## **INTRODUCTION**

The Blind property covers a pronounced, north-south trending magnetic low that resembles the magnetic signature at Argus Metals Corp. Hyland Gold property, which is located approximately 50 km to the north. The magnetic low at the Blind property is associated with scattered elevated gold-, silver-, molybdenum-, copper- and zinc-in-soil values. The Blind property is owned by Strategic Metals Ltd.

This report describes a five day grid soil sampling program conducted by Archer, Cathro and Associates (1981) Limited in summer 2010 on behalf of Strategic Metals. The work was performed on June 8 to 11 and June 13. One of the authors (S. Eaton) directed the program. Both authors' Statements of Qualifications are in Appendix I.

## **PROPERTY LOCATION, CLAIM DATA AND ACCESS**

The Blind property consists of 120 contiguous mineral claims, located in southeastern Yukon at latitude 60°06' north and longitude 128°05' west on NTS map sheet 105A/01 (Figure 1). Eighty claims were staked prior to the 2010 field season, while the remainder were acquired after favourable results were obtained from the field work. The property covers an aggregate area of about 2400 hectares (24 km<sup>2</sup>). The claims are registered with the Watson Lake Mining Recorder in the name of Archer Cathro, which holds them in trust for Strategic Metals. Specifics concerning claim registration are tabulated below, while the locations of individual claims are shown on Figure 2.

| <u>Claim Name</u> | <u>Grant Number</u> | <u>Expiry Date</u> |
|-------------------|---------------------|--------------------|
| Blind 1-80        | YD33751 - YD33830   | March 9, 2014*     |
| 81-120            | YD110859 -YD110898  | October 28, 2011   |

\*Expiry date includes 2010 work that has been filed for assessment credit but not yet accepted.

Access to the property was provided by a Hughes 500D helicopter operated by Kluane Airways from the Watson Lake airport, which is located approximately 40 km west of the property. All personnel stayed at a hotel in Watson Lake.

The community of Watson Lake is the nearest supply centre. The closest road access is from the Alaska Highway, which at its nearest point is 10 km southwest of the property. The Alaska Highway is usable in all seasons by two wheel drive vehicles.

## **HISTORY AND PREVIOUS WORK**

The Hyland River, which lies eight kilometres west of the Blind property, has been explored intermittently for placer gold since 1872 (Yukon Geological Survey, 2004). Placer dredging leases were held on the lower Hyland River (to the west and southwest of the Blind property) by Coho Exploration Ltd. in 1968. These leases were optioned to Brycon Exploration and Colorado Corp. (King Resources) in 1969 and 1970 (grey line on Figure 3 shows areas of historical placer exploration). No information has been found in regard to placer activities or results obtained (Yukon Geological Survey, 2004).

DATE: MAY 2011

The GSC compiled data from residual total field aeromagnetic surveys that have been flown at various times over much of Yukon (Yukon Geological Survey, 2010). This compilation demarcated a large, north-south elongated magnetic low, the core of which is covered by the Blind property (Figure 3).

### **GEOMORPHOLOGY AND CLIMATE**

The Blind property is drained by creeks that flow into the Hyland River, which ultimately connects to the Arctic Ocean via the Liard and Mackenzie rivers.

Local elevations on the property range from 750 to 1050 m above sea level. Topographic relief is gentle to moderate. The property lies entirely below treeline and is heavily forested. Vegetation primarily comprises black spruce and lodgepole pine with an understory of low shrubs and moss.

The climate in the Blind area is typical of northern continental regions with long, cold winters, truncated fall and spring seasons and short, mild summers. Although summers are relatively mild, arctic cold fronts often cover the area and snowfall can occur in any month. The property is mostly snow free from early June to early October.

### **GEOLOGY**

The Geological Survey of Canada performed geological mapping in the vicinity of the Blind property (NTS map sheets 105A and 095D) at 1:250,000 scale in the late 1960s (Gabrielse, 1967 and Gabrielse and Blusson, 1969). In 2003, Gordey and Makepeace completed a compilation of Yukon-wide geology and updated lithological unit names in the Blind property area. The following geological descriptions are based on the published maps.

The property lies within Selwyn Basin (Figure 4), a tectonic element comprising deep water clastic rocks with minor carbonate facies, which accumulated along the North American continental margin during Paleozoic time (Pigage, 2004).

The property lies within Quaternary unconsolidated glacial, glaciofluvial and glacio-lacustrine deposits (Figure 5). The nearest exposed units are situated 10 km to the east. Those exposures consist of Upper Proterozoic to Lower Cambrian Hyland Group and Vampire Formation, which are overlain by Upper Cambrian and Ordovician Rabbitkettle Formation. The units are described in detail in Table I.

| Rabbitkettle Formation | COR1                   | Upper Cambrian and Ordovician       | Thin bedded, wavy banded, silty limestone and grey lustrous calcareous phyllite; limestone intraclast breccia and conglomerate; massive to laminated, grey quartzose siltstone and chert and rare black slate; local mafic flows, breccia, and tuff. |
| Vampire Formation      | uPCV                   | Upper Proterozoic to Lower Cambrian | Dark brown weathering, thin-bedded, argillaceous fine-grained sandstone and siltstone, minor interbedded medium- to coarse grained white to light grey orthoquartzite; phyllite, slate, and argillite.                                               |
| Hyland Group           | PCH (undifferentiated) | Upper Proterozoic to Lower Cambrian | Consists upwards of coarse turbiditic clastics, limestone and fine clastics typified by maroon and green shale; may include younger units; includes scattered mafic volcanic rocks.                                                                  |

### **SOIL GEOCHEMISTRY**

In 2010, Strategic Metals collected 449 soil samples at 100 by 450 m spacings across the original 80 Blind claims. Soil samples were collected from 10 to 40 cm deep holes dug by hand-held auger. They were placed into individually pre-numbered Kraft paper bags. Sample sites are marked by aluminum tags inscribed with the sample numbers and affixed to 0.5 m wooden lath that were driven into the ground. All soil sample locations were recorded using hand-held GPS units.

The soil samples were sent to ALS Chemex in North Vancouver, B.C., where they were dried, screened to -180 microns, and then analyzed for 35 elements using an aqua regia digestion and inductively coupled plasma-atomic emission spectroscopy analysis (ME-ICP41). An additional 30 g charge was further analysed for gold by fire assay with inductively coupled plasma-atomic emission spectroscopy finish (Au-ICP21).

Sample locations are shown on Figure 6, while results for gold, silver, copper, molybdenum and zinc are illustrated thematically on Figures 7 to 11. Certificates of Analysis are provided in

Appendix II. Table II lists the ranges of values that define background, weak, moderate and strong soil anomalies.

**Table II – Soil Sample Thresholds**

| <b>Element</b>   | <b>Weak</b>     | <b>Moderate</b>     | <b>Strong</b>       |
|------------------|-----------------|---------------------|---------------------|
| Gold (ppb)       | $\geq 10 < 20$  | $\geq 20 < 50$      | $\geq 50 \leq 185$  |
| Silver (ppm)     | $\geq 0.5 < 1$  | $\geq 1 < 2$        | $\geq 2 \leq 3.3$   |
| Copper (ppm)     | $\geq 50 < 100$ | $\geq 100 \leq 152$ | n/a                 |
| Molybdenum (ppm) | $\geq 2 < 5$    | $\geq 5 \leq 10$    | n/a                 |
| Zinc (ppm)       | $\geq 50 < 100$ | $\geq 100 < 200$    | $\geq 200 \leq 220$ |

Isolated, non-coincident, strongly elevated gold and silver values and moderately anomalous copper, molybdenum and zinc values are scattered across the grid. This lack of continuity is not surprising given the very low sample density and the strongly glaciated terrain. Arsenic and antimony values are subdued.

### **DEPOSIT MODEL**

Strategic Metal's exploration at the Blind property is mainly directed toward gold. The property is centred on a strong magnetic low that closely resembles the magnetic signature of the Hyland Gold deposit located 50 km to the north. The mineralization at the Hyland Gold property is thought to be related to a buried Middle or Late Cretaceous granitic body. Sedimentary rocks at the Hyland Gold property comprise predominantly quartzite and phyllite with interbedded grit, limestone, and k-feldspar pebble conglomerate of the Hyland Group. The styles of mineralization include silica stockwork veining along with silica-sulphide replacement of graphitic argillites and limestone. Highlights from the main zone include a drill intercept of 2.65 g/t gold over 16.7 m and trench exposure of 30 m at 4.87 g/t gold (Argus Metals Corp., 2011).

### **DISCUSSION AND CONCLUSIONS**

Strategic Metals' exploration program was designed to provide reconnaissance-scale geochemical data over an aeromagnetic anomaly modelled on the nearby Hyland Gold deposit. Soil sampling in 2010 resulted in a few strong anomalies for gold and silver, but data is still too low density to be effectively evaluated.

Due to encouraging soil geochemical and magnetic results, the Blind property warrants further exploration. Infill soil sampling should be done to better define anomalous trends and, once those results are available, airphotos should be studied to examine local glacial movements. Glacial dispersion trains may point to probable source areas for the metals. Depending upon the strength of soil anomalies from the first phase of detailed sampling may be needed. Traditional follow up techniques like geological mapping and prospecting will likely be ineffective due to glacial cover and, thus, some type of drilling will be needed to test for bedrock mineralization.

## CERTIFICATE VA10079583

Project: BLIND

P.O. No.:

This report is for 225 Soil samples submitted to our lab in Vancouver, BC, Canada on 17-JUN-2010.

The following have access to data associated with this certificate:

JOAN MARIACHER

BILL WENGZYNOWSKI

## SAMPLE PREPARATION

| ALS CODE | DESCRIPTION                    |
|----------|--------------------------------|
| WEI-21   | Received Sample Weight         |
| LOG-22   | Sample login - Rcd w/o BarCode |
| SCR-41   | Screen to -180um and save both |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION                   | INSTRUMENT |
|----------|-------------------------------|------------|
| Au-ICP21 | Au 30g FA ICP-AES Finish      | ICP-AES    |
| ME-ICP41 | 35 Element Aqua Regia ICP-AES | ICP-AES    |
