1.0 INTRODUCTION

1.1 General introduction

The Antimony mountain project is located approximately 65 km northeast of Dawson City, Yukon Territory Canada. It consists of 478 contiguous quartz claims and covers approximately 9,617 hectares. The western limit of the property crosses the Dempster Highway. Access to the property from Dawson entails a 25 minute helicopter trip. The 2010 work season consisted of a diamond drilling program which included 4 drill holes at the focused on the Golden Wall zone. Prior to drilling, a short mapping exercise was carried out to determine best location for drill pads. Flume Exploration services spent 4 days implementing drill pads, consisting of timbers and minor earth moving.

1.2 Participating Personnel

The 2010 drilling program was funded and operated by Golden Predator Canada Corp. of Vancouver, British Columbia. Kluane Drilling of Whitehorse, Yukon provided the drilling services, and staged out of the Brewery Creek property. Fireweed helicopters, based in Dawson City provided helicopter support. The helicopter and pilot stayed at the Brewery Creek camp. Geological and logistical services were provided by Golden Predator Canada Corp. staff. Expediting services were provided by C.O.R.E Expediting of Whitehorse, Yukon. All sample assay work was done by ALS/Chemex labs of Vancouver, BC.

1.3 Agreement

Golden Predator has an option to earn a 100% interest in the Antimony Project, subject to a 4% NSR of which 3% on 422 (RyanWood Exploration Inc.) quartz claims can be bought back for \$3,000,000 and a 2% NSR on 56 quartz claims (Strategic Metals) of which 1% can be bought back for \$500,000.

2.0 PROPERTY LOCATION, CLAIM DATA AND ACCESS

2.1 Location

Antimony Mountain is located in the Dawson mining district, approximately 65 km northeast of Dawson and 25 km north of the Brewery Creek project (Fig. 2-1). The property comprises 472 contiguous quartz claims covering approximately 9617 hectare, and is situated on NTS Map Sheet 116B/08 centered at 64 ° 19' north and 138 ° 16' west (NAD 83, Zone 7N: 633000 m E, 7134500 m N).

2.3 Access

The claims are located adjacent to the Dempster Highway, near the 50 km mark. The property can be accessed by helicopter, which is either a 25 minute flight from Dawson City, or a 10 minute flight from the Brewery Creek property. For the 2010 exploration season it was accessed from Brewery Creek via helicopter.

3.0 PHYSIOGRAPHY

This location is part of the western edge of the ancient Selwyn basin, and contains clastic and minor volcanic rock ranging from Proterozoic to Jurassic. Antimony Mountain is a part of the Snowy Range of Ogilvie Mountains. Topography is rugged a result of glacially carved U shaped valleys, and sharp ridges and arêtes. Well developed vertical joints in the intrusive rocks also contribute to the rugged nature of the property. Valley slopes are covered in scree, resulting in the majority of bedrock being covered. Valley bottoms are predominantly colluviums and glacial moraine. Outcrop is prevalent on ridges and is exposed along the banks of Cody Creek. The property ranges from 1,120 to 2,036m above sea level, the highest point being Antimony

Mountain. The majority of this property is above tree line (~1200 m), and vegetation consists of alder, willow, and other sub-alpine species.

4.0 HISTORY AND PREVIOUS WORK

4.1 Conwest Exploration

Earliest recorded work on the property was by Conwest Exploration. In 1966 the AJ/O'Brien property was staked on the eastern margin of the Antimony Mountain stock. The work included geochemistry and four diamond drill holes totaling 659 feet.

4.2 Anaconda Canada Exploration Ltd.

In 1979 Anaconda Canada Exploration Ltd. staked the Thor claims. These claims were staked on the basis of a stream sediment survey and EM survey carried out by the Geological Survey of Canada (GSC). The sampling program identified several anomalous areas, however instrument malfunctions with the EM survey resulted in limited reliable data. In 1980, Anaconda carried out detailed mapping, hand trenching and four NQ diamond holes in upper Antimony creek. This work delineated the showings to be narrow east-west trending fault controlled polymetallic veins with local high grade sections (Coombes 1996).

4.3 Total Energold Corp.

The Thor claims were re-staked as the Buz and Hud claims in 1987 by Kim Hudson. In 1988, Total Energold Corporation staked the Antimony Mountain stock area, and in 1989 optioned the Buz and Hud claims from Ms. Hudson. Work in 1989 included flying a VLF-EM survey; extensive reconnaissance soil and stream sediment sampling as well as rock sampling; 1:10,000 scale geological mapping, detailed mapping of showings; ground geophysics and diamond drilling of the AJ showing. The aforementioned sampling and geophysical surveys attributed to the discovery of the TT and Toby veins.

4.4 Kennecott Exploration

In 1994, Kennecott staked the AM claims and optioned the BUZ and HUD claims. This was spurred by elevated gold, arsenic, antimony and uranium values obtained from GSC stream sediment sampling. The 1995 Kennecott program consisted of geochemical soil surveys, localized mapping and examination of the known showings. Previous work had focused on metalliferous deposits in the met-sedimentary rocks surrounding the intrusive, thus the intrusive was considered highly prospective. At this time, Kennecott inferred from their exploration program that the interior of the stock was suitable to hold "Fort Knox" type gold deposits.

1998 Kennecott work consisted of stream sediment sampling, prospecting, soil and rock sampling of ridges and valley slopes. The focus was outside the main intrusion, in an effort to focus on underexplored areas. Stream sediment sampling confirmed anomalous drainages which

contained mineralized showings. Soil samples distal to the intrusion returned low gold values. This program identified four areas of interest: The North Ridge area, upper Jan creek, Toby Creek and Cody Creek.

4.5 RyanWood Exploration

In 2004 Shaun Ryan of RyanWood exploration sent a team out to expand on the soil anomaly. Their survey revealed a gold, arsenic, bismuth anomaly on the most western soil grid, which may coincide with calc silicate/skarn mineralization. Figure 4-1 depicts the soil and rock samples taken by RyanWood exploration. The apparent northeast/southwest trend along the top of the ridge is obvious. This trend is the foundation on which Golden Predator based its 2010 drilling program on.

4.6 Golden Predator Canada Corp.

In 2009 Golden Predator earned a 100% interest in the claims which were previously owned by Ryanwood Exploration Inc. via an option agreement. The 2009 exploration program consisted of a 12 hole 1142 m diamond drilling program. The purpose of this program was to define the thickness and attitude of the AJ vein located adjacent to Cody Creek. Drilling was conducted between September 4th 2009 and October 6th 2009. The results delineated continuous mineralization with potentially economic gold values, and the presence of a mineralized cal-silicate skarn in both the hanging and foot wall. This indicated the potential for more widely spread mineralization associated with the intrusion of the Antimony stock. The highlights from the 2009 drilling program follow on table 4-1.

5.0 Geology

5.1 Geologic setting

The property is situated at the western edge of the Selwyn Basin. The Selwyn Basin is bound by the Tintina Fault to the south and the Dawson Thrust fault to the north. The theory has been proposed that the present-day Tintina Fault was the location of an ancient suture zone. The structure has undergone ~450km of transcurrent dextral slip since the end of the Mesozoic.

The Selwyn Basin rocks are that of the ancient geosynclines at the western margin of the North American plate. These rock types vary from Proterozoic basinal and platformal clastic/politic sediments to Jurassic clastic shelf sediments (Anderson and Hulstein 1998). The basin endured rifting during the Proterozoic and again in the late Devonian.

During the Mesozoic terrane accretion dominated the western edge of the North American plate. When the Intermontane super-terrane collided with the passive continental margin of North America, compressive tectonic events occurred. The result was crustal shortening, tight folding and failure along hinges resulting in large scale thrust features. The three regionally stacked thrust panels are: the Robert Service, Tombstone and Dawson thrust sheets (oldest to youngest).

Throughout the Paleozoic the Selwyn Basin was intruded by granitoids ranging from Mississippian to Eocene in age. The most dominant and extensive intrusion sequence was the mid Cretaceous Tombstone Suite. These rocks range from intermediate to felsic in composition, and are linked to known gold deposits at Brewery Creek, Dublin Gulch, Clear Creek, and Gold Dome in the Yukon, and Fort Knox, True North and Pogo in Alaska.

5.2 Property Geology

Stratigraphy

The property is underlain by upper Proterozoic to Early Cambrian Hyland group which is subdivided into the Yusezyu and Narchilla Formations. The Yusezyu Formation consists of rusty weathered gritty quartzite, sandstone and quartz-pebble conglomerate with minor limestone and calcareous sandstones and shales (Gabrielse and Campbell, 1991). The Narchilla formation consists mainly of black, maroon and green shales and slates.

The Hyland group is overlain by the Lower Cambrian Gull Lake Group, which consists of fine clastics and minor sandstones. This group is overlain by the Cabro-Ordovician carbonate rocks of the Rabbitkettle group. At the southern end of the property, Ordovician to Early Devonian Road River Group chert, shale and calcareous siltstones outcrop.

Fig. 5-1 | Regional Geology

Antimony Mountain Property
Yukon Territory, Canada

Structure

Bedding generally strikes east to southeast (070-150°) and dips to both the north and south. Variable strikes and dips reveal asymmetric, isoclinal folding with the trend of fold-axes at northwest with a westerly closure (Anderson and Hulstein, 1998). Intermediate dikes and quartz veins often intrude faults and fractures. Mapping by Logan Resources at the Golden Wall area suggests that folding has deformed the metasedimentary rocks into an upright anticlinal structure with the axial plane following the Golden Wall ridge.

Intrusive rocks

The Antimony Mountain stock, a feldspar porphyritic hornblende monzonite with quartz-monzonite core measures approximately 7 by 3.5 km (Pelletier and Tucker 1989). The Kennecott field programs throughout the 1990's identified three specific dike lithologies (Anderson and Hulstein 1998):

1. A fine grained quartz latite dikes, 1-3 m wide, observed beyond the Antimony Mountain stock but are thought to be related to it. On the North Ridge these dikes were mineralized with disseminated pyrite and pyrrhotite.
2. A feldspar-biotite porphyritic dike, pale orange with a very fine grained greyish brown groundmass. These dikes were hosted within gritty quartzites on the ridge spurs flanking Cody Creek. Dikes were 1-10 m thick and spaced 10-200 m apart. Appears to be related to Antimony Mountain stock but has undergone different alteration.
3. Lamprophyre dikes with a hornblende-biotite rich groundmass, often biotite porphyritic, were observed within and beyond the main stock and were observed in the 2009 drill program

Work completed by Logan Resources by Chris Ash (Ash, 2010, pers. comm.) on the Golden Wall showing identified four dyke types on the Golden Wall Ridge:

1. Hornblende-biotite pyritic dyke described as very fine grained to aphanitic, with a weakly glassy texture;
2. Hornblende-biotite pyritic dyke similar in composition to the previous dyke, but coarser grained;
3. Hornblende pyritic diorite dyke consisting of a fine to medium grained hornblende porphyry with recessive weathering;
4. Quartz monzodiorite(?), coarse grained and equigranular

6.0 MINERALIZATION

Previous work done on the property has shown that most mineralization is vein-type arsenopyrite-tourmaline-quartz-pyrrhotite in nature, and is related and proximal to the Antimony Mountain intrusive stock, or within the contact metamorphic aureole of the stock. In addition these veins are generally fault controlled, such as that of the AJ zone near Cody creek, the focus

of Golden Predator's 2009 program. The Golden Wall showing is skarn/replacement-type mineralization resulting from limestone or lime clastics proximal to intrusive bodies. The zone shows massive to disseminated sulphides (arsenopyrite, pyrite and pyrrhotite) situated in limy Proterozoic sediments. The units that comprise this area appear to form northeast trending, upright anticlinal structure with an axial trace that parallels the Golden Wall Ridge (Ash, 2010, pers. Comm.). The zone is exposed along the upper 100 metres of the ridge with an approximate strike length of 450m.

7.0 2010 EXPLORATION

7.1 Exploration

The 2010 exploration program focussed on the Golden wall zone. Prior to start of the drilling, the area was visited by Fredy Marino, Sr. project geologist with Golden Predator Canada Corp. The initial visits to the location were done for the purpose of preliminary mapping of the stratigraphic units. Previous work delineated that the deposit was "stratabound", thus mapping the potential mineralized zone was essential prior to drilling. Once the attitude of the potential mineralized zone was determined, 3 drill pads were built on the top of the Golden Wall ridge, and 4 diamond drill holes were drilled.

7.2 Drilling

As mentioned previously, the focus of the 2010 drilling program was at the Golden wall zone. The purpose of the four holes (GW10-026-029) was to test and define the north northeast trending axial plane of the theorized upright anticline. The location of the four diamond drill holes can be seen on figure 7-1 and table 7-1 shows the collar file.

Holes GW10-026 and 027 were drilled from the same pad. Hole 026 intercepted multiple sections of finely disseminated pyrrhotite and pyrite over sections up to 10 meters in thickness. These intercepts spurred Golden Predator Canada Corp. to drill a second hole in the same location, but at a more northern azimuth, GW10-027. This hole intercepted semi-massive sulphides from 27.33 to 29.74, 45.96 to 51.6 m and 79.6 to 83.64 meters.

7.3 Collar Surveys

Collar locations were surveyed using a handheld Garmin GPS with accuracy of approximately $\pm$ 3 meters. Table 7-1 presents the collar file for the 2010 program.

Table 7-1 Antimony Collar Locations

Hole	Length m	Easting	Northing	Elevation	Azimuth	Dip
GW10-026	256.03	629238	7135845	1657	45	-50
GW10-027	231.34	629238	7135845	1657	18	-55
GW10-028	188.06	629030	7135672	1614	20	-50
GW10-029	92.96	629242	7135986	1591	170	-45

7.4 Sampling Methodology

An electric rock saw was used to split the core once logged and sample intervals were laid out. One half of the core was sent for sampling, and the other is kept on site for future analysis. Drill core samples were transported to Whitehorse by C.O.R.E expediting, and then samples were sent to ALS Mineral's prep lab in Whitehorse, and then forwarded to one of their ISO 9001 certified preparation facility in Terrace or Vancouver. The pulps were analyzed at ALS Mineral's ISO 9001 certified laboratory in Vancouver. Approximately 5% of the pulps are sent for secondary check assays at Stewart Group's Eco Tech laboratory in Kamloops, B.C. Blanks, commercial standards and duplicate samples were included in each batch. To determine Au levels at the ppb level detection limit of 5-10,000 ppb (5-1000 ppb at Stewart Group) 30 g samples are fire assayed then digested in aqua regia solution and analyzed by atomic absorption. At Eco Tech, values over 1,000 ppb are re-assayed by fire assay, digested with aqua regia and then re-analyzed by an atomic absorption instrument (detection limit 0.03 g/t). At ALS Minerals, values over 10 g/t Au are re-assayed by fire assay followed by a gravimetric finish (50 ppb lower detection limit). Additional check-analyses are being carried out by the lab which did not receive the original sample.

Other elements, including silver, were analyzed by a 35 elements package (ME-ICP41) in which the sample is dissolved in an aqua regia acid solution and then analyzed by ICP-AES (Inductively Coupled Plasma - Atomic Emission Spectrometry). Ag values over 100 g/t are re-assayed by method Ag-OG46 which involves digestion in Hydrobromic, Nitric and Hydrochloric acids followed by analysis by ICP-AES. Ag values over 1,500 g/t are re-assayed by method Ag-GRA21, a 30 g fire assay with gravimetric finish (5 g/t lower detection limit).

7.5 Results

The 2010 drilling program carried out at the Golden Wall zone was designed to test and define the north northeast trending axial plane of the theorized upright anticline. Hole GW10-027 and GW10-028 intersected multiple zones of gold mineralization, and the highlights are presented in Table 7-2.

Table 7-2 Golden Wall Results

Hole I.D	From (m)	To(m)	Au g/t	Interval (m)
GW10-028	23.00	25.00	3.250	2
GW10-028	16.00	18.00	1.925	2
GW10-027	103.50	105.50	1.155	2
GW10-027	48.00	50.00	0.582	2
GW10-027	27.30	29.00	0.472	1.70
GW10-028	31.00	33.00	0.469	2

GW10-028	12.00	14.00	0.425	2
GW10-028	25.00	27.00	0.425	2

Hole GW10-027 was drilled at an azimuth of 18 degrees, 27 degrees to the north of GW10-026, which was drilled at an azimuth of 45 degrees. Both holes intersected abundant pyrite and pyrrhotite mineralization throughout the hole, however only GW10-027 produced favourable results. Hole GW10-028 was drilled a few hundred meters southwest of hole GW10-027 and intersected the highest gold values found on the Golden Wall this year. The pyrite/pyrrhotite mineralization that resulted in the 3.250 g/t Au sample was from a mineralized vein running from 23.2 to 27.43 meters. The 16.0 to 18.0 sample which ran 1.925 g/t Au came from a zone of foliation bound replacement pyrite mineralization. Hole GW10-027 intersected 1.155 g/t Au over a two meter section of quartz-biotite hornfels, which was located directly above a four meter brecciated zone. These results are encouraging and have laid the ground work for future exploration on this specific zone.

8.0 CONCLUSIONS AND RECOMMENDATIONS

The 2010 drilling program partially evaluated the Golden Wall Zone on the Antimony Project. The following conclusions are drawn:

Geological logging of the core and the subsequent interpretation of the results characterize the Golden Wall showing as a mix of earlier deformed sedimentary rocks that include interbedded limestone and siltstone and more massive quartzite. Four different types of intrusive rocks cut the metasedimentary sequence. These intrusive dykes are: monzonite, andesite, coarse plagioclase andesite porphyry, and lamprophyre dykes in composition.

Mineralization at the Golden Wall is typical of replacement in limestones or limy clastic sedimentary units proximal to intrusive dike rocks. The best developed mineralization occurs proximal to dykes which cut the axial bedding of the sedimentary units. Quartz-sulphide-tourmaline veins typical of the other showings at the Antimony Property have not been identified at the Golden Wall Zone yet.

The current exploration program covered only two quartz mining claims of the Golden Wall Zone (YC25810, and YC25823), and identified a weakly mineralized zone. While only modest results were returned, it is recommended that Golden Predator continue to explore the Golden Wall Showing. Previous rock and soil sample results are questionable. The diamond drill holes do not reflect same values reported from previous surface results. The previous material analyzed may likely be talus-float and not true soil-rock samples.

Results of hole GW10-028 have confirmed the intense magnetic highs which is coincident with presence of pyrrhotite. However, VLF-EM signal is strongly affected by Golden Wall steep topography.

Detailed follow up channel sampling and mapping should be completed in the Golden Wall outcrop to evaluate the main lithological units, alteration types, and main structural mineralized trends. In addition, detailed prospecting and bedrock mapping are recommended to the NNE part of the Golden Wall Mountain.

Continuation of exploration drilling is highly recommended. A 1,000 meter diamond drilling program is warranted to check untested anomalous areas at the Golden Wall Zone (300m); and to test the extent and grade of gold mineralization of the JC vein showing (300m), and the AJ vein showing (400m).

APPENDIX 1

STATEMENT OF QUALIFICATIONS

I, Fredy Marino, of the City of Chicoutimi, in the Province of Quebec, DO HEREBY CERTIFY THAT:

1) I am an employee and Project Geologist of Golden Predator Canada Corp. with an address at 201A – 170 Titanium Way, Whitehorse, Yukon, Y1A 0G1.

2) I hold the following academic qualifications:

B.Sc. Degree in Geology (1995), University EAFIT, Medellin, Colombia; Professional Master Degree in mineral exploration (2000) ITC, Delft, Netherlands; and Master Degree in Geology (2004), Mackay School of Mines, University of Reno, Nevada.

3) I have been practicing my profession continuously in Canada and overseas for the past fifteen years as an exploration/project geologist on a variety of exploration programs searching for various commodities including gold, copper, and PGE's.

4) The information for this report is based on information as itemized in the Selected Reference section of this report and from work the author has performed at the Antimony Mt. Property from August 5th to August 21st, 2010.

Dated this 2nd Day of February, 2011.

Respectfully Submitted

Fredy Marino, PM, MSc.

Project Geologist,

Golden Predator Canada Corp.

I, Tyler Bourne, of the City of Vancouver, in the Province of British Columbia, do hereby certify that:

- 1) I am an employee and Geologist with Golden Predator Canada Corp. with an address at 201A-170 Titanium Way, Whitehorse, Yukon, Y1A 0G1.
- 2) I graduated from the University of British Columbia with a B.Sc. in Earth and Environmental Science in 2009
- 3) From 2007 to present, I have been actively engaged in mineral exploration in Canada, with a focus in gold exploration.
- 4) The information for this report is based on information as itemized in the reference section of this report and from works the authors of this report performed on the Antimony Mt. property from July 21st to August 20th 2010.

Dated this 2nd Day of February, 2011

Respectfully submitted

Tyler Bourne, B.Sc.

Geologist

Golden Predator Canada Corp.

CERTIFICATE WH10118317

Project: Antimony Mt
P.O. No.: Sbmtn-2010-JC-1223
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT,
Canada on 24-AUG-2010.
The following have access to data associated with this certificate:
ANDREW CALDWELL COR COE JACK COTE
GILLES DESSUREAU FREDY MARINO BILL SHERIFF

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI- 21	Received Sample Weight
LOG- 22	Sample login - Rcd w/o BarCode
CRU- QC	Crushing QC Test
PUL- QC	Pulverizing QC Test
CRU- 31	Fine crushing - 70% < 2mm
SPL- 21	Split sample - riffle splitter
PUL- 31	Pulverize split to 85% < 75 um
LOG- 24	Pulp Login - Rcd w/o Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au- AA23	Au 30g FA- AA finish	AAS
ME- ICP41	35 Element Aqua Regia ICP- AES	ICP- AES
ME- OG46	Ore Grade Elements - AquaRegia	ICP- AES
Cu- OG46	Ore Grade Cu - Aqua Regia	VARIABLE

To: GOLDEN PREDATOR CANADA CORP.
ATTN: ALS CHEMEX

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE WH10118318

Project: Antimony Mt		
P.O. No.: Sbmtn-2010-JC-1217		
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 24- AUG- 2010.		
The following have access to data associated with this certificate:		
ANDREW CALDWELL GILLES DESSUREAU	COR COE FREDY MARINO	JACK COTE BILL SHERIFF

SAMPLE PREPARATION	
ALS CODE	DESCRIPTION
WEI- 21	Received Sample Weight
LOG- 22	Sample login - Rcd w/o BarCode
CRU- 31	Fine crushing - 70% < 2mm
SPL- 21	Split sample - riffle splitter
PUL- 31	Pulverize split to 85% < 75 um
LOG- 24	Pulp Login - Rcd w/o Barcode

ANALYTICAL PROCEDURES		
ALS CODE	DESCRIPTION	INSTRUMENT
Au- AA23	Au 30g FA- AA finish	AAS
ME- ICP41	35 Element Aqua Regia ICP- AES	ICP- AES

To: GOLDEN PREDATOR CANADA CORP.
ATTN: ALS CHEMEX

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE WH10118319

Project: Antimony Mt
P.O. No.: SBMtn-2010-JC-1216
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT,
Canada on 24- AUG- 2010.
The following have access to data associated with this certificate:
ANDREW CALDWELL
GILLES DESSUREAU
COR COE
FREDY MARINO
JACK COTE
BILL SHERIFF

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI- 21	Received Sample Weight
LOG- 22	Sample login - Rcd w/o BarCode
CRU- QC	Crushing QC Test
PUL- QC	Pulverizing QC Test
CRU- 31	Fine crushing - 70% < 2mm
SPL- 21	Split sample - riffle splitter
PUL- 31	Pulverize split to 85% < 75 um
LOG- 24	Pulp Login - Rcd w/o Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au- AA23	Au 30g FA- AA finish	AAS
ME- ICP41	35 Element Aqua Regia ICP- AES	ICP- AES

To: GOLDEN PREDATOR CANADA CORP.
ATTN: ALS CHEMEX

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE WH10118960

Project: Antimony Mt
P.O. No.: SbMtn-2010-JC-1215
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT,
Canada on 24-AUG-2010.
The following have access to data associated with this certificate:
ANDREW CALDWELL
CILLES DISSUREAU
COR COE
FREDY MARINO
JACK COTE
BILL SHERIFF

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-QC	Crushing QC Test
CRU-31	Fine crushing - 70% < 2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% < 75 um
LOG-24	Pulp Login - Rcd w/o Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
AU-AA23	Au 30g FA-AA finish	AAS
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

To: GOLDEN PREDATOR CANADA CORP.
ATTN: ALS CHEMEX

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE WH10118961

Project: Antimony Mt
P.O. No.: SbMtn-2010-JC-1212
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT,
Canada on 24-AUG-2010.
The following have access to data associated with this certificate:
ANDREW CALDWELL
GILLES DESSUREAU
COR COE
FREDY MARINO
JACK COTE
BILL SHERIFF

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI- 21	Received Sample Weight
LOG- 22	Sample Login - Rcd w/o BarCode
PUL- QC	Pulverizing QC Test
CRU- 31	Fine crushing - 70% < 2 mm
SPL- 21	Split sample - riffle splitter
PUL- 31	Pulverize split to 85% < 75 um
LOG- 24	Pulp Login - Rcd w/o Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
AU- AA23	Au 30g FA- AA finish	AAS
ME- ICP41	35 Element Aqua Regia ICP- AES	ICP- AES

To: GOLDEN PREDATOR CANADA CORP.
ATTN: ALS CHEMEX

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE WH10122271

Project: Antimony Mt
P.O. No.: Spmtm-JC-1191
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT,
Canada on 30-AUG-2010.
The following have access to data associated with this certificate:
ANDREW CALDWELL COR COE JACK COTE
GILLES DESSUREAU FREDY MARINO BILL SHERIFF

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
FND-02	Find Sample for Addn Analysis

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

To: GOLDEN PREDATOR CANADA CORP.
ATTN: ALS CHEMEX

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE WH10122272

Project: Antimony Mt

P.O. No.: Sbmtn-JC-1193

This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT,
Canada on 30-AUG-2010.

The following have access to data associated with this certificate:

ANDREW CALDWELL
GILLES DESSUREAU

COR COE
FREDY MARINO

JACK COTE
BILL SHERIFF

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
FND-02	Find Sample for Addn Analysis

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Cu-OG46	Ore Grade Cu - Aqua Regia	VARIABLE

To: GOLDEN PREDATOR CANADA CORP.
ATTN: ALS CHEMEX

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE WH10122274

Project: Antimony Mt
P.O. No.: Sbmtn-JC-1194
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT,
Canada on 30-AUG-2010.

The following have access to data associated with this certificate:

ANDREW CALDWELL
GILLES DESSUREAU

COR COE
FREDY MARINO

JACK COTE
BILL SHERIFF

APPENDIX 4

METHODS OF DETECTION

Geochemical Procedure - ME-ICP41
Trace Level Methods Using Conventional ICP-AES Analysis

Sample Decomposition: Nitric Aqua Regia Digestion (GEO-AR01)
Analytical Method: Inductively Coupled Plasma - Atomic
Emission Spectroscopy (ICP - AES)

A prepared sample is digested with aqua regia in a graphite heating block. After cooling, the resulting solution is diluted to 12.5 mL with deionized water, mixed and analyzed by inductively coupled plasma-atomic emission spectrometry. The analytical results are corrected for inter-element spectral interferences.

NOTE: In the majority of geological matrices, data reported from an aqua regia leach should be considered as representing only the leachable portion of the particular analyte.

Element	Symbol	Units	Lower Limit	Upper Limit	Default Overlimit Method

Fire Assay Procedure – Au-AA23 & Au-AA24
Fire Assay Fusion, AAS Finish

Sample Decomposition: Fire Assay Fusion (FA-FUS01 & FA-FUS02)

Analytical Method: Atomic Absorption Spectroscopy (AAS)

A prepared sample is fused with a mixture of lead oxide, sodium carbonate, borax, silica and other reagents as required, inquarted with 6 mg of gold-free silver and then cupelled to yield a precious metal bead.

The bead is digested in 0.5 mL dilute nitric acid in the microwave oven, 0.5 mL concentrated hydrochloric acid is then added and the bead is further digested in the microwave at a lower power setting. The digested solution is cooled, diluted to a total volume of 4 mL with de-mineralized water, and analyzed by atomic absorption spectroscopy against matrix-matched standards.

Method Code	Element	Symbol	Units	Sample Weight (g)	Lower Limit	Upper Limit	Default Overlimit Method
Au-AA23	Gold	Au	ppm	30	0.005	10.0	Au-GRA21
Au-AA24	Gold	Au	ppm	50	0.005	10.0	Au-GRA22

DOWNHOLE SURVEY:

AZIMUTH (true):	DIP:	DEPTH (m):
No DownHole survey taken		

SUMMARY: From	To	Code	Description
	0	3.05 CAS	Casing
	3.05	5.52 lpr	Light grey fine grained quartz diorite,
	5.52	8.45 Sdt	Light grey siltstone, minor oxidation and heavily fractured.
	8.45	19.15 lpm	Grey/white fine to medium grained monzonite, pervasive chlorite alteration.
	19.15	25 Xq/Sdt	First meter, unoxidized quartzite followed by ~ 5 meters of black siltstone with pervasive chlorite alteration.
	25	55.47 Xk/Xh/Xhqb	Alternating meter scale units of undifferentiated hornfels, skarn, quartz biotite hornfels. Patchy replacement pyrrhotite throughout.
	55.47	63.76 lpm	Competent fine grained monzonite, abundant patchy replacement pyrrhotite.
	63.76	93.33 Xhb/Sdt/Xq	Alternating meter scale units of biotite hornfels, siltstone and quartzite. Last ~5m has pervasive chlorite alteration, as well as minor pyrrhotite.
	93.33	103.85 VNq/Bx	Approximate 10 meter zone of quartz veins and breccia, heavily oxidized.
	103.85	130.36 Sdt/lpd/lpr	~10 meters of siltstone followed by nearly 20 meters of diorite/quartz diorite. Units are unoxidized, but skarn alteration dominates the last 5 meters
	130.36	140.78 BX/VNq	Heavily brecciated zone with 10cm scale quartz veins at the end.
	140.78	199.12 lpm/Xhqb	Alternating meter scale units of monzonite and quartz biotite hornfels. Last 10 meters contains minor pyrite replacement.
	199.12	245.93 lpd/Xhqb/Xh	Alternating meter scale units of quartz diorite, quartz biotite hornfels and undifferentiated hornfels. Minor pyrite replacement throughout. Patchy c
	245.93	246.34 Bx	Limonitic breccia containing semimassive overprinting pyrite.
	246.34	256.03 lp/Xhb	Intermediate intrusive and biotite hornfels.

	0	1.52 CAS	Casing
	1.52	8.54 Xq	Light brown quartzite, moderately oxidized. Pyrite and arsenopyrite occur as a minor replacement sulphide.
	8.54	27.43 Ip/Sdt/VN	Alternating meter scale units of intrusive (undifferentiated) siltstone and quartz veins, hosting pyrite/pyrrhotite.
	27.43	75.9 Scl/S/Sdt	Sedimentary units, alternating limestone, siltstone and undifferentiated sedimentary rocks. Intermitent chlorite alteration.
	75.9	81.25 lpd	Light grey diorite, unoxidized with patchy chlorite alteration.
	81.25	107.7 Sdt	Fine grained black siltstone, unoxidized.
	107.7	155.5 lva	Light green grey andesite unit, unoxidized.
	155.5	158.1 BX	Breccia, clay altered, unmineralized and unoxidized.
	158.1	167.2 S	Undifferentiated sedimentary rocks, unaltered and unoxidized.
	167.2	173.7 BX	Light orange/brown breccia. Unoxidized and unmineralized.
	173.7	180.8 lvl	Grey/white trachyandesite.
	180.8	181.5 VN	Vein, quartz, unmineralized/unoxidized.
	181.5	188.06 Sdh	Shale.

No DownHole survey taken		

SUMMARY: From	To	Code	Description
0.00	9.14	CAS	Casing.
9.14	11.35	Sdt	Black fine grained siltstone, with minor oxidation. Highly fractured.
11.35	12.10	lp	Green fine grained undifferentiated intermediate intrusive. Minor oxidation.
12.10	20.66	Sdt	Black fine grained siltstone, with minor oxidation. Highly fractured.
20.66	23.50	lpr	Yellow, moderately oxidized quartz diorite.
23.50	28.00	Xq	Light grey quartzite. Minor oxidation, and minor replacement pyrite.
28.00	34.50	Sdt	Brownish beige siltstone, minor oxidation.
34.50	36.00	lp	Light yellow/brown intermediate intrusive.
36.00	44.05	Sdt	Brownish beige siltstone, minor oxidation.
44.05	53.20	Sdt	Black siltstone, unaltered unmineralized.
53.20	62.00	Sdt	Light pink siltstone, unoxidized.
62.00	69.63	lpm	Greyish green monzonite. Unoxidized.
69.63	79.00	Scl	Light grey limestone.
79.00	92.17	lpd	Light grey diorite dike.
92.17	92.96	Sdt	Siltstone.

CERTIFICATE WH10113249

Project: Antimony Mt		
P.O. No.: ShMtn-JC-1199		
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 15- AUG- 2010.		
The following have access to data associated with this certificate:		
COR COE FREDY MARINO	JACK COTE BILL SHERIFF	GILLES DESSUREAU

SAMPLE PREPARATION	
ALS CODE	DESCRIPTION
WEI- 21	Received Sample Weight
CRU- QC	Crushing QC Test
LOG- 22	Sample login - Rcd w/o BarCode
CRU- 31	Fine crushing - 70% < 2mm
SPL- 21	Split sample - riffle splitter
PUL- 31	Pulverize split to 85% < 75 um
LOG- 24	Pulp Login - Rcd w/o Barcode

ANALYTICAL PROCEDURES
