YUKON QUARTZ MINING ACT
FORM "C" - APPLICATION FOR A CERTIFICATE OF WORK

Q90953-Q90955

(This form required in duplicate with sketch showing location of work.)

(Name) Blake S. Macdonald	Occupation President
(Postal Address) Ketzta Enterprises Ltd., Ross River, Yukon	

OFFICE DATE STAMP

MAKE OATH AND SAY, THAT:

1. I am the owner, or agent of the owner, of the mineral claim(s) to which reference is made herein.

2. I have done, or caused to be done, work on the following mineral claim(s):

(Here list claims on which work was actually done by number and name)

PELLY 2 - 22 inclusive

situated at Detour Lakes area, Relly River Claim Sheet No. 105 L 14

in the Whitehorse Mining District, to the value of at least \$3,000.00

dollars, since the twentieth day of July 1980,

to represent the following mineral claims ~~under the authority of Grouping Certificate No.~~ _____

(Here list claims to be renewed in numerical order, by grant number and claim name, showing renewal period requested).

Claim Name	Number	Grant Number	Renewal Period
PELLY	2 - 22 incl.	YA 48165 to YA 48185 incl.	1 year

3. The following is a detailed statement of such work: (Set out full particulars of the work done indicating dates work commenced and ended in the twelve months in which such work is required to be done as shown by Section 53.)

- compass and topofil grid with geochem
- work commenced July 20/80 ended August 10/80
- all invoices not received as yet, approximate value \$150/claim, maps, assays, report, etc. to follow by October 15/80
- assays expected 3 - 5 weeks late

Sworn before me at Ross River, Yukon

this 25 day of August 1980

PELly PROJECT		
CLAIM MAP		
Scale 1 : 31,680	Date NOV 1980	NTS
Revised _____	By G.H.R./d.h.	Fig 2

CONCLUSIONS

The geological results from the present survey are not encouraging. Values in all three elements tested are low and relatively uniform. It seems most likely that the claims do not contain a substantial sulphide body that is in a position to influence soil metal values.

RECOMMENDATIONS

Since the property lies in a favourable geological environment near the Clear Lake massive sulphide deposit it is recommended that the claims be retained in good standing pending further development in the area.

If further work is required to maintain the claims in good standing this further work should consist of detailed prospecting and geological mapping.

INTRODUCTION

The PELLY 2-20 claims and several other claim groups were staked as part of the Pelly Project, a joint venture between Welcome North Mines Ltd. and E and B Explorations Inc. The claims were located to cover areas potentially favourable for the discovery of a mineral deposit similar to the nearby Clear Lake zone.

During the summer of 1980, Ketz Enterprises Ltd. of Ross River, Y.T. contracted to cut a grid over the property and to carry out a geochemical soil survey. The results of this survey are presented in this report.

LOCATION AND ACCESS

The property is located in the Pelly River Valley in the south-central Yukon about 120 miles north of Whitehorse. The specific location would be: Latitude 62° 47' N, Longitude 135° 02' W.

Access for light exploration purposes is by helicopter from bases at Ross River or Carmacks. Several lakes in the area and a gravel airstrip at Clear Lake are suitable for fixed-wing use if required.

Bush cover in the district is moderate and generally does not hinder traversing.

HISTORY AND PREVIOUS WORK

Following the discovery by Conwest Explorations Inc. of the Clear Lake deposit in 1978 the Pelly Project was formed and several geologically favourable areas were staked in the district.

Some 1675 line-kilometres of airborne magnetic and electromagnetic survey were flown over a portion of the district in April of 1980 for the Pelly Project.

GEOLOGY

The detailed geology of the area is poorly understood. In general the area is underlain by somewhat schistose rocks of the Askin Group and by Anvil Range volcanics and shale. These older rocks have been cut by substantial monzonitic intrusives of presume cretaceous age. The detailed geology of the Pelly claims is not known.

GEOCHEMISTRY

Discussion of Method

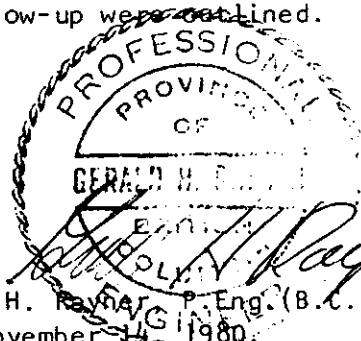

The soil samples were taken at 100 metre intervals along flagged grid lines 400 metres apart. A short handled grub hoe was used to collect the sample. Whenever possible the B² horizon was collected although in some areas only A² material was available. Throughout the district the normal soil profile is overlain by up to 0.5 metres of volcanic ash which must be penetrated to collect the sample.

The samples were placed in numbered kraft paper envelopes and sent to Whitehorse Assay Labs. Whitehorse, Y.T. for analysis.

The samples were dried, screened to minus 80 mesh and a weighed portion was digested in hot HNO₃ and HClO₄. The resulting solution was then analysed by Atomic Absorbtion Spectrometre for copper, lead and zinc.

Discussion of results

The values reported for all three elements were surprisingly low. No areas warranting closer geochemical follow-up were outlined.

A circular professional seal for Gerald H. Ray, a Professional Engineer in the Province of British Columbia. The seal contains the text "PROFESSIONAL ENGINEER", "PROVINCE OF BRITISH COLUMBIA", and "GERALD H. RAY". A signature is written across the seal.

F O R W A R D

During the period July 15th to August 14th, 1980, Ketza Enterprises Ltd. was employed and supervised by Welcome North Mines Ltd. to undertake the controlled geochemical sampling of eleven properties in the Detour Lakes area of the Pelly River valley. Ketza Enterprises collected all samples and prepared all maps for the surveys. All results were then sent to Welcome North Mines Ltd. No effort was made by Ketza Enterprises to interpret results or to tie results into existing geological information. During the analysis of samples, certain samples from RSVP, PVA, and PDQ claim blocks were destroyed by fire at the Whitehorse Assay Office.

Method of Control

The control of sampling was obtained by the use of compass and chained lines. To tie the lines into the claim block the base lines were run along claim lines tying the claim posts into the grid. Cross lines were run at intervals of 400 meters at right angles to the base lines and sample stations were at intervals of 100 meters on the cross lines.

Method of Collection

At 100 meter intervals on the flagged cross lines samples were obtained with the use of a mattock from the B horizon which in most cases was just below the ash layer that overlays the Detour Lakes area approximately 12 - 18 inches below the surface. The samples obtained were placed in a Kraft envelope and the envelope was marked with the claim block name and the line and station.

Method of Analysis

Samples collected were sent to Whitehorse Assay labs, a division of Barringer Magenta and run accordingly.

Method of Analysis (Continued)

1. Samples are dried.
2. Sieved to minus 80 mesh.
3. Weighed to 0.5 gms.
4. Digested in hot HNO_3 & HClO_4 for 4 hours.
5. Cooled and brought up to 5 MLS, shaken and settled.
6. Analysed on an Atomic Absorption Spectrometer.
7. Sample results are recorded and returned to Ketz Enterprises Ltd. to be recorded on grid plans.
