

GETTY CANADIAN METALS, LIMITED

MACMILLAN JOINT VENTURE

ASSESSMENT REPORT

TITLE: Aerial Photography, Orthophoto and Line Maps Report

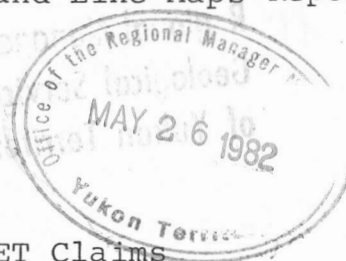

AUTHOR: C.W. Payne

DATE: 5 May 1982

LOCATION: Name of Claim Group - SUE and GET Claims

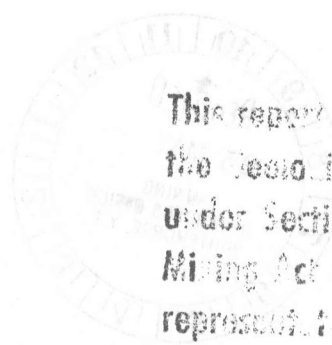

Claim Sheet Numbers - 105L/10, 11, 14, 15.

Co-ordinates - Latitude 62°49'N
- Longitude 135°05'W

Work conducted from August to December, 1981.

091036

This report has been examined by
the Geological Evaluation Unit
under Section 53 (4) Yukon Quartz
Mining Act and is allowed as
representation work in the amount
of \$ 16,050.

P. Watson

for Regional Manager, Exploration and
Geological Services for Commissioner
of Yukon Territory.

SUMMARY AND CONCLUSIONS

This report describes the results of the targetting, aerial photography and production of the orthophotos and line maps on the SUE and GET claims.

An aerial photography survey was flown in August to establish better ground control during exploration and to provide an acceptable base to plot survey results.

1.0 GENERAL

1.1 Introduction

The SUE and GET claims are currently held by Getty Canadian Metals, Limited and Essex Minerals Canada for the MacMillan Joint Venture.

The aerial photography work described herein was conducted by and under the direct supervision of C.W. Payne. The writer laid out the program and evaluated the results based on the data presented herein.

1.2 Location and Access

The MacMillan Joint Venture claim group, centered at 62°49'N latitude, 135°05'W longitude, is located east of the confluence of the MacMillan and Pelly Rivers, central Yukon (see Figure 1). Access can be gained in three ways:

- i) via fixed-wing aircraft from Whitehorse or Pelly Crossing, distances of 160 and 40 miles respectively. A dirt airstrip, 150' wide by 3,000' long, situated immediately west of the Clear Lake deposit, can accommodate planes up to a DC-3.

DATE DEC., 1981 DRAWING No 1 SCALE 1" to 50 miles	
Getty Canadian Metals, Ltd.	

ii) via helicopter from a base in Carmacks, a distance of 50 miles.

iii) via winter tote road from Pelly Crossing, road distance of approximately 40 miles.

Access during the 1981 summer exploration programme was via fixed-wing aircraft and helicopter.

1.3 Physiography and Climate

The Venture area covers a series of gently rolling hills and ridges referred to as the Tummel Basin. Elevations range from 1,760' ASL at Pelly River to 2,400' ASL on the hill tops.

The climate is sub-arctic with long cold winters and short cool summers. Temperatures range from -40°F to 80°F. Annual precipitation is 20 to 30 inches.

The Joint Venture claims area is underlain by numerous small lakes and swamps which make line-controlled ground geophysical surveys very difficult in summer, therefore, most geophysical surveys have been carried out during the winter months.

2.0 AERIAL PHOTOGRAPHY PROGRAM

An aerial photography program was undertaken over the MacMillan Joint Venture area to establish ground control for grid lines and to accurately tie in claim boundaries. As well, the program produced base maps for lake sediment geochemistry, geologic mapping, drill hole location and airphoto interpretation. The aerial photography program can be sub-divided into two parts; survey control, and aerial photography and orthophoto preparation.

2.1 Survey Control

A total of 30 targets were set out and surveyed to allow bridged control over the claims and model control of Clear Lake grid area (Figure 2). An additional 32 targets were laid out spotting drill hole collars and 7 targets for location of the Clear Lake grid.

2.2 Aerial Photography and Orthophoto Preparation

A total of 500 square miles of high level black and white aerial photography covering the claims and part of the Area of Interest was flown in late August (Figure 3). Within this area flown, an orthophoto was produced covering part (80 square

miles) of the claim block at a scale of 1:10,000 and contour interval of 10 metres (Figure 3).

Orthophoto and base maps from this survey now provide an adequate base to plot survey data. Copies of the orthophotos and line maps (scale 1:10,000) are included as Appendix I.

The Clear Lake grid area was also flown at a suitable lower level to produce an orthophoto at a scale of 1:2,000 with a contour interval of 2 metres.

A list of SUE and GET claims on which assessment is being applied is seen in Table I.

APPENDIX IV

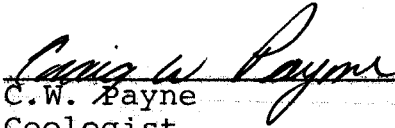

CERTIFICATE OF AUTHOR

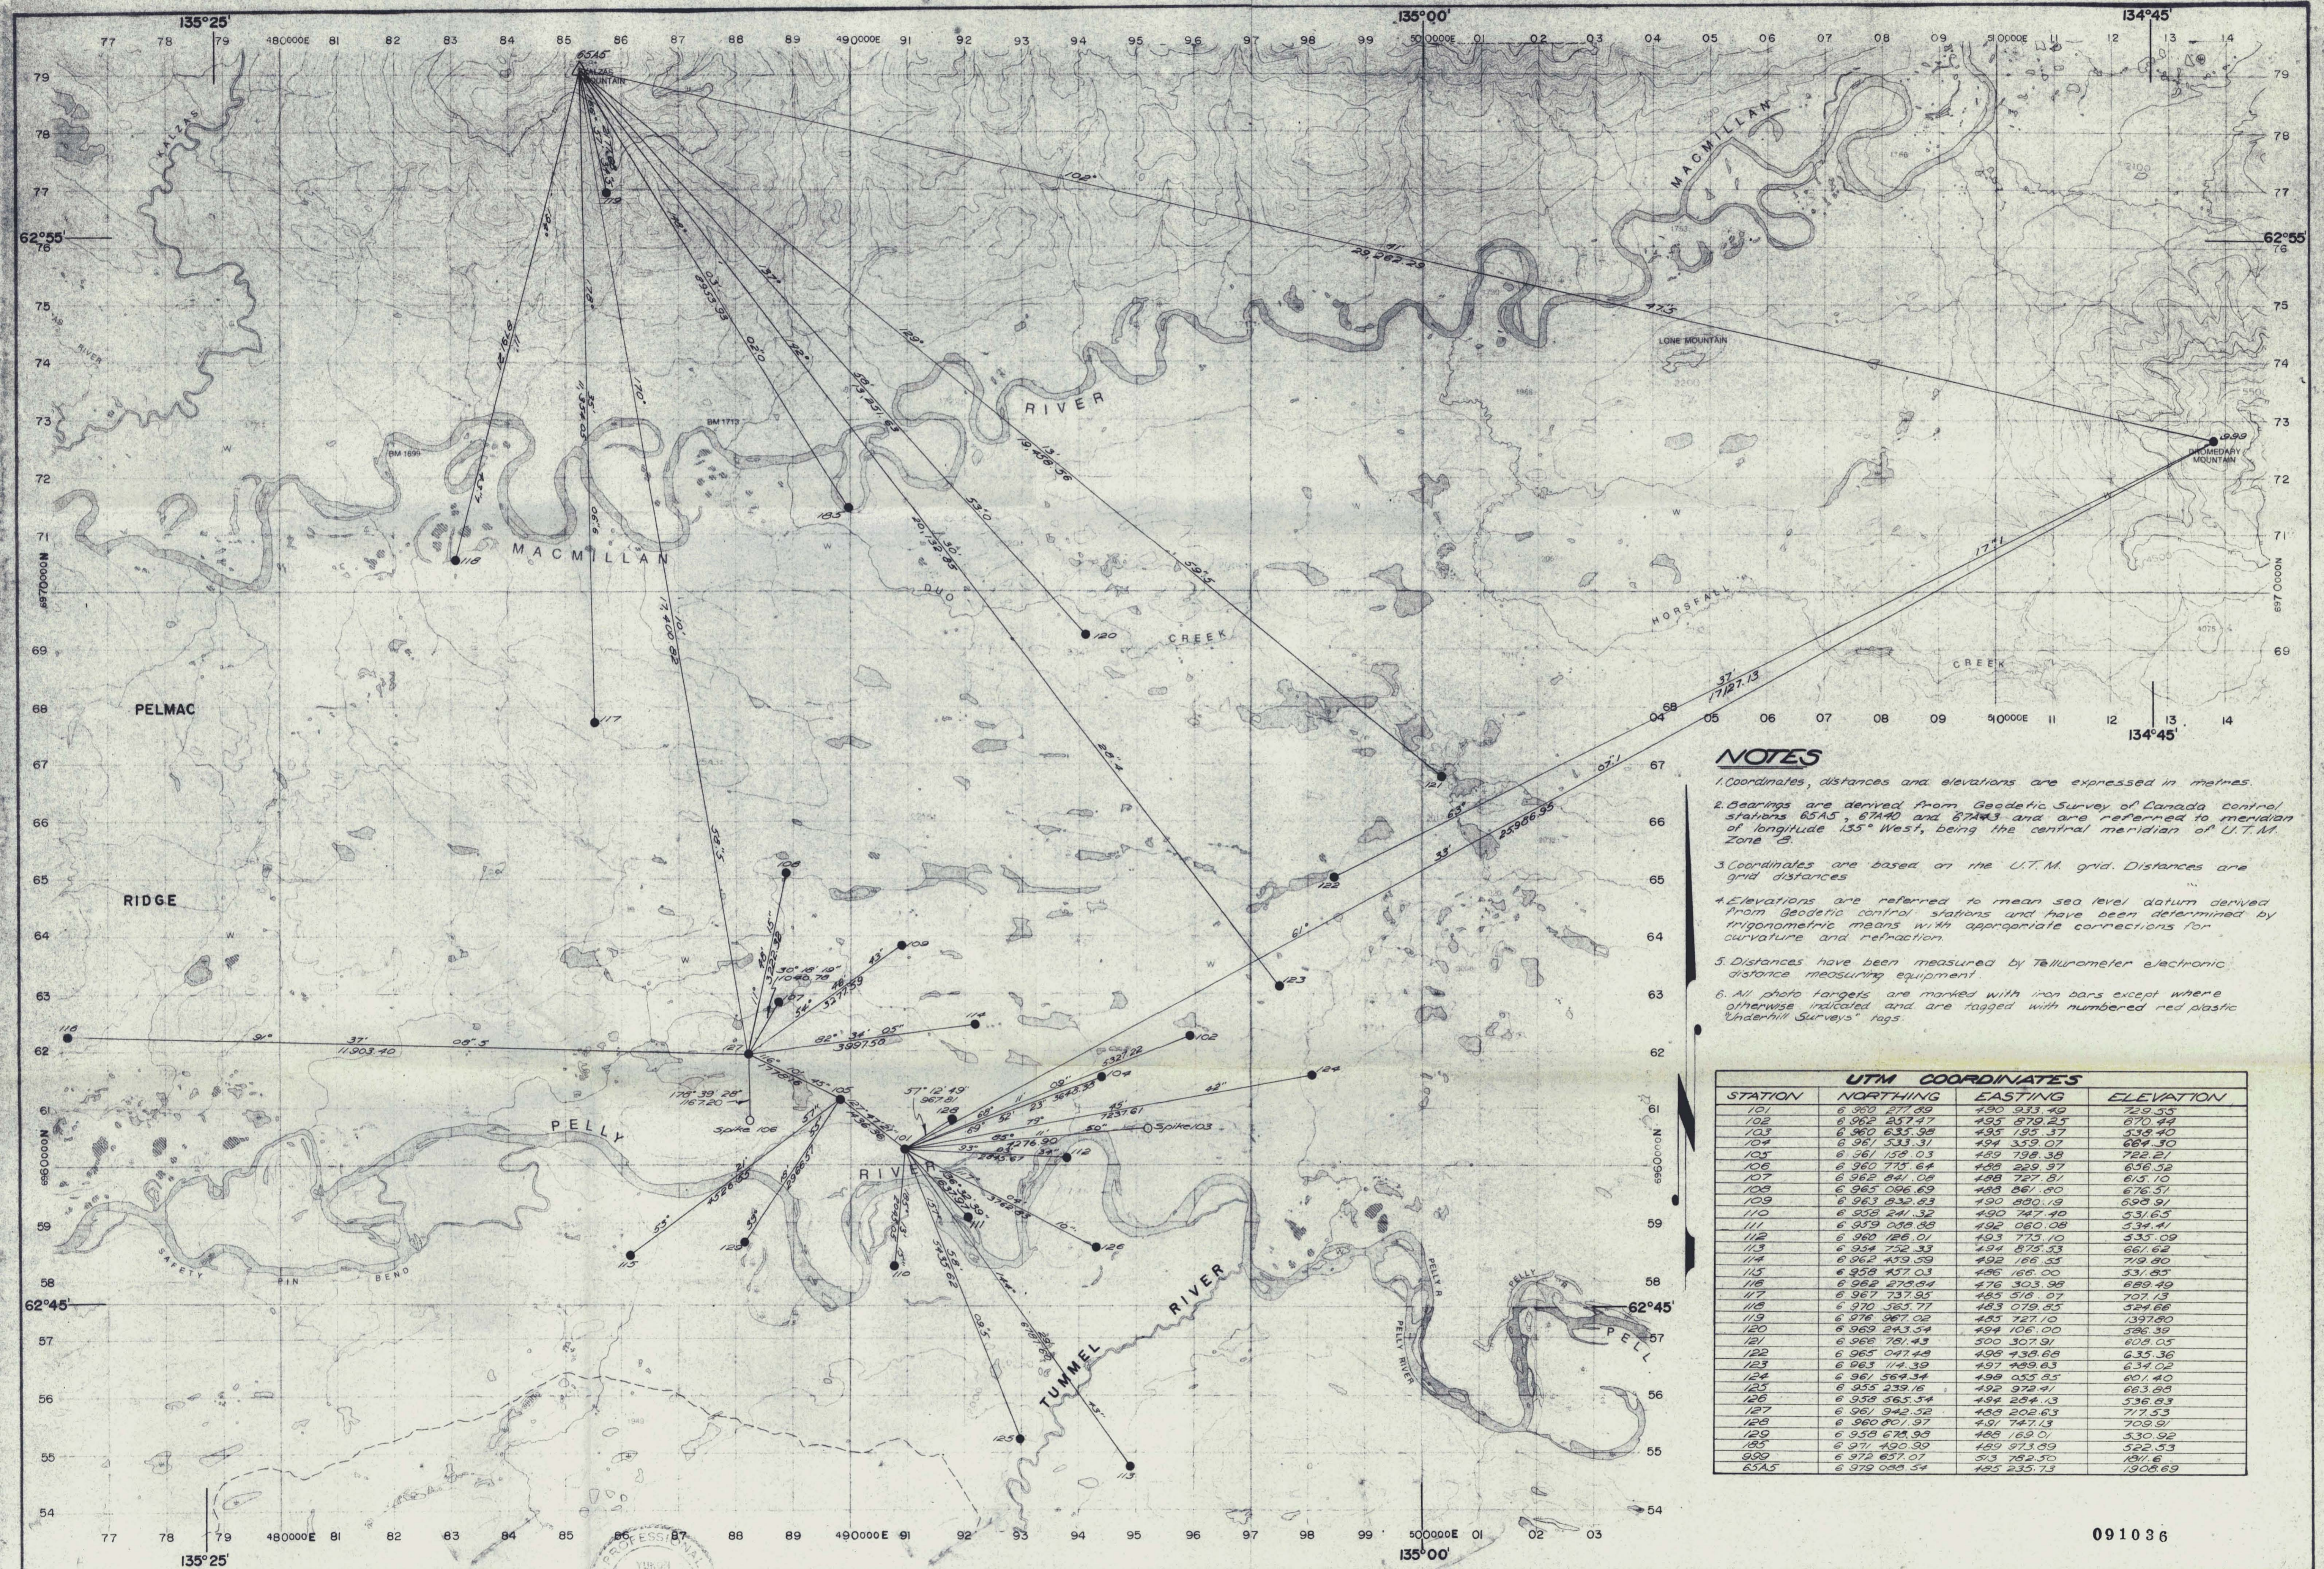

APPENDIX IV

Certificate of Author

I. C.W. Payne, hereby certify that:

1. I am a geologist residing at 401-2326 Eton Street, Vancouver, B.C.
2. I received a Master of Science degree in Geological Sciences from Brock University in 1979 and have been practising my profession since that time.
3. I am the author of this report and directed the overall conduct of the programme described herein.
4. I am employed as a geologist by Getty Mines, Limited.

C.W. Payne
Geologist

NOTES

1. Coordinates, distances and elevations are expressed in metres.
2. Bearings are derived from Geodetic Survey of Canada control stations 65A5, 67A40 and 87A83 and are referred to meridian of longitude 135° West, being the central meridian of U.T.M. Zone 8.
3. Coordinates are based on the U.T.M. grid. Distances are grid distances.
4. Elevations are referred to mean sea level datum derived from Geodetic control stations and have been determined by trigonometric means with appropriate corrections for curvature and refraction.
5. Distances have been measured by Tellurometer electronic distance measuring equipment.
6. All photo targets are marked with iron bars except where otherwise indicated and are tagged with numbered red plastic "Underhill Surveys" tags.
