1.0 SUMMARY AND RECOMMENDATIONS

The Coffee project is an exploration-stage gold project located in west-central Yukon and the claims are 100% owned by Kaminak Gold Corp. In 2011, Kaminak undertook a second season of systematic exploration work on the Group 3 portion of the claim block (Grouping Certificate HW07091). New Sense geophysics of Markham Ontario, conducted an airborne magnetic/radiometric survey over the Coffee property at 200 meter spacing in addition to a smaller 100 meter line spaced detailed survey (June 11- July 22, 2011). AECOM, of Yukon, conducted a detailed aerial photo survey (August 27-30, 2011). Soil sampling was carried out by Ground Truth Exploration from Dawson City, Yukon and 2682 samples (including field duplicates) were collected on the Group 3 Coffee claims during July 13-31, 2011. Expenditure on the Group 3 claims totals $180,235.66 (excluding GST). Ongoing work is recommended, supported by favourable results documented herein as well as by the extensive ongoing drill programs at Coffee.

Respectfully submitted,

Alan J. Wainwright, Ph.D., P.Geo.
District Geologist
Kaminak Gold Corp.

2.0 INTRODUCTION

The Coffee Gold Project is an early-stage gold exploration project, 100% owned by Kaminak Gold Corp. ("Kaminak"), and located in the White Gold district of west-central Yukon. The project encompasses several gold occurrences within an exploration concession that covers an area of more than 600 square kilometres. This document summarizes the 2011 geochemical, geophysical and survey work undertaken by Kaminak on the "Group 3" portion of the claims. Except for in Figure 3 (which uses decimal degrees), all maps below use the UTM NAD83 zone 7 coordinate system.

3.0 LOCATION AND ACCESS

The Coffee Gold Project is located in west-central Yukon, Canada within the Whitehorse Mining District, 130 kilometres south of Dawson City (Figure 1). The property comprises 3,021 contiguous Yukon mine claims covering an aggregate area of 60,230 hectares owned by Kaminak. The Coffee property covers parts of (1:50 000 scale) map sheets 115J-13, 115J-14 and 115J-15 and the centre of the property is located at 139.172 degrees longitude west and 62.836 degrees latitude north.

The property and the region have no established towns, villages or electricity. Barge access is available to the nearby Coffee Creek camp, and a new 22 kilometre access road has been constructed to the exploration site from the barge landing. Access to the property is also available by helicopter from Dawson or Carmacks, or conversely, by airplane to the Coffee Creek camp airstrip and from there by helicopter.

4.0 CLIMATE AND PHYSIOGRAPHY

Yukon has a sub-arctic continental climate with a summer mean of 10 degrees Celsius and a winter mean of -23 degrees Celsius. Summer and winter temperatures can reach 35 and -55 degrees Celsius, respectively.

The area is unglaciated and consists of subdued topography with elevation ranging from 400 to 1,500 meters. The Coffee Project claims encompass an area of tree-covered hills on the Yukon Plateau, incised by mature drainages that are part of the Yukon River watershed. The property has local mature pine forests with thick moss cover on the ground. Bedrock exposures are scarce.

5.0 LAND TENURE

The Coffee Project claim block consists of 3,021 registered claims (claims registered as follows: 2,927 Coffee, 68 Cream, 16 Lion, and 10 Sugar). The entire claim block covers an area measuring approximately 50 by 12 kilometres, divided into 5 claim groups (Figure 2). The boundaries of the individual claims have not been legally surveyed and the mineral rights exclude surface rights. The list of Group 3 claims is presented in Appendix A.

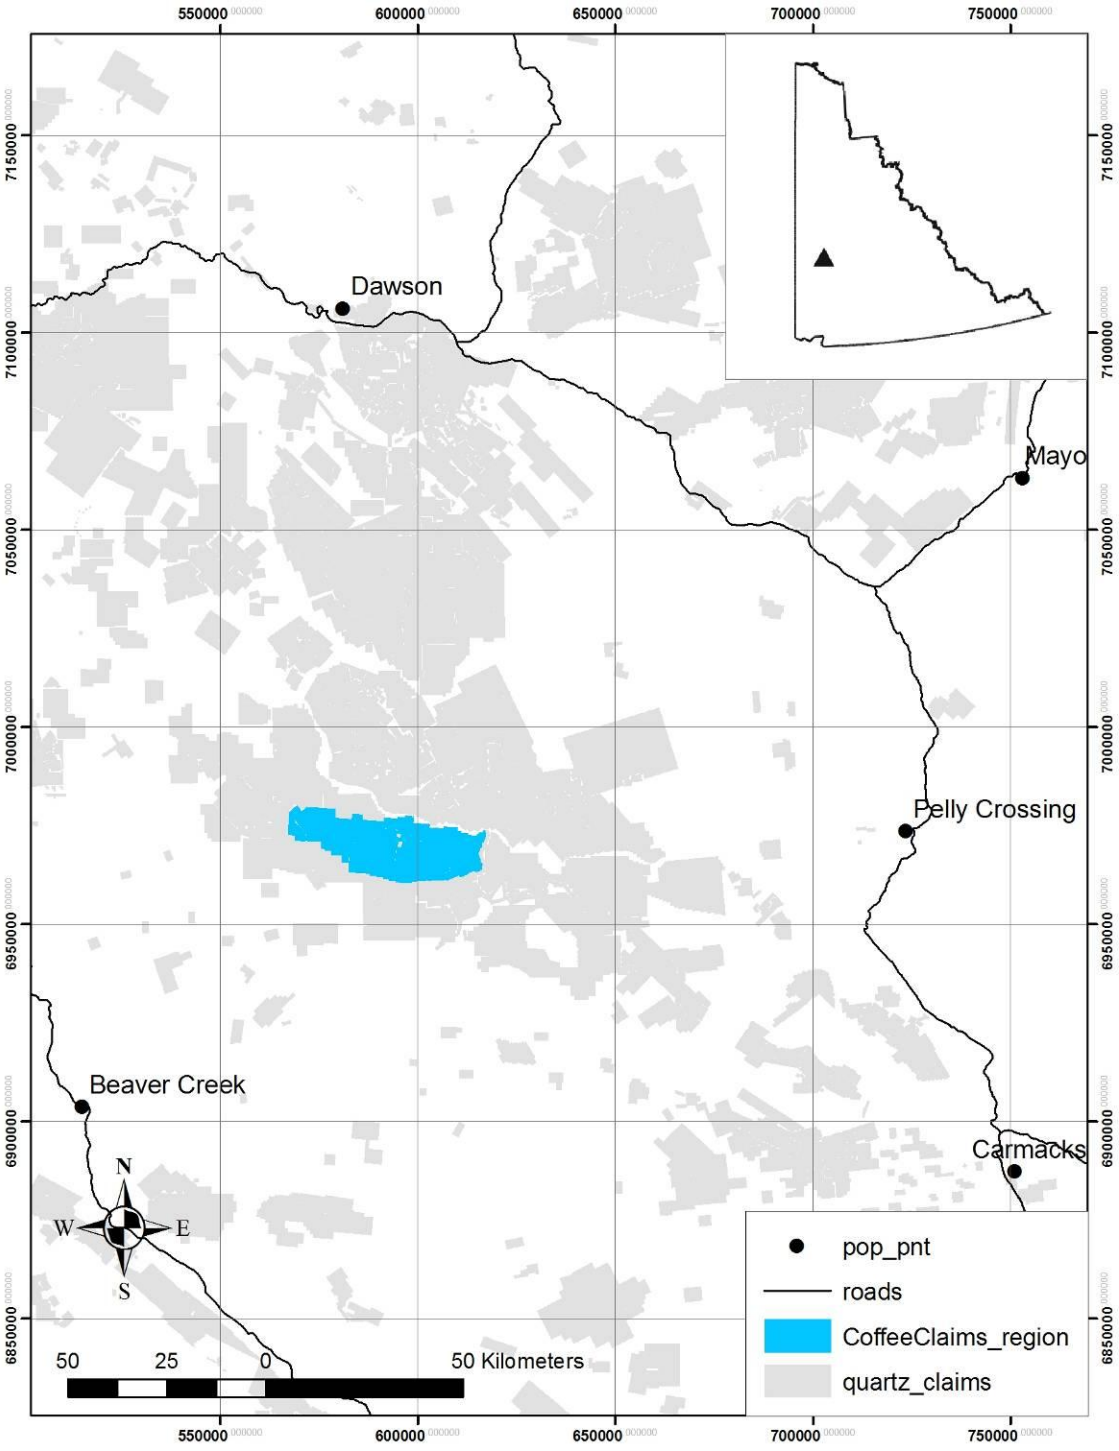

Figure 1 Location of the Coffee claims, west-central Yukon.

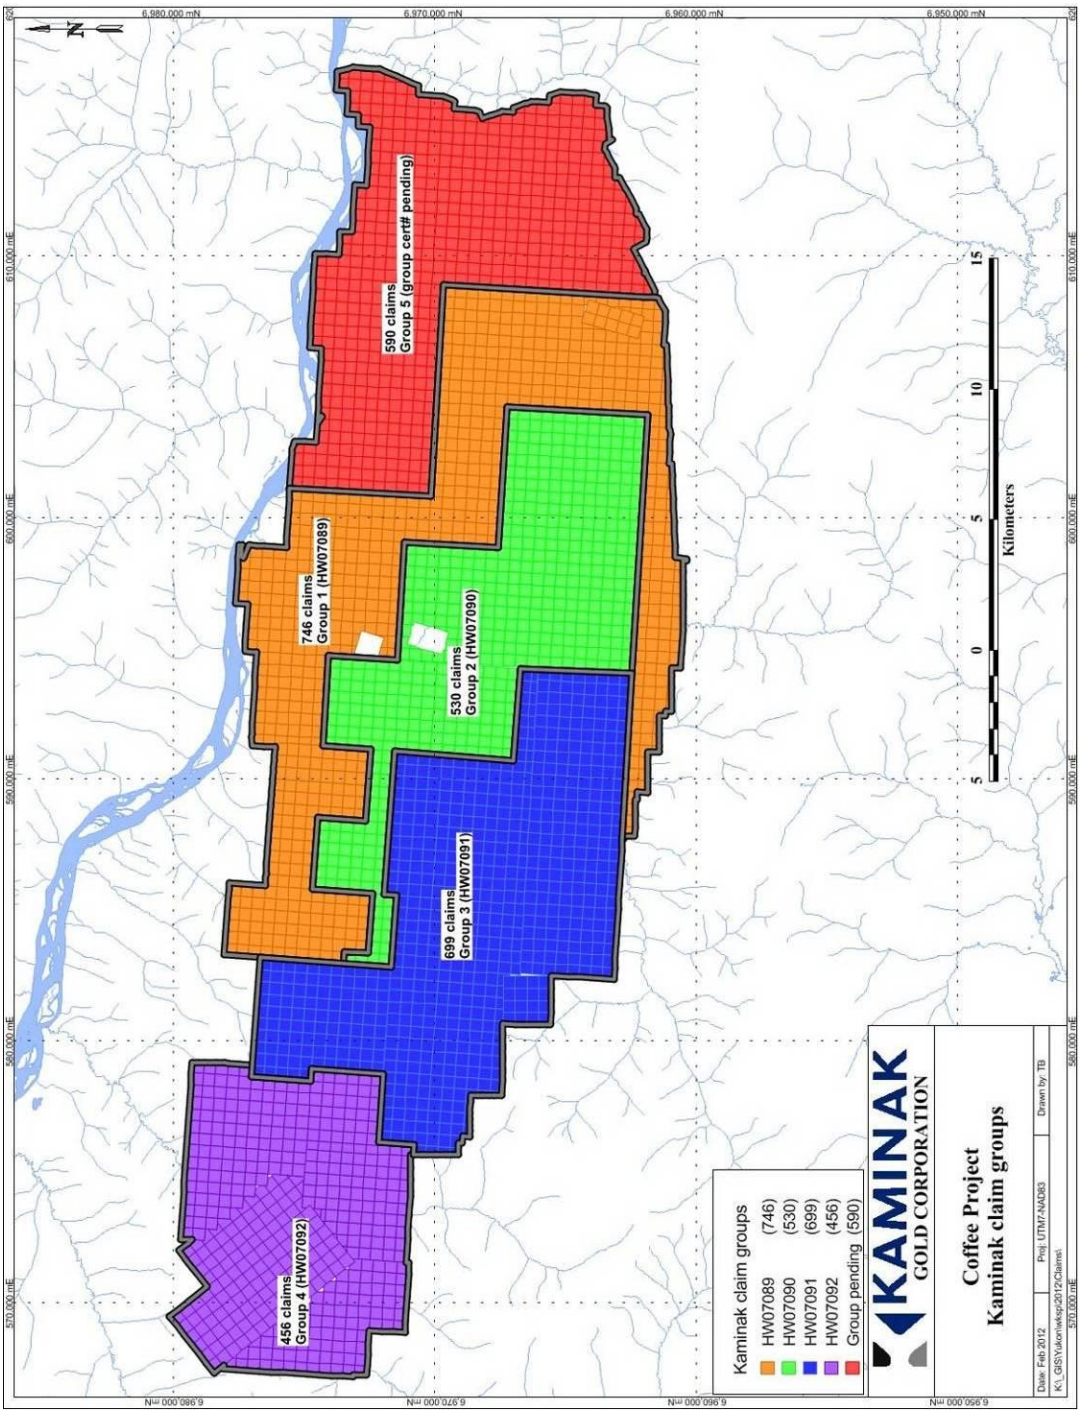

Figure 2 Map of the Coffee claim groups. The Group 3 sector (HW07091; blue) is pertinent to this document.

6.0 PREVIOUS WORK

Intermittent placer mining activity has occurred in the Coffee Creek area since the turn of the century and historic hardrock exploration in the area has been largely limited to reconnaissance work in the 1960s and 1970s for porphyry copper.

C.D.N. Taylor, P.Eng (Atlantic Energy Limited, August 1981) reported that soil and silt samples collected from Coffee Creek, near the confluence of the Yukon River, contained "uniformly high, double digit arsenic values." Taylor recommended that Coffee Creek be re-sampled during low water table levels (cited in Jaworski and Meyer, 2000).

Deltango Gold conducted silt and soil sampling in 1999 in the area of the Coffee Project claims and recommended further work, based on anomalous results (Jilson, 2000). In 1999-2000, a brief Coffee Creek exploration program was conducted by consultants for Prospector International Resources. This program involved stream sediment sampling of secondary drainages, contour and ridgeline reconnaissance soil sampling, rock sampling of available outcrop and prospecting, and minor fluid inclusion work. The 1999 work identified an open-ended reconnaissance soil gold anomaly. The 2000 work further delineated this anomaly to be approximately 400 by 900 metres and further soil sampling in addition to mechanized trenching were recommended (Jaworski and Meyer, 2000; Jaworski and Vanwermeskerken, 2001).

In 2006 and 2007, grid sampling and ridgetop soil sampling traverses were completed on the Coffee Project claims (Ryan 2007; Ryan, 2008).

In June 2009, Kaminak executed an option agreement with Shawn Ryan to acquire the Coffee Project. Kaminak has carried out exploration on the Coffee Project over the course of three separate field seasons: 2009, 2010 and 2011. Exploration in 2009 consisted of soil sampling, trenching, mapping, prospecting and a ground magnetic survey. Exploration in 2010 followed up with the same activities in support of a 16,104 metre core drilling program. The 2011 exploration campaign consisted of reverse circulation and diamond core drilling, trenching, geophysics, surveying, mapping and soil sampling (Table 1). The 2011 geochemical, airborne geophysical and airborne survey work that pertain to the Group 1 portion of the claim group are the subject of this report. A more complete review of the exploration work at Coffee can be found in Chartier (2012).

Table 1 Work history by Kaminak Gold at Coffee (2009-2011).

Exploration Work	2009	2010	2011
Soil Samples	6,000 samples	9,473 samples	10,958 samples
Trenching	4,000 metres	4,000 metres	3,824 metres
Mapping and Sampling	10 day reconnaissance program	10 day reconnaissance program	15 day reconnaissance program
Drilling		16, 104 meters (76 core boreholes)	247 boreholes (48,000 meters) were drilled: 101 core boreholes (28, 463 meters) and 146 reverse circulation boreholes (19,538 meters)
Geophysics	261 line-kilometre ground magnetic survey	Ground magnetic (465 line-kilometre at 100 meter spacing and 114 line-kilometre at 25 to 50 meter spacing)	4,842 line-kilometre helicopter magnetic and gamma-ray spectrometric airborne survey; 15.9 line-kilometres of horizontal loop electromagnetic (HLEM) and Ohm mapper surveys
Geomorphology/orthophoto survey/topographic survey	N/A	N/A	Geomorphological terrane study, detailed orthophoto survey and LIDAR topographic survey

7.0 GEOLOGICAL SETTING

7.1 Regional Geology

The Coffee Project is located in the Yukon-Tanana terrane (YTT), which consists of accreted pericratonic sequences that cover a large part of the northern Cordillera from northern British Columbia to east-central Alaska (Colpron et al., 2006; Berman et al., 2007; Figure 3). The YTT consists of Paleozoic schists and gneisses that were intruded by several suites of plutons that range in age from Jurassic to Eocene (Mortensen, 1992; Colpron et al., 2006). The Paleozoic rocks are pervasively foliated containing at least two overprinting rock fabrics (Ryan and Gordey, 2004; MacKenzie et al., 2008; Mackenzie and Craw, 2010) and the rocks were tectonically stacked along foliation-parallel thrust faults between the Late Permian and Early Jurassic (Mortensen, 1996; Berman et al., 2007). Subsequent extension may have occurred during the mid-Cretaceous in the Dawson Range (Mackenzie et al., 2010), similar to that documented in east-central Alaska (Pavlis et al., 1993). Other primary bedrock gold deposits in the region include the recently discovered Golden Saddle system (Mackenzie and Craw, 2010; Mackenzie et al., 2010).

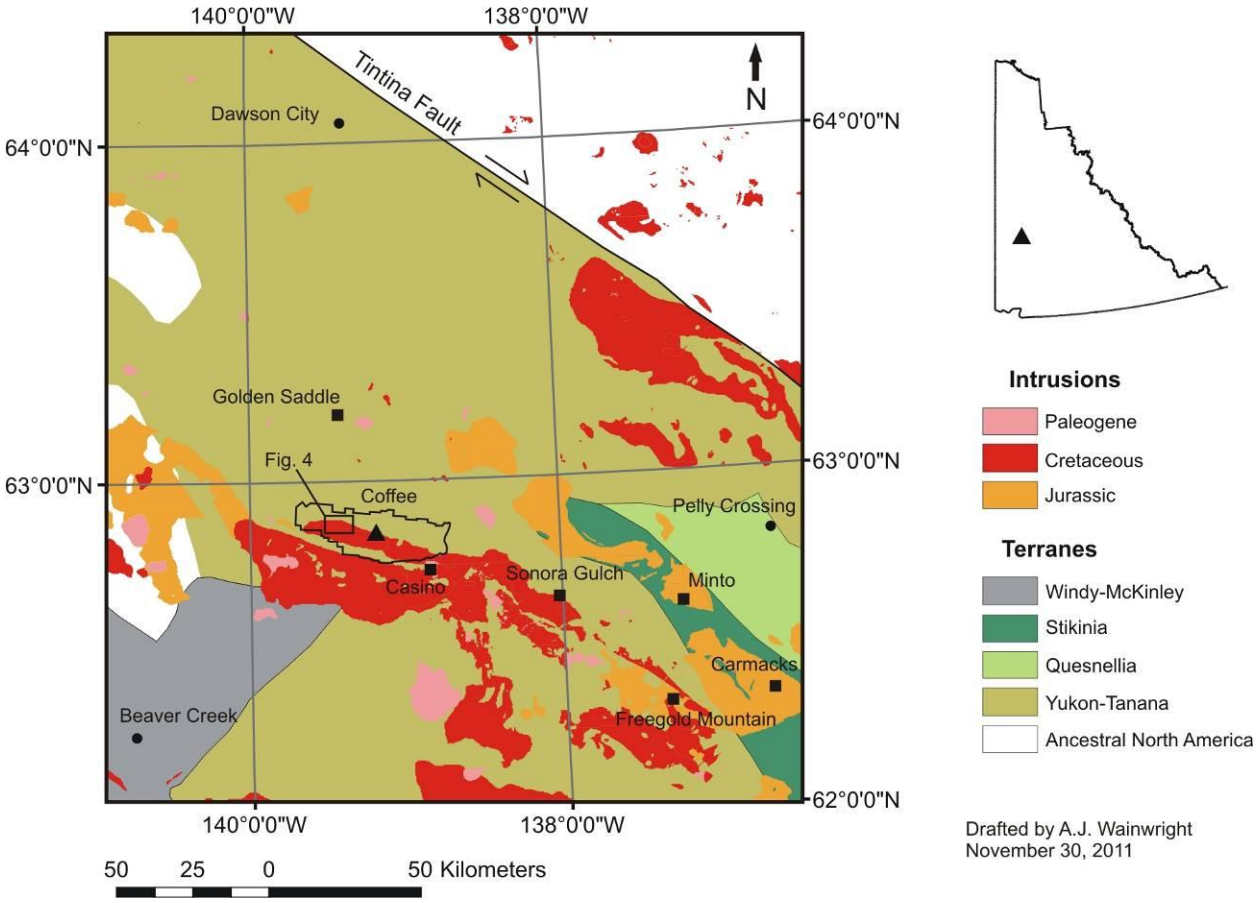

Figure 3 Regional geological setting for the Coffee project (modified after Gordey and Makepeace, 1999).

7.2 Property Geology

7.2.1 Basement rocks and intrusions

The Coffee area is underlain by two main shallowly to moderately south-dipping rock sequences in contact with Cretaceous granite to the south (Wainwright et al., 2011; Figure 4). The lowermost rock unit is a mixed gneiss sequence characterized by dominant felsic augen-bearing gneissic rocks interleaved with volumetrically-minor biotite-feldspar-quartz schist intervals. These rocks are overlain by a thick, highly-variable package of biotite-feldspar-quartz (± muscovite ± amphibole) schist, interpreted as a metamorphosed sediment-dominant sequence. The lower part of the schist unit includes a variably-strained mafic sequence interpreted as a metavolcanic package characterized by the presence of pyroxene, in addition to low-strain relict cumulate-textured gabbro clasts, fining-upward sequences and possible pillows. Biotite-feldspar-quartz (± muscovite ± amphibole) schist in the upper parts of the sequence is intercalated with 5 cm to 5 m wide concordant intervals of metacarbonate that increase in abundance upward in the sequence (i.e. to the south).

The foliated basement rocks are adjacent to a large west-northwest trending Cretaceous granite batholith (Coffee Creek granite). Abundant Jurassic to Cretaceous (?) fine-grained to porphyritic, andesitic to dacitic (subvolcanic) dikes cross-cut all of the rocks observed in the area (Table 2).

7.2.1 Structure and gold zones

The Paleozoic basement rock fabric is highly variable; however, mapping of drill core suggests that there is a general progression in strain intensity from north to south. Schistose to protomylonite textures in addition to relict primary depositional textures are observed in the north part of the project area (low-strain), whereas mylonitic and ultramylonitic textures are noted more commonly in the foliated rocks closer to the granite intrusion in the south (high-strain). The increase in strain intensity appears to correspond to steepening of the south-dipping foliation toward the south.

Significant gold zones have been detected in a number of areas across the Coffee property to date (Figure 4; Table 3). The moderately- to steeply-dipping gold zones are hosted in discrete corridors that correspond to a variety of orientations. Gold-rich sectors are characterized by breccias that include clasts of dikes, schist and gneiss in addition to silicified fragments of unknown origin. Alteration associated with gold includes silica, sericite (illite), Fe-carbonate, clay, carbonate and the gold zones are typically deeply oxidized.

Gold-bearing structures at Coffee are spatially associated with intermediate to felsic dikes. Very high-grade intervals are associated with microbreccia, coarse quartz vein breccia and high sulfide content; domains interpreted as multiply-reactivated, high-energy, high-fluid flux conduits. The gold-rich breccias contain clasts of altered wallrock and dikes, and crosscut all of the rock units. Moreover, the gold zones detected to date are not significantly diluted by post-mineral dikes, nor are they truncated/displaced by significant faulting; thus the introduction of gold is interpreted to be late within the framework of geologic evolution in the district.

Table 2 Rock units at Coffee.

Rock Unit	Location	Comment
Augen Gneiss	Supremo area	Intercalated with biotite-feldspar schist; dominant host rocks surrounding high-grade breccias in the Supremo zone
Biotite-feldspar schist	Dominant unit in central panel	Intercalated with metacarbonate and metavolcanic units; host for gold in the Latte zone
Metacarbonate rocks	Occur high in the biotite-feldspar schist panel	Typically 5cm to 5m thick; increase in abundance upward in the sequence
Mafic metavolcanic rocks	Occur low in the biotite-feldspar schist panel	Relict volcanic and sedimentary textures; up to 50m thick
Granite	Kona, Americano area	Large Coffee Creek Granite batholith trends west-northwest, mid- to late Cretaceous
Dacite dikes	Cuts all rock units	Strong spatial association with gold zones
Andesite dikes	Cuts all rock units	Weaker spatial association with gold zones

Table 3 Description of the main mineralized zones at Coffee.

Zone	Host Rocks	Summary Description
Supremo	Augen gneiss	Narrow gold-bearing brittle structures with gold commonly hosted in matrix-supported breccia and dacite dikes. Gold associated with quartz-sericite-pyrite alteration.
Latte	Biotite-feldspar schist, Augen gneiss	Gold is hosted in zones of brecciation and strong fracturing as well as areas with pervasive sericite alteration and disseminated sulphides. Some high-grade zones associated with quartz vein breccias.
Double Double	Augen gneiss	Narrow gold-bearing brittle structures hosted in matrix-supported breccia including dacite porphyry fragment breccia. Anastamosing quartz vein networks and microbreccia associated with high-grade.
Kona	Granite	Broad zones of fracture-controlled and disseminated pyrite associated with dacite dikes. Gold hosted in quartz-sericite altered granite. Iron oxides after disseminated pyrite, pyrite veinlets stockworks and sooty-pyrite rich shear zones.
Americano, Americano West and Espresso	Granite	Zones of fracture-controlled and disseminated pyrite. Gold hosted in quartz-sericite altered granite similar to Kona. Stibnite noted at Americano West.
Macchiato and Cappuccino	Augen Gneiss	Strong oxidation, silica flooding, abundant limonite and brecciation noted at Macchiato

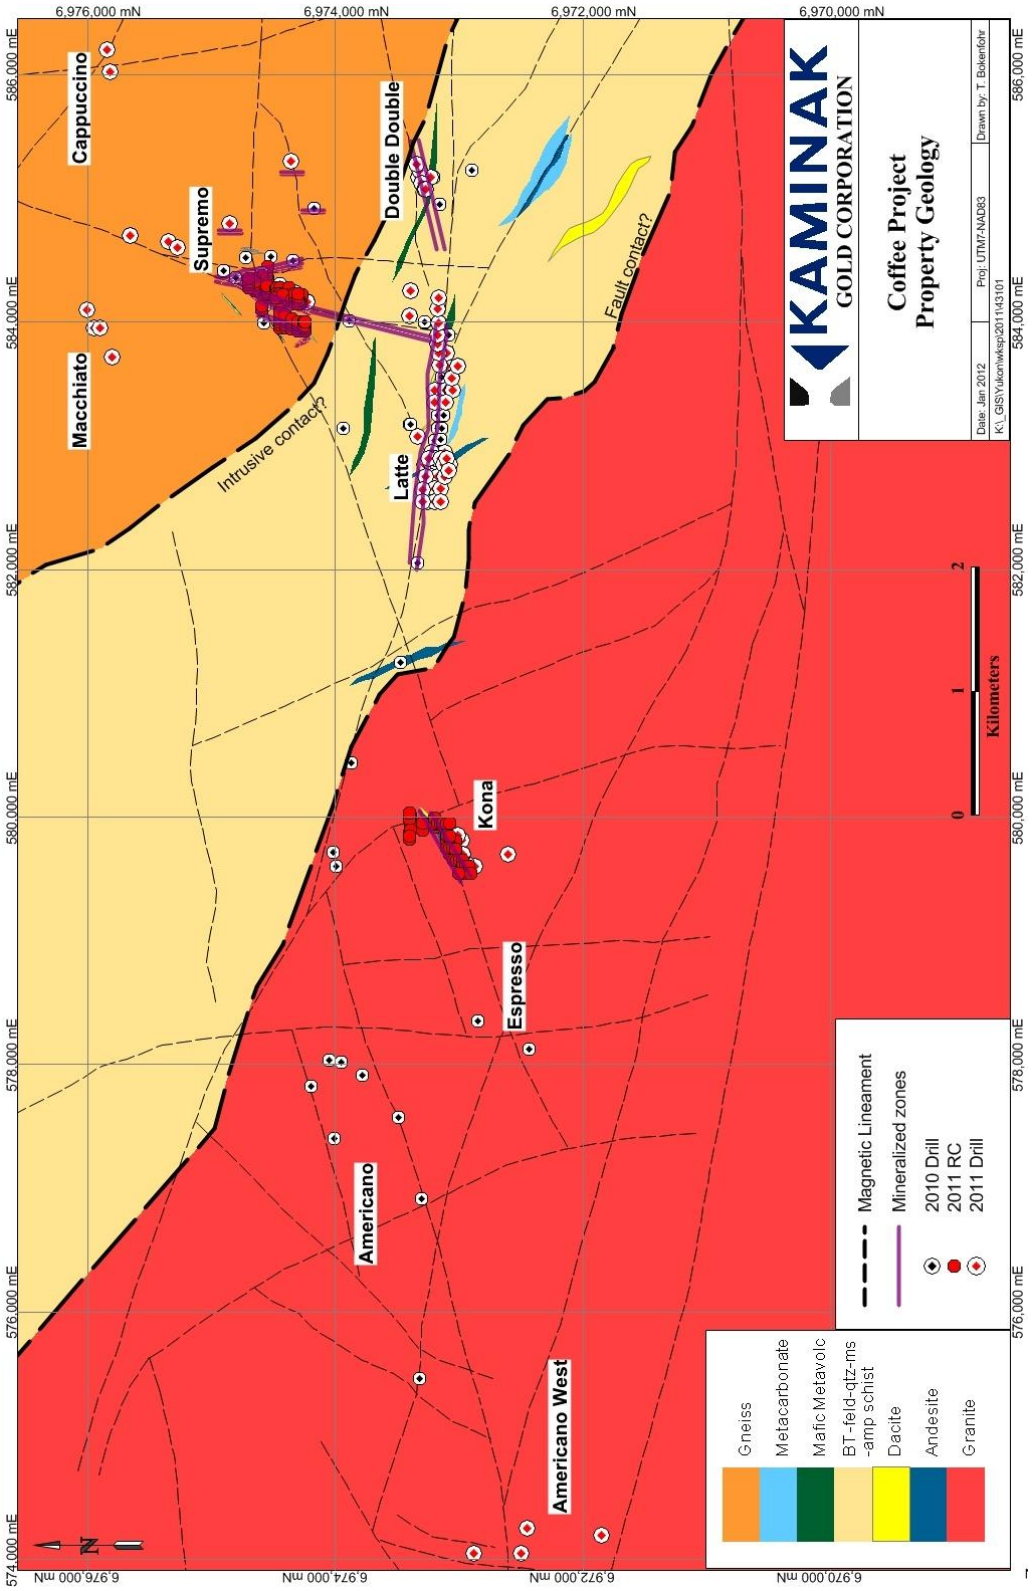

Figure 4 Property geology map for part of the Coffee claims.

8.0 CURRENT WORK

The 2011 work in the Group 3 area consisted of an airborne geophysical survey, an airborne orthophoto survey and soil sampling (Figure 5). The entire claim block was covered by both the geophysical and orthophoto surveys (shown in grey on Figure 5).

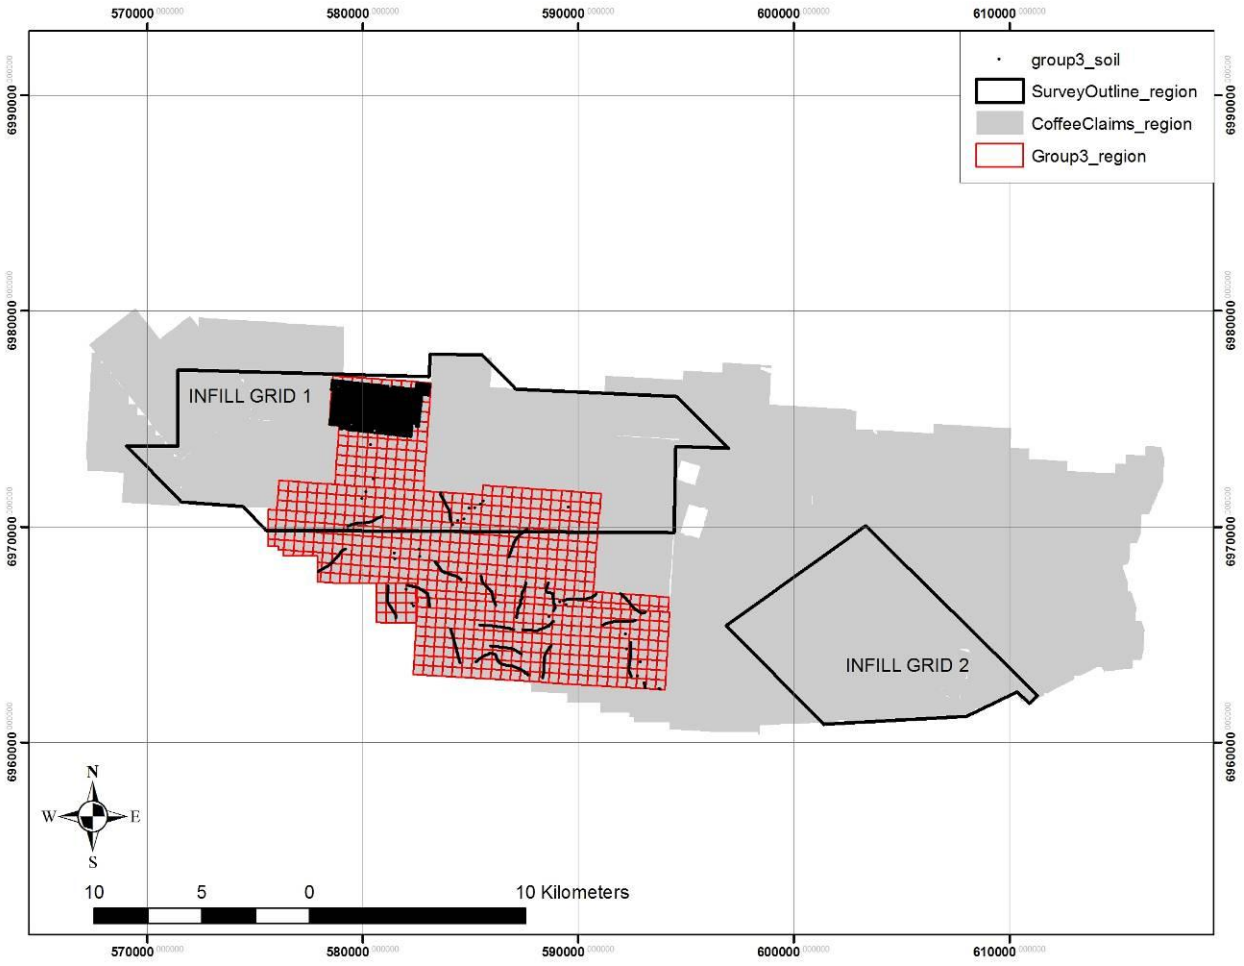

Figure 5 Overview of the work performed on Group 3 claims (red) in June-August 2011.

8.1 Airborne Geophysical Survey

New-Sense Geophysics Ltd. of Markham, Ontario was contracted to run a high sensitivity helicopter magnetic and gamma-ray spectrometric airborne survey. The survey was flown over a regional block and two infill blocks (Figure 6). The magnetic and radiometric survey was flown between June 22 and July 7, 2011 for a total of 4,842 line kilometres (including 913 line kilometres over Infill Grid 1 block; and 391 over Infill Grid 2 block). Lines were flown at 200 metres spacing for the regional block and 100 metres spacing for the two infill blocks.

The geophysical equipment was comprised of a high-sensitivity Cesium-3 magnetometer mounted in a fixed stinger assemble, and a 1024-channel spectrometer. Airborne ancillary equipment included; digital recorders, fluxgate magnetometer, radar altimeter, and global positioning system (GPS) receiver. The GPS receiver provided accurate real-time navigation and subsequent flight path recovery. Surface equipment included a magnetic base station with

GPS time synchronization, and a PC-based field workstation which was used to check the data quality and completeness on a daily basis.

The technical objective of the survey was to provide high-resolution total field magnetic and radiometric maps suitable for anomaly delineation, detailed structural evaluation, and identification of lithologic trends. Fully corrected magnetic and radiometric maps were prepared by New-Sense Geophysics Limited.

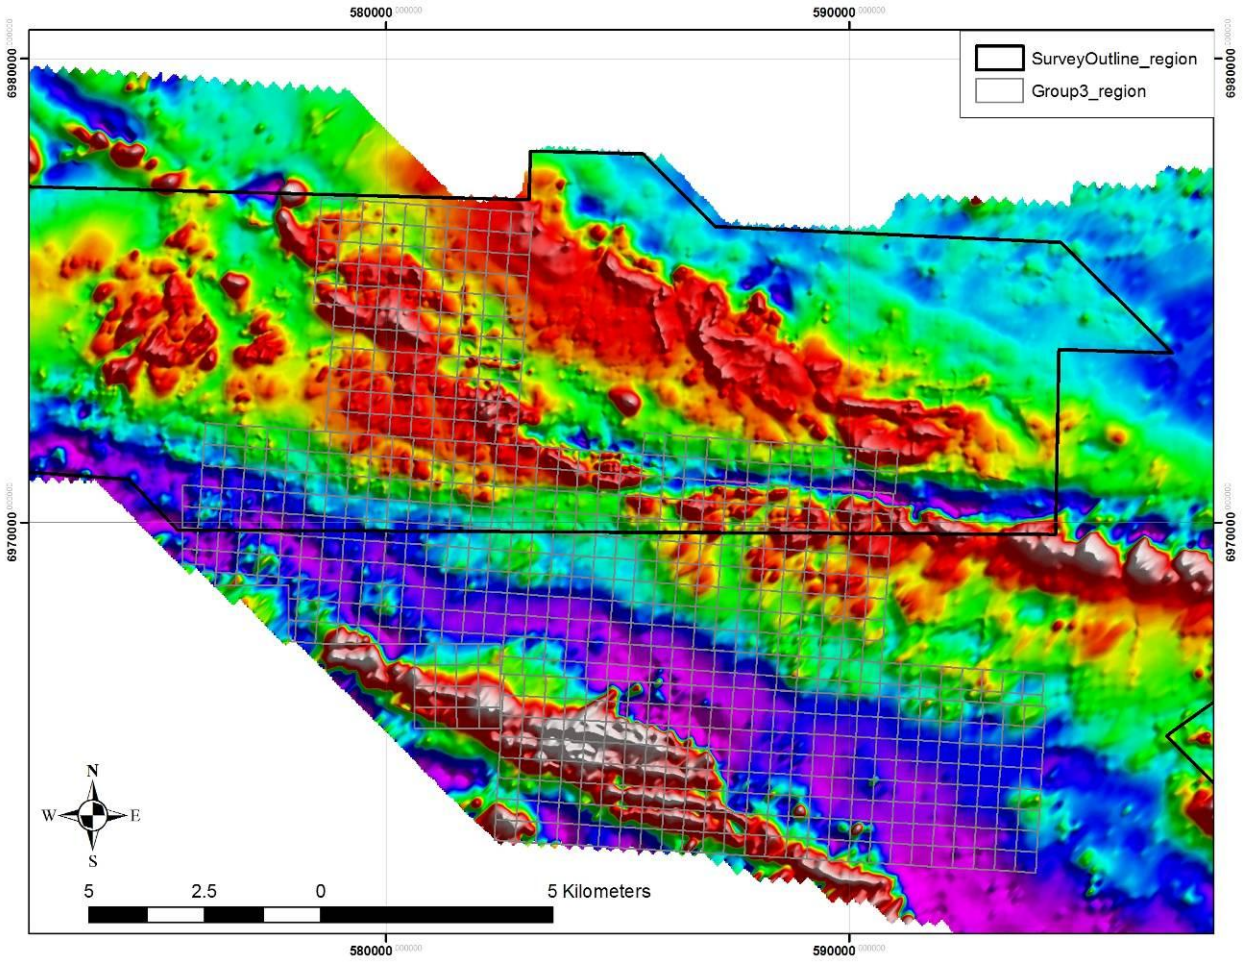

Figure 6 TMI (Total Magnetic Intensity) map shown for the Group 3 area. The detailed 100m survey areas are outlined in black.

8.2 Airborne Orthophoto Survey

AECOM, of Yukon, conducted a detailed aerial orthophoto survey (August 27-30, 2011) over the entire Coffee claim block (including the Group 3 claims; Figure 7). The colour aerial photo survey was flown at a scale of 1:20,000 by Geographic Air Surveys from Edmonton, Alberta. AECOM managed and monitored the flying of the required area and ensured it was flown to the proper specifications. The acquisition of colour aerial photography adhered to the Interdepartmental Committee on Air Surveys (ICAS) Specification for Aerial Survey Photography 2000. These specifications include parameters for sun angle, scale, and expected accuracy. The aerial photography was flown with viable sun angles of >30°.

The aerial photography was flown in stereo with 60% forward overlap (1.83 kms between images) and 30% side lap (3.2 kms between flight lines) suitable for stereo viewing. A RC30 aerial film camera was utilized for the photo acquisition. There were a total of 14 flight lines and approximately 331 images required to take in the entire property.

The aerial photography was then scanned with a Vexcel 4000 photogrammetric scanner to create the digital imagery. Two meter contours were computer-generated from previously compiled DEM (including hydrography) and Lidar data. The production of orthophotos was then done to remove geometric and variable scales inherent in aerial photographs. With the rectification of these properties, the scanned imagery became an orthophoto which was then mosaiced together in sheet format. The resulting corrected image is then at a constant scale across the entire area with an output orthophoto resolution of 25 cm.

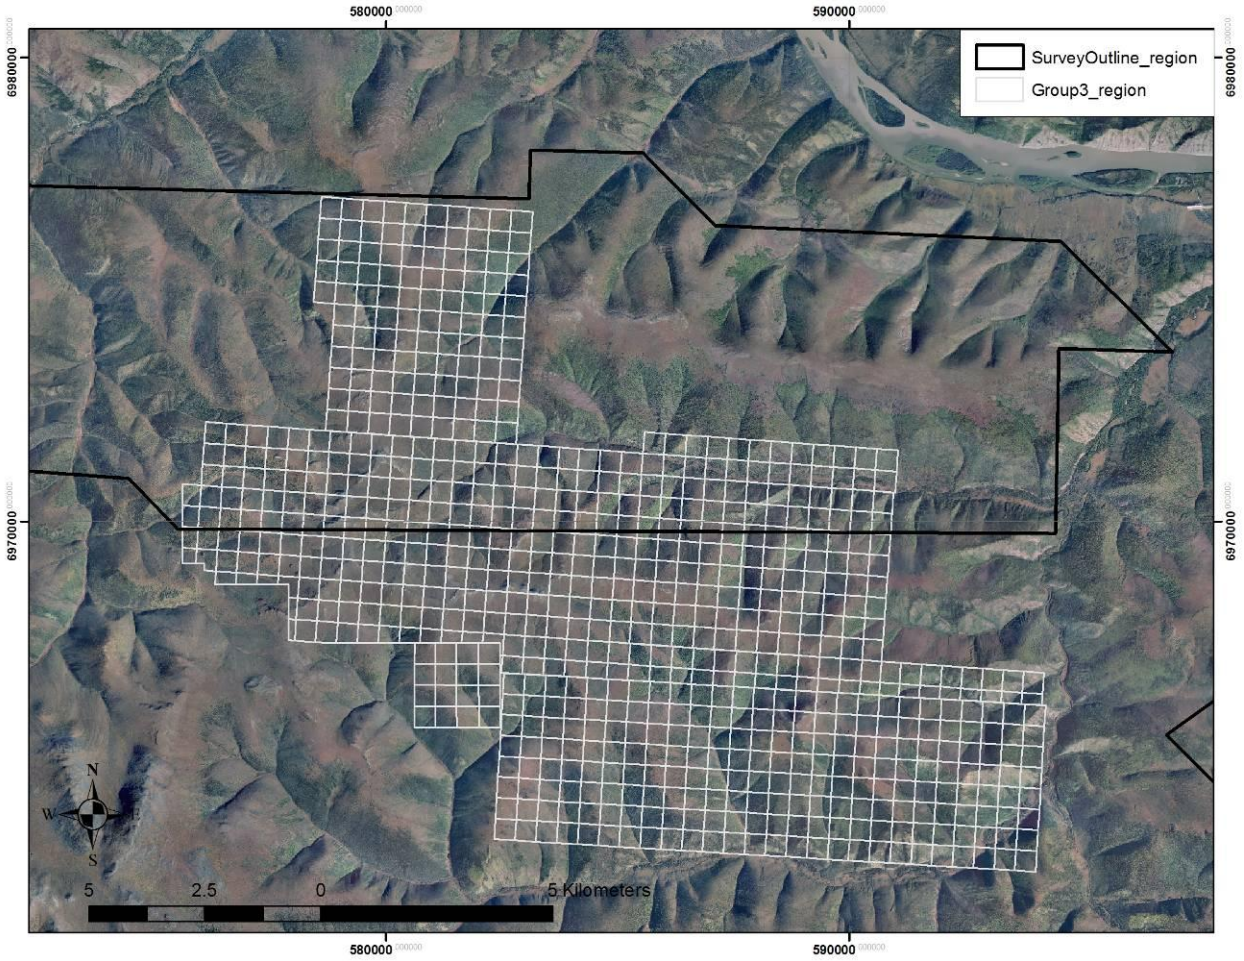

Figure 7 Detailed orthophoto image shown for the Group 3 area.

8.3 Soil Geochemical Work

Ridge top and grid soil sampling was carried out by Ground Truth Exploration from Dawson City, Yukon. 2682 samples (including field duplicates) were collected on the Group 3 claims during 10 days of field work during July 13-31, 2011. Reconnaissance ridge-and-spur samples were taken at 50m intervals and grid sampling was done on 100m spaced lines at 50m intervals.

Samples were collected using a hand auger to various depths depending on the soil profile. The organic A horizon material was discarded, and augering continued until the C horizon rock chips were encountered, checking for false bottoms on the A horizon profile. Soil samples were collected over intervals varying from 60 to 70 centimetres, with maximum depth not exceeding the 1.25 metre length of the auger. Samples were placed directly in pre-marked bags. A field duplicate sample was collected at a rate of one every 25 samples. Sample number, location, depth, and geological parameters were recorded directly into a hand-held computer with a GPS reading of sample location also stored separately as a backup. The sample location was marked with flagging tape and a metal tag on a nearby tree.

Samples were submitted by the contractor to Acme Analytical Laboratories in Vancouver, British Columbia. The sample information was downloaded from the hand-held computers into spreadsheets, and subsequently integrated into Kaminak's Coffee Project database.

Of the 2682 samples collected in the Group 3 claims area, 64 samples were between 30 and 150 ppb Au, and 9 samples were greater than 150 ppb Au, up to a maximum of 517 ppb Au. These results are considered fairly anomalous for the region (Figures 8 and 9; Appendix 2). The anomalous samples are located in clusters in the grid area in the northwest part of Group 3 claims, in addition to sporadic high values encountered in reconnaissance ridge-and-spur sampling traverses in the southern and southeast sectors of the area. The anomalies in the grid area have not been drill-tested, and are located west of the Macchiato prospect (the prospects are discussed more fully in Chartier, 2012).

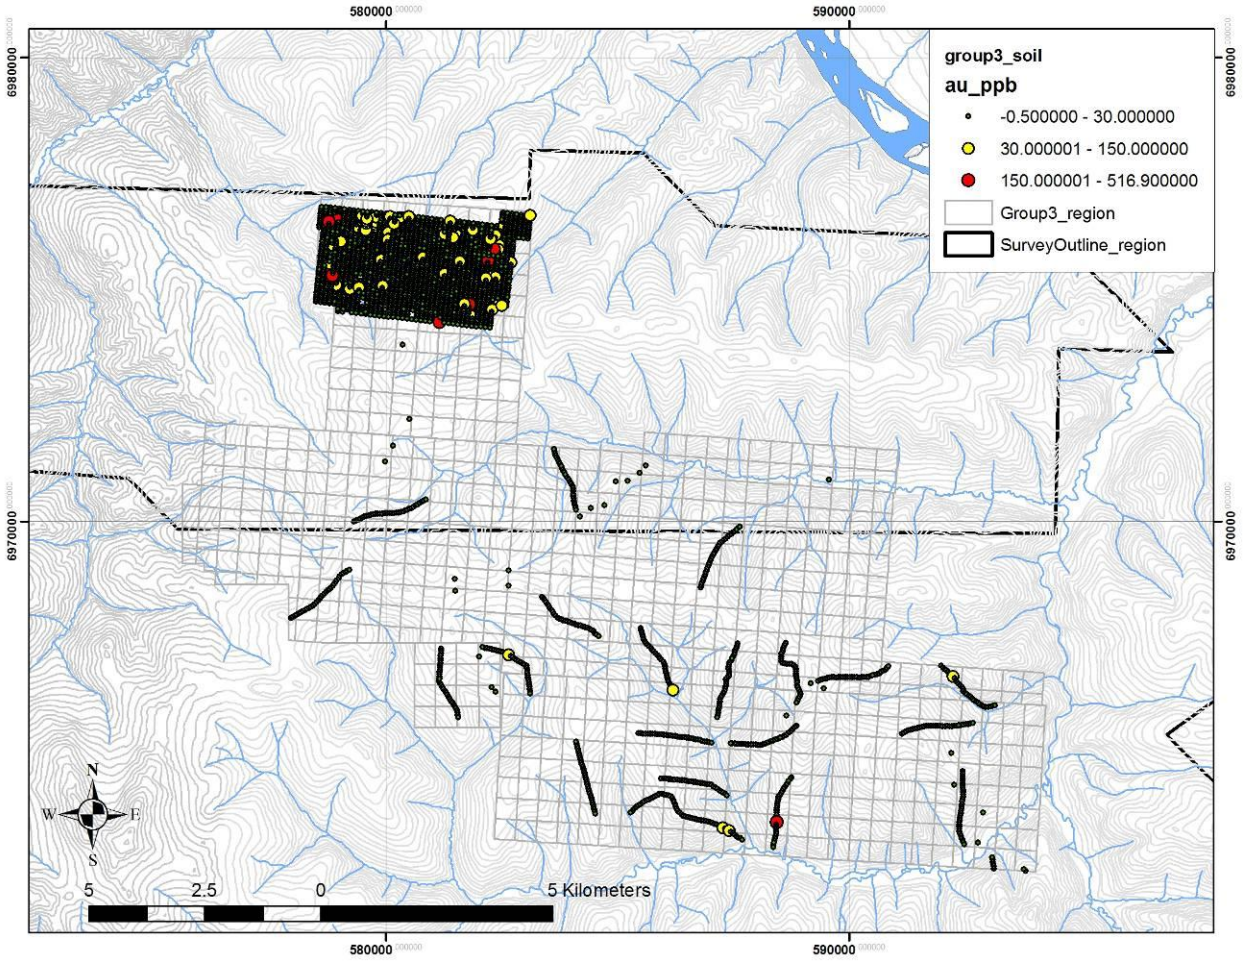

Figure 8 Gold-in-soil results for the Group 3 claims area. A detailed map of the grid area in the northwest part of the map is shown in Figure 9.

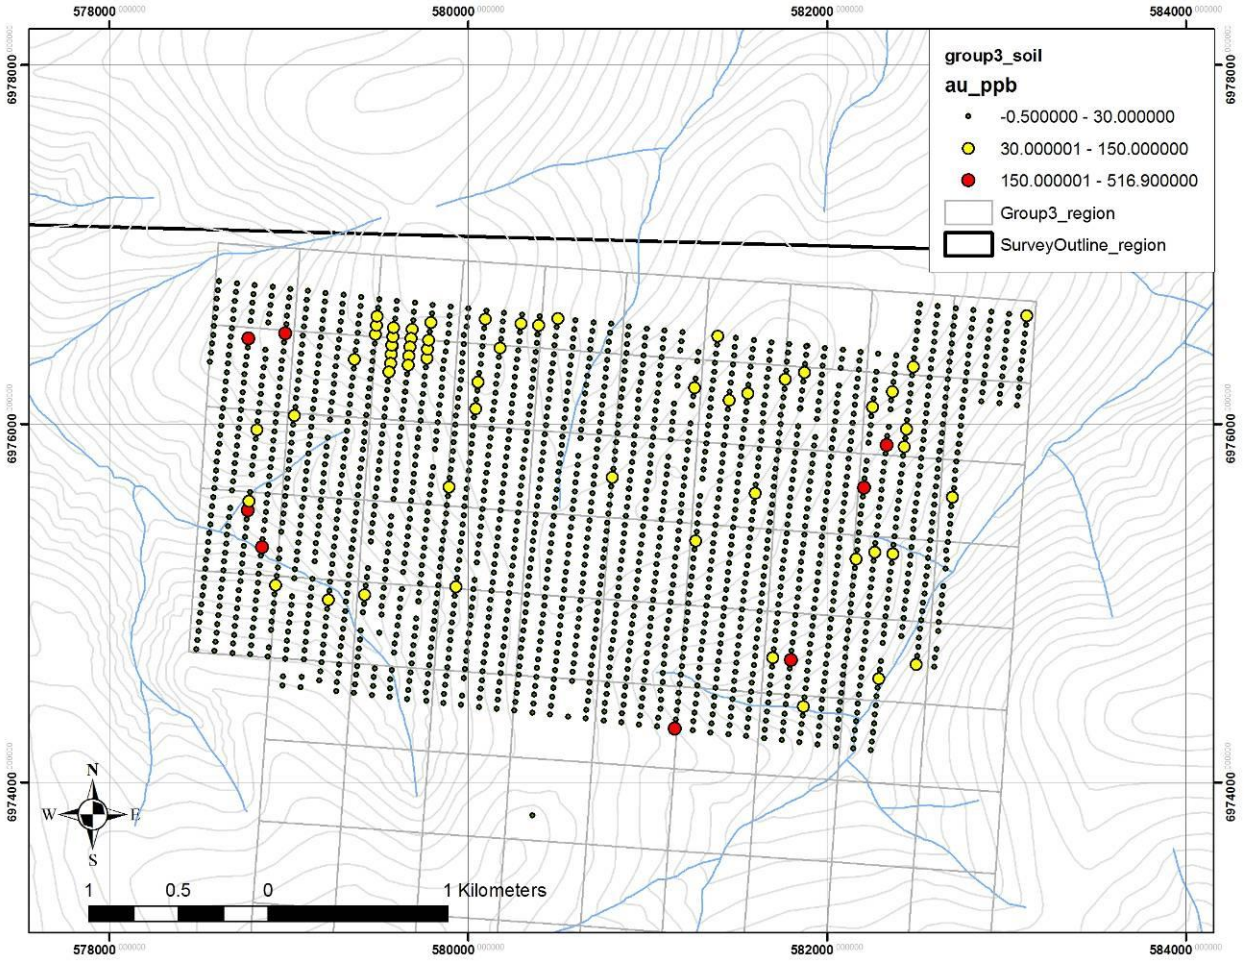

Figure 9 Detailed map of gold-in-soil results for the grid area in the northwest part of the Group 3 claims.

9.0 DISCUSSION AND RECOMMENDATIONS

The Coffee Project exploration program is ongoing and plans are underway for continued systematic work in 2012 at the time of writing.

The aeromagnetic/radiometric and detailed orthophoto surveys are contributing to targeting work that is ongoing. Lineaments from these datasets associated with geochemical trends will be targeted for further work as the Coffee exploration campaign proceeds.

The 2011 soil sampling grid in the northwest part of the Group 3 claims has a number of clusters of anomalous samples (Figure 9). These areas, as well as additional sporadic gold-rich soil samples elsewhere in the Group 3 claims area are worthy of follow-up (this work is ongoing).

10.0 STATEMENT OF EXPENDITURES

The total cost for the 2011 work on the Group 3 claims was $180,235.66 ($189,247.45 including 5% GST; Table 4).

Table 4 Cost summary for the Group 3 claims.

Coffee HW07091 - Expenditure Summary		
2011 Field Season	**Contractor**	**Cost**
		Pro Rata Cost
Airborne magnetics/radiometrics		
Regional 200m line spacing (incl mob/demob)	New Sense Geophysics	**$ 31,909.69**
Jet Fuel (including freight to site)	North 60	**$ 5,058.32**
Crew Accommodation Coffee Camp	Kaminak Gold Corp	**$ 2,970.02**
Detailed 100m line spacing Infill (Block 2)	New Sense Geophysics	**$ 11,309.53**
Jet Fuel (including freight to site)	North60	**$ 1,091.96**
Crew Accommodation Coffee Camp	Kaminak Gold Corp	**$ 712.39**
Soil Sampling		
Ridge and spur sampling (July 13-31, 2011)	Groundtruth Expl.	**$ 67,050.00**
Analytical	Acme	**$ 46,935.00**
Geomorphology Project		
Preparation for Field Work	Aecom	**$ 3,668.91**
Aerial Photograph Acquisition	Geographic Air Survey Limited	**$ 9,529.84**
	TOTAL COFFEE GROUP HW07091 COST	**$ 180,235.66**
	GST 5%	$ 9,011.78
	Total + GST	**$ 189,247.45**
Total Coffee Project Cost		*Notes*
Regional Survey 3,365line km, area hectares = 13,980		$ 137,522.10
40 drums total at $395/drum + $150/drum for barge transportation to site		$ 21,800.00
12 Pilot and geophysicist for 16 days at $400/man/day		$ 12,800.00
Detailed survey 23641 hectares on Coffee		$ 50,801.55
9 drums total at $395/drum + $150/drum for barge transportation to site		$ 4,905.00
Pilot and geophysicist for 4 days at $400/man/day		$ 3,200.00
July 3-31, 2011;		
Coffee Total: 10971 samples at $25/sample.		$ 274,394.91
Coffee Total: 10971 samples at $17.5 per sample		$ 191,992.50
Coffee Geomorphological Mapping for Strategic Sampling		
Published 1:40,000 air photo acquisition and planning		$ 15,812.00
1:20,000 stereo-pair aerial photography		$ 41,071.00
Pro Rata Assumptions:		*Hectares*
Total Coffee Quartz Claims		60,250
Group 3 hectare		13,980
Proportion of Total		**23.2%**
Number of geochem samples		2682
hectares detailed mag surveyed		5263
(23641 detail mag on entire Coffee property)

12.0 STATEMENT OF QUALIFICATIONS

I, Alan John Wainwright, hereby certify that:

1. I am a mineral exploration geologist with offices at Suite 1020 – 800 West Pender Street, Vancouver BC V6C 2V6.
2. I am a graduate of McGill University (B.Sc., 2000), University of Toronto (M.Sc., 2003) and The University of British Columbia (Ph.D., 2008), all in geology. I have been engaged in mineral exploration since 1999.
3. I am a Professional Geoscientist of the Association of Professional Engineers and Geoscientists of the Province of British Columbia, Registration #33841.
4. I have had direct involvement with the exploration program conducted on the area discussed in this report. I am familiar with mineral deposit models and have experience conducting evaluations of mineral properties. I have been working on the Coffee claims since April 2010.

Respectfully submitted,

Alan J. Wainwright, Ph.D., P.Geo.
District Geologist
Kaminak Gold Corp.

13.0 APPENDIX 1 – Coffee Claims (Group 3; grouping certificate HW07091)

Client: **Kaminak Gold Corporation**
1020 - 800 West Pender Street
Vancouver BC V6C 2V6 Canada

Submitted By: Tim Smith
Receiving Lab: Canada-Dawson City
Received: July 08, 2011
Report Date: August 09, 2011
Page: 1 of 7

CERTIFICATE OF ANALYSIS DAW11000005.1

CLIENT JOB INFORMATION

Project: CFC
Shipment ID: 2011-SDUG01
P.O. Number
Number of Samples: 152

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT Dispose of Reject After 90 days

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
Dry at 60C	152	Dry at 60C			VAN
SS80	152	Dry at 60C sieve 100g to -80 mesh			VAN
1DX2	152	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN

ADDITIONAL COMMENTS

Invoice To: Kaminak Gold Corporation

CERTIFICATE OF ANALYSIS DAW11000025.1

CLIENT JOB INFORMATION

Project: CFC
Shipment ID: 2011-CFC06
P.O. Number
Number of Samples: 331

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
SS80	331	Dry at 60C sieve 100g to -80 mesh			WHI
Dry at 60C	331	Dry at 60C			WHI
1DX2	331	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN

CERTIFICATE OF ANALYSIS WHI11000749.1

CLIENT JOB INFORMATION

Project: CFC
Shipment ID: 2011-CFC04
P.O. Number
Number of Samples: 33

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
SS80	33	Dry at 60C sieve 100g to -80 mesh			WHI
Dry at 60C	33	Dry at 60C			WHI
1DX2	33	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN

ADDITIONAL COMMENTS

Invoice To: Kaminak Gold Corporation

1.0 SUMMARY AND RECOMMENDATIONS

The Coffee project is an exploration-stage gold project located in west-central Yukon and the claims are 100% owned by Kaminak Gold Corp. In 2011, Kaminak undertook a second season of systematic exploration work on the Group 4 portion of the claim block (Grouping Certificate HW07092). New Sense geophysics of Markham Ontario, conducted an airborne magnetic/radiometric survey over the Coffee property at 200 meter spacing in addition to a smaller 100 meter line spaced detailed survey (June 11- July 22, 2011). AECOM, of Yukon, conducted a detailed aerial photo survey (August 27-30, 2011). Soil sampling was carried out by Ground Truth Exploration from Dawson City, Yukon and 1524 samples (including field duplicates) were collected on the Group 4 Coffee claims during July 13-31, 2011. Expenditure on the Group 4 claims totals $110,717.44 (excluding GST). Ongoing work is recommended, supported by favourable results documented herein as well as by the extensive ongoing drill programs at Coffee.

Respectfully submitted,

Alan J. Wainwright, Ph.D., P.Geo.
District Geologist
Kaminak Gold Corp.

2.0 INTRODUCTION

The Coffee Gold Project is an early-stage gold exploration project, 100% owned by Kaminak Gold Corp. ("Kaminak"), and located in the White Gold district of west-central Yukon. The project encompasses several gold occurrences within an exploration concession that covers an area of more than 600 square kilometres. This document summarizes the 2011 geochemical, geophysical and survey work undertaken by Kaminak on the "Group 4" portion of the claims. Except for in Figure 3 (which uses decimal degrees), all maps below use the UTM NAD83 zone 7 coordinate system.

3.0 LOCATION AND ACCESS

The Coffee Gold Project is located in west-central Yukon, Canada within the Whitehorse Mining District, 130 kilometres south of Dawson City (Figure 1). The property comprises 3,021 contiguous Yukon mine claims covering an aggregate area of 60,230 hectares owned by Kaminak. The Coffee property covers parts of (1:50 000 scale) map sheets 115J-13, 115J-14 and 115J-15 and the centre of the property is located at 139.172 degrees longitude west and 62.836 degrees latitude north.

The property and the region have no established towns, villages or electricity. Barge access is available to the nearby Coffee Creek camp, and a new 22 kilometre access road has been constructed to the exploration site from the barge landing. Access to the property is also available by helicopter from Dawson or Carmacks, or conversely, by airplane to the Coffee Creek camp airstrip and from there by helicopter.

4.0 CLIMATE AND PHYSIOGRAPHY

Yukon has a sub-arctic continental climate with a summer mean of 10 degrees Celsius and a winter mean of -23 degrees Celsius. Summer and winter temperatures can reach 35 and -55 degrees Celsius, respectively.

The area is unglaciated and consists of subdued topography with elevation ranging from 400 to 1,500 meters. The Coffee Project claims encompass an area of tree-covered hills on the Yukon Plateau, incised by mature drainages that are part of the Yukon River watershed. The property has local mature pine forests with thick moss cover on the ground. Bedrock exposures are scarce.

5.0 LAND TENURE

The Coffee Project claim block consists of 3,021 registered claims (claims registered as follows: 2,927 Coffee, 68 Cream, 16 Lion, and 10 Sugar). The entire claim block covers an area measuring approximately 50 by 12 kilometres, divided into 5 claim groups (Figure 2). The boundaries of the individual claims have not been legally surveyed and the mineral rights exclude surface rights. The list of Group 4 claims is presented in Appendix A.

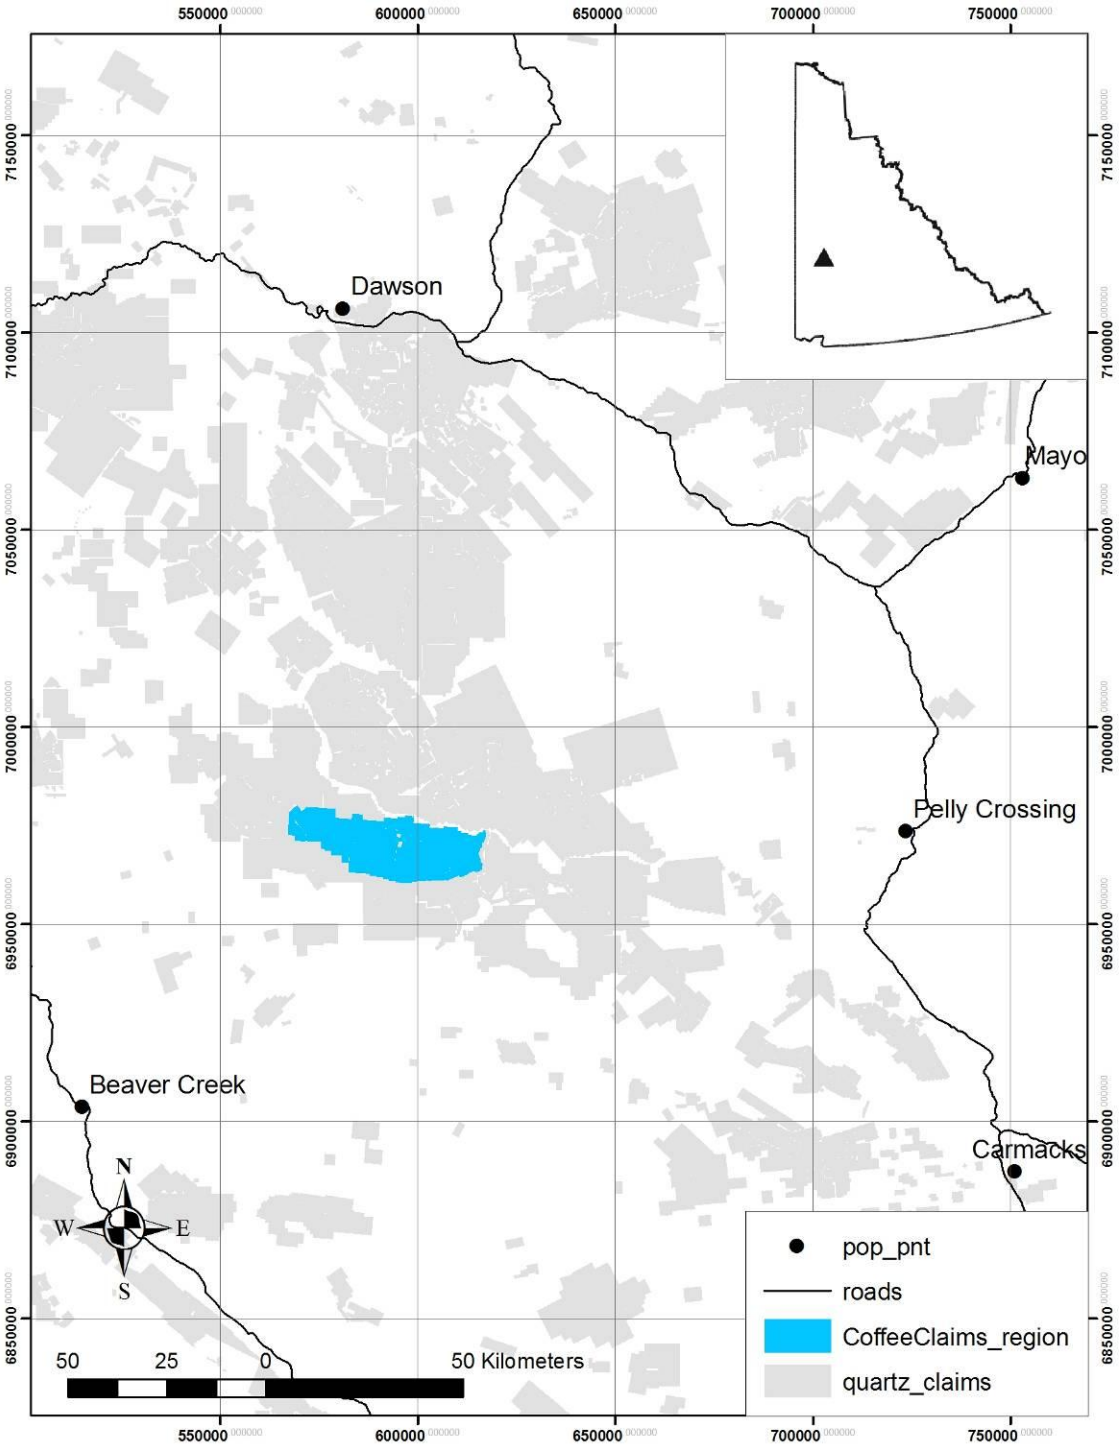

Figure 1 Location of the Coffee claims, west-central Yukon.

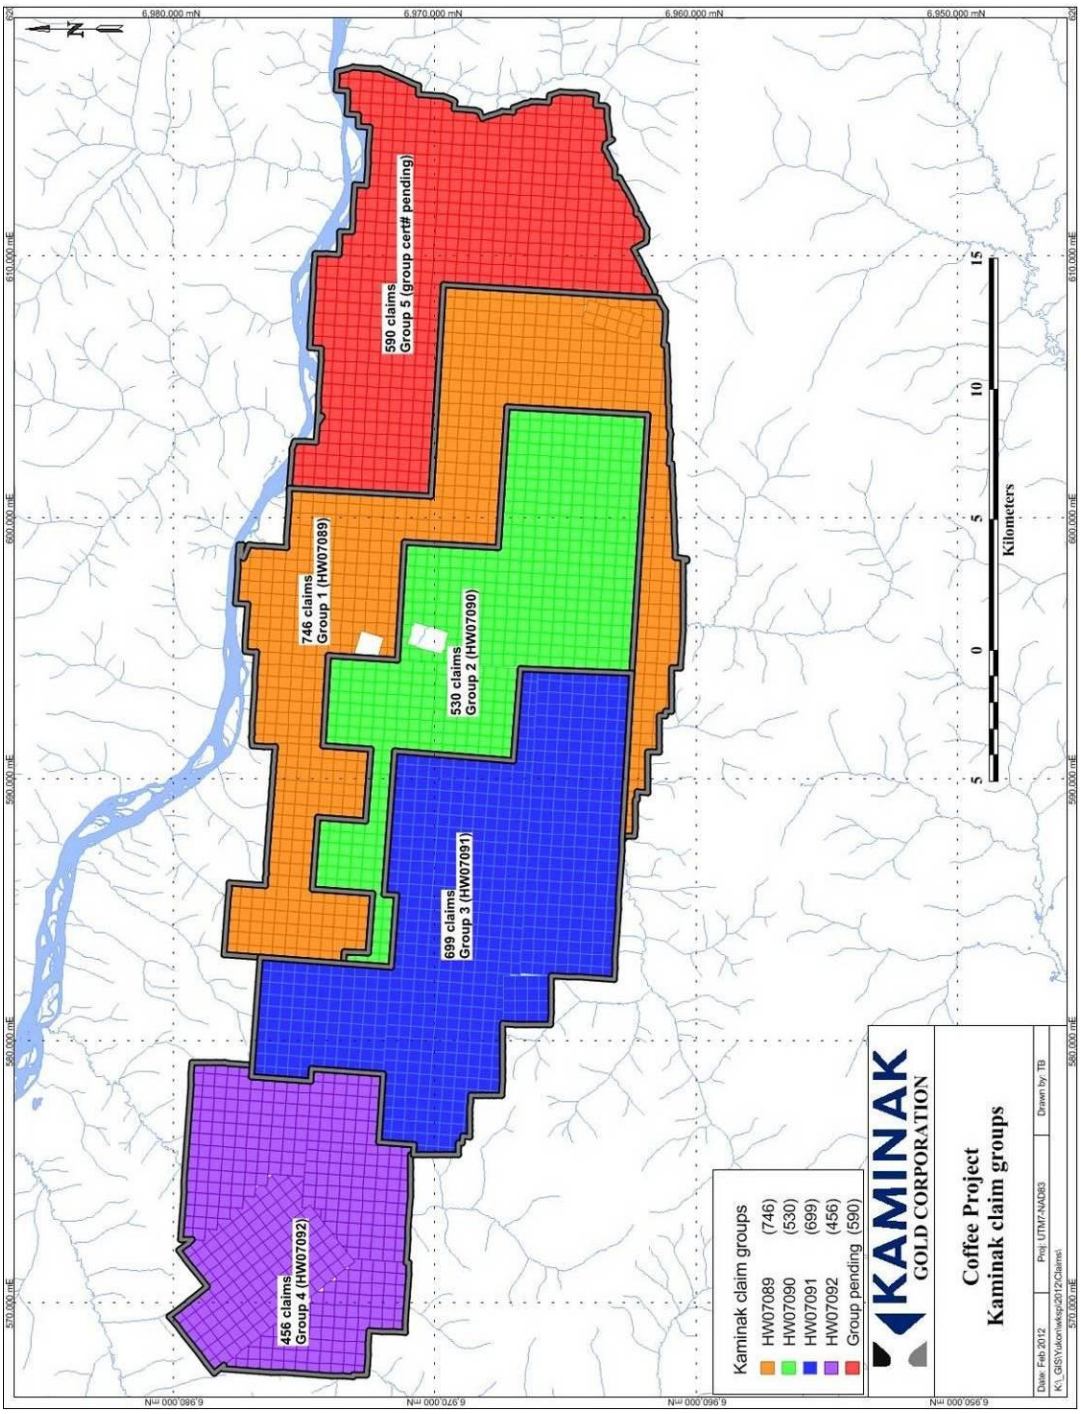

Figure 2 Map of the Coffee claim groups. The Group 4 sector (HW07092; purple) is pertinent to this document.

6.0 PREVIOUS WORK

Intermittent placer mining activity has occurred in the Coffee Creek area since the turn of the century and historic hardrock exploration in the area has been largely limited to reconnaissance work in the 1960s and 1970s for porphyry copper.

C.D.N. Taylor, P.Eng (Atlantic Energy Limited, August 1981) reported that soil and silt samples collected from Coffee Creek, near the confluence of the Yukon River, contained "uniformly high, double digit arsenic values." Taylor recommended that Coffee Creek be re-sampled during low water table levels (cited in Jaworski and Meyer, 2000).

Deltango Gold conducted silt and soil sampling in 1999 in the area of the Coffee Project claims and recommended further work, based on anomalous results (Jilson, 2000). In 1999-2000, a brief Coffee Creek exploration program was conducted by consultants for Prospector International Resources. This program involved stream sediment sampling of secondary drainages, contour and ridgeline reconnaissance soil sampling, rock sampling of available outcrop and prospecting, and minor fluid inclusion work. The 1999 work identified an open-ended reconnaissance soil gold anomaly. The 2000 work further delineated this anomaly to be approximately 400 by 900 metres and further soil sampling in addition to mechanized trenching were recommended (Jaworski and Meyer, 2000; Jaworski and Vanwermeskerken, 2001).

In 2006 and 2007, grid sampling and ridgetop soil sampling traverses were completed on the Coffee Project claims (Ryan 2007; Ryan, 2008).

In June 2009, Kaminak executed an option agreement with Shawn Ryan to acquire the Coffee Project. Kaminak has carried out exploration on the Coffee Project over the course of three separate field seasons: 2009, 2010 and 2011. Exploration in 2009 consisted of soil sampling, trenching, mapping, prospecting and a ground magnetic survey. Exploration in 2010 followed up with the same activities in support of a 16,104 metre core drilling program. The 2011 exploration campaign consisted of reverse circulation and diamond core drilling, trenching, geophysics, surveying, mapping and soil sampling (Table 1). The 2011 geochemical, airborne geophysical and airborne survey work that pertain to the Group 1 portion of the claim group are the subject of this report. A more complete review of the exploration work at Coffee can be found in Chartier (2012).

Table 1 Work history by Kaminak Gold at Coffee (2009-2011).

Exploration Work	2009	2010	2011
Soil Samples	6,000 samples	9,473 samples	10,958 samples
Trenching	4,000 metres	4,000 metres	3,824 metres
Mapping and Sampling	10 day reconnaissance program	10 day reconnaissance program	15 day reconnaissance program
Drilling		16, 104 meters (76 core boreholes)	247 boreholes (48,000 meters) were drilled: 101 core boreholes (28, 463 meters) and 146 reverse circulation boreholes (19,538 meters)
Geophysics	261 line-kilometre ground magnetic survey	Ground magnetic (465 line-kilometre at 100 meter spacing and 114 line-kilometre at 25 to 50 meter spacing)	4,842 line-kilometre helicopter magnetic and gamma-ray spectrometric airborne survey; 15.9 line-kilometres of horizontal loop electromagnetic (HLEM) and Ohm mapper surveys
Geomorphology/orthophoto survey/topographic survey	N/A	N/A	Geomorphological terrane study, detailed orthophoto survey and LIDAR topographic survey

7.0 GEOLOGICAL SETTING

7.1 Regional Geology

The Coffee Project is located in the Yukon-Tanana terrane (YTT), which consists of accreted pericratonic sequences that cover a large part of the northern Cordillera from northern British Columbia to east-central Alaska (Colpron et al., 2006; Berman et al., 2007; Figure 3). The YTT consists of Paleozoic schists and gneisses that were intruded by several suites of plutons that range in age from Jurassic to Eocene (Mortensen, 1992; Colpron et al., 2006). The Paleozoic rocks are pervasively foliated containing at least two overprinting rock fabrics (Ryan and Gordey, 2004; MacKenzie et al., 2008; Mackenzie and Craw, 2010) and the rocks were tectonically stacked along foliation-parallel thrust faults between the Late Permian and Early Jurassic (Mortensen, 1996; Berman et al., 2007). Subsequent extension may have occurred during the mid-Cretaceous in the Dawson Range (Mackenzie et al., 2010), similar to that documented in east-central Alaska (Pavlis et al., 1993). Other primary bedrock gold deposits in the region include the recently discovered Golden Saddle system (Mackenzie and Craw, 2010; Mackenzie et al., 2010).

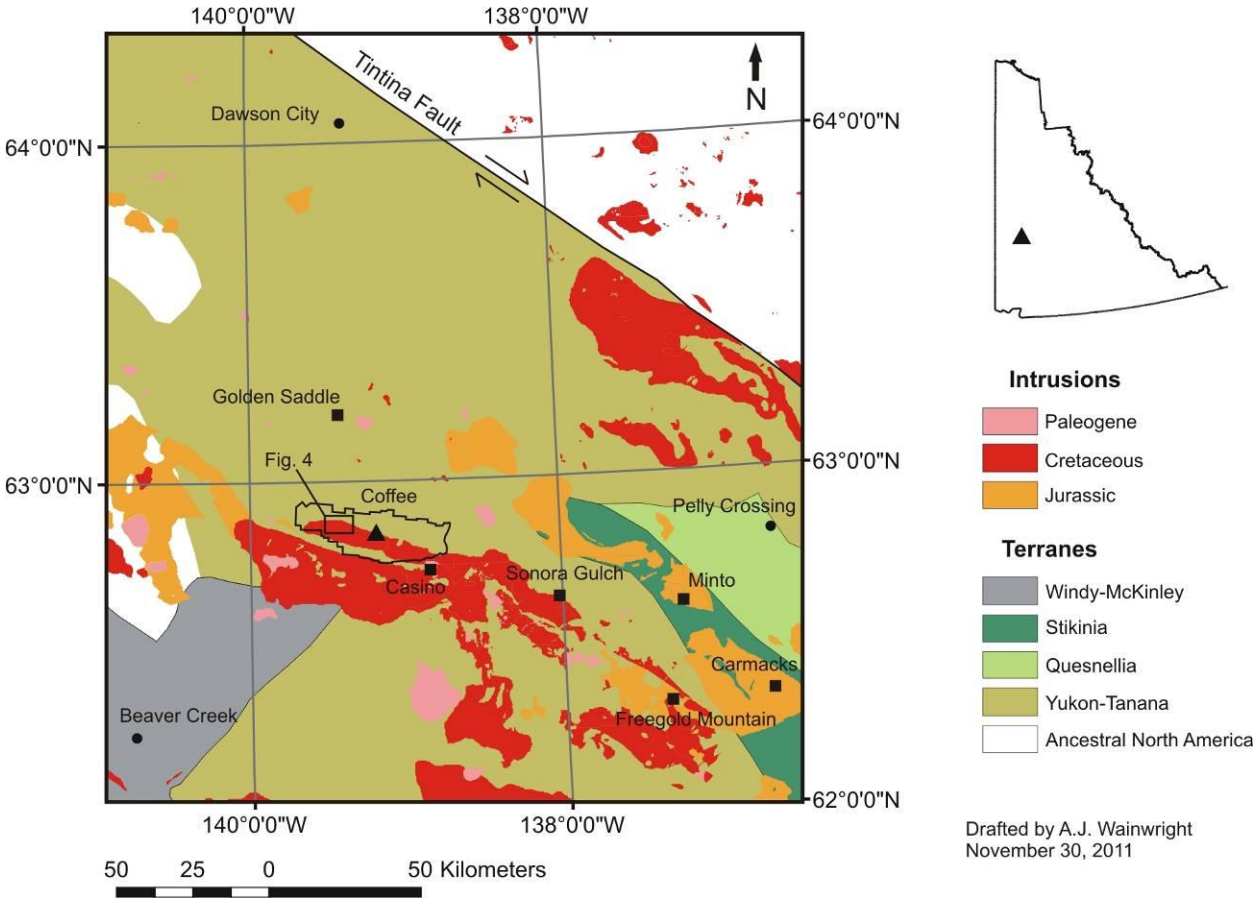

Figure 3 Regional geological setting for the Coffee project (modified after Gordey and Makepeace, 1999).

7.2 Property Geology

7.2.1 Basement rocks and intrusions

The Coffee area is underlain by two main shallowly to moderately south-dipping rock sequences in contact with Cretaceous granite to the south (Wainwright et al., 2011; Figure 4). The lowermost rock unit is a mixed gneiss sequence characterized by dominant felsic augen-bearing gneissic rocks interleaved with volumetrically-minor biotite-feldspar-quartz schist intervals. These rocks are overlain by a thick, highly-variable package of biotite-feldspar-quartz (± muscovite ± amphibole) schist, interpreted as a metamorphosed sediment-dominant sequence. The lower part of the schist unit includes a variably-strained mafic sequence interpreted as a metavolcanic package characterized by the presence of pyroxene, in addition to low-strain relict cumulate-textured gabbro clasts, fining-upward sequences and possible pillows. Biotite-feldspar-quartz (± muscovite ± amphibole) schist in the upper parts of the sequence is intercalated with 5 cm to 5 m wide concordant intervals of metacarbonate that increase in abundance upward in the sequence (i.e. to the south).

The foliated basement rocks are adjacent to a large west-northwest trending Cretaceous granite batholith (Coffee Creek granite). Abundant Jurassic to Cretaceous (?) fine-grained to porphyritic, andesitic to dacitic (subvolcanic) dikes cross-cut all of the rocks observed in the area (Table 2).

7.2.1 Structure and gold zones

The Paleozoic basement rock fabric is highly variable; however, mapping of drill core suggests that there is a general progression in strain intensity from north to south. Schistose to protomylonite textures in addition to relict primary depositional textures are observed in the north part of the project area (low-strain), whereas mylonitic and ultramylonitic textures are noted more commonly in the foliated rocks closer to the granite intrusion in the south (high-strain). The increase in strain intensity appears to correspond to steepening of the south-dipping foliation toward the south.

Significant gold zones have been detected in a number of areas across the Coffee property to date (Figure 4; Table 3). The moderately- to steeply-dipping gold zones are hosted in discrete corridors that correspond to a variety of orientations. Gold-rich sectors are characterized by breccias that include clasts of dikes, schist and gneiss in addition to silicified fragments of unknown origin. Alteration associated with gold includes silica, sericite (illite), Fe-carbonate, clay, carbonate and the gold zones are typically deeply oxidized.

Gold-bearing structures at Coffee are spatially associated with intermediate to felsic dikes. Very high-grade intervals are associated with microbreccia, coarse quartz vein breccia and high sulfide content; domains interpreted as multiply-reactivated, high-energy, high-fluid flux conduits. The gold-rich breccias contain clasts of altered wallrock and dikes, and crosscut all of the rock units. Moreover, the gold zones detected to date are not significantly diluted by post-mineral dikes, nor are they truncated/displaced by significant faulting; thus the introduction of gold is interpreted to be late within the framework of geologic evolution in the district.

Table 2 Rock units at Coffee.

Rock Unit	Location	Comment
Augen Gneiss	Supremo area	Intercalated with biotite-feldspar schist; dominant host rocks surrounding high-grade breccias in the Supremo zone
Biotite-feldspar schist	Dominant unit in central panel	Intercalated with metacarbonate and metavolcanic units; host for gold in the Latte zone
Metacarbonate rocks	Occur high in the biotite-feldspar schist panel	Typically 5cm to 5m thick; increase in abundance upward in the sequence
Mafic metavolcanic rocks	Occur low in the biotite-feldspar schist panel	Relict volcanic and sedimentary textures; up to 50m thick
Granite	Kona, Americano area	Large Coffee Creek Granite batholith trends west-northwest, mid- to late Cretaceous
Dacite dikes	Cuts all rock units	Strong spatial association with gold zones
Andesite dikes	Cuts all rock units	Weaker spatial association with gold zones

Table 3 Description of the main mineralized zones at Coffee.

Zone	Host Rocks	Summary Description
Supremo	Augen gneiss	Narrow gold-bearing brittle structures with gold commonly hosted in matrix-supported breccia and dacite dikes. Gold associated with quartz-sericite-pyrite alteration.
Latte	Biotite-feldspar schist, Augen gneiss	Gold is hosted in zones of brecciation and strong fracturing as well as areas with pervasive sericite alteration and disseminated sulphides. Some high-grade zones associated with quartz vein breccias.
Double Double	Augen gneiss	Narrow gold-bearing brittle structures hosted in matrix-supported breccia including dacite porphyry fragment breccia. Anastamosing quartz vein networks and microbreccia associated with high-grade.
Kona	Granite	Broad zones of fracture-controlled and disseminated pyrite associated with dacite dikes. Gold hosted in quartz-sericite altered granite. Iron oxides after disseminated pyrite, pyrite veinlets stockworks and sooty-pyrite rich shear zones.
Americano, Americano West and Espresso	Granite	Zones of fracture-controlled and disseminated pyrite. Gold hosted in quartz-sericite altered granite similar to Kona. Stibnite noted at Americano West.
Macchiato and Cappuccino	Augen Gneiss	Strong oxidation, silica flooding, abundant limonite and brecciation noted at Macchiato

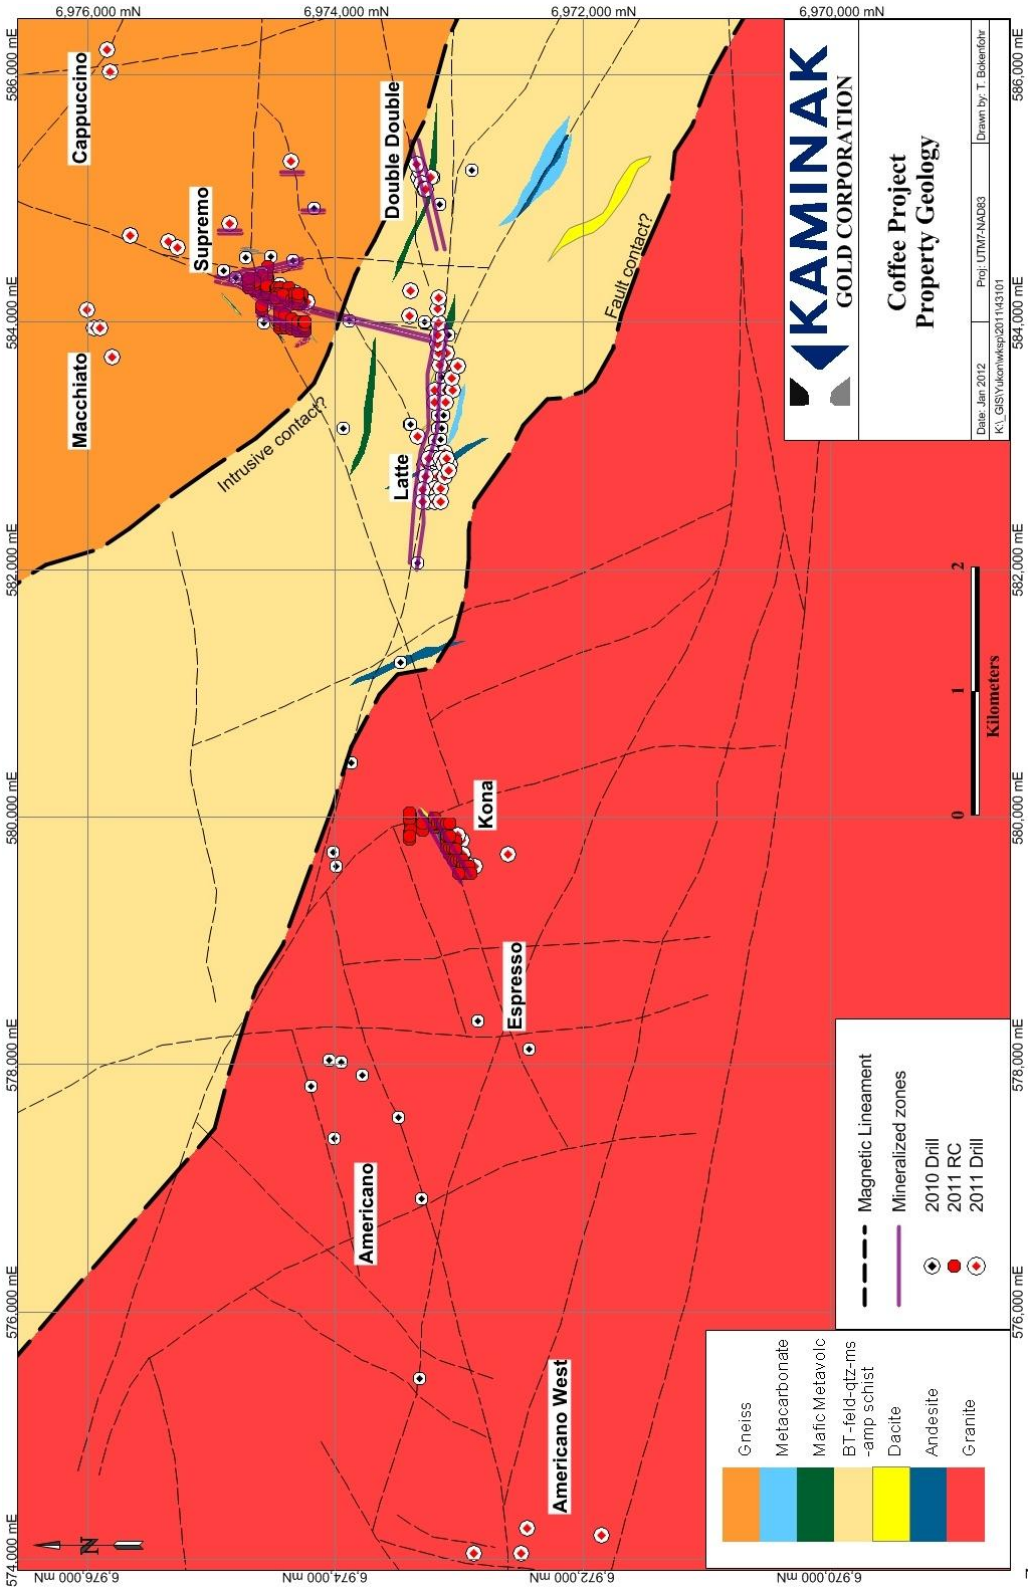

Figure 4 Property geology map for part of the Coffee claims.

8.0 CURRENT WORK

The 2011 work in the Group 4 area consisted of an airborne geophysical survey, an airborne orthophoto survey and soil sampling (Figure 5). The entire claim block was covered by both the geophysical and orthophoto surveys (shown in grey on Figure 5).

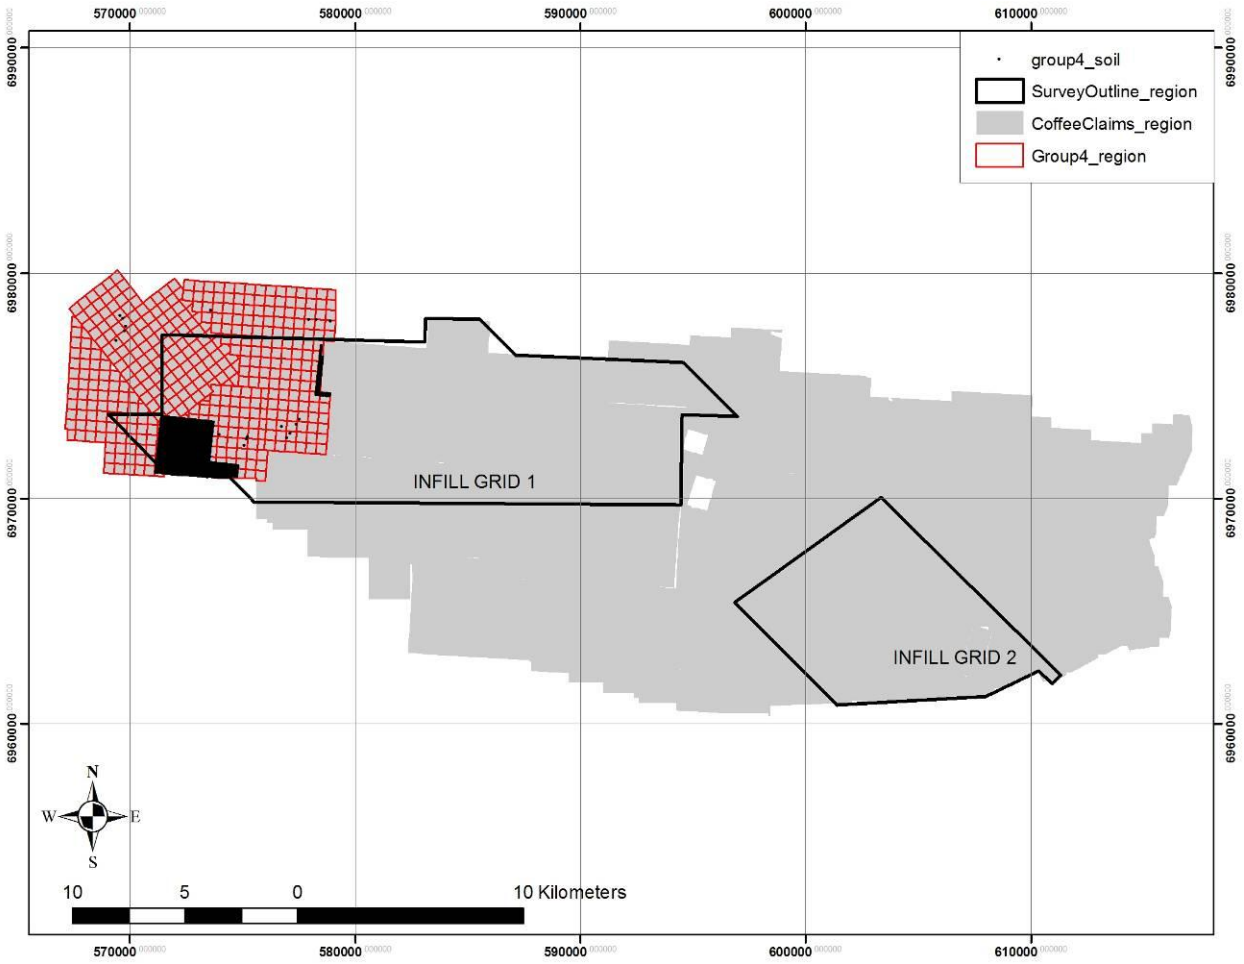

Figure 5 Overview of the work performed on Group 4 claims (red) in June-August 2011.

8.1 Airborne Geophysical Survey

New-Sense Geophysics Ltd. of Markham, Ontario was contracted to run a high sensitivity helicopter magnetic and gamma-ray spectrometric airborne survey. The survey was flown over a regional block and two infill blocks (Figure 6). The magnetic and radiometric survey was flown between June 22 and July 7, 2011 for a total of 4,842 line kilometres (including 913 line kilometres over Infill Grid 1 block; and 391 over Infill Grid 2 block). Lines were flown at 200 metres spacing for the regional block and 100 metres spacing for the two infill blocks.

The geophysical equipment was comprised of a high-sensitivity Cesium-3 magnetometer mounted in a fixed stinger assemble, and a 1024-channel spectrometer. Airborne ancillary equipment included; digital recorders, fluxgate magnetometer, radar altimeter, and global positioning system (GPS) receiver. The GPS receiver provided accurate real-time navigation and subsequent flight path recovery. Surface equipment included a magnetic base station with

GPS time synchronization, and a PC-based field workstation which was used to check the data quality and completeness on a daily basis.

The technical objective of the survey was to provide high-resolution total field magnetic and radiometric maps suitable for anomaly delineation, detailed structural evaluation, and identification of lithologic trends. Fully corrected magnetic and radiometric maps were prepared by New-Sense Geophysics Limited.

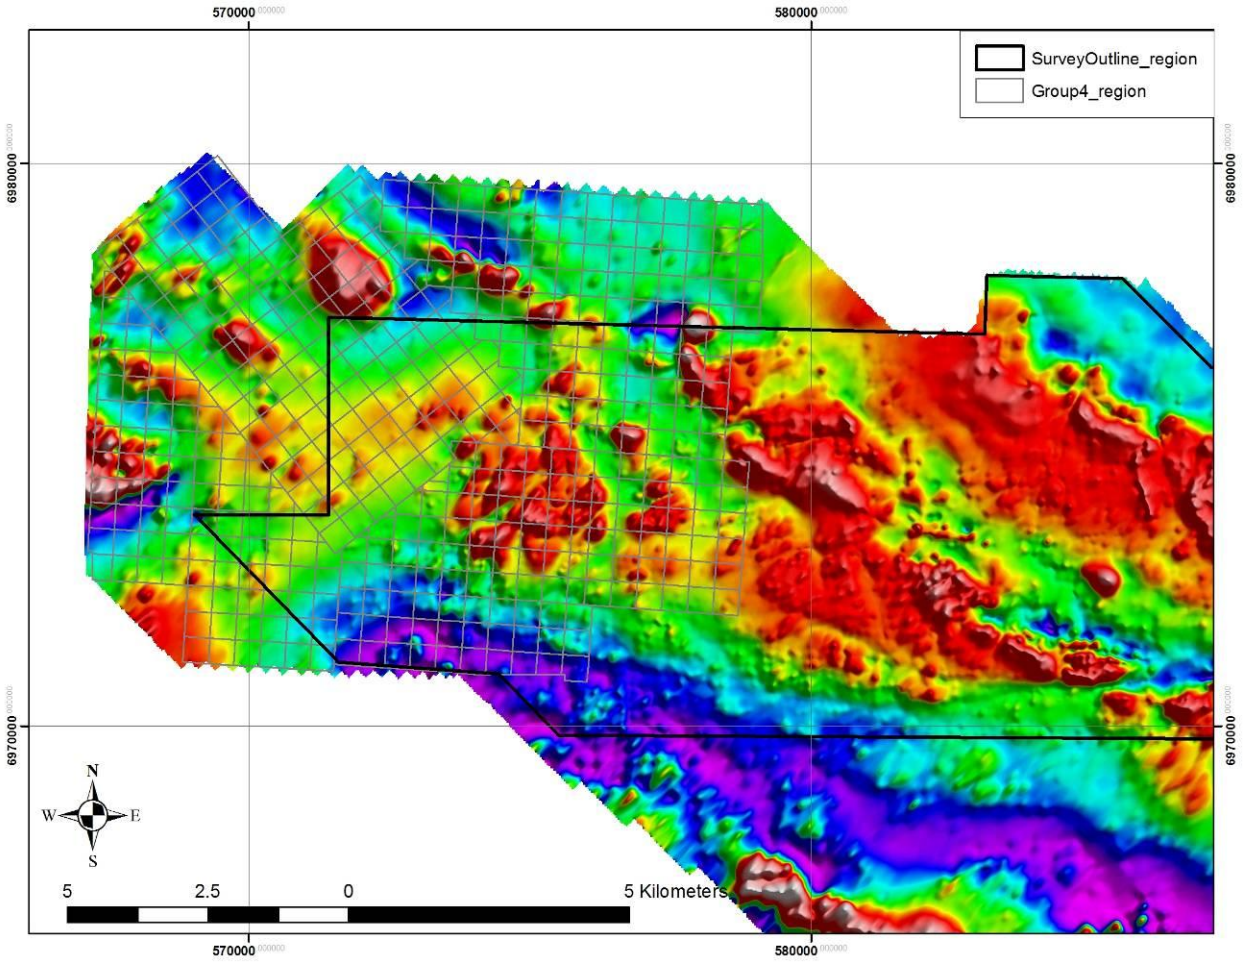

Figure 6 TMI (Total Magnetic Intensity) map shown for the Group 4 area. The detailed 100m survey area is outlined in black.

8.2 Airborne Orthophoto Survey

AECOM, of Yukon, conducted a detailed aerial orthophoto survey (August 27-30, 2011) over the entire Coffee claim block (including the Group 4 claims; Figure 7). The colour aerial photo survey was flown at a scale of 1:20,000 by Geographic Air Surveys from Edmonton, Alberta. AECOM managed and monitored the flying of the required area and ensured it was flown to the proper specifications. The acquisition of colour aerial photography adhered to the Interdepartmental Committee on Air Surveys (ICAS) Specification for Aerial Survey Photography 2000. These specifications include parameters for sun angle, scale, and expected accuracy. The aerial photography was flown with viable sun angles of >30°.

The aerial photography was flown in stereo with 60% forward overlap (1.83 kms between images) and 30% side lap (3.2 kms between flight lines) suitable for stereo viewing. A RC30 aerial film camera was utilized for the photo acquisition. There were a total of 14 flight lines and approximately 331 images required to take in the entire property.

The aerial photography was then scanned with a Vexcel 4000 photogrammetric scanner to create the digital imagery. Two meter contours were computer-generated from previously compiled DEM (including hydrography) and Lidar data. The production of orthophotos was then done to remove geometric and variable scales inherent in aerial photographs. With the rectification of these properties, the scanned imagery became an orthophoto which was then mosaiced together in sheet format. The resulting corrected image is then at a constant scale across the entire area with an output orthophoto resolution of 25 cm.

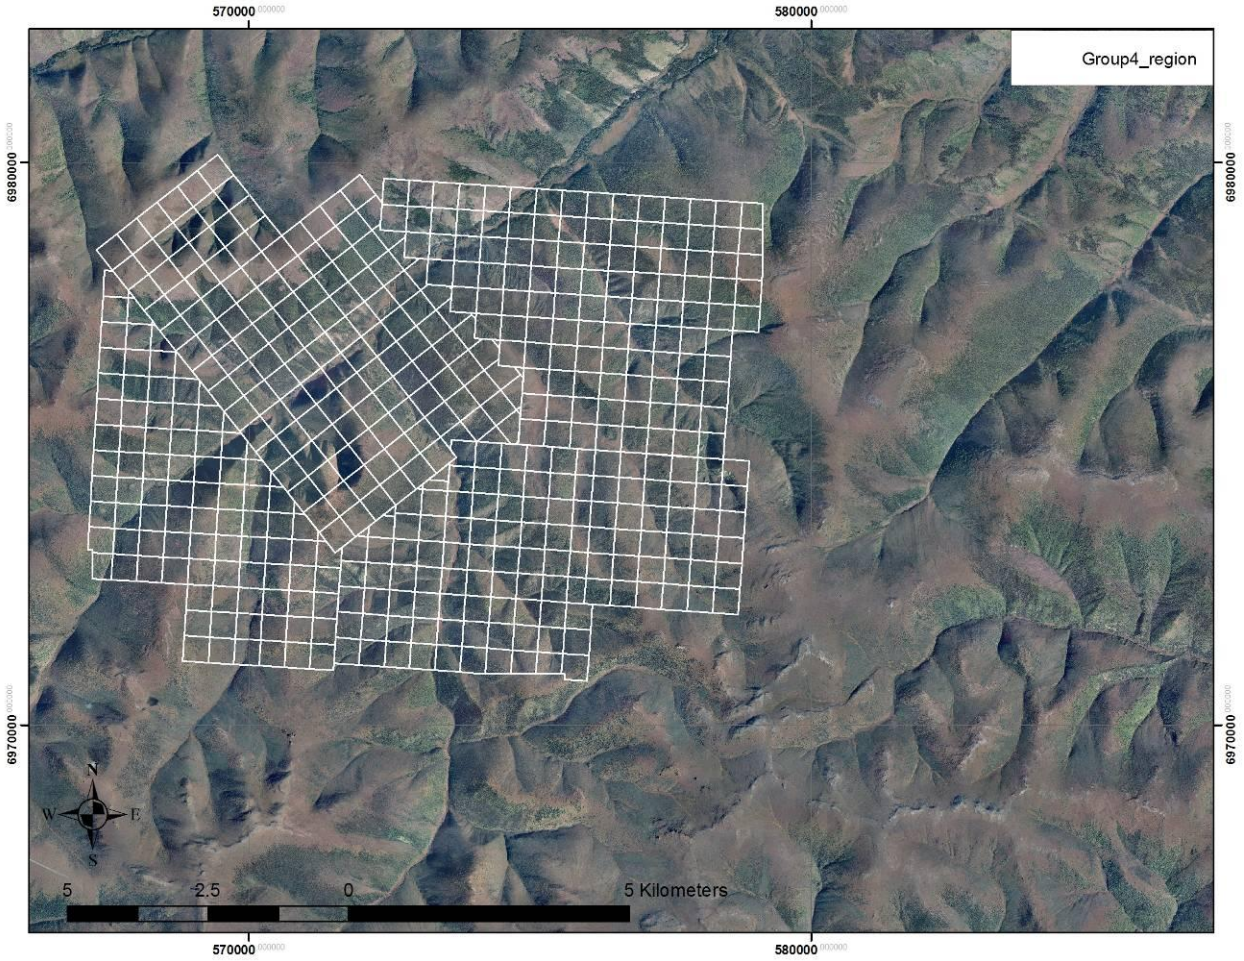

Figure 7 Detailed orthophoto image shown for the Group 4 area.

8.3 Soil Geochemical Work

Ridge top and grid soil sampling was carried out by Ground Truth Exploration from Dawson City, Yukon. 1524 samples (including field duplicates) were collected on the Group 4 claims during 10 days of field work during July 13-31, 2011. Reconnaissance ridge-and-spur samples were taken at 50m intervals and grid sampling was done on 100m spaced lines at 50m intervals.

Samples were collected using a hand auger to various depths depending on the soil profile. The organic A horizon material was discarded, and augering continued until the C horizon rock chips were encountered, checking for false bottoms on the A horizon profile. Soil samples were collected over intervals varying from 60 to 70 centimetres, with maximum depth not exceeding the 1.25 metre length of the auger. Samples were placed directly in pre-marked bags. A field duplicate sample was collected at a rate of one every 25 samples. Sample number, location, depth, and geological parameters were recorded directly into a hand-held computer with a GPS reading of sample location also stored separately as a backup. The sample location was marked with flagging tape and a metal tag on a nearby tree.

Samples were submitted by the contractor to Acme Analytical Laboratories in Vancouver, British Columbia. The sample information was downloaded from the hand-held computers into spreadsheets, and subsequently integrated into Kaminak's Coffee Project database.

Of the 1524 samples collected in the Group 4 claims area, 30 samples were between 30 and 150 ppb Au, and 6 samples were greater than 150 ppb Au, up to a maximum of 328 ppb Au. These results are considered anomalous for the region (Figures 8 and 9; Appendix 2). The anomalous samples are located in clusters and linear trends in the grid area in the southern part of Group 4 claims, in addition to sporadic high values encountered in reconnaissance ridge-and-spur sampling traverses elsewhere in the Group 4 area. The main southwest-trending linear anomaly in the grid area has not been drill-tested, and is located west of (and possibly along-trend from) the Americano West prospect (Figure 9; the prospects are discussed more fully in Chartier, 2012).

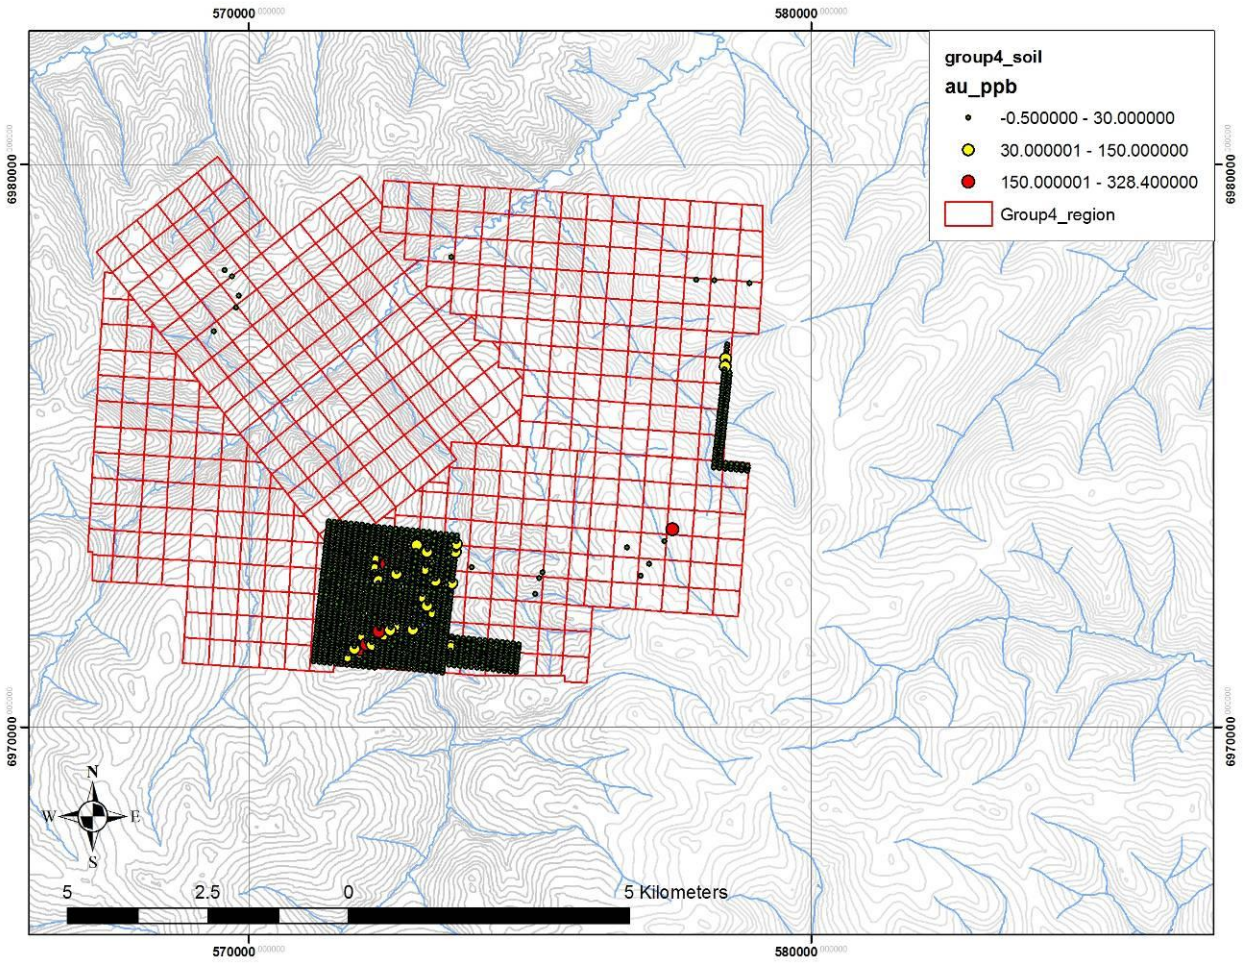

Figure 8 Gold-in-soil results for the Group 4 claims area. A detailed map of the grid area in the southern part of the map is shown in Figure 9.

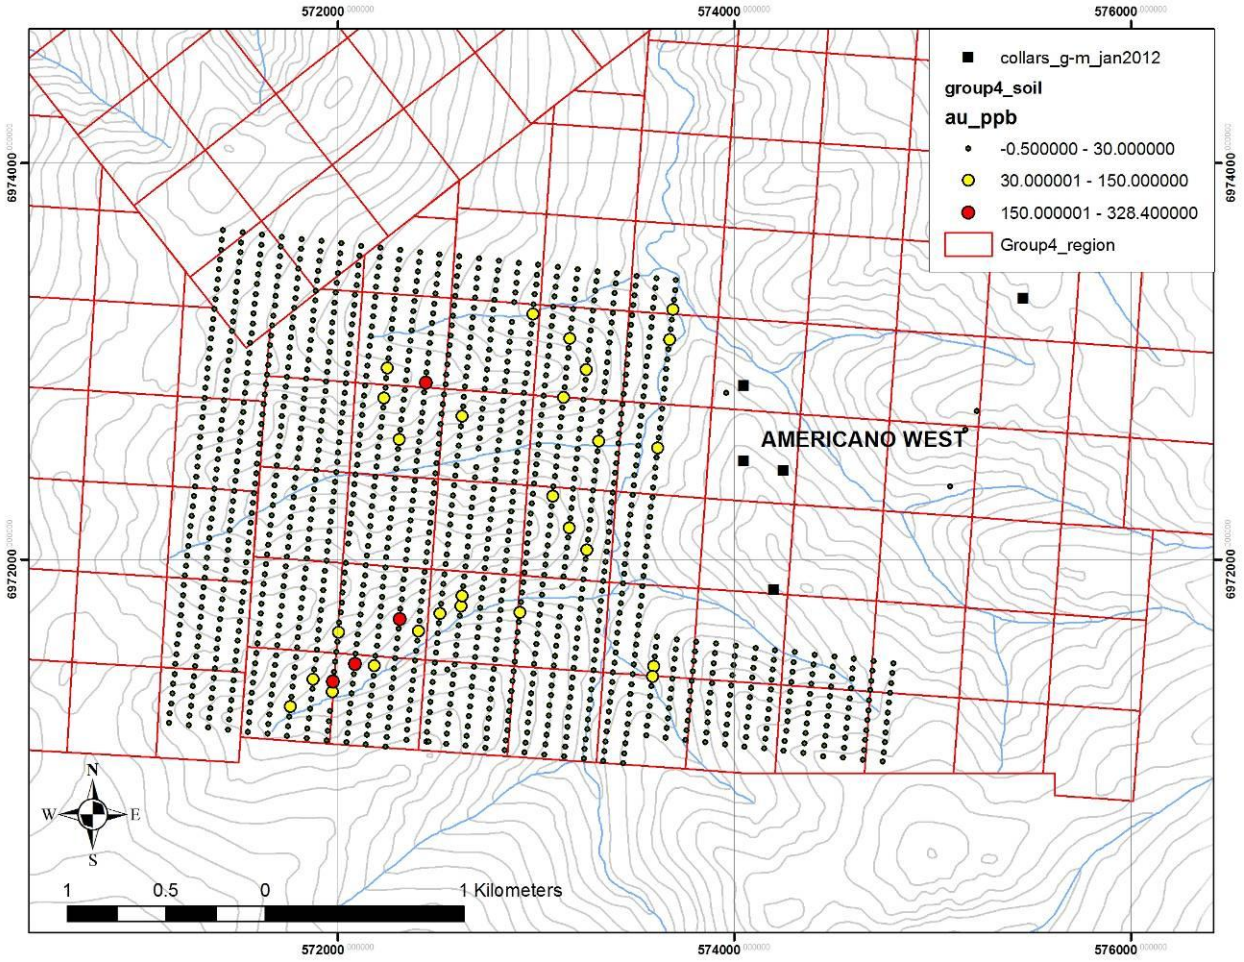

Figure 9 Detailed map of gold-in-soil results for the grid area in the southern part of the Group 4 claims. Note the soil anomaly along strike from the Americano West drill holes.

9.0 DISCUSSION AND RECOMMENDATIONS

The Coffee Project exploration program is ongoing and plans are underway for continued systematic work in 2012 at the time of writing.

The aeromagnetic/radiometric and detailed orthophoto surveys are contributing to targeting work that is ongoing. Lineaments from these datasets associated with geochemical trends will be targeted for further work as the Coffee exploration campaign proceeds.

The 2011 soil sampling grid in the southern part of the Group 4 claims has a number of clusters of anomalous samples in addition to a zone with a conspicuous southwest linear trend (Figure 9). The southwest-trending anomaly may represent the along-strike extension of the Americano West area. These areas, as well as additional sporadic gold-rich soil samples elsewhere in the Group 4 claims area are worthy of follow-up (this work is ongoing).

10.0 STATEMENT OF EXPENDITURES

The total cost for the 2011 work on the Group 4 claims was $110,717.44 ($116,253.32 including 5% GST; Table 4).

Table 4 Cost summary for the Group 4 claims.

Coffee HW07092 - Expenditure Summary		
2011 Field Season	**Contractor**	**Cost**
		Pro Rata Cost
Airborne magnetics/radiometrics		
Regional 200m line spacing (incl mob/demob)	New Sense Geophysics	**$ 20,839.45**
Jet Fuel (including freight to site)	North 60	**$ 3,303.47**
Crew Accommodation Coffee Camp	Kaminak Gold Corp	**$ 1,939.65**
Detailed 100m line spacing Infill (Block 2)	New Sense Geophysics	**$ 9,697.87**

12.0 STATEMENT OF QUALIFICATIONS

I, Alan John Wainwright, hereby certify that:

1. I am a mineral exploration geologist with offices at Suite 1020 – 800 West Pender Street, Vancouver BC V6C 2V6.
2. I am a graduate of McGill University (B.Sc., 2000), University of Toronto (M.Sc., 2003) and The University of British Columbia (Ph.D., 2008), all in geology. I have been engaged in mineral exploration since 1999.
3. I am a Professional Geoscientist of the Association of Professional Engineers and Geoscientists of the Province of British Columbia, Registration #33841.
4. I have had direct involvement with the exploration program conducted on the area discussed in this report. I am familiar with mineral deposit models and have experience conducting evaluations of mineral properties. I have been working on the Coffee claims since April 2010.

Respectfully submitted,

Alan J. Wainwright, Ph.D., P.Geo.
District Geologist
Kaminak Gold Corp.

Vancouver BC V6C 2V6 Canada

Submitted By: Tim Smith
Receiving Lab: Canada-Dawson City
Received: July 08, 2011
Report Date: August 09, 2011
Page: 1 of 7

CERTIFICATE OF ANALYSIS DAW11000005.1

CLIENT JOB INFORMATION

Project: CFC
Shipment ID: 2011-SDUG01
P.O. Number
Number of Samples: 152

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT Dispose of Reject After 90 days

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
Dry at 60C	152	Dry at 60C			VAN
SS80	152	Dry at 60C sieve 100g to -80 mesh			VAN
1DX2	152	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN

ADDITIONAL COMMENTS

Invoice To: Kaminak Gold Corporation

CERTIFICATE OF ANALYSIS DAW11000016.1

CLIENT JOB INFORMATION

Project: CFC
Shipment ID: 2011-CFC01
P.O. Number
Number of Samples: 208

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT Dispose of Reject After 90 days

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
Dry at 60C	208	Dry at 60C			DAW
SS80	208	Dry at 60C sieve 100g to -80 mesh			DAW
1DX2	208	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN

ADDITIONAL COMMENTS

Invoice To: Kaminak Gold Corporation
1020 - 800 West Pender Street
Vancouver BC V6C 2V6
Canada

CC: Tim Smith

GENERAL MANAGER

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only.
All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
"*" asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.
