INTRODUCTION

The Meloy property covers porphyry and vein style, copper±gold±silver±molybdenum ±tungsten±tin±zinc mineralization. The property is located in the Ruby Range of southwestern Yukon and is owned 100% by Strategic Metals Ltd.

This report describes a ten day program of prospecting, hand trenching and soil geochemistry that was conducted on the Meloy property between July 19 and 29, 2017. The work was performed by Archer, Cathro & Associates (1981) Limited on behalf of Strategic Metals. The author supervised the field program and interpreted the data from work. The author's Statement of Qualifications is in Appendix I and a Statement of Expenditures is located in Appendix II.

PROPERTY LOCATION, CLAIM DATA AND ACCESS

The Meloy property comprises 234 contiguous mineral claims located 90 km northwest of Haines Junction in southwestern Yukon, at latitude 61°29'N and longitude 138°11'W on NTS map sheets 115G/08 and 115G/09 (Figure 1). The property covers an area of approximately 4845 ha (48.45 km²). The claims are registered with the Whitehorse Mining Recorder in the name of Archer Cathro, which holds them in trust for Strategic Metals. Claim data are listed below, while the locations of individual claims are illustrated on Figure 2.

<u>Claim Name</u>	<u>Grant Number</u>	<u>Expiry Date*</u>
Meloy 1-20	YC65705-YC65724	March 31, 2027
21-42	YC65745-YC65766	March 31, 2027
43-58	YD117353-YD117368	April 02, 2023
59-74	YD117369-YD117384	April 02, 2023
75-98	YD117385-YD117408	April 02, 2023
99-182	YD117109-YD117192	April 02, 2023
183-234	YD117193-YD117244	April 02, 2023

* Expiry dates include 2017 work that has been filed for assessment credit, but not yet accepted.

Access to the property in 2017 was provided by a Bell 206B helicopter operated by Capital Helicopters (1995) Limited of Whitehorse from the Silver City airstrip at the southern end of Kluane Lake, which is located about 45 km south of the Meloy property.

The closest road access to the Meloy property is at the abandoned community of Aishihik about 35 km to the east-northeast. If required, heavy equipment could access the property via a trail that extends from Aishihik to the Meloy property and nearby historical placer workings (Figure 2).

The entire Meloy property lies within the traditional territory of the Kluane First Nation and the eastern portion overlays with the traditional territory of the Champagne and Aishihik First Nations. The Kluane, Champagne and Aishihik First Nations have concluded land claim agreements with Canada and Yukon.

HISTORY

J. Meloy initially staked the area in 1951 as the Molly claims and performed hand trenching in 1952. The Molly claims were allowed to lapse, and the area was restaked in 1960 by J. McConnery as the Big Sam claims and again in 1962 by L. Nault as the Pag and Bird claims (Smith, 1971). No reports were filed regarding any of these claims.

In 1970, Phelps Dodge acquired a large claim block and conducted a work program that included mapping, geochemical surveys, one diamond drill hole (66.7 m) on the floor of the Main Cirque (Figure 2) and two diamond drill holes 305.7 m in the Rockslide area to the east. No drill logs or assays were reported from this work (Smith, 1971).

In 1986, the Geological Survey of Canada (GSC) performed a regional stream sediment survey on the map sheets where the Meloy property is located. Samples taken from streams draining the area of the property produced moderately to strongly anomalous results including peak values of 97 ppm copper, 28 ppm tungsten, and 298 ppm zinc (Friske *et al.*, 1986).

In 2007, Strategic Metals staked the Meloy property. In 2008, it performed a three day program comprising prospecting and soil sampling. Results from this program were encouraging. Twenty-six rock samples were assayed with peak values of 4.89% copper, 832 ppb gold, 9770 ppm molybdenum, 3.51% tungsten and 6420 ppm tin. One hundred and fifteen soil samples were also analyzed yielding peak values of 2300 ppm copper, 42 ppb gold, 595 ppm molybdenum, 129 ppm tungsten and 127 ppm tin (Smith, 2008).

In 2010, Strategic Metals spent one day prospecting and geochemically sampling the Meloy property. Eleven rock and 58 soil samples were collected for analysis. Results from this work supported the anomalies identified by the 2008 program. Rocks yielded up to 1.06 g/t gold, 110 ppm silver, 8720 ppm molybdenum, 3380 ppm tungsten, 312 ppm tin, and greater than 1% copper and zinc. Soil sampling returned further anomalous results to maximums of 2000 ppm copper, 224 ppb gold, 4 ppm silver, 12 ppm molybdenum, 100 ppm tungsten, and 80 ppm tin (Smith, 2011).

Also in 2010, Strategic Metals contracted New-Sense Geophysics Ltd. of Markham, Ontario to perform an airborne magnetic survey over the property. A total of 293 line kilometres were flown. This survey identified two circular magnetic lows in the northern part of the property and a number of linear lows in the southern part (Smith, 2011).

From early 2011 to summer 2012, the property was under option to Alix Resources Corp. There is no record of any work that Alix may have done under terms of that agreement.

In the summer of 2012, after the option agreement with Alix expired, Strategic Metals performed one day of mapping, prospecting and soil sampling. Eight rock samples and 135 soil samples were collected for analysis. Rocks yielded up to 0.303 g/t gold, 1.04% copper, 18.7 ppm silver, 1.47% molybdenum, 341 ppm tungsten, 119 ppm tin, and 589 ppm zinc. Soil sampling expanded the soil geochemical anomaly to encompass a 2500 m in diameter area with a 1000 m in diameter core of strong to very strong copper, gold, silver and molybdenum values. The core

is centered on the Main Cirque (Figure 2) and includes peak values of 4520 ppm copper, 673 ppb gold, 18.6 ppm silver, 595 ppm molybdenum, 266 ppm tungsten, 217 ppm tin and 2090 ppm zinc (Smith, 2012).

In August 2013, Strategic Metals contracted Underhill Geomatics Ltd. to fly aerial photography over the Meloy property. An interpretation of the air photos was completed in spring 2014 and identified outcrop locations, vegetation and overburden covered areas, and colour variations that are thought to reflect differences in alteration types.

Between August 19 and 24, 2014 Strategic Metals performed a seven day program that included geological mapping, prospecting, hand trenching and soil geochemistry (36 samples). Peak values of 8.72% Cu, 1.06 g/t Au, 560 ppm Ag and 1.47 % Mo were obtained from 54 rock samples and hand trenching returned 4.47% Cu, 0.208 g/t Au and 296 g/t Ag over 10 m (trench TR14-01).

In 2015, ground surveying was conducted by Underhill Geomatics Ltd. to facilitate preparation of the 2013 air photos and the creation of detailed topographic maps (Morten, 2015).

In winter 2017, the Alaskite claims covering the Northstar and Rockslide areas, southeast of the existing Meloy property, lapsed. Shortly after, Strategic staked an additional 140 Meloy claims to cover the Rockslide and Northstar areas. The Alaskite claims were originally staked by Shawn Ryan in 2011 after a reconnaissance soil geochemical program in 2007. Ryan conducted two further soil geochemical programs that consisted of 329 samples in 2011 and 566 samples in 2012 (Ryan, 2013). Ryan's sampling outlined sizable copper, molybdenum, tungsten and bismuth ± gold anomalies.

In February 2018, the Meloy claims 183-234 were staked.

GEOMORPHOLOGY

The Meloy property lies within the Ruby Range in the southern part of the Yukon Plateau. It is underlain by rugged alpine terrain characterized by sharp peaks and high rounded ridges, which are bounded by steep-walled valleys with broad flat floors. Some of the peaks and ridges may have escaped glaciation, but glacial features are common at lower elevations (Muller, 1967).

A large northwest-trending ridge runs through the centre of the Main Cirque zone connecting three prominent peaks referred to as South, Central and North (Figure 2). A series of southwest-trending spurs extend off the South and Central peaks. South-facing slopes are moderately steep and are blanketed by relatively stable talus and vegetation. North-facing slopes are largely inaccessible because of cliffs and unstable talus. The Rockslide and Northstar areas are dominated by a north trending ridge, referred to as Plaster Ridge, that is characterized by steep and rugged walls leading up to a relatively wide and flat top.

The Main Cirque area is separated from the Rockslide and Northstar zones by a broad steep walled valley occupied by Alaskite Creek (which drains north) and Raft Creek, which initially drains south, then turns towards the west. Talbot Creek is located on the eastern side of Plaster

Ridge and drains the Rockslide and Northstar areas to the north. A large rock glacier sits at the head of Talbot Creek, within Talbot Cirque.

Elevations on the property range from 1675 m to 2245 m. Sparse vegetation consisting of moss and grass is found on valley floors, south-facing slopes and small upland plateaus.

All creeks draining the property flow into Talbot Arm of Kluane Lake, which is part of the White River watershed and the Yukon River system.

REGIONAL GEOLOGY

The property is located between the Tintina and Denali faults (Figure 3). The regional geology was originally mapped at 1:250,000 scale by the Geological Survey of Canada (GSC) in the early 1970s (Templeman-Kluit, 1974). In 1999, Gordey and Makepeace (1999) reinterpreted regional geology in the Meloy area as part of a Yukon-wide compilation. In 2007 to 2016, the Yukon Geological Survey (YGS) re-mapped the northern portion of map sheet 115G and the west half of 115H (Israel et al., 2010; Israel and Westberg; 2011; Israel and Borch, 2015; Israel and Friend, 2016). The following description of regional geology is based on the most recently published data.

Rocks in the vicinity of the Meloy property belongs to three main tectonic elements: 1) Kluane schist; 2) Ruby Range suite; and 3) Yukon-Tanana terrane. Collectively these elements form a northeast-dipping structural stack that exposes a roughly 50 km thick section of crust, extending from the Denali Fault to the north end of Aishihik and Sekulmун lakes (Figure 4).

The Yukon-Tanana terrane in the region consists of Proterozoic to Devonian siliciclastic rocks of the Snowcap Assemblage, structurally interleaved with Devonian to Mississippian metavolcanic rocks, carbonaceous schist, quartzite and marble of the Finlayson assemblage. These rocks are polydeformed and metamorphosed up to amphibolite grade. Structure is dominated by a moderately to steeply northeast dipping, northwest striking foliation and southwest verging overturned folds.

The Kluane schist is dominated by biotite, muscovite and quartz schist with minor carbonaceous pelite, ultramafic rocks and marble. The schists are upper greenschist to lower amphibolite grade, and show several phases of deformation. The dominant structures are similar to the Yukon-Tanana terrane with northwest striking and northeast dipping foliation and overturned, southwest verging folds. An early Late Cretaceous age has been assigned to the Kluane schist based on detrital zircons found within the unit.

The Ruby Range suite is dominated by biotite-hornblende granodiorite and quartz diorite. Other phases include granite, tonalite and quartz-feldspar porphyry. The suite ranges in age from ~65 Ma to 52 Ma. The oldest portions of the suite are found along the Kluhini River thrust and are strongly to moderately foliated. Younger phases tend to be massive and cross-cut the foliation within the older phases as well as overprinting much of the thrust. The younger phases have distinctive smoky quartz crystals and show evidence of being intruded at high crustal levels. The Ruby Range suite is intimately related to its extrusive equivalent, the Rhyolite Creek volcanic

rocks. The volcanic rocks are dominated by dacite, andesite and rhyolite with minor amounts of basalt. The Rhyolite Creek volcanic rocks outcrop at the northern edge of the Ruby Range suite, corresponding to the magmatic rocks intruded at the higher crustal levels.

The Yukon-Tanana terrane is thrust over the Kluane schist along the Kluhini River thrust. This is a Late Cretaceous thrust fault that is truncated by the Denali fault in the northwest and continues into northwestern British Columbia in the south. Most of this fault is overprinted by intrusive rocks of the Ruby Range suite; however, it is periodically exposed between Kluane Lake in the west and Dezadeash Lake in the south. The most recent ductile deformation within the Yukon-Tanana terrane and all ductile fabrics within the Kluane schist can be related to this Late Cretaceous thrusting event.

The area has also been affected by large brittle/ductile and brittle faults. The largest of these structures is the Denali fault, located approximately 40 km to the south of the Meloy property. This is a northwest striking, steeply dipping fault that has as much as 400 km of Latest Cretaceous to Tertiary dextral offset. Closer to the Meloy property the Serpent Head Lake fault strikes northwest that has as much as 100 km of strike length. The age and kinematics of this fault are unknown; however it may be an important feature for controlling mineralization to the west of the Meloy (e.g. the Wolf property). Several north and northeast striking brittle structures cross-cut intrusive rocks of the Ruby Range suite as well as the Rhyolite Creek volcanic rocks. In several instances these act as conduits for mafic and porphyry dykes and overlying volcanic rocks.

PROPERTY GEOLOGY

Systematic geological mapping of the Main Ridge area was undertaken by Burrell (2014), no further property scale mapping has occurred since then. Some areas on the property have not been mapped due to difficult access to bedrock and talus cover. Table 1 shows the main lithologic units immediately surrounding and within the Meloy claim boundary.

Table I – Lithological Descriptions

Unit Name (symbol)	Age	Description (<i>From Israel et al., 2010</i>)
Ruby Range suite (PR)	Paleocene	Fine to coarse-grained, salt and pepper, hornblende ± biotite quartz diorite, medium grained, light grey to pinkish, biotite ± hornblende granodiorite; fine to medium grained, beige to grey tonalite with smoky grey quartz.
Alaskite Creek (EJA)	Early Jurassic	Massive, unfoliated, medium-grained, green-pink-grey, biotite ± hornblende granite, plagioclase crystals altering to a greenish colour, moderately to strongly magnetic.
Finlayson Assemblage (DMF)	Upper Devonian to Lower Mississippian	Polydeformed and metamorphosed mafic to felsic metavolcanic rocks; carbonaceous pelite, quartzite and psammite; quartz-muscovite schist; light grey to beige marble.

The Meloy property is wholly underlain by Ruby Range suite, comprising medium to coarse grained, hornblende ± biotite quartz diorite and medium grained, light grey to pinkish, biotite ± hornblende granodiorite with common smoky grey quartz crystals. On the property, the Ruby Range suite has been subdivided using distinctive weathering characteristics, all of which are likely related to alteration types. These include: 1) rusty weathering Ruby Range suite appears to be weakly argillic altered and contains minor pyrite around mafic minerals; 2) grey weathering Ruby Range suite is thought to be weakly potassic altered or unaltered; and 3) tan weathering Ruby Range suite is strongly clay altered (Figure 5). No detailed petrographic studies have been done to establish the alteration characteristics.

In the south-central part of the property there is a red-brown hematite-rich gossan zone that lies within the Ruby Range suite and is associated with closely spaced joint sets and shear surfaces (Smith, 1971).

Late stage, fine-grained, homogenous, diabase dykes and fine-grained aplite to quartz-feldspar porphyry dykes parallel the strongest fracture set. Where exposed, these dykes are up to one metre thick.

In 2014, several fracture sets were measured within Ruby Range suite. Although a wide range of attitudes were recorded, the primary fractures were found to strike 000 to 045° and dip 65 to 80° to the west. Work in 2017 identified a multitude of fractures and veinlets that predominantly had the same orientation as previously identified features (striking 180-220° and dipping 75-88°W). A number of strong, recessively weathering linears cross the Main Ridge. These linears typically trend 000 to 012° and are developed atop strongly fractured dykes or up to two metre wide zones that contain multiple quartz-flooded fractures.

A structural zone identified within the Main Ridge area, between trenches TR-14-01, TR-14-02 and TR-14-03, separates grey weathering potassic-altered granodiorite from rusty weathering phyllitic and argillic (?) altered granodiorite. The zone strikes northeast and appears to align with a fault interpreted to run along Alaskite Creek. Several steeply dipping mafic (diabase?) dykes are found within this structural zone, several of which have well-developed slickensides and polished surfaces suggesting they were intruded during or prior to movement along the zone.

MINERALIZATION AND HAND TRENCHING

To date, the Main Ridge and the Main Cirque areas have been the primary focus of prospecting on the property. The following descriptions of mineralization, distribution and alteration are mainly based on observations from those areas with a minor amount of work described from the work S. Ryan and others have completed in the Rockslide area.

Most of the mineralization discovered to date on the property is hosted in quartz veins, veinlets and fractures. Mineralized structures are most evident in the grey weathering Ruby Range suite. Some mineralization has also been found in the southern part of the Main Ridge area, in quartz veins found within an east-trending zone of tan coloured talus that may be derived from a shear zone. A relatively flat lying (186°/19W) 20-30 cm thick quartz vein located within TR-14-01 is mineralized with bornite, chalcopyrite and encrusting malachite.

A variety of sulphide minerals have been identified to date on the property. Pyrite, arsenopyrite, chalcopyrite, pyrrhotite and bornite occur in narrow fractures and quartz veins. Molybdenum is found as fine grains in veins that range from millimetre-scale to 30 cm in width or as coarse rosettes along dry fractures. Bladed wolframite crystals up to 1.5 cm in length are hosted in quartz veins that are up to six centimetres across. No tin minerals have been identified on the property.

Table II describes styles of mineralization in the veins.

Table II – Styles of Mineralization within Quartz Veins

Mineral	Abundance	Size and form
Pyrite	Approximately 2%	Disseminated, 2 mm cubic crystals
Chalcopyrite	Approximately 4%	Disseminated and blebby crystals
Arsenopyrite	Less than 1%	Fine stringers
Molybdenite	Approximately 3%	Up to 3 cm diameter rosettes
Bornite	Less than 1%	Bands up to 2 cm thick
Wolframite	Approximately 1%	3 mm to 1.5 cm long bladed crystals.

Secondary mineralization occurs within and adjacent to weathered quartz veins and diabase dykes. Malachite and azurite coat talus surfaces and fracture planes in the recessive linears associated with dykes exposed on the Main Ridge. Small limonitic pits after pyrite are common within quartz veins. Scorodite is found within the east-trending zone of tan talus in the south of the Main Ridge portion of the property as well within the Rockslide area.

The highest concentrations of quartz veins are observed within recessive linears along the crest of the Main Ridge and in outcrops along the southern wall of the Main Cirque; however, this apparent distribution may be biased because only the central part of the property has been mapped and prospected. Overall abundance of quartz veins in most parts of the property has not yet been determined.

In 2017, a total of 66 rock samples were collected for analysis (Figure 5). Of these 53 were chip samples focussed on two areas, 11 samples were taken from a gossan southeast of camp in the Rockslide area and a further 42 samples from the Main Ridge area. Thirteen rock samples were collected from outcrops, sub-crops or talus. The chip samples are described below, while the other samples are described in Appendix III. Thematic results for copper, gold, silver and molybdenum are illustrated on Figures 6 to 9.

All rock sample sites in 2017 were marked with orange flagging tape labeled with the sample number. The location of each sample was determined using a handheld GPS unit. All samples sent for shipment were double bagged with an individually pre-numbered sample tag placed in each bag. Analytical work was done by ALS Minerals, with sample preparation in Whitehorse and assays and geochemical analyses in North Vancouver. All rock samples were analyzed for gold by fire assay followed by atomic absorption (Au-AA24) and 48 other elements by four acid digestion followed by inductively coupled plasma-atomic emission spectroscopy (ME-MS61). Overlimit values were determined for copper and molybdenum using a four acid digestion

followed by inductively coupled plasma-atomic emission spectroscopy (Cu/Mo-OG62). Certificates of Analysis are copied in Appendix IV.

Descriptions of samples collected during previous programs and sample preparation and analytical techniques used to test them can be found in Smith (2008, 2011 and 2012) and Burrell (2014). Table III lists anomalous thresholds used to describe rock geochemical results.

Table III – Anomalous Rock Thresholds

Element	Weak (ppm)	Moderate (ppm)	Strong (ppm)	Historical Peak* (ppm)	2017 Peak (ppm)
Copper	>200 ≤500	>500 ≤1000	>1000	87,200	121,500
Gold	>0.2 ≤0.5	>0.5 ≤1.0	>1.0	1.06	1.31
Silver	>5 ≤10	>10 ≤20	>20	560	85.6
Molybdenum	>50 ≤100	>100 ≤500	>500	39,400	82.9
Tungsten	>100 ≤200	>200 ≤500	>500	35,100	2040
Tin	>100 ≤200	>200 ≤500	>500	1950	500.5
Zinc	>500 ≤1000	>1000 ≤2000	>2000	10,010	2160

* Overlimit analyses for copper and zinc were not performed in 2010.

Main Ridge

Six of the thirteen rock samples were collected from the Main Ridge area (Figures 6-9). The geochemical signature of samples taken along the Main Ridge is notably enriched in copper, silver, molybdenum and tungsten. Individual rock samples returned background to strongly anomalous results, with all strongly anomalous values for elements of interest coming from quartz veins and Ruby Range suite that is cut by swarms of veinlets or high intensity fractures. All of the 2017 samples were collected from grey weathering, potassic altered granodiorite returning highest values of copper (12.15%), gold (0.315 g/t), tungsten (34.6 ppm), zinc (2140 ppm), molybdenum (82.9 ppm), silver (270 ppm) and tin (500.5 ppm).

Three rock samples were taken from approximately one kilometre north of the Main Ridge area, outside of the area of detailed mapping completed in 2014 (Figure 6-9). These samples returned background values in gold and molybdenum, and background to strong values of all other elements of interest. Peak values for copper (2.76%), tin (480 ppm), tungsten (2040 ppm) and zinc (2140 ppm) came from sericite and limonite quartz veins, and silver (42 ppm) from a silicified diabase dyke,

Main Cirque

Three rock samples were collected from the Main Cirque area, all from rusty weathered argillic altered granodiorite of the Ruby Range suite (Figures 6-9). The samples returned mainly background to weakly anomalous values in silver, gold, molybdenum, tin and zinc with background to moderate values of tungsten (up to 229 ppm) and moderate to strong copper values (up to 0.268%).

Rockslide

One grab sample from scorodite stained drusy quartz float was sampled from the Rockslide area southeast of camp (Figures 6-9). The quartz contained ~1% disseminated arsenopyrite, sparse clots of galena and trace amounts of fine grained chalcopyrite. The sample returned background values of molybdenum and tungsten, with moderate tin (228 ppm) and strongly anomalous copper (9840 ppm), gold (1.31 g/t), silver (265 ppm) and zinc (2160).

Hand Trenching

In 2017, 29 continuous chip samples were collected over lengths ranging from 2 to 14 m. Twenty-three of them were from the Main Ridge area, near the 2014 hand trenches and six were from the Rockslide area (Figures 6-9). Scans and descriptions of each chip sample can be found in Appendix V. Samples from the Main Ridge area were collected from potassic to argillic altered granodiorite and diabase dykes. Highlights include 1525 ppm copper and 45.5 ppm silver over four metres (TR17-03) and 154.4 ppm molybdenum over four metres (TR17-23).

The six continuous chip samples from the Rockslide area are all from potassic altered granodiorite talus and talus fines. Values range from background to weakly anomalous for all metals of interest.

SOIL GEOCHEMISTRY

A reconnaissance-scale stream sediment survey conducted in the 1980s by the GSC showed that samples taken from streams draining Ruby Range suite rocks in the Meloy area are often anomalous compared to regional backgrounds, using the 95th percentile to define strongly anomalous values (Friske *et al.*, 1986). Threshold values used to categorize soil geochemical results from the Meloy property are set much higher than the regional thresholds, as shown in Table IV.

Table IV – Anomalous Soil Thresholds

Element	Weak	Moderate	Strong	Peak	Regional 95 th Percentile *
Copper (ppm)	>100 ≤200	>200 ≤500	>500	4520	118
Gold (ppb)	>20 ≤50	>50 ≤100	>100	673	31
Silver (ppm)	>2 ≤5	>5 ≤10	>10	19	0.4
Molybdenum (ppm)	>5 ≤10	>10 ≤50	>50	595	3
Tungsten (ppm)	>10 ≤20	>20 ≤50	>50	356	16
Tin (ppm)	>10 ≤25	>25 ≤50	>50	217	16
Zinc (ppm)	>200 ≤500	>500 ≤1000	>1000	2090	298

* Stream sediment samples (Friske *et al.*, 1986)

A total of 444 soil samples were collected from the western part of the Meloy property by Strategic Metals between 2008 and 2017, including 92 taken in 2017 (Figure 10). An additional 1021 soil samples were collected from the eastern part of the Meloy property by S. Ryan in 2007, 2011 and 2012. In 1970, Phelps Dodge collected soil samples from various parts of the

property. In 2017, 92 soil samples were collected from the Meloy property (Figure 10). Thematic results from all work programs for copper are illustrated on Figure 11, while results for gold, molybdenum and silver are located on Figures 12 to 14 respectively. Soil development is poor in most areas sampled because the Ruby Range suite weathers into talus fines not soil.

The soil geochemical surveys have delineated two main copper-in-soil anomalies, one centred on the Main Cirque (Raft prospect) and the other centred in upper Talbot Creek (Rockslide prospect). The Raft prospect encompasses a 3000 m by 3000 m area and contains peak values of 4520 ppm copper, 673 ppb gold, 19 ppm silver, 595 ppm molybdenum, 356 ppm tungsten, 217 ppm tin and 2090 ppm zinc.

The Rockslide prospect is defined by strongly anomalous copper, silver, bismuth, arsenic, molybdenum, tungsten and gold that cover a 2000 m by 3000 m area. This prospect yielded peak values of 1889 ppm copper, 55 ppb gold, 14.9 ppm silver, 67.8 ppm molybdenum, 31.3 ppm tungsten and 851 ppm zinc. The Rockslide prospect is divided by glacial deposits within the Talbot Creek valley.

A third copper-in-soil geochemical anomaly was identified in the south-central part of the property by Phelps Dodge in 1970; however, follow up work revealed that this anomaly was the result of a concentration of minor chalcopyrite, molydenite and bornite hosted in widely spaced joints and shears within steep rock faces. The host rock was fresh, coarse grained alaskite to leucogranite (Smith, 1971).

Smaller clusters of anomalous results occur elsewhere on the property. These clusters comprise samples with moderately elevated values for copper, zinc, tungsten and tin. No follow up prospecting has been done in any of these areas.

DISCUSSION AND CONCLUSIONS

The Meloy property hosts large, multi-element geochemical anomalies believed to be related to atypical porphyry-style mineralization. The larger of the two is centred on the Main Cirque area and is 3000 m in diameter. The other, is centred on the newly acquired Rockslide area and is 3000 m by 2000 m in size. Strongly anomalous rock and soil values for copper, gold, silver, molybdenum, tungsten, tin and zinc have been obtained from samples taken across the property. Economic minerals are hosted within fractures and quartz veins cutting rusty and grey weathering rocks of the Ruby Range suite.

Mineralization is closely tied to a series of northerly-trending, steeply dipping linears, which are apparent along the Main Ridge but are mostly obscured by thick talus in other areas.

Future work on the Meloy property should consist of the following:

- 1) Detailed geological mapping in the northern part of the Main Cirque, the Rockslide area and elsewhere on the property where outcrop is accessible;
- 2) Continuous chip sampling along the Main Ridge to test the mineral potential of the rusty and grey weathering Ruby Range suite rocks in addition to the mineralized quartz veins and dykes. Due to the recessive nature of the mineralized fracture/vein

- zones blocky intrusive talus will have to be excavated in most areas to expose bedrock, before chip sampling can be done. This work should also evaluate potential for surface leaching at higher elevations because the ridge tops may have been nunatuks when this area was glaciated;
- 3) Representative specimens of rusty, tan and grey weathering Ruby Range suite should be collected so that thin sections can be made for petrographic studies;
 - 4) Prospecting should follow up unexplained strongly anomalous soil geochemical values; and,
 - 5) After evaluating results of the surface program, diamond drilling should be done to test the mineralization at depth.

Respectfully submitted,

ARCHER, CATHRO & ASSOCIATES (1981) LIMITED

APPENDIX I

STATEMENT OF QUALIFICATIONS

STATEMENT OF QUALIFICATIONS

I, Heather Burrell, geologist, with business addresses in Vancouver and Squamish, British Columbia and Whitehorse, Yukon Territory and residential address in Whitehorse, Yukon, do hereby certify that:

1. I graduated from the University of British Columbia in 2006 with a B.Sc in Geological Sciences.
2. From 2004 to present, I have been actively engaged in mineral exploration in the Yukon Territory, British Columbia and Northwest Territories.
3. I am a Professional Geoscientist (P. Geo.) with the Association of Professional Engineers and Geoscientists of British Columbia (Member Number 34689).
4. I am a partner in Archer, Cathro & Associates (1981) Limited.
5. I have personally supervised the fieldwork reported herein and have interpreted all data resulting from this work.

Heather Burrell, B.Sc., P.Geo.

APPENDIX III
ROCK SAMPLE DESCRIPTIONS

Rock Sample DescriptionsProperty: Meloy

Sample Number: K293103 UTM: 653416 mE Nad83, Zone 7
Elevation: 6798 m UTM: 6818198 mN

Comments: CHIP-17-24 (0-6m): Of orange-brown weathering, pale yellow-orange potassic altered phaneritic granodiorite talus and talus fines. Rare cobbles of grey-white Massive quartz with rusty brown weathered surfaces. 1.70-3m consists of fine grained medium to dark grey diabase dyke fragments. No outcrop.

Sample Number: K293104 UTM: 653424 mE Nad83, Zone 7
Elevation: 6802 m UTM: 6818179 mN

Comments: CHIP-17-25 (0-5m): Of orange-brown weathering, pale yellow-orange potassic altered phaneritic granodiorite talus and talus fines with rusty brown weathered surfaces. Rare dark grey fine grained diabase dyke fragments.

Sample Number: K293105 UTM: 653424 mE Nad83, Zone 7
Elevation: 6794 m UTM: 6818178 mN

Comments: CHIP-17-25 (5-10m): Of orange-brown weathering, pale yellow-orange potassic altered phaneritic granodiorite talus and talus fines and rare cobbles of light grey-white massive quartz. Material across interval is talus and talus fines.

Sample Number: K293106 UTM: 653428 mE Nad83, Zone 7
Elevation: 6804 m UTM: 6818173 mN

Comments: CHIP-17-25 (10-14m): Of orange-brown weathering, pale yellow-orange potassic altered phaneritic granodiorite talus and talus fines, rare cobbles of massive quartz, rare cobbles of fine grained dark grey diabase dyke material (?). Interval material varies from cobbles to talus fines.

Sample Number: K293107 UTM: 653451 mE Nad83, Zone 7
Elevation: 6789 m UTM: 6818125 mN

Comments: CHIP-17-26 (0-3m): Of orange-brown weathering, pale yellow-orange potassic altered phaneritic granodiorite talus and talus fines. Some surfaces weathered to rusty brown.

Rock Sample DescriptionsProperty: Meloy

Sample Number: K293108 UTM: 653456 mE Nad83, Zone 7
Elevation: 6790 m UTM: 6818123 mN

Comments: CHIP-17-26 (3-6.40m): Of orange-brown weathering, pale yellow-orange potassic altered phaneritic granodiorite talus and talus fines with some surfaces weathered to rusty brown.

Sample Number: K293109 UTM: 653463 mE Nad83, Zone 7
Elevation: 6787 m UTM: 6818110 mN

Comments: CHIP-17-27 (0-5m): Of orange-brown weathering, pale yellow-orange potassic altered phaneritic granodiorite talus and talus fines with some surfaces weathered rusty brown.

Sample Number: K293110 UTM: 653468 mE Nad83, Zone 7
Elevation: 6791 m UTM: 6818105 mN

Comments: CHIP-17-27 (5-10m): Of orange-brown weathering, pale yellow-orange potassic altered phaneritic granodiorite talus and talus fines.

Sample Number: K293111 UTM: 653486 mE Nad83, Zone 7
Elevation: 6792 m UTM: 6818098 mN

Comments: CHIP-17-28 (0-6m): Of orange-brown weathering, pale yellow-orange potassic altered phaneritic granodiorite talus and talus fines with some surfaces weathered rusty brown. Possible granodiorite outcrop at 4.30m has a fracture with strike dip of 005/66 east.

Sample Number: K293112 UTM: 653493 mE Nad83, Zone 7
Elevation: 6776 m UTM: 6818089 mN

Comments: CHIP-17-29 (0-5m): Of orange-brown weathering, pale yellow-orange potassic altered phaneritic granodiorite talus and talus fines.

Sample Number: K293113 UTM: 653497 mE Nad83, Zone 7
Elevation: 6774 m UTM: 6818084 mN

Comments: CHIP-17-29 (5-10m): Of orange-brown weathering, pale yellow-orange potassic altered phaneritic granodiorite talus and talus fines.

Rock Sample DescriptionsProperty: Meloy

Sample Number: K293339 UTM: 649918 mE Nad83, Zone 7
Elevation: 6997 m UTM: 6820316 mN

Comments: Outcrop sample of a ~10cm wide banded quartz vein, through potassically-altered granodiorite, hosting clots of 3% chalcopyrite, 3% brassy-rose coloured wolframite?, <1% bornite and sparse encrusting malachite; Collected in the cliffs in an area of high fracture density.

Sample Number: K293340 UTM: 649550 mE Nad83, Zone 7
Elevation: 6478 m UTM: 6821474 mN

Comments: Outcrop sample of dark silicified diabase dyke, collected along the selvage of a 2m wide sub-vertical dyke trending 222, with manganese, chalcocite and encrusting malachite; The dyke cuts through rusty-weathering granodiorite.

Sample Number: K293341 UTM: 649550 mE Nad83, Zone 7
Elevation: 6479 m UTM: 6821469 mN

Comments: Subcrop sample of a ~4cm wide banded quartz-sericite vein with dark malachite-encrusted bands of chalcocite, trace very fine grained chalcopyrite. Collected from the opposite side of the dyke described in K293340.

Sample Number: K293342 UTM: 649565 mE Nad83, Zone 7
Elevation: 6723 m UTM: 6821336 mN

Comments: Outcrop sample from a ~30cm wide banded chalcedonic quartz vein with bands of limonite, very fine grained dark black mineralization (chalcocite?), and rare encrusting malachite. Collected at the margin of an individual ~2m wide, sub-vertical diabase dyke, trending 226 in a ~25m wide dyke swarm.

Sample Number: K293343 UTM: 650048 mE Nad83, Zone 7
Elevation: 7042 m UTM: 6820237 mN

Comments: Outcrop sample from a flat-lying, 10cm wide, drusy quartz vein with limonite in druses and trace pyrite. Vein cuts potassically-altered granodiorite with an orientation of 270/04, and is located just below the ridge top.

Sample Number: K293344 UTM: 650048 mE Nad83, Zone 7
Elevation: 7028 m UTM: 6820241 mN

Comments: Outcrop sample of a 10cm wide, flat-lying, barren grey chalcedonic quartz vein. Collected ~1m below K293343.

Rock Sample DescriptionsProperty: Meloy

Sample Number: K293345 UTM: 650040 mE Nad83, Zone 7
Elevation: 7022 m UTM: 6820254 mN

Comments: Float grab of orange to yellow weathering, potassic-altered granodiorite, with encrusting malachite on weathered surfaces.
Collected ~20m below the ridge top in talus. No rep.

Sample Number: K293346 UTM: 650026 mE Nad83, Zone 7
Elevation: 6954 m UTM: 6820289 mN

Comments: Outcrop sample of a rusty weathering fracture with wallrock in potassic-altered granodiorite. The fracture is sericite-altered(?) with trace very fine grained chalcopyrite and has an orientation of 181/90, in an area of high veinlet and fracture density with a multitude of orientations (predominantly sub-vertical). Collected ~40m below the ridge top. No rep.

Sample Number: K293347 UTM: 650022 mE Nad83, Zone 7
Elevation: 6934 m UTM: 6820304 mN

Comments: Outcrop sample of a ~5mm wide rusty-grey weathering and sericite-altered veinlet and wall rock, hosting abundant medium grained chalcopyrite. Veinlet has an orientation of 185/74 and cuts potassic-altered granodiorite in an area of high fracture and veinlet density, with a multitude of orientations. Collected ~60m below ridge top.

Sample Number: K293348 UTM: 649694 mE Nad83, Zone 7
Elevation: 6996 m UTM: 6820665 mN

Comments: Outcrop sample of dark, rusty-weathering, phyllitic-altered granodiorite (quartz-sericite-pyrite). Alteration is best developed along fractures, with halos of disseminated pyrite.

Sample Number: K293349 UTM: 649740 mE Nad83, Zone 7
Elevation: 6899 m UTM: 6820717 mN

Comments: Outcrop sample of rock with the same lithology as sample K293348, but with stringers of very fine grained chalcopyrite along a rusty weathering seam.

Rock Sample DescriptionsProperty: Meloy

Sample Number: K293350 UTM: 649782 mE Nad83, Zone 7
Elevation: 6826 m UTM: 6820787 mN

Comments: Outcrop sample from a yellow-green (scorodite?) stained and dark, rusty weathering, clifly outcrop of phylllic-altered granodiorite, hosting disseminated very fine grained arsenopyrite, likely developed along a sub-vertical north-south trending fracture.

Sample Number: K293351 UTM: 650049 mE Nad83, Zone 7
Elevation: 7028 m UTM: 6820231 mN

Comments: CHIP-17-01: 0-4m of a 7m chip sample along the ridge-top, bearing 305 degrees, that cuts orange-brown to grey weathering, pale yellow, potassically-altered granodiorite. (Part of a 2 sample sequence, K293351-K293352)

Sample Number: K293352 UTM: 650045 mE Nad83, Zone 7
Elevation: 7036 m UTM: 6820237 mN

Comments: CHIP-17-01: 4-7m of a 7m chip sample along the ridge-top, bearing 305 degrees, that cuts orange-brown to grey weathering, pale yellow, potassically-altered granodiorite and a recessive, ~1m wide diabase dyke, bearing 031 degrees, which hosts sparse encrusting malachite along the margins. (Part of a 2 sample sequence, K293351-K293352)

Sample Number: K293353 UTM: 650030 mE Nad83, Zone 7
Elevation: 7027 m UTM: 6820245 mN

Comments: CHIP-17-02: 0-4m of a 8m chip sample along the ridge-top, bearing 302 degrees, that cuts orange-brown to grey weathering, pale yellow, potassically-altered, phaneritic granodiorite with trace malachite on fracture surfaces. (Part of a 2 sample sequence, K293353-K293354)

Sample Number: K293354 UTM: 650027 mE Nad83, Zone 7
Elevation: 7032 m UTM: 6820247 mN

Comments: CHIP-17-02: 4-8m of a 8m chip sample along the ridge-top, bearing 302 degrees, that cuts orange-brown to grey weathering, pale yellow, potassically-altered, phaneritic granodiorite with trace malachite on fracture surfaces. (Part of a 2 sample sequence, K293353-K293354)

Rock Sample DescriptionsProperty: Meloy

Sample Number: K293355 UTM: 650018 mE Nad83, Zone 7
Elevation: 7020 m UTM: 6820252 mN

Comments: CHIP-17-03: 0-4m of a 4m chip sample along the ridge-top, bearing 310 degrees, that cuts orange-brown to grey weathering, pale yellow, potassically-altered, phaneritic granodiorite. This sample ends at the southern end of trench TR-14-01.

Sample Number: K293356 UTM: 649994 mE Nad83, Zone 7
Elevation: 7020 m UTM: 6820265 mN

Comments: CHIP-17-04: 0-6m of a 11m chip sample along the ridge-top, bearing 305 degrees, that cuts orange-brown to grey weathering, pale yellow, potassically-altered, phaneritic granodiorite with more grungy/grossy material around 0-4m, and blocky for the remainder. Fracture of 191/84W at the 4m mark, in the outcrop below. (Part of a 2 sample sequence, K293356-K293357)

Sample Number: K293357 UTM: 649990 mE Nad83, Zone 7
Elevation: 7024 m UTM: 6820266 mN

Comments: CHIP-17-04: 6-11m of a 11m chip sample along the ridge-top, bearing 305 degrees, that cuts orange-brown to grey weathering, pale yellow, potassically-altered, phaneritic granodiorite with more grungy/grossy material around 0-4m, and blocky for the remainder. (Part of a 2 sample sequence, K293356-K293357)

Sample Number: K293358 UTM: 649972 mE Nad83, Zone 7
Elevation: 7036 m UTM: 6820277 mN

Comments: CHIP-17-05: 0-5m of a 10m chip sample along the ridge-top, bearing 297 degrees, that cuts orange-brown to grey weathering, pale yellow, blocky, potassically-altered, phaneritic granodiorite. Fractures of 210/67W and 174/20W at the 5m and 8.5m marks, respectivley, in the outcrop below. (Part of a 2 sample sequence, K293358-K293359)

Sample Number: K293359 UTM: 649966 mE Nad83, Zone 7
Elevation: 7037 m UTM: 6820279 mN

Comments: CHIP-17-05: 5-10m of a 10m chip sample along the ridge-top, bearing 297 degrees, that cuts orange-brown to grey weathering, pale yellow, blocky, potassically-altered, phaneritic granodiorite. Fractures of 210/67W and 174/20W at the 5m and 8.5m marks, respectivley, in the outcrop below. (Part of a 2 sample sequence, K293358-K293359)

Rock Sample DescriptionsProperty: Meloy

Sample Number: K293360 UTM: 649960 mE Nad83, Zone 7
Elevation: 7043 m UTM: 6820283 mN

Comments: CHIP-17-06: 0-4m of a 4m chip sample along the ridge-top, bearing 291 degrees, that cuts orange-brown to grey weathering, pale yellow, potassically-altered, phaneritic granodiorite.

Sample Number: K293361 UTM: 649948 mE Nad83, Zone 7
Elevation: 7057 m UTM: 6820289 mN

Comments: CHIP-17-07: 0-4.5m of a 9m chip sample along the ridge-top, bearing 295 degrees, that cuts orange-brown to grey weathering, pale yellow, potassically-altered, phaneritic granodiorite as well as a 3m wide, rusty-brown weathering, pale grey-white, sucrosic aplite dyke between 2.5-5.5m. A fracture of 220/80W in the aplite dyke, and 190/35W in the granodiorite. (Part of a 2 sample sequence, K293361-K293362)

Sample Number: K293362 UTM: 649944 mE Nad83, Zone 7
Elevation: 7058 m UTM: 6820291 mN

Comments: CHIP-17-07: 4.5-9m of a 9m chip sample along the ridge-top, bearing 295 degrees, that cuts orange-brown to grey weathering, pale yellow, potassically-altered, phaneritic granodiorite as well as a 3m wide, rusty-brown weathering, pale grey-white, sucrosic aplite dyke between 2.5-5.5m. A fracture of 220/80W in the aplite dyke, and 190/35W in the granodiorite. (Part of a 2 sample sequence, K293361-K293362)

Sample Number: K293363 UTM: 649935 mE Nad83, Zone 7
Elevation: 7045 m UTM: 6820298 mN

Comments: CHIP-17-08: 0-5m of a 10m chip sample along the clifly outcrop underneath the ridge-top, bearing 302 degrees, that cuts outcrop of dark rusty orange-brown weathering, pale yellow, potassically-altered granodiorite with lots of dark rusty fractures at a multitude of orientations. One (predominant) fracture orientation of 214/76W at the 4m mark. (Part of a 2 sample sequence, K293363-K293364)

Rock Sample DescriptionsProperty: Meloy

Sample Number: K293364 UTM: 649931 mE Nad83, Zone 7
Elevation: 7053 m UTM: 6820301 mN

Comments: CHIP-17-08: 5-10m of a 10m chip sample along the cliffy outcrop underneath the ridge-top, bearing 302 degrees, that cuts outcrop of dark rusty orange-brown weathering, pale yellow, potassically-altered granodiorite with lots of dark rusty fractures at a multitude of orientations. (Part of a 2 sample sequence, K293363-K293364)

Sample Number: K293365 UTM: 649924 mE Nad83, Zone 7
Elevation: 7062 m UTM: 6820300 mN

Comments: CHIP-17-09: 0-4m of a 4m chip sample along the cliffy outcrop underneath the ridge-top, bearing 304 degrees, that cuts outcrop of orange-brown to grey weathering, pale yellow, potassically-altered, phaneritic granodiorite with high veinlet and fracture density and several dark rusty fractures.

Sample Number: K293366 UTM: 649907 mE Nad83, Zone 7
Elevation: 7058 m UTM: 6820312 mN

Comments: CHIP-17-10: 0-4m of a 4m chip sample along the ridge-top, bearing 300 degrees, that cuts blocky orange-brown to grey weathering, pale yellow, potassically-altered, phaneritic granodiorite.

Sample Number: K293367 UTM: 649901 mE Nad83, Zone 7
Elevation: 7054 m UTM: 6820316 mN

Comments: CHIP-17-11: 0-3.5m of a 7m chip sample along the ridge-top, bearing 299 degrees, that cuts orange-brown to grey weathering, pale yellow, potassically-altered, phaneritic granodiorite, and a 1m wide diabase dyke located between 1-2m, with an orientation of 235/84N. (Part of a 2 sample sequence, K293367-K293368)

Sample Number: K293368 UTM: 649897 mE Nad83, Zone 7
Elevation: 7052 m UTM: 6820316 mN

Comments: CHIP-17-11: 3.5-7m of a 7m chip sample along the ridge-top, bearing 299 degrees, that cuts orange-brown to grey weathering, pale yellow, potassically-altered, phaneritic granodiorite. (Part of a 2 sample sequence, K293367-K293368)

Rock Sample DescriptionsProperty: Meloy

Sample Number: K293369 UTM: 653423 mE Nad83, Zone 7
Elevation: 6814 m UTM: 6818183 mN

Comments: Composite sample of yellow-green, scorodite stained, drusy quartz hosting 1% fine grained arsenopyrite throughout, as well as sparse clots of coarse grained galena and trace very fine grained chalcopyrite. The fragments are ~4cm wide and moderately abundant on a gossanous ridge-top, over cliffs.

Sample Number: K293370 UTM: 649887 mE Nad83, Zone 7
Elevation: 7068 m UTM: 6820326 mN

Comments: CHIP-17-12 (0-4m): of orange-brown weathering, pale yellow potassic-altered granodiorite

Sample Number: K293371 UTM: 649881 mE Nad83, Zone 7
Elevation: 7071 m UTM: 6820327 mN

Comments: CHIP-17-12 (4-8m): of orange-brown weathering, pale yellow potassic-altered granodiorite, rare molybdenite blebs/folia

Sample Number: K293372 UTM: 649879 mE Nad83, Zone 7
Elevation: 7059 m UTM: 6820328 mN

Comments: CHIP-17-12 (8-12m): of orange-brown weathering, pale yellow potassic-altered granodiorite

Sample Number: K293373 UTM: 649877 mE Nad83, Zone 7
Elevation: 7060 m UTM: 6820330 mN

Comments: CHIP-17-12 (12-14m): of orange-brown weathering, pale yellow potassic-altered granodiorite

Sample Number: K293374 UTM: 649867 mE Nad83, Zone 7
Elevation: 7060 m UTM: 6820337 mN

Comments: CHIP-17-13 (0-4m): of orange-brown weathering, pale yellow potassic-altered granodiorite

Sample Number: K293375 UTM: 649864 mE Nad83, Zone 7
Elevation: 7066 m UTM: 6820343 mN

Comments: CHIP-17-13 (4-9m): of orange-brown weathering, pale yellow potassic-altered granodiorite.

Rock Sample Descriptions		Property: Meloy		
Sample Number:	K293376	UTM:	649857 mE	Nad83, Zone 7
Elevation:	7046 m	UTM:	6820347 mN	
Comments: CHIP-17-14 (0-4m):of orange-brown weathering, pale yellow potassic-altered granodiorite with mild rusty weathering on some surfaces. 2.8-3.5m dark brown-grey granodiorite				
Sample Number:	K293377	UTM:	649852 mE	Nad83, Zone 7
Elevation:	7055 m	UTM:	6820348 mN	
Comments: CHIP-17-14 (4-8.7m): Of orange-brown weathering, pale yellow potassic-altered granodiorite with rare white precipitate on some surfaces. Fracture 024/90 at 7m.				
Sample Number:	K293378	UTM:	649847 mE	Nad83, Zone 7
Elevation:	7058 m	UTM:	6820352 mN	
Comments: CHIP-17-15 (0-3m):Of orange-brown weathering, pale yellow potassic-altered granodiorite and fine grained dark grey-black diabase dyke (approximately 1.5m wide trending 040 degrees). Rare malachite staining on diabase dyke.				
Sample Number:	K293379	UTM:	649843 mE	Nad83, Zone 7
Elevation:	7065 m	UTM:	6820356 mN	
Comments: CHIP-17-15 (3-6.5m): Of orange-brown weathering, pale yellow potassic-altered granodiorite and dark grey-black diabase dyke. Granodiorite has some rusty brown weathered surfaces. Fracture in granodiorite outcrop at 6m has strike dip of 210/75 north.				
Sample Number:	K293380	UTM:	649839 mE	Nad83, Zone 7
Elevation:	7070 m	UTM:	6820359 mN	
Comments: CHIP-17-16 (0-4m): Of orange-brown weathering, pale yellow potassic-altered granodiorite and a ~0.5m wide dark grey-black weathering diabase dyke between 1 and 2m with strike dip of 045/71 south.				
Sample Number:	K293381	UTM:	649837 mE	Nad83, Zone 7
Elevation:	7068 m	UTM:	6820360 mN	
Comments: CHIP-17-16 (4-8m):Of orange-brown weathering, pale yellow potassic-altered granodiorite and dark grey-black weathering diabase dykes at 4-4.3m (trends 035 degrees northeast) and between 5.8-7m (trends 035 degrees northeast. Dyke between 5.8-7m has strike/dip of 225/85 (contact between granodiorite and diabase dyke).				

Rock Sample Descriptions		Property: Meloy		
Sample Number:	K293382	UTM:	649829 mE	Nad83, Zone 7
Elevation:	7067 m	UTM:	6820364 mN	
Comments: CHIP-17-17 (0-4m): Of orange-brown to grey weathering, pale yellow potassic-altered granodiorite				
Sample Number:	K293383	UTM:	649829 mE	Nad83, Zone 7
Elevation:	7061 m	UTM:	6820368 mN	
Comments: CHIP-17-17 (4-8m): Of orange-brown weathering, pale yellow potassic-altered granodiorite with some fracture surfaces weathering to a rusty brown.				
Sample Number:	K293384	UTM:	649820 mE	Nad83, Zone 7
Elevation:	7064 m	UTM:	6820374 mN	
Comments: CHIP-17-18 (0-3m): Of orange-brown weathering, pale yellow potassic-altered granodiorite with rusty brown weathering surfaces. Fracture in granodiorite outcrop at 0m has strike dip of 034/80 south.				
Sample Number:	K293385	UTM:	649814 mE	Nad83, Zone 7
Elevation:	7049 m	UTM:	6820374 mN	
Comments: CHIP-17-18 (3-6.5m): Of orange-brown weathering, pale yellow potassic-altered granodiorite. 2-5m surfaces are heavily weathered to rusty brown.				
Sample Number:	K293386	UTM:	649810 mE	Nad83, Zone 7
Elevation:	7051 m	UTM:	6820376 mN	
Comments: CHIP-17-19 (0-3m): Of orange-brown weathering, pale yellow potassic-altered granodiorite with rusty brown weathered coatings. Rare possible argillic alteration? Rusty brown granodiorite 0-1m.				
Sample Number:	K293387	UTM:	649808 mE	Nad83, Zone 7
Elevation:	7054 m	UTM:	6820379 mN	
Comments: CHIP-17-19 (3-6m): Of orange-brown weathering, pale yellow potassic-altered granodiorite with minor rusty brown weathered fractures. 4-6m has abundant dirt/gravel along with heavily fractured rock. Fracture in granodiorite at 3m with strike dip of 020/89 south.				

Rock Sample DescriptionsProperty: Meloy

Sample Number: K293388 UTM: 649801 mE Nad83, Zone 7
Elevation: 7065 m UTM: 6820381 mN

Comments: CHIP-17-20 (0-5m): Of orange-brown weathering, pale yellow potassic- to argillic-altered granodiorite. Rusty brown weathered surfaces and fractures. Fracture at 5m with strike dip of 196/88 northwest

Sample Number: K293389 UTM: 649797 mE Nad83, Zone 7
Elevation: 7069 m UTM: 6820387 mN

Comments: CHIP-17-21 (0-3.5m): Of orange-brown weathering, pale yellow potassic- to argillic-altered granodiorite

Sample Number: K293390 UTM: 649793 mE Nad83, Zone 7
Elevation: 7070 m UTM: 6820389 mN

Comments: CHIP-17-21 (3.5-7m): Of orange-brown weathering, pale yellow potassic- to -argillic-altered granodiorite. Fracture in outcrop below ridge at 2m mark has strike dip of 222/80 north.

Sample Number: K293391 UTM: 649788 mE Nad83, Zone 7
Elevation: 7086 m UTM: 6820395 mN

Comments: CHIP-17-22(0-6m): Of orange-brown weathering, pale yellow potassic- to argillic-altered granodiorite with abundant rusty brown weathered surfaces. No measurement

Sample Number: K293392 UTM: 649782 mE Nad83, Zone 7
Elevation: 7096 m UTM: 6820399 mN

Comments: CHIP-17-23 (0-4m): Of orange-brown weathering, pale yellow potassic- to argillic-altered granodiorite with mild rusty brown weathered surfaces.

Sample Number: K293393 UTM: 649779 mE Nad83, Zone 7
Elevation: 7097 m UTM: 6820402 mN

Comments: CHIP-17-23 (4-8m): Of orange-brown weathering, pale yellow potassic- to argillic-altered granodiorite and bleached grey aplite dyke at 4-5.5m. 7-8m interval has rare quartz vein/band with minor molybdenite.

CERTIFICATE WH17158509

Project: MELOY

This report is for 100 Soil samples submitted to our lab in Whitehorse, YT, Canada on 31-JUL-2017.

The following have access to data associated with this certificate:

HEATHER BURRELL
JACK MORTON

ANDREW CARNE

JOAN MARIACHER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI- 21	Received Sample Weight
LOG- 22	Sample login - Rcd w/o BarCode
SCR- 41	Screen to - 180um and save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT

CERTIFICATE WH17158542

Project: MELOY

This report is for 66 Rock samples submitted to our lab in Whitehorse, YT, Canada on 31-JUL-2017.

The following have access to data associated with this certificate:

ANDREW CARNE

JOAN MARIACHER

JACK MORTON

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI- 21	Received Sample Weight
LOG- 21	Sample logging - ClientBarCode
CRU- QC	Crushing QC Test
CRU- 31	Fine crushing - 70% <2mm
PUL- QC	Pulverizing QC Test
SPL- 21	Split sample - riffle splitter
PUL- 31	Pulverize split to 85% <75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au- AA24	Au 50g FA AA finish	AAS
ME- MS61	48 element four acid ICP- MS	
Aq- OG62	Ore Grade Ag - Four Acid	ICP- AES
ME- OG62	Ore Grade Elements - Four Acid	ICP- AES
Cu- OG62	Ore Grade Cu - Four Acid	ICP- AES
Pb- OG62	Ore Grade Pb - Four Acid	ICP- AES
