WORK DONE BY

S.B. Jones

WORK DONE FOR

Dynasty Explorations Ltd.

REMARKS

General geology of the claim groups is phyllite bordered by the Anvil Batholith and volcanic units. The Hoho-Bram claim group covers 2 large airborne E.M. anomalies. Detailed geological, geophysical, geochemical and possible drilling is proposed for this group.

NORTHERN MINERAL EXPLORATION ASSISTANCE PROGRAM
REQUEST FOR GRANT PAYMENT
FURTHER PROPOSED EXPLORATION -1971

GENERAL

Dynasty Explorations previously requested budget approval and assistance during the period March 1 to July 31, 1971, on the Tintina Properties in the Anvil Range. The claim groups including the Lorna, Roto, Gran, Jean, Aro and Hoho-Bram claims were grouped together for an estimated budget of \$86,730.00 which included geochemical, geophysical and geological surveys. We now request approval of a second stage program of diamond drilling in the two areas involved. A total of 5000 feet of diamond drilling is planned on the Lorna-Roto-Gran-Jean-Aro claims with an estimated budget of \$128,205.00, and 3000 feet of diamond drilling on the Hoho-Bram claims with an estimated budget of \$79,090.00. This second phase of exploration involves a total estimated budget of \$207,295.00.

SURVEY COVERAGE

Calculations from previous surveys are tabulated below as a basis for estimated costs of future exploration.

Overall Survey Costs

- | | |
|--|--------------------|
| (1) Contract charges for BQ diamond drilling | = \$ 12.00 per ft. |
| (2) Road building, poor quality | =\$500.00 per mile |
| (3) Jet Ranger helicopter charges | =\$240.00 per hour |

LORNA-ROTO-GRAN-JEAN-ARO CLAIMS

Initial geological, geochemical and geophysical surveys proposed for the Lorna-Roto-Gran-Jean-Aro Claims are expected to indicate several coincident anomalies caused by potential massive sulphides. The additional proposed budget of \$128,205.00 will provide funds for 5000 feet of diamond drilling to fully assess the nature of anomalies encountered.

Proposed work for March to July, 1971, is included in our "Northern Mineral Exploration Assistance Program Request for Grant Payment - Exploration Program - 1971" application forwarded previously. All work conducted in 1970 is included in individual reports on the Lorna, Roto, Gran and Jean claims forwarded with our "Northern Mineral Assistance Program Request for Grant Payment - Exploration Program 1970" application.

MINERAL CLAIMS HELD BY DYNASTY EXPLORATIONS

HOHO-BRAM CLAIMS

The Hoho-Bram claims were recently staked to cover two large airborne electromagnetic anomalies to the north of the Swim deposit. Economic potential appears good since the claims cover the favourable host rock, graphitic to sericitic quartz rich phyllites. The initial 1971 proposed budget provides funds for detailed geological, geophysical and geochemical surveys. This additional proposed budget of \$79,090.00 includes continued follow-up of 3000 feet of diamond drilling on potential anomalies obtained from previous surveys.

HOGO-BRAM CLAIMS

The Hoho-Bram claims were recently staked to cover two large airborne electromagnetic anomalies to the north of the Swim deposit. Economic potential appears good since the claims cover the favourable host rock, graphitic to sericitic quartz rich phyllites. The initial 1971 proposed budget provides funds for detailed geological, geophysical and geochemical surveys. This additional proposed budget of \$79,090.00 includes continued follow-up of 3000 feet of diamond drilling on potential anomalies obtained from previous surveys.
