Statement of Professional Qualifications of Hajime Shimizu

Date of Birth: November 17th. 1927

1952 - Graduate from University of Kyoto, Dept. of Sciences, Geology and Mineralogy School. Theme General Geology of Natural Gas Area in Southern Kyushu Island, Japan.
Joined Mitsubishi Metal Corporation.

1952 to

1964 - Worked in Northern Honshu Island "Kuroko" Area and Osarizawa Copper Mine as mining geologist - partly exploration geologist.

1964 - June, Ph. D

Theme: Black Ore (Kuroko) horizon in Kazuno - Basin area, Northern Eastern Honshu Island, Japan (Especially Osarizawa Mineralized Area)

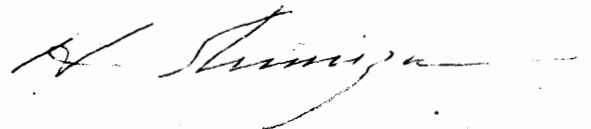

1964 to

1969 - Working in Melbourne Australia as representative of Mitsubishi Metal Corporation in charge of exploration projects searching for Base Metals. During this period several exploration projects were achieved including Mammoth Copper Prospects (later became Gunpowder Copper Mine under operation in Queensland).

1969 to

1975 - Worked at Head Office in Tokyo, as Senior Geologist, then Assistant General Manager of Overseas Exploration and Development Department. During this period made several overseas trips to various mines and prospects throughout the world.

1976 - Worked in Vancouver Office as General Manager of Mitsubishi Metal Corporation, Vancouver Branch.

NAMES AND ADDRESSES OF PERSONS INVOLVED IN WORK

Dr. Hajime Shimizu,
#604 - 2061 Beach Ave.,
Vancouver,
B.C. V6G 1Z3

Mr. Taka-aki Kashiwagi,
1-8-24 Gotenyama,
Musashino City,
Japan

Mr. Richard Eastman,
Box 4411,
Whitehorse,
Yukon.

1. INTRODUCTION

In the period from July 2nd. to July 9th., 1976, the staff of Mitsubishi Metal Corporation completed the geological reconnaissance survey work on the ML Claim groups located in the Hopkins Lake Area of the Yukon Territory on behalf of the above mentioned Company, a mining company legally incorporated in Japan having its main office in Tokyo and one of its branch offices in Vancouver (2766 - 200 Granville Street, Vancouver, B.C. V6C 1S4).

The work was carried out on the above mentioned area with the objective of proving the high value of U_3O_8 content in an intrusive rock specimen which was collected by the staff when they visited the area during October 1975.

11. GENERAL STATEMENT

1) Location, Access, and Geographic Features

The property (ML claim groups) is situated at about latitude $61^{\circ}18'N$ and longitude $136^{\circ}55'W$ in Hopkins Lake Area of Claim Sheet 115-H-7, in the Whitehorse Mining District, Yukon Territory. It is about 75 air miles NW of Whitehorse. (see figs. 1 and 2)

There is an access road into the properties which is the Aishihik Road, about a half mile west of the property.

The mineral claim group is approximately 3500' to 4500' in elevation on a steep hill of the west bank, with more flattening on the eastern part of the claims with some vegetation at the bottom and less at the top.

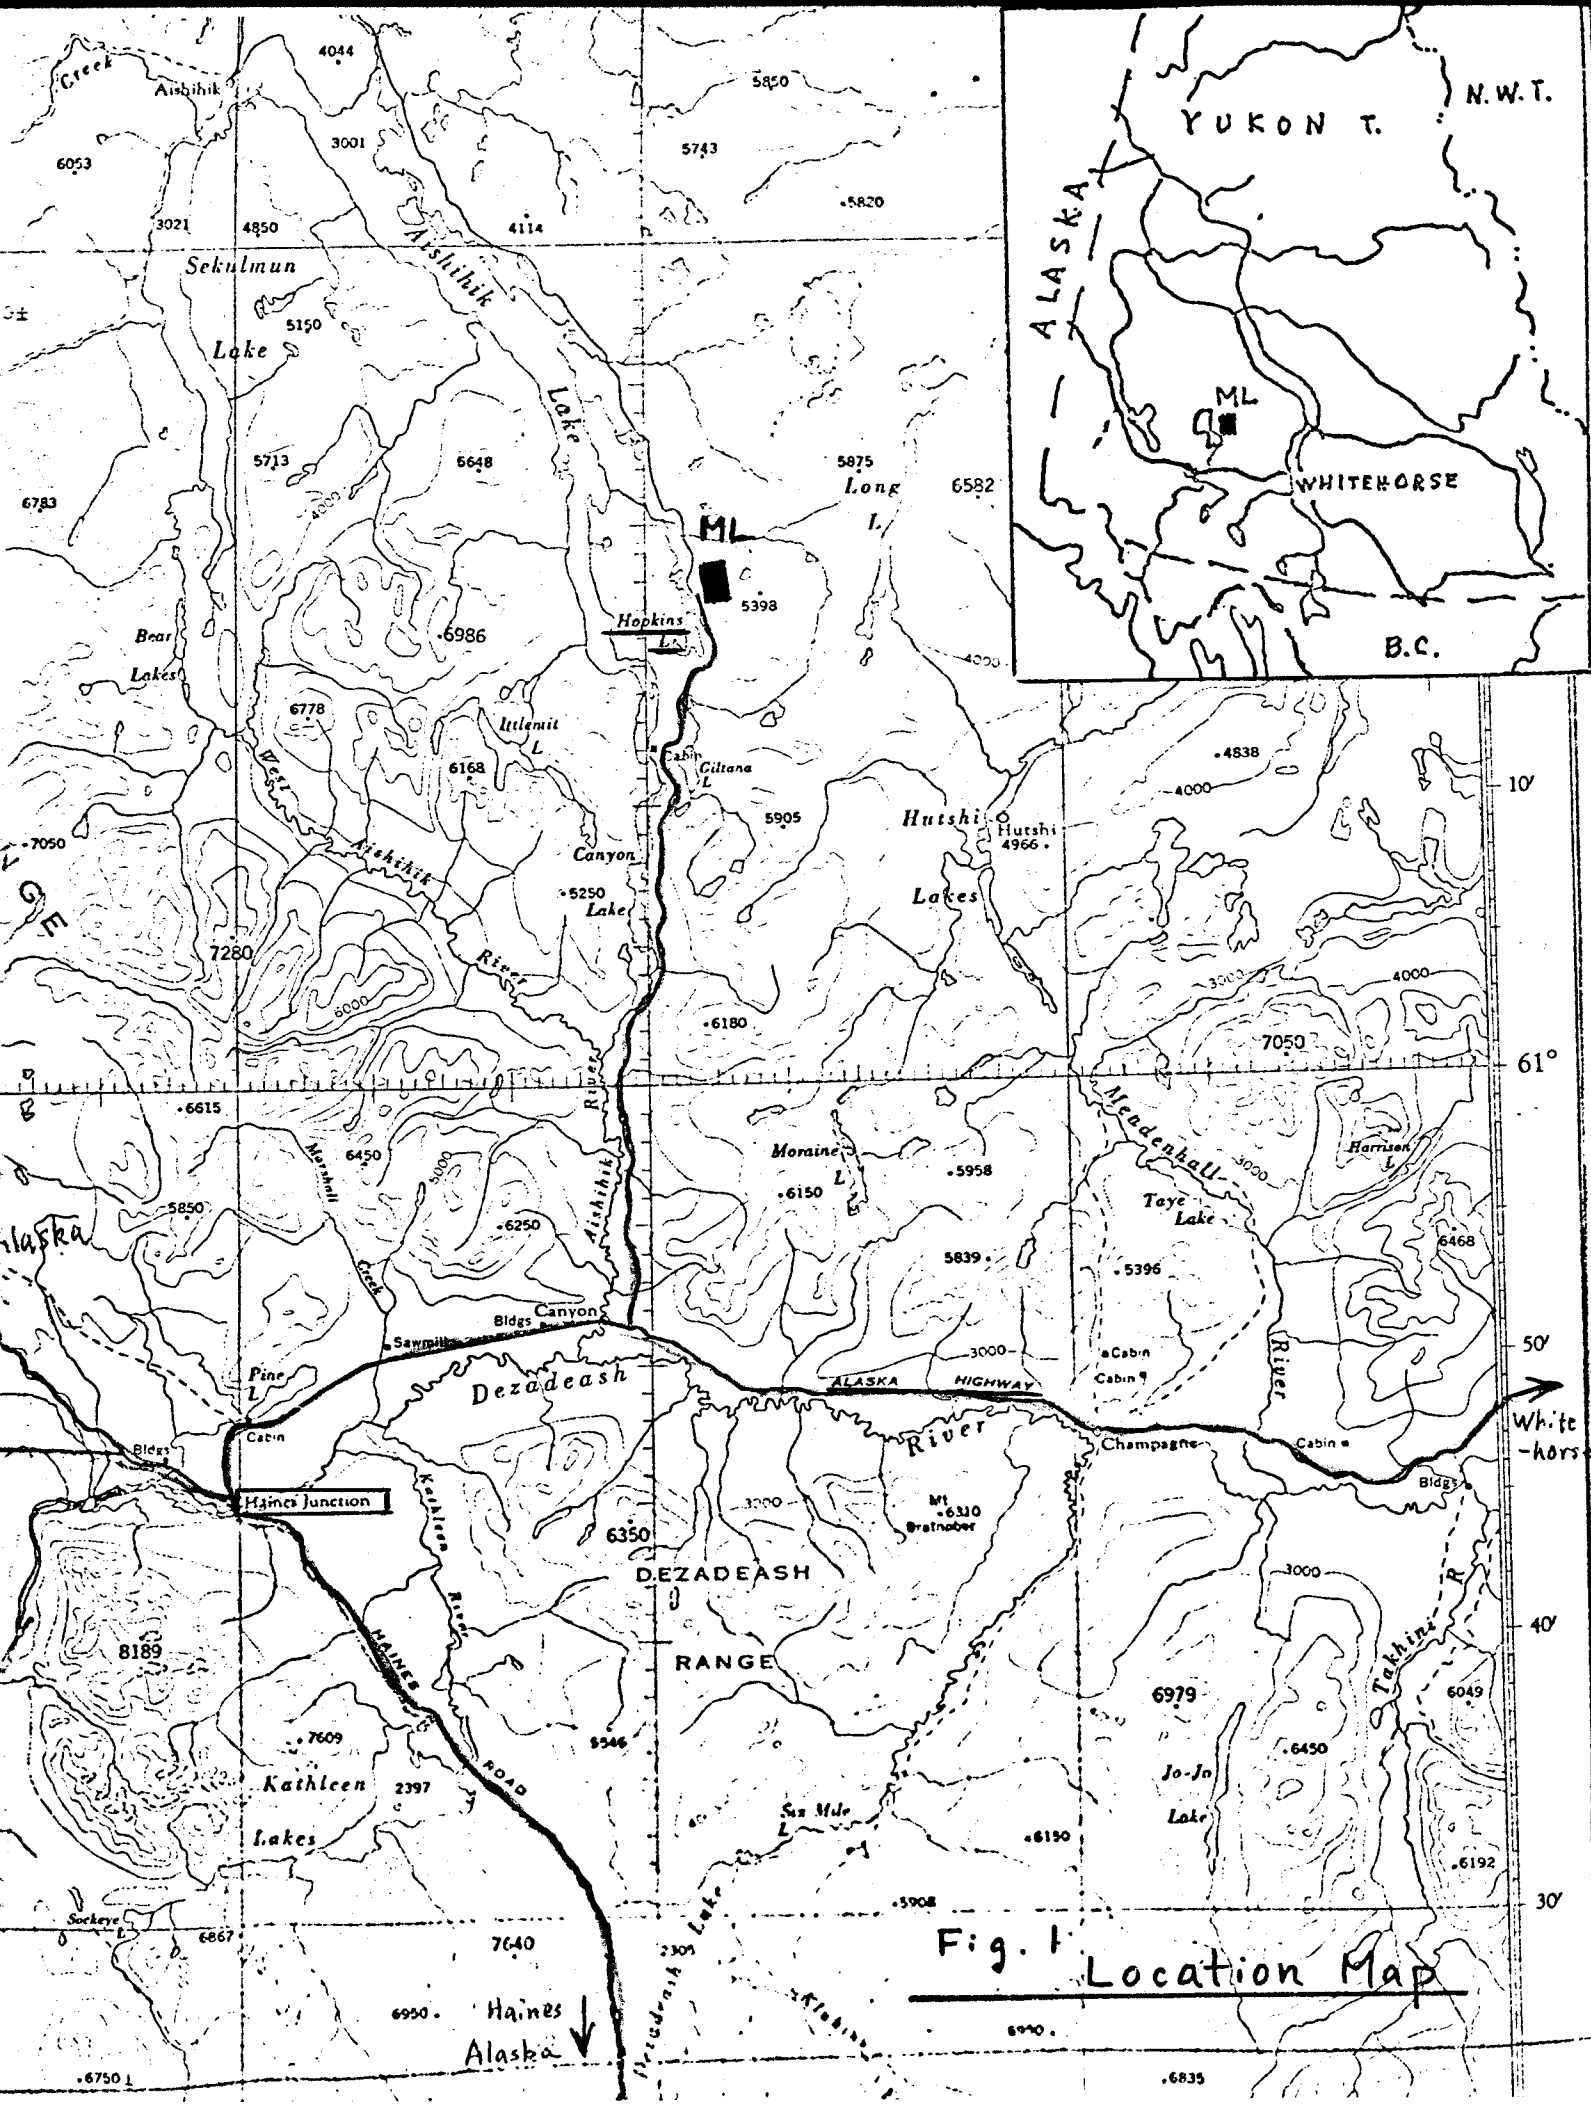

Fig. 1 Location Map

2) History of Mineral Claims

The ML claim group was first staked by Dr. Kuang Ine Lu, and Mr. Minoru Yoshida, immediately after the survey they carried out during October 1975.

During May 1976 these claims were transferred to Mitsubishi Metal Corporation.

The area was originally an AD claim which we named in 1968 after we found a copper showing in some outcrops. We then staked the claims as AD group.

From 1968 to 1970 a wide range of geochemical and geophysical survey were done by our staff; the result of the survey was not encouraging enough to warrant any further exploration, so we decided to let these claims lapse on July 11th. 1974.

111. Results of Survey

1. The result of chemical analysis of U_3O_8 for the intrusive rock specimen which was collected last year is as follows:

0.124 per cent of U_3O_8 (the specimen looks like pegmatitic)

Geological survey for this year was concentrated towards the checking of intrusive rock distribution and detection of high radio-activity, using the scintillation counter.

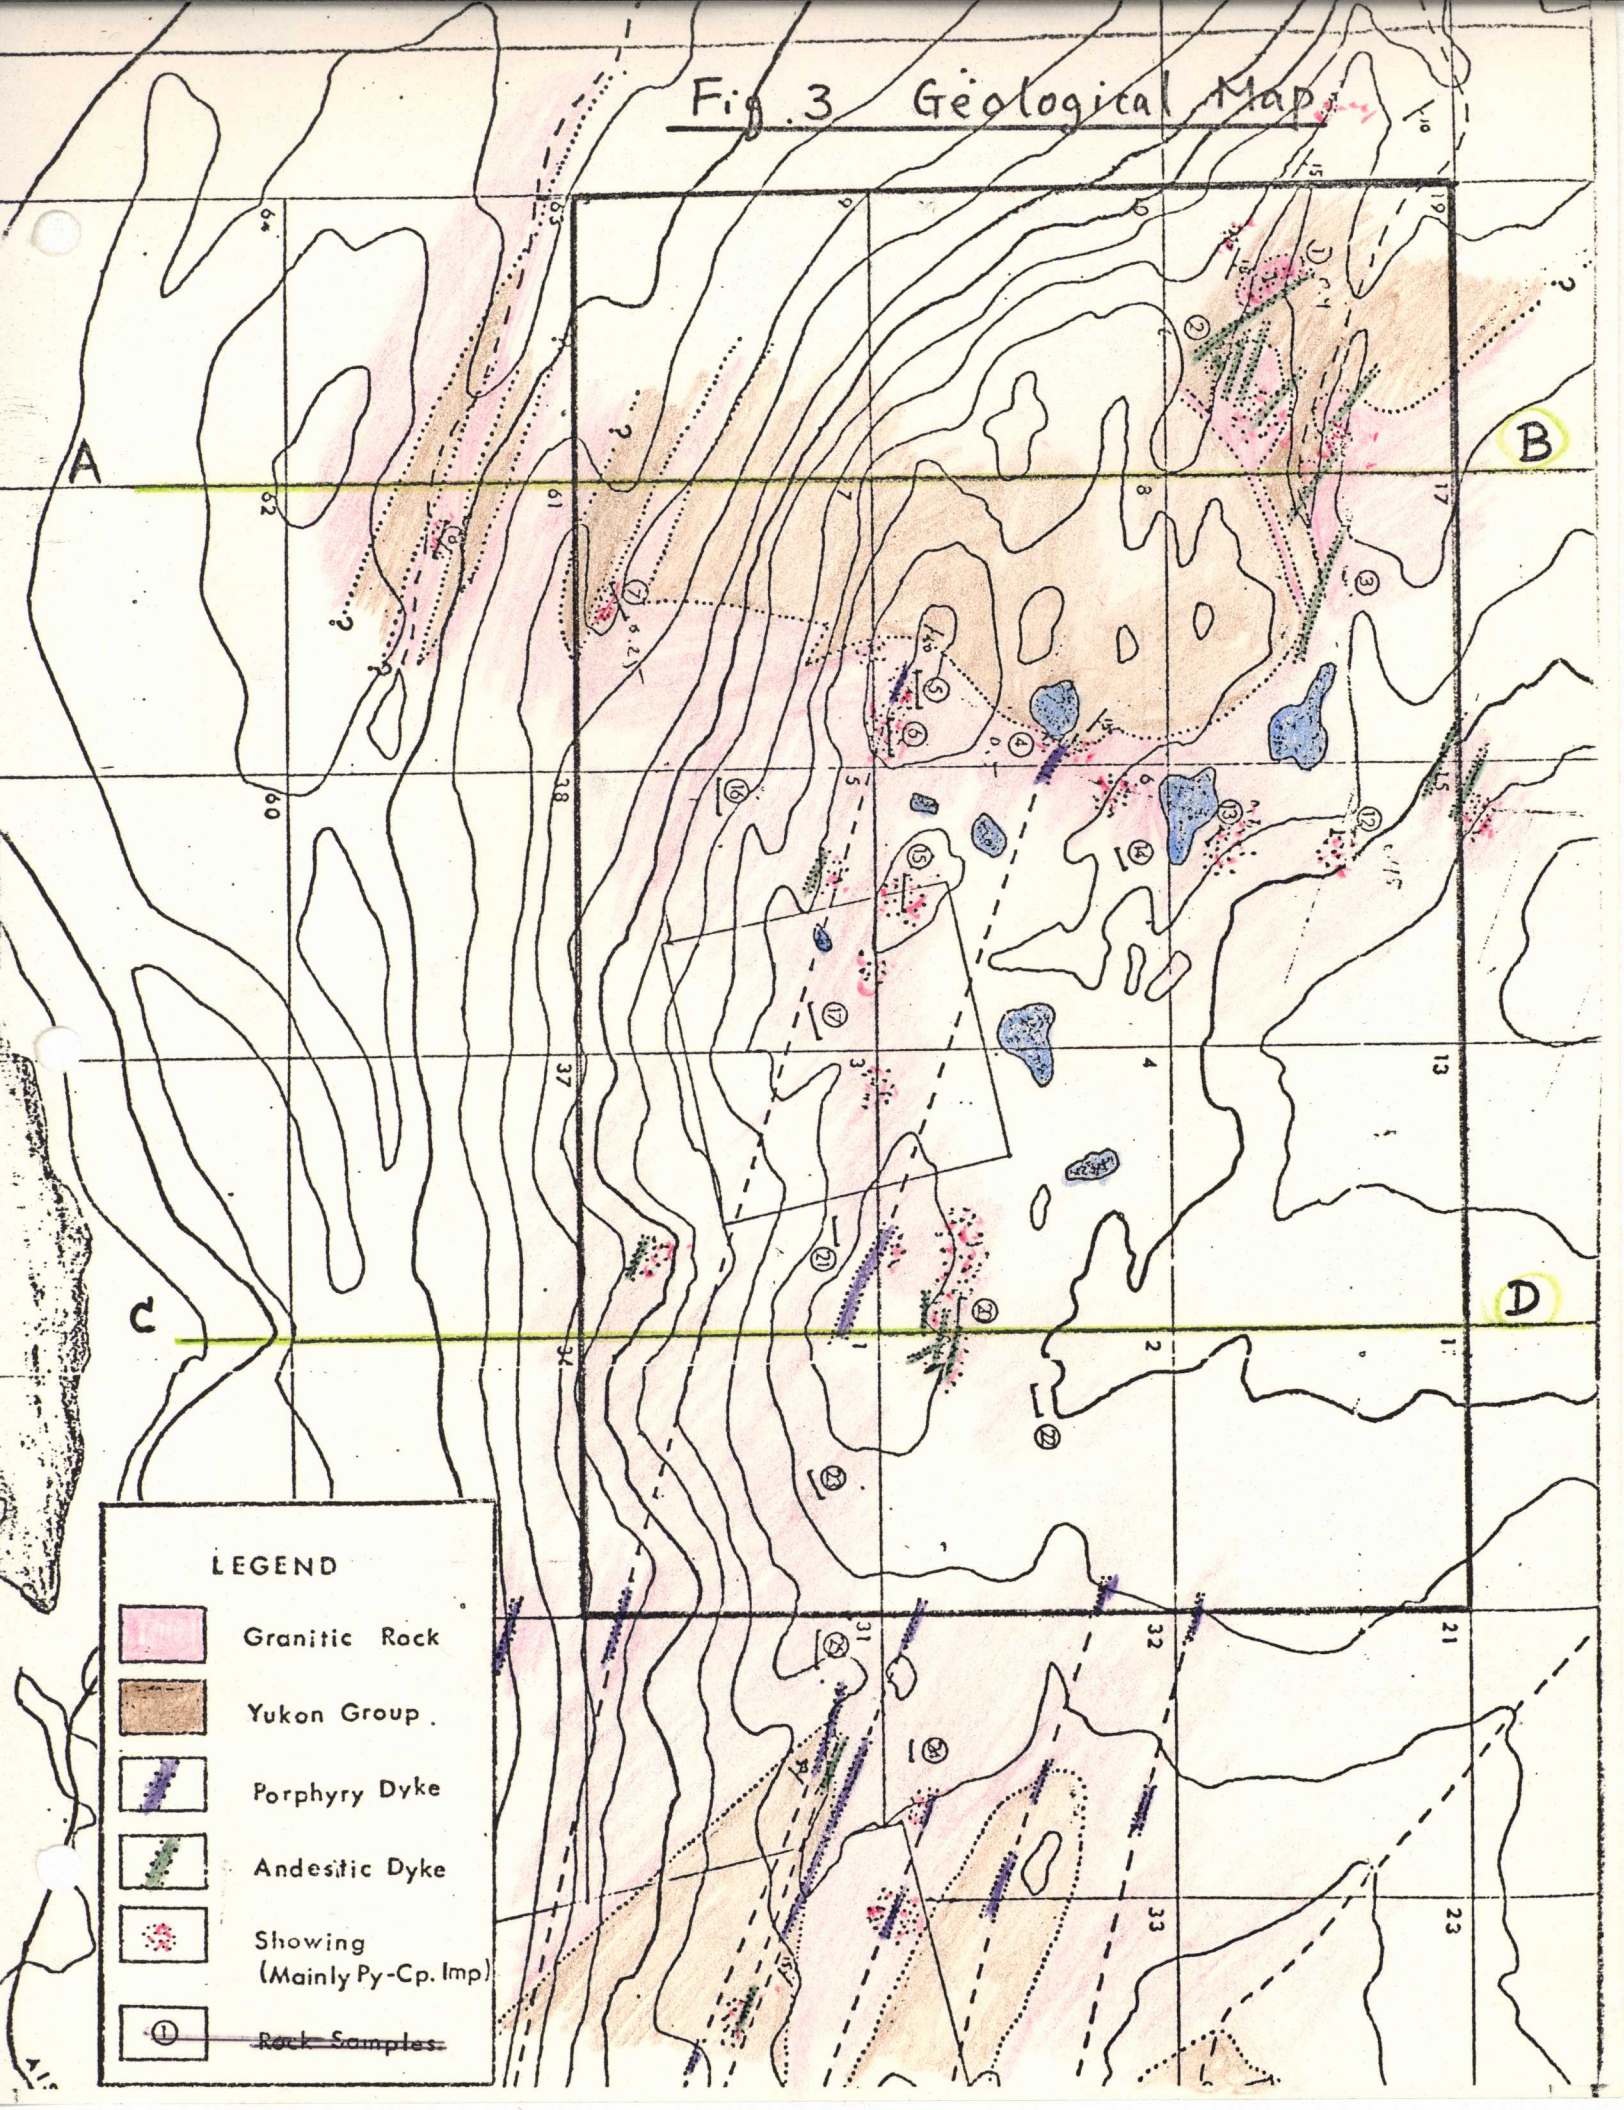

The outlying geological features, we already knew; as stated earlier we had surveyed the property from 1968 - 1970 hoping to find copper mineralization.

Geology of the area consists of Yukon Group sediments and metasediments, Coast Range intrusives (Mesozoic) and dyke rocks. See following table:

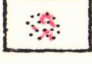

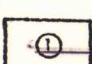

Geological Formation of ML Claim Group Area

		Lithology
Recent & Pleistocene (After Jurassic)	Superficial Deposits Dyke Rocks	Alluvium & Glacial Drift Andesitic & Porphyritic (and related type) rocks
Jurassic and (?) Cretaceous	Coast Range Intrusives	Syenite, Monzonite, Diorite Granodiorite, Granite and related types
Precambrian and later	Yukon Group	Quartz-chlorite-sericite-schist, Epidote-actinolite-green stone, Quartz-mica-schist, Quartzite, Slate, limestone, Granite-gneiss, and etc.

2. The result of the radioactive survey which we achieved by using a scintillation counter was not so encouraging. The count per second ranged between 80 - 180 (see attached plate 2 - 3, 2 - 4)

The rock specimens which we collected from the Coast Range Intrusive Unit (Granitic rock) were sent to the laboratory for analytic process at the same time. The results of chemical analysis were very low; 0.001 per cent of U_3O_8 . (see attached plate 2 - 1, 2 - 2)

1V. SURVEY AND RECOMMENDATIONS

Reconnaissance and geological work was done to find a favourable zone of radioactive mineral occurrences; particularly of the intrusive granite rock area using the scintillation counter after collecting the rock specimens. The result of the survey with the chemical analysis of the rock specimens (the number of collected samples is 39) still remains uncertain, especially the result of radioactive value in the rock specimen which was collected in 1975. Regarding this point, recent findings of uranium mineralization in the Norther part of the Yukon Territories show that further investigation should be taken in this area, especially as regards finding a favourable zone of intrusive granitic rock, or pegmatitic dyke.

V. STATEMENT OF EXPENSES

Miscellaneous Expenses	123.01
Travelling costs	1,598.83
Extra Staff - Mr. R. Eastman salary	350.00
Accomodation costs	285.00
