CERTIFICATE VA05063074

Project: Dublin Gulch-1735

P.O. No.:

This report is for 4 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 29-JUL-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05064959

Project: Dublin Gulch-1735

P.O. No.:

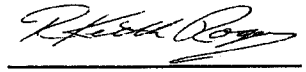
This report is for 106 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 8-AUG-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

094876

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05064957

Project: Dublin Gulch-1735

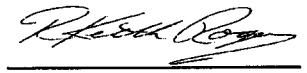
P.O. No.:

This report is for 178 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 8-AUG-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05066289

Project: Dublin Gulch-1735

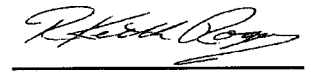
P.O. No.:

This report is for 70 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 11-AUG-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05066350

Project: Dublin Gulch-1735

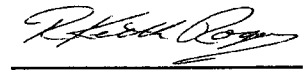
P.O. No.:

This report is for 58 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 11-AUG-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING

CERTIFICATE VA05066355

Project: Dublin Gulch-1735

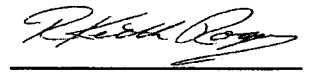
P.O. No.:

This report is for 63 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 11-AUG-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05067824

Project: Dublin Gulch-1735

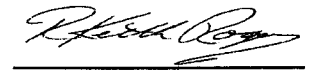
P.O. No.:

This report is for 146 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 12-AUG-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES
Pb-AA62	Ore grade Pb - four acid / AAS	AAS
Ag-AA62	Ore grade Ag - four acid /AAS	AAS
Zn-AA62	Ore grade Zn - four acid / AAS	AAS
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING

CERTIFICATE VA05067826

Project: Dublin Gulch-1735

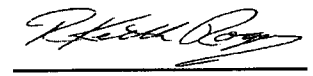
P.O. No.:

This report is for 143 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 12-AUG-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING

CERTIFICATE VA05069644

Project: Dublin Gulch-1735

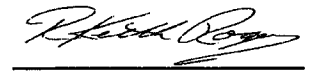
P.O. No.:

This report is for 3 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 21-AUG-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05070461

Project: Dublin Gulch-1735

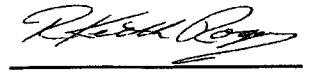
P.O. No.:

This report is for 129 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 22-AUG-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05070460

Project: Dublin Gulch-1735

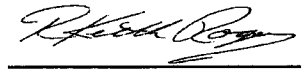
P.O. No.:

This report is for 93 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 22-AUG-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05070531

Project: Dublin Gulch-1735

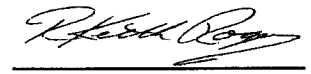
P.O. No.:

This report is for 100 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 23-AUG-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

Finalized D(3-SEP-2005
Account: STRGOL

CERTIFICATE VA05072072

Project: Dublin Gulch-1735

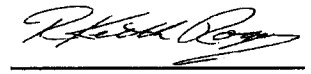
P.O. No.:

This report is for 71 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 25-AUG-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05072073

Project: Dublin Gulch-1735

P.O. No.:

This report is for 96 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 25-AUG-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING

CERTIFICATE VA05072075

Project: Dublin Gulch-1735

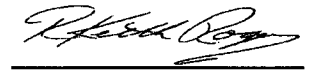
P.O. No.:

This report is for 140 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 25-AUG-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05074728

Project: Dublin Gulch-1735

P.O. No.:

This report is for 119 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 1-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING

CERTIFICATE VA05074737

Project: Dublin Gulch-1735

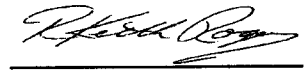
P.O. No.:

This report is for 30 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 2-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**

CERTIFICATE VA05074196

Project: Dublin Gulch-1735

P.O. No.:

This report is for 120 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 2-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05074726

Project: Dublin Gulch-1735

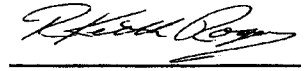
P.O. No.:

This report is for 141 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 2-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05074738

Project: Dublin Gulch-1735

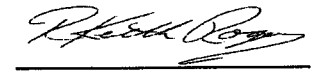
P.O. No.:

This report is for 79 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 2-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

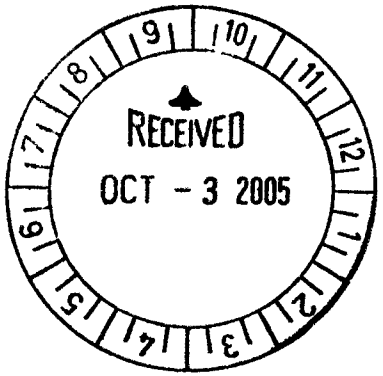
CERTIFICATE VA05078596

Project: Dublin Gulch-1735

P.O. No.:

This report is for 79 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 14-SEP-2005.

The following have access to data associated with this certificate:



DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05078597

Project: Dublin Gulch-1735

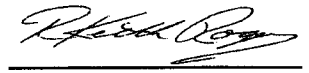
P.O. No.:

This report is for 84 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 14-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05080930

Project: Dublin Gulch-1735

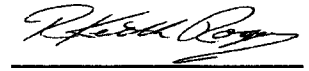
P.O. No.:

This report is for 129 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 20-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05080697

Project: Dublin Gulch-1735

P.O. No.:

This report is for 136 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 20-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

Finalized D 3-OCT-2005
Account: STRGOL

CERTIFICATE VA05080698

Project: Dublin Gulch-1735

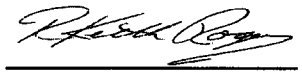
P.O. No.:

This report is for 79 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 20-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05080696

Project: Dublin Gulch-1735

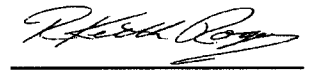
P.O. No.:

This report is for 41 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 20-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05080587

Project: Dublin Gulch-1735

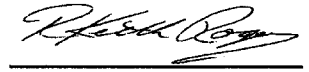
P.O. No.:

This report is for 51 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 20-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05082980

Project: Dublin Gulch-1735

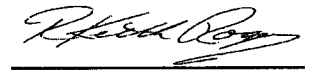
P.O. No.:

This report is for 133 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 27-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05083121

Project: Dublin Gulch-1735

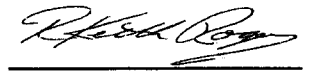
P.O. No.:

This report is for 52 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 27-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05082694

Project: Dublin Gulch-1735

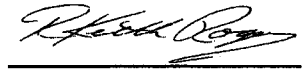
P.O. No.:

This report is for 100 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 27-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

Finalized Da 3-OCT-2005
Account: STRGOL

CERTIFICATE VA05082695

Project: Dublin Gulch-1735

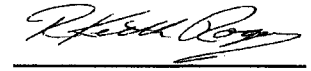
P.O. No.:

This report is for 102 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 27-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
PUL-QC	Pulverizing QC Test
CRU-QC	Crushing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

Finalized Da 4-OCT-2005
Account: STRGOL

CERTIFICATE VA05082983

Project: Dublin Gulch-1735

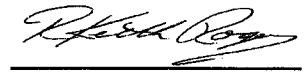
P.O. No.:

This report is for 99 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 27-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
PUL-QC	Pulverizing QC Test
CRU-QC	Crushing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING

CERTIFICATE VA05083821

Project: Dublin Gulch-1735

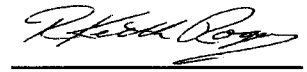
P.O. No.:

This report is for 150 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 27-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING

CERTIFICATE VA05083822

Project: Dublin Gulch-1735

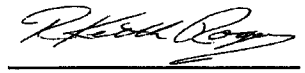
P.O. No.:

This report is for 97 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 27-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05083939

Project: Dublin Gulch-1735

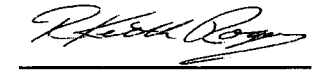
P.O. No.:

This report is for 180 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 28-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES
Zn-AA62	Ore grade Zn - four acid / AAS	AAS
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING

CERTIFICATE VA05085049

Project: Dublin Gulch-1735

P.O. No.:

This report is for 138 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 29-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING

Finalized Da 8-SEP-2005
This copy reported on 17-OCT-2005
Account: STRGOL

QC CERTIFICATE VA05074728

Project: Dublin Gulch-1735

P.O. No.:

This report is for 119 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 1-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING

QC CERTIFICATE VA05074737

Project: Dublin Gulch-1735

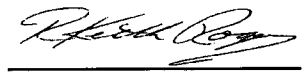
P.O. No.:

This report is for 30 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 2-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

QC CERTIFICATE VA05074725

Project: Dublin Gulch-1735

P.O. No.:

This report is for 81 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 2-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES
Ag-AA62	Ore grade Ag - four acid /AAS	AAS

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

Finalized Da 1-SEP-2005
This copy reported on 17-OCT-2005
Account: STRGOL

QC CERTIFICATE VA05074738

Project: Dublin Gulch-1735

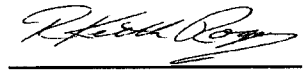
P.O. No.:

This report is for 79 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 2-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

QC CERTIFICATE VA05074196

Project: Dublin Gulch-1735

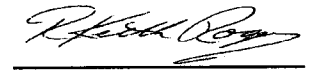
P.O. No.:

This report is for 120 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 2-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

This copy reported on 17-OCT-2005
Account: STRGOL

QC CERTIFICATE VA05074726

Project: Dublin Gulch-1735

P.O. No.:

This report is for 141 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 2-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

This copy reported on 17-OCT-2005
Account: STRGOL

QC CERTIFICATE VA05078597

Project: Dublin Gulch-1735

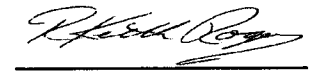
P.O. No.:

This report is for 84 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 14-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

QC CERTIFICATE VA05078596

Project: Dublin Gulch-1735

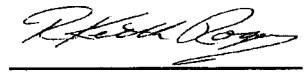
P.O. No.:

This report is for 79 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 14-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

This copy reported on 17-OCT-2005
Account: STRGOL

QC CERTIFICATE VA05080587

Project: Dublin Gulch-1735

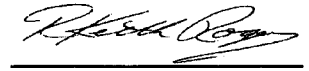
P.O. No.:

This report is for 51 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 20-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**

QC CERTIFICATE VA05080697

Project: Dublin Gulch-1735

P.O. No.:

This report is for 136 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 20-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

Finalized D 3-OCT-2005
This copy reported on 17-OCT-2005
Account: STRGOL

QC CERTIFICATE VA05080698

Project: Dublin Gulch-1735

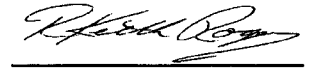
P.O. No.:

This report is for 79 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 20-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

QC CERTIFICATE VA05083822

Project: Dublin Gulch-1735

P.O. No.:

This report is for 97 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 27-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

QC CERTIFICATE VA05083121

Project: Dublin Gulch-1735

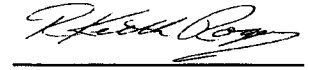
P.O. No.:

This report is for 52 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 27-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

Finalized Dat 4-OCT-2005
This copy reported on 17-OCT-2005
Account: STRGOL

QC CERTIFICATE VA05082983

Project: Dublin Gulch-1735

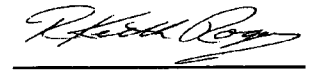
P.O. No.:

This report is for 99 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 27-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
PUL-QC	Pulverizing QC Test
CRU-QC	Crushing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

This copy reported on 17-OCT-2005
Account: STRGOL

QC CERTIFICATE VA05082695

Project: Dublin Gulch-1735

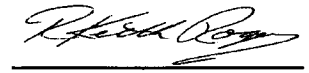
P.O. No.:

This report is for 102 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 27-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
PUL-QC	Pulverizing QC Test
CRU-QC	Crushing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

Account: STRGOL

QC CERTIFICATE VA05082694

Project: Dublin Gulch-1735

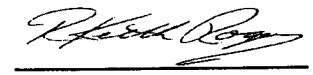
P.O. No.:

This report is for 100 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 27-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

Account: STRGOL

QC CERTIFICATE VA05080930

Project: Dublin Gulch-1735

P.O. No.:

This report is for 129 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 20-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

Finalized Da 3-OCT-2005
This copy reported on 17-OCT-2005
Account: STRGOL

QC CERTIFICATE VA05083821

Project: Dublin Gulch-1735

P.O. No.:

This report is for 150 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 27-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

QC CERTIFICATE VA05082980

Project: Dublin Gulch-1735

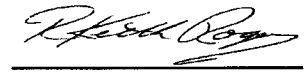
P.O. No.:

This report is for 133 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 27-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

QC CERTIFICATE VA05083939

Project: Dublin Gulch-1735

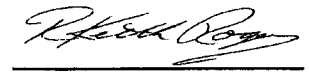
P.O. No.:

This report is for 180 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 28-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES
Zn-AA62	Ore grade Zn - four acid / AAS	AAS
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

QC CERTIFICATE VA05085049

Project: Dublin Gulch-1735

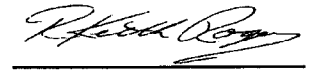
P.O. No.:

This report is for 138 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 29-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-24	Pulp Login - Rcd w/o Barcode
SPL-21d	Split sample - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

QC CERTIFICATE VA05089300

Project: Dublin Gulch-1735

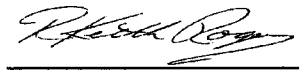
P.O. No.:

This report is for 20 Pulp samples submitted to our lab in Vancouver, BC, Canada on 17-OCT-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
FND-02	Find Sample for Addn Analysis

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

QC CERTIFICATE VA05089441

Project: Dublin Gulch-1735

P.O. No.:

This report is for 82 Pulp samples submitted to our lab in Vancouver, BC, Canada on 17-OCT-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
FND-02	Find Sample for Addn Analysis

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING

QC CERTIFICATE VA05099507

Project: Dublin Gulch-1735

P.O. No.:

This report is for 76 Other samples submitted to our lab in Vancouver, BC, Canada on 15-NOV-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
CRU-31	Fine crushing - 70% <2mm
FND-03	Find Reject for Addn Analysis
WEI-21	Received Sample Weight
BAG-01	Bulk Master for Storage
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-32	Pulverize 1000g to 85% < 75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24T	Triplicate - Au 50g FA-AA finish	AAS
Au-AA24	Au 50g FA AA finish	AAS
Au-AA24d	Dup - Au 50g FA-AA finish	AAS

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

Standard is STANDARD DST6/OxF41.

GROUP 1E - 0.25 GM SAMPLE DIGESTED WITH HCLO4-HNO3-HCL-HF TO 10 ML. (>) CONCENTRATION EXCEEDS UPPER LIMITS. SOME MINERALS MAY BE PARTIALLY ATTACKED/VOLATILIZED. REFRACTORY AND GRAPHITIC SAMPLES CAN LIMIT AU SOLUBILITY. ANALYSIS BY ICP-ES.

- SAMPLE TYPE: ROCK CHIP P150 AU** GROUP 3B - 30.00 GM SAMPLE ANALYSIS BY FA/ICP.

Samples beginning 'RE' are Reruns and 'RRE' are Reject Reruns.

Data A FA ____ DATE RECEIVED: AUG 5 2005 DATE REPORT MAILED: Aug 17/05

GROUP 1E - 0.25 GM SAMPLE DIGESTED WITH HCLO4-HNO3-HCL-HF TO 10 ML. (>) CONCENTRATION EXCEEDS UPPER LIMITS. SOME MINERALS MAY BE PARTIALLY ATTACKED/VOLATILIZED. REFRACTORY AND GRAPHITIC SAMPLES CAN LIMIT AU SOLUBILITY. ANALYSIS BY ICP-ES.
AU** GROUP 3B - 30.00 GM SAMPLE ANALYSIS BY FA/ICP.
- SAMPLE TYPE: ROCK CHIP P150 Samples beginning 'RE' are Reruns and 'RRE' are Reject Reruns.

GROUP 1E - 0.25 GM SAMPLE DIGESTED WITH HCLO4-HNO3-HCL-HF TO 10 ML. (>) CONCENTRATION EXCEEDS UPPER LIMITS. SOME MINERALS MAY BE PARTIALLY ATTACKED/VOLATILIZED. REFRACTORY AND GRAPHITIC SAMPLES CAN LIMIT AU SOLUBILITY. ANALYSIS BY ICP-ES.
- SAMPLE TYPE: Rock Chip P150 AU** GROUP 3B - 30.00 GM SAMPLE ANALYSIS BY FA/ICP.
Samples beginning 'RE' are Reruns and 'RRE' are Reject Reruns.

# of Samples: 155 Sample Type: Rock Chip Date Received: August 05, 2005

First sample name: B291009 Last sample name: B381869

Analysis Requested: Group 1E (0.25gm) Group 3B (30gm)+Au-rock

(Please review carefully and notify us of any changes to be made.)

Estimated date of completion: August 18/05

STORAGE: ☐ **Unless we receive further instructions, coarse rejects and pulps will be discarded after three months. Please refer to our price schedule for storage charges.**

☐ **Please note the following missing / extra samples were noted in the sample sequence.**

☐ Missing Samples:

Do you want us to hold analysis until the samples are received?

☐ Hold analysis ** **Missing samples will be sent to Acme on**

☐ Proceed with analysis

☐ Extra Samples:

☐ Discard / disregard extra samples

☐ Include extra samples in analysis Date:

Authorizing Name or Signature Required

Standard is STANDARD DST6/OxF41.

GROUP 1E - 0.25 GM SAMPLE DIGESTED WITH HCLO4-HNO3-HCL-HF TO 10 ML. (>) CONCENTRATION EXCEEDS UPPER LIMITS. SOME MINERALS MAY BE PARTIALLY ATTACKED/VOLATILIZED. REFRACTORY AND GRAPHITIC SAMPLES CAN LIMIT AU SOLUBILITY. ANALYSIS BY ICP-ES.

- SAMPLE TYPE: ROCK CHIP P150 AU** GROUP 3B - 30.00 GM SAMPLE ANALYSIS BY FA/ICP.

Samples beginning 'RE' are Reruns and 'RRE' are Reject Reruns.

Data A FA ____ DATE RECEIVED: AUG 5 2005 DATE REPORT MAILED: Aug 17/05

Clarence Leong

GROUP 1E - 0.25 GM SAMPLE DIGESTED WITH HCLO4-HNO3-HCL-HF TO 10 ML. (>) CONCENTRATION EXCEEDS UPPER LIMITS. SOME MINERALS MAY BE PARTIALLY ATTACKED/VOLATILIZED. REFRACTORY AND GRAPHITIC SAMPLES CAN LIMIT AU SOLUBILITY. ANALYSIS BY ICP-ES.
AU** GROUP 3B - 30.00 GM SAMPLE ANALYSIS BY FA/ICP.
- SAMPLE TYPE: ROCK CHIP P150 Samples beginning 'RE' are Reruns and 'RRE' are Reject Reruns.

ACME ANALYTICAL LABS LTD.

852 E. Hastings St., Vancouver, BC
CANADA V6A 1R6

Confirmation of Request for Analyses

(Please DO NOT fax back to ACME unless there are changes to be made.)

File No. A504697

Date: August 22, 2005

To:		From:	
Name:	Jim Sparling	Name:	Clarence / Jacky
Company:	StrataGold Corporation		
		Phone:	(604) 253-3158
Fax:	(604) 682-5404	Fax:	(604) 253-1716
Project:	Dublin Gulch 1735	e-mail:	tech@acmelab.com

# of Samples: 56 Sample Type: Rock Chip Date Received: August 19, 2005

First sample name: B382169 Last sample name: B382589

Analysis Requested: Group 1E (0.25gm) Group 3B (30gm)+Au-rock

(Please review carefully and notify us of any changes to be made.)

Estimated date of completion: September 2/05

STORAGE: ☐ **Unless we receive further instructions, coarse rejects and pulps will be discarded after three months. Please refer to our price schedule for storage charges.**

☐ **Please note the following missing / extra samples were noted in the sample sequence.**

☐ Missing Samples:

Do you want us to hold analysis until the samples are received?

☐ Hold analysis ** **Missing samples will be sent to Acme on**

☐ Proceed with analysis

☐ Extra Samples:

☐ Discard / disregard extra samples

☐ Include extra samples in analysis **Date:**

Dear Ma Lyra Lee

Regarding SGS Order Number 48771, Work Order # 084434, Project # 1735 and 12 samples, date submitted 04/07/05

I have the paper copy of the results as well as StrataGold has paid the invoice (received August 8th) for this service. However, can you please also forward the results of the analysis digitally to me via email?

Thank you for your attention to this matter.

Sincerely
Jim Sparling

APPENDIX I

REPORT

Review of the Dublin Gulch Quality Control Program

By: Lynda Bloom, Analytical Solutions Ltd.

REVIEW OF THE DUBLIN GULCH QUALITY CONTROL PROGRAM

Prepared on behalf of STRATAGOLD CORPORATION

Prepared by Lynda Bloom, M.Sc., P.Geo.
Analytical Solutions Ltd.
1214-3266 Yonge Street, Toronto, Ontario M4N 2L6
416-462-9124 FAX 416-462-1637 lynda@explorationgeochem.com

December 2005

Executive Summary

Approximately 7,583 samples were collected and assayed in 2005 from Holes DG05-276C through DG05-309C for the Dublin Gulch Gold project in the Yukon.

The samples were prepared and assayed at ALS-Chemex, Vancouver. Check assays were performed at ACME Analytical Laboratories, Vancouver.

Sample preparation and assay procedures are:

a) 1 to 5 kg split drill core samples are shipped to ALS-Chemex;
b) the entire sample is crushed to 70% passing 2 mm;
c) 250 gm is riffle split from the crushed sample;
d) the 250 gm sub-sample is pulverized to better than 85% passing 75 microns;
e) pulps are analyzed for gold by fire assay on a 30 gm aliquot with an ICP finish (Au-AA23); and
f) pulps are analyzed for a multi-element suite by four-acid digestion and ICP-OES finish (method code ME-ICP61).

Quality control procedures include:

a) insertion of a coarse blank with every 20 samples;
b) insertion of a reference material with every 20 samples;
c) analysis of a pulp "Preparation Duplicate" with every 20 samples;
d) submission of 250 gm riffle split sub-sample to ACME for preparation and gold analysis;
e) analysis of a quarter-core drill core sample ("Core Duplicate") with every 20 samples; and
f) the laboratories internal assay quality control program of blanks, standards and duplicates.

There is no evidence of systematic gold contamination based on the blanks that were inserted with samples and there is no evidence for bias for the gold assays based on results for the reference materials.

Approximately 5% of the samples appear to contain a portion of gold that is not homogenously distributed in drill core or sample pulps. Improvements to the sample preparation and assaying procedures should be considered including

- crushing to better than 70% passing –2 mm;
- pulverizing a 500 or 1,000 g sample;
- assaying 50 g instead of 30 g; and
- selecting samples on the basis of Bi for gold re-assays.

It is recommended that pulps be submitted for check assays, not a riffle split of the crushed material, and that the procedure for pulp "Preparation Duplicates" be replaced by a standard procedure for assaying two splits of the crushed material.

1.0 Introduction

A total of 7,583 samples, including standards and blanks, were collected and assayed from a total of 8,105 metres from Hole DG05-276C through Hole DG05-309C inclusive at the Dublin Gulch Gold project in the Yukon.

This report summarizes the results of the 2005 Quality Control ("QC") program based on data provided in a series of Excel spreadsheets by David Hladky, Senior Project Manager, of StrataGold Corporation.

The objective of this report is to document the gold data acquired for quality control samples and various types of duplicate assays in order to identify any bias in the gold assays or sources of contamination.

2.0 Sample Preparation, QC and Assay Procedures

Sample preparation and assay procedures are:

a) 1 to 5 kg split drill core samples are shipped to ALS-Chemex;
b) the entire sample is crushed to 70% passing 2 mm;
c) 250 gm is riffle split from the crushed sample;
d) the 250 gm sub-sample is pulverized to better than 85% passing 75 microns;
e) pulps are analyzed for gold by fire assay on a 30 gm aliquot with an ICP finish (Au-AA23); and
f) pulps are analyzed for a multi-element suite by four-acid digestion and ICP-OES finish (method code ME-ICP61).

Quality control procedures include:

a) insertion of a coarse blank with every 20 samples;
b) insertion of a reference material with every 20 samples;
c) analysis of a pulp "Preparation Duplicate" with every 20 samples;
d) submission of 250 gm riffle split sub-sample to ACME for preparation and gold analysis;
e) analysis of a quarter-core drill core sample ("Core Duplicate") with every 20 samples; and
f) the laboratories internal assay quality control program of blanks, standards and duplicates.

The samples were prepared by and assayed at the ALS-Chemex, Vancouver laboratory. Sub-samples for check assays were pulverized and assayed at ACME Analytical Laboratories, Vancouver.

3.0 Accuracy as Determined by Blanks and Standards

Data were provided in file "ALS_ACME_MASTER.xls".

Coarse blanks and reference materials were submitted with samples for preparation and assaying at ALS-Chemex at a rate of one in 20 samples.

3.1 Laboratory Performance for Blank Samples

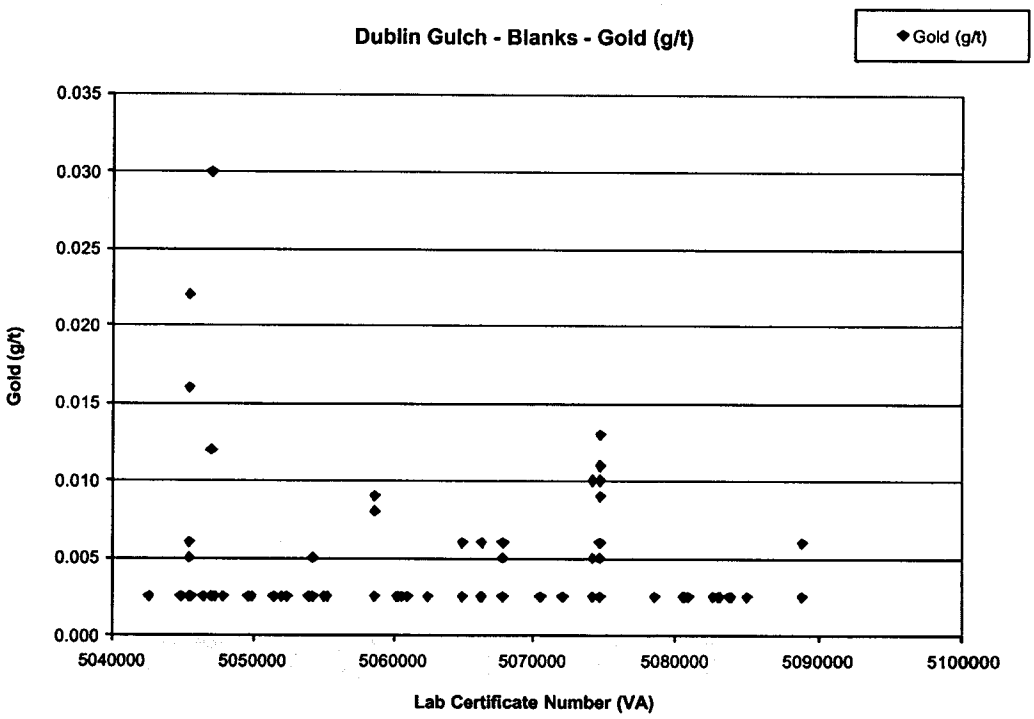
Barren coarse material ("blanks") is submitted with samples for crushing and pulverizing to determine if there has been contamination or sample cross-contamination in preparation. Elevated values for blanks may also indicate sources of contamination in the fire assay procedure (contaminated reagents or crucibles) or sample solution carry-over during instrumental finish.

The source of the blank material was garden rock from Canadian Tire.

A total of 359 coarse blank samples were submitted for sample preparation and assaying. Gold values were reported as less than detection limit (5 ppb Au) for 94% of the blanks. The maximum value reported for a blank was 137 ppb Au. The data were plotted (Figure 3.1.1) and Table 3.1.1 summarizes the results.

Table 3.1.1: Assays for the Dublin Gulch Blanks

Element	No. of Insertions	Expected Mean	Observed Values		No. of QC Failures
			Mean*	Std. Dev.	
Au (ppm)	359	0.005	0.0029	0.0023	4



* - The mean was calculated based on assigning each sample with less than detection limit gold as 2.5 ppb Au.

There were four samples for which the gold assays were outside acceptable limits (Table 3.1.2). These were excluded from the calculations in Table 3.1.1.

Table 3.1.2: List of Failures for Blanks

Sample No	Certificate No.	Expected Au (ppm)	Observed Au (ppm)
B291096	VA05042605	0.005	0.065
B291496	VA05045519	0.005	0.396
B363496	VA05070461	0.005	0.049
B381576	VA05072073	0.005	0.137

Figure 3.1.1: Gold Assays for Blanks

There is no evidence of systematic gold contamination based on the blanks that were inserted with samples. Samples from the batches with assays outside acceptable limits should be re-assayed.

Rejects for the following samples were submitted for preparation of a new pulp and assaying:

- B291086 to B291106
- B291486 to B291506
- B363486 to B363506
- B381566 to B381586

3.2 Laboratory Performance Based on Reference Materials and Control Samples

Reference materials ("RM") are submitted with samples for assay to identify:
(a) if there were assay problems with specific sample batches; and
(b) possible long-term biases in the overall dataset.

The definition of a quality control failure is when:
(a) assays for two consecutive RMs are outside ± two standard deviations, or
(b) assays for a RM are outside ± three standard deviations.

If the assays for reference materials failed the acceptance tests, sample pulps should be re-submitted for assay.

A total of 368 reference materials ("RMs") purchased from CANMET and OREAS were submitted with samples. The results are plotted against time as a series of graphs in Appendix 1 and the results are summarized in Table 3.2.1. Quality control failures are excluded from the calculations in Table 3.2.1.

The average gold for the seven RMs falls within less than 0.5% of the expected values and shows no bias.

Table 3.2.1: Results for RMs Inserted with Sample Batches – Gold (ppm)

Reference Material	No. of Insertions	Expected Au (ppm)		Observed Au (ppm)		No. of Mislabels	No. of Failures
		Mean	Std Dev	Mean	Std Dev		
Canmet CH-4	38	0.88	0.040	0.881	0.068	1	0
Canmet Ma-2c	47	3.02	0.130	3.092	0.171	0	0
OREAS 42P	67	0.091	n.a.	0.091	0.005	2	1
OREAS 51P	65	0.43	0.023	0.439	0.027	1	2
OREAS 6Pb	59	1.425	0.052	1.434	0.069	1	1
OREAS 7Pb	50	2.77	0.050	2.782	0.109	1	4
OREAS 61Pa	42	4.46	0.130	4.495	0.140	0	0
	368					6	8

There are seven cases where it is suspected that the reference material code was recorded incorrectly (Table 3.2.2) and these values are excluded from the previous calculations.

Table 3.2.2: List of Suspected Clerical Errors for RMs

Sample No	Recorded as RM	Expected Au (g/t)	Possibly RM	Observed Au (g/t)

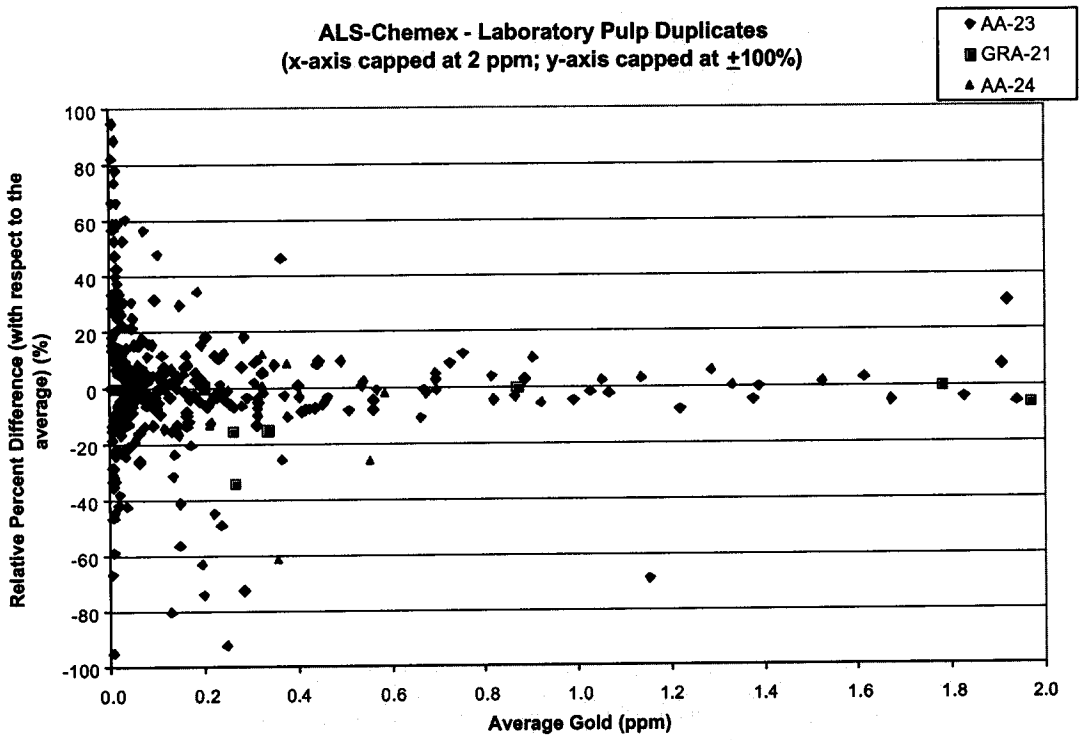
OREAS 7Pb	B382690	2.770	1.110	**40.1**

Sample pulps from ten samples before and after the nine quality control failures were resubmitted for assay.

The number of QC failures (2%) is within the range expected for fire assay gold.

There is no evidence of bias for the gold assays based on results for the reference materials.

4.0 Pulp Duplicates



Commercial laboratories routinely assay a second aliquot of the sample pulp for one in ten samples. The data are used by the laboratory for their internal quality control monitoring. The data are either automatically reported to clients or can be requested.

The assays for pulp duplicates provide an estimate of the reproducibility related to the uncertainties inherent in the analytical method and the homogeneity of the pulps. The precision or relative percent difference calculated for the pulp duplicates indicates whether pulverizing specifications should be changed and/or whether alternative methods, such as screened metallics for gold, should be considered.

4.1 ALS-Chemex Internal QC Pulp Duplicates

For most fire assay methods, ALS-Chemex analyzes gold in batches of 84 samples. With every 84 samples, they run two internal standards, one blank and three duplicates. These data were provided in two Excel files "STRGOL_QC Data June to October.xls" and "STRGOL_QC Data October 18 to November 24.xls". The original and duplicate assays are plotted in Figure 4.1.1.

Figure 4.1.1: Laboratory Pulp Duplicates (0 to 2 g/t Au)

There were a total of 558 laboratory duplicate gold assays reported. The reproducibility of these assays was generally within ± 20% (Table 4.1.1 and Figure 4.1.1).

Table 4.1.1: Percentage of Laboratory Pulp Duplicate Pairs Reporting Within Specific Ranges for Gold Assays

Criteria	N	5%	10%	20%	25%	50%	> 50%
all samples	558	283	374	449	466	511	47
		51%	67%	80%	84%	92%	8%
> 5 x d.l.	300	142	218	261	272	290	10
		47%	73%	88%	91%	97%	3%

Duplicate assays reported by ALS-Chemex are within an expected range for Dublin Gulch rock types and based on these data the pulps are reasonably homogeneous with respect to gold.

4.2 StrataGold Pulp Duplicates

ALS-Chemex received two sample bags with consecutive sample numbers, one of which was empty for one in 20 samples. ALS-Chemex assayed two 30 g aliquots of the sample, assigning consecutive sample numbers.

A total of 362 StrataGold Pulp Duplicates were assayed at ALS-Chemex. Relative Percent Difference ("RPD") was calculated (original assay less duplicate assay relative to the average assay). The results are plotted as a series of graphs in Appendix 2.

Table 4.2.1 shows how many of the duplicate pairs agree within ± 5%, 10%, 20%, 25%, 50% and greater than 50%. Only samples where the average concentration was greater than five times the detection limit (5 ppb Au) were included in the calculations.

Table 4.2.1: Percentage of StrataGold Pulp Duplicate Pairs Reporting Within Specific Ranges

Element	Total N	N (> 5 x d.l.)	N = falling within					
			5%	10%	20%	25%	50%	> 50%
Au (ppm)	362	283	62	118	177	197	245	38
			22%	42%	63%	70%	87%	13%

The reproducibility of these assays can be compared with the ALS-Chemex Internal QC Pulp Duplicates ("Internal QC Duplicates") discussed in Section 4.1, which is also the comparison of two 30 g aliquots for fire assay from the same 250 g pulp. The description of the reproducibility of the pulps in Section 4.1 was that 88% of the pulps repeated within ±20% and 3% of the samples repeated outside ±50%. In comparison, in Section

4.2, the reproducibility of the pulps can be described as 63% of the assays agreeing within ±20% and 13% of the assays repeating outside ±50%.

ALS-Chemex uses the Internal QC Duplicates for its internal quality control and their procedures require that the duplicates are reported within a specific range. If the results do not agree within the range that is preset for their quality control procedures, samples may be re-assayed until an acceptable range is reported. In contrast, the StrataGold Pulp Duplicates were reported by ALS-Chemex without comparing the assays for duplicate pairs, and therefore the reproducibility in Section 4.2 may be a more reliable measurement of reproducibility than in Section 4.1.

There are 12 cases where there are variances greater than 100% between the gold assays for the two StrataGold Pulp Duplicates and where the average values are greater than 100 ppb Au (Table 4.2.2), which represent the most extreme differences between duplicate pairs.

Table 4.2.2: Samples with Variances Greater Than 100% for StrataGold Pulp Duplicates

Original			Duplicate			Average Au (ppm)	RPD (%)
Sample No.	Au (ppm)	Certificate	Sample No.	Au (ppm)	Certificate		
B291488	1.015	VA05045519	B291489	0.239	VA05045519	0.627	123.76
B291508	0.768	VA05044876	B291509	4.170	VA05044876	2.469	-137.79

B381788	0.513	VA05058632	B381789	0.139	VA05060567	0.326	114.72
B382048	0.430	VA05058633	B382049	0.076	VA05058633	0.253	139.92
B382088	0.502	VA05058633	B382089	0.012	VA05060235	0.257	190.66
B382628	0.603	VA05066355	B382629	0.169	VA05066355	0.386	112.44

It appears that these "extreme differences" may be related to the fact that pulps are not homogeneous with respect to gold. The comparisons of core duplicates and check assays also demonstrate that there is a small population of samples (5%) that have assays with poor reproducibility.

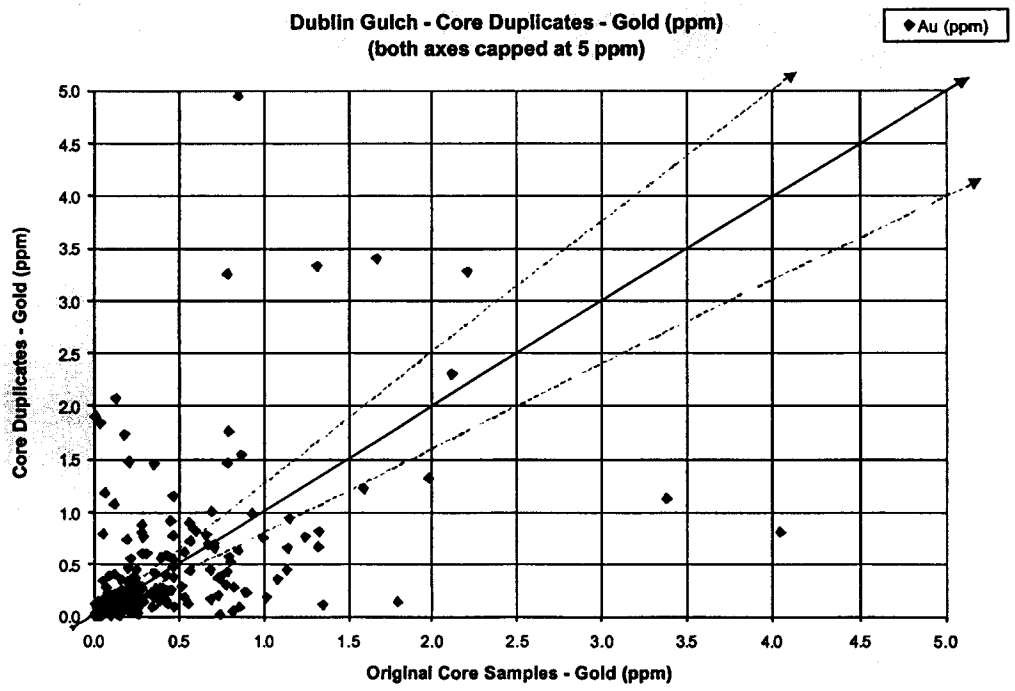
It is recommended that a second riffle split be prepared for every 20th sample for future programs. Test work on the riffle splitting may indicate that larger pulps (usually 1,000 g) should be used routinely and it may be preferable to have samples crushed to better than 70% passing 2 mm prior to taking a split for pulverizing.

5.0 Preparation Duplicates

Preparation duplicates are created by splitting a second cut of the crushed sample in the same way and for the same weight as the original sample. The objective is to determine if:

a) splitting procedures are applied consistently, and
b) whether changes to sample preparation procedures, specifically specification for the crush size, are required.

No preparation duplicates (according to the definition above) were requested and this procedure should be implemented immediately.



6.0 Drill Core Duplicate Samples

Drill core duplicates are the second half of a drill core sample, which is assayed to determine:

(a) the reproducibility of assays for different halves of the core, and
(b) if there is any sampling bias.

In this case, quarter-core was submitted as drill core duplicates. The gold assays for the original and duplicate samples are compared in Figure 6.1. A total of 364 pairs were submitted, out of which there are 263 cases where the mean of the two values is greater than 25 ppb (five times detection limit). There are 178 cases where the assays for the original sample are higher than duplicate sample and 155 cases where the opposite it true.

Figure 6.1: Comparison of Gold Assays for Drill Core Duplicates

RPD was calculated (original core assay less duplicate core assay relative to the average). The results are summarized in Tables 6.1 and 6.2 and the graphs are in Appendix 3. Seven percent of the duplicate pairs agree within ±5%, 16% within ±10% and 29% within ±25%.

Table 6.1: Summary of Core Duplicates

Criteria	N	Positive	Negative	Zero
all samples	364	178	155	31
		49%	43%	9%
> 5 x d.l.	263	139	123	1
		53%	47%	0%

Table 6.2: Percentage of Core Duplicates Pairs Reporting Within Specific Ranges

Element	Total N	N (> 5 x d.l.)	N = falling within					
			5%	10%	20%	25%	50%	> 50%
Au (ppm)	364	263	19	41	62	76	146	117
			7%	16%	24%	29%	56%	44%

There is no bias evident between original and duplicate halves of the drill core. It is therefore assumed that there has been no bias introduced by preferentially submitting the more mineralized half of the core for assay.

The reproducibility of the pulps was described as 63% of the assays agreeing within ±20% and 13% of the assays repeating outside ±50% (Section 5). It is evident, and expected, that the reproducibility of two parts of the core would be worse that reproducibility of two assays from the same pulp (Table 6.2). Only 24% of the assays for core duplicates agree within ±20%.

The pulp is fine-grained and can be homogenized whereas the core is only sawn and the two samples cannot be homogenized. In addition, the assays compared for core duplicates incorporate all of the sampling, sub-sampling and analytical errors for handling of crushed material and pulps.

It is possible to change sample preparation procedures to improve sample reproducibility but the only solution to improving the comparison between two halves of the core is to submit whole core for analysis. Submission of whole core is unacceptable for a number of other reasons, such as having an archive sample for future reference, and therefore, no changes to the drill core sampling procedure are recommended.

There are 37 cases where there are variances greater than 100% between the gold assays for the two field splits and where the average values are greater than 100 ppb Au (Table 6.3).

It is possible that in some cases the differences are due to mislabeling of samples in the field or sample mix-ups at the laboratory. To test this theory, the distribution of bismuth, which is associated with gold, was examined for the samples with high variance between assays.

There are 27 cases where duplicates with higher Bi also have higher Au. Although the Bi:Au ratio is not constant, the gold assay differences are supported by variations in the bismuth results. Bismuth is analyzed by four-acid digestion and ICP finish while Au is assayed by 30 gm Fire Assay with ICP finish and because the analytical methods are different for gold and bismuth it is reasonable to assume that variation in gold assays for core duplicates is not due to sample mix-ups. Other elements (namely, As, Cr, Cu, Fe, Mo, Pb, S, Sb, W and Zn) also show correspondence within $\pm$10% for most of the core duplicates, again supporting the premise that the gold variation is a function of the rock type and not laboratory error.

Table 6.3: Samples with Variances Greater Than 100% for Drill Core Duplicates

7.0 Check Assays at Secondary Laboratory

Check assays are recommended for up to 5% of the samples submitted. The same pulp that was assayed originally is submitted to a different laboratory for the same analytical procedures primarily to augment the assessment of bias based on the RMs and in-house control samples submitted to the original laboratory. Reference materials are also inserted with samples submitted to the secondary laboratory to measure whether the secondary laboratory is potentially biased.

In this case, a second split of the crushed material was submitted to ACME for preparation and assaying. Submission of the -2 mm crushed material to a second laboratory, instead of sample pulps, means that several criteria are being tested simultaneously including:

- sampling error associated with selection of the 250 gm riffle split;
- possible sample contamination at ACME during preparation; and
- assay biases between ALS-Chemex and ACME.

Three hundred and fifty-nine samples were submitted to ACME for check assays (original samples were assayed at ALS-Chemex). RPD was calculated (ALS-Chemex assay less ACME assay relative to the ALS-Chemex assay) and plotted (Figure 7.1). The results are summarized in Tables 7.1 and 7.2 and additional graphs are in Appendix 4.

Figure 7.1: Check Assays

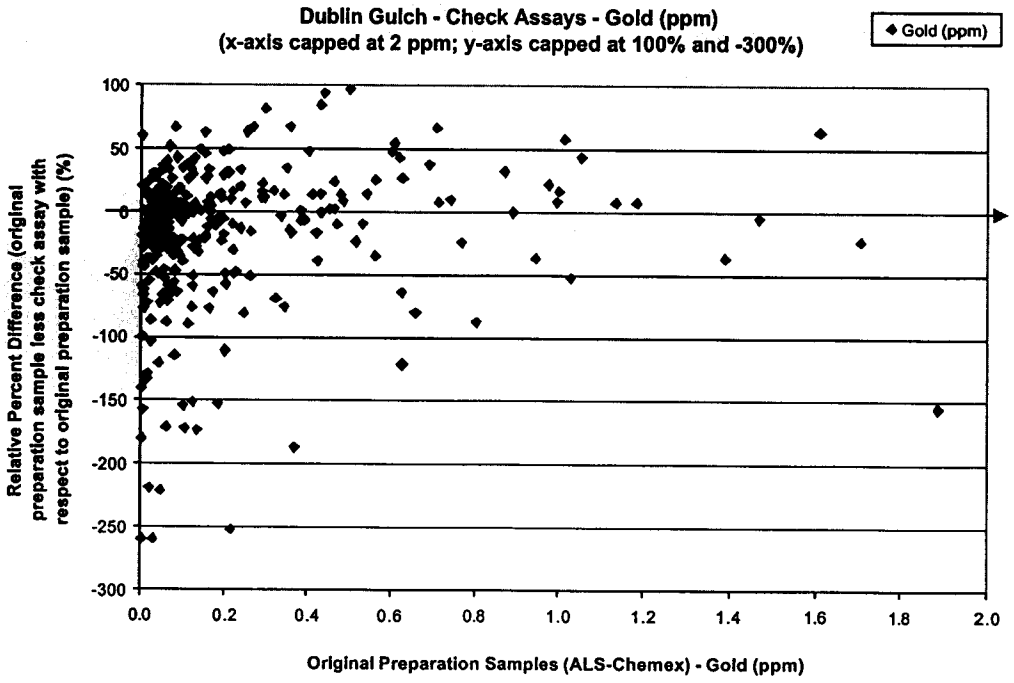

Table 7.1 shows how many of the duplicate pairs agree within ±5%, ±10%, ±20%, ±25%, ±50% and greater than 50%. Only samples where the average gold concentration was greater than five times the detection limit (5 ppb) were included in the calculations.

Table 7.1: Percentage of Check Assays Reporting Within Specific Ranges

Element	Total N	N (> 5 x d.l.)	N = falling within					
			5%	10%	20%	25%	50%	> 50%
Au (ppm)	359	279	37	73	128	148	214	65
			13%	26%	46%	53%	77%	23%

Table 7.1 is a comparison of assays for two different splits of the –2 mm crushed material and there is no comparable data where two different splits of the –2mm crushed material were assayed at the same laboratory. The differences between ACME and ALS-Chemex are within ±20% for 46% of the samples; this is not that different than the reproducibility for the pulp "Preparation Duplicates", both assayed at ALS-Chemex, which was reported as 63% reporting within ±20%. However, the number of samples outside ±50% is 23% for the check assays, which is considerably different than reported for the pulps (13%).

Part of the difference is attributed to a bias between the assays from the two laboratories. Table 7.2 summarizes the number of cases with positive and negative RPD.

Table 7.2: Summary of Check Assays

Criteria	N	ALS-C > ACME	ALS-C < ACME	ALS-C = ACME
all samples	359	141	212	6
		39%	59%	2%
> 5 x d.l.	279	121	155	3
		43%	56%	1%

There should be a near equal number of cases where the RPD is positive and where it is negative. For the 279 samples with Au concentrations greater than five times detection limit, there are 155 cases where ACME assays are higher than ALS-Chemex assays (i.e. RPD is negative) and only 121 cases where ACME assays are lower than ALS-Chemex assays (i.e. RPD is positive).

The median RPD is -9.38% suggesting that the ACME Au assays tend to be 9.38% higher than ALS-Chemex. The differences are particularly apparent for the lower grade gold samples in Figure 7.1. Table 7.3 documents that ALS-Chemex assays are lower than ACME for approximately 60% of the samples and ACME is lower than ALS-Chemex for only 40% of the samples.

Table 7.3: Summary of Check Assays (Specific Grade Ranges)

Au (ppm)	N	ALS-C > ACME	ALS-C < ACME	ALS-C = ACME
0.025 – 0.1 ppm	127	54	72	1
		42%	57%	1%
0.1 – 0.5 ppm	117	52	63	2
		44%	54%	2%
> 0.5 ppm	35	15	20	0
		43%	57%	0%

Due to the variance in the data caused by the cumulative uncertainties in preparation and sample splitting, it is difficult to determine if the bias is statistically significant and/or possible causes. Also since no standards were submitted to ACME with the samples, it is not possible to state which laboratory is 'more' accurate, i.e. although there is a bias it is not known which laboratory is correct.

Whereas 46% of assays for the two splits agree within ±20%, 23 samples (Table 7.4) have assays reported that are much different.

The samples listed in Table 7.4, represent about 7% of the samples submitted for check assays. Based on other assays comparisons, it appears that 7% of the samples have characteristics consistent with the presence of "coarse gold" and assays do not reproduce within ±100%.

As stated by MRDI (1997): "The presence of coarse gold has been established previously by petrographic studies, which provided an estimate of *in situ* gold particle sizes ranging from 4 to 1,400 microns, with an average size of 155 microns. Gold particles of this size can be expected to have a negative impact on the reproducibility of assay results. The combination of low grade and coarse particle size provides a most difficult situation for obtaining accurate grade estimates."

8.0 Laboratory Audit

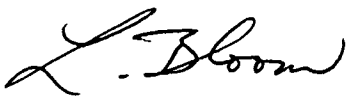
Both ACME Analytical Laboratories and ALS-Chemex Laboratories are well-recognized, ISO-accredited laboratories. The author has visited the ALS-Chemex, Vancouver facility as recently as January 2005. A laboratory audit was not considered necessary at this time.

9.0 Conclusions

There is no evidence of systematic gold contamination based on the blanks that were inserted with samples.

Reference materials were inserted 368 times with samples and in general, gold results fall within +/-1% of the expected gold value reported. There are nine cases which are quality control failures for which repeat assays were requested. There is no evidence for bias for the gold assays based on results for the reference materials.

There is consistent evidence that approximately 5% of the samples contain a portion of gold that is not homogenously distributed in drill core or sample pulps. Improvements to the sample preparation and assaying procedures should be considered including



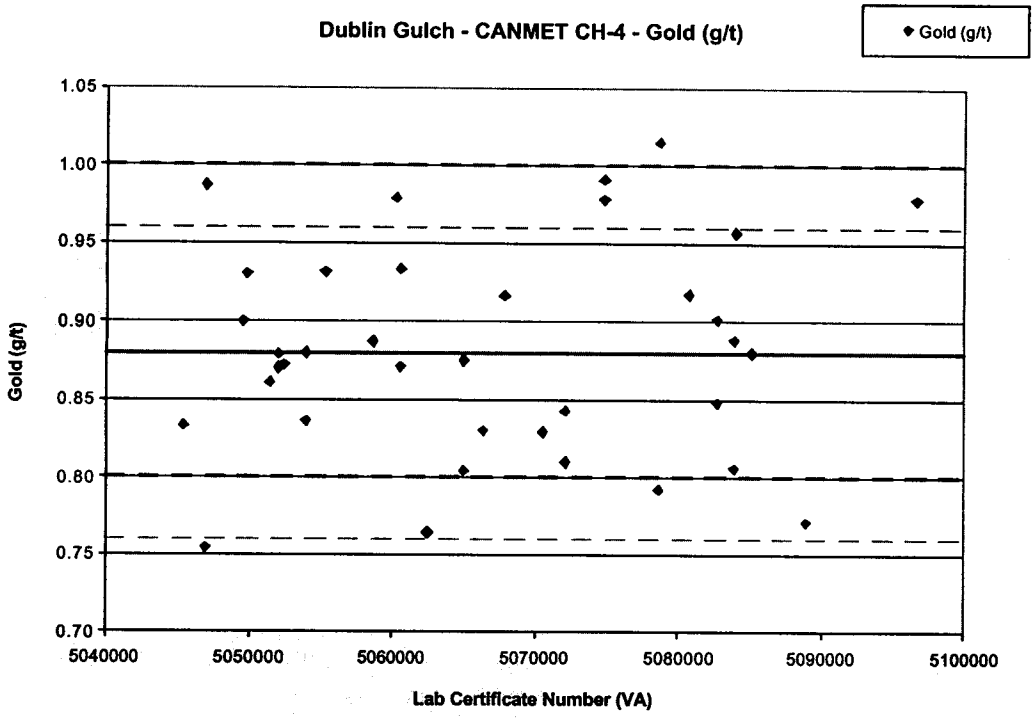
- crushing to better than 70% passing –2 mm;
- pulverizing a 500 or 1,000 g sample;
- assaying 50 g instead of 30 g; and
- selecting samples on the basis of Bi for gold re-assays.

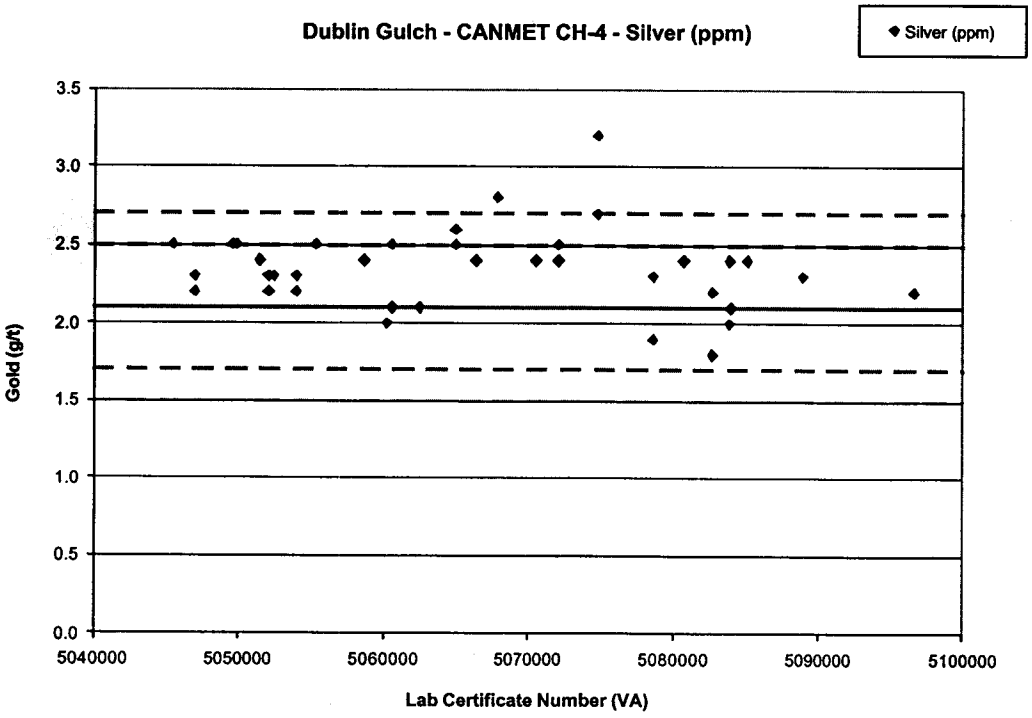
It is recommended that pulps be submitted for check assays, not a riffle split of the crushed material.

It is recommended that the procedure for pulp "Preparation Duplicates" be replaced by a standard procedure for assaying two splits of the crushed material.

There has been no audit of the ACME or ALS-Chemex sample preparation or laboratory facilities.

Respectfully submitted,





Lynda Bloom, M.Sc., P.Geo.

REPORT

Report on Results of a Laboratory Audit of ALS Chemex Laboratory, North Vancouver, B.C.

By: Stephen Cook, Consulting Geochemist

REPORT ON RESULTS OF A LABORATORY AUDIT OF ALS CHEMEX LABORATORY, NORTH VANCOUVER, B.C.

PREPARED FOR
STRATAGOLD CORPORATION

701 - 475 Howe Street
Vancouver, British Columbia
V6C 2B3

By

Stephen Cook, M.Sc., P. Geo.
Consulting Geochemist

Cook Geochemical Consulting
5-3341 Mary Anne Crescent
Victoria, B.C. V9C 3S7

November 4, 2005

Executive Summary

Auditing, both pre-arranged and unannounced, of all geochemical labs used should be conducted on a regular basis by mineral exploration companies. Lab auditing ensures and documents that preparation and analytical equipment is appropriate and is functioning properly, that established procedures are adhered to, standards of cleanliness maintained, and that the lab is generally in good operational order. Well-designed riffle splitters, the presence of cleaning quartz supplies beside each crushing and pulverizing station, and the tracking of individual fire assay crucibles are among the many typically factors examined during a lab audit, all of which may have a close bearing on the ultimate quality of analyses and assays. The importance of regular audits should not be disregarded on the premise that the lab is regarded as a good one, or that its sister lab in another country was once deemed suitable. Audits may uncover numerous deficiencies even in well-regarded labs, and it is not unusual for good labs to periodically slide in some areas. In this respect regular lab auditing by independent investigators is an important component of a comprehensive quality assurance program.

An examination of the facilities, equipment and procedures of ALS Chemex Lab, North Vancouver, was carried out as a laboratory audit on October 27 2005 on behalf of StrataGold Corporation. The audit produced mostly positive observations, particularly on their analytical capabilities. In the opinion of the author, ALS Chemex in North Vancouver is a highly-reputable geochemical laboratory whose good reputation for quality analytical work is well-founded. As far as could be determined over the course of the visit, the methods, procedures, equipment and systems which are used, available and employed at ALS Chemex conform to standard Canadian exploration industry practices. In all likelihood they are also among the best of those Canadian geochemical labs currently used by the mineral exploration industry. A few minor causes for concern are noted, mostly dealing with sample preparation, and some recommendations regarding possible future actions by StrataGold are given.

1) Introduction and Scope of the Project

The author was retained by Mr. Jim Sparling, Exploration Manager of StrataGold Corporation, to conduct an independent laboratory audit on the company's primary geochemical laboratory, ALS Chemex Laboratory, North Vancouver, B.C. This lab handles StrataGold's preparation, analytical and assay work for its exploration projects, including the Dublin Gulch gold deposit, a bulk-tonnage intrusive-related Au-W-Bi prospect. Although the projects span a range of exploration stages, including the sampling of surficial materials, the majority of samples are rock and drill core samples for geochemical analysis and Au fire assay.

The author visited the laboratory on October 27 2005 together with a small group of geologists from the Expatriate group of companies including Dave Hladky (StrataGold), J.J. O'Donnell (Pacifica Resources) and Cliff Pearson (Pearson Geological Services, Victoria). The audit was conducted over the course of an approximately 6 hour-long group laboratory tour, which required most of the work day. This was not a surprise visit, but was arranged in advance by StrataGold. The tour was conducted by Stuart McLeod (Analytical Services Manager-Northern Region) and Lawrence Ng (Manager-Geochemical Analysis), assisted en route by various department managers, and covered all preparation and analytical facilities of the laboratory.

This report comprises i) personal observations made by the author during the tour, and ii) results of the answers to specific questions posed to ALS Chemex personnel. Some additional information was also obtained from the company website. The photographs in this report were all personally taken by the author during this visit. All observations are essentially a 'snapshot in time' of the single day visit. Given that the visit was made on a busy workday with a larger group in the midst of the post-field season sample rush, it was not possible to physically inspect each and every jaw crusher, ring mill, riffle splitter and balance as would typically be the case for a smaller lab on a quieter day.

The author has previously prepared quality control recommendations for StrataGold's analytical work, but has not personally visited any of the company's exploration properties, nor had any involvement with the review of subsequent QA/QC data.

2) General Laboratory Information

ALS Chemex is generally considered to be one of the world's premier geochemical laboratory groups for the mineral exploration industry, and the North Vancouver lab in particular to be one of the better full-service laboratories. ALS Chemex is the Minerals Division of ALS, which also operates environmental, oil, food and electronics laboratory divisions. The ALS group of companies is owned by Campbell Brothers Limited, a publicly-listed Australian company. Other ALS Chemex labs elsewhere in North America include Val d'Or, Quebec, Reno, Nevada and Fairbanks, Alaska. As well, there are numerous facilities world-wide including those in South America, Australia, Asia, Europe and Africa.

ALS Chemex was formed in 1999 through the acquisition of Chemex Labs and its merger with the existing ALS (Australian Laboratory Services) mineral laboratories. In North

Vancouver, ALS Chemex laboratory (212 Brooksbank Avenue) handles analytical work mainly for the mineral exploration and mining industries. This lab originated as Chemex Labs prior to becoming part of ALS Chemex, and has been located at the same site for approximately 30-35 years. The current laboratory building was built in the early 1980's. In 2001 the company took over a well-established rival laboratory group, Bondar-Clegg, and closed its nearby North Vancouver facility. ALS Chemex has ISO 9001:2000 registration in North America.

Both Stuart McLeod and Lawrence Ng, who conducted the tour, have been with the company for approximately 20 years. Mr. McLeod stated that he has been there since 1986. Keith Rogers, the executive manager of the lab (not present during the audit) was the former Bondar-Clegg lab manager, and was stated to have approximately 30 years experience in the business.

General Impressions

In general, this is a large laboratory, with expansive facilities and a large staff. The physical size of the digestion laboratory and the sample weighing facilities are the largest ever observed in a commercial laboratory by the author, and the number of ICP units the greatest. Sample preparation and reception is located at ground level, and the air-conditioned analytical facilities are upstairs. Backup generators are available to provide power at the laboratory in case of electricity disruptions. Although the sample reception and prep areas are relatively cramped, the weighing, digestion and instrumental analysis departments are all quite spacious and, for the most part, very clean, tidy and free of miscellaneous clutter. The wearing of safety glasses was ubiquitous throughout the lab, implying to an outsider that management views staff health and safety issues as being of a high priority. The general impression conveyed is a positive one.

Staff Qualifications and Training

Lab personnel comprise some 260 laboratory staff and 50 administrative staff. Approximately 20-25% of the lab staff are reported to have university degrees. As well, there are 6 B.C. Certified Assayers on staff in Vancouver. Each department has its own internal training program, and each month holds a departmental 'crew talk' session to discuss issues. The lab recently hosted a 3 day internal seminar from a Varian (ICP manufacturer) instrumentation representative. The lab encourages and reportedly will pay for extra external training for staff.

3) Sample Receiving and Preparation

The sample receiving and preparation area is perhaps one of the weaker aspects of the laboratory. At sample receiving, all samples are unpacked, weighed, sorted in correct numerical order, bar-coded and sent to the appropriate drying area. One the positive side, the immediate bar-coding of samples is efficient and no doubt greatly reduces the possibility of sample mix-ups and errors. On the negative side, the reception area is to some degree shared with the sample prep area, and seems rather small and cramped for a lab of this size.

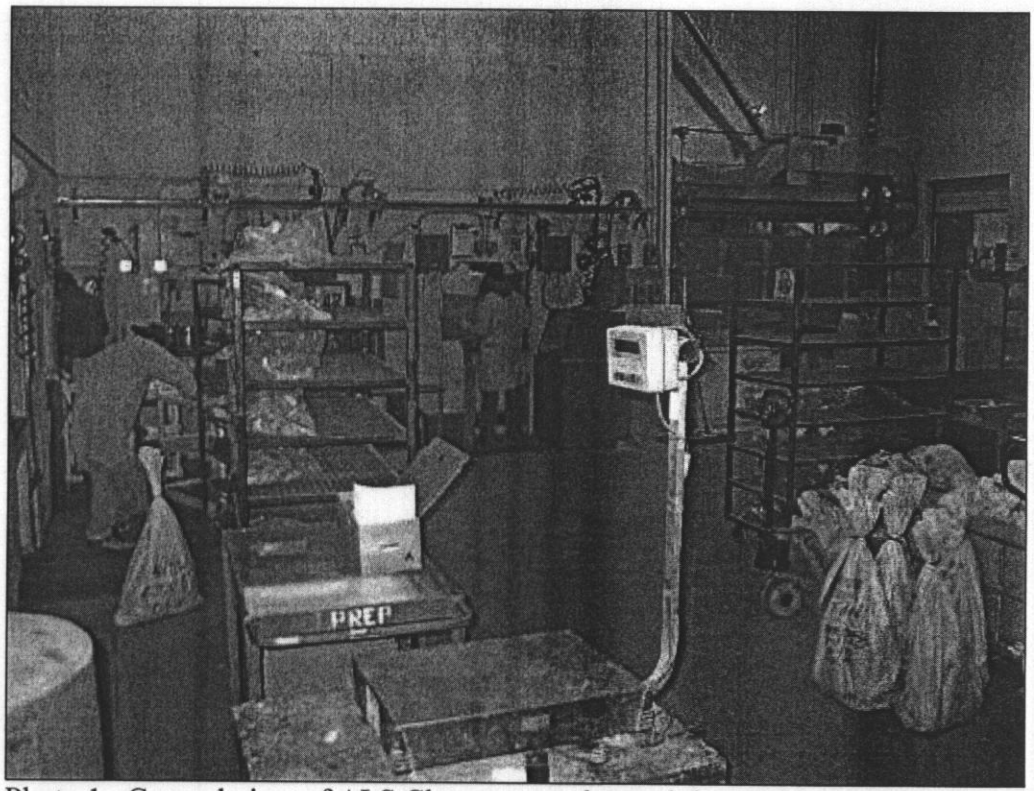

Photo 1. General view of ALS Chemex sample receiving and preparation area. Note the ring milling station in the background.

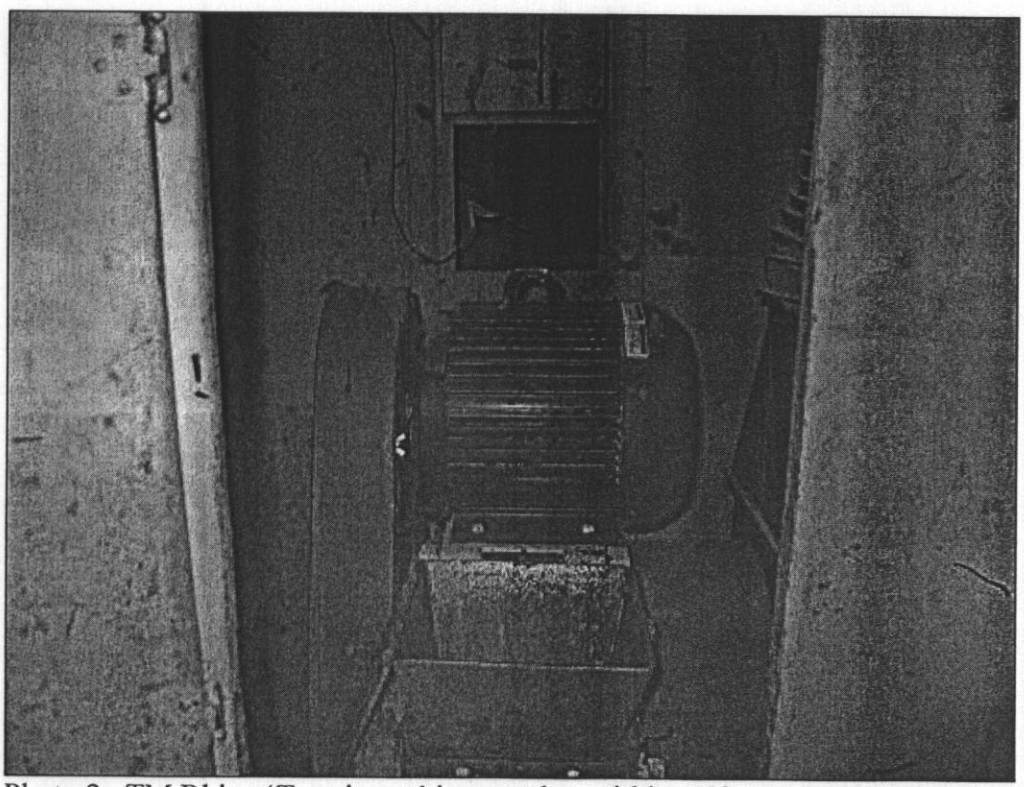

Photo 2. TM Rhino 'Terminator' jaw crusher within self-contained station with dust extraction at ALS Chemex sample prep area.

The moveable tables used for unpacking and sorting the samples did not appear to be specifically marked for use for either ore-grade or trace-level samples. Furthermore they did not seem to be kept too clean and free of dust or grit - the author ran his finger over one while passing and there was noticeable rock dust on it No protective layer of disposable paper, from large rolls, was observed to be laid beneath the samples during sorting and bar-coding.

Separate drying facilities, on either side of the receiving and prep area, are used for ore-grade and trace level samples.

Crushing and Pulverizing of Rock and Core

The equipment observed, and general procedures used, in sample prep here are in accordance with standard industry norms in the preparation of rock and core samples. Jaw crushers are used to reduce rock and core to small fragments, riffle splitters to obtain a smaller, representative split of the coarse-crushed material, and ring mill pulverizers then used to pulverize the sample to a fine powder for subsequent analysis. Rock and core preparation capacity was stated to be about 3000 samples per day.

Sample preparation is designed to completely pulverize rock in two operations – jaw crusher and ring mill. No disc mills, roll crushers or other types of inappropriate sample preparation equipment were observed in the lab. The major items of prep equipment seemed to be of reasonably recent vintage, and in good shape. The TM Rhino 'Terminator' primary jaw crusher shown in Photo 2 was stated to be one year old. A check of the sample receiving tray showed no rust, holes or other defects. The primary crushers are enclosed within enclosed wooden 'stations' with dust extraction systems to prevent cross-contamination between individual crushing stations. Although the author has in the past visited other ALS Chemex labs where cleanliness around the base of the jaw crushers was questionable, the stations at the North Vancouver lab seemed reasonably clean. Vacuum cleaner hoses were present for cleaning purposes, and the ventilation air flow within the enclosed confines of the station was stated to be routinely checked on an annual basis. A steel ring mill examined at one of the pulverizing stations was in good condition, with no obvious wear, cracks or holes which might result in an incomplete or cross-contaminated grind. Ring mill bowls are manufactured by TM Engineering, and are all composed of low-chromium steel made to specific ALS Chemex specifications (*note: specs not obtained*). Apparently no Cr-steel ring mills are used at all in the lab. Although the use of these so-called 'soft steel' mills increases wear and the rate at which they must be replaced, it also reduces if not eliminates the likelihood of chromium contamination of rock and core samples. However, the undertaking of specific tests are recommended should chromium contamination of rock samples ever be an issue in a StrataGold exploration project. Larger 1.7 kg-capacity bowls of a different manufacture are also available in the prep lab.

Barren blank cleaning materials were observed to be present adjacent to both jaw crusher and ring mill prep stations. Compressed air hoses for cleaning are present at these stations (Photo 1); coarse brushes for cleaning of the jaw crushers were not observed, although they may have been overlooked in the relatively cluttered prep area. Coarse

stream gravel (Photo 5) is used for cleaning jaw crushers, and a well-sorted siliceous coarse sand (Photo 6; of unknown origin) is used for cleaning of ring mills. Pails and bins of these barren materials were seen to be kept immediately beside individual stations for ease of access and use by the prep staff. In discussion with ALS Chemex personnel, jaw crushers and ring mills are not routinely cleaned with these blank materials between each sample, but cleaning is instead restricted to cleaning between batches, or between individual sets of samples. Cleaning between individual samples is limited to the use of compressed air. Each blank material is analyzed and tested monthly for any possible contamination as part of the labs internal quality control procedure; it was not apparent whether this referred to individual machines, or individual batches of blank material.

The desired sieve size crushing standard for primary jaw crushing is 70% of the material passing < 2 mm. Similarly, the desired sieve size standard for ring milling is 85% of the material passing -200 mesh. Results are stated to be checked daily, and weekly test results are posted on a bulletin board in the sample prep area (Photos 7 and 8). A casual examination of the weekly results for each in Photos 7 and 8 shows that test results are generally exceeding the desired standard, at least for the single week in question. These examples here show that 82-84% of coarse crushed material is passing a < 2mm sieve, and that about 91-97% of ring milled material is passing a -200 mesh sieve. However the posted weekly results did not seem to very timely, dating here from early to mid-September, about 1.5 months prior to this visit). It is possible there might have been another bulletin board with more recent data posted. Sieve test results are recently being captured electronically, so the absence of a notebook at each crushing or pulverizing station noting the sieve tests results over a period of time is not a cause for concern here.

Riffle splitters are used to reduce the sample size of jaw-crushed rock and core prior to ring milling. In the case of StrataGold, standard procedure is to reduce the complete coarse-crushed rock or core sample down to approximately 250 grams using the riffle splitter. This would normally entail several passes of material through the riffle splitter to achieve this weight reduction in a representative fashion. A riffle splitter in a splitting station located immediately next to the primary jaw crusher (Photo 2) is shown in Photo 3. The station was reasonably clean, and the splitter appeared to be in good physical shape. There were an even number of riffles, which is a necessity for representative splitting, but unfortunately the individual riffles were not all completely parallel with one another. As is evident in Photo 3, one of the riffles in the foreground is attached at an oblique angle relative to the other riffles. This would be expected to reduce the likelihood of achieving a representative split.

The receiving pans at the above riffle splitter station were obviously very new and in good shape, with rounded corners and no rust, holes, etc. (Photo 3). However a number of pans which were observed stacked on storage shelves beneath the prep stations did appear to be much more beaten up, and in rougher condition. The surprisingly poor design of the riffle splitter, which was in plain view, leads one to wonder if other riffle splitters in the lab were of similarly-poor design. The relatively crowded prep lab was very busy during the visit, so it is possible that other splitters in equal or worse shape could easily have been in use.

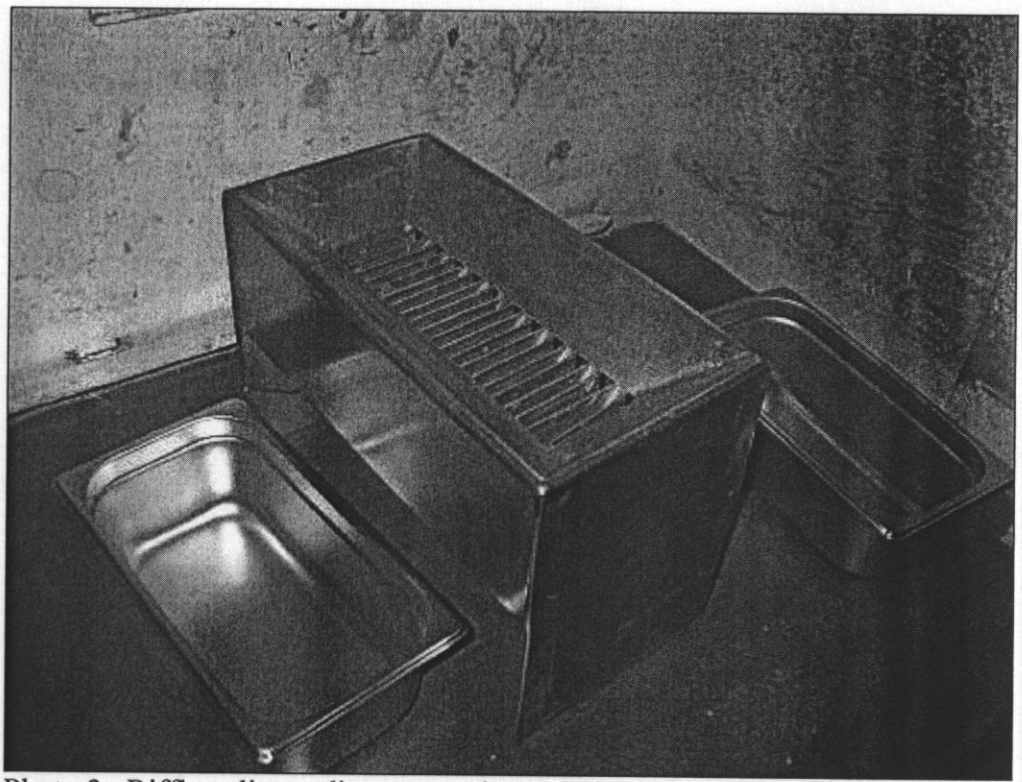

Photo 3. Riffle splitter adjacent to primary jaw crusher. Note the uneven riffle in the foreground; the opening is wider on the left side than on the right side.

Photo 4. Cleaning ring mills with an air hose at a pulverizing station.

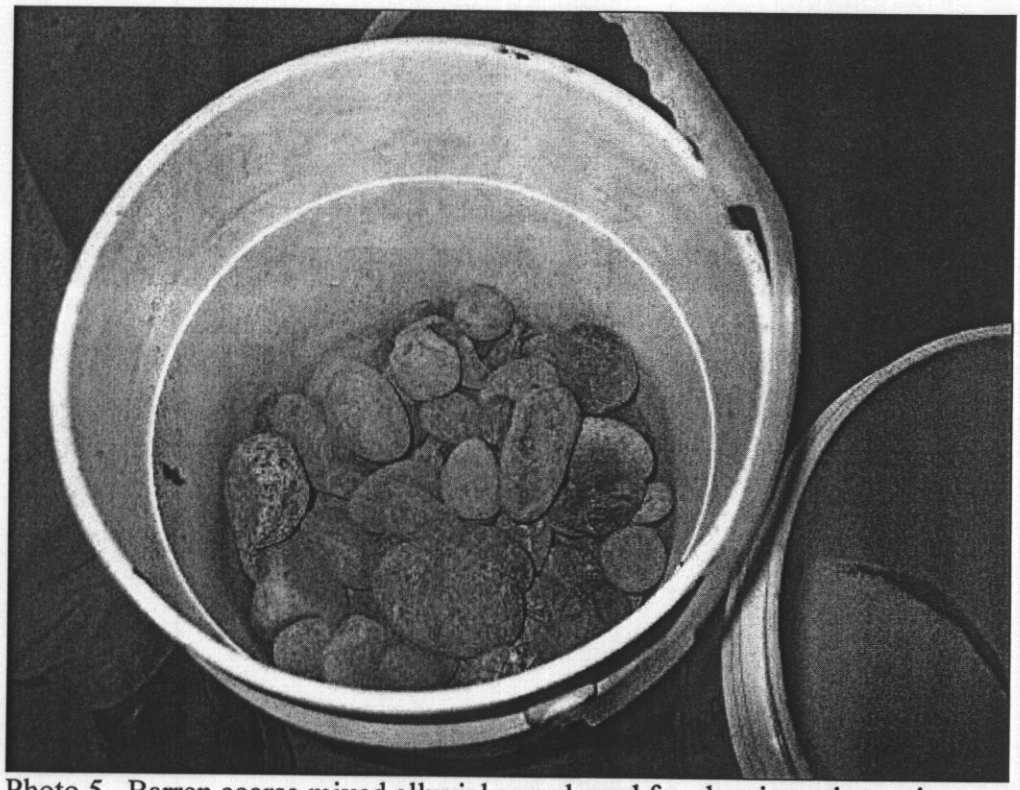

Photo 5. Barren coarse mixed alluvial gravel used for cleaning primary jaw crushers. The pail is located next to the jaw crusher for ease of access.

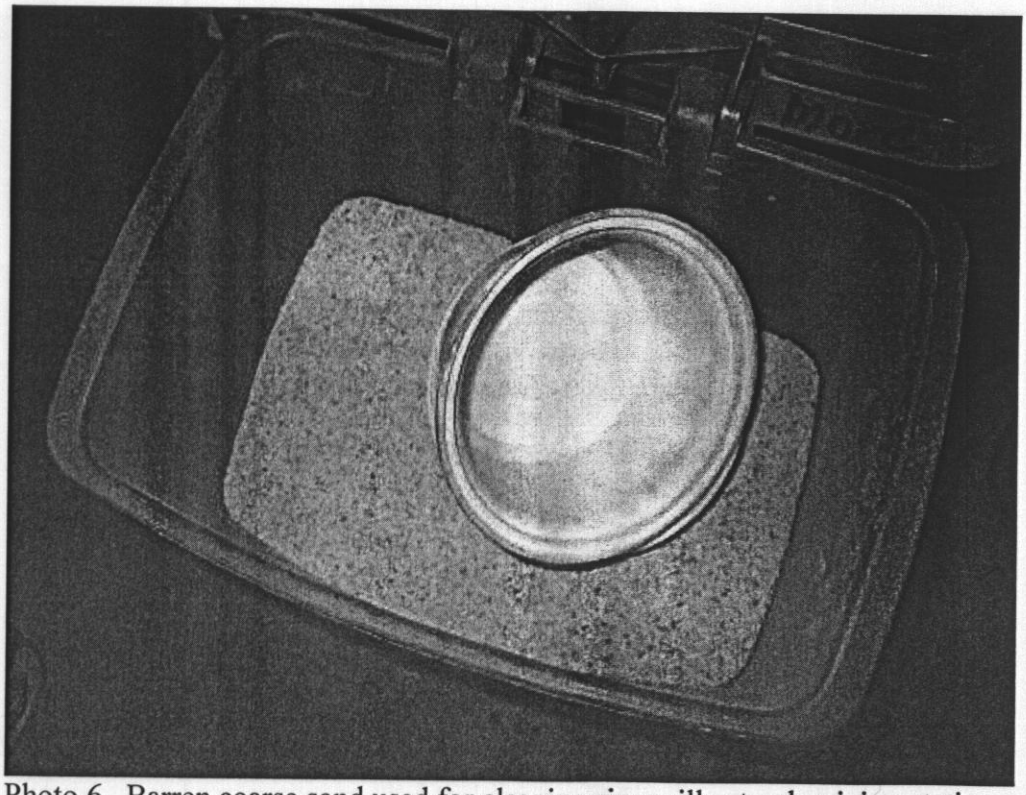

Photo 6. Barren coarse sand used for cleaning ring mills at pulverizing station. As with the gravels in Photo 5 above, this bin is located at the pulverizing station.

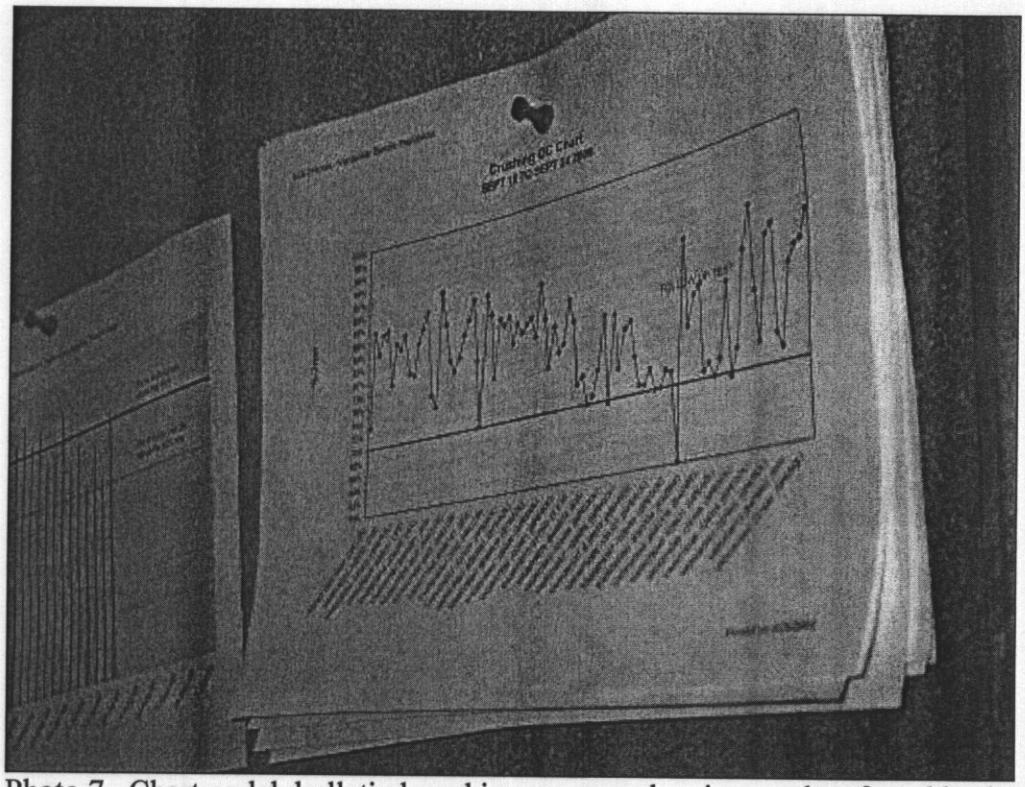

Photo 7. Chart on lab bulletin board in prep area showing results of weekly sieve tests of material crushed in the jaw mills.

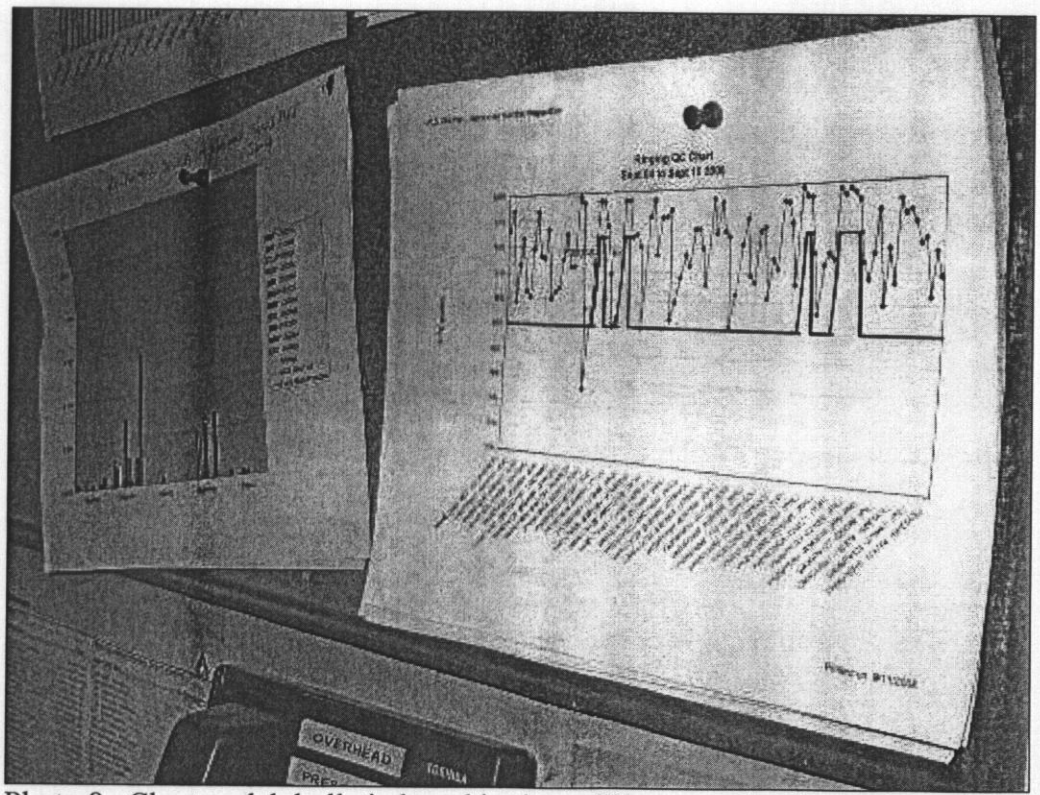

Photo 8. Chart on lab bulletin board in ring milling area showing results of weekly sieve tests of pulverized material in ring milling equipment.

Preparation of Soils and other Surficial Materials

Dedicated stations for the sieving of soils, sediments and other surficial materials were located in one corner of the prep area, a short distance away from the main rock prep area. This some-what segregated location for the soil prep area is one positive feature of it; a second is that ALS Chemex's standard procedure is to routinely sieve soils and sediments to completion. This is a critical but often overlooked factor in the integrity of gold exploration programs. Only stainless steel sieves are used, in accordance with best practices for geochemical analysis, but the -80 mesh sieve that was present at one of the work stations (Photos 9 and 10) did appear quite worn and battered.

Lab staff admit that they find it more difficult to adequately deal with the preparation of organic-rich surficial materials, and state that they may subcontract out the preparation and/or ashing of organic soils (*e.g.* peat) and vegetation to other laboratories.

The soil prep area is surprisingly small for such a major lab, particularly in comparison to the area devoted to rock crushing and pulverizing. During the course of discussion with ALS Chemex personnel the author questioned the lack of fume hoods over the prep areas, but lab staff suggested that use of downward dust extraction system (Photo 9) was cleaner than use of overhead dust extraction. As a more general comment, in no part of the lab, in this department or elsewhere, did the author notice any small trays of fine silica set out for the monitoring of general airborne contamination levels.

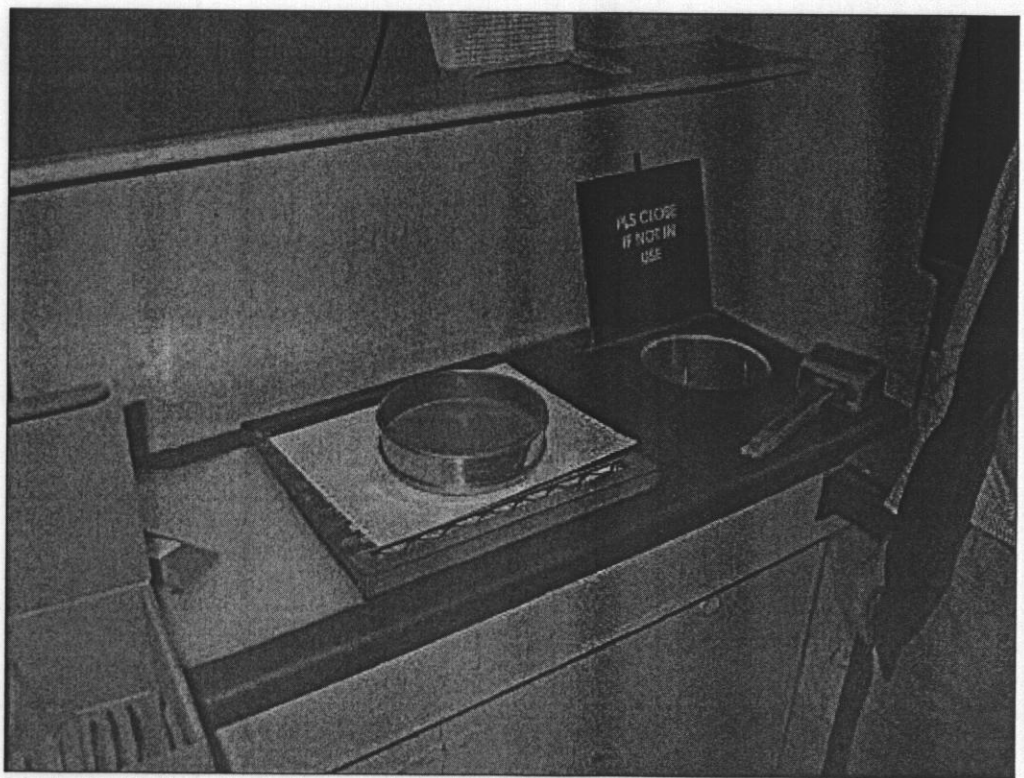

Photo 9. Soil preparation work station, showing sieve, downdraft dust removal system, and wooden mallet for disaggregating samples on outside of bag as required.

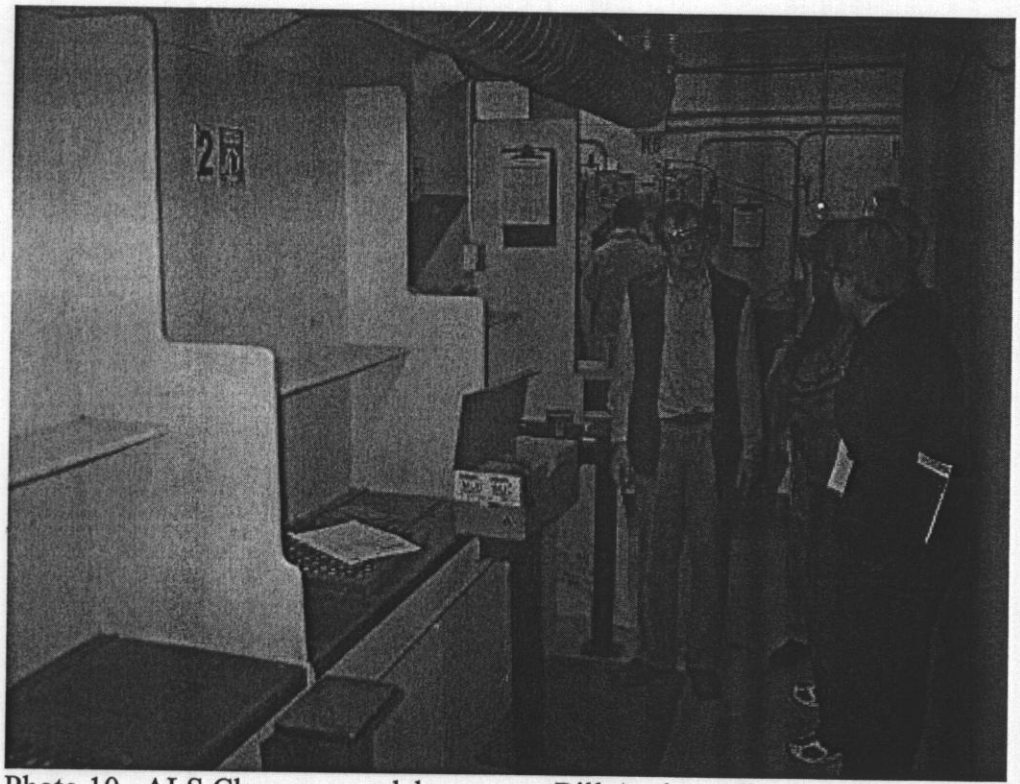

Photo 10. ALS Chemex prep lab manager Bill Anslow talks to our group in soil prep area. Note segregation of the soil prep area from the rest of the prep lab (behind).

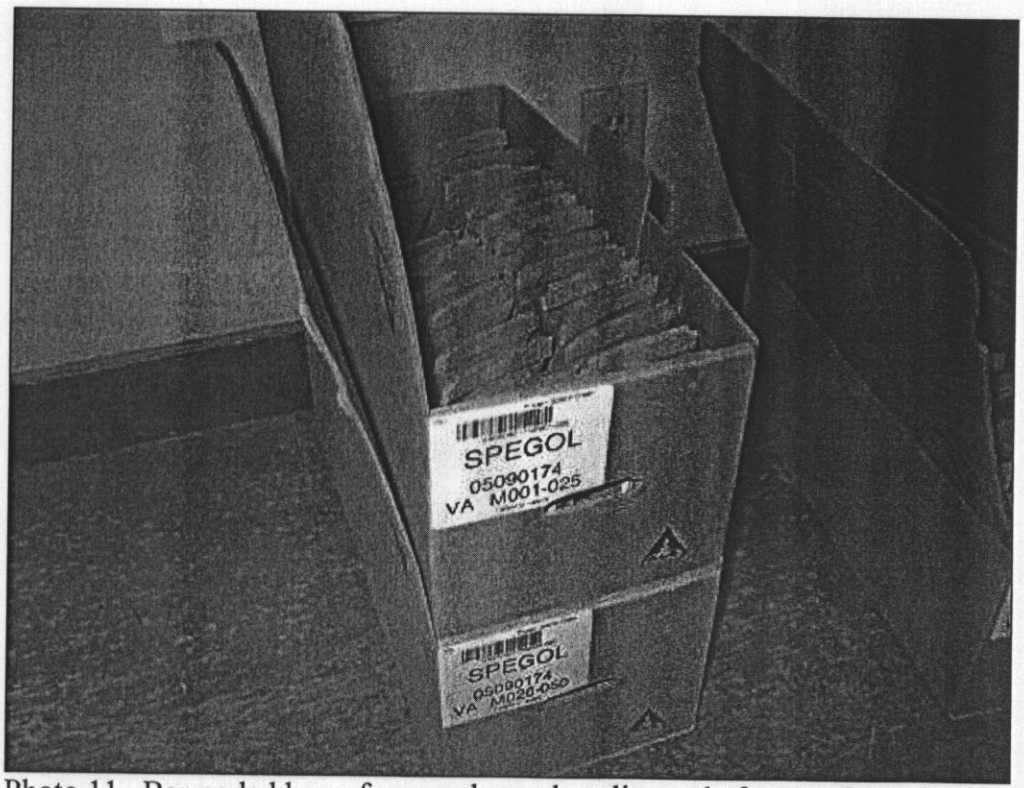

Photo 11. Bar-coded box of prepped sample splits ready for transfer to the digestion labs.

Subsplitting of Samples for Assay and Analysis

A significant concern of the author is the manner by which the final rock and core splits are obtained from the pulverized material prepared in the ring mill. Although the riffle splitter is used to obtain representative ~ 250 gram splits, after coarse crushing, for pulverization in a ring mill, no similar such procedure is apparently used after pulverization to obtain the splits used for assay (e.g. 30 grams for gold fire assay) or analysis. The use of a micro-splitter yields the most reproducible results, but this procedure is unlikely to be routinely performed in a commercial laboratory due to the extra time and expense required.

The final splitting of pulps was not observed during the lab visit, so the author is unable to state whether the assay pulp was obtained by rolling and quartering the pulverized 250 gram sample with a sheet of paper, or merely scooping 30 grams out of the ring mill and into a pulp bag (Photo 11). While ring milling generally produces a homogenous product, it is unwise to assume this when dealing with gold. This step of the sample prep process should be more closely examined should StrataGold's QA/QC analytical duplicate results prove imprecise.

4) Sample Weighing and Internal QA/QC Procedures

The weighing room at ALS Chemex may be the largest one the author has ever seen at a commercial laboratory. A total of 14 balances are used to weigh out sample material for digestion and subsequent analysis (Photo 12), with a possible capacity of 8000-12000 samples per day. The balances are mostly Sartorius and Mettler models, and only digital-readout models were observed. One balance was selected at random and checked for accuracy using a pair of balance verification weights – a 30 gram weight and a 1 gram weight. In each case, the desired 30 gram and 1 gram results was achieved, to 3 decimal places. Although balances in the gravimetric analysis lab are located on heavy tables to minimize any shaking or vibration, those in the weighing room seem to be located on standard tables. This may be because only a specified weight range of sample material is weighed out in each case, not the exact amount, as shown in the example in Photo 12. Balances are stated to be checked for accuracy on a monthly basis. They are also stated to be externally certified every 3 years, although this period was said to be soon reduced to 1 year intervals.

The lab's routine internal QA/QC procedures are put into place during the sample weighing process. Each internal batch of samples for multi-element ICP (40 samples) and fire assay (84) samples contains a fixed number of internal QA/QC samples of varying type. In the case of the 84-sample fire assay batch, for example, each batch contains 78 routine samples and 6 QA/QC samples: 1 barren method blank, 2 standards and 3 pulp duplicates. Only external standards are used; ALS Chemex apparently uses no internal standards as part of their internal quality control. Of commercially-available external standards, it appears that Rocklabs and Geostats standards are extensively used. Some CANMET standards were also observed on shelves in the weighing room, although they are probably not used as frequently as Rocklabs or Geostats standards due to their higher cost.

Photo 12. A Mettler balance used for weighing 0.4-0.5 gram samples for ME-ICP41 digestion and analysis. Note the white jars of Rocklabs standards, used here as part of ALS Chemex's internal QA/QC system.

5) Fire Assay

The fire assay facility at ALS Chemex is clean and relatively spacious. It contains 3 fire assay fusion furnaces and 3 cupellation furnaces, and the sample through-put capacity is about 7000 samples per day. The fusion furnaces are gas-powered and operate at 1050°C; furnace temperatures are checked by certified thermocouples. They are located at ground level, adjacent to a large garage-style door which was open during the visit.

Each fire assay batch consists of 84 samples, with a combination of 78 routine and 6 QA/QC samples as previously described in the weighing section above. Crucibles of Chinese manufacture are used at ALS Chemex (Photo 14). The fire assay flux is pre-mixed in bulk by Anachemia off-site, and delivered from a hopper bag to the crucibles by auto-loader as shown in Photos 15 and 16. The auto-loader is an ALS Chemex design and is reputed to be unique in the world. Use of this technique likely produces a superior mixture of flux and sample relative to more manual methods of mixing; in addition, the use of pre-mixed flux and both auto-loading and auto-mixing techniques no doubt results in a lower-lead workplace environment which is far healthier for the fire assayers. The process operates as follows: the batch-tray of 84 samples in crucibles is placed within the loading machine where the pre-mixed flux is added into each crucible from a central bulk hopper bag on top (Photo 15). The tray leaves the bulk loader, where a saran wrap-type cover is put over the samples before the tray then proceeds into the shaking machine for mixing (Photos 16 and 17). Once mixing is complete (Figure 17), the batch-tray of samples proceeds to the fusion furnace (Photo 18).

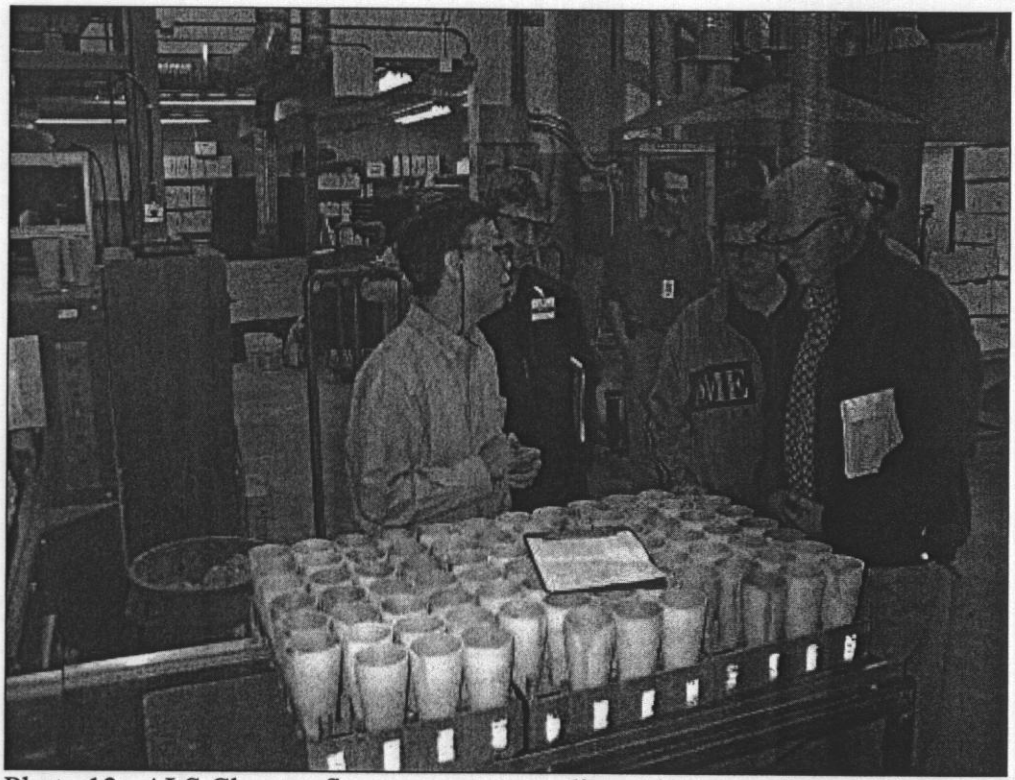

Photo 13. ALS Chemex fire assay manager discussing procedures with StrataGold and Pacifica Resources personnel.

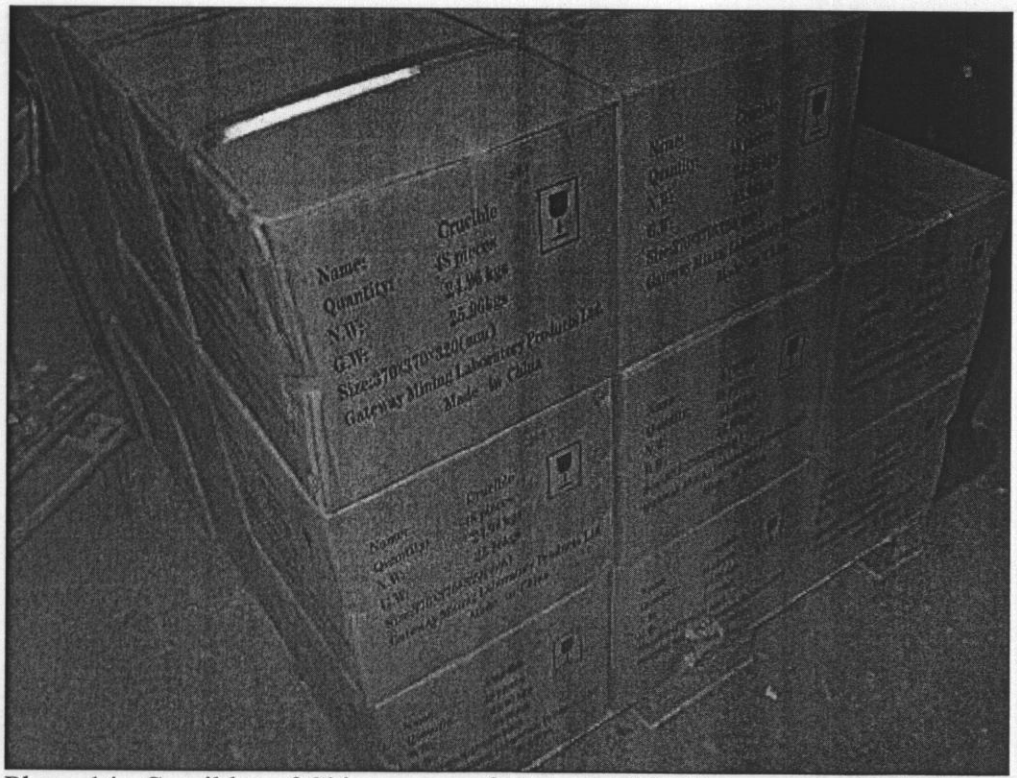

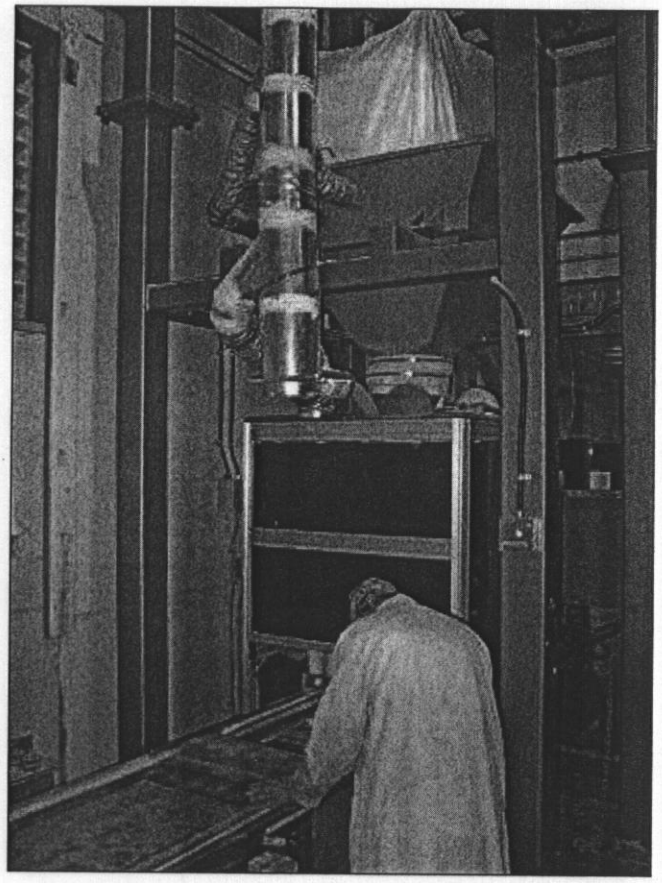

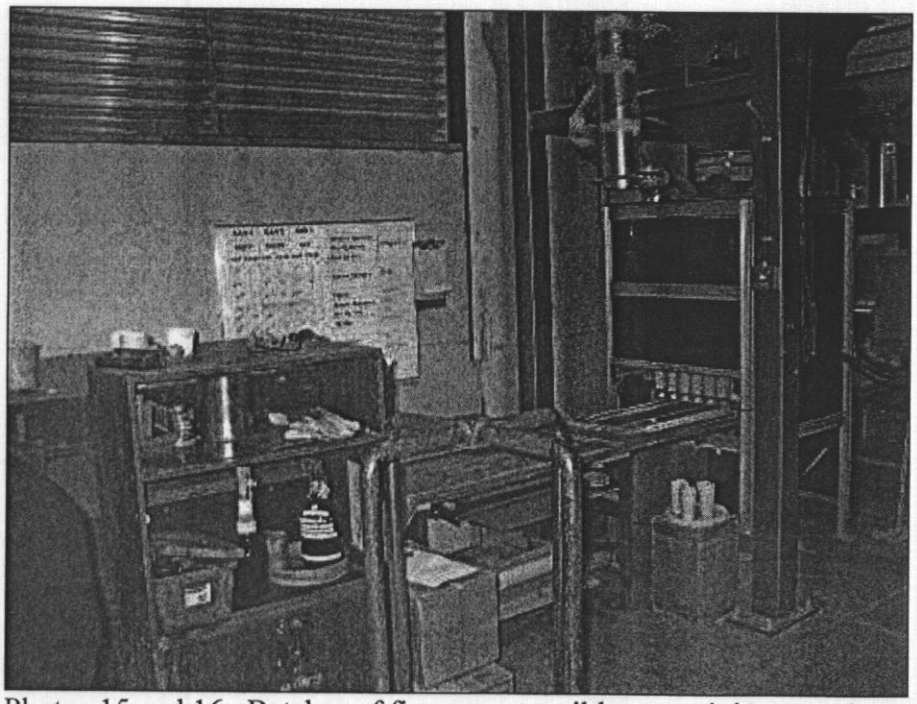

Photo 14. Crucibles of Chinese manufacture used for fire assay at ALS Chemex.

Photos 15 and 16. Batches of fire assay crucibles containing samples to be assayed are bulk-loaded with pre-mixed flux from an upper hopper (top), then along moved to a mixer machine (blue, at left) where flux and sample are uniformly mixed.

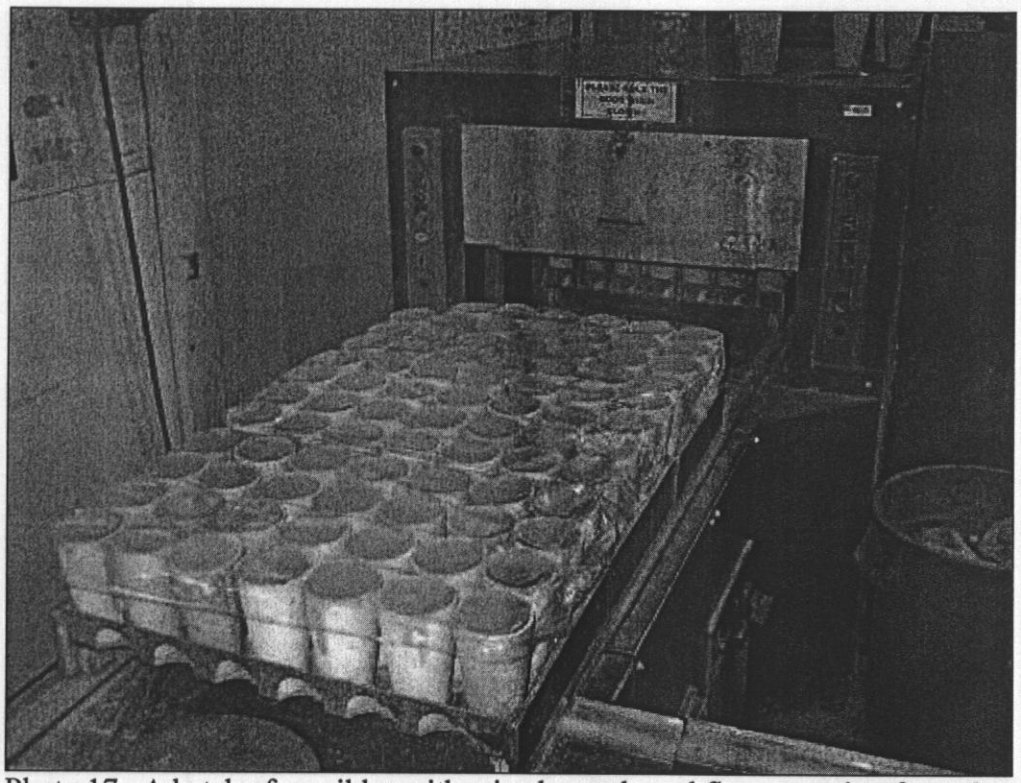

Photo 17. A batch of crucibles with mixed sample and flux emerging from the mixing machine.

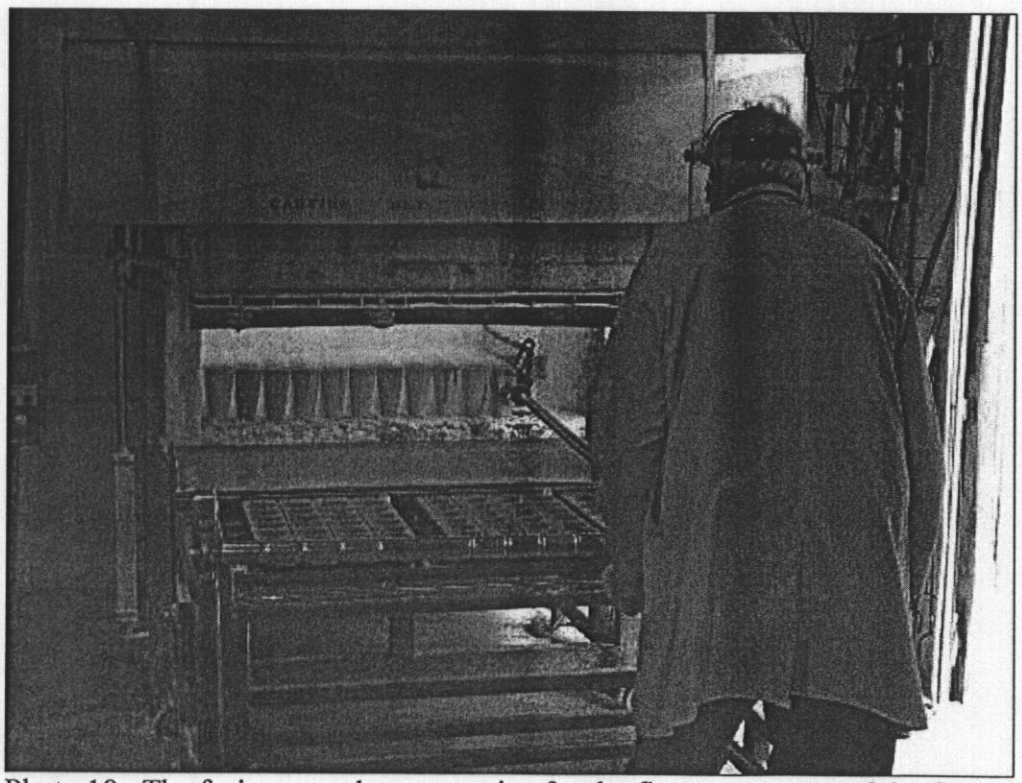

Photo 18. The fusion complete, preparing for the first pour at one of the fire assay fusion furnaces.

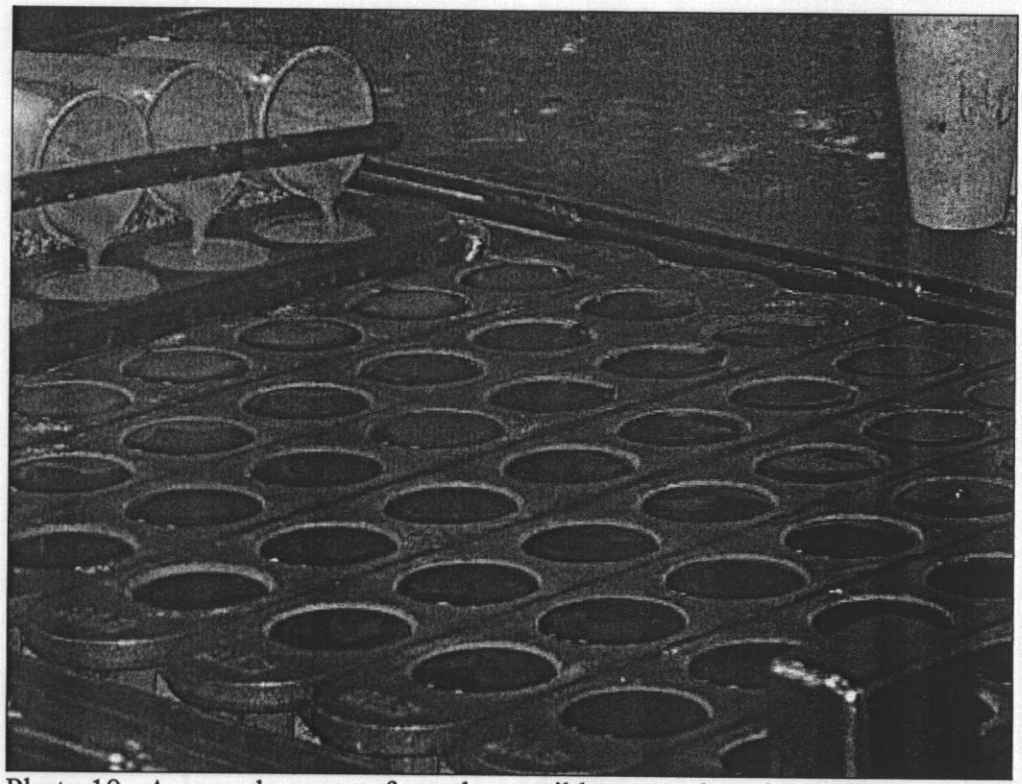

Photo 19. A very clean pour from the crucibles; no splattering, spillage or messy pours were observed during our visit to the ALS Chemex fire assay lab.

The fire assay fusion requires 15 minutes, and once removed from the furnace each pour empties 12 crucibles simultaneously (Photos 18 and 19). Each of the pours observed by the author during the visit were neat and clean, with no splattering, spillage or sample intermixing as is sometimes seen.

Crucial to the integrity of gold exploration programs, crucibles from all samples assaying greater than 500 ppb gold are discarded. As all samples are bar-coded, crucible usage is monitored by computer. This no doubt ensures that those crucibles containing high-grade gold samples really are discarded as intended, rather than being accidentally reused where they might cross-contaminate a later sample. Used crucibles are also thrown away if they are chipped or otherwise damaged; the author observed a worker going through a rack of used crucibles and discarding a large number of them.

A silver nitrate solution is added during the cupellation stage (Photo 20), rather than using silver wire. However pure silver foil is used for high-grade samples. Fire assay staff stated that a switch to the use of compressed air during cupellation, rather than 'natural breathing', has reduced the time necessary to complete the process. Two Sartorius microbalances are used for any subsequent gravimetric finish. The lab has a capacity of up to 1500 gravimetric analyses per day. The methods manuals shown on a shelf in the gravimetric weighing room (Photo 21) are typical of the ready access to documentation of standard procedures at this lab.

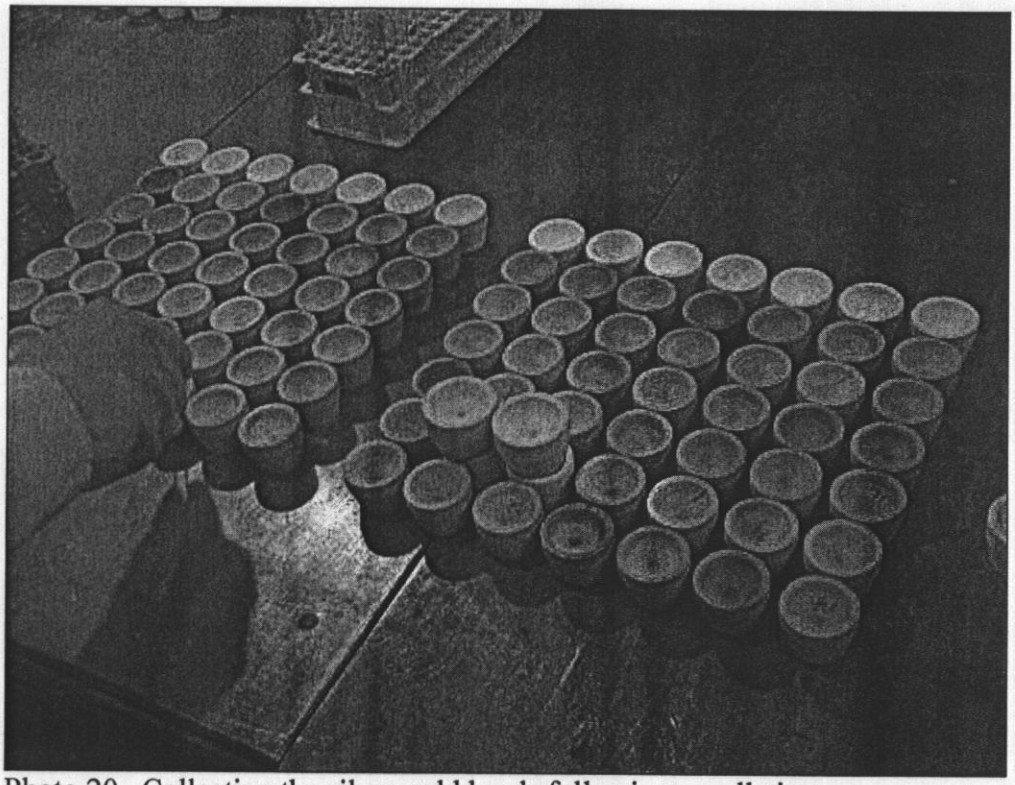

Photo 20. Collecting the silver-gold beads following cupellation.

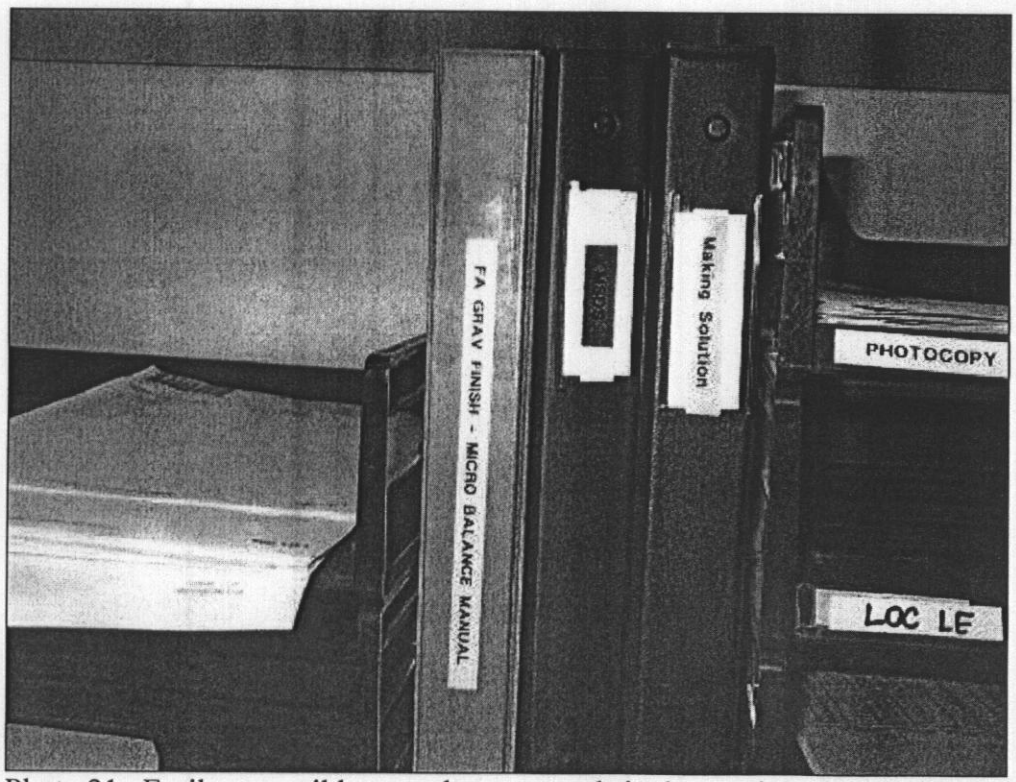

Photo 21. Easily-accessible procedures manuals in the gravimetric weighing room are typical of the use of written systematic procedures at ALS Chemex.

6) Acid Digestions

The acid digestion lab, like most of the analytical facilities at ALS Chemex, is spacious and clean. From the point of view of the various acid digests, graphite heating blocks (Photo 22) are widely used in the digestion lab in place of the old hot plates and water bathes. The use of graphite blocks helps to better regulate the temperature at which the digestions take place, in all likelihood producing a more constant and consistent digestion within the same batch of samples. Lab staff indicated that, following digestion, all acid solutions are expected to be analyzed within 3 days. If they are not analyzed within 5 days, new sample splits must be made and the digestions must be repeated.

Other than Teflon test tubes (Photo 22), glass test tubes which require washing after use are not used in the lab. Only disposable test tubes are used, then discarded, preventing any possibility of accidental cross-contamination of samples from the use of dirty glassware. The lab equipment was not rusty due to the effects of acid fumes as is often seen, and the author noticed that even the trolley carts used for moving racks of test tubes around were of a high-density plastic rather than metal construction.

All lab staff were wearing safety glasses, and warning signs on the fume hoods directed that face shields were also to be worn when handling concentrated acids.

As a minor negative point, the author felt that the various acid digestion stations were not very clearly marked as to the type of digestions typically performed in, although the fume hoods or digestion cabinets were individually numbered.

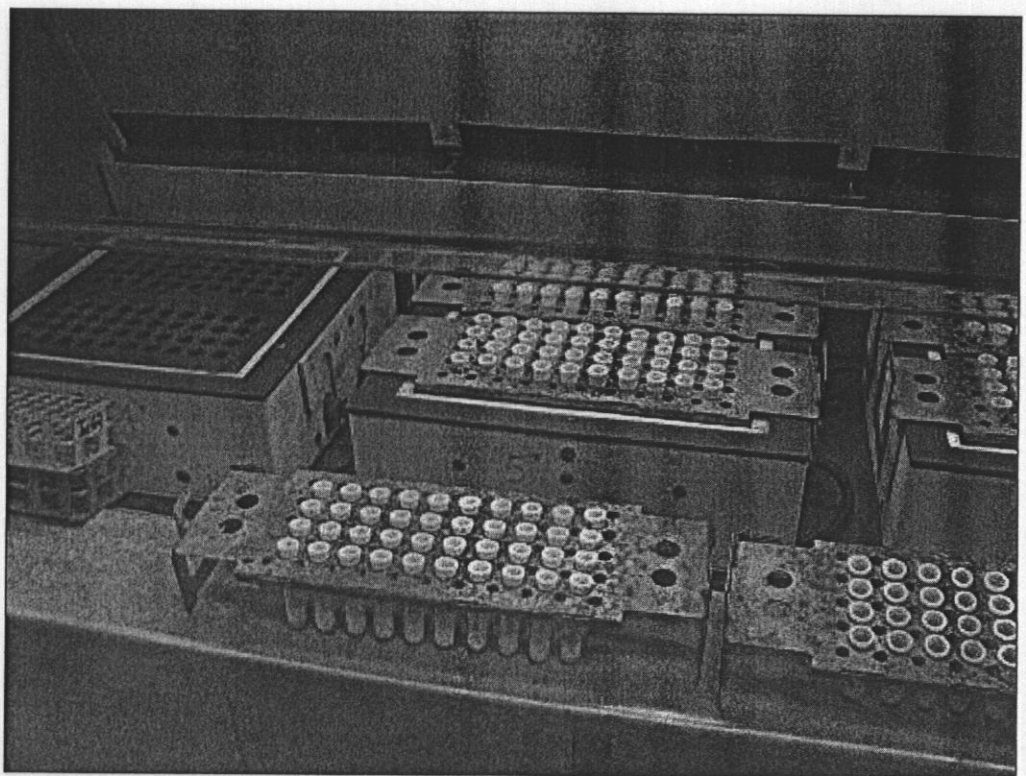

Photo 22. Multi-acid digestions using Teflon test tubes. Note the use of graphite heating blocks rather than hot plates and water baths.

7) Analytical Instrumentation

XRF

The XRF lab at ALS Chemex has three Phillips XRF units of various vintages, the most recent one being brand new (background in Figure 23). The lab is capable of producing both pressed pellets (10 gram samples) and fused pellets (1 gram samples) for XRF total determinations. Individual runs of 40 samples include internal QA/QC standards for instrument calibration.

Given that XRF determinations are unlikely to be a major component of StrataGold's analytical work at ALS Chemex, more attention was given to other analytical facilities such as the ICP and AAS labs.

Photo 23. XRF laboratory, showing the two most recent of the three Phillips XRF units at ALS Chemex.

ICP-MS

The ICP-MS (inductively coupled plasma-mass spectrometry) laboratory on the 2nd floor of ALS Chemex contains 9 modern Perkin-Elmer Elan 9000 ICP-MS units (Photo 24). Most were stated to be 2-3 years old; one new one had clearly just arrived, and was not yet operational. The lab is very roomy and clean, with a minimum of clutter. The lab is air conditioned, and the wrap-around windows are covered with inside darkening screens to help regulate the temperature at which the ICP-MS's operate. In addition, a great deal of effort has obviously been expended to minimize the environmental effects of acid fumes on both personnel and instrumentation. Trays of test tubes at the auto-samplers are

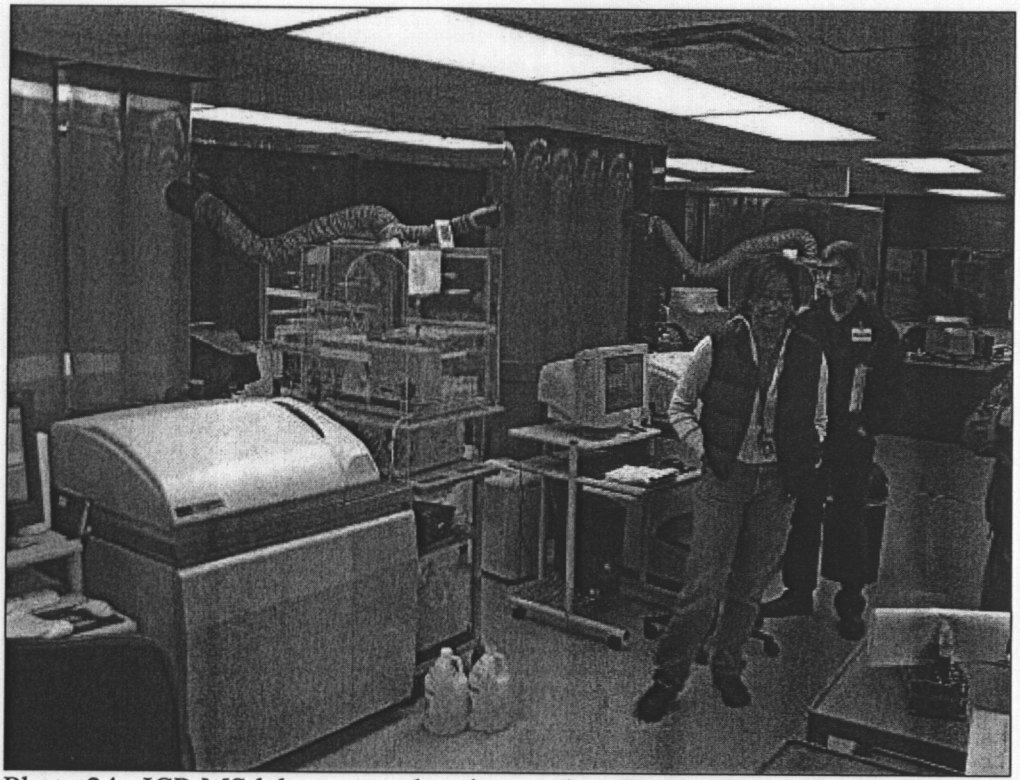

Photo 24. ICP-MS laboratory, showing modern Perkin-Elmer Elan 9000 ICP-MS units. Note the venting of acid fumes by vertical exhaust pipes to minimize health and equipment damage by the acid fumes.

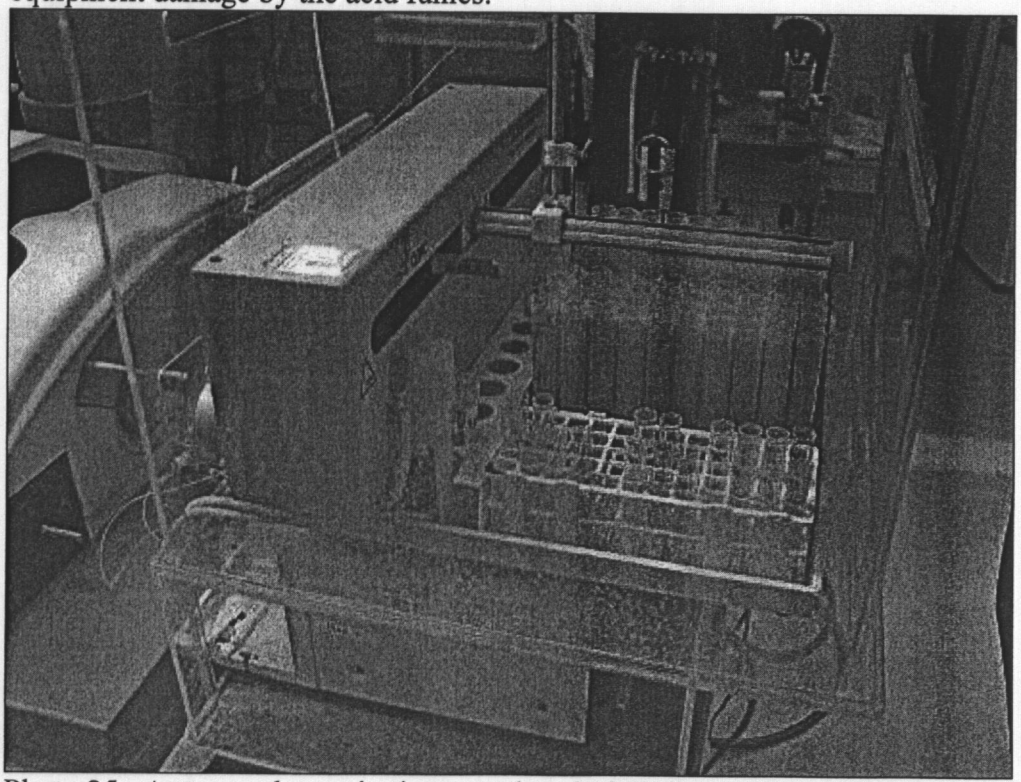

Photo 25. Autosampler aspirating sample solutions into an ICP-MS from disposable test tubes within a Plexiglass containment; it rinses in distilled water between each sample.

kept within a plexiglass containment, and acid fumes are vented to vertical plastic exhaust pipes which remove the fumes from the lab environment (Photos 24 and 25). This increases the level of environmental safety in the workplace, and helps to minimize the ever-present problem of equipment damage by the acid fumes.

The autosampler shown in Photo 25 is typical of those found with ICP units in modern geochemical laboratories. Sample solutions are aspirated into the ICP-MS from disposable test tubes. A typical instrument batch run is set up to include 3 racks of 42 test tubes each, including 6 internal QA/QC samples. In addition the autosampler rinses in distilled water between each sample to prevent any possible carryover contamination from a previous sample solution.

ICP-ES

The ICP-ES (inductively coupled plasma-emission spectroscopy) lab at ALS Chemex is certainly the largest ever visited by the author at a commercial lab. There are 14 modern Varian ICP-ES units in the clean and uncluttered lab (Photo 26), which is adjacent to the ICP-MS lab. They all appeared to be identical Varian Vista-Pro units; they were stated to be all within only 4 years of age. Consistent with this, the units appeared to be in exceptionally good shape, with no obvious external rust or other damage. As shown in Photos 26 and 27, all batches of test tubes containing sample solutions are within Plexiglas containment during the analytical runs, and the acid fumes vented off from the immediate lab environment.

The ICP-ES lab was stated to have a capacity of 650-700 samples per day, per unit, for a daily through-put of up to 9000 samples. The internal QA/QC protocols for each run are equivalent to those of the ICP-MS units, and fresh ICP calibration standards are prepared each day. As with the ICP-MS units, individual machines are not dedicated to specific types of samples, for example water samples which are typically very low-level, but are routinely purged and cleaned before any such batch.

The concentration of such a large number of Varian ICP-ES units must be viewed as being very positive from the point of view of the client. ALS Chemex being such a substantial ICP customer, any instrumentation problems are likely to be fixed by Varian representatives very quickly, minimizing the chances of receiving faulty data. Furthermore the lab has considerable internal back-up and redundancy with so many similar units in place, reducing the likelihood that instrument problems at any one machine might affect the time required to complete a given batch of samples.

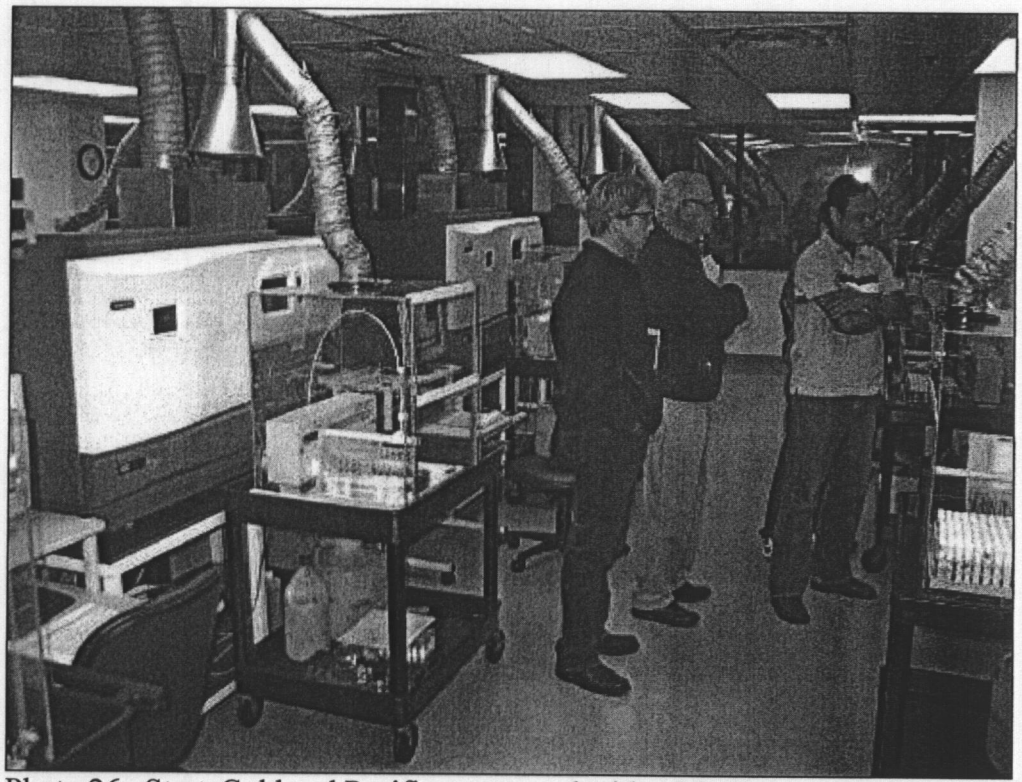

Photo 26. StrataGold and Pacifica personnel with ALS Chemex ICP lab manager amid a roomful of Varian ICP-ES units. Note the use of plastic rather than metal trolley carts.

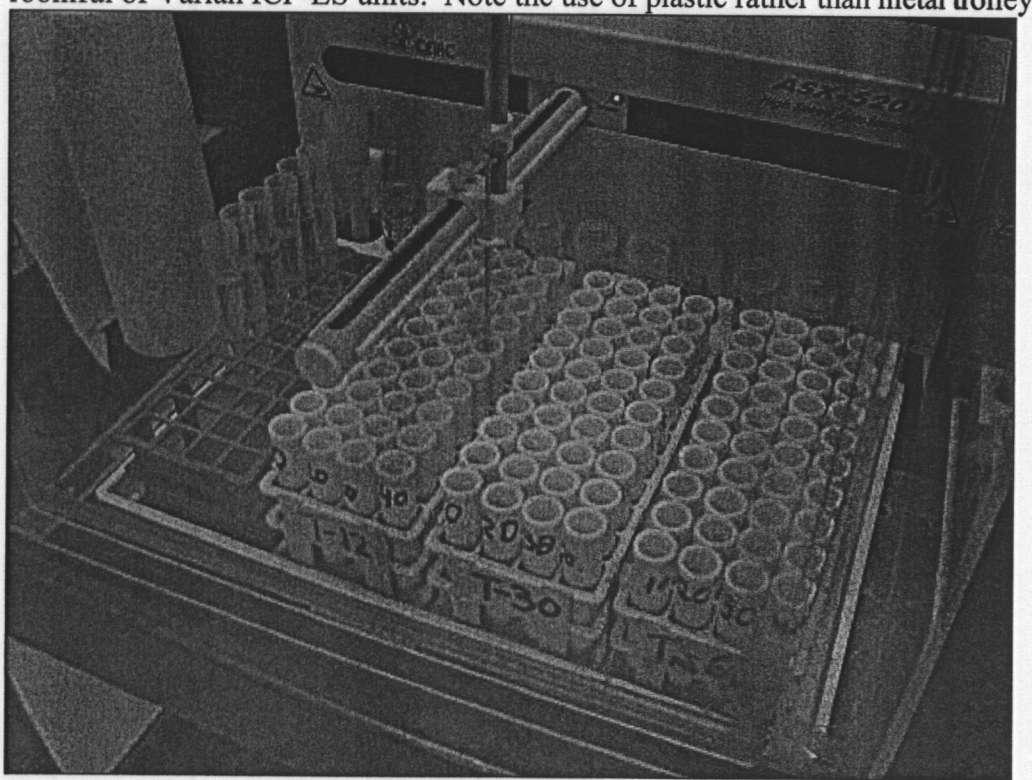

Photo 27. View of an autosampler attached to ICP-ES unit, showing typical run set-up of 3 trays of 40 test tubes each (in these case, Teflon test tubes). Method blanks and standards are at the left.

AAS

The atomic adsorption lab at ALS Chemex is a large one, with 4 modern Varian 240 AAS units and 2 older Varian 220 AAS units (about 5 years old). In addition, 3 AAS units are dedicated to the analysis of mercury by cold vapour-AAS, as shown below in Photo 28. Typically these machines have a capacity of about 800 samples per day.

Two of the AAS instruments are reserved for gold analysis. However there is no graphite furnace (GF-AAS) set-up available. Like all instrumentation at ALS Chemex, all recording of data is entirely computerized; there is no manual recording of AAS element data as is often observed at smaller laboratories. This must be expected to all but eliminate the possibility, if not the probability, of any operator transcription errors.

Lab staff indicate that they are capable of determining high-grade selenium concentrations using an AAS finish.

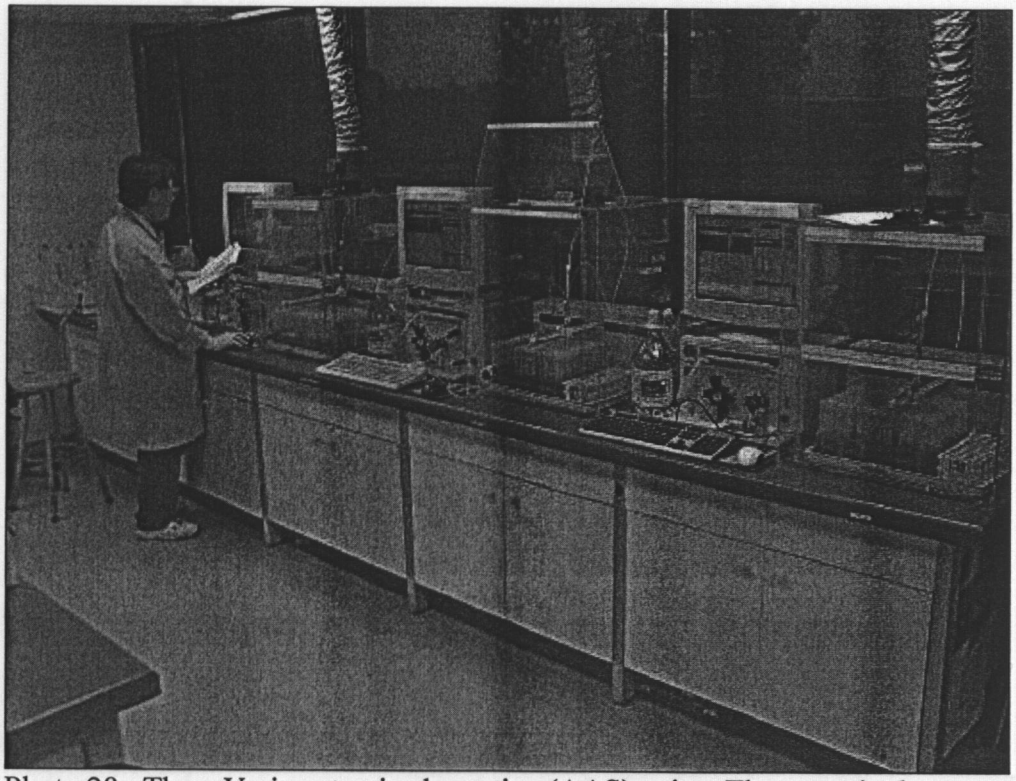

Photo 28. Three Varian atomic absorption (AAS) units. These particular ones are dedicated to the analysis of mercury by the cold vapour-AAS method.

8) Miscellaneous Laboratory Issues

Computerization and Automation

All data recording is entirely computerized; no manual data entry is carried out or, according to lab staff, is it even possible once the bar-coded samples have left the sample prep area. This systematic computerized treatment of sample data recording must be

viewed positively as greatly reducing the chance of sample mix-ups, omissions or transcription errors.

This extends to the treatment of overlimit samples as well, providing an automatic trigger for a more appropriate analysis of an overlimit sample. Such samples are automatically flagged for additional analysis or assay, removing the human factor and eliminating the chance that this will somehow be overlooked by the lab staff.

LIMS

A LIMS (laboratory information management system) has been in place at ALS Chemex since 2001. As noted earlier, this system relies on bar coding and scanning of samples to provide chain of custody records for sample batches at all stages of sample preparation and analysis. The LIMS is web-based, and was developed in-house rather than purchased off-the-shelf. If any problems develop with the LIMS, ALS Chemex has an internal IT group on-site which can attack the problem immediately, rather than waiting for external contractors to show up.

Retention of Records

The response to questions about the availability of historical records at ALS Chemex was a bit fuzzy, but such records are available depending on their age. Mineral exploration companies are compelled by National Instrument 43-101 to retain hardcopy analytical certificates for 7 years, and ALS Chemex staff confirm that they do retain hardcopy certificates for that length of time. They also suggested that in fact such hardcopy records are likely to be kept by ALS Chemex for a bit longer than that as well. In the case of digital data, staff suggest that they are able to access digital files back to about 1983. They do admit, however, that older files in perhaps-obsolete formats might take a bit of work to access. They suggested that they would not be able to recover any files from prior to 1983. As ALS Chemex's global server is located in Vancouver, digital files from international projects are likely to be accessible as well.

Retention of Pulps and Rejects

Pulps are stored at ALS Chemex without charge for 90 days following issue of the certificate of analysis. Rejects and other oversize material are stored for 30 days; in both cases the lab will notify clients for further instructions at the end of this period. At this point the client may either accept return of the materials, pay for their continued storage, or have them discarded.

Pulps are bar-coded and this serves as their identifier during storage. The question of security of stored pulps was put to the ALS Chemex representatives during the visit, and to what extent the pulps are protected from either malicious or incidental mischief during storage. Lab staff stated that the pulps are stored in a multi-use warehouse, but are shrink-wrapped on pallets such as to be inaccessible to casual tampering. Furthermore, the samples are identified by barcode only and are not identified by either company name or project on the storage pallets, greatly reducing the potential for any malicious tampering to occur during storage.

Waste Disposal

ALS Chemex lab staff state that old pulps and reject materials are sent to a landfill via a contractor. Hazardous wastes are also disposed of using a contractor 'Clean Carbon'. Used cupels are sent to Quebec for disposal.

External Accreditation

ALS Chemex has ISO 9001:2000 certification in North America, and this fact is prominently displayed on page 1 of the current ALS Chemex Canadian schedule of services and fees. Other various certification levels have also been achieved in other countries, particularly Peru. ISO certification has little to do with actual analyses, and does not ensure that a lab is using the best equipment or the most appropriate methods. It does indicate however that a lab has specific protocols and procedures on file and in place for dealing with management of quality systems, process controls, calibration of equipment, internal auditing, staff training, records management and so on, all of which may be contributing factors to performing good quality work.

At present ALS Chemex is working toward accreditation to ISO 17025. This is a very different standard, providing a specific assessment of analytical competence for specific analytical techniques.

The lab also conducts their own internal audits; in fact, an internal quality audit was underway in the preparation lab at the time as our visit.

As noted earlier, ALS Chemex has 6 B.C. Certified Assayers on its North Vancouver analytical staff. The Assayers Certification Program is authorized by statute in British Columbia, and ensures that assayers practicing in the province meet the high standards of competency required by the mining and securities industries. British Columbia is the only mining jurisdiction in the world that requires assayers to undergo extensive theoretical and practical training, and pass a rigorous practical examination before being certified. In addition, ALS Chemex is a sponsor of the Assayers Certification Program, and the Program website lists two senior ALS Chemex staff as being members.

ALS Chemex also participates in several international round-robin tests among laboratories as part of its progress toward ISO 17025 certification. One of these is the Geostats Round-Robin of Laboratories, involving approximately 100 labs world-wide. This round-robin set of comparative analyses is conducted twice a year by Geostats Pty of Perth, Australia, who should be consulted directly for a copy of the most recent sets of results. In addition, ALS Chemex also participates in the CANMET Proficiency Testing Program for Mineral Analysis Laboratories. CANMET, or the Canada Centre for Mineral and Energy Technology, is a division of the federal Ministry of Natural Resources. Other round-robins in which ALS Chemex participates include the Canadian Certified Reference Materials Project (CCRMP), RockLabs, and PTP MAL.

9) Summary and Recommendations

Laboratory audits and inspections are carried out to confirm the qualifications of the lab and its staff, and to investigate the reputation of the lab, inspect its facilities, equipment, procedures, general cleanliness and internal quality assurance and quality control programs. The audit of ALS Chemex Labs, North Vancouver, which was carried out by the author on October 27 2005 produced mostly positive observations, particularly on the analytical side. In the opinion of the author, ALS Chemex in North Vancouver is a highly-reputable geochemical laboratory whose good reputation for quality analytical work is well-founded. As far as could be determined over the course of the visit, the methods, procedures, equipment and systems which are used, available and employed at ALS Chemex conform to standard Canadian exploration industry practices. In all likelihood they are also among the best of those Canadian geochemical labs which currently serve the mineral exploration industry. A few minor causes for concern are noted, mostly dealing with sample preparation, and some recommendations regarding possible future StrataGold work are given.

Broadly, some of the positive features of ALS Chemex identified by the audit include the following:

- ALS Chemex is a full-service laboratory, with a broad analytical capability which should be sufficient to meet all or most of an exploration company's needs without having to find a second lab for certain procedures. This analytical capacity spans the range from AAS to ICP-MS work, and includes both assay and low-level trace element capabilities.

- The North Vancouver laboratory is a stable cornerstone of a global analytical company, and has been located at the same site for some 35 years. Senior managers met during the have some 20 years of service in the company, and it is evident from the discussions that took place that they are enthusiastic and engaged. Senior staff seem to be able and willing to discuss available geochemical methods and analytical options with clients to ensure that their specific analytical needs are met.

- Forays into high-technology methods of i) tracking samples with bar codes, ii) computerization of analytical results to eliminate manual transcription errors, iii) efforts to standardize methods from one ALS Chemex lab to another, and iv) the 'Webtrieve' online data tracking and access system to monitor progress of analytical batches and retrieve data, may presumably result in a relatively more consistent set of geochemical analyses and assays, with less chance of errors due to mix-ups, omissions or oversights. For example, barcoded samples permit quick identification and systematic discarding of fire assay crucibles which have been used for high-grade gold samples.

- ALS Chemex provides a transparent documentation of its analytical methods, QA/QC procedures and even the expected levels of metal contamination during ring mill pulverization on its corporate website (www.alschemex.com).

- ALS Chemex maintains systematic internal QA/QC procedures to monitor data quality during sample preparation and analysis.

- Automation of certain procedures, in particular the bulk-loading and automatic mixing of pre-mixed flux with the samples for gold fire assay in crucibles, would be expected to produce a more consistent analysis or assay compared to labs where manual, and more variable, procedures are used.

- Most analytical equipment, particularly the many ICP-ES and ICP-MS units, are relatively new and recent models. Older analytical equipment, other than perhaps those for low-throughput specialty analyses (*e.g.* Leco), was conspicuously absent in the laboratory. Similarly the instrumentation seemed to be in overall good condition, with a minimum of rust, peeling or wear.

- The very large number of ICP-ES, ICP-MS and AAS units in ALS Chemex's analytical labs provide a considerable level of internal redundancy and backup, making it relatively unlikely that instrumentation problems would affect the timeline for delivery of geochemical data to a client. Furthermore the concentration of all units of the same type among only two common manufacturers (*e.g.* Perkin-Elmer for ICP-MS; Varian for ICP-ES) should ensure a much greater consistency of analytical results than if a more eclectic group of machines from different ICP manufacturers was used.

- ALS Chemex seems to have taken efforts to maintain a relatively healthy lab environment, i) using pre-mixed fire assay flux and automated methods of flux addition and mixing to presumably reduce lead levels in the fire assay lab, and ii) striving to vent away acid fumes in the instrumentation labs.

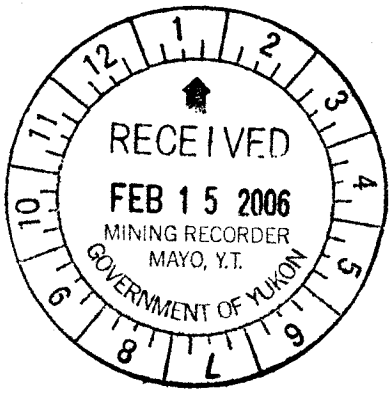
- The general lab environment, other than in sample prep areas, was generally clean and tidy, with a minimum of clutter.

A few negative observations were also produced by the audit, and while relatively few in number they are no less important for the success of StrataGold's exploration programs. The sample preparation facilities could bear with some improvement. Although the preparation area is reasonably clean, the equipment uniform and for the most part seemingly modern, and the general methods used in accordance with industry practice (*e.g.* use of jaw crusher followed by ring milling), a few points are worthy of mention:

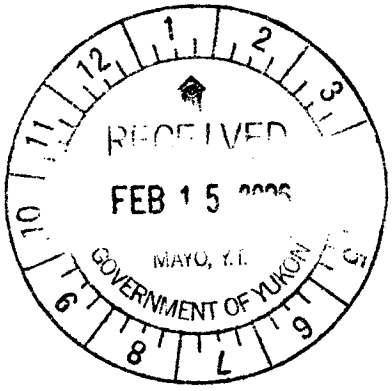
- The receiving and prep area is relatively small and cramped given the large overall size of this lab, and it appeared that greater attention could be given to keeping the receiving carts and trolleys clean.

- One of the riffle splitters observed in the prep lab had an irregular, poorly-designed, riffle and while it was accompanied by new receiving trays, other trays seen stacked on the shelves below looked fairly worn.

- In discussions with lab staff, it was evident that instructions related to earlier QA/QC procedure recommendations from the author to StrataGold had not been correctly carried out at ALS Chemex. Preparation of prep duplicates were evidently not carried out as instructed, with the individual ring milling of two separate sample splits of coarse-crushed material from the riffle splitter. Instead it appeared that two samples for subsequent analysis were being taken from the same single pulverized sample. While this is still a perfectly good duplicate, it represents an analytical duplicate, not a preparation duplicate. In fairness, the procedure might not have been adequately explained to ALS Chemex by StrataGold.



Admittedly these few negative points turned up by the lab audit are relatively minor ones in a review which returned otherwise-impressive results. The author does not wish to overstress them. They do highlight however the need for constant vigilance concerning evaluation of QA/QC results, and continued verification that ALS Chemex is actually conducting the sample prep methods that it is supposed to, in the way that it is supposed to. StrataGold should request to be routinely provided with all internal QA/QC results from each batch, if they do not do so already.



Sample preparation is commonly one of the most individual-dependent activities in a modern geochemical laboratory, and it is the area least affected by the advent of automation, computerization and high technology which has swept over the industry over the past two decades. This wave has brought about highly accurate and precise ICP-MS geochemical determinations on rock samples which however, are often crushed and pulverized in almost the same manner as they were years ago. With respect to sample preparation, some additional recommendations to StrataGold are as follows:

- Follow up on the sample preparation comments in this report by conducting additional surprise visits to verify that samples are being continually prepped as requested. Verification of sample prep and analysis procedures is not a matter of just faxing over some instructions and then walking away – they must be continually be stressed, results and methods queried (in the case of drill core, in particular) in light of any new geological or mineralogical information, and changes or alterations made if required.

- Depending on results of an assessment of QA/QC results (e.g. accuracy and precision of gold results) from StrataGold's 2005 drill program, tests may be warranted and sample prep or analytical changes may be required to better deal with any varying styles of gold mineralization in StrataGold's deposits and projects. Within the necessary bounds of the industry-standard preparation methods of jaw crushing, riffle splitting and pulverization, there may be some minor changes more appropriate to each project area, depending on mineralogy, which might improve the accuracy and precision of results. These might include, for example, changes in such details as the particle size grind, or in the method of obtaining the final sample split for fire assay. Generic standard preparation methods are an important guide, but they should not be viewed as completely rigid or static in light of an evolving understanding of deposit geology, ore mineralogy, or other factors.

APPENDIX L

List of Geochemical Rock Samples

Table 4: List of Geochemical Rock Samples from 2005 Dublin Gulch Regional Program

Sample	Easting NAD 27	Northing NAD 27	Elev	SampleType	Strike	Dip	Dip Dir.	Date & Sampler	Sample Notes
B290401	459824	7103052							Quartzite with thin (2mm) quartz vein; No vis min'n; White quartz; Light grey; Slightly foliated.
B290402	459760	7104687							Quartzite with 3-4 8 to 10 mm quartz veins; White quartz; No visible mineralization; Light grey.
B290403	459283	7103004							White quartz vein with 2ndary quartz veins with semi-massive (up to 20%) pyrite, limonite, white oxide; Pyrite cement, slightly brecciated venilets up to 1.3cm thick; Host rock barren, 2ndary min'n.
B290405	454244	7104676							Quartzite; Slightly metamorophosed, similar to 290506-590508; Weakly foliated; Light grey; 2-3mm quartz eyes common; Siliceous; Quartz/argillite cement; Coarse grained quartz to fine grained conglomerate.
B290406	451135	7104931						Aug 19, 05 / Jason Kindrat	White Quartz vein in grey MSED; No min'n
B290407	450924	7104904		Outcrop				Aug 19, 05 / Jason Kindrat	White quartz (sub cm vnlts) with slight hematite stain, in grey MSED, no visible min'n.
B290408	451991	7107282		Outcrop				Aug 20, 05 / Jason Kindrat	1 cm quartz veinlets (whit) in grey qtzt; No visible min'n
B290409	454602	7106729		Outcrop				Aug 20, 05 / Jason Kindrat	3 cm quartz vein; Slightly vuggy, no vis min'n
B290410	454573	7107249		Outcrop?				Aug 20, 05 / Jason Kindrat	Coarse grained Sandstone; Grains 2-4mm; No min'n; Slightly limonitic; Appears sorted; Silica matrix.
B290411	455539	7105086						Aug 20, 05 / Jason Kindrat	White "bull" quartz vein; 1.5 - 3.5cm thick; No visible min'n.
B290412	462469	7107271		Outcrop					White to grey quartz vein; 4 cm thick; No visible min'n
B290413	462374	7107785		Grab					White quartz vein; 2.5cm thick; No visible min'n.
B290414	461584	7106813		Chip/Outcrop					White quartz; No visible min'n; Oxidized fractures; 1-4cm thick
B290415	461339	7107627		Grab float					Grey to white quartz vein; No visible min'n; 2-4cm thick
B290416	461066	7107310		Grab					Grey quartz vein; 4-5cm thick; No visible min'n; In grey MSED
B290417	461326	7107175		Outcrop					0.5 - 1.5cm white-grey quartz veins in hematitic fine grained quartzite; No visible min'n
B290418	462645	7105531							Quartz vein; White
B290419	462503	7104429							No Sample
B290420	462455	7104321		Grab float					Quartz vein; Rounded (transported); Cobble; 5-6cm thick, no vis min'n
B290421	469601	7105930	1202						
B290422	469920	7106445	1061						
B290423	469758	7107442	1148						
B290424	471040	7107421	932						
B290425	454875	7100969	1117						
B290426	469983	7105869	1180						
B290427	472105	7102701	1320						
B290428	471991	7102531	1266						
B290501	453170	7105590	918	Chip/Grab	320	13	NE		Gossan; Highly oxidized; Appears to be sed, though textures obliterated; Regolith?; Breccia text locly, very vuggy; No visible mineralization.

Sample	Easting NAD 27	Northing NAD 27	Elev	SampleType	Strike	Dip	Dip Dir.	Date & Sampler	Sample Notes
B290502	453170	7105590	917.5	Vert chip sample	320	13	NE		Sub-cm laminations; Appears to be sed; No vis min'n; Dk brown-orange
B290503	453170	7105590	917	Vert chip sample	320	13	NE		Lt. Grey clay layer, with yellow to red envelope; Oxidized clay or altered rhy/feld?; 3-5cm thick
B290504	453170	7105590	916.5	Vert chip sample	320	13	NE		Cm to sub-cm bands of oxidized sed; No text; Locally breccia?; Cemented breccia?; No intrusive visible; No min'n
B290505	453170	7105590	915.5	Vert chip sample	320	13	NE		Sim to above; Thicker beds; Up to 2-4cm thick; Breccia texture with vugs; Hioghly ox'd as above; no vis min'n.
B290506	453334	7105399	1014	Chip/Grab	330	73	NE		Quartzite o/c with qtz veining (white); Very siliciesou; Light grey-green- 1 cm qtz veins at 330 73 deg NE; 1-3 mm foliations; weak S1?; Folations at 330 67 deg NE.
B290507	453334	7105399	1014	Chip/Grab	330	73	NE		Sample of white "bull" quartz; 30 cm thick; No vis min'n.
B290508	453376	7105371	1031	Chip/Grab					Quartzite o/c; 40 60 deg fracture foliation perpendicular to sed foliation; 2 cm and 5 cm quartz veins (white); No vis min'n.
B290509	452722	7102973	1353	Outcrop	145	5	SW		Sample of quartz vein in Quartzite; Minor hemaite staining (2%); no visible mineralization; Outcrop 30 by 30m
B290510	452480	7103119	1312	Outcrop	240	22	NW		Quartz vein (white to grey) in Quartzite, irregular, no visible min'n
B290511	452413	7103137	1322	Outcrop	195	22	NW		Quartz vein in Quartzite; Grey to white vein; No min'n; Outcrop 3 by 4m
B290512	452297	7103033	1340	Rubble-Crop					Quartz vein, trace limonite stain; In Quartzite
B290513	452212	7102875	1334	Rubble-Crop					Thick quartz vein in quartzite; 30-40 cm thick, white to grey-white; Slightly limonitic; No visible min'n.
B290514	452064	7102551	1369	Rubble-Crop					Massive quartz vein; White; No visible min'n; Massive boulders
B290515	451463	7102347	1371	Rubble-Crop					Massive quartz veins in quartzite; Relict Py? (empty cubes); White quartz; 20-30 cm thick; No visible min'n, grab from rubble-crop.
B290516	451041	7102341	1365	Rubble-Crop					Quartz vein in Quartzite; No visible min'n
B290517	450752	7102636	1353	Rubble-Crop					Quartz vein in quartzite, similar to previous; Quartz vein up to 60 cm thick; No visible min'n.
B290518	450794	7103157	1316	Rubble-Crop					Quartz vein in quartzite, as previous; Slightly limonitic; No visible min'n
B290519	450641	7103451	1315	Outcrop	220	27	NW		Metased/Quartzite outcrop with local quartz veining; No min'n; Quartz vein 3-6mm thick
B290520	450548	7103962	1292	Outcrop	275	23	NE		Quartz vein (8cm thick) in quartzite; No visible min'n; Long outcrop (100m + by 10-20m); Slightly limonitic overall; Grey quartzite with qhite quartz.
B290521	450497	7103994	1299	Outcrop	297	47	NE		Felsic (?); limonitic, light brown-yellow; highly altered and vuggy; Similar to oxidized zone in 290501; Some thin quartxz (2-4mm); No visible mineralization; Weak foliation at 297 47 NE.
B290522	450493	7103995	1301	Outcrop					Similar to previous; Some quartz; Highly limonitic/hematitic; Appears felsic; Some late quartz veinint
B290523	450415	7104030	1308	Sub-crop					Dark red oxidation (hem) with metased/felsic hr; No vis Min'n; Quartz eyes (4-6mm) (alt'd MSED);Vuggy; Appears brecciated; Sub crop
B290524	461930	7101656	1155	Outcrop				Dave H / Aug 25/05	White quartz vein in lt. bronw-grey MSED; 1-10cm thick, minor oxidation, no vis min'n

Sample	Easting NAD 27	Northing NAD 27	Elev	SampleType	Strike	Dip	Dip Dir.	Date & Sampler	Sample Notes
B290525	462317	7101745	1192	Grab-Talus				Dave H / Aug 25/05	Grey to white quartz vein in GND, Med grained; 2 cm selvage of weak ser/arg alteration; No visible min'n; QV 1.5cm thick; Talus slope north of creek.
B290526	462375	7101712	1198	Grab-Talus				Dave H / Aug 25/05	Quartz vein in GND; Grey; Talus slope, No vis min'n; Ven 2 cm wide
B290527	462458	7101702	1220	Grab-Talus				Dave H / Aug 25/05	1-2cm grey to white quartz veins in GND; MGD clasts visible, gen 4x10 cm; Some chloritic veins with limonite; Med to coarse grained GND; Common quartz veins in talus, up to 10 cm.
B290528	462505	7101704	1236	Grab-Talus				Dave H / Aug 25/05	Sheeted (1cm) grey quartz veins in GND; GND talus; 1% pyrite cubes, disseminated; Chloritic; 55% qtz, 35% feld, + chl and dk mins.
B290529	456069	7096953	1178	Grab					Trench grab sample , sulfide rich galena sample
B290530	456152	7096974	1165	Trench Grab					Trench Grab
B290531	456252	7096997		Trench Grab					Sampled bedrock outcrop along portal entrance
B290532	456022	7096940		Trench Grab					
B290534	455357	7099447	1306	Outcrop					Phyllite on mountain top
B290535	456761	7099036	1129	Grab / Float					grab sample in trench of qtz vn material
B290536	455321	7099460	1311	Grab / Float					qtz float
B290537	456763	7099009	1132	Grab / Float					push pile at end of trench w/ phyllite and welded qtzte
B290538	456745	7099078	1135	Grab / Float					sample of galena / arsenopy material w/ qtz vning
B290539	456688	7099120	1147	Chip / Output					granodiorite
B290540	454718	7101467	1352	Grab / Float					qtz boulder
B290541	454648	7101623	1336	Outcrop					phyllite dipping 42 NW trending 098
B290542	454663	7101403	1355	Grab / Float					phyllite debris exposed as rubble on surface
B290543	454559	7101363	1355	Grab / Float					debris , qtzt, fgss
B290544	454503	7101370	1345	Grab / Float					exposed rubble , grab sample
B290545	455423	7099404	1282	Outcrop					phyllite
B290546	455491	7099321	1257	Grab / Float					phyllite w/ qtz vns in shallow trench
B290547	455569	7099287	1234	Grab / Float					qtz vning in phyllite along shallow trench/road
B290548	455676	7099267	1206	Grab / Float					large qtzvn boulder on shallow trench phyllite pieces abundant
B290549	455886	7099183	1152	Grab / Float					qtz vn pieces of float w/ phyllite and qtzte present
B290550	456049	7099140	1144	Grab / Float					qtz w/ abundant boulders of qtz / sstone or qtzite
B290551	456112	7099148	1151	Chip/outcrop				28-AUG-05 2:18:38PM	granodiorite
B290552	456223	7099147	1143	Outcrop				28-AUG-05 2:25:38PM	from meters wide qtz vn outcropped in a granodiorite host striking 082
B290553	456360	7099189	1120	Grab				28-AUG-05 2:37:01PM	qtz vn pieces in a trench
B290554	456614	7099157	1133	Scree grab				28-AUG-05 2:48:09PM	granodiorite with minor vning of qtz in slope scree
B290555	456847	7098983	1133	Outcrop				28-AUG-05 3:02:42PM	qtz boudins in phyllite outcrop
B290556	456904	7099006	1130	Grab				28-AUG-05 3:10:28PM	phyllite float grab sample
B290557	456978	7099004	1115	Grab / Outcrop ?				28-AUG-05 3:16:36PM	qtzite with minor qtz vn pieces
B290558	457514	7099306	1006	Grab				28-AUG-05 3:37:41PM	granodiorite float from trench
B290559	451127	7099798	1211	Outcrop				29-AUG-05 10:31:26AM	fine grained sandstone / qtzite
B290560	451130	7099824	1210	Grab				29-AUG-05 10:36:37AM	Qtzite with qtz vns as a float sample
B290561	451153	7099891	1230	Outcrop				29-AUG-05 10:46:37AM	phyllite

Sample	Easting NAD 27	Northing NAD 27	Elev	SampleType	Strike	Dip	Dip Dir.	Date & Sampler	Sample Notes
B290562	451165	7099921	1238	Outcrop				29-AUG-05 10:52:00AM	Granodiorite
B290563	451175	7099949	1231	Outcrop				29-AUG-05 11:00:01AM	Qtz vn in phyllite
B290564	451177	7099962	1234	Outcrop				29-AUG-05 11:03:53AM	Green phyllite / medaseds
B290565	451193	7100031	1221	Outcrop				29-AUG-05 11:09:10AM	Qtzt / sandstone (fine-grained)
B290566	451190	7100063	1225	Grab / Float				29-AUG-05 11:13:39AM	Qtz vning in fgss
B290567	451177	7100101	1229	Outcrop				29-AUG-05 11:24:57AM	Granodiorite
B290568	451172	7100166	1218	Outcrop				29-AUG-05 11:32:04AM	Granodiorite
B290569	451151	7100209	1211	Outcrop				29-AUG-05 11:35:20AM	tan sandstone with shale-like structure. dipping approx. 20 to NE
B290570	452904	7100303	1151	Outcrop				29-AUG-05 11:57:27AM	Phyllite
B290571	452954	7100348	1161	Grab / Float				29-AUG-05 12:05:12PM	Qtz float in fgss or qtzite
B290572	452972	7100389	1170	Outcrop				29-AUG-05 12:11:36PM	Qtz vn in sandstone / qtzite
B290573	452990	7100466	1191	Outcrop				29-AUG-05 12:22:29PM	Qtz vn in Qtzite unit
B290574	453038	7100563	1222	Outcrop				29-AUG-05 12:31:16PM	Phyllite
B290575	453073	7100594	1240	Outcrop				29-AUG-05 12:40:18PM	Meters thick qtz vn in phyllite unit dipping 20 to NE
B290576	453139	7100668	1242	Outcrop				29-AUG-05 12:49:16PM	Qtz vn in phyllite
B290577	453211	7100729	1263	Outcrop				29-AUG-05 12:56:15PM	Qtz vns in phyllite
B290578	453281	7100818	1289	Grab				29-AUG-05 1:03:24PM	Qtz vn material in qtzite / sandstone
B290579	453354	7100920	1296	Outcrop				29-AUG-05 1:16:57PM	fgss / qtzite
B290580	453410	7100962	1293	Outcrop				29-AUG-05 1:26:10PM	Quartzite
B290581	453494	7100966	1297	Outcrop				29-AUG-05 1:33:15PM	fgss / qtzite
B290582	453597	7101031	1313	Outcrop				29-AUG-05 1:47:51PM	qtz float w/ in qtzite outcrop
B290583	453695	7101051	1300	Outcrop				29-AUG-05 1:58:54PM	fgss
B290584	453766	7101080	1284	Outcrop and				29-AUG-05 2:04:42PM	Qtz vns in Qtzite
B290585	453881	7101105	1283	Scree Grab				29-AUG-05 2:13:33PM	Qtz vns in Qtzite
B290586	454015	7101105	1340	Outcrop				29-AUG-05 2:39:30PM	Qtz vns in Qtzite
B290587	454109	7101086	1345	Outcrop				29-AUG-05 2:47:06PM	Quartzite
B290588	454153	7101191	1337	Grab				29-AUG-05 2:53:11PM	Qtz vns in Qtzite
B290589	454229	7101216	1338	Grab				29-AUG-05 3:00:03PM	Qtz vns in Qtzite
B290590	454290	7101223	1344	Outcrop				29-AUG-05 3:04:15PM	Quartzite
B290591	454368	7101250	1346	Outcrop				29-AUG-05 3:07:35PM	Quartzite
B290592	454453	7101334	1344	Outcrop				29-AUG-05 3:13:08PM	Quartzite
B290593	454542	7101335	1345	Grab / Float				29-AUG-05 3:19:47PM	Quartzite possible outcrop
B290594	454638	7101400	1348	Grab / Float				29-AUG-05 3:25:43PM	Quartzite
B290595	454717	7101467	1351	Grab / Float				29-AUG-05 3:37:14PM	Qtz boulder float in phyllite chips
B290596	454800	7101585	1364	Outcrop				29-AUG-05 3:44:44PM	Phyllite
B290597	452911	7098374	1072	Trench Grab				30-AUG-05 10:57:31AM	Qtz vn in phyllite
B290598	452989	7098437	1084	Grab / Float				30-AUG-05 11:03:00AM	Phyllite pieces
B290599	453049	7098421	1092	Trench Grab				30-AUG-05 11:10:47AM	oxidized galena sulfides some bleached zone in phyllite
B290600	453120	7098423	1101	Trench Grab				30-AUG-05 11:20:57AM	oxidized galena / silver sulfides some bleached zone in phyllite
B290601	453196	7098447	1115	Trench Grab				30-AUG-05 11:29:21AM	oxidized galena / silver sulfide in phyllite rock is olive green and grey ,
B290602	453240	7098483	1124	Trench Grab				30-AUG-05 11:38:30AM	oxidized galena / silver sulfide in phyllite and qtzite, rock is olive green
B290603	453336	7098519	1129	Trench Grab				30-AUG-05 11:46:05AM	oxidized material either py or aspy vn approx 1 meter wide striking 068 to 072
B290604	453415	7098451	1152	Grab / Float				30-AUG-05 11:52:11AM	Phyllite pieces on road

Sample	Easting NAD 27	Northing NAD 27	Elev	SampleType	Strike	Dip	Dip Dir.	Date & Sampler	Sample Notes
B290605	453480	7098390	1173	Outcrop / Chip				30-AUG-05 11:57:48AM	Qtz vns in phyllite outcrop
B290606	453582	7098425	1161	Outcrop / Chip				30-AUG-05 12:13:56PM	Qtz boulder outcrop along road side
B290607	453700	7098417	1158	Outcrop / Chip				30-AUG-05 12:19:39PM	Phyllite outcrop
B290608	453776	7098430	1152	Outcrop / Chip				30-AUG-05 12:27:44PM	Phyllite outcrop
B290609	453883	7098436	1160	Grab / Float				30-AUG-05 12:35:30PM	Phyllite chips sampled from road
B290610	453989	7098422	1174	Grab / Float				30-AUG-05 12:40:36PM	Qtz pieces sampled from road in Phyllite predominant chips
B290611	454093	7098433	1193	Grab / Float				30-AUG-05 12:46:21PM	Qtz pieces sampled from road in Phyllite predominant chips
B290612	454189	7098470	1206	Grab / Float				30-AUG-05 12:53:55PM	limonite stained Qtz pieces sampled from road in Phyllite predominant chips
B290613	454288	7098513	1223	Outcrop / Chip				30-AUG-05 1:04:34PM	Qtz vn chipped of phllite outcrop
B290614	454357	7098599	1229	Grab / Float				30-AUG-05 1:08:20PM	Qtz and phyllite sampled from phyllite outcrop
B290615	454436	7098653	1243	Trench Grab				30-AUG-05 1:19:26PM	Oxidized welded qtz vns and vuggy metaseds, limonite and abundant phyllite
B290616	454539	7098632	1264	Trench Grab				30-AUG-05 1:36:35PM	rusty metaseds , limonite, oxidized sulfides py? , in phyllite outcrop
B290617	454612	7098613	1279	Trench Grab				30-AUG-05 1:45:27PM	Qtzite with limonite , oxidized , in a phyllite outcrop exposed from trenching
B290618	454678	7098640	1278	Trench Grab				30-AUG-05 1:49:34PM	oxid galena / silver , rock is yellow / green coated layer w/ extensive
B290619	454770	7098727	1269	Trench Grab				30-AUG-05 2:07:39PM	Portal Entrance , 10 -12 meters wide oxid sulfide vn w/ galena, ground is
B290620	454855	7098823	1267	Outcrop / Chip				30-AUG-05 2:17:00PM	qtzte / phyllite w/ sheeted qtz vns (1 cm wide) outcrop
B290621	454865	7098870	1259	Outcrop / Chip				30-AUG-05 2:21:52PM	Qtz vn in phyllite outcrop
B290622	454882	7098967	1252	Grab / Float				30-AUG-05 2:28:40PM	Phyllite rubble from outcrop on road
B290623	454914	7099090	1249	Grab / Float				30-AUG-05 2:36:09PM	Qtz float on road in phyllite scree possible outcrop
B290624	454926	7099169	1273	Outcrop / Chip				30-AUG-05 2:43:23PM	Qtz vn in phyllite outcrop
B290625	454959	7099275	1285	Grab / Float				30-AUG-05 2:51:37PM	Qtzite on road
B290626	454977	7099352	1303	Outcrop / Chip				30-AUG-05 2:57:41PM	Qtz vn from Qtzte / Phyllite outcrop
B290627	455067	7099410	1294	Outcrop / Chip				30-AUG-05 3:07:46PM	Phyllite
B290628	455160	7099446	1294	Grab / Float				30-AUG-05 3:11:46PM	Qtz float in phyllite ground
B290629	454333	7100399	1348	Outcrop / Chip				31-AUG-05 9:07:30AM	Qtzite outcrop
B290630	454358	7100338	1346	Trench Chip				31-AUG-05 9:11:48AM	Qtzite chip from outcrop in trench
B290631	454396	7100284	1338	Outcrop / Chip				31-AUG-05 9:14:57AM	Phyllite
B290632	454483	7100235	1307	Grab / Float				31-AUG-05 9:22:50AM	Phyllite and Qtzite on road
B290633	454542	7100222	1293	Grab / Float				31-AUG-05 9:25:29AM	Qtz vn pieces in Phyllite outcrop? float
B290634	454626	7100180	1268	Grab / Float				31-AUG-05 9:30:46AM	Qtz vning in phyllite / Qtzite scree near outcrop
B290635	454703	7100142	1253	Grab / Float				31-AUG-05 9:37:32AM	Phyllite chips on road
B290636	454800	7100110	1246	Outcrop / Chip				31-AUG-05 9:42:46AM	Granodiorite
B290637	454839	7100101	1226	Outcrop / Chip				31-AUG-05 9:51:44AM	Qtz vns in granodiorite outcrop w/ some grano sampled
B290638	455027	7099947	1186	Grab / Float				31-AUG-05 10:02:26AM	Phyllite float grab sample by creek
B290639	455060	7099864	1186	Grab / Float				31-AUG-05 10:13:49AM	Qtzite
B290640	455110	7099786	1219	Grab / Float				31-AUG-05 10:22:10AM	Phyllite

B627504	463619	7100509	1420	Outcrop / chip				09-SEP-05 3:37:42PM	Poss. mafic dyke outcrop in trench green/ mafics/ w/ calcite vnlets,
B627505	463702	7100569	1419	Grab / Float				09-SEP-05 3:43:19PM	granodiorite and qtzite float
B627506	463757	7100641	1409	Grab / Float				09-SEP-05 3:46:44PM	Qtzite float
B627507	463905	7100728	1388	Outcrop / chip				09-SEP-05 4:04:02PM	Qtzite outcrop
B627508	451905	7096407	772	outcrop / chip				10-SEP-05 4:04:02PM	qtzite w/ green material (40%) looks siliceous like torquoise
B627509	451554	7096274	745	outcrop / chip				10-SEP-05 4:04:02PM	3 in qtz vn on foln in qtzite outcrop
B290037	459135	7100843		MS	130	55	SW		Massive sulphide vein; <5 to 15cm thick, 10-12 at sample location; 50% Aspy, 10% py, 40%+ qtz, panned oxide material, no vg, though lots of sulphides, modly oxidized, possible to find a fresh very siliceous surface, outcrop over 10m, vein near vertical
B290038	459196	7100857		QV	140	20	SW		15 to 30 cm quartz vein with 1-3% aspy and 1-2% py on margins, and locally diss as coarse 1-2mm xtls, no vg, 5% blotchy yellow carbonate, appears to be parallel to banding in metased
B290039	459200	7100862		QV	135	23	SW		Possibly the same quartz vein as previous, smokey white to grey quartz; 1-3% aspy on margins and locally disseminations; 4-14cm wide, boudinaged, adjacent to gougy and graphitic flt?; visible for 3m along strike;
B290040	459437	7100976		QV	170	58	SW		Quartz vein parallel to metased banding; 10-20cm thick; white to grey quartz with 2-4% sulphides including pyrite and aspy; metaseds possibly steepen or folded to E; boudinaged
B290041	461359	7100977		Grab	100	90	S		Dip 90 to 85 deg
B290042	458269	7100365		Sulphide Veins					Numerous veins at Haggart Creek, no orientation given
B290043	458269	7100365		Sulphide Veins					Weathered Aspy
B290044	458269	7100364		Sulphide Veins					
B290045	458269	7100362		Sulphide Veins					Weathered Sulphide veins; vein material at Haggart Creek
B290046	458269	7100360		Sulphide Veins					Haggart Creek
B290047	459232	7102931		Massive Aspy					Haggart Creek Tin Dome Property
B290048	459262	7102931		Massive Aspy					Tin Dome Property; Massive sulphide Aspy, Haggart Creek
B290049	459232	7102931		Massive Sulphide					Massive sulphide Float, Tim Dome, Haggart Creek
B290050	459232	7102991		Massive Sulphide					Massive Sulphide Float, Haggart Creek, Across creek from Massive Aspy
B290051	462385	7101777		Sulphide Veins					Aspy Float from waste pile at Cascallen Vein

CERTIFICATE VA05047182

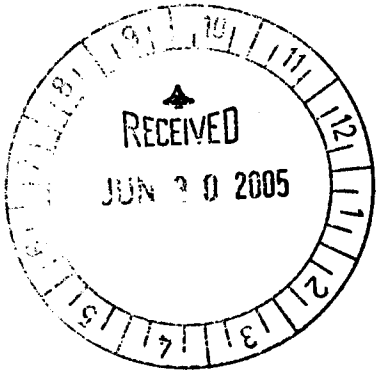
Project: Dublin Gulch-1735

P.O. No.:

This report is for 4 Rock samples submitted to our lab in Vancouver, BC, Canada on 15-JUN-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	



SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	A	AAS
Hg-CV41	T	FIMS

CERTIFICATE VA05074736

Project: Dublin Gulch-1735

P.O. No.:

This report is for 32 Rock samples submitted to our lab in Vancouver, BC, Canada on 1-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES
Pb-AA62	Ore grade Pb - four acid / AAS	AAS
Ag-AA62	Ore grade Ag - four acid /AAS	AAS
Ag-GRA21	Ag 30g FA-GRAV finish	WST-SIM

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05074729

Project: Dublin Gulch-1735

P.O. No.:

This report is for 28 Rock samples submitted to our lab in Vancouver, BC, Canada on 1-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**

Finalized Dat -SEP-2005
Account: STRGOL

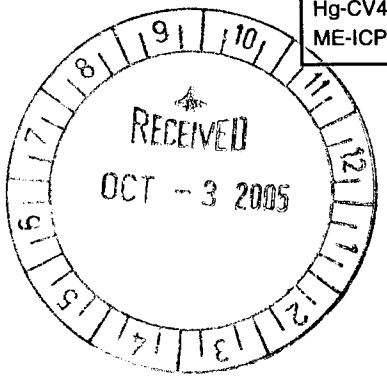
CERTIFICATE VA05080589

Project: Dublin Gulch-1735

P.O. No.:

This report is for 124 Rock samples submitted to our lab in Vancouver, BC, Canada on 19-SEP-2005.

The following have access to data associated with this certificate:



DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05080931

Project: Dublin Gulch-1735

P.O. No.:

This report is for 83 Rock samples submitted to our lab in Vancouver, BC, Canada on 23-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES
Pb-AA62	Ore grade Pb - four acid / AAS	AAS
Ag-AA62	Ore grade Ag - four acid /AAS	AAS

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05082981

Project: Dublin Gulch-1735

P.O. No.:

This report is for 2 Rock samples submitted to our lab in Vancouver, BC, Canada on 27-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
Hg-CV41	Trace Hg - cold vapor/AAS	FIMS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

Finalized Da 4-SEP-2005
Account: STRGOL

CERTIFICATE VA05072078

Project: 1735

P.O. No.:

This report is for 208 Stream Sediment samples submitted to our lab in Vancouver, BC, Canada on 25-AUG-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41d	Screen to -100um, save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

094876

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

Project: 1735

P.O. No.:

This report is for 101 Stream Sediment samples submitted to our lab in Vancouver, BC, Canada on 25-AUG-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41d	Screen to -100um, save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05072076

Project: 1735

P.O. No.:

This report is for 17 Stream Sediment samples submitted to our lab in Vancouver, BC, Canada on 25-AUG-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41d	Screen to -100um, save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05074733

Project: 1735

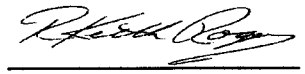
P.O. No.:

This report is for 242 Stream Sediment samples submitted to our lab in Vancouver, BC, Canada on 1-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41d	Screen to -100um, save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05074735

Project: 1735

P.O. No.:

This report is for 50 Stream Sediment samples submitted to our lab in Vancouver, BC, Canada on 1-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41d	Screen to -100um, save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05074932

Project: 1735

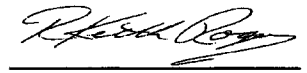
P.O. No.:

This report is for 100 Stream Sediment samples submitted to our lab in Vancouver, BC, Canada on 2-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41d	Screen to -100um, save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05074933

Project: 1735

P.O. No.:

This report is for 137 Stream Sediment samples submitted to our lab in Vancouver, BC, Canada on 2-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41d	Screen to -100um, save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05074930

Project: 1735

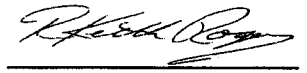
P.O. No.:

This report is for 118 Stream Sediment samples submitted to our lab in Vancouver, BC, Canada on 2-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41d	Screen to -100um, save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05074404

Project: 1735

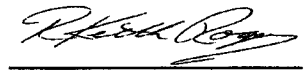
P.O. No.:

This report is for 106 Stream Sediment samples submitted to our lab in Vancouver, BC, Canada on 2-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41d	Screen to -100um, save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05074197

Project: 1735

P.O. No.:

This report is for 61 Stream Sediment samples submitted to our lab in Vancouver, BC, Canada on 2-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

CERTIFICATE VA05080198

Project: 1735

P.O. No.:

This report is for 290 Stream Sediment samples submitted to our lab in Vancouver, BC, Canada on 20-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
SCR-41	Screen to -180um and save both
LOG-22	Sample login - Rcd w/o BarCode
LOG-24	Pulp Login - Rcd w/o Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05078835

Project: 1735

P.O. No.:

This report is for 244 Stream Sediment samples submitted to our lab in Vancouver, BC, Canada on 20-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
SCR-41d	Screen to -100um, save both
LOG-22	Sample login - Rcd w/o BarCode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05082982

Project: 1735

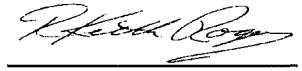
P.O. No.:

This report is for 27 Stream Sediment samples submitted to our lab in Vancouver, BC, Canada on 27-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
DRY-21	High Temperature Drying
LOG-24	Pulp Login - Rcd w/o Barcode
SCR-41d	Screen to -100um, save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

Finalized Da(/-OCT-2005
Account: STRGOL

QC CERTIFICATE VA05084943

Project: 1735

P.O. No.:

This report is for 88 Stream Sediment samples submitted to our lab in Vancouver, BC, Canada on 28-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-24	Pulp Login - Rcd w/o Barcode
SCR-41d	Screen to -100um, save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

Signature: Robert Long

CERTIFICATE VA05084943

Project: 1735

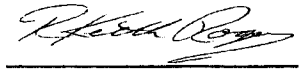
P.O. No.:

This report is for 88 Stream Sediment samples submitted to our lab in Vancouver, BC, Canada on 28-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-24	Pulp Login - Rcd w/o Barcode
SCR-41d	Screen to -100um, save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05084502

Project: 1735

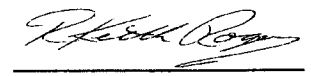
P.O. No.:

This report is for 152 Stream Sediment samples submitted to our lab in Vancouver, BC, Canada on 28-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-24	Pulp Login - Rcd w/o Barcode
SCR-41d	Screen to -100um, save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA05084501

Project: 1735

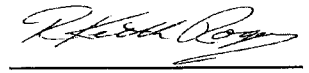
P.O. No.:

This report is for 220 Stream Sediment samples submitted to our lab in Vancouver, BC, Canada on 28-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-24	Pulp Login - Rcd w/o Barcode
SCR-41d	Screen to -100um, save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

Account: STRGOL

CERTIFICATE VA05082213

Project:

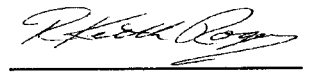
P.O. No.:

This report is for 24 Stream Sediment samples submitted to our lab in Vancouver, BC, Canada on 29-SEP-2005.

The following have access to data associated with this certificate:

DAVID HLADKY	JIM SPARLING	TERRY TUCKER

SAMPLE PREPARATION



ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41d	Screen to -100um, save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
ME-ICP61	27 element four acid ICP-AES	ICP-AES

To: **STRATAGOLD CORPORATION**
ATTN: JIM SPARLING
701-475 HOWE ST
VANCOUVER BC V6C 2B3

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.
