SUMMARY

The Cat 2008 field work was conducted by a 6 man crew all employees of Ryanwood Exploration. The crew mobilized out to the Ross River area and conducting a large soil sampling program over 3 claim blocks. The Cat soil work was conducted between July 08 and August 15 2008. A total of 631 soils were collected outlining a nice zinc-silver-lead anomaly.

1.0 INTRODUCTION

The Cat claims where staked to cover a Zinc Sedex target that was looked at by Cominco in 1989 and 1990.

2.0 LOCATIONS AND ACCESS

The Cat property is located south of the Hoole River at Lat. 61'33' N and Long. 131'33' E on NTS 105G/6, 90 km SE of Ross River, Yukon.

Access is via helicopter from Ross River with mob/demob possible from the Robert Campbell Highway 45 km to the NE. A 50 km long Cat trail connects the northern end of the property to the Robert Campbell Highway.

3.0 PROPERTY DESCRIPTION

The Cat Claim block consists of 101 full Yukon Quartz Mining claims that are registered in the Watson Lake Mining district to Shawn Ryan.

4.0 PHYSIOGRAPHY

The claim group covers a semi-mountainous zone on the northern edge of the Pelly Mountains. The elevation ranges from 1,300 metres to 2,200 metres in moderate to steeply sloping ground. Small scrub coniferous and deciduous vegetation ends at the 1,400 m contour and the ground cover is alpine heather above 1,400 m. Glaciation has played the major role in developing the current landform.

5.0 REGIONAL GEOLOGY (Cominco 1990 Assessment)

The Pelly Mountains, between the Tintina and St. Cyr Faults, consist primarily of fine sediments deposited on the northeast flank of the Pelly-Cassiar Platform. The rocks consist of complexly folded and faulted carbonaceous and calcareous pelites and carbonates of upper Cambrian to Devonian age. A lateral transition between shelf and basin environments occurs to the southeast near the St. Cyr Fault resulting in the deposition of upper Cambrian to Ordovician quartzite, siltstone and shale facies and bioclastic Silurian carbonates. Low grade metamorphism is prevalent throughout the region resulting in fissile shales and phyllites in the pelitic units. Locally the carbonates are recrystallized to a low grade, fine-grained marble with dolomitized sections.

5.1. PROPERTY GEOLOGY

The HOOLE, AN0 and CYR claims are underlain by Selwyn Basin rocks of Cambrian to Devonian-Mississippian age, as mapped by the Geological Survey of Canada. These rocks are in fault contact to the northeast (Tintina Fault) and the southwest (St. Cyr Fault).

The stratigraphy in the area of Pb-Zn mineralization has been subdivided into 3 broad units. The oldest unit consists of Cambrian to Lower Ordovician orange-brown weathering succession of thin bedded phyllitic and calcareous siltstone with thin interbeds of dark grey calcareous mudstone. This succession grades upwards into grey calcareous shale with thin limy mudstone and minor silty quartzite interbeds locally containing Pb-Zn mineralized carbonaceous quartz siltstone / siltstone / shale.

An overlying Lower Ordovician unit of black carbonaceous, calcareous and locally siliceous shale is recognized by the presence of Lower to Middle Ordovician graptolites identified as *Isograptus caduceus*, *Phyllograptus typus* and *Tetragraptus quadribrachiatus*.

The youngest unit consists of Ordovician to Upper Silurian black carbonaceous massive bedded silty limestone and light grey to black bioclastic limestone. Bioclasts include crinoids and the corals *Favosites* and *Coelestrata*.

This rock sequence generally strikes 110°, is moderately to strongly foliated and is exposed within a thrust slice. The stratigraphy as defined in outcrop suggests the presence of a synclinal fold structure cored by Silurian carbonates or the existence of a thrust fault repeat of the rock sequence. Minor off sets along north-northeast trending faults has been identified.

Within the Cambro-Ordovician quartz siltstone and shale, Pb-Zn-Ag mineralization occurs as disseminations, blebs and veinlets with associated pyrite. Previous drilling of the quartz siltstone outcrop yielded 13.8% Pb, 10.0% Zn and 2.14 opt Ag over 0.4 m and widens down dip to 4.6% Pb, 9.2% Zn and 1.20 opt Ag over 2.3 m.

YTG Geology Map

UPPER TRIASSIC

TrJC: JONES LAKE - CASSIAR

calcareous siltstone and shale, commonly finely cross laminated; dark grey and buff weathering, recessive, thin bedded locally bioclastic limestone and interbedded sandy or silty limestone

UPPER DEVONIAN TO LOWER MISSISSIPPIAN

DMEC: EARN - CASSIAR

consists upwards of dark clastic rocks (1) capped by tuffaceous chert (2) and felsic volcanic rocks (3), the chert and volcanics in part laterally equivalent; intrusive equivalents of the volcanics

are the Pelly Mountains Suite

1. dark grey, recessive weathering, thin bedded, black siliceous slate with interbeds and members of quartz-chert greywacke, chert granule grit and chert pebble to cobble conglomerate; may include lenses of intermediate to felsic volcanoclastic rocks
2. rusty orange weathering, resistant, apple green and dark grey, thin bedded chert and cherty tuff; local nodular and bedded barite

MIDDLE SILURIAN TO MIDDLE DEVONIAN

SDA

SDA: ASKIN

platy dolomitic siltstone (1) overlain by dolostone and orthoquartzite (2) with rare volcanics (3)

1. tan, medium grey and locally maroon weathering, light grey, thin bedded to platy dolomitic siltstone, dolomitic fine grained sandstone and minor silty dolomite (**Askin Gp.**)
2. medium grey to buff weathering, medium to thick bedded dolomite, silty and sandy dolomite, limestone; medium to thick bedded, medium grained mature orthoquartzite; dolomitized laminated mudstone and dolomite with vugs, birdseye and fenestral cavities (**Askin Gp.**)

CAMBRIAN TO DEVONIAN OR YOUNGER

CDS

CDS: ST. CYR

poorly understood, fine clastic and carbonate assemblage, (1) to (5), with only general similarities to equivalent strata elsewhere in Cassiar Mountains; overlain by strata typical of Earn, Tay and Jones Lake assemblages elsewhere

1. orange to brown weathering, recessive, medium grey interlaminated calcareous shale and silty limestone or calcareous siltstone; proportion of carbonate to clastic material varies widely; includes slaty and phyllitic equivalents (Cambro-Ordovician?)
2. orange brown weathering, recessive, thin bedded, medium to dark grey, calcareous. shale, siltstone and argillaceous. limestone; includes slate and phyllitic slate (Cambrian to Lower Devonian?)

6.0 WORK PERFORMED / METHODS

Soil Work

Soil samples were taken on 200 line spacing and 50 meters station spacing. On rocky ground a grub hoe was used to take sample 30-40 centimeters down. On well developed soil ground a one-meter soil auger was used to take sample at a deeper depth. Soil sample taken with auger were gathered at an average depth of 50-70 centimeters. All samples were placed in Kraft soil bags. Exact position location was defined using Garmin GPS. All GPS location was downloaded nightly onto field computers.

Soil location was marked in the field with pink flagging and sample identification was marked on an aluminum tag.

Samples were air dried in Dawson City and then sent to Chemex Labs in Vancouver. Samples were processed at minus 80 mesh and analysis was 1DX-MS for 35 elements.

7.0 INTERPRETATION

SOIL SURVEY

The soil survey covered a grid measuring 4600 meters by 1300 meters. The soil survey indicates two narrow 50-100 meter wide high grade soils (1000 ppm +Zn) located in the western part of the survey that measured up to 1800 meters long and is running in a north-west direction. The western soil anomaly seems to converge in the central part of the soil survey and forms one large 800 meter by 400 meter in the east central part of the grid.

Soil values reached as high as 4190 ppm Zn, 5.72 ppm Ag, and 10,000 plus ppm Pb.

8.0 RECOMMENDATION

I would recommend geological mapping and prospecting over the anomalous area and if terrain conditions warrant a small trenching program.

11.0 QUALIFICATION

I Shawn Ryan located in Dawson City, Yukon work as a professional prospector. I run a small exploration company located in Dawson city.

I have worked in the exploration business for the last 25 years. I worked the first 12 years as a contractor working on numerous projects in the NWT, Ontario, Quebec and the Yukon. I have worked for the last 12 years as a local prospector for myself.

I have overseen the whole Cat Project.

I own 100 % of the Cat claims.

Dated this 09 of October 2009 in Dawson City, Yukon.

Respectfully submitted

Shawn Ryan
