EVE PROJECT

1.0 SUMMARY

The Eve Project had 26 man days of work, collecting 445 soils. A flagged grid was established and 33.8 kl of ground magnetic survey was conducted. The Program was successful in identifying two different soil anomalies. A potential gold target is defined on the West Little Grid with anomalous values in Bi, As, Ag, Au and W. A second anomaly appeared flanking the magnetic high anomaly on the Main Grid; it is anomalous in Zn, Ba, Hg, and V.

2.0 INTRODUCTION

The Eve Project work consists of a large crew of ten men working one day to establish a flagged grid and then 3 men stayed on to finish the soil work and conduct a ground magnetic survey. The crew all from Dawson City and employed by Ryanwood Exploration consist of Issac Fage, Adam Fage, Joe McCann, Mike Lindley, Mat Macqueu, Jeremy Duplisea, Tyson Foxcroft, Kyle Macdougall, Don Marchall and Shawn Ryan.

3.0 ACCESS

The Access to the Eve Project is by pick up truck. A gravel road was established to gain access to the Rhodanite Showing located on the Eve Claims. The Eve claims road is located on the west side of South Canol Road 25 miles up the from the Alaska Highway.

4.0 Regional Geology

REGIONAL GEOLOGY (excerpt from Al Doherty 2001 assesement Report 094263)

The Evelyn Creek Rhodonite property is located within the Yukon Tanana Terrane. A large block of YTT rocks outcrop just east of the Teslin fault and can be traced continuously from here north through to Little Salmon Lake and on to the Tintina Fault. Earlier workers used names such as Yukon Group and Big Salmon Metamorphic Complex for these lithologies. The rocks are Devonian-Missippian and (?) Earlier Nasina Assemblage quartzites and quartz mica schists (Gordey and Makepeace, 2001).

The quartzites and quartz mica schists are variably metamorphosed, and intruded by a Mid-Cretaceous Cassiar intrusion of intermediate composition.

5.0 WORK PERFORMED / METHODS

5.1 Grid Work

A total of 21.kilometers of grid was established using Garmin GPS 76 instruments. The beauties of Garmin 76 GPS are that they have a left right function and can keep you right on track within a ± 5 meters error. Station where flagged using Artic orange flagging tape and marked with black permanent markers as to the line and station co-ordinates. In total 840 Station where established. The grid lines ran in a northeast direction with the intension to cross the regional magnetic anomaly at a 90-degree angle.

5.2 Magnetic Survey

The magnetic survey was conducted across the entire grid plus some extra lines in an open valley bottom. One part of the grid was only established using GPS, no flags where place on the ground since no soil work was being conducted in this open glacial filled valley.

The survey uses two Envi-Mag, Scintrex magnetometers. One is the portable field unit and the second is a base station magnetometer that records reading every 15seconds at a stationary position for the entire survey. The base station monitors the earth daily magnetic drift. At the end of each daily survey both the field and base station magnetometers are plugged in together and the daily drift is corrected out of the field mag.

Only the corrected data is used to plot the survey results. The field survey took reading every 25 meters for a total of 1352 readings.

5.3 Soil Survey

The Eve Project had 18 man days of soil work in the total there was 445 soil collected. Soil sampling was on 50 and 100 station spacing depending on ground condition.

All soil sample where taken with one meter soil probes and sometime with a prospector pick. We carried both on rocky talus slope. Soil sample location where marked on the ground with orange flagging and recorded in Garmin GPS. About 400-500 grams of soil was collected and place in well mark kraft soil bags.

All samples where brought out to Whitehorse and air dried repacked in rice bags and sent to Acme Labs in Vancouver. Sample where process with Aqua Regia ICP-MS for 36 elements.

The GPS where downloaded every night and store in a personal computer.

6.0 Results / Interpretation

6.1 Magnetic Survey

The magnetic survey revealed a large north-south trending magnetic high running through the eastern part of the grid. The large anomaly measures 2.1 kilometers long and is on average 250 meters wide. The large magnetic anomaly is flanked by two smaller magnetic highs both running in the same direction. All three are believed to be caused by a regional geological trend.

A closer look at the various rock units with a magnet or a magnetic susceptibility meter should help in identifying what the exact geology unit is causing this anomaly.

The eastern part of the grid is sitting in a regional magnetic low.

6.2 Soil Survey

The soil survey revealed two general areas of anomalous soil population.

Area One I called the Western Little Grid has anomalous levels in gold indicator elements such as copper, Bismuth, Arsenic, Silver and minor gold.

Area two I called the Magnetic Flank is anomalous in minor base metal elements. This anomaly is interesting because it flanks the magnetic high and runs across four lines. The anomalous elements are Zinc, Barite, Mercury, and Vanadium.

7.0 RECOMMENDATION

I recommend follow up work on both soil anomalies. I would start by expanding the Western Little grid to the north west with more soil work.

I would also recommend staking more claims around the magnetic high soil anomaly. I would then conduct more soil work around this ridge area. The magnetic high may be related to magnetic iron formation that is sometimes associated with VMS Deposits.

Travel Cost	8 man days @ \$150.00 per day	\$1,200.00
Report writing and GIS Soil Work	4 days @ \$250.00	\$1,000.00

Total		\$30,595.00

10.0 QUALIFICATION

I Shawn Ryan located in Dawson City, Yukon work as a professional prospector.
I run a small exploration company located in Dawson city.

I have worked in the exploration business for the last 22 years. I worked the first 12 years as a contractor working on numerous projects in the NWT, Ontario, Quebec and the Yukon. I have worked for the last 8 years as a local prospector for myself.

I have being trained to run various geophysical instruments and surveys such as magnetic surveys, max-min surveys, induce polarity surveys and Vlf surveys.

I have overseen the whole EVE Project and was the party chief in charge.

Dated this 15 of January 2007 in Dawson City, Yukon.

Respectfully submitted
