SUMMARY

This technical report documents the qualifying mineral exploration work conducted during the 2018 exploration program on the RJ Property, and has been provided to satisfy the reporting requirements for Yukon assessment reports and YMEP (Yukon Mineral Exploration Program) reports. Partial financing for the program was provided through YMEP under its' Target Evaluation Hard Rock Module (# 18-054).

The RJ property consists of 138 quartz claims; 107 claims in the Dawson Mining District and 31 claims contiguous in the Mayo Mining District. The Property is located approximately 140 km east of Dawson City in the northwest portion of NTS Map Sheet 115P/15. The claims are located in the traditional territory of the Na'Cho N'Yak Dun First Nation. Access to the Property is via the Clear Creek road from the Klondike Highway and through the headwaters of Clear Creek down into Big Creek along 17 kilometers of new all-wheel drive road put in by a Big Creek placer miner in 2016. The road traverses down Big Creek for approximately 6 kilometers and then exits the creek, going east to Hobo Creek and Arizona Creek. The RJ Property's western boundary is approximately two kilometres up the road from Big Creek.

The 2018 exploration work consisted of geochemical soil sampling, mapping and prospecting. The exploration work was completed during July and August and was conducted by Fox Exploration Ltd., an exploration services contractor based in Whitehorse, Yukon. From July 26th to August 11th, a 4-person crew was mobilized with pickup trucks to the RJ Property, a temporary camp was constructed, and a geochemical soil sampling grid survey and prospecting were completed. A total of 268 soil samples and 22 rock samples were collected. Soil sampling was conducted using augers and mattocks along a defined survey grid. Sample intervals were set at 50 meters and line spacing was 100 metres. The grid consists of 13 lines with a total of 26 sample station sites per line.

The 2018 exploration program was successful in identifying elevated anomalous gold within and peripheral to the Hobo Stock which fits the geological model for Intrusion Related Gold Deposits with the Hobo Stock being a Tombstone Suite age intrusive similar to the Red Mountain Stock. The 2018 exploration program conducted on the RJ Property followed up and confirmed the presence of anomalous gold on the Property identified from the 2017 exploration program.

LOCATION AND ACCESS

The RJ property consists of 138 quartz claims; 107 claims in the Dawson Mining District and 31 claims contiguous in the Mayo Mining District. The Property is located approximately 140 km east of Dawson City in the northwest portion of NTS Map Sheet 115P/15 at latitude 63°56' N and longitude 137°55' E, or UTM NAD 83 coordinates **407687E, 7092796N** (Figure 1). The claims are located in the traditional territory of the Na'Cho N'Yak Dun First Nation. The RJ Property is located approximately 80 km northwest of the town of Mayo, and 130 km east-southeast of Dawson City. Access to the Property is via the Clear Creek road from the Klondike Highway and through the headwaters of Clear Creek down into Big Creek along 17 kilometers of new all-wheel drive road put in by a Big Creek placer miner in 2016. The road traverses down Big Creek for approximately 6 kilometers and then exits the creek, going east to Hobo Creek and Arizona Creek. The RJ Property's western boundary is approximately two kilometres up the road from Big Creek.

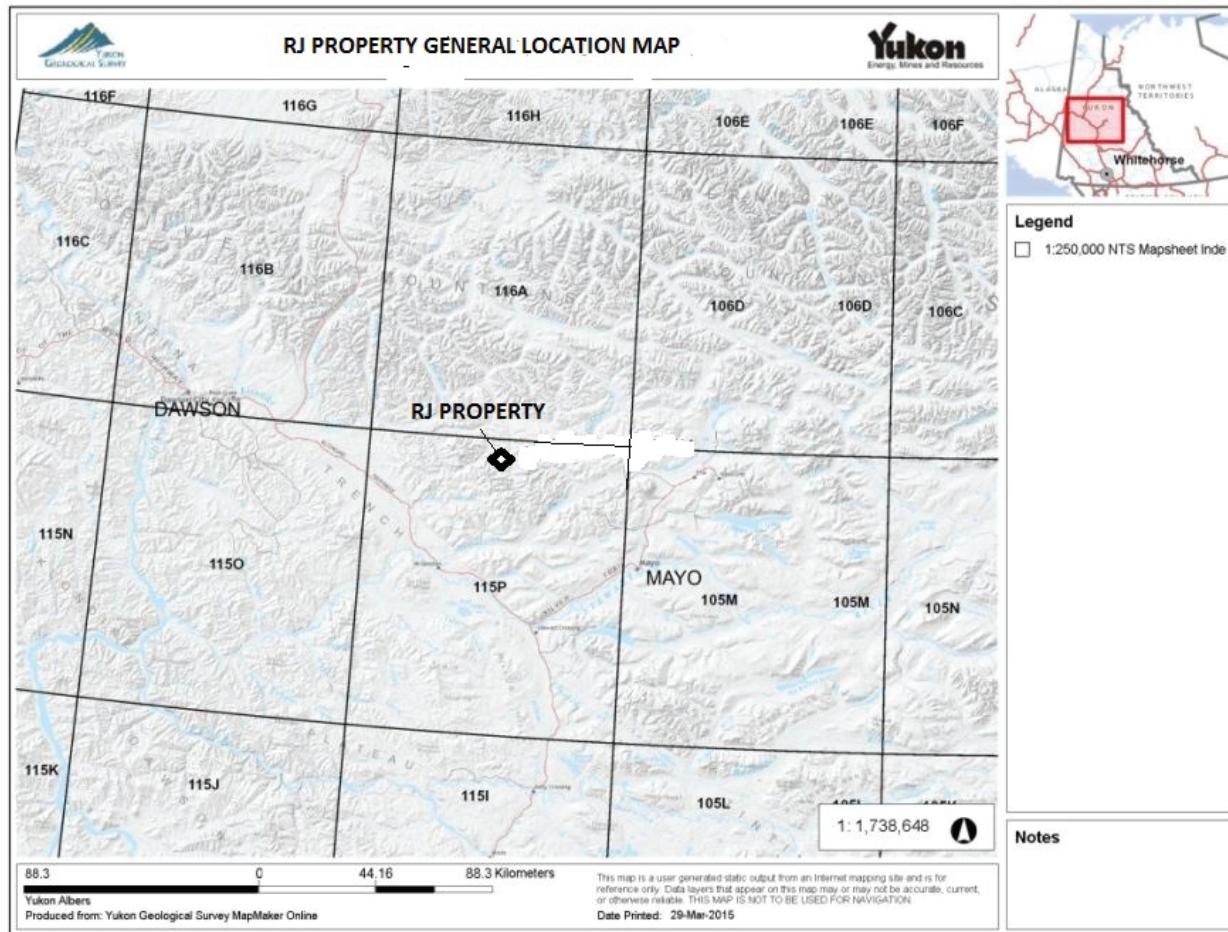

FIGURE 1 - GENERAL LOCATION MAP

CLAIM DATA

The RJ property consists of 138 mining claims; 107 claims in the Dawson Mining District and 31 claims contiguous in the Mayo Mining District. The claims are located on NTS map sheet 115P/15 at latitude 63°56' north and longitude 137°55' west (Figure 2) and are registered with the Mayo Mining Recorder and the Dawson Mining Recorder. All the RJ mining claims are registered in the name of Ryan Coe. The property consists of two contiguous claim blocks. The northern block includes 107 RJ claims in the Dawson Mining District and the southern block consists of the 37 RJ claims in the Mayo Mining District. The RJ claims were staked in the spring of 2017. The detailed claim list is found in Appendix A.

Figure 2 RJ Claims

GEOLOGY AND MINERALIZATION

REGIONAL SCALE

The property is located in rocks of western Selwyn Basin, where Late Proterozoic and Paleozoic basinal sediments accumulated at or near the western margin of ancestral North America. These rocks were later imbricated into several stacked thrust sheets during Jura-Cretaceous plate convergence, resulting in the Robert Service, Tombstone and Dawson thrusts. The RJ Property area is located on the hanging wall of the Robert Service thrust sheet. Several post-kinematic magmatic provinces resulted from this convergence and intrude and stitch the stacked thrust sheets. The late Cretaceous Tombstone Intrusive Suite, dated at around 92 Ma, defines a magmatic and metallogenic province known for its intrusion-hosted and intrusion-related gold, tungsten, uranium and skarn occurrences and have become high priority exploration targets.

The brittle siliceous clastic rocks as well as the calcareous units of lower Selwyn Basin, in contact with or in proximity to these intrusions, form favourable hosts for various vein and replacement-type mineralization. A structural control usually influences the orientation of mineralized structures. Many examples of such occurrences are found in the area. The discovery and development of the Fort Knox deposit near Fairbanks, Alaska, and the realization that equivalent rocks occurred in western Selwyn Basin (on the other side of the Tintina fault), created an exploration boom in the 1990's where Brewery Creek, Dublin Gulch, Scheelite Dome and Clear Creek as well as Red Mountain were developed and understood to be to be examples of mineralization or deposits hosted in Cretaceous Tombstone Suite intrusions and their hornfelsed sedimentary hosts. Intrusion-related gold deposits include the Eagle Zone at Dublin Gulch, which contains an indicated mineral resource of 4.8 million ounces (151 million grams) gold, at a grade of 0.68 g/t (<http://www.vitgoldcorp.com>). The Brewery Creek deposits combined contain inferred and indicated resources of 1.5 million ounces (47 million grams) gold, at grades ranging from 0.93 g/t to 1.37 g/t (<http://www.goldenpredator.com>). The Fort Knox deposit contains a proven and probable reserve of 2.4 million ounces (75 million grams) gold at a grade of 0.47 g/t Au, a measured and indicated resource of 1.45 million ounces (46 million grams) at a grade of 0.43 g/t gold and an inferred resource of 189,000 ounces (5.9 million grams) gold at a grade of 0.44 g/t (<http://www.kinross.com>).

Placer operations are usually located on creeks draining these Cretaceous intrusions and therefore become pathfinders for these types of deposits. Placer workings are located in Big Creek, Hobo Creek and Sprague Creek, all of which drain the RJ Property.

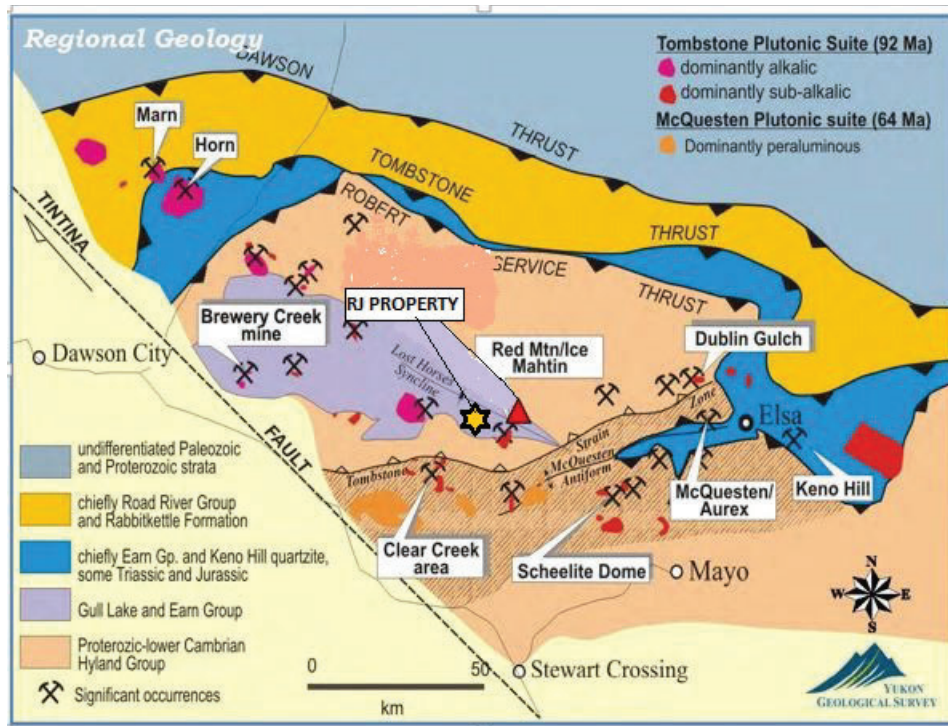

FIGURE 3 - REGIONAL GEOLOGY AFTER MURPHY (1997), TAKEN FROM COLE (2012)

LOCAL GEOLOGY

PROPERTY SCALE

The following is taken from Fonseca, 2002. "Murphy (1997) carried out 1:50,000 scale mapping of the McQuesten River Region, Northern McQuesten, and Mayo map areas under the 1991-1996 Canada/Yukon Economic Development Agreement. As part of the mapping program, Murphy and Héon (1996) mapped the Sprague Creek sheet (NTS 115P/15), and interpreted the geology of the Red Mountain area as comprised of outcrops of Cambrian age (Narchilla and Gull Lake Formations) in the overturned limb of the Lost Horses Syncline. The area lies in the hanging wall of the Robert Service Thrust, and near the upper boundary of Tombstone Strain Zone. Tombstone Strain Zone refers to an intense shear zone extending from the hanging-wall of Tombstone Thrust Fault to the footwall of Robert Service Thrust plate".

An unfoliated, quartz-bearing intrusive body in the core of the RJ claims was dated at 92.3+/-0.8 Ma and interpreted as a stock (the Hobo Stock). Regional airborne magnetics obtained from the Geological Service of Canada from 800 m spaced flight lines show an unusually large magnetic response underlying the Hobo "Stock" implying that the outcropping intrusion may be spatially associated with a larger, buried pluton.

LAYERED ROCKS

Layered rocks consist of strongly foliated, polydeformed clastic and volcanoclastic rocks of interpreted Cambrian age. Clastic rocks are maroon and green shale and black pyritic shale of the Cambrian Narchilla Formation (Hyland Group) exposed on creek beds and valley bottoms; white-to-tan, fine-to-coarse grained quartz-wacke {white grit unit) exposed on road cuts at intermediate elevations; grey to tan, noncalcareous shale forming recessive rubble on hill tops and saddles, and in road cuts at upper elevations. Dark green, fine-grained, weakly foliated, disseminated sulphide-bearing, volcanoclastic rocks of Gull Lake Formation overlay black pyritic shales of Narchilla Formation, and are capped by a sequence of shale to white grit. This

alternating fine/coarse grained sedimentary package is hornfelsed and the more brittle rock types are favoured hosts to vein-hosted mineralization (Fonseca, 2002).

MAGMATIC ROCKS

The sedimentary sequence is intruded by a biotite-quartz monzonite composition. Contact metamorphic effects are pervasively developed as biotite-hornfels in fine-grained rocks above and below the intrusive contacts, and constitute prominent magnetic high features.

MINERALIZATION AND ALTERATION

The RJ Property has not been mapped on a detailed level and at present there is no known mineralization with the exception of the anomalous gold and arsenic values returned in the soil geochemical survey conducted in 2017.

The area was covered by the McConnell glaciations but the ridge tops do not show any glacial deposits.

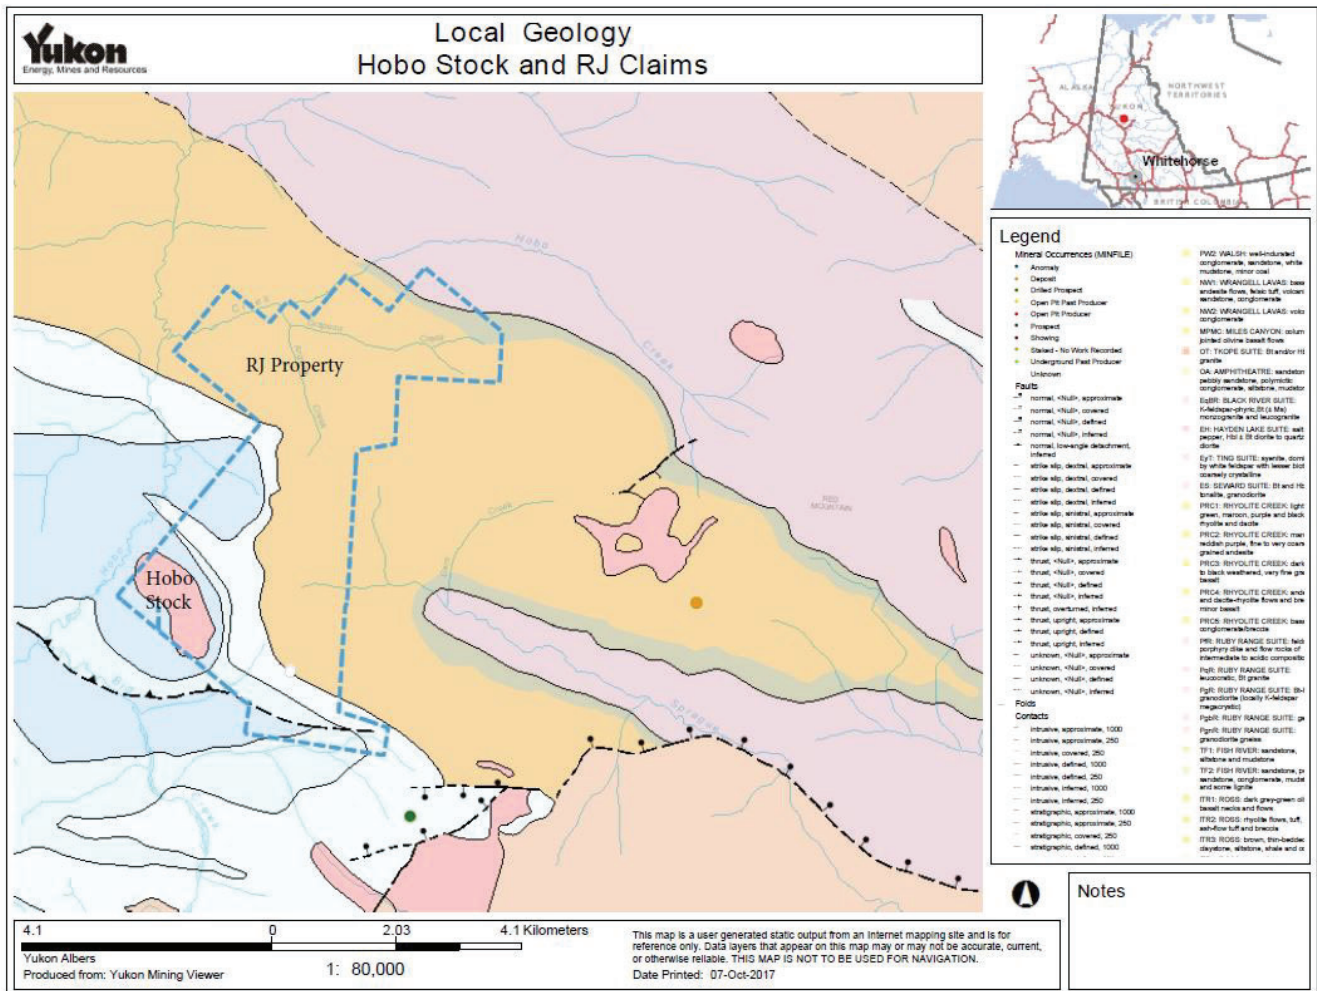

FIGURE 4 - GEOLOGY OF RJ PROPERTY AREA

PREVIOUS WORK

A portion of the RJ Property was previously staked as the FOX claims in 2002 and an assessment report was filed for road construction (Fonseca, 2002). The claims lapsed a few years later.

2018 EXPLORATION PROGRAM

The 2018 exploration program on the RJ Property was completed from July 26th to August 11th, 2018 and was conducted by Fox Exploration Ltd., an exploration services contractor based in Whitehorse, Yukon. A 4-person crew was mobilized with pickup trucks to the RJ property, a temporary camp was constructed, and a geochemical soil sampling survey and prospecting was completed. A total of 268 soil samples and 22 rock samples were collected. Soil sampling was conducted using augers and mattocks along a defined survey grid. Sample intervals were set at 50 meters and lines were spaced 100 metres apart.

The 2018 exploration program was successful in identifying elevated anomalous gold within and peripheral to the Hobo Stock which fits the geological model for Intrusion Related Gold Deposits with the Hobo Stock being a Tombstone Suite age intrusive similar to the Red Mountain Stock. The 2018 exploration program conducted on the RJ Property confirmed the presence of anomalous gold on the Property.

Soil sampling was conducted on the following RJ claims:

RJ 22,23,24,25,26,28,35,37,39,40 and 42 in the Dawson Mining District and RJ 33, 34 and 49 in the Mayo Mining District (Figure 5).

GEOCHEMICAL SURVEY RESULTS

A geochemical soil sampling grid survey was conducted on the property during the 2018 exploration program. Sample spacing was 50 metres and the lines were 100 metres apart for a total of 13 lines with 26 sample sites per line. An additional 7 samples were also located off the grid within topographic depressions. The purpose of the survey grid was to follow up on previous 2017 anomalous gold results returned from a cursory one km geochemical soil sampling line traverse completed on the Property in 2017 (Figure 5). A total of 268 soil samples were taken during the 2018 exploration program. The locations of the soil samples are shown on the grid map (Figure 6) and the GPS locations are listed in Appendix B. The results of this soil sampling grid geochemical survey returned anomalous gold of up to 63.7 ppb Au. The elevated gold in soil values are in the Hobo stock and the sedimentary contact area peripheral to the stock (Figure 8). The Assay certificate for the sample results is included in Appendix D.

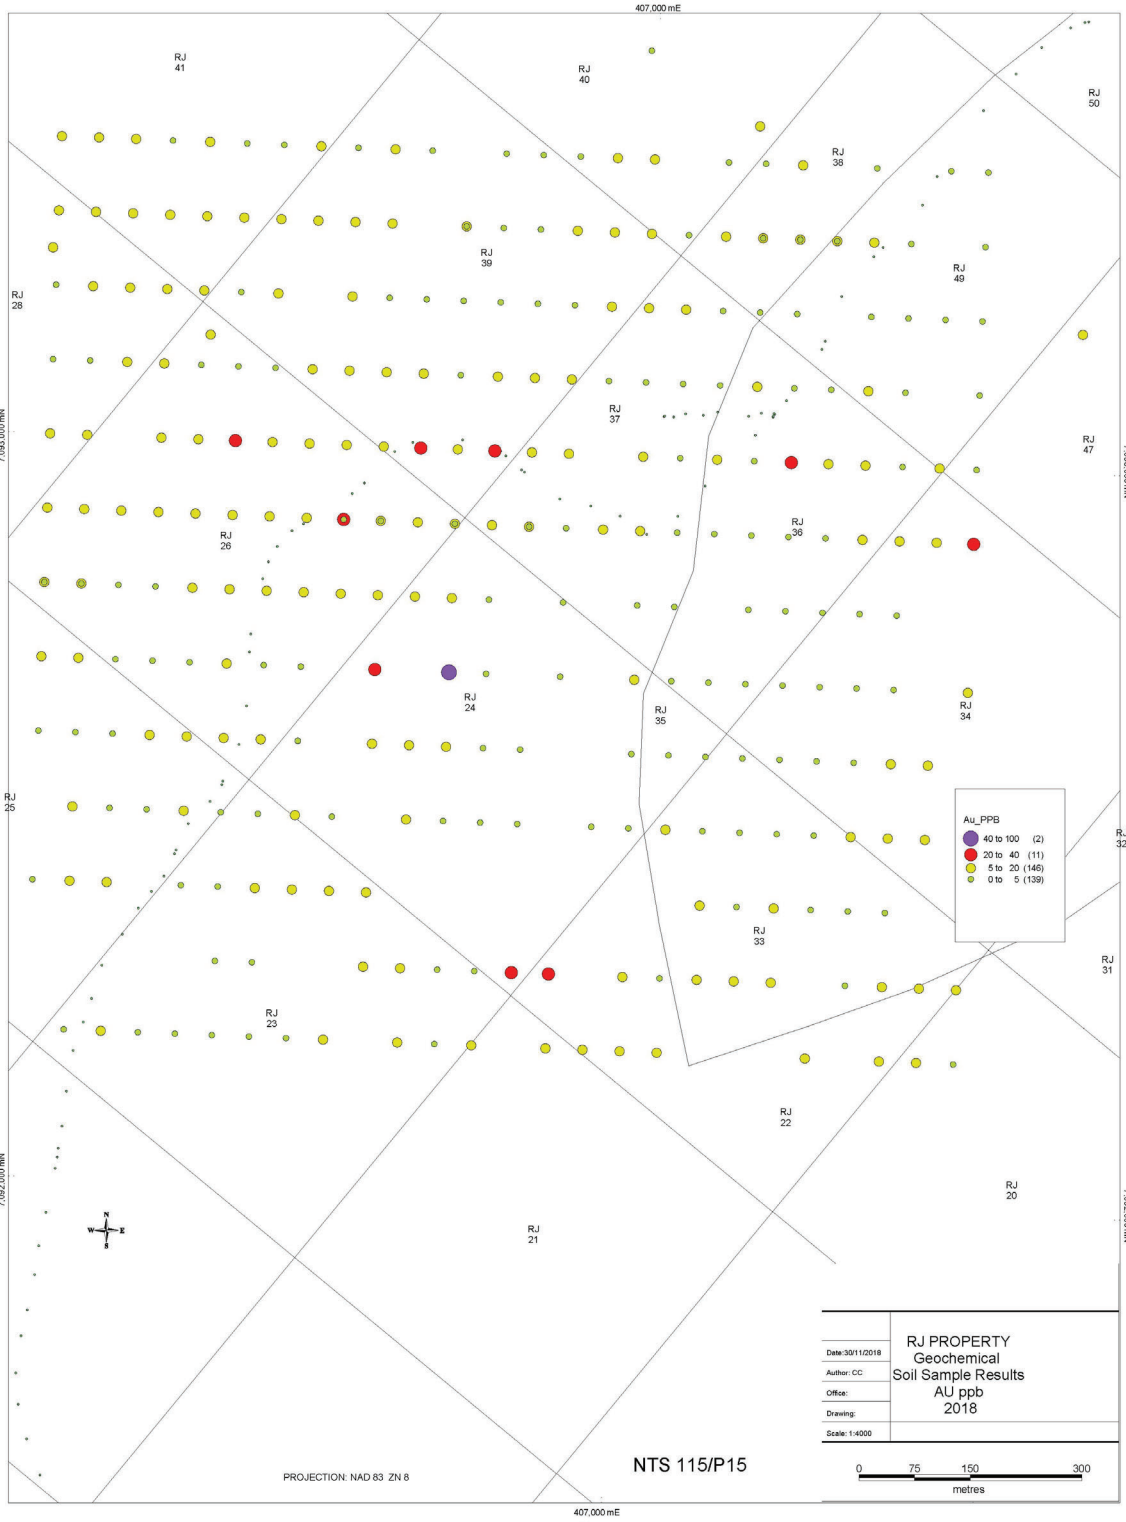

FIGURE 7 SOIL SAMPLE RESULTS (AU PPB) AND TRAVERSE LOCATION RJ PROPERTY 2018

FIGURE 8 GEOLOGY MAP WITH GEOCHEMICAL RESULTS AU PPB

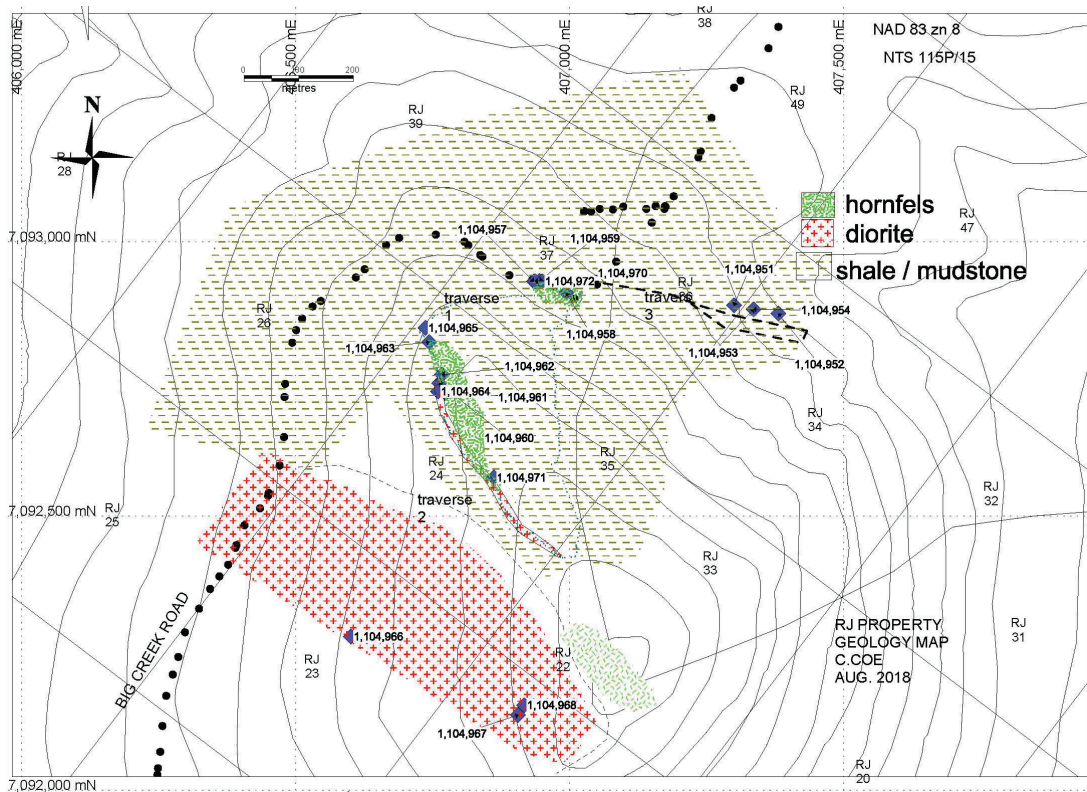

FIGURE 9 2018 MAPPING TRAVERSE AND ROCK SAMPLE LOCATIONS

A total of 2 traverses were completed on the property during the 2018 exploration program. The purpose for the traverses was to prospect areas of the property that covers a portion of the Hobo Stock and sedimentary rock contact. A total of 22 rock samples were taken during the traverses. The locations of the rock samples are shown on the traverse map (Figure 9) and the GPS locations are listed in Table 1 along with the rock descriptions and gold assays. Three grab rock samples taken during prospecting and geological mapping returned > 20ppb Au and up to 60.4 ppb Au (Figure 10; Sample # 1104951).

1104968	406917	7092155	Lt grey Qtzite; some vuggy Fe stained areas; some calcite in veinlets		2.3
1104969	406596	7091984	dk grey syenite-granite; vuggy; Fe staining; feldspar porphyry		0.3
1104970	406937	7092928	Lt green and grey Qtzite. Calcareous and with des sulphides. ASPY.		4.5
1104971	406862	7092570	feldspar porphyry diorite		3.9
1104972	406950	7092928	Lt grey limestone with minor des py		1

GEOCHEMICAL SURVEY AND ANALYTICAL METHOD

Soil and rock Geochemistry Analytical Certificates are in Appendix D.

A total of 268 soil samples and 22 rock samples were collected from the soil geochemical grid survey area and from prospecting. Sample intervals were 50 metres with a total of 26 sample stations per line and 13 lines total.

Individual sample locations were uploaded from a spreadsheet to non-deferential handheld GPS units and navigated to the field site by the soil sampler. The projection used for field GPS was NAD 83, zone 8 and any deviation in the physical sample location was entered in the operator's field notes. UTM coordinates of sample locations are included in Appendix B. A map showing the soil sample locations and corresponding sample number ID is included in Appendix C.

Soil samples were collected with hand augers and also with a mattock when needed. Station sample number ID's were permanently marked in the field with aluminum tags. Sample collection targeted the 'B' Horizon with depths ranging from 30 -100 cm. Loess, permafrost, and steep talus slopes and or talus rock with no soil, prohibited some samples from being collected. The samples were collected in individual kraft paper soil sample bags and dried at camp in a dedicated canvass tent where a geostove was used for heat. The samples were then packed in large plastic bags and placed in rice bags for transport to Bureau Veritas Mineral Laboratory in Whitehorse. Chain of custody of the samples remained with the geologist or geotechs until delivery of the samples to the lab.

A description of the analytical methods used was obtained from the Bureau Veritas Mineral Laboratory website. At the Bureau Veritas Mineral Laboratory in Whitehorse, the entire soil sample was dried and then dry-sieved using a 180 micron (Tyler 80 mesh) screen. The prepared sample was then sent to Bureau Veritas Mineral Laboratory in Vancouver for analysis. The samples were analyzed for 36 elements using method ICP-ES/MS whereby sample splits of 15 grams are leached in hot modified Aqua Regia. Samples were handled, dried and screened in an area dedicated for these media to avoid contamination from more mineralized rock and core samples.

For rock samples, the sample was crushed, split to 250 grams and pulverized to 200 mesh at the laboratory in Whitehorse. The sample was then sent to the Vancouver laboratory for 36 element detection using method AQ292 whereby a 30 gram split is digested in Aqua Regia solution and analyzed using ICP/ES/MS. Over detection limit of >10,000 ppb gold samples were then fire assayed using a 30 gram split, whereby the sample is fire assayed using lead collection fire assay and a gravity finish.

CONCLUSIONS AND RECOMMENDATIONS

A geochemical soil sampling grid survey was completed on the property during the 2018 exploration program. Prospecting and geological mapping was also conducted. A total of 268 soil samples (figure 6) and 22 rock samples (figure 9) were collected. Soil sampling was conducted using augers and mattocks along a defined survey grid. Sample intervals were set at 50 meters and lines were spaced 100 metres apart. The grid consisted of 13 lines with a total of 26 sample station sites per line.

The 2018 exploration program was successful in identifying elevated anomalous gold within and peripheral to the Hobo Stock which fits the geological model for Intrusion Related Gold Deposits with the Hobo Stock being a Tombstone Suite age similar to the Red Mountain Stock. The 2018 exploration program conducted on the RJ Property followed up and confirmed the presence of anomalous gold on the Property identified from the 2017 exploration program.

The locations of the soil samples are shown on the survey grid map (Figure 5) and the GPS locations are listed in Appendix B. The analytical geochemical results from the soil sampling survey returned anomalous gold of up to 63.7 ppb Au with ten samples returning >20 ppb Au. The elevated gold in soil results transects through the Hobo stock and the peripheral sedimentary rocks (Figure 6). Three grab rock samples taken during prospecting and geological mapping returned > 20ppb Au and up to 60.4 ppb Au. Additional follow up geochemical soil sampling, prospecting and mapping is recommended.

Statement of Expenditures for the 2018 RJ Exploration Program

ITEM	DESCRIPTION	AMOUNT
WAGES		
	Senior Geologist (P. Geo): 21 days @ \$700/day	\$14,700
	Project Manager: 13 days @ \$650/day	\$8,450

CERTIFICATE OF ANALYSIS

WHI18000615.1

CLIENT JOB INFORMATION

Project: RJ
Shipment ID:
P.O. Number
Number of Samples: 299

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT Dispose of Reject After 60 days

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Fox Exploration Ltd.
1701 Robert Lang Dr.
Courtenay British Columbia V9N 1A2
Canada

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
DY060	297	Dry at 60C			WHI
SS80	297	Dry at 60C sieve 100g to -80 mesh			WHI
SVRJT	297	Save all or part of Soil Reject			WHI
AQ252	295	1:1:1 Aqua Regia digestion Ultratrace ICP-MS analysis	30	Completed	VAN
SHP01	297	Per sample shipping charges for branch shipments			VAN

ADDITIONAL COMMENTS

JEFFREY CANNON
Geochemistry Department Supervisor

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
*** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	22	Crush, split and pulverize 250 g rock to 200 mesh			WHI
AQ250	22	1:1:1 Aqua Regia digestion Ultratrace ICP-MS analysis	0.5	Completed	VAN
SHP01	22	Per sample shipping charges for branch shipments			VAN

ADDITIONAL COMMENTS

JEFFREY CANNON
Geochemistry Department Supervisor

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
*** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.
