DIAMOND DRILLING
DDH 68-M-1 (Multi 12 M.C.)

Our diamond drill hole (DDH 68-M-1) was drilled on M.C. Multi 12 during June and July 1968. The drill target was an airborne magnetic and a ground induced polarization anomaly.

The drilling was performed by A. Arsenault Diamond Drilling using a BBS-1 drill fitted for AQ wireline drilling.

A camp was established near the site and was serviced by Go-Tract and Foremost tracked vehicles. A small amount of helicopter time was also utilized to bring out some of the gear after the job was finished.

No economic mineralization was observed and no assaying was done. The core is stored at the Faro camp. The core log is attached.

M.O. Hampton, P. Eng.
Chief of Exploration for
Anvil Mining Corporation Ltd.
