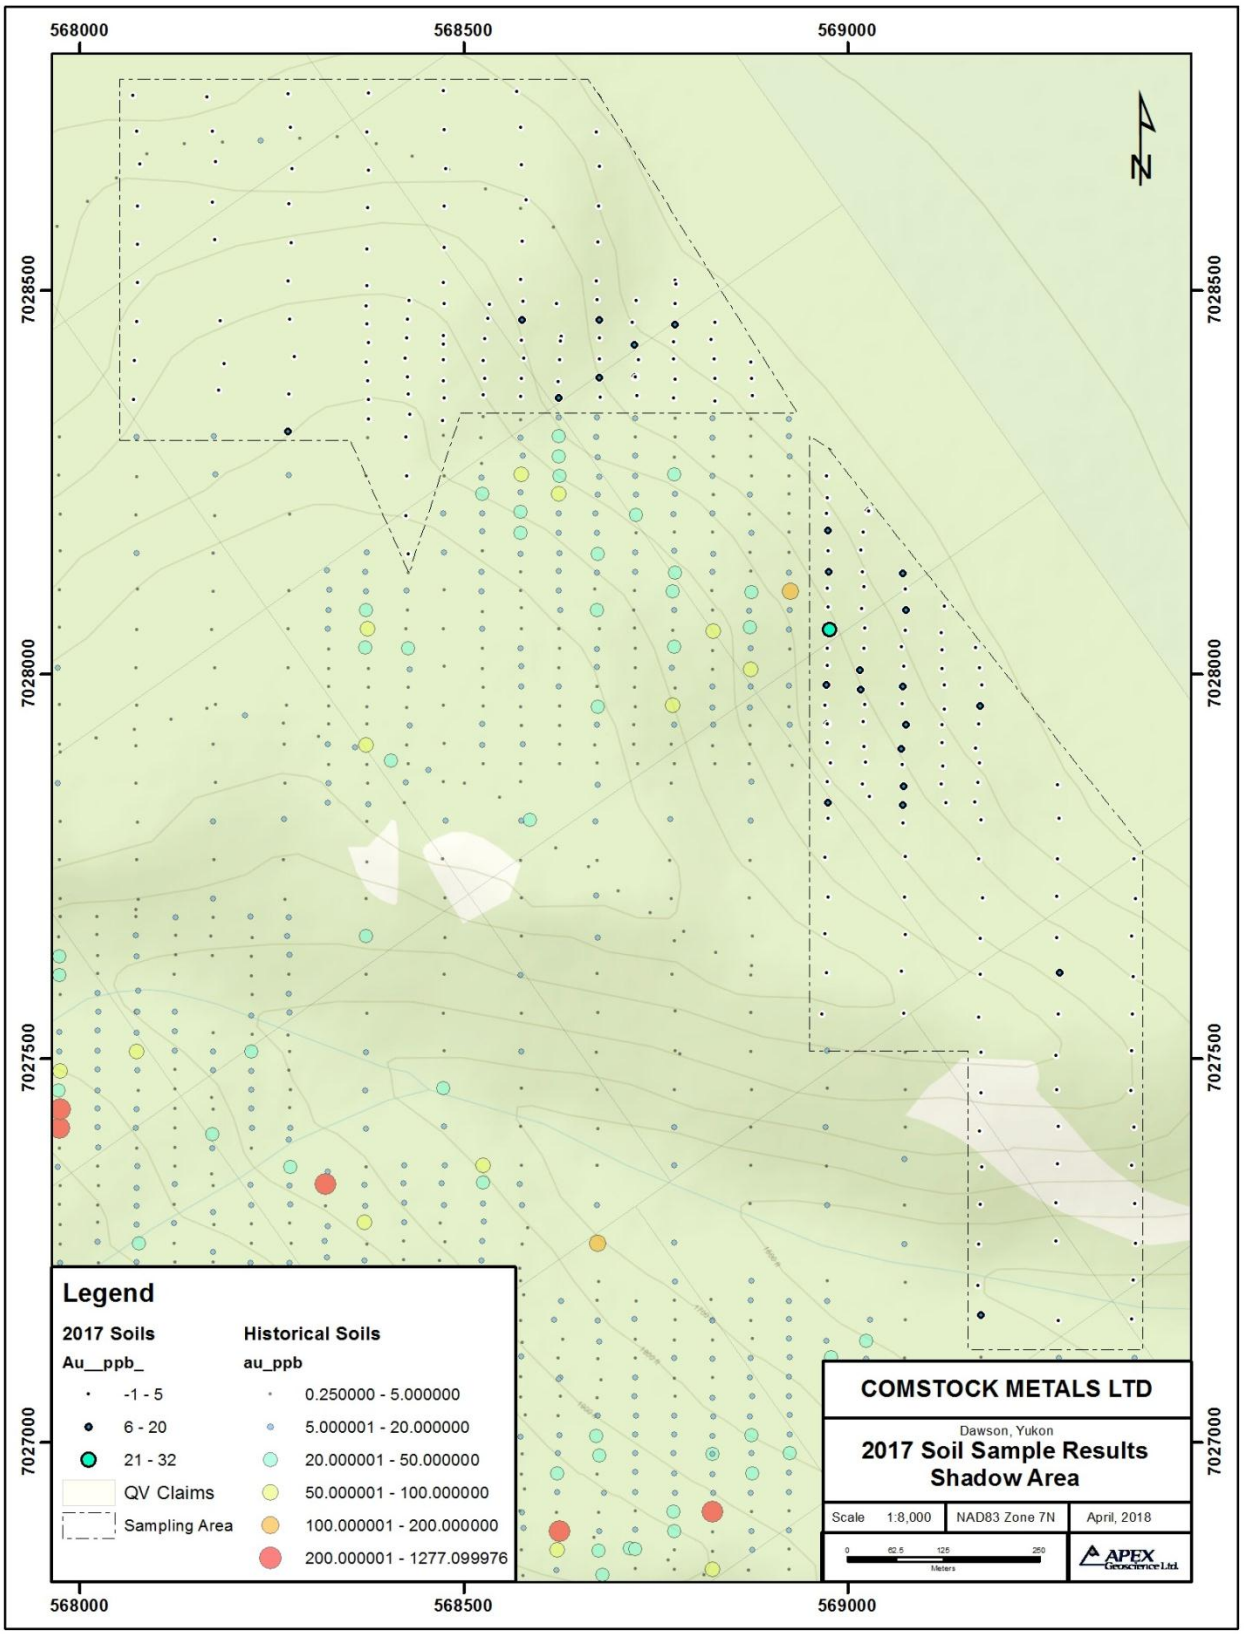

Figure 10 Korat-Tetra Area 2017 Soil Sample Results

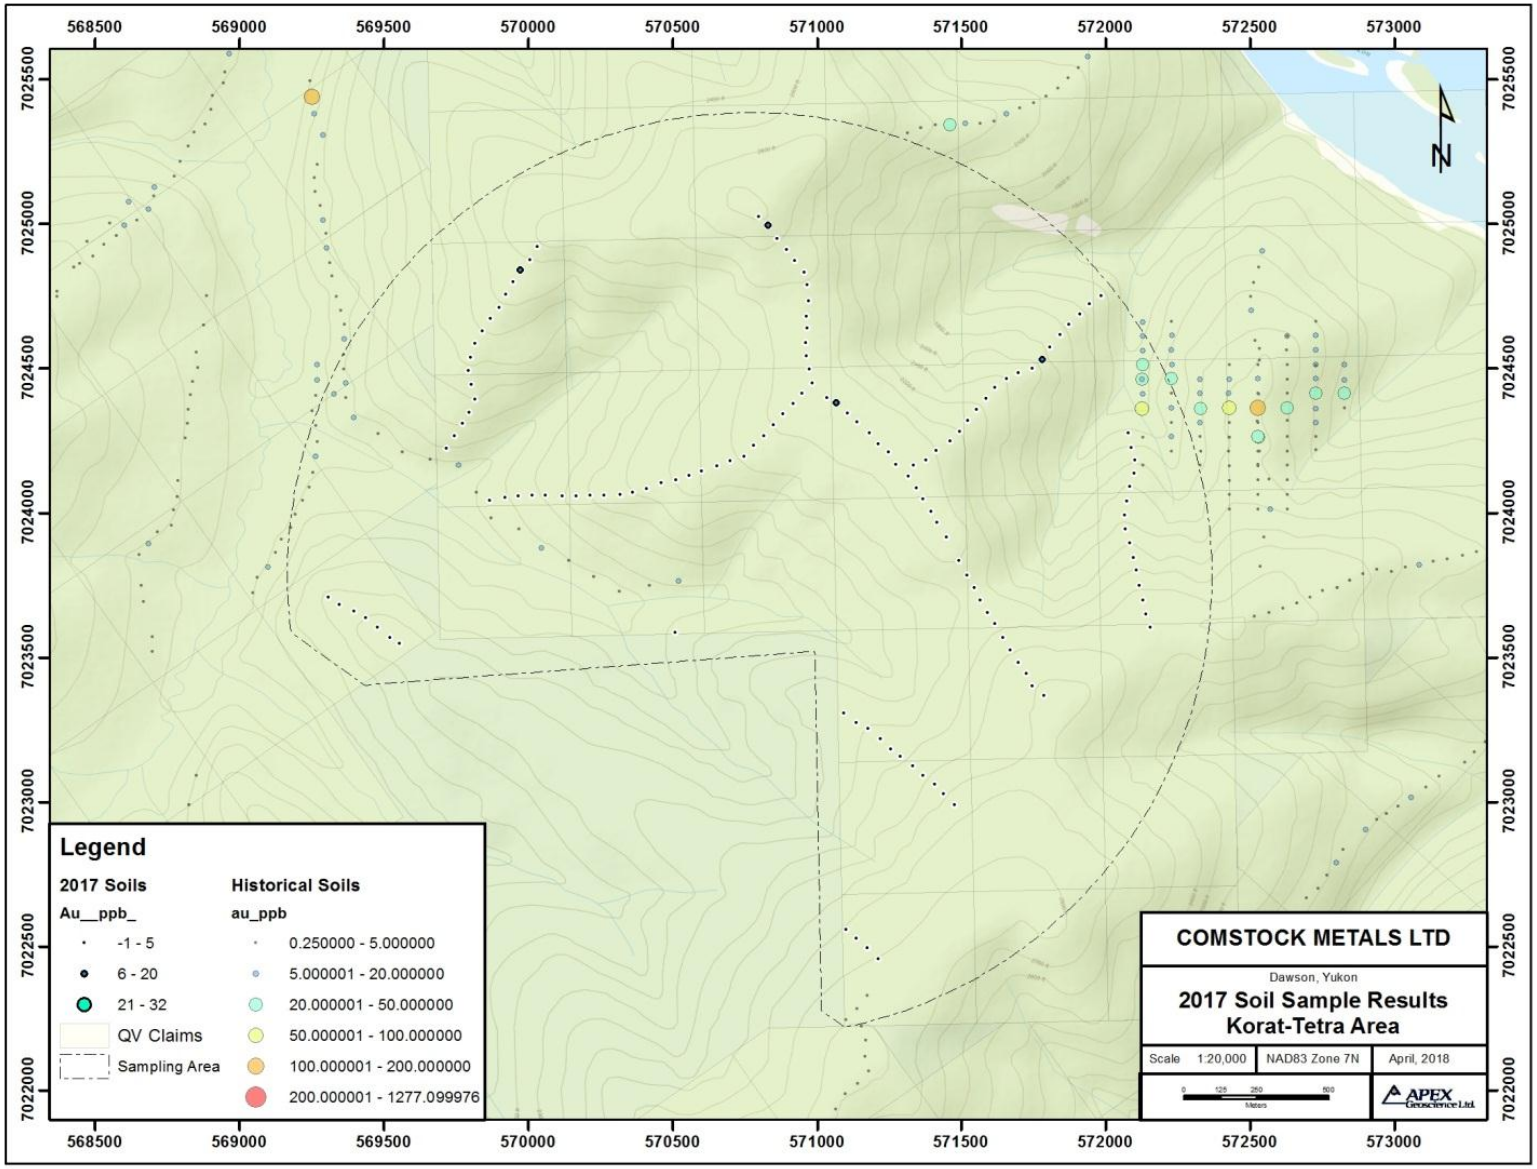

7.2 Drilling

The 2017 VG Zone diamond drilling program was designed to follow up on the 2016 rotary air blast (RAB) drilling program and extend the VG deposit westward. A total of 904.4 m of HQ drill core in 6 holes was drilled on the western flank of the VG deposit (Table 3). Three holes were completed to target depth while the remainder did not reach planned depth due to drilling problems related to faulting. The drill program was supervised by APEX personnel, and executed by TKD Consulting Limited. The core logging, cutting and sampling were completed by APEX personnel.

Table 4 Drill Hole Details

Hole ID	Zone	Easting*	Northing	Elevation	Azimuth	Dip	Total Depth (m)
QV17-018	VG	574358	7016045	534.8	0	-90	238.96
QV17-019	VG	574357	7016046	534.8	340	-65	267.31
QV17-020	VG	574264	7016013	538.5	160	-60	70.47
QV17-021	VG	574265	7016015	539.4	0	-90	210.82
QV17-022	VG	574169	7015973	515.6	160	-65	74.13
QV17-023	VG	574170	7015975	516.7	0	-90	42.67

Drill holes QV17-018 (-90°) and QV17-019 (-65°/340 azimuth) were drilled from a single pad located on the western flank of the VG Zone, and were designed to test the down-dip extension of mineralization in QV13-012 (Figure 11). The holes passed through a variably altered and faulted suite of felsic gneiss lithologies. Both drill holes encountered wide zones of gold mineralization associated with pyrite mineralized quartz veins, stockworks and breccias. The mineralized zones are contained within a broader envelope of sericite-illite ±chlorite alteration. Silicification is observed locally, and is generally correlated with stockwork zones. Significant anomalous gold mineralization occurs in both drill holes, including 45.5 m averaging 1.42 g/t Au, starting at 67.5 m in QV17-018, and 51.2 m averaging 1.48 g/t Au, starting at 98 m in QV17-018. This confirms that the VG deposit extends greater than 125 m down dip of hole QV13-12 and 45 m west of holes QV12-06 and QV12-08. Significant weighted average drill intercepts are listed in Table 4.

Figure 11 Cross-Section of Drill Holes QV17-018 and QV17-019 with Results

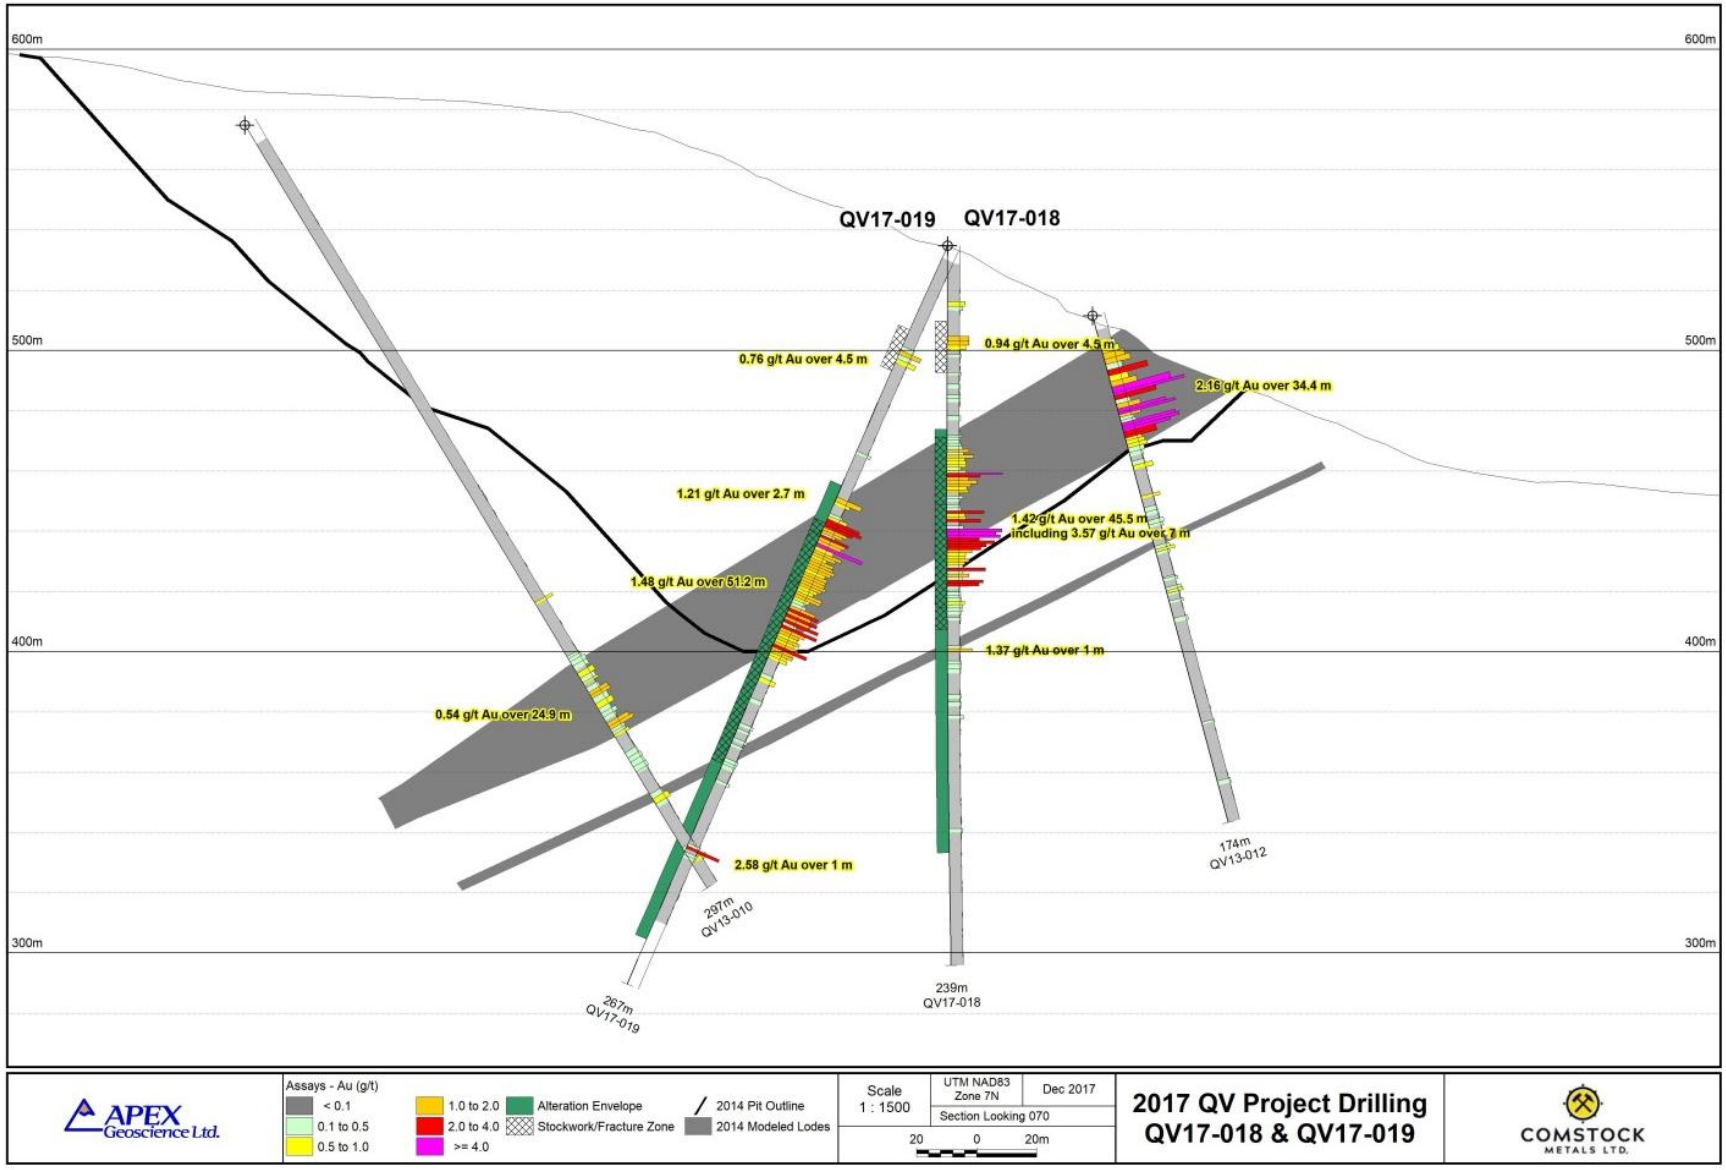

Table 5 Significant Weighted Average Drill Intercepts

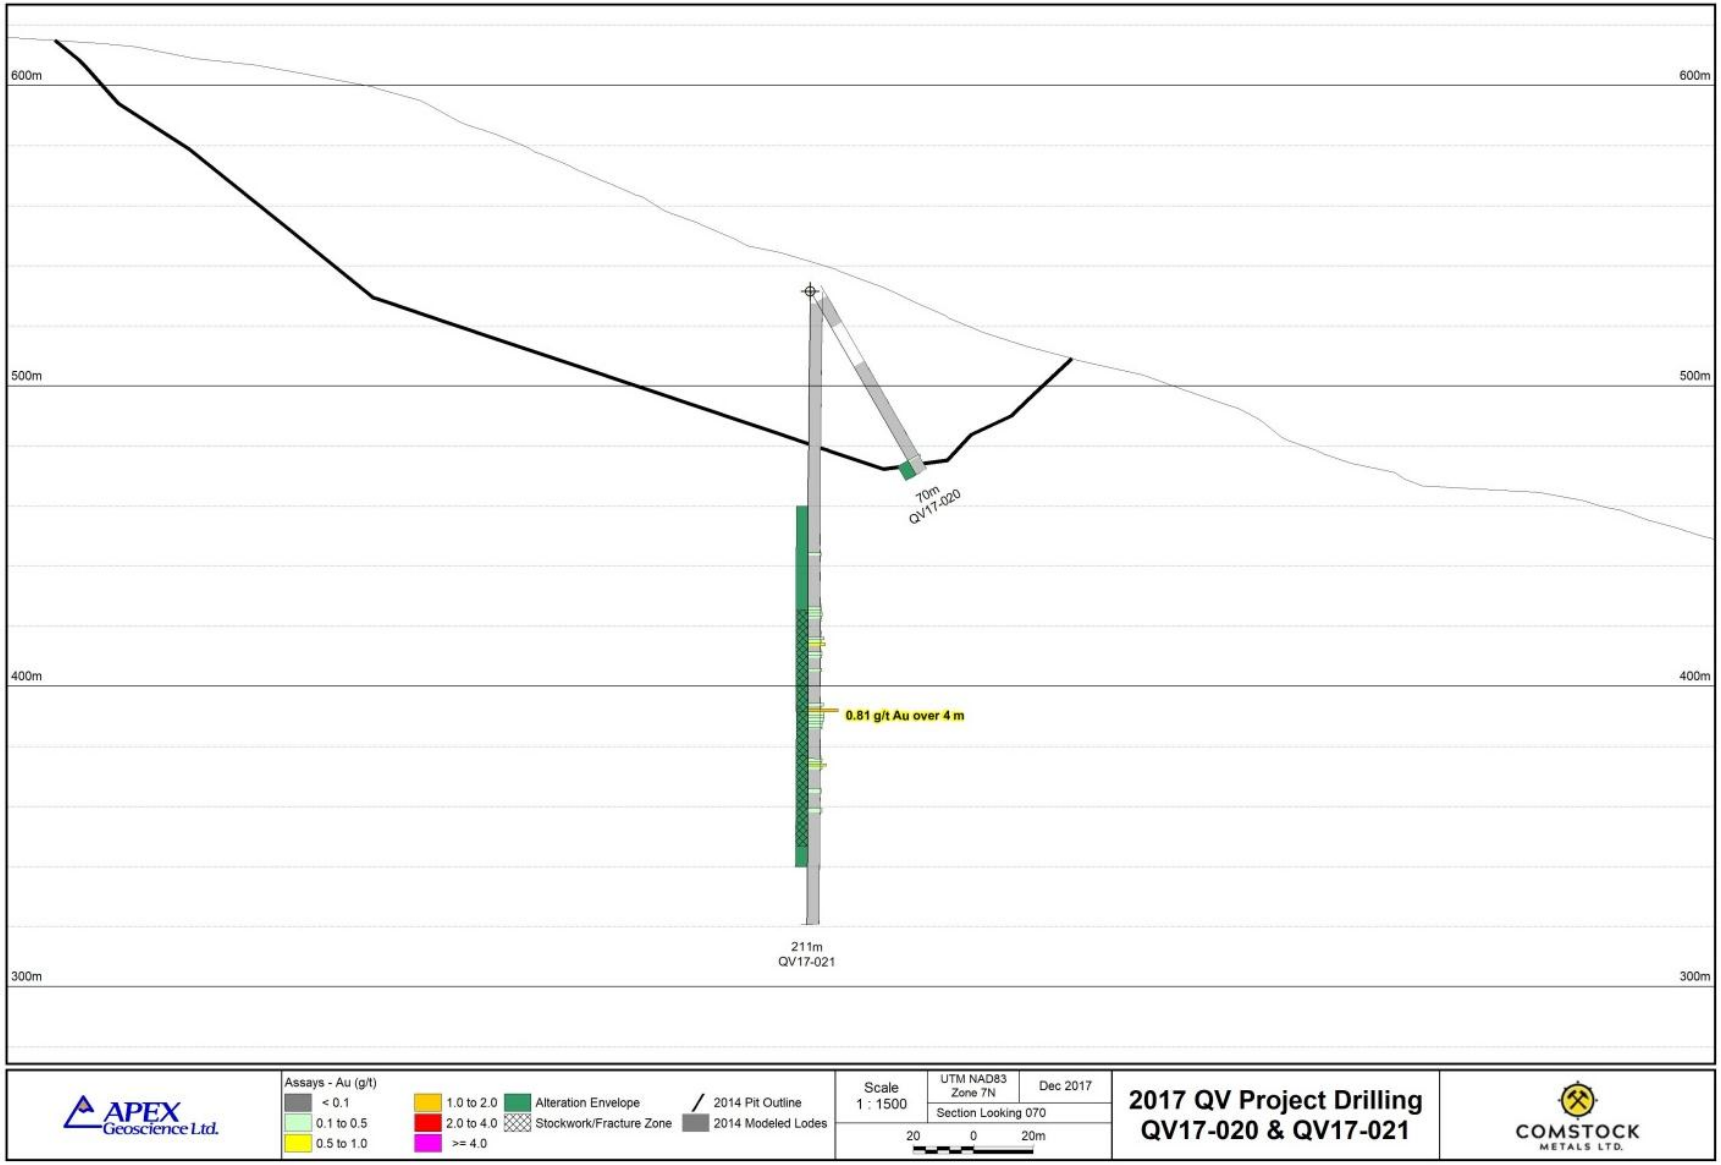
Hole ID	From (m)	To (m)	Interval (m)*	Au (ppm)
QV17-018	30.00	34.50	4.50	0.94
	67.50	**113.00**	**45.50**	**1.42**
including	94.00	101.00	7.00	3.58
including	94.00	97.00	3.00	4.46
	133.80	134.80	1.00	1.37
QV17-019	38.00	42.50	4.50	0.76
	91.10	93.80	2.70	1.21
	98.00	**149.20**	**51.20**	**1.48**
	217.20	218.20	1.00	2.58
QV17-021	139.00	143.00	4.00	0.81

* True thickness is interpreted to be 85-90% of drilled width for QV17-018, 21 and 55-60% for QV17-019; intervals column may not add due to rounding

Drill holes QV17-020 (-60°/160 azimuth) and QV17-021 (-90°) were drilled from a single pad 100 metres west-southwest of holes QV17-018 and QV17-019, and were designed to test the western extension of mineralization in the VG Zone (Figure 12). Hole QV17-020 encountered a substantial fault zone and was terminated prior to reaching target depth. Hole QV17-021 passed through a variably altered and faulted suite of felsic gneiss (±augen) and schist lithologies. Numerous fault zones were encountered down hole, often associated with moderate to strong oxidation. Like holes QV17-018 and QV17-019, a broad zone of veining, stockwork and breccia was intersected, associated with sericite-illite ±chlorite alteration and variable pyrite mineralization; however, the stockwork and breccia zones appear less developed with generally lower volumes of quartz material and pyrite mineralization. Widespread weak-moderately anomalous gold mineralization occurs between 87 m and 173 m down hole, including 4 m averaging 0.81 g/t Au starting at 139 m down hole. This is consistent with the interpreted western projection of the VG deposit but characterized by a rock package disrupted by considerable faulting and oxidation.

Drill holes QV17-022 (-65°/160 azimuth) and QV17-023 (-90°) stepped out 100 metres west-southwest of QV17-020 and QV17-021 to further test the western extension of mineralization in the VG Zone. Both holes encountered extensive faulting and were terminated prior to target depth.

Figure 12 Cross-Section of Drill Holes QV17-020 and QV17-021 with Results



8 Sample Preparation, Analysis and Security

8.1.1 Sample Collection and Shipping

8.1.2 Soil Samples

A total of 620 soil samples were collected at the QV Property during the 2017 exploration program. Shovels were used to clear the sample area of surface material, such as grass and detritus. Most of the samples were collected from the C-horizon using a soil auger. Nine of the 620 samples were collected from the A or B-horizon. Samples were placed into labelled Kraft soil sample bags along with a sample tag inscribed with the unique sample number. Sample locations were recorded with a handheld GPS and written on a sample card bearing the matching sample number, the date and the sampler's name. Additional details were recorded, including vegetation cover, and the sample depth, soil horizon, colour, moisture, compaction and quality of sample. The sample details were later transcribed to digital format in Microsoft Excel.

Soil samples were dried at camp in the sample bags prior to shipping. Once sufficiently dry, the samples were placed into poly woven (rice) bags labelled with return and sender address's and secured with cable ties. Shipments were driven out of camp and delivered to the ALS preparation lab in Whitehorse. The samples were prepared in Whitehorse and shipped via ALS's internal network to the ALS Vancouver lab for analysis. ALS reported nothing unusual with respect to the shipments, once received.

8.1.1 Drill Core

A total of 701 drill core intervals were selected and sent for analysis, totalling 794.1 metres of core length. Each interval was typically either 1.0 m or 1.5 m in length, depending on the intensity of visual mineralization and alteration. The minimum sample length was 0.5 m and the maximum was 2.0 m. The sample intervals were marked out and tagged by APEX geologists, and the core was then photographed. Samples were sawed in half using a core saw. Duplicate samples were cut into quarters. For each sample, one half core was sent for analysis and the other was left in the box. For duplicate samples, one half core was used as the "original" sample, one quarter core was used as the "duplicate sample", and one quarter core was left in the box.

Drill core samples were placed into labelled plastic sample bags along with a sample tag inscribed with the unique sample number. The samples were placed into woven (poly) rice bags labelled with return and sender address's and secured with cable ties. Shipments were driven out of camp and delivered to the ALS preparation lab in Whitehorse. The samples were prepared in Whitehorse and shipped via ALS's internal network to the ALS Vancouver lab for analysis. ALS reported nothing unusual with respect to the shipments, once received.

8.2 Sample Preparation and Analysis

8.2.1 Soil Samples

Once received by ALS, the samples were logged into the ALS tracking system, assigned bar code labels, weighed and air dried overnight. The samples are then dry-sieved to 180 micron and divided into plus (material remaining on screen) and minus (material passed through) fraction samples, which are both retained.

The prepared samples were analyzed by ALS Geochemistry Method AuME-TL43. A 25 g sample is taken from the minus fraction and leached using an aqua regia digestion. The solution is then analyzed for trace gold and multi-element using an inductively coupled plasma mass spectroscopy finish (ICP-MS).

8.2.2 Drill Core

Once received by ALS, the samples were logged into the ALS tracking system, assigned bar code labels and weighed. The samples were then dried and crushed to pass a U.S. Standard No. 10 mesh, or 2 mm screen (70% minimum pass). A 500 g split was taken and pulverized to pass a U.S. Standard No. 200 mesh, or 75 micron screen (85% minimum pass).

The prepared samples were analyzed by ALS Geochemistry Methods ME-MS61 (48 element four acid ICP-MS) and Au-AA24 (Au 50 g fire assay AA finish). For ME-MS61 analysis, a prepared sample (0.25 g) is digested with perchloric, nitric and hydrofluoric acids. The residue is leached with dilute hydrochloric acid and diluted to volume. The solution is then analyzed by ICP-MS. Results are corrected for spectral interelement interferences.

For Au-AA24 analysis, a prepared (50 g) sample is fused with a mixture of lead oxide, sodium carbonate, borax, silica and other reagents as required, inquarted with 6 mg of gold-free silver and then cupelled to yield a precious metal bead. The bead is digested in a 0.5 mL dilute nitric acid in the microwave oven, 0.5 mL concentrated hydrochloric acid is then added and the bead is further digested in the microwave at a lower power setting. The digested solution is cooled, diluted to a total volume of 4 mL with de-mineralized water, and analyzed by atomic absorption spectroscopy against matrix-matched standards.

8.3 Field Quality Assurance and Quality Control

8.3.1 Soil Samples

The QA/QC measures employed in the field during the 2017 soil sampling program comprised inserting field duplicates into the sample stream at a rate of approximately 1 duplicate per 20 samples. Duplicate sample results are compared to originals to test the repeatability of lab results. A total of 33 duplicate samples were collected and analyzed. The data shows a good overall repeatability.

8.3.2 Drill Core

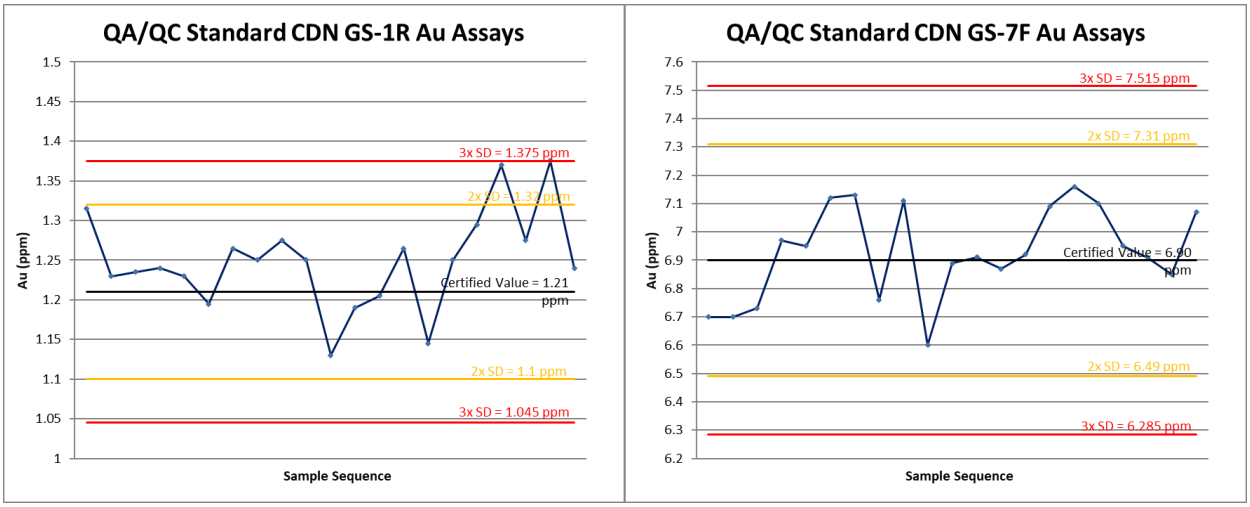
The QA/QC measures employed in the field during the 2017 diamond drilling program comprised inserting analytical standards, blanks and duplicate samples into the sample stream, each at a rate of 1 QA/QC sample per 20 samples. Standards and blanks are compared to expected values to ensure the lab results fall within the acceptable margin of error. Similarly, duplicate sample results are compared to originals to test the repeatability of lab results.

Analytical standards were inserted into the sample stream to verify the accuracy of the laboratory analysis. Two standards were selected for the drill program: CDN GS-1R and CDN GS-7F. QA/QC summary charts for the standards are presented in Figure 13. The charts indicate the measured values for each standard in addition to the certified value, and the second and third "between laboratory" standard deviation for gold (Au).

There are two general industry standard criteria employed by which standards are assigned a "pass" or "reviewable" status. First, a "reviewable" standard is defined as any standard occurring anywhere in the sample sequence returning a value greater than three standard deviations (>3SD) above or below the accepted value. Second, if two or more consecutive standards from the same batch return values greater than two standard deviations (>2SD) above or below the accepted value on the same side of the mean, they are classified as "reviewable". QA/QC samples falling outside the established limits are flagged and subject to review and possible re-analysis, along with the 10 preceding and succeeding samples.

A total of 21 CDN GS-1R and 21 CDN GS-7F were inserted into the sample stream of 701 drill core samples. All standards were assigned a "pass" status according to the criteria outlined above.

Figure 13 QA/QC Analytical Standards (Au)

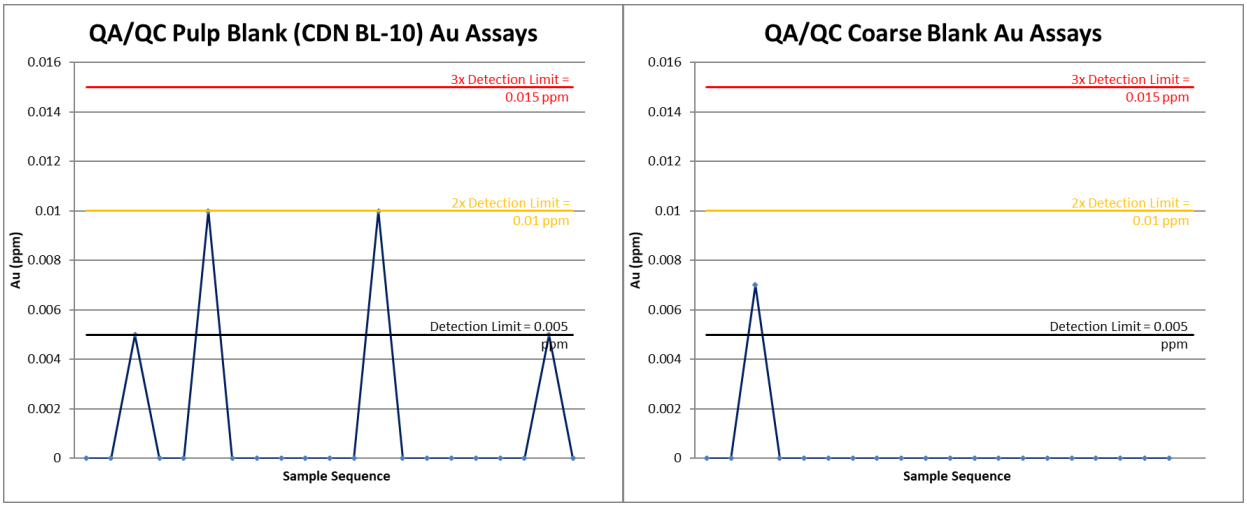


Blank samples were inserted into the samples stream to check for contamination during sample preparation and analysis. Two types of blanks were selected for the drill program: CDN BL-10 blank pulps and ½" mesh silica coarse blanks (500 g). The blank

pulps are used to test contamination during analysis and the coarse blanks are used to test for contamination during preparation. QA/QC summary charts for the two blanks are presented in Figure 14. The charts indicate the measured values for each blank in addition to the analytical method detection limit, 2x the detection, and 3x the detection limit for gold (Au). A blank is considered “reviewable” if it returns a value greater than 2x the detection limit of the analytical method.

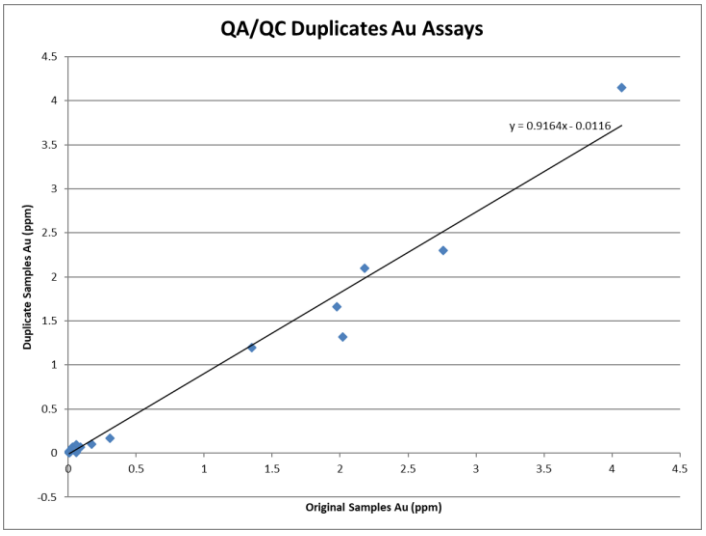
A total of 21 blank pulps and 20 coarse blanks were inserted into the sample stream of 701 drill core samples. All blanks were assigned a “pass” status according to the criteria outlined above.

Figure 14 QA/QC Analytical Blanks (Au)



Duplicate drill core samples were collected to assess the repeatability of individual analytical values. A total of 41 duplicate samples were collected and analyzed. Figure 15 shows the original versus duplicate values for gold (Au). The results indicate a good overall repeatability of the drill data.

Figure 15 QA/QC Duplicate Samples (Au)



It is the authors' opinion that the sample collection, preparation, security, analytical and QA/QC measures used during the 2017 diamond drilling program were adequate for this stage of exploration at the QV Property.

8.4 Laboratory Quality Assurance and Quality Control

ALS Global has developed and implemented at each of its locations a Quality Management System (QMS) designed to ensure the production of consistently reliable data. The system covers all laboratory activities and takes into consideration the requirements of ISO standards.

The QMS operates under global and regional Quality Control (QC) teams responsible for the execution and monitoring of the Quality Assurance (QA) and Quality Control programs in each department, on a regular basis. Audited both internally and by outside parties, these programs include, but are not limited to, proficiency testing of a variety of parameters, ensuring that all key methods have standard operating procedures (SOPs) that are in place and being followed properly, and ensuring that quality control standards are producing consistent results.

Quality assurance and quality control (QA/QC) measures at ALS include routine screen tests to verify crushing and pulverizing efficiency, sample preparation duplicates (every 50 samples), and analytical quality controls (blanks, standards, and duplicates). Quality control samples are inserted with each analytical run, with the minimum number of QC samples dependant on the rack size specific to the chosen analytical method. Results for quality control samples that fall beyond the established limits are automatically red-flagged for serious failures and yellow-flagged for borderline results. Every batch of samples is subject to a dual approval and review process, both by the individual analyst and the Department Manager, before final approval and certification.

ALS maintains ISO registrations and accreditations. ISO registration and accreditation provides independent verification that a QMS is in operation at the location in question. All ALS laboratories are either certified to ISO 9001:2008 or accredited to ISO 17025:2005.

9 Data Verification

Mr. Christopher Livingstone, P.Geo., Project Geologist of APEX and an author of the Report, directly supervised the 2017 QV Property exploration program and was on-site for the duration. During the course of the program, Mr. Livingstone conducted several traverses in the VG Zone area to verify the geology, alteration and mineralization reported from previous programs. The authors also conducted a review of the available literature and documented results relevant to the Property.

10 Exploration Expenditures

The 2017 QV Property exploration program was completed between September 10th, 2017 and October 19th, 2017 at the VG Zone, Korat-Tetra area, and Shadow area. The program comprised 620 soil samples from the three target areas, and 6 diamond drill holes totalling 904.4 m at the VG Zone. The total cost to complete the 2017 exploration program was $846,268.06. A detailed breakdown of the program expenditures is provided in Appendix 1.

11 Interpretation and Conclusions

Diamond drilling prior to 2017 in the VG Zone defined an open-ended, southwest-trending, near surface tabular body of gold mineralization across a strike length of approximately 325 m, 275 m down dip from surface, and approximately 35 m to 40 m true thickness (Pautler and Shahkar, 2014). The 2017 drilling showed the potential to extend the deposit southwest and down dip.

Diamond drill holes QV17-018 (45.5 m averaging 1.42 g/t gold, starting at 67.5 m down hole) and QV17-019 (51.2 m averaging 1.48 g/t gold, starting at 98 m down hole) confirm the VG deposit extends greater than 125 m down dip of hole QV13-12 and 45 m west of holes QV12-06,-08. Drill hole QV17-021, a 100 m step-out to the west of QV17-018/19, intersected an alteration zone with widespread anomalous gold mineralization extending from 87 m to 173 m down hole, including 4 m averaging 0.81 g/t gold starting at 139 m down hole, consistent with the interpreted western projection of the VG deposit but characterized by a rock package disrupted by considerable faulting and oxidation. Holes QV17-022 and QV17-023 stepped out an additional 100 m west, but failed to reach target depth due to substantial faulting.

Results from the drilling to date indicate that potential remains to extend the VG deposit to the west, east and down-dip. The 2017 drilling on the western flank of the VG deposit suggests that the area has been subject to substantial complex faulting that is poorly constrained within the current model. Positive results from shallow 2016 RAB holes drilled south of the 2017 drilling area suggest that the mineralization persists to the west, possibly offset by faulting. Additional diamond drilling is warranted in this area to further test the western extent of the VG Zone and to better define the geological and structural controls on mineralization.

Additional drilling should be completed the eastern extent of the VG Zone, north of the Telegraph Fault. The current interpretation is that the zone extends east below the surface but is offset by the Telegraph Fault. This is supported by results from the 2016 RAB drilling program, which intercepted VG style mineralization and alteration beginning at 20 m to 30 m depth in the area. Mineralization intercepted on the south side of the Telegraph Fault is interpreted to represent footwall remnants of the fault offset of the VG Zone (Gibson and Fage, 2017).

The 2017 soil sampling at the VG Zone and the Shadow area was designed to infill and extend previous soil coverage to constrain gold in soil anomalies in both areas. Results from the 2017 program close off the anomalies in both areas. No additional work is

recommended for these areas at this time. The ridge and spur sampling at Korat-Tetra failed to produce any significantly anomalous gold values. However, previous sampling in the Tetra area, east of the 2017 ridge and spur sampling, defined an east-west trending gold in soil anomaly that has not been closed off. The historical grid could be extended during a future program.

Previous ridge and spur soil sampling in the north of the Property and east of the Shadow area also identified several anomalous samples that warrant follow up.

12 Recommendations

Results to date indicate that further diamond drilling is warranted at the VG Zone to test the western, eastern and down-dip extent of the VG deposit. Approximately 2,000 m of diamond drilling is recommended. Prior to drilling, geological logs from the 2012, 2013 and 2017 programs should be standardized and the geological model should be updated. The VG deposit model should also be updated to reflect the addition of the 2017 results, and a conceptual mineralization model should be completed incorporating all diamond drilling, RAB drilling and trenching results. These models should be used to inform and refine drill targeting.

Additional ridge and spur sampling should be completed east and southeast of Shadow, and several small grids should be completed testing anomalous ridge and spur samples in the north of the Property. The Tetra grid should be extended east and west. Approximately 500 samples should be collected.

The recommended program is estimated to cost $1,570,000 CAD (Table 5).

Table 6 Estimated Cost to Complete the Recommended Exploration Program

Item	Units	Unit Cost	Quantity	Subtotal
Geological & mineralization modelling	Person days	$500	15	$7,500

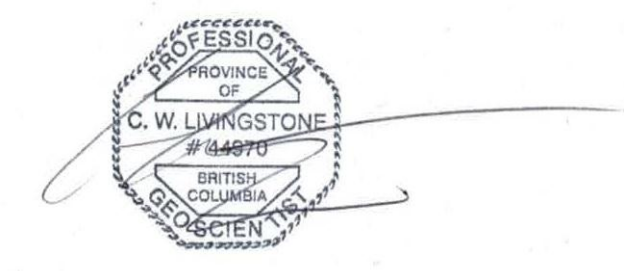
14 Certificate of Author

14.1 Christopher W. Livingstone Certificate of Author

I, Christopher W. Livingstone, residing in Vancouver, British Columbia, do hereby certify that:

1. I am a Project Geologist of APEX Geoscience Ltd., located at 410-800 West Pender Street, Vancouver, British Columbia, Canada.
2. I am the author and responsible for all sections of the report entitled: **"2017 Assessment Report QV Project"**, dated May 4th, 2018 (the "Report").
3. I am a graduate of The University of British Columbia (2011), Vancouver, British Columbia with a B.Sc. in Earth and Ocean Sciences (spec. Geology) and have practiced my profession continuously since 2011.
4. I am a Professional Geologist (P.Geo.) registered with Engineers and Geoscientists of British Columbia, and I am a 'Qualified Person' in relation to the subject matter of this Report.
5. To the best of my knowledge, information and belief, the Report contains all scientific and technical information that is required to be disclosed to make the Report not misleading.

Dated this May 4th, 2018
Vancouver, British Columbia, Canada



Christopher W. Livingstone, B.Sc., P.Geo.

14.2 Robyn Christian Certificate of Author

I, Robyn Christian, residing in Vancouver, British Columbia, Canada do hereby certify that:

1. I am a Junior Geologist of APEX Geoscience Ltd., located at 410-800 West Pender Street, Vancouver, British Columbia, Canada.
2. I am the author and responsible for all sections of the report entitled: **"2017 Assessment Report QV Project"**, dated May 4th, 2018 (the "Report").
3. I am a graduate of the Simon Fraser University, Burnaby, British Columbia with a B.Sc. in Geology (2014) and have practised my profession since 2014.
4. I am a Geoscientist in Training (G.I.T.) registered with Engineers and Geoscientists of British Columbia, and I am a 'Qualified Person' in relation to the subject matter of this Report.
5. To the best of my knowledge, information and belief, the Report contains all scientific and technical information that is required to be disclosed to make the Report not misleading.

Dated this May 4th, 2018
Vancouver, British Columbia, Canada

"Signed"

Robyn Christian, B.Sc., G.I.T.

Account: COMSTOM

CERTIFICATE WH17231001

Project: QV

P.O. No.: 17-QV-04

This report is for 206 Soil samples submitted to our lab in Whitehorse, YT, Canada on 24-OCT-2017.

The following have access to data associated with this certificate:

CHRIS LIVINGSTONE	KRIS RAFFLE	DAVID TERRY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41	Screen to -180um and save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
AuME-TL43	25g Trace Au + Multi Element PKG	ICP-MS

To: **COMSTOCK METALS LTD.**
ATTN: CHRIS LIVINGSTONE
310 - 850 WEST HASTINGS STREET
VANCOUVER BC V6C 1E1

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

***** See Appendix Page for comments regarding this certificate *****

CERTIFICATE WH17231006

Project: QV

P.O. No.: 17-QV-04

This report is for 200 Soil samples submitted to our lab in Whitehorse, YT, Canada on 24-OCT-2017.

The following have access to data associated with this certificate:

CHRIS LIVINGSTONE	KRIS RAFFLE	DAVID TERRY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41	Screen to -180um and save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
AuME-TL43	25g Trace Au + Multi Element PKG	ICP-MS

To: **COMSTOCK METALS LTD.**
ATTN: CHRIS LIVINGSTONE
310 - 850 WEST HASTINGS STREET
VANCOUVER BC V6C 1E1

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE WH17231010

Project: QV

P.O. No.: 17-QV-04

This report is for 167 Soil samples submitted to our lab in Whitehorse, YT, Canada on 24-OCT-2017.

The following have access to data associated with this certificate:

CHRIS LIVINGSTONE	KRIS RAFFLE	DAVID TERRY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41	Screen to -180um and save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
AuME-TL43	25g Trace Au + Multi Element PKG	ICP-MS

To: **COMSTOCK METALS LTD.**
ATTN: CHRIS LIVINGSTONE
310 - 850 WEST HASTINGS STREET
VANCOUVER BC V6C 1E1

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

***** See Appendix Page for comments regarding this certificate *****

CERTIFICATE WH17231012

Project: QV

P.O. No.: 17-QV-04

This report is for 97 Soil samples submitted to our lab in Whitehorse, YT, Canada on 24-OCT-2017.

The following have access to data associated with this certificate:

CHRIS LIVINGSTONE	KRIS RAFFLE	DAVID TERRY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41	Screen to -180um and save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
AuME-TL43	25g Trace Au + Multi Element PKG	ICP-MS

To: **COMSTOCK METALS LTD.**
ATTN: CHRIS LIVINGSTONE
310 - 850 WEST HASTINGS STREET
VANCOUVER BC V6C 1E1

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

Appendix 4 2017 VG Zone Drill Hole Lithologies

2017 Diamond Drill Holes Lithologies

HOLE ID	FROM (m)	TO (m)	INTERVAL (m)	LITH 1	LITH 2	DESCRIPTION
QV17-018	0	6.1	6.1	OVB		
QV17-018	6.1	12.1	6	BQFGa		bio-fsp-qtz augen gneiss; strong fracture controlled orange limonite alteration; rubbly
QV17-018	12.1	38.2	26.1	BQFG		bio-fsp-qtz gneiss (+/- augen); variable limonite alteration; short zones with disseminated amphibole (hornblende?) grains; moderate fracturing, rubbly zones
QV17-018	38.2	42	3.8	FTBX		brecciated with significant qtz vein material; pervasive ser-ill (+/- crb) alteration of groundmass and associated with fractures, commonly overprinted with orange limonite alt; veining appears multi-phase - 1-grey cherty brecciated quartz associated with trace py, often lim altered; 2-later grey to milky white distinct veins with associated ser-ill-lim on fractures, pyrite mineralization associated with dark grey variably magnetic (w-s) mineral (magnetite/chromite?) filling fractures
QV17-018	42	61	19	BQFGa		augen gneiss; variable orange-brown limonite staining; patchy weak ser-ill alteration; zones of textural destruction; minor pyrite mineralization associated with veining
QV17-018	61	63.5	2.5	FGG		lt grey-green to white (gneissic?) unit; top of unit is marked by large fault gouge zone; local orange limonite alt; very strong pervasive ser-ill alteration; zones of silicification associated with textural destruction; fine disseminated pyrite cubes or blebs throughout unit, significantly more than surrounding units
QV17-018	63.5	76	12.5	BQFG		mod-strongly fractured bio-fsp-qtz gneiss; orange-brown limonite alt; weak ser-ill assoc with fractures
QV17-018	76	76.5	0.5	FGG		fault; orange-brown clay gouge
QV17-018	76.5	81.8	5.3	BQFG		mod-strongly fractured bio-fsp-qtz gneiss; orange-brown limonite alt; weak ser-ill assoc with fractures; several faults

HOLE ID	FROM (m)	TO (m)	INTERVAL (m)	LITH 1	LITH 2	DESCRIPTION
QV17-018	81.8	85.3	3.5	BQFGa		grey augen gneiss; weak-moderate fracture controlled pale yellow-green ser-ill alteration; increased pyrite mineralization associated with veining
QV17-018	85.3	101.5	16.2	BQFG	FTBX	grey to yellow-green with orange limonite staining; strongly fractured/veined to stockworked, locally faulted or brecciated with quartz infill; strong ser/ill + sil + pyrite; increased pyrite content vs surrounding, associated with veining, 1-2%; epidote alt of larger veins; mod fracture controlled orange limonite alt, locally strong staining
QV17-018	101.5	120.3	18.8	BQFG		pale yellow-green to light grey-green; limonite drops out; ser/ill + sil + pyrite; green coloured zones - chloritized? Rock type difficult to determine due to alteration related textural destruction; fractured to stockworked with qtz and chalcedonic qtz infill
QV17-018	120.3	127.6	7.3	HBFQG		fine-med grained, med-dark green-grey hbl-bio-fsp-qtz gneiss; moderately fractured; ser/ill +/- crb associated with fractures & pat pervasive; patchy weak hem; variably chloritized
QV17-018	127.6	167.5	39.9	BQFG		light grey-green (gneissic?) unit; strongly altered (ser/ill +chl); coarse fsp +/- qtz through most of unit; difficult to determine rock type due to alteration; most of unit is highly fractured to brecciated or faulted; zones of qtz stockwork
QV17-018	167.5	192	24.5	BQFG		relatively unaltered, fine (locally med) grained bio-fsp-qtz gneiss; transitional ser/ill to ksp/hem alteration associated with fractures; unit is mainly competent; veining occurs as discrete cm-scale veins with minor py mineralization
QV17-018	192	199.73	7.73	HBFQG		yellow-green to pink with distinct dark green hornblende xtals; moderate pervasive ser-ill alteration, transitional to ksp-hem; finely disseminated cubic to blebby pyrite
QV17-018	199.73	201.54	1.81	CFP		crowded feldspar porphyry dyke; fsp grains are ser-ill altered
QV17-018	201.54	208.85	7.31	HBFQG		yellow-green to pink with distinct dark green hornblende xtals; moderate pervasive ser-ill-chl alteration + silicification, transitional to ksp-hem; finely disseminated cubic to blebby pyrite

HOLE ID	FROM (m)	TO (m)	INTERVAL (m)	LITH 1	LITH 2	DESCRIPTION
QV17-018	208.85	212.09	3.24	CFP		feldspar porphyry dyke; ser-ill alteration of fsp grains; ksp-hem alteration of some fsp + fracture related
QV17-018	212.09	238.96	26.87	HBFQG		yellow-green to pink with distinct dark green hornblende xtals; moderate pervasive ser-ill-chl alteration + silicification, transitional to ksp-hem; finely disseminated cubic to blebby pyrite
QV17-019	0	4.38	4.38	OVB		
QV17-019	4.38	38.8	34.42	BQFG		bio-qtz-fsp gneiss, locally augen gneiss; fractured & rubbly, locally faulted/bx; mod-strong pervasive orange-brown limonite alteration overprinting ser-ill alteration; ser-ill weakens after 20m
QV17-019	38.8	70.25	31.45	BQFGa		variably altered bio-qtz-fsp augen gneiss; fractured & rubbly, locally faulted/bx; weakened limonite - mainly associated with fractures, strongest in rubble & fault zones; weak ser-ill associated with fractures / stringers / occasional short qtz-bx zones; unaltered zones are strongly biotitic, display more obvious augen; 60.33-61.59m - qtz-crb (cal-sid) vein, unmineralized; 69.25-70.18m - rubbly qtz (minor crb) vein, rafts of altered wallrock, limonite associated with fracturing, trace pyrite
QV17-019	64.5	87	22.5	BQFGa		mainly unaltered bio-qtz-fsp augen gneiss; weak-mod limonite associated with fractures; very hard & siliceous after 79m; 1% finely disseminated pyrite, 2-3% in veins; 75.65-76.45 - altered qtz vein, 1-2% py; 78.5-79m - altered qtz vein, large white crb band towards top of vein, 2-3% py - mainly concentrated in single stringer/fracture fill
QV17-019	87	91.1	4.1	BQFG		increasing orange-brown limonite alteration, fracture controlled becoming pervasive; weak patchy ser-ill alteration;
QV17-019	91.1	92.7	1.6	QVBX	FTBX	faulted, broken/bx mixed qtz vein and wallrock

HOLE ID	FROM (m)	TO (m)	INTERVAL (m)	LITH 1	LITH 2	DESCRIPTION
QV17-019	92.7	100.5	7.8	BQFG		orange-brown limonite alteration, fracture controlled to pervasive; weak patchy ser-ill alteration
QV17-019	100.5	104.7	4.2	BQFG		limonite weakens, fracture controlled; grey-green gneissic unit; moderately fractured; 1-2% fine cubic pyrite
QV17-019	104.7	122.6	17.9	BQFG		grey-green, chlorite altered, stockworked gneissic unit; dark grey chalcedonic qtz-py infill with occasional grey qtz veins/veinlets; 2-3% fine cubic to blebby or stockwork pyrite; ser-ill alteration picking up along fractures 108.8-110.1m - qtz vein zone; 113.4-113.9m - qtz vein zone, rubbly
QV17-019	122.6	146	23.4	BQFG		altered and stockworked (gneissic?) unit, locally bx; dark grey chalcedonic qtz-py infill; strong pervasive pale yellow-green ser-ill alteration; 3-5% fine cubic to blebby or stockwork pyrite, locally up to 10%
QV17-019	146	150.2	4.2	BQFG		grey-green gneissic unit; ser-ill alteration weakening, becomes patchy; stockwork weakens, moderate fracturing, locally strong to stk/bx; py mineralization reduced, 1-2%
QV17-019	150.2	165.5	15.3	BQFG		variably altered and mineralized dark grey to med grey-green bio-qtz-(fsp) gneiss; transitional out of ser-ill alt zone; moderately to strongly fractured with qtz infill (locally altered to albite); 1-2% pyrite mainlly associated with altered and fractured zones, locally up to 5%
QV17-019	165.5	172.6	7.1	BQFG	FTBX	grey-green chl +/- ser-ill altered (gneissic?) and stockworked unit; local destruction of primary textures by alteration; numerous faults, stockwork and bx zones; qtz-crb (albite after qtz?) infill of stk & bx; minor py mineralization
QV17-019	172.6	177.35	4.75	FTBX		fault bx zone; zones of clay gouge and bx with clay infill; pale green-grey ser-ill-chl altered; minor py mineralization

HOLE ID	FROM (m)	TO (m)	INTERVAL (m)	LITH 1	LITH 2	DESCRIPTION
QV17-019	177.35	187.5	10.15	BQFG	FDP	grey-green, locally pale yellow-green mixed altered gneiss and feldspar porphyry; weak-moderate stockwork with qtz +/- py infill; ser-ill-chl alteration; cubic to blebby pyrite
QV17-019	187.5	192.2	4.7	CFP		light grey-green feldspar porphyry unit; alteration weakens; minor py
QV17-019	192.2	201.8	9.6	BQFG		variably altered dark grey to med grey-green gneissic unit
QV17-019	201.8	212.2	10.4	BQFG		green, altered, silicified gneissic unit; ser-ill-chl alteration, silicified; blebby pyrite 2-3%, locally up to 5%
QV17-019	212.2	220.3	8.1	BQFG		variably altered dark grey to med grey-green gneissic unit
QV17-019	220.3	230.3	10	BQFG		increasing chlorite alteration; patchy mixed ser-ill and ksp-hem
QV17-019	230.3	233.9	3.6	FTBX		fault bx zone; zones of clay gouge and bx with clay infill; pale green-grey ser-ill-chl altered, patchy ksp-hem; minor py mineralization
QV17-019	233.9	235.4	1.5	CFP		feldspar porphyry; ser-ill alteration associated with fractures
QV17-019	235.4	246.9	11.5	BG	MSCH	weakly altered mafic gneiss/schist; py associated with veining; patchy ser-ill & ksp-hem; alteration intensifies from 244.3m
QV17-019	246.9	251	4.1	HBFQG		ser-ill + chl altered gneissic unit; patchy ksp-hem; disseminated hornblende grains
QV17-019	251	267.31	16.31	BQFG		ksp-hem alteration intensifies; unit is rubbly, faulted/bx; patchy py disseminations
QV17-020	0	3.15	3.15	OVB		
QV17-020	3.15	12	8.85	BQFG		pervasive orange-brown limonite alteration; blocky and broken, faulted zones
QV17-020	12	22	10	BQFGa		med grey bio-qtz-fsp augen gneiss; limonite weakens, fracture controlled, locally pervasive; weak ser-ill associated with fractures

HOLE ID	FROM (m)	TO (m)	INTERVAL (m)	LITH 1	LITH 2	DESCRIPTION
QV17-020	22	69.6	47.6	BQFG		variably altered med-dark grey bio-qtz-fsp (+/- augen) gneiss; limonite fracture controlled, locally pervasive and increasing intensity towards bottom contact; weak ser-ill associated with fractures, locally mod-str; grades into massive unit below 30.7-34.3m - pervasive ser-ill alteration + limonite staining, siliceous with abundant qtz vein material, disseminated black cubes (tarnished py?); 65.7-67.5m - 1cm qtz vein sub // TCA, associated ser-ill halo
QV17-020	69.6	70.47	0.87	RHY		massive orange-brown unit - rhyolite dyke?; soft, altered - (ser-ill?), limonite overprinting; 5% white, rounded, soft grains - carbonate (weak effervescence); HOLE LOST
QV17-021	0	2.67	2.67	OVB		
QV17-021	2.67	10.5	7.83	BQFG		strong limonite & crb alteration associated with fractures, moderate pervasive limonite; rubbly unit, faulted zones; 5.5-7.8m - fractured to weakly stockworked zone, crb-lim infill, minor py
QV17-021	10.5	20.5	10	BQFGa		med grey bio-qtz-fsp augen gneiss; limonite weakens, fracture controlled; weak ser-ill associated with fractures
QV17-021	20.5	101.9	81.4	BQFG		variably altered, med-dark grey bio-qtz-fsp (+/- augen) gneiss; weak-mod limonite associated with fractures; weak-mod patchy ser-ill associated with fractures, locally pervasive; patchy moderate to strong crb alteration of felsic minerals + fracture controlled; local small scale folding 36.9-37.3m, 78.4-80.8m - fractured to stockworked, qtz/chalcedony infill, altered - ser-ill & lim
QV17-021	101.9	105	3.1	BQFG		moderately fractured qtz-crb vein zone; pervasive ser-ill alteration, moderate fracture controlled to pervasive limonite; 0.5-1% disseminated pyrite
QV17-021	105	114.4	9.4	BQFG	FTBX	breccia / stockwork zone; well developed fracture network - bx apperence; fractures are typically narrow (<1mm) with dark grey (chalcedony?) or limonitic infill; unit is silicified and pervasively ser-ill altered; variable finely disseminated to locally blebby pyrite - 0.5-1%, locally up to 2-3%

HOLE ID	FROM (m)	TO (m)	INTERVAL (m)	LITH 1	LITH 2	DESCRIPTION
QV17-021	114.4	118	3.6	BQFG	FTBX	fault/bx zone; alternating zones of rubble/clay gouge and competent core
QV17-021	118	131.3	13.3	BQFG	FTBX	breccia / stockwork zone, as above 106.5-114.5m; more intense ser-ill alteration, weakened lim; stockwork intensifies 123.8-130.5m - dark grey (chalcedony?) infill in wider fractures, associated strong silicification; variable finely disseminated py 1-3%
QV17-021	131.3	137.1	5.8	BQFG		moderately fractured to weakly stockworked, intensity increasing towards bottom of interval; qtz-crb infill, some zones of chalcedonic infill; patchy ser-ill + chlorite; 0.5-1% finely disseminated to blebby pyrite
QV17-021	137.1	140	2.9	BQFG	FTBX	fault/bx zone; alternating zones of rubble/clay gouge and competent core
QV17-021	140	144.6	4.6	FTBX		light green silicified bx zone; abundant qtz with lesser dark grey chalcedony; strong pervasive chlorite alteration; 1-2% finely disseminated pyrite
QV17-021	144.6	145.7	1.1	FTBX	FGG	similar to above, more rubbly & bx with abundant dark grey clay gouge
QV17-021	145.7	151	5.3	BQFG		moderate stockwork with off white qtz-crb infill; patchy ser-ill alteration + silicification; chlorite fades after 147m; blebby pyrite, 0.5%
QV17-021	151	154.5	3.5	BQFG		variably altered dark grey biotite gneiss/schist; zones of intense silicification with minor ser-ill alteration and 3-5% finely disseminated pyrite; patchy chlorite & hematite
QV17-021	154.5	161.1	6.6	BQFS		strongly altered vein/stk zone; pervasive silicification, ser-ill + chl alteration; 3-5% finely disseminated to blebby pyrite, often vein associated
QV17-021	161.1	166.5	5.4	BQFS		patchy ser-ill + chlorite +/- sil alteration, associated with zones of veining/stk; 1-2% py

HOLE ID	FROM (m)	TO (m)	INTERVAL (m)	LITH 1	LITH 2	DESCRIPTION
QV17-021	166.5	186.85	20.35	BQFS		dark blue-grey biotite schist; sparse patchy alteration - ser-ill + chl; reduced veining - mainly qtz-crb stringers; some foliation parallel qtz-crb veins developing towards bottom of interval - cross cut by stringer/stk network; pyrite associated with qtz-crb veining; localized core scale shearing and folds
QV17-021	186.85	191.15	4.3	CFP		light green feldspar porphyry dyke; pervasive chlorite alteration; strong white clay (ser-ill?) or talc + carbonate alteration on fractures, less intense alteration of feldspar grains
QV17-021	191.15	210.82	19.67	BQFS		dark blue-grey biotite schist with dark purple bands/veinlets (chalcedony?); patchy green chlorite altered, foliation parallel qtz-crb vein zones, often silicified; pyrite associated with vein zones, locally 3-5%; white clay or talc + carbonate alteration associated with fractures
QV17-022	0	3.28	3.28	OVB		
QV17-022	3.28	12.2	8.92	BQFGa		rubbly felsic gneiss with multiple small faults; mod-str limonite alteration associated with fractures, locally pervasive
QV17-022	12.2	20	7.8	BQFG	FTBX	faulted/bx felsic gneiss; zones of coarse fault gouge; pervasive limonite alteration; weak-mod sericite-illite alteration associated with fractures
QV17-022	20	29.7	9.7	FTBX	BQFG	fault; brown to grey unconsolidated sandy material with gravel; zones of rubbly/blocky felsic gneiss
QV17-022	29.7	39.5	9.8	BQFG	FTBX	grey, rubbly felsic gneiss; weak-mod limonite + crb associated with fractures; patchy hematite alt on fractures
QV17-022	39.5	51.8	12.3	BQFG		siliceous felsic gneiss +/- augen; core becomes more competent, minor blocky zones; weak ser-ill developing associated with fractures; weak lim on fractures
QV17-022	51.8	74.13	22.33	BQFGa		variably altered felsic augen gneiss; patchy ser-ill, typically associated with fractures, locally pervasive; zones of silicification; 65-74m - zone of epithermal qtz-crb veining with associated pyrite mineralization (tr-0.5%)
QV17-023	0	1.28	1.28	OVB		

HOLE ID	FROM (m)	TO (m)	INTERVAL (m)	LITH 1	LITH 2	DESCRIPTION
QV17-023	1.28	16	14.72	BQFG		med grey to orange-brown rubbly felsic gneiss (+/-augen); limonite alteration associated with fractures, locally pervasive; zones of weak fc ser-ill
QV17-023	16	29.8	13.8	FTBX	BQFG	limonitic fault zone; short intervals of competent or blocky felsic gneiss
QV17-023	29.8	43.24	13.44	BQFG		med grey to orange-brown rubbly felsic gneiss (+/-augen); limonite alteration associated with fractures, locally pervasive; zones of weak fc ser-ill

CERTIFICATE WH17219032

Project: QV

P.O. No.: 17-QV-01

This report is for 116 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 10-OCT-2017.

The following have access to data associated with this certificate:

CHRIS LIVINGSTONE	KRIS RAFFLE	DAVID TERRY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
DRY-22	Drying - Maximum Temp 60C
CRU-32	Fine Crushing 90% <2mm
SPL-21	Split sample - riffle splitter
PUL-32	Pulverize 1000g to 85% < 75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
Au-AA24	Au 50g FA AA finish	AAS

To: **COMSTOCK METALS LTD.**
ATTN: CHRIS LIVINGSTONE
310 - 850 WEST HASTINGS STREET
VANCOUVER BC V6C 1E1

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE OF ANALYSIS WH17219032

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

Applies to Method: REE's may not be totally soluble in this method.
ME-MS61

LABORATORY ADDRESSES

Applies to Method: Processed at ALS Whitehorse located at 78 Mt. Sima Rd, Whitehorse, YT, Canada.

CRU-32	CRU-QC	DRY-22	LOG-22
LOG-23	PUL-32	PUL-QC	SPL-21
WEI-21			

Applies to Method: Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

Au-AA24	ME-MS61

CERTIFICATE WH17219033

Project: QV

P.O. No.: 17-QV-02

This report is for 124 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 10-OCT-2017.

The following have access to data associated with this certificate:

CHRIS LIVINGSTONE	KRIS RAFFLE	DAVID TERRY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
DRY-22	Drying - Maximum Temp 60C
CRU-32	Fine Crushing 90% <2mm
SPL-21	Split sample - riffle splitter
PUL-32	Pulverize 1000g to 85% < 75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
Au-AA24	Au 50g FA AA finish	AAS

To: **COMSTOCK METALS LTD.**
ATTN: CHRIS LIVINGSTONE
310 - 850 WEST HASTINGS STREET
VANCOUVER BC V6C 1E1

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE OF ANALYSIS WH17219033

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

Applies to Method: REE's may not be totally soluble in this method.
ME-MS61

LABORATORY ADDRESSES

Applies to Method: Processed at ALS Whitehorse located at 78 Mt. Sima Rd, Whitehorse, YT, Canada.

CRU-32	CRU-QC	DRY-22	LOG-22
LOG-23	PUL-32	PUL-QC	SPL-21
WEI-21			

Applies to Method: Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

Au-AA24	ME-MS61

CERTIFICATE WH17230982

Project: QV

P.O. No.: 17-QV-06

This report is for 226 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 24-OCT-2017.

The following have access to data associated with this certificate:

CHRIS LIVINGSTONE	KRIS RAFFLE	DAVID TERRY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-23	Pulp Login - Rcvd with Barcode
BAG-01	Bulk Master for Storage
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
DRY-22	Drying - Maximum Temp 60C
CRU-32	Fine Crushing 90% <2mm
SPL-21	Split sample - riffle splitter
PUL-32	Pulverize 1000g to 85% < 75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
Au-AA24	Au 50g FA AA finish	AAS

To: **COMSTOCK METALS LTD.**
ATTN: CHRIS LIVINGSTONE
310 - 850 WEST HASTINGS STREET
VANCOUVER BC V6C 1E1

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE OF ANALYSIS WH17230982

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

REE's may not be totally soluble in this method.

Applies to Method: ME-MS61

LABORATORY ADDRESSES

Processed at ALS Whitehorse located at 78 Mt. Sima Rd, Whitehorse, YT, Canada.

Applies to Method:				
BAG-01	CRU-32	CRU-QC	DRY-22
LOG-22	LOG-23	PUL-32	PUL-QC
SPL-21	WEI-21		

Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

Applies to Method:	
Au-AA24	ME-MS61

CERTIFICATE WH17230984

Project: QV

P.O. No.: 17-QV-07

This report is for 54 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 24-OCT-2017.

The following have access to data associated with this certificate:

CHRIS LIVINGSTONE	KRIS RAFFLE	DAVID TERRY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-23	Pulp Login - Rcvd with Barcode
BAG-01	Bulk Master for Storage
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
DRY-22	Drying - Maximum Temp 60C
CRU-32	Fine Crushing 90% <2mm
SPL-21	Split sample - riffle splitter
PUL-32	Pulverize 1000g to 85% < 75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
Au-AA24	Au 50g FA AA finish	AAS

To: **COMSTOCK METALS LTD.**
ATTN: CHRIS LIVINGSTONE
310 - 850 WEST HASTINGS STREET
VANCOUVER BC V6C 1E1

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE OF ANALYSIS WH17230984

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

Applies to Method: REE's may not be totally soluble in this method.
ME-MS61

LABORATORY ADDRESSES

Applies to Method: Processed at ALS Whitehorse located at 78 Mt. Sima Rd, Whitehorse, YT, Canada.

BAG-01	CRU-32	CRU-QC	DRY-22
LOG-22	LOG-23	PUL-32	PUL-QC
SPL-21	WEI-21		

Applies to Method: Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

Au-AA24	ME-MS61

CERTIFICATE WH17230986

Project: QV

P.O. No.: 17-QV-08

This report is for 58 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 24-OCT-2017.

The following have access to data associated with this certificate:

CHRIS LIVINGSTONE	KRIS RAFFLE	DAVID TERRY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-23	Pulp Login - Rcvd with Barcode
BAG-01	Bulk Master for Storage
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
DRY-22	Drying - Maximum Temp 60C
CRU-32	Fine Crushing 90% <2mm
SPL-21	Split sample - riffle splitter
PUL-32	Pulverize 1000g to 85% < 75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
Au-AA24	Au 50g FA AA finish	AAS

To: **COMSTOCK METALS LTD.**
ATTN: CHRIS LIVINGSTONE
310 - 850 WEST HASTINGS STREET
VANCOUVER BC V6C 1E1

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE OF ANALYSIS WH17230986

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

Applies to Method: REE's may not be totally soluble in this method.
ME-MS61

LABORATORY ADDRESSES

Applies to Method: Processed at ALS Whitehorse located at 78 Mt. Sima Rd, Whitehorse, YT, Canada.

BAG-01	CRU-32	CRU-QC	DRY-22
LOG-22	LOG-23	PUL-32	PUL-QC
SPL-21	WEI-21		

Applies to Method: Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

Au-AA24	ME-MS61

CERTIFICATE WH17232210

Project: QV

P.O. No.: 17-QV-05

This report is for 90 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 25-OCT-2017.

The following have access to data associated with this certificate:

CHRIS LIVINGSTONE	KRIS RAFFLE	DAVID TERRY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-23	Pulp Login - Rcvd with Barcode
BAG-01	Bulk Master for Storage
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
DRY-22	Drying - Maximum Temp 60C
CRU-32	Fine Crushing 90% <2mm
SPL-21	Split sample - riffle splitter
PUL-32	Pulverize 1000g to 85% < 75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
Ag-OG62	Ore Grade Ag - Four Acid	ICP-AES
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Ag-GRA21	Ag 30g FA-GRAV finish	WST-SIM
Au-AA24	Au 50g FA AA finish	AAS

To: **COMSTOCK METALS LTD.**
ATTN: CHRIS LIVINGSTONE
310 - 850 WEST HASTINGS STREET
VANCOUVER BC V6C 1E1

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE WH17236242

Project: QV

P.O. No.: 17-QV-03

This report is for 157 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 27-OCT-2017.

The following have access to data associated with this certificate:

CHRIS LIVINGSTONE	KRIS RAFFLE	DAVID TERRY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-23	Pulp Login - Rcvd with Barcode
BAG-01	Bulk Master for Storage
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
DRY-22	Drying - Maximum Temp 60C
CRU-32	Fine Crushing 90% <2mm
SPL-21	Split sample - riffle splitter
PUL-32	Pulverize 1000g to 85% < 75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
Au-AA24	Au 50g FA AA finish	AAS

To: **COMSTOCK METALS LTD.**
ATTN: CHRIS LIVINGSTONE
310 - 850 WEST HASTINGS STREET
VANCOUVER BC V6C 1E1

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

Recommended value and the "Between Laboratory" two standard deviations

Gold	***1.21 g/t ± 0.11 g/t***	***30g FA, instrumental***	***Certified value***

PREPARED BY: CDN Resource Laboratories Ltd.
CERTIFIED BY: Duncan Sanderson, B.Sc., Licensed Assayer of British Columbia
INDEPENDENT GEOCHEMIST: Dr. Barry Smee., Ph.D., P. Geo.
DATE OF CERTIFICATION: May 25, 2015

ORIGIN OF REFERENCE MATERIAL:

Standard CDN-GS-1R was prepared using 793 kg of blank granite and 7 kg of a high grade gold ore.
.

METHOD OF PREPARATION:

Reject ore material was dried, crushed, pulverized and then passed through a 270 mesh screen. The +270 material was discarded. The -270 material was mixed for 5 days in a double-cone blender. Splits were taken and sent to 15 commercial laboratories for round robin assaying. Round robin results are displayed below:

	Lab 1	Lab 2	Lab 3	Lab 4	Lab 5	Lab 6	Lab 7	Lab 8	Lab 9	Lab 10	Lab 11	Lab 12	Lab 13	Lab 14	Lab 15

Total S	0.1			

REFERENCE MATERIAL: CDN-GS-1R

Statistical Procedures:

The final limits were calculated after first determining if all data was compatible within a spread normally expected for similar analytical methods done by reputable laboratories. Data from any one laboratory was removed from further calculations when the mean of all analyses from that laboratory failed a t test of the global means of the other laboratories. The mean and standard deviation were calculated using all remaining data. Any analysis that fell outside of the mean ±2 standard deviations was removed from the ensuing data base. The mean and standard deviations were again calculated using the remaining data. This method is different from that used by Government agencies in that the actual "between-laboratory" standard deviation is used in the calculations. This produces upper and lower limits that reflect actual individual analyses rather than a grouped set of analyses. The limits can therefore be used to monitor accuracy from individual analyses, unlike the Confidence Limits published on other standards.

Participating Laboratories: (not in same order as table of assays)

Bureau Veritas (Acme), Vancouver, BC, Canada

Recommended value and the "Between Laboratory" two standard deviations

Gold	***7.19 g/t***	***±***	***0.37 g/t***	***30 g FA, instrumental***	***Certified value***
Gold	***7.15 g/t***	***±***	***0.40 g/t***	***30 g FA, gravimetric***	***Certified value***

Note: Standards with an RSD of near or less than 5% are certified; RSD's of between 5% and 15% are Provisional; RSD's over 15% are Indicated. Provisional and Indicated values cannot be used to monitor accuracy with a high degree of certainty.

The certified value and between lab 2SD calculated for each element are based on specific analytical procedures. It is inappropriate to apply them to other techniques.

PREPARED BY: CDN Resource Laboratories Ltd.
CERTIFIED BY: Duncan Sanderson, B.Sc., Licensed Assayer of British Columbia
INDEPENDENT GEOCHEMIST: Dr. Barry Smee., Ph.D., P. Geo.
DATE OF CERTIFICATION: June 21, 2016

ORIGIN OF REFERENCE MATERIAL:

Standard CDN-GS-7G was prepared using 730 kg of low grade granitic ore with 70 kg of gold bearing ore.
.
METHOD OF PREPARATION:

Reject ore material was dried, crushed, pulverized and then passed through a 270 mesh screen. The +270 material was discarded. The -270 material was mixed for 5 days in a double-cone blender. Splits were taken and sent to 15 commercial laboratories for round robin assaying. Round robin results are displayed below:

Statistical Procedures:

The final limits were calculated after first determining if all data was compatible within a spread normally expected for similar analytical methods done by reputable laboratories. Data from any one laboratory was removed from further calculations when the mean of all analyses from that laboratory failed a t test of the global means of the other laboratories. The mean and standard deviation were calculated using all remaining data. Any analysis that fell outside of the mean ±2 standard deviations was removed from the ensuing data base. The mean and standard deviations were again calculated using the remaining data. This method is different from that used by Government agencies in that the actual "between-laboratory" standard deviation is used in the calculations. This produces upper and lower limits that reflect actual individual analyses rather than a grouped set of analyses. The limits can therefore be used to monitor accuracy from individual analyses, unlike the Confidence Limits published on other standards.

Our certified gold values are based on 30 g Fire Assay determinations. For optimal results, we strongly recommend you assay our standards with similar methods using "at least" 30 g of material. Using a smaller sample weight may result in erratic values.
