CALCAREOUS SANDSTONE: primarily calcareous sand with a large fraction of mudstone interbeds. Calcareous sandstone is fine to coarse grained with prominent bedding throughout unit.
Upper contact is gradational with the overlying mudstone. Lower contact is also gradational into the underlying mudstone unit.

Mudstone interbeds are as follows:
-From 68.3-69.7m is primarily mudstone with 80% mudstone and 20% calcareous sandstone.
-From 71.9-73.16m is primarily mudstone with 80% mudstone and 20% calcareous sandstone.

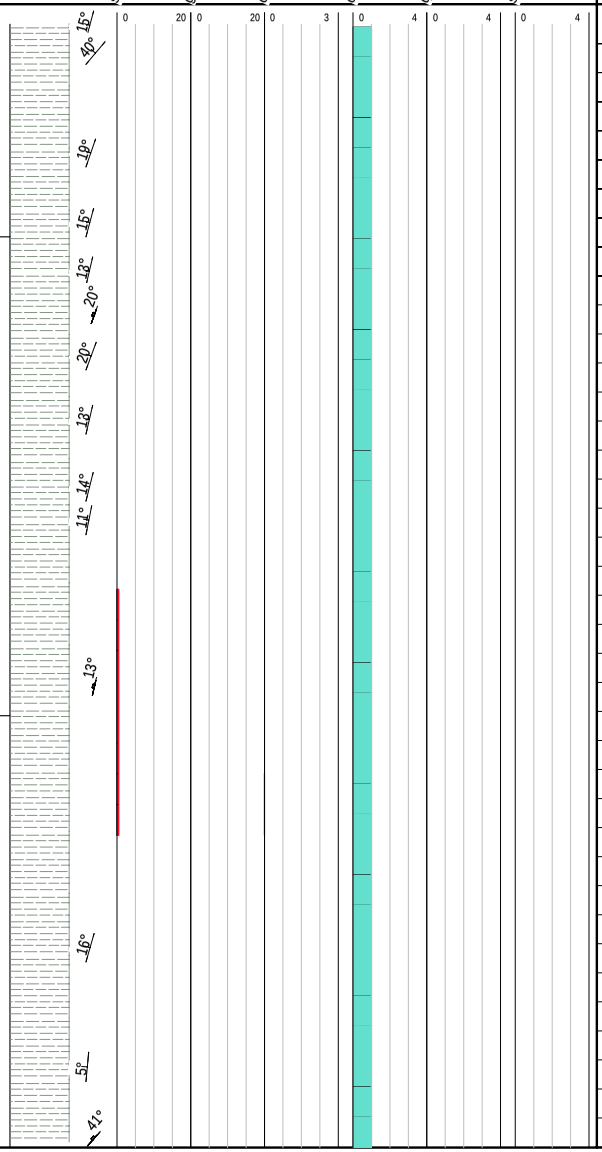
GREY MUDSTONE: light to dark grey mudstone with interbeds of sandstone found thoughout unit. Some sphalerite mineralization is found within this unit. Upper contact is sharp with overlying limestone unit and lower contact is gradational into the underlying sandstone unit.



Structure: excellent bedding due to interlaminations between mudstone and sandstone.

sandstone. Unit interbedded with mudstone and non-calcareous sandstone throughout. Mudstone interbeds ranging from mm-scale to 5cm in width. Non-calcareous sandstone interbeds are gradational into and out of the calcareous unit and range in width from 5cm to 90cm. Minor brecciated zones between calcareous and non-calcareous units spanning 5-40cm.

Structure: Unit is fairly competent with minor faulted zones.

Excellent bedding laminations between calcareous sand and mudstone.

SANDSTONE: unit is primarily sandstone but there are interbeds of mudstone and calcareous sandstone found throughout. Sandstone ranges from medium to coarse grained throughout. Sandstone is massive in sections of the unit displaying no bedding orientations, whereas intervals of mudstone interbeds have excellent observable beds.
-From 59.85-61.86m is a grey mudstone section within the sandstone unit.
-From 66.94-68.04m is a calcareous sandstone section within the sandstone unit.

-From 70.78-71.23m is a calcareous sandstone section within the sandstone unit.

| **Project:** | Andrew | **Collar elevation:** | 1354.0 m |
| **Hole:** | AN08-126 | **Azimuth:** | 187.4° |
| **Proposed:** | Prop1301 | **Dip:** | -59.5° |
| **Location:** | 641300 m East 6978470 m North | **Length:** | 416.05 m |
| **Area:** | Andrew_deposit | **Date started:** | **Date completed:** |
| **Claim:** | ANDREW9 | 2008/08/25 | 2008/09/03 |
| **Logged by:** | M.Eckfeldt | | |
| **Drilled by:** | Kluane | | |
| **Assayed by:** | ALS_Chemex | | |
| **Core size:** | NTW | | |
| **Dip tests by:** | Reflex_MS | | |

**Objective:**

AN08-126 was drilled to test the extent of the known Andrew Deposit with depth. No mineralization was intersected, and no samples were taken. The hole had to be reduced from NTW to BTW around 285 metres; the down-hole survey was done through the BTW and NTW intervals separately, causing a shift in the test depth interval. Complete test coverage was achieved.

| | | SANDSTONE |
| | | Variable composition sandstone, dominated by fine grained dark grey sandstone with bedding parallel tan reduction patches. From approximately 33.50m to 34.50m, a coarse quartz-rich sandstone dominates with grains up to 2mm in size and frequent opalescent quartz grains. The entire unit as common grey mudstone interbeds 20 to 200mm wide. |
| | | STRUCTURE |
| | | The unit is well bedded, and occasionally strongly broken and faulted. Faulting is parallel to bedding. |

CALCAREOUS SANDSTONE

Variable calcareous sandstone with thin dark grey to black mudstone interbeds. The sandstone is dominantly calcareous with some intervals less reactive to acid than others. Some sandstone intervals have a muddy matrix and some lithic fragments, other intervals have 1mm or less feldspar grains making up approximately 10% of the interval in locallized patches. The bottom of the unit is finely laminated with light and dark grey sandstone.

STRUCTURE

The unit is moderately to well bedded. Moderate faulting appears to be parallel to bedding and concentrated in mudstone intervals. Faults are crumbly and graphitic with rare gouge filled faults. Good cross-beds indicate a younging downhole.

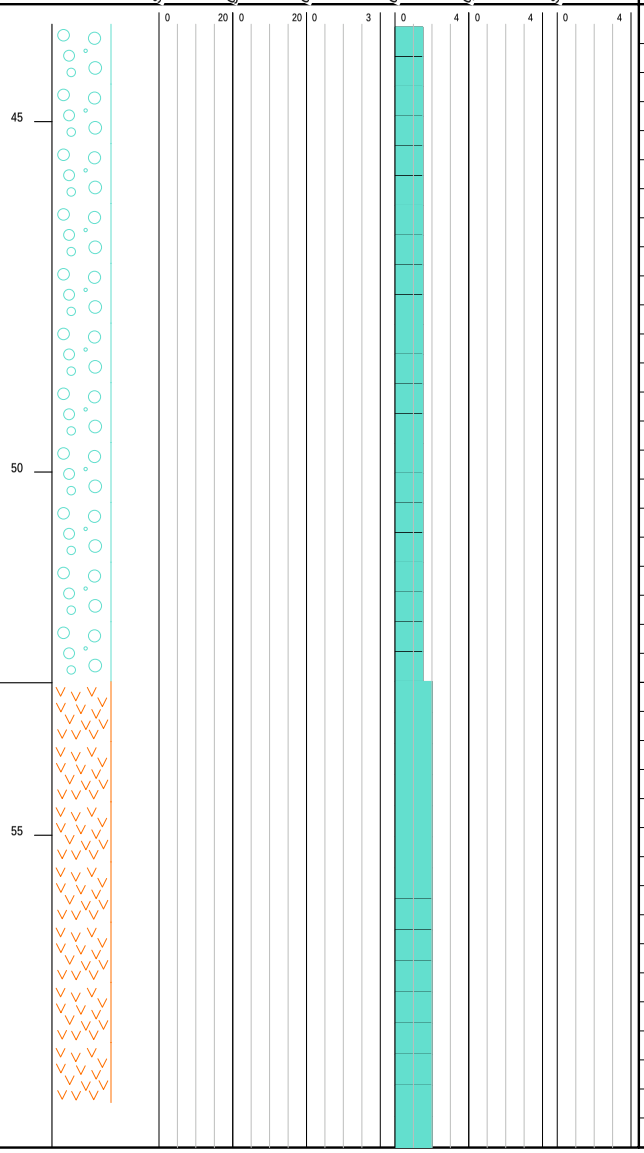
rock with veining in clasts and post-veining occuring cross-cutting clasts.
Matrix is primarily grey to black mudstone. Clast size ranges from mm-size to 7cm in diameter.

Structure:
Heavily fractured with little beding orientations.
From 46.96- 47.3m, 15% gouge, 85% rock fragments.
From 50.8- 52.99m, 20% gouge 80% rock fragments.

Mineralization:
« 42.00- 42.10 pyr 2%» large globular cluster of pyrite concentrated within vein.
Weak limonite on fracture surfaces.

Veining:
Veining occurs within clasts as well as secondary veining overprinting breccia.
« 41.80- 52.99 1.5* cal » weak to moderate calcite veining



52.99 64.00 lv

AMYGDALOIDAL ANDESITE

Intermediate to mafic igneous rock with secondary mineralization of vescicles.
Flow is coarser at bottom with larger amygdules, fines toward the centre of the flow and grades back into coarser amygdules near the top of the flow. Top of flow is gradational from silica altered into the more characteristically igneous features.

There are at least 2 ages of veining throughout this unit. The older veins are folded and convoluted within the unit and the younger veins are more planar.

Structure: unit fairly fratured and areas of gouge material is dispersed throughout.
From 58.3- 58.4m, 50% gouge 50% rock fragments
From 60.1- 60.2m, 10% gouge 90% rock fragments
From 62.7- 62.8m, 80% gouge 20% rock fragments

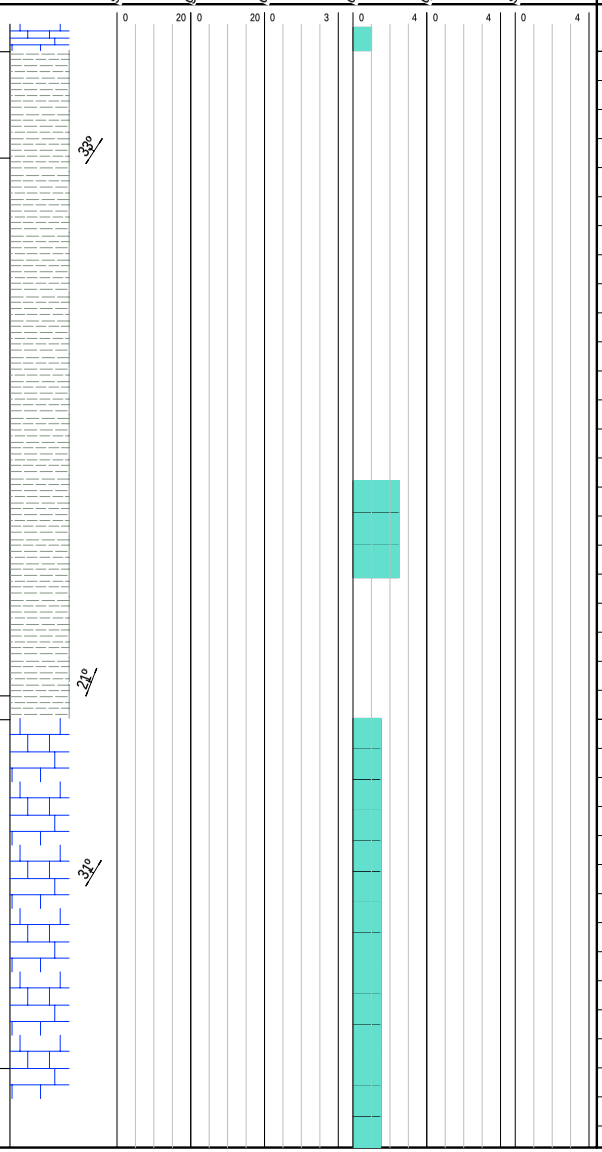
GREY MUDSTONE

Light grey to dark grey mudstone with zones of strong fracturing and a minor brecciated zone. Upper contact is faulted mudstone topped by limestone and the bottom contact is sharp into the underlying limestone unit.

Zone of brecciation is characterized as clast dominated with a dark grey to black mudstone matrix. Clast composition within this zone is grey mudstone from the surrounding country rock ranging in size from 0.5cm to 5cm in diameter and angular in shape. Zone of brecciation is from 118.0- 118.9m.

Structure:
Bedding measurements attainable due to slight colour changes in mudstone laminations:< @ 115.05 S0 33° >< @ 120.00 S0 21° >
From 116.72- 116.92m 100% rock fragments
From 118.5- 119.4m, 5% gouge 95% rock fragments



Veining:
Moderate to strong calcite veining through zone of brecciation « 118.00- 118.90
2.5* cal »

| From | To | Rocktype & Description |
|---|---|---|
| 120.21 | 129.75 | Sls |

LIMESTONE

Very fine to coarse grained limestone with varying characteristics throughout unit but maintaining a high reactivity to HCL. Some interbeds of non-reactive green to dark grey mudstone are found on which bedding measurements are attainable. Colour of the limestone varies from white to dark grey. Differences in micro-faulting throughout unit. Changes in massive to bedded limestone are also observable differences.
There is a zone of potential brecciation but vein overprinting and fracturing makes it difficult to come to a confident consensus (possible brecciated zone from 125.2- 126.85m).

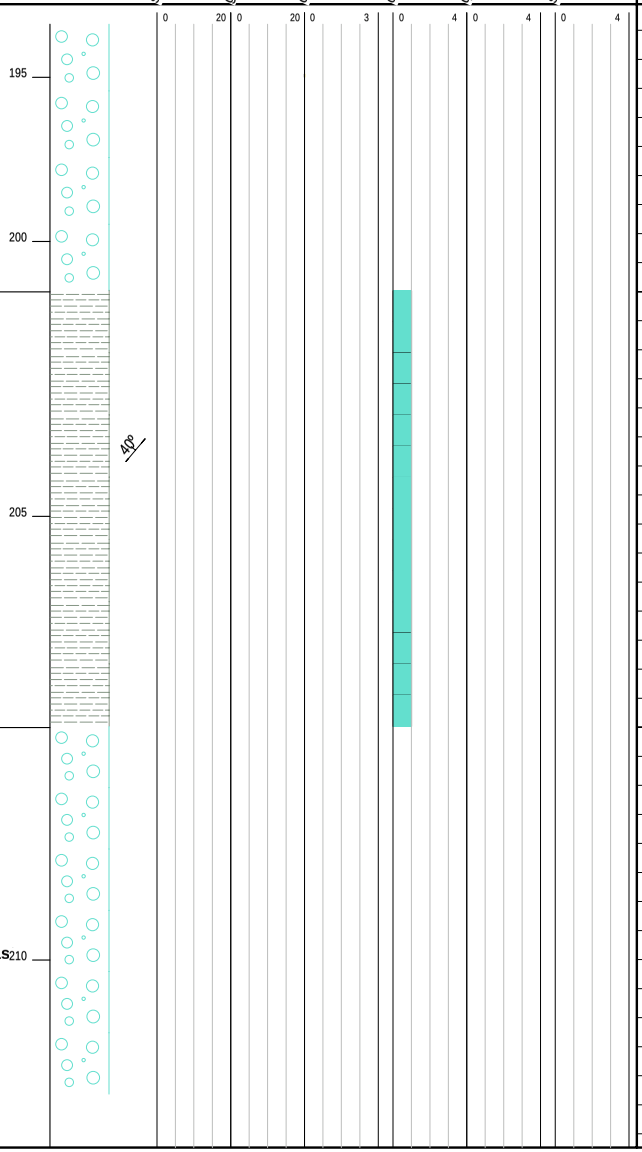
TECTONIC/SEDIMENTARY BRECCIA

Unit is highly varied and changes from mudstone to sandstone to breccia over intervals of ~5cm to ~1m but is dominantly breccia throughout. Sandstone dominated intervals are massive, coarse grained, grey sediment. Mudstone is fractured and interbedded into the sandstone and breccia. The main brecciated intervals are very irregular and altered as veining and shearing are typically present. Clasts range in composition from mudstone to coarse sandstone. Sandstone clasts typically have calcite veining. Clasts are angular to subrounded.

Intervals of breccia seem to be tectonically induced with evidence of faulting and veining as well as irregular and angular clasts seen throughout the section. Intervals of sedimentary breccia have slightly more rounded clasts and also have flow orientation. The matrix within the sedimentary breccia has less veining and less evidence of tectonic activity.

Structure:
Core is fairly competent throughout with minor faulted zones.



Veining:
« 170.94- 171.36 3.5* cal » strong to intense calcite veining.
Large sedimentary clasts tend to have weak to moderate calcite veining.

| **Drilled by:** | Kluane | | |
| **Assayed by:** | ALS_Chemex | | |
| **Core size:** | NTW | | |
| **Dip tests by:** | Reflex_M | | |

**Objective:**

To follow up on results by Noranda done in 2002 testing NS trending stockwork which was chip sampled and resulted in 1% Zn over 15m and EW trending carbonate dominated stockwork which had no mineralization on surface. The target was to intersect mineralization at a different angle from DY08-001. The drill hole was shut-down early, as the drill pad became unsafe to continue drilling. The pad moved the drill offline thus complete survey data could not be recorded.

SEDIMENTARY BRECCIA: unit is highly varied due to sporadic intervals of grey mudstone as well as sections of strong veining. Clasts within the breccia range in size from <1cm to ~3-4cm diameter and clast composition is primarily mudstone and sandstone.

Structure:

< @ 31.80 S0 36° > clast orientation

Unit is highly fractured with sections detailed below:

From 23.1- 23.8m, 10% gouge 90% rock fragments

From 26.2- 28.26m, 5% gouge 95% rock fragments with rock fragments ranging in size from 1-7cm in width.

From 30.5- 31.66m, 50% gouge 50% rock fragments

Veining: prevalent through areas of higher shearing following bedding planes.

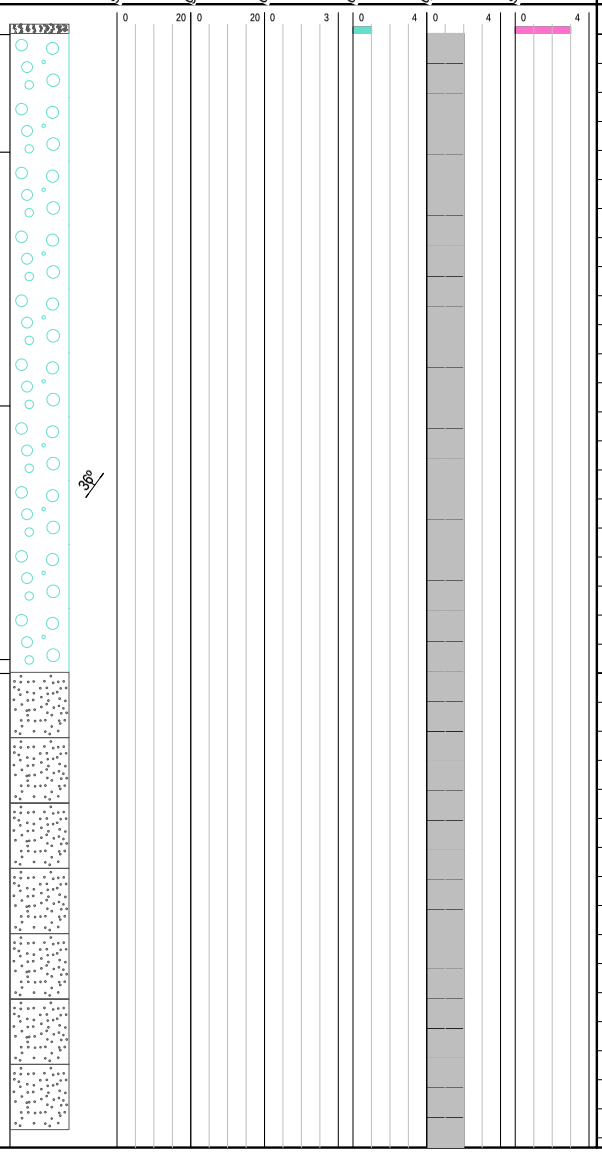
« qtz 2*» moderate quartz veining

| From | To | Rocktype & Description |
|---|---|---|
| 35.25 | 36.90 | Sst |

SANDSTONE:

Light grey medium to coarse grained sandstone with moderate to strong veining. Sand is fairly massive with no bedding readings attainable.

Structure: interval is fairly fractured with moderate to low competency of core.



Mineralization:

Limonite along fracture surfaces. « lim 1%»

« 36.00- 36.40 0.05% pyr » minor pyrite occuring as 0.5cm wide blebs

Veining:

moderate veining « 35.25- 36.90 qtz 2*»

| From | To | Rocktype & Description |
|---|---|---|

Unit is strongly veined with mineralization occurring predominantly within veins. The matrix ranges from grey to black mudstone as well as sandstone and breccia. Primary veining occurs within clasts but secondary mineralized veins overprint everything. Upper contact gradational from the overlying breccia unit and lower contact is gradational into the underlying sandstone unit. Clasts within the breccia range from <1cm to 5cm in width. Some vuggy voids found throughout unit infilled with carbonate crystals. Voids range in size from 0.3mm to 1.5cm in width.

Structure: No bedding measurements observable due to heavy overprinting of veins.
From 90.0-90.15m is a faulted section with 40% gouge and 60% rock fragments.

Veining: veining is strong to intense and ranges in size from mm-scale to 4cm wide. Some areas are completely inundated with veining that it is hard to tell the structure of them as they are massive and encompass entire core.
« 88.49- 104.33 3.5* qtz » strong to intense quartz veining
« 104.67- 114.10 qtz 3*» strong quartz veining

Alteration: strong silica alteration throughout various sections of unit detailed below:

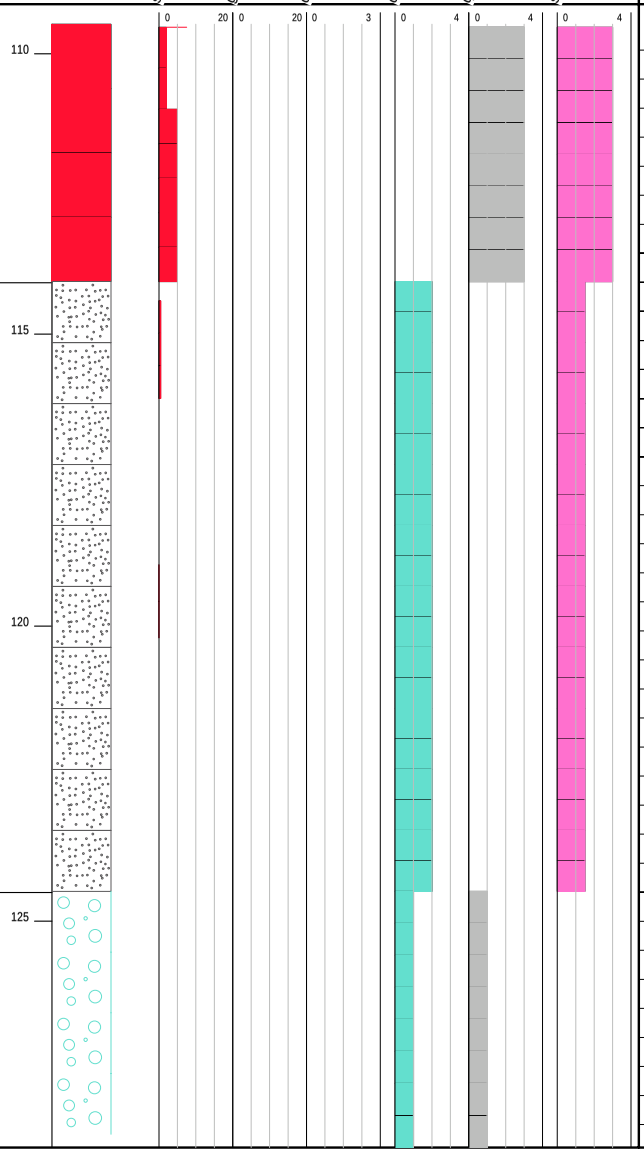
SANDSTONE

Sandstone ranges from light to dark grey and has interbeds of breccia throughout. Minor sphalerite mineralization throughout unit. Breccia has sandstone clasts ranging in size from <1cm to 15cm wide. Breccia is clast supported.

Structure: sandstone is massive so no bedding readings are able to be taken

Mineralization: minor amounts of sphalerite mineralization
« 114.43- 116.10 0.5% spl »
« 118.95- 120.20 0.01% spl » trace sphalerite

Veining:
« 114.10- 124.54 cal 2*» moderate calcite veining



Alteration: « 1.5* sil » weak to moderate silica alteration

| From | To | Rocktype & Description |
|---|---|---|

Structure:

No bedding measurements throughout this unit as strong veining overprints any original sedimentary structures. Any sedimentary structures observed tend to be within brecciated clasts.

Some faults throughout the unit detailed below:

From 139.28- 139.85m is a faulted zone with 5% gouge and 95% rock fragments. Rock fragments range in size from mm-scale to 5cm wide.

From 150.9-151.5m is 30% gouge and 70% rock fragments. Gouge is fairly cemented into the competent rock making a faulted breccia.

From 153.25-153.6m is 40% gouge and 60% rock fragments ranging in size from mm-scale to 4cm wide.

From 163.07-164.59m is a fault zone with 10% gouge and 90% rock fragments. Fragments are relatively rounded and range in size from mm-scale to 5cm in diameter.

From 172-174m is a fault zone comprising 70% gouge and 30% rock fragments.

Mineralization:

Mineralization occurs as blebs within veins but within massive mineralization sections it is difficult to observe if they are hosted within veins as they might be hosted within the sandstone and breccia.

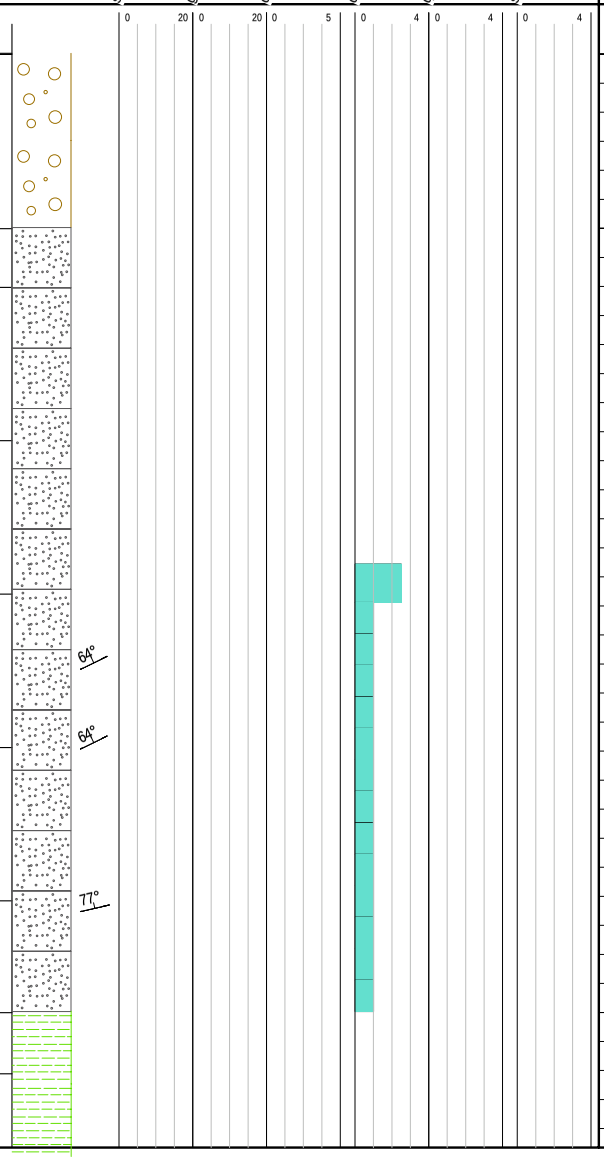
# DRILL LOG

| | | | |
|---|---|---|---|
| **Project:** | Andrew | **Collar elevation:** | 1280.0 m |
| **Hole:** | DY08-003 | **Azimuth:** | 45.0° |
| **Proposed:** | DY08-G | **Dip:** | -50.0° |
| **Location:** | 642022 m East 6977741 m North | **Length:** | 237.74 m |
| **Area:** | Darcy_zone | **Date started:** | **Date completed:** |
| **Claim:** | ANDREW3 | 2008/06/14 | 2008/06/18 |
| **Logged by:** | H.Jaggard | | |
| **Drilled by:** | Kluane | | |
| **Assayed by:** | ALS_Chemex | | |
| **Core size:** | NTW | | |
| **Dip tests by:** | Reflex_MS | | |

**Objective:**

To follow up on the mineralization discovered in the previous hole drilled on the Darcy Zone, DY08-003, and to potentially extend the zone of mineralization.

**SUMMARY LOG:**



| | |
|---|---|

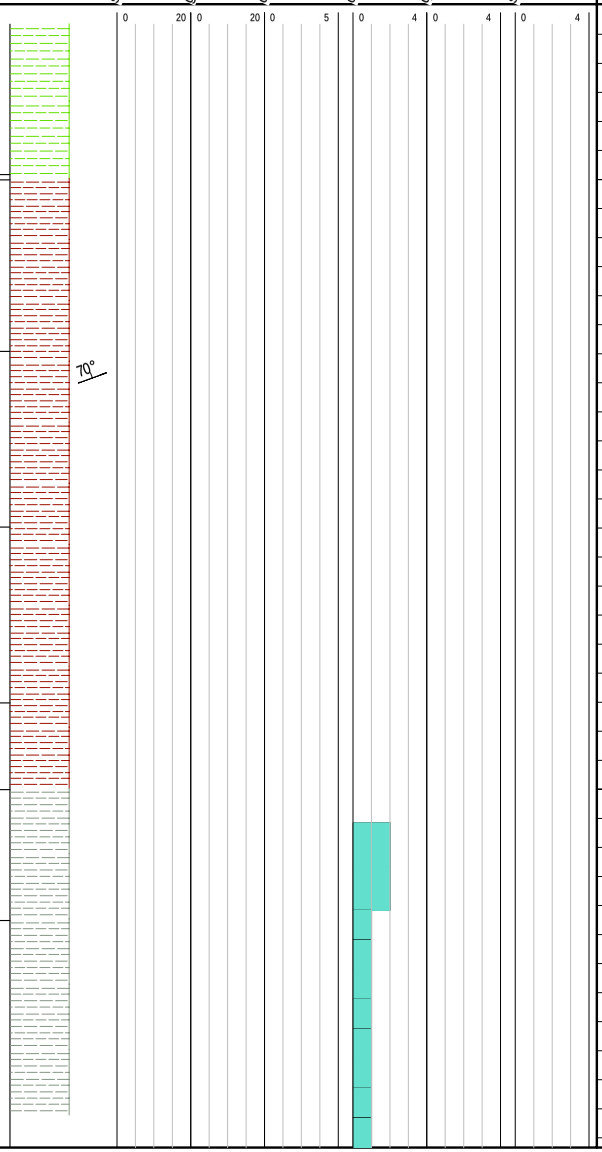
**Project:** Andrew **Hole Number:** DY08-003



| From | To | Rocktype & Description |
|---|---|---|
| | | « 53.10- 54.80 cal 2.00*» moderate calcite veining |
| | | « 54.80- 62.60 cal 1*» weak calcite veining |
| 62.60 | 70.10 | Zfzg |
| | | FAULT ZONE: rock fragments and gouge define this interval. Approximately 5% gouge and 95% rock fragments. Fragments range in size from <1cm to 25cm. Fragments are angular to subrounded. Some compotent pieces of core scattered throughout interval ranging from 5- 25cm. Compotent pieces are brecciated with sandstone to mudstone and weak to moderate veining. |
| | | Veining: « qtz 1.00*» « cal 1.00*» |
| 70.10 | 80.45 | Xsz |
| | | SHEAR ZONE: Shear zone is characterized by strong fabric deformation and high concentration of gouge and faulted zones. Zone is brecciated but is matrix supported with matrix comprising green mudstone for upper section of interval and changing to a matrix of grey mudstone and sandstone in lower part of interval. |
| | | Shearing changes direction throughout unit from ~3 degrees up to 50 degrees from core axis. |
| | | From 70.10-75.55m is green mudstone matrix supported with sandstone clasts scattered throughout. Clasts range in size from mm-scale to 2cm wide. Clasts display a preferred orientation with the shearing direction. |
| | | From 75.55-80.45m is primarily a grey mudstone to sandstone matrix. This interval is also matrix supported with clasts ranging in size from mm-scale to 7cm wide comprised of grey sandstone. From 76.89 - 77.5m the clasts are strongly silicified within a dark grey mudstone matrix. |
| 80.45 | 118.57 | Sst |
| | | SANDSTONE: unit is fairly extensive and varies throughout with interbeds of mudstone, breccia, and fault zones. Sandstone ranges from light to dark grey and is medium to coarse grained. Sections of sandstone are highly silicified |

|---|---|---|
| | | and are potentially quartzite in composition. Sphalerite and galena mineralization is found within unit. |
| | | Structure: |
| | | Numerous faulted sections throughout unit described below: |
| | | -From 82.73-83.82m is a fault zone with 10% gouge and 90% rock fragments. Fragments through this interval are angular and range in size from <1cm- 5cm wide. |
| | | -From 85.42-91.0 is a heavily fractured and faulted zone with approximately 20% gouge and 80% rock fragments. Within this zone there are competent pieces up to 20cm wide, however, the rock is strongly fractured and 1-3cm wide gouge veins are dispersed throughout these competent pieces. Fragments are angular. |
| | | -From 99.54-100.7m is a fault zone with <5% gouge and >95% rock fragments. Fragments are angular and range in size from <1cm-5cm wide. |
| | | -From 104.51-104.75m is a fault zone with 10% gouge and 90% rock fragments. Fragments are angular and range in size from mm-scale to 3cm wide. |
| | | -From 107.33-108.2m is another fault zone with 20% gouge and 80% rock fragments. |
| | | -From 114.0-114.3m is a fault zone located directly after the main mineralised zone. Fault zone is comprised of angular clasts ranging in size from <1cm-4cm wide. |
| | | -From 116.58-116.78m is a fault zone with 100% rock fragments ranging in size from 1-3cm wide. |
| | | -From 121.13-121.43m is a fault zone with 100% rock fragments ranging in size from mm-scale to 4cm wide. |
| | | Some potential bedding structure measurements throughout unit, however, with faulting and offset of beds it is uncertain whether laminations are accurate. |

| | | BARREN STOCKWORK |
| | | Calcareous stockwork veining through a region of sedimentary breccia, with clasts mainly of sandstone and grey mudstone in a graphitic black mudstone matrix. Bottom contact puts this stockworked breccia, which appears to be Earn Group, above Highland mudstones, though it looks to be just a small shear zone. |

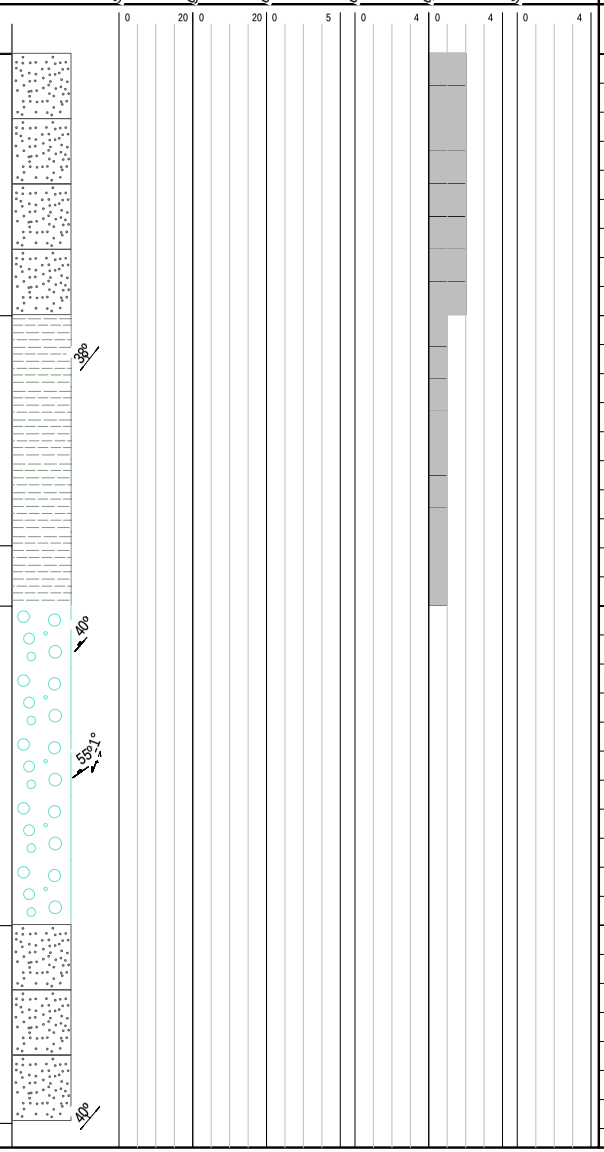
| **Drilled by:** | Kluane | | |
| **Assayed by:** | ALS_Chemex | | |
| **Core size:** | NTW | | |
| **Dip tests by:** | Reflex_MS | | |

**Objective:**

Hole DY08-005 is being drilled from the same location as DY08-002, which encountered significant mineralization. This hole will be drilled at an azimuth of 360 degrees and a dip of -70 to test for further mineralization in the Darcy Zone, but there was not any mineralization intersected down dip from the mineralization intersected in DY08-002.

**SUMMARY LOG:**



0m to 5.50m - Mixture of sandstone and grey mudstone
5.50m to 15.91m - Mixture of sandstone, fault gouge and sedimentary breccia
15.91m to 25.76m - Mixture of grey mudstone and fault breccia
25.76m to 37.27m - Mixed sandstone, fault breccia and shear zone
37.27m to 46.99m - Mixed shear zone and sedimentary breccia
46.99m to 51.60m - Mixed fault gouge, sandstone and shear zone
51.60m to 54.86m - Mudstone
54.86m to 55.80m - Fault gouge
55.80m to 83.21m - Shear zones and calcareous sandstone/siltstone
83.21m to 131.47m - Mixed red and green mudstone
131.47m to 155.30m - Grey mudstone
155.30m to 186.67m - Mixed red and green mudstone
186.67m to 191.10m - Fault breccia
191.10m to 196.75m - Sandstone
196.75m to 200.29m - Grey mudstone
200.29m to 205.50m - Red Mudstone
205.50m to 206.57m - Sandstone
206.57m to 217.04m - Mix of black and grey mudstone with trace sphalerite.
217.04m to 218.44m - Fault breccia with trace sphalerite
218.44m to 221.07m - Barren stockwork veining and breccia
221.07m to 246.88m - Mixed grey mudstone and sandstone
246.88m - End of Hole

Trace sphalerite as a 5mm blotch within the grey mudstone, seeming to be associated with a shear/foliation stucture. The sphalerite has an orange-yellow core with dark orange-brown 1mm rind.

Gradational contact with overlying black mudstone over 50cm.

Fault Breccia.

Stongly brecciated black and grey mudstone, which appear to be strongly sheared in sections of competent rock. 5% quartz/calcite veinlets, 1mm to 1cm in size, at varying orientations. 50% sub-competent rock and rock fragments, 35% competent rock, and 15% fault gouge. Bedding is obscured by shearing and faulting.

0.5% pyrite occurs as fine-grained masses up to 2mm in size and along bedding planes.

Trace sphalerite as reddish orange to brown 1-2mm blebs associated with a 3mm quartz/calcite vein within black mudstone.

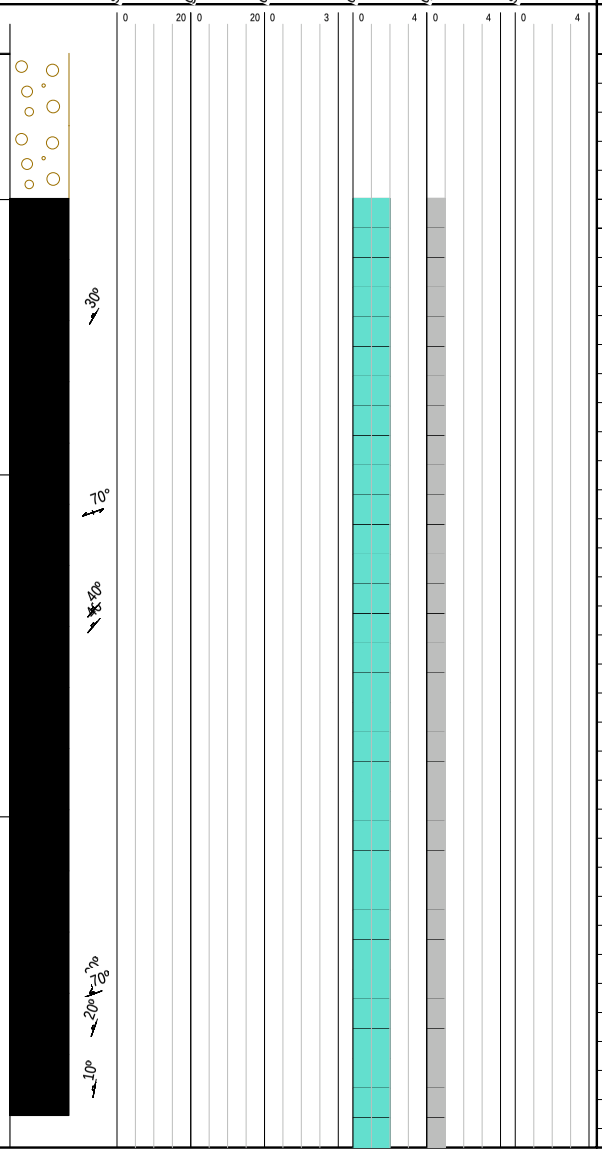
| **Proposed:** | DY08-N | **Dip:** | -48.3° |
| **Location:** | 642187 m East 6977806 m North | **Length:** | 81.99 m |
| **Area:** | Darcy_zone | **Date started:** | **Date completed:** |
| **Claim:** | ANDREW3 | 2008/07/28 | 2008/07/30 |
| **Logged by:** | J.Norris | | |
| **Drilled by:** | Kluane | | |
| **Assayed by:** | ALS_Chemex | | |
| **Core size:** | NTW | | |
| **Dip tests by:** | Reflex_MS | | |

**Objective:**

Hole DY08-006 is being drilled at an azimuth of 360 degrees and at a dip of -50, at a location 59m North of DY08-002. The objective of the hole is to test for mineralization encountered in hole DY08-002. The hole is planned to go to a depth of 150m.

NOTE: Hole was lost at 81.99m, was redrilled as DY08-006A, having steepened to -51 degrees dip.

**SUMMARY LOG:**



0m to 0.96m - Overburden
0.96m to 17.94m - Barren Stockwork Veining/Brecciation
17.94m to 32.27m - Fault Breccia
32.27m to 39.32m - Sandstone
39.32m to 41.84m - Barren Stockwork Veining/Brecciation
41.84m to 58.75m - Stockwork Veining with Sphalerite Mineralization (1% sphalerite)
58.75m to 59.79m - Fault Breccia
59.79m to 62.61m - Barren Stockwork Veining/Brecciation
62.61m to 63.75m - Grey Mudstone
63.75m to 65.09m - Stockwork Veining with Sphalerite Mineralization (1% sphalerite)
65.09m to 70.75m - Grey Mudstone
70.75m to 71.19m - Fault Gouge
71.19m to 72.22m - Stockwork Veining with Sphalerite Mineralization (8% sphalerite)
72.22m to 75.79m - Grey Mudstone
75.79m to 77.02m - Fault Gouge
77.02m to 78.41m - Fault Breccia
78.41m to 81.99m - Fault Gouge
81.99m - End of Hole

|---|---|---|
| | | occurs within the core of these thick quartz/calcite veins, where the boundary between them is feathered. The sphalerite also occurs within zones of intense brecciation, along with clasts of mudstone and sandstone in a quartz/calcite vein. The sphalerite does not appear to be brecciated by the veining. Overall there is 1% sphalerite throughout the unit, however can occur up to 15% over 50cm. There is trace amounts of fine-grained pyrite within the sandstone. There is also very trace amounts of chalcopyrite associated with the sphalerite. |
| | | 50.84m to 55.14m - Silicified oolitic sandstone. Dark grey in colour with 5-50% 0.5mm to 2mm circular ooids throughout. Weakly mineralized zone, with trace amounts of red-orange sphalerite as 2-3mm blebs within the sandstone as well as rarely replacing some ooids. Very fine-grained pyrite also rarely replaces some ooids. Sphalerite is also seen as small blotches and blebs within quartz/calcite stockwork veining. |

| | | Stockwork Veining with Sphalerite Mineralization. |
| | | Fine grained, tan to light grey, moderately bedded sandstone with minor 2-5cm interbeds of finely laminated greenish-grey mudstone. Moderately brecciated by quartz/calcite stockwork veining with sphalerite mineralization. Minor dark grey alteration of the sandstone as a dendritic/blotchy pattern in localized areas. Competent rock. |
| | | Sphalerite occurs as reddish-brown masses and blotches from 2mm to 2cm thick. The mineralization is associated with quartz/calcite stockwork veining and brecciation, and the boundary bewteen the veins and the sphalerite is feathered. Overall there is 8% sphalerite over the unit (1.03m).There are a minor amount of 1-2mm quartz/calcite veinlets which cross-cut the sphalerite mineralization. Some of the veins appear to have formed in several pulses, where there is a thin 1-2mm quartz-rich core, rimmed by a 4-5mm calcite rind. There are also smaller veinlets which show a 3mm calcite core, with a 1mm quartz rind. |

| **Dip tests by:** | Reflex_MS | | |

**Objective:**

Hole DY08-006A is being drilled as a redrill from hole DY08-006 which encountered major faulting and was lost at 81.99m. This hole is slightly steeper and will has the same objective as hole DY08-006, which is to test the mineralization encountered in DY08-002, located 49m to the north of DY08-006 and DY08-006A.

**SUMMARY LOG:**

0m to 3.05m - Same as DY08-006 (overburden and barren stockwork veining)
3.05m to 17.99m - Barren Stockwork Veining/Brecciation
17.99m to 34.57m - Sandstone with sections of fault gouge and fault breccia
34.57m to 42.54m - Mixture of sandstone and grey mudstone
42.54m to 55.53m - Stockwork Veining with Sphalerite Mineralization (5% sphalerite)
55.53m to 61.59m - Barren Stockwork Veining/Brecciation
61.59m to 62.55m - Stockwork Veining with Sphalerite Mineralization (3% sphalerite)
62.55m to 68.35m - Grey Mudstone
68.35m to 71.06m - Stockwork veining with Sphalerite Mineralizaion (5% sphalerite)
71.06m to 71.64m - Sandstone
71.64m to 72.71m - Calcareous Sandstone
72.71m to 88.81m - Grey Mudstone
88.81m to 90.39m - Stockwork Veining with Sphalerite Mineralization (8% sphalerite)
90.39m to 121.20m - Sedimentary breccia wih sections of fault gouge and fault breccia.
121.20m to 124.47m - Sandstone
124.47m t o 126.28m - Fault Breccia
126.28m to 128.72m - Fault Gouge
128.72m to 130.01m - Sedimentary Breccia
130.01m to 131.06m- Sandstone
131.06m to 132.59m - Fault Breccia
132.59m - End of Hole

Overburden

As previously logged in DY08-006, as barren stockwork veining and brecciation.

| | | |
|---|---|---|
| 3.05 | 17.99 | Zbxv |

Barren Stockwork Veining and Brecciation

Strongly faulted massive grey mudstone and tan-grey fine-grained sandstone. Moderate quartz/calcite veining and brecciation throughout (5-20%). Clasts of mudstone within the veining range from 3mm to 1cm in size. Moderate amount of limonite staining within the quartz/calcite veins, where there is moderate to strong leaching of the veins over the first 9m of core. Vugs up to 15mm in size are left within the quartz/calcite veins. Moderate shearing has taken place in the unit, as evidence by the nature of the mudstone and quartz/calcite veins. HIghly faulted zone with 50% competent and sub-competent rock with 35% rock fragments and 15% fault gouge. Few orientations available due to intense faulting and shearing.

Strucutre

< @ 3.60 Ft 50.00° 5.00mm > Fault gouge.

3.65m to 5.65m - Fault breccia. 90% rock fragments and 10% fault gouge.

Sandstone

Moderately fractured and faulted dark grey, fine to medium grained, massive sandstone. There are sections up to 15cm of fault gouge throughout. Moderate quartz/calcite veining, ranging from 2-15%, where the highest concentration of veining occurs in the central 3m of core.

Minor amounts of sphalerite occur as reddish-brown blotches associated with moderate amounts of quartz/calcite veining. The section of veining which contains the sphalerite is highly fractured and has 15cm of fault gouge at the upper occurrence.

Gradational contact with overlying unit of fault breccia over 35cm.

Structure

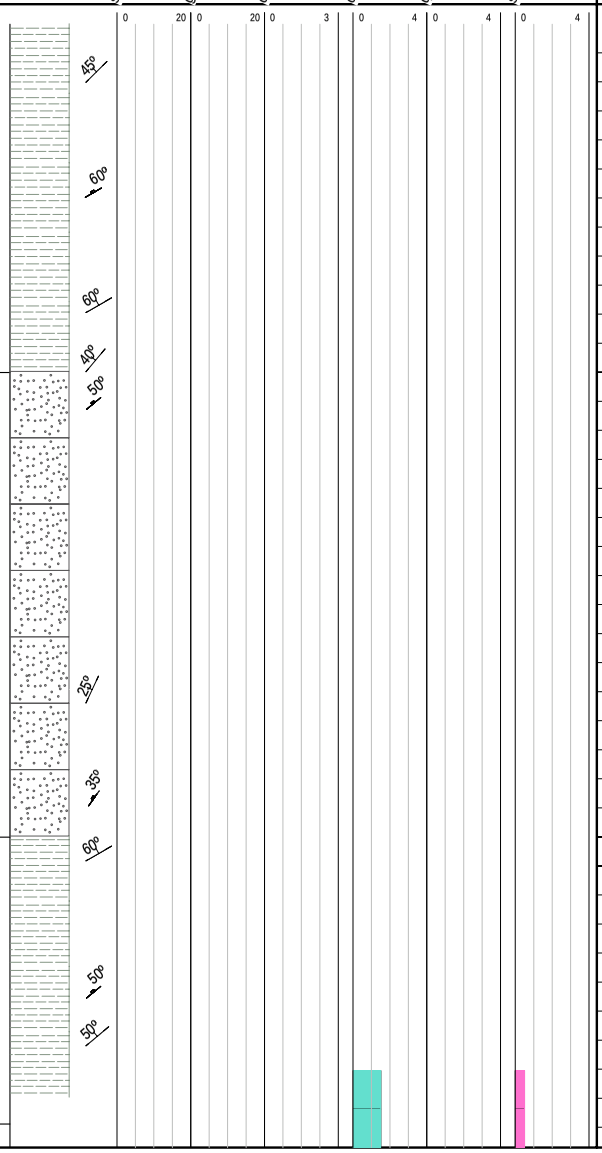
Grey Mudstone



Interbedded grey and green mudstone which are finely laminated. Interbedding may be due to fluid alteration. Unit is weakly sheared. Trace 1-4mm quartz/caclite veinlets, some of which have been partially leached, leaving 1-3mm vugs. Competent rock with minor faulting throughout.

| | | Stockwork Veining with Sphalerite Mineralization |
| | | Corse grained medium grey sandstone over first 1.5m of unit, which gives way to a fine to medium grained medium to light grey sandstone. Bedding is sometimes preserved in the finer-grained sections of the sandstone. A section of the sandstone from 44.38m to 54.78m is moderately calcareous. There are minor interbeds of 2cm to 5cm finely laminated black mudstone throughout. |
| | | There is 20-30% stockwork quartz/calcite veining and brecciation which is seen throughout the unit. The veining sometimes brecciates the unit into 2mm to 2cm clasts. There appears to be several generations of veining, due to the cross-cutting relationships observed within the unit. There is also evidence of folding and shearing post-dating the stockwork veining event(s). |
| | | Sphalerite occurs as dark red to brown blotches and masses, associated with |

quartz/calcite veining. The mineralization occurs in the core of veins, where there is a feathered texture at the margin between the sphalerite and the vein material. Trace thin 1-2mm veinlets cross-cut the mineralization. Overall there is 5% sphalerite across this unit. Some of the mineralizd veins are slighly leached and vuggy, leaving an orange stain on the core.

Gradational contact with overlying sandstone over 1m.

52.04m to 52.03m - There is a section showing 10-75% ooids within the sandstone. The ooids are round, 1-3mm in size and are rarely replaced by sphalerite. The oodis are highly reative to acid.

| | | Stockwork Veining with Sphalerite Mineralization |
| | | Moderately silificed grey fine to medium-grained sandstone with 10-25% quartz/calcite stockwork veining thorughout. Rock is fractured over first 1m of core, is comptetent, then is faulted at the bottom contact. The veining weakly brecciates the sandstone into 3mm to 1cm sized clasts. |
| | | Sphalerite is seen as dark red to brown blotches and masses, associated with the quartz/calcite stockwork veining. The sphaerlite occurs as 2-5mm blebs and up to a 5cm mass within a quartz/calcite vein. Sphalerite moderately replaces clasts of sandstone and mudstone where they have been brecciated by quartz/calcite veining. Overall there is 8% spahlerite across the interval. |

Fault Breccia.

Strongly faulted zone of black and grey mudstone/sedimentary breccia. There is 75% competent and sub-competetent rock and rock fragments to 25% fault gouge. Competent sections of rock show grey to black mudstone as well as dark black mudstone surrounding clasts of grey to tan sandstone and mudstone. Overall the rock is highly graphitic.

There is 2-5% 1-5mm quartz/calcite veins seen in the sub-competent sections, as well as rock fragments of quartz/calcite in the fractured/faulted zones. Trace sphalerite occurs as 2-3mm dark red to brown blebs within quartz/calcite veinlets.

SANDSTONE

Quartz rich sandstone with a slight grey-green colour. Possibly due to silica and chlorite flooding.

STRUCTURE

The unit is relatively competant except for some short shear zones where interbedded mudstone has concentrated strain.

< @ 20.04 Sz 10.00° 33.00 >
< @ 21.20 Ft 8.00° 35.00mm >
< @ 23.82 Fr 50.00° >

MINERALIZATION

The unit has a strong iron oxidation on fracture faces. Moderate to strong silicification, and moderate quartz veining. Weak rusty calcite veining.

| | | SEDIMENTARY BRECCIA |
| | | The unit is sedimentary breccia with interbedded coarse grained sandstone. The sedimentary breccia, has rounded sandstone grains from 2mm to 25mm in size. The sandstone is quartz rich with approximately 5% feldspar grains. |
| | | STRUCTURE |
| | | The sedimentary breccia is moderately sheared and faulted. |
| 70.82 | 85.15 | Sst |
| | | SANDSTONE |
| | | Fine to medium grained, quartz rich sandstone. Occasional quartz grains up to 2mm in size make up less than 3% of the unit. Local feldspar grains less than 1%. The unit is black or tan in colour. |
| | | STRUCTURE |
| | | Moderately bedded, frequent chaotic micro-fractures. |
| | | < @ 83.85 S0 55.00° > |
| | | MINERALIZATION |
| | | Weak to moderate quartz stringers. Black speckled colour, possibly an alteration. The black tends to follow and highlight the micro fractures, or tends to colour entire intervals solid black. |

| From | To | Rocktype & Description |
|---|---|---|

Minor amounts of coarse grained thick quartz-sphalerite veins, in unit dominated by quartz vein stockwork. The sphalerite is medium brown in colour and within the core of quartz veins. The host rock is fine grained dark grey sandstone. From 23.24 to 23.73 ooids are found within a calcareous sandstone interval.

STRUCTURE

The core is very broken and appears to have been reworked by the drill.

< @ 24.70 S0 20.00° >
< @ 28.84 S1 14.00° >
< @ 29.50 Ft 50.00° 65.00mm >

MINERALIZATION

Minor carbonate alteration. Strong silica alteration and quartz veining. Rusty coatings are frequent on fractures and as pits within quartz veins. Locallized sphalerite veining.

BARREN QUARTZ AND CALCITE STOCKORK

Strong quartz veining and moderate calcite veining cross-cut a sandstone unit with interbedded grey mudstone. The sandstone has 1-2mm quartz grains and a finer grained, muddy matrix.

STRUCTURE

The core is relatively competant with minor faulting.

< @ 36.65 Ft 30.00° 1.00mm >

MINERALIZATION

Strongly silicified. Strong quartz veining with moderate calcite veining. Dark speckled colour with the the silica flooding.

FAULT BRECCIA

As seen above. Brecciated interbeds of calcareous sandstone, black mudstone and grey mudstone. Some intervals where little movement appears to have occured in dominantly calcareous sandstone. Other intervals where the lithologies appear to be suspended as fragments in a black mudstone.

STRUCTURE

The unit is moderately faulted.

< @ 100.10 Ft 20.00° 10.00mm >
< @ 102.05 S1 37.00° >

| | | BARREN QUARTZ VEIN BRECCIA |
| | | Barren quartz veins cross-cut a sandstone unit. The sand is dark and light grey, medium grained. |
| | | STRUCTURE |
| | | The core is extremely broken with 90% of the core being in fragments 5cm in size or less. Likely due to proximity to surface. Any orientations are impossible. |
| | | MINERALIZATION |
| | | Stong quartz veining. Strong iron oxidation on fracture faces as well as pervasive through lighter coloured sandstone. |
| | | « qtz 3.00*» |
| | | « sil 1.00*» |
| | | < @ 4.34 quartz V 55.00° 15.00 > |
| 9.37 | 22.19 | Sst |
| | | SANDSTONE |
| | | The unit is a fine to medium grained quartz rich sandstone. There are patchy tan sections, possibly reduction patches. Some interbedded dark grey mudstone. |
| | | STRUCTURE |
| | | As seen in the above unit, the rock is extremely broken and orientations are difficult to obtain. |

**Objective:**

DY08-010 was drilled in the Darcy Zone to test the extent of mineralization found in DY08-002 which was drilled to the south-east. The hole was originally planned for 100m depth, but due to drill pad instability issues, the hole had to be ended at 86.87m depth.

CASING: no core recovery

SANDSTONE: medium to coarse grained, grey sandstone with moderate to strong limonite alteration permeating through fracture surfaces. Interbeds of breccia in and surrounding faulted sections. Lower contact with underlying mudstone unit is gradational over approximately 40cm as the contact angle is shallow to core axis.

Structure: Fault zones throughout unit detailed below:
-From 9.14-10.84m is a fault zone with 60% gouge and 40% rock fragments
-From 12.63-13.71m is a fault zone with 40% gouge and 60% competent core

Veining: weak quartz veining « qtz 1.00*»

28.69 44.85 Vspl

STOCKWORK VEINED SPHALERITE MINERALIZATION: unit is primarily sandstone with quartz-carbonate veining throughout, however, there are interbeds of breccia dispersed throughout the unit. Brecciated matrix is mudstone to sandstone with sandstone clasts. Unit is strongly faulted with major intervals detailed below. Stockwork veining is prevalent throughout unit ranging from weak to intense. Stockwork veins tend to overprint rock type leaving the assumption of lithology as sandstone to breccia throughout. Upper contact is fault bounded with the overlying breccia unit. Lower contact is also fault bounded with the underlying faulted unit.

Structure: Faults dispersed throughout unit:
« 29.17- 30.48 30% gouge, 70% fragments Ft 999.00°»
« 31.25- 32.63 30% gouge, 70% fragments Ft 999.00°»

| From | To | Rocktype & Description |
|---|---|---|
| 0.00 | 4.80 | Ogv |
| | | OVERBURDEN |
| | | Loose overburden and ground up core; competent core starts at 4.80. |
| | | Casing was 34' = 10.36 m. |
| 4.80 | 11.95 | Sms_rd |
| | | RED MUDSTONE |
| | | Fine-grained, hematitic red and pale green mudstone of the Narchilla Formation. Green mudstone flanks the upper and lower contact of the red mudstone: 4.80 - 9.80 m is green, 9.80 - 10.75 m is red, and 10.75 - 11.95 is green. There is moderate iron oxide staining along fractures due to proximity to surface, and much of the core is friable and ground-up, again due to surface proximity, though there may also be faulting associated. Lower contact is fault bound. |
| | | < @ 10.05 Fr 10.00° > < @ 10.17 S1 20.00° > |
| 11.95 | 13.50 | Zfzg |
| | | FAULT ZONE |
| | | Fault zone developed through blackish-grey mudstone, with local green mudstone caught up as well. The core is very blocky and broken-up between zones of gouge. Moderate iron staining occurs along fracture planes. Lower contact ground-up and approximate. |
| | | < @ 11.95 Ft 20.00° 150.00mm > < @ 12.09 S1 40.00° > < @ 12.35 Ft 999.00° 100.00mm > < @ 12.75 Ft 999.00° 400.00mm > |

| 25.91 | 35.05 | Zbxv |
| | | STOCKWORK & BRECCIA ZONE |
| | | Barren quartz stockwork and breccia zone developed through dark grey mudstone and grey sandstone, with local graphitic black mudstone interspersed. Local faulting through interval, and mild iron oxide staining on fracture surfaces. Weak calcite overprinting the quartz stockwork. Local pyrite nodules in the mudstone are elongated parallel to the deformation fabric. Lower contact is defined by presence of sphalerite. |
| | | *Block error: 115' should be 110' = 5' error. All blocks were corrected/adjusted. |

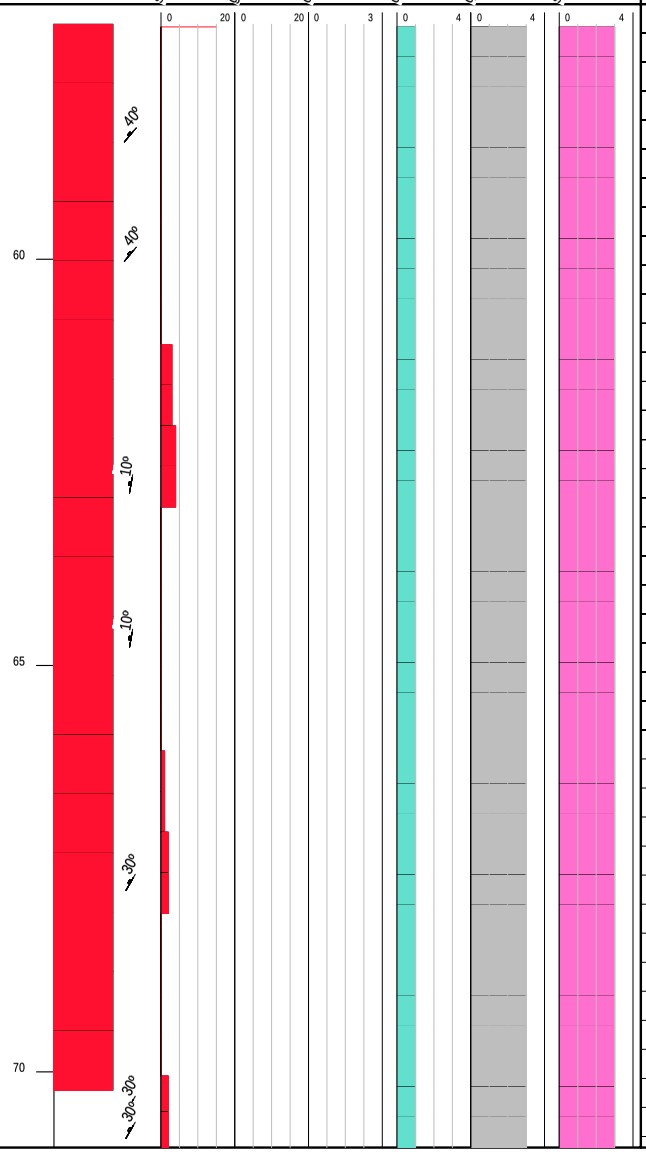
**Project:** Andrew **Hole Number:** DY08-014



| From | To | Rocktype & Description |
|---|---|---|
| | | |
| | | 39.05 - 40.05m: Massive to semi-massive sphalerite in quartz veins cutting grey mudstone and silicified grey sandstone. « spl 10.00%» |
| | | 40.05 - 41.05m: As previous, cutting both mudstone and silicifed sandstone, with local patches of calcite overprinting the stockwork. « spl 14.00%» |
| | | 41.05 - 42.05m: Minor sphalerite in quartz veins cutting mudstone from 41.05 - 41.22m, followed by a relatively barren section of silicifed and moderately stockworked sandstone. « spl 1.00%» |
| | | 42.05 - 43.05m: Trace sphalerite in silicified and moderately stockworked sandstone. Local calcite patches overprinting the stockwork. « spl 0.10%» |
| | | 43.05 - 44.05m: Patchy (almost net-textured) sphalerite in quartz-matrix breccia. Host rock is not readily apparent, as there has been near total brecciation and replacement, possibly two phases. There is an obvious dark grey quartz breccia with sphalerite, cut by a milky-white quartz breccia with sphalerite. Late calcite veining affect both. « spl 6.00%» |
| | | 44.05 - 45.05m: Similar to previous, with local semi-massive sphalerite. « spl 5.00%» < @ 44.10 Ft 10.00° 8.00mm > |
| | | 45.05 - 46.05m: Net-textured sphalerite in massive, milky-white quartz from 45.05 - 45.56m, followed by barren breccia and barren sandstone for the remainder of the interval. « spl 3.00%» |
| | | 46.05 - 47.05m: Trace sphalerite in quart veins cutting silicifed sandstone. Broken and ground core from 46.10 - 46.55 m. « spl 0.10%» < @ 47.00 Fr 10.00° > |
| | | 47.05 - 48.05m: Blobs of sphalerite in quartz veins cutting silicified sandstone. Local late calcite patches. « spl 3.00%» |
| | | 48.05 - 49.05m: As previous. « spl 2.00%» |
| | | 49.05 - 50.05m: As previous. « spl 2.00%» |

| **Proposed:** | Prop4004 | **Dip:** | -49.1° |
| **Location:** | 642329 m East 6978082 m North | **Length:** | 124.97 m |
| **Area:** | Darcy_zone | **Date started:** | **Date completed:** |
| **Claim:** | ANDREW4 | 2008/09/06 | 2008/09/08 |
| **Logged by:** | W.Carter | | |
| **Drilled by:** | Kluane | | |
| **Assayed by:** | ALS_Chemex | | |
| **Core size:** | NTW | | |
| **Dip tests by:** | Reflex_MS | | |

**Objective:**

The objective of DY08-016 was to test for mineralization in the kill zone. A weak zone of Zn+/-Pb mineralization was intersected as discrete veins, but on average it amout to trace to 1% sphalerite through the interval.

**SUMMARY LOG:**

| **Project:** | Andrew | **Collar elevation:** | 1103 m |
| **Hole:** | DN08-001 | **Azimuth:** | 226.2° |
| **Proposed:** | AN08-DA3 | **Dip:** | -59.8° |
| **Location:** | 643506 m East 6977344 m North | **Length:** | 143.26 m |
| **Area:** | Darin_zone | **Date started:** | **Date completed:** |
| **Claim:** | AMB128 | 2008/06/21 | 2008/06/24 |
| **Logged by:** | S.Berdahl | | |
| **Drilled by:** | Kluane | | |
| **Assayed by:** | ALS_Chemex | | |
| **Core size:** | NTW | | |
| **Dip tests by:** | Reflex_MS | | |

**Objective:**

DN08-001 will be the first of the holes in the Darin Zone, which is located to the southeast of the Andrew and Darcy zones. It is being drilled roughly perpendicular to bedding and is expected to intersect at a shallow depth the stockworked sandstone that may be responsible for the high-Zn soil anomalies in the area.

| From | To | Rocktype & Description |
|---|---|---|
| | | Mixed coarse-grained quartz sandstone with a light quartz and calcite stockworks and sphalerite mineralization at various depths. Sphalerite occurs within quartz veins, as well as in granular replacements within the sandstones. Tabular shapes of these sphalerite infills suggest they may be replacing weathered out feldspar grains originally in the sandstone. A few zones of brecciation and deformation are present, particularly on the few grey mudstone beds within the unit. |

GREY MUDSTONE

Grey mudstone with interbeds of black mudstone, grading conformably into the underlying black mudstone unit by increased prevalence of black beds. Trace pyrite mineralization occurs along bedding strata in some places. Weak confidence of downhole younging for this unit based on cross-stratification and load deformation.

| | | BLACK MUDSTONE |
| | | Unit of black mudstone with regions of heavy gouging, and trace pyrite mineralization along beds. A few interbeds of grey mudstone are present, as well as a limestone conglomerate with pyrite inclusions near the structural bottom (stratigraphic top, if the conformable, adjacent grey mudstone is overturned) of the unit. Quartz and mild calcite veining occurs within some grey mudstone beds, and moderate calcite veining occurs within the limestone member. Very light quartz veining in black mudstones. |

| | | SANDSTONE |
| | | Mixed unit comprising mostly poorly sorted, coarse-grained quartz sandstones with interbeds of dark mudstone-sandstone sedimentary breccias. A light quartz stockwork is present through most of the unit, concentrated especially in the sandstones, and later calcareous veining is most prevalent in the sedientary breccias. At the up-hole contact of the unit, still in fractured material |

**FAULT ZONE**

Region of poor recovery. Sandy gouge (shale-based sand up-hole and more crystaline, sandstone-based down-hole in the unit) forced the drill to switch from NTW to BTW core size at ~121.92m depth. One region of intact sandstone was recovered within the zone.

|---|---|---|
| 124.13 | 127.32 | Sst |

**SANDSTONE**

Coarse-grained sandstone, lightly quartz stockworked and heavily faulted. Towards the bottom the sandstone takes on a greenish hue and forms a light sedimentary breccia with a dark grey mudstone. Minor pyrite is present in regions of fault gouge.

< @ 125.57 Gouge Fault 75.00° 220.00mm >

**GREY MUDSTONE**

Heavily fractured unit of dark grey mudstone with light calcareous veining and trace pyrite mineralization. Bedding strata show small-scale folding within the unit. Certain calcareous veins have regions of tan colouring which do not react strongly in HCl.

| | | OVERBURDEN |
| | | Mainly quartz-veined quartz sandstone pieces, weathered and rusted, with bits of intact mineral soil. |
| 6.30 | 13.58 | Sms_gy |
| | | GREY MUDSTONE |
| | | Dark grey mudstone with green interbeds, rusted along fractures. Throughout the unit are many small grains of an unidentified mineral (limonite?), less than 0.5mm in diameter and lacking any euhedral crystal form. It is possible that they are alterations from a previous mineral (pyrite?) in the mudstone. The unit is internally offset along small fractures, but is competent and does not appear to have been heavily deformed. |

| | | GREY MUDSTONE |
| | | Stratified dark grey mudstone, slightly brecciated and hosting a few qtz-veined sandstone clasts or interbeds, very similar to the smaller mudstone interbeds seen within the sandstone and sedimentary breccia units. One sandstone feature contains a 1mm grain of galena in a quartz vein, as well as a 2cm sparse cluster of pyrrhotite in quartz. Similar units occur downhole, but lack mineralization. |

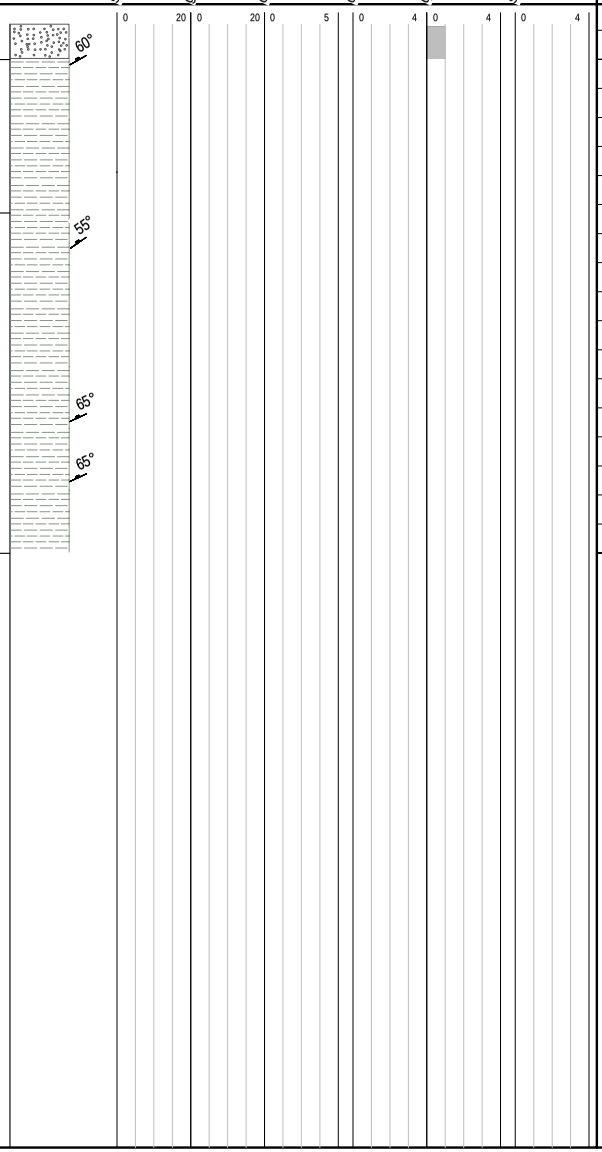
GREY MUDSTONE



Very dark grey mudstone, graphitic in places. Unit has been heavily sheared, with regions of fault gouge, deformed quartz veins and a few rounded clasts of other lithologies. In one such clast, a small (~2mm) cluster of sphalerite can be seen.

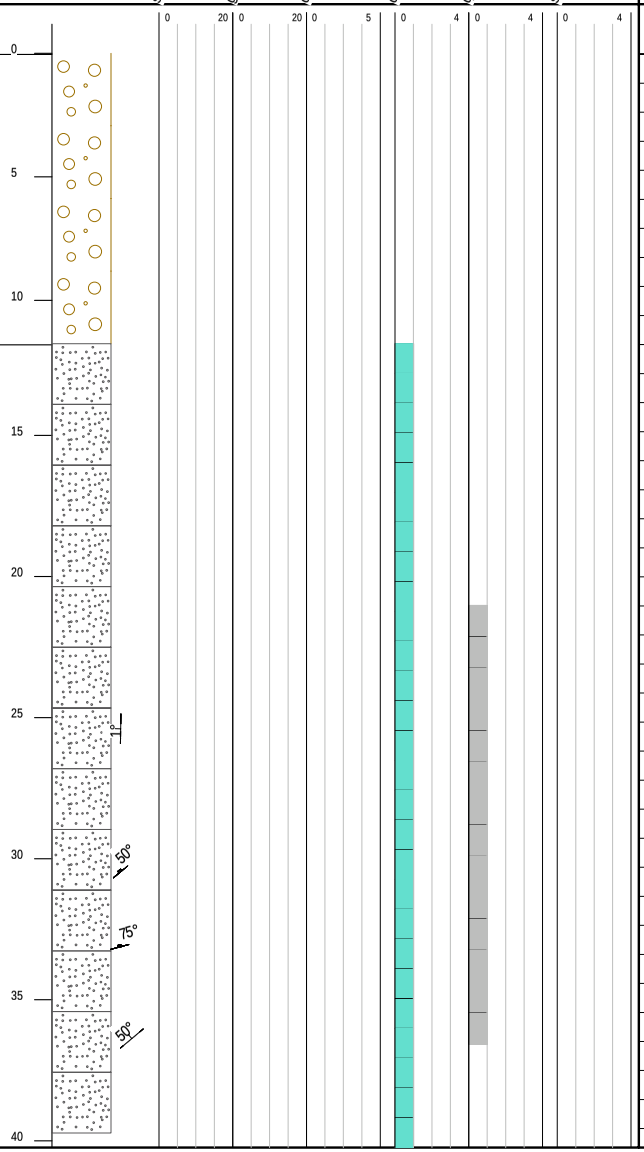
**OVERBURDEN**

Rused and heavily fractured regions of green mudstone, sandstone and mineral soil.



| From | To | Rocktype & Description |
|---|---|---|
| 11.75 | 59.08 | Sst |

**SANDSTONE**

Mixed unit, largely light blue grey sandstone but with variations, as well as a few <1m interbeds of mudstone and sedimentary breccia. The unit is very heavily fractured and rusted at the top. Light calcite veining occurs throughout.

11.75 - 24.00m: Very heavy fracturing. Some gouge zones (up to 8 cm across) are present, but were not measured as the unit above 24m does not likely reflect orientations of the competent bedrock.

**Objective:**

DN08-004 will be drilled approximately 50m to the SW of DN08-001 along an azimuth of 225 degrees and at a dip of -60 degrees. It is expected to intersect mineralization within the stockworked sandstone responsible for the high-Zn soil anomalies in the area.

SANDSTONE: medium to very coarse grained sandstone which is highly weathered throughout. Strong to intense silica alteration within unit. Unit is fairly fragmented and fractured throughout with main zones detailed below. Lower contact into the underlying mudstone unit is gradational over approximately 50cm. Effects of weathering has altered the colour of sandstone beds throughout unit. Stronger weathering is found near strongly fractured areas. Some heavily weathered beds are a purple-red colour whereas not as weathered sections of sandstone are white-grey and strongly silicified. In very coarse grained sections of sandstone, quartz grains are approximately 1-2mm in diameter.

Structure: some major fault and fracture zones throughout unit detailed below:

-From 3.45-4.7m is a fault zone with 20% gouge and 80% rock fragments
-From 5.4-6.1m is a fault with 40% gouge and 60% rock fragments
-From 9.14-9.54m with 10% gouge and 90% rock fragments
-From 10.15-10.67m is a fault zone with 30% gouge and 70% rock fragments.
-From 12.19-12.44m with 20% gouge and 80% rock fragments.
-From 14.1-14.4m is a fault zone with 10% gouge and 90% rock fragments.
-From 15.1-15.68m is a fault zone with 40% gouge and 60% rock fragments.
-From 21.03-22.86m is a fault zone with 20% gouge and 80% rock fragments.
-From 24.15-24.2m is a fault zone with 95% gouge and 5% rock fragments.
-From 24.62-24.77m is a fault zone with 100% gouge.

| | | SANDSTONE: grey, coarse grained sandstone. Fairly massive with little bedding definition. Unit is strongly fractured and fragmented within the upper half of the unit. Weathering discoloration penetrating into sandstone within 1-2cm of fracture surfaces making sandstone a brown-orange colour within this area. No chert observable within sandstone. Any minor clasts within sandstone unit are mm-scale mudstone clasts. |

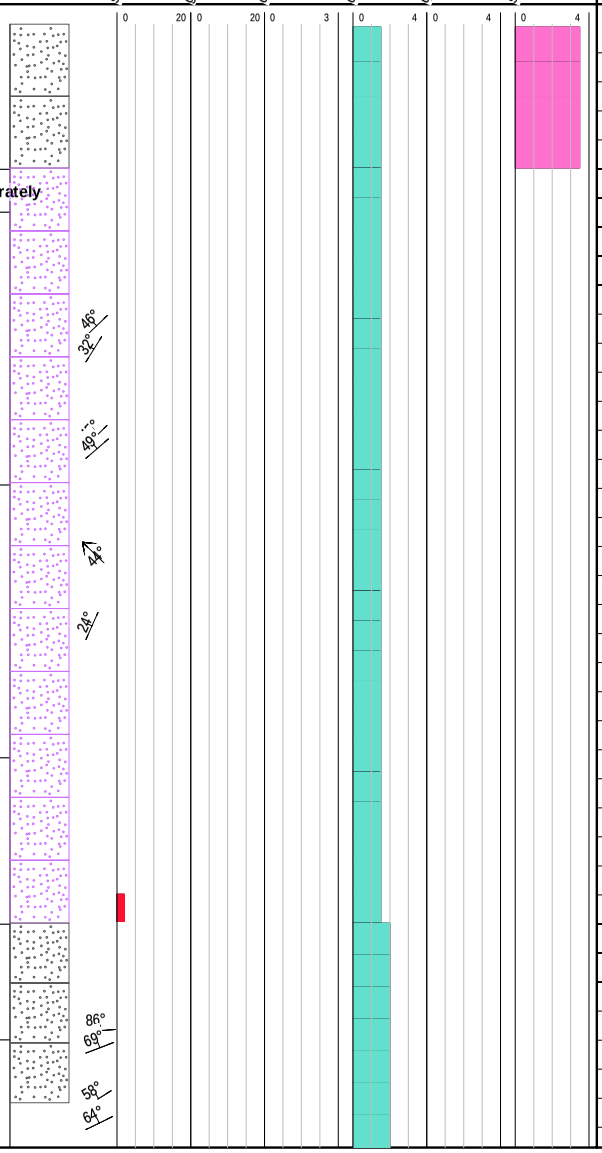
FAULT BRECCIA: Strongly broken and fragmented core. Competent core displays evidence of breccia and sandstone lithologies. Brecciated sections have a mudstone matrix and oxidized sandstone clasts. Clasts range in diameter from <1cm-4cm. The sandstone fragments within this faulted unit are strongly silicified and coarse grained.

Structure: Entire unit is approximately 5% gouge and 95% rock fragments.

45.72 49.19 Sst

SANDSTONE: medium to coarse grained sandstone with mudstone and fault brecciated sections. Sandstone ranges in colour from grey to orange to pink suggesting some weathering and oxidation effects. Upper contact is gradational over approximately 20cm with the overlying faulted breccia unit. Lower contact is sharp with underlying calcareous sandstone unit.



Structure: Some faulted sections within unit detailed below:
-From 47.85-47.9m is a fault zone with 100% gouge.
-From 49.0-49.19m is a fault zone with 90% gouge and 10% rock fragments.

| | | SANDSTONE: unit is highly variable with interbeds of mudstone, breccia and limestone found throughout. Mudstone interbeds range in width from mm-scale to 110cm. Limestone interbeds are fine grained, white to grey in colour, and are strongly to intensely reactive to HCL. Limestone interbeds range in width from 3-10cm. Brecciated sections are typically found near faults and is typically mudstone matrix with either mudstone or calcareous sandstone clasts. |
| | | Structure: some major faulted sections within unit detailed below: |
| | | -From 128.35-129.37m is a fault zone with 30% gouge and 70% rock fragments. |
| | | -From 131.06-131.68m is a fault zone with 40% gouge and 60% rock fragments. |
| | | -From 132.36-132.59m is a fault zone with 70% gouge and 30% rock fragments. |

| | | OVERBURDEN |
| 1.77 | 12.19 | Sst |
| | | SANDSTONE |
| | | The unit is a fine grained sandstone light grey in colour. The sandstone is quartz rich with approximately 1% feldspars and 2% lithics. The unit is semi-massive with some rare bedding and short intervals of well bedded grey mudstone. |
| | | STRUCTURE |
| | | The unit is relatively competant with short intervals of gouge and angular rock fragments. Fractures are at moderate to high angles to core axis. The amount of faulting is difficult to determine due to the proximity to surface. |
| | | < @ 5.45 Ft 35.00° 200.00mm > |
| | | < @ 6.96 Orientation difficult 90% rock fragments, 10% gouge Ft 15.00° 110.00mm > |

STRUCTURES

Orientations of the fault zone are difficult due to the highly fractured nature.

< @ 12.44 Ft 25.00° 1.00mm >

MINERALIZATION

Weak calcite veining

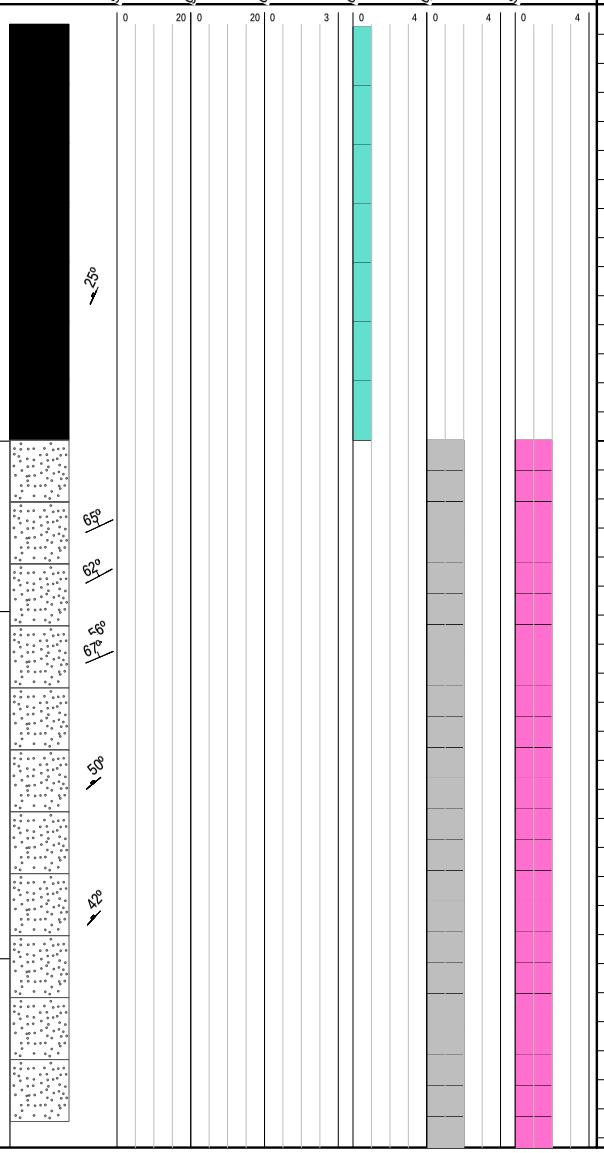
« cal 1.00*»

12.53 25.91 Sst

SANDSTONE

The unit is as seen above the fault breccia zone. The sandstone appears to be semi-massive to well bedded with light and dark laminations.

STRUCTURE



The unit is strongly faulted at high angles to the core axis. Faults commonly are gouge filled with minor amounts of rock fragments. Some fractures.

< @ 13.86 S0 65.00° >
< @ 14.59 S0 62.00° >

SPHALERITE AND GALENA MINERALIZATION

The sphalerite is associated with quartz stringers. The sphalerite is a honey brown colour with a darker orangy brown rim. Galena is found as a small network of stringers within a quartz-sphalerite-galena vein. The host rock is the same sandstone seen immediately above.

| | | SANDSTONE: unit is fairly competent considering it is at the top of the hole, however, there are some fault zones detailed below. Sandstone unit ranges from white to dark grey in colour and from fine-medium to medium grained. There are interbeds of breccia found throughout which are strongly veined and clast supported. Clasts are sandstone with a mudstone matrix. From 3.05-8.3m weathering effects are present within the sandstone as fracture surfaces have been discoloured to an orange colour permeating through the sandstone up to 4cm. |
| | | Structure: Some fault zones within unit detailed below: |
| | | -From 6.84-6.92m is a fault zone with 60% gouge and 40% rock fragments. |
| | | -From 8.94-9.09m is a fault zone with <5% gouge and >95% rock fragments. |
| | | -From 12.75-13.18m is a fault zone with 100% rock fragments. |
| | | Sandstone is fairly massive with little bedding laminations. |
| | | < @ 7.87 Fr 34.00° > |

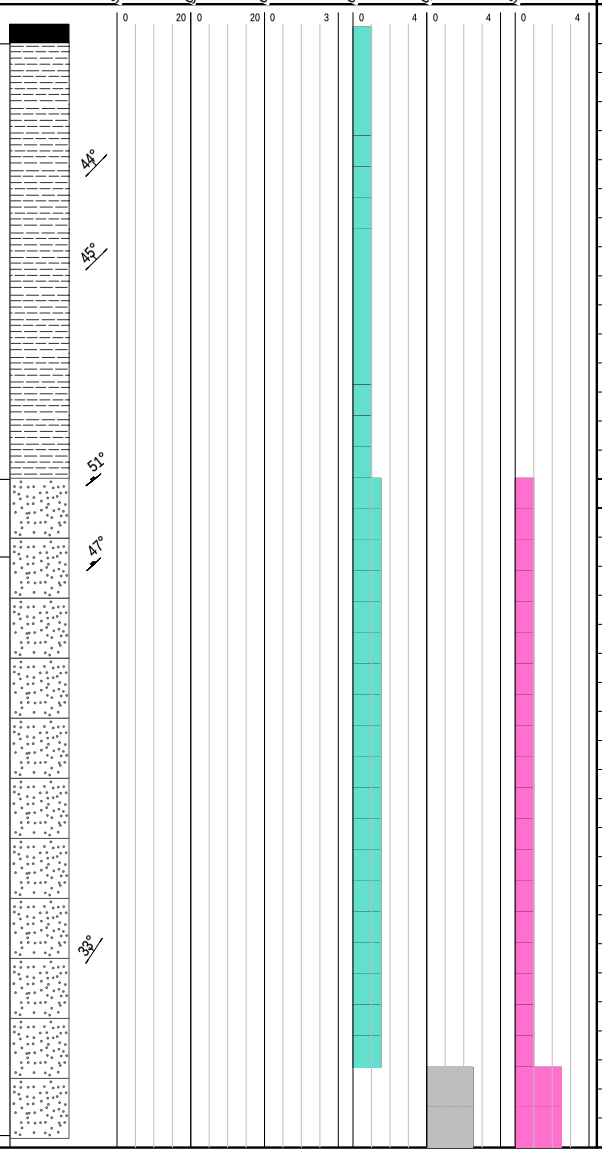
MUDSTONE: unit is primarily green mudstone with grey mudstone at the bottom of the unit. Some interbeds of breccia within unit with clasts of sandstone and grey mudstone matrix.

Structure: Unit is fairly competent with minor faults detailed below:
-From 28.54-28.79m is a fault zone with 10% gouge and 90% rock fragments.

< @ 26.74 S0 44.00° >
< @ 27.54 S0 45.00° >
< @ 29.32 Ft 51.00° >

Mineralization: trace pyrite found throughout unit « pyr 0.01%»



Veining: weak calcite veining « cal 1.00*»

SANDSTONE: unit is light to medium grey, medium grained, and has interbeds of breccia and mudstone throughout. Sandstone is moderately to strongly silicious. Some faulted and fractured sections outlined below. Upper contact is sharp and faulted with the overlying mudstone unit and lower contact is gradational over 3cm with the underlying fault breccia unit.

Structure: Some faulted zones detailed below:
-From 29.32-29.34m is a fault with 100% gouge.
-From 31.73-32.45m is fault with <5% gouge and >95% rock fragments.
-From 32.67-33.35m is a fault with with 100% angular to subrounded rock fragments.

Sandstone is fairly massive showing little to no bedding laminations other than when interbedded with mudstone.

MUDSTONE: light to dark grey mudstone with interbeds of light grey sandstone dispersed throughout. Sandstone interbeds range in width from 1-12cm. Mudstone and sandstone are interbedded resulting in excellent bedding laminations and measurements.

Structure:
Fault zone found from 53.5-53.54m with 100% gouge.

| | | STOCKWORK VEINED SPHALERITE AND GALENA MINERALIZATION: host rock is strc |
| | | silicified sandstone. Sandstone ranges from medium to coarse grained and is |
| | | moderately to strongly weathered with some vuggy veins found throughout. |
| | | Sphalerite and galena occur throughout unit within quartz-calcite veins and |
| | | also as minor disseminations within the sandstone. Sandstone is massive |
| | | displaying little to no bedding laminations plus it is strongly overprinted by |
| | | quartz-carbonate veins. |
| | | Structure: Some faulted sections within unit detailed below: |
| | | -From 0.97-2.68m the core is fragmented due to being in the top of the hole. |
| | | Fragments range in size from 1-15cm in width. |
| | | -From 6.3-6.36m is a fault zone with 100% rock fragments. |
| | | -From 11.39-11.54m is a fault zone with 10% gouge and 90% rock fragments |
| | | -From 12.3-12.49m is a fault zone with 100% weathered rock fragments. |
| | | -From 13.52-13.72m is a fault zone with 100% subangular to subrounded weathered |
| | | rock fragments. |

|---|---|---|---|
| **Project:** | Andrew | **Collar elevation:** | 1055.0 m |
| **Hole:** | DN08-009 | **Azimuth:** | 221.8° |
| **Proposed:** | AN08-DA4 | **Dip:** | -58.4° |
| **Location:** | 643606 m East 6977300 m North | **Length:** | 103.63 m |
| **Area:** | Darin_zone | **Date started:** | **Date completed:** |
| **Claim:** | AMB128 | 2008/08/16 | 2008/08/18 |
| **Logged by:** | W.Carter | | |
| **Drilled by:** | Kluane | | |
| **Assayed by:** | ALS_Chemex | | |
| **Core size:** | NTW | | |
| **Dip tests by:** | Reflex_MS | | |

**Objective:**

DN08-009 was drilled to further test the extent of the Zn-Pb mineralized zone intersected by earlier Darin Zone drill holes, which have confirmed the soil anomaly in this zone.

|---|---|---|---|
| **Project:** | Andrew | **Collar elevation:** | 1101.0 m |
| **Hole:** | DN08-012 | **Azimuth:** | 223.7° |
| **Proposed:** | AN08-DA15 | **Dip:** | -57.6° |
| **Location:** | 643308 m East 6977298 m North | **Length:** | 100.58 m |
| **Area:** | Darin_zone | **Date started:** | **Date completed:** |
| **Claim:** | AMB125 | 2008/08/23 | 2008/08/24 |
| **Logged by:** | W.Carter | | |
| **Drilled by:** | Kluane | | |
| **Assayed by:** | ALS_Chemex | | |
| **Core size:** | NTW | | |
| **Dip tests by:** | Reflex_MS | | |

**Objective:**

DN08-012 was drilled to further test the extent of the Zn-Pb mineralized zone intersected by DN08-008. A weakly mineralized zone was intersected from 15.35 - 35.55 m.
At 78.64 m, the downhole survey was interrupted and the reading was erronous, therefore it is not included. All the other readings are correct.

**SUMMARY LOG:**

# DRILL LOG

| | | | |
|---|---|---|---|
| **Project:** | Andrew | **Collar elevation:** | 1141 m |
| **Hole:** | DN08-013 | **Azimuth:** | 231.0° |
| **Proposed:** | AN08-DA14 | **Dip:** | -49.9° |
| **Location:** | 643344 m East 6977397 m North | **Length:** | 164.59 m |
| **Area:** | Darin_zone | **Date started:** | **Date completed:** |
| **Claim:** | AMB125 | 2008/08/25 | 2008/08/28 |
| **Logged by:** | H.Jaggard | **Objective:** | |
| **Drilled by:** | Kluane | DN08-013 was drilled to further test the extent of the Zn-Pb mineralized zone intersected by earlier Darin Zone drill holes, which have confirmed the soil anomaly in this zone. | |
| **Assayed by:** | ALS_Chemex | | |
| **Core size:** | NTW | | |
| **Dip tests by:** | Reflex_MS | | |

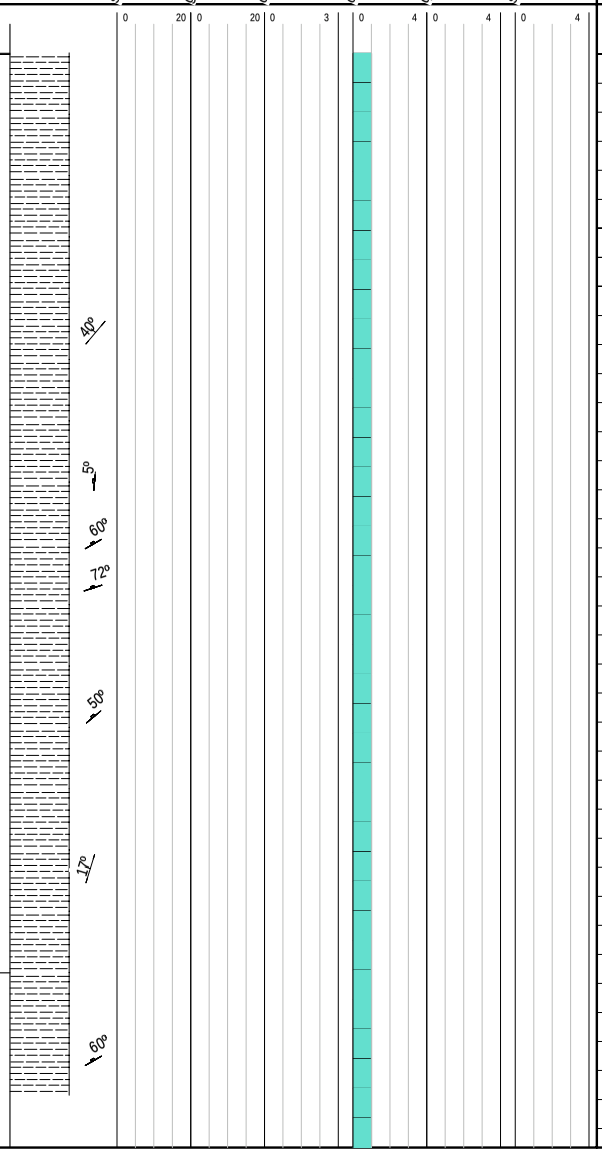
**BLACK MUDSTONE**

Black mudstone with fine lamations of light grey siltstone, up to 10mm wide.
Some short intervals of interbedded calcareous sandstone.

**SAMPLING**

The hole hole has been sampled in order to cover the contacts between the felsic porphyry and any other unit encountered. This was decided upon after initially sampling the first 37m. Further sampling was carried out where sphalerite mineralization was encountered down hole.

**STRUCTURE**



The mudstone shows a prominent cleavage which is often parallel to numerous fold axies. Silty laminations show minor fold axies. The unit is also strongly faulted with thin discrete graphitic faults.

< @ 4.51 S0 17.00° >
< @ 5.46 Sv 60.00° >
< @ 5.47 Sa 60.00° >

**MINERALIZATION**

The black mudstone contains some diagenetic pyrite parallel to bedding. Minor carbonate alteration of the sandstone intervals. Weak calcite veining. Weak iron oxidation on fracture faces.

**FAULT BRECCIA**

Brecciated and gougy black mudstone with short intervals of calcareous sandstone.

**STRUCTURE**

The unit is dominated by fissile and crumbly black mudstone, and approximately 7% gouge. Orientations are difficult due to the crumbly nature of the unit.

< @ 6.00 Ft 25.00° 30.00mm >

**FELSIC PORPHYRY**

The rock is an alterered feldspar-amphibole porphyry. The alteration gives the rock an overall cloudy-grey appearance and makes phenocryst identification difficult. A best estimate of composition would be 6% amphibole phenocrysts, 55-60% plagioclase phenocrysts, 3% milky feldspar phenocrysts, and the remainder being fine grained interstitial felsic material. The feldspars are generally 2-3mm across, and the amphibole's are approximately 5mm to less than 1mm. At 29.13m depth there is an 11mm dike of nearly equigranular feldspars 1mm wide, and black mafics less than or equal to 1mm.

**STRUCTURE**

The unit is overall competant with many discrete fracture planes at variable orientations. The upper 3m of the unit is soft and crumbly due to moderate argillic alteration and chloritic alteration.

| | | MINERALIZATION |
| | | The upper 3m of the unit has moderate argillic alteration and chloritic alteration of the amphiboles. A weak carbonate alteration can be detected using acid on fresh fracture faces. Moderate to strong iron oxidation covers fracture faces from 13.30 to 12.66. The amount of oxidation is much lower beyond 12.66. There also appears to be very fine grained pyrite and pyrrhotite concentrated within dark blebs, possibly altered mafics. The concentration of both appear to increase at approximately 22m depth. |

< @ 39.00 contact with below unit S0 10.00° >

MINERALIZATION

The unit has strong graphitic coatings on faults, and weak to moderate carbonate alteration. Pyrite is common as disseminations in the black mudstone as well as quartz-pyrite stringers.

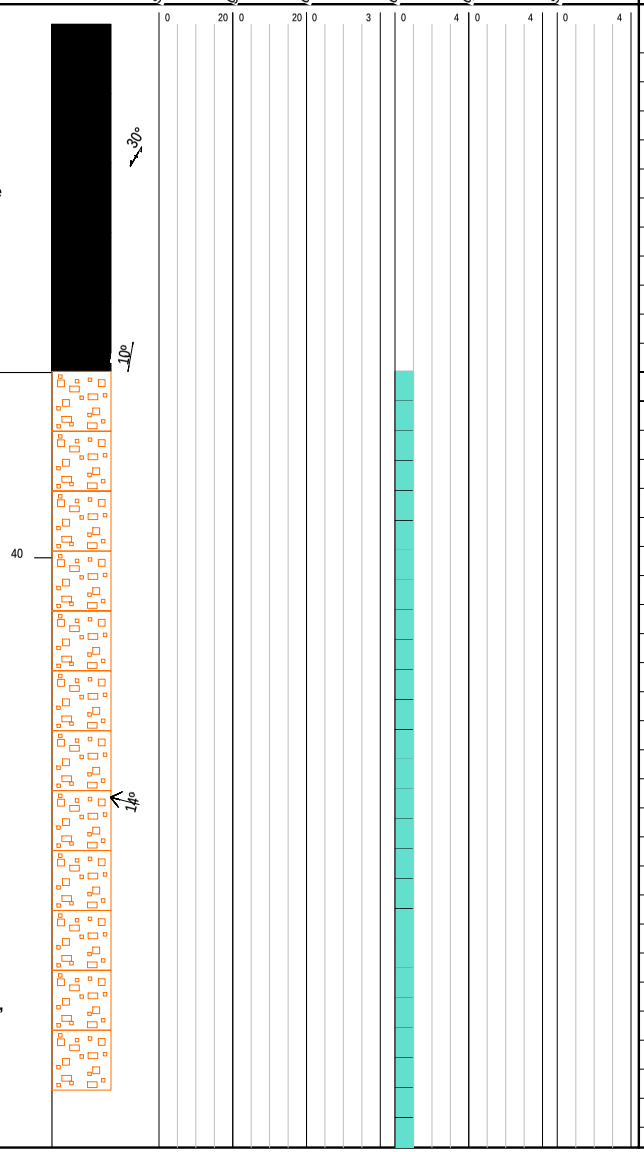
« pyr 0.50%»
« within faults grp 25.00%»

| 39.00 | 44.14 | Fpo |
|---|---|---|

FELSIC PORPHYRY

The lithology is the same as seen above. The rock has a slightly darker hue, possibly indicating biotite alteration. There is a 1-2mm wide chill-margin at the contact with the above brecciated black mudstone. The chill-margin is a creamy pinkish-white and very fine grained with no phenocrysts. The porphyry appears to post-date much of the deformation within the underlying unit, as evident from the undeformed porphyry in contact with, and truncating the underlying deformed black mudstone.

STRUCTURE



The unit is often fractured, measurements are representative of a regular fracturing of the unit. Fractures are closely related to calcite veining.

< @ 40.54 Fr 15.00° >

MINERALIZATION

The unit has a weak carbonate alteration, minor pyrite and trace pyrrhotite replacing mafics, and some green possibly chloritic alteration of the feldspar phenocrysts. The fine grained aphanitic groundmass as a dark grey-pinkish hue, suggesting possible biotite alteration.

| | | FAULT ZONE |
| | | The unit is extremely crumbly and gougy felsic prophyry. Much of the breakage could be due to drilling but there are long intervals of soft gougy core. |
| | | STRUCTURE |
| | | Extremely broken core with equal amounts of gouge. Orientations are not possible |
| | | MINERALIZATION |
| | | Strong iron oxidation on rock fragments. Likely some clay alteration of the porphyry to create the sections of gouge. |
| | | « cly 3.00*» |
| 50.76 | 69.05 | Fpo |
| | | FELSIC PORPHYRY |
| | | The unit is as seen above. The unit undergoes a slow transition from a medium grey to a dark grey at around 58m depth. |
| | | STRUCTURE |
| | | The unit is extremely broken and blocky. Measurements are representative of pervasive fracturing with discrete faulting. Calcite coatings are frequent on fracture faces. |

| | | MINERALIZATION |
| | | The unit as weak to moderate iron oxidation on frature faces. Minor clay alteration of the felsic groundmass. There is a slight green colour to the feldspar phenocrysts indicating chloritic alteration. Weak calcite and quartz veining. Minor pyrite appears to be replacing mafic phenocrysts and some trace pyrrhotite. As mentioned in the above porphyry unit, biotitic alteration is present and increases to a moderate to strong amount at approximately 58m depth. |

MINERALIZATION

Their is a very strong graphitic mineralization whithin faults and between foliations. The entire unit has a dark sooty feel to it. Sphalerite can be found in low percentages associated with quartz veins which are overprinted by minor calcite. Carbonate alteration of very fine grained sandstone laminations. Pyrite is frequent within quartz stringers.

| **Assayed by:** | ALS_Chemex | | |
| **Core size:** | NTW | | |
| **Dip tests by:** | Reflex_MS | | |

**Objective:**

GT08-001 was drilled 50m to the south of the Scott Killzone in order to test for any subsurface mineralization, indicated by float mineralized with sphalerite in the killzone. Although the planned depth was 100m, the hole was shutdown at 73.76m due to difficult drilling conditions that halted drilling.

**SUMMARY LOG:**

**OVERBURDEN**

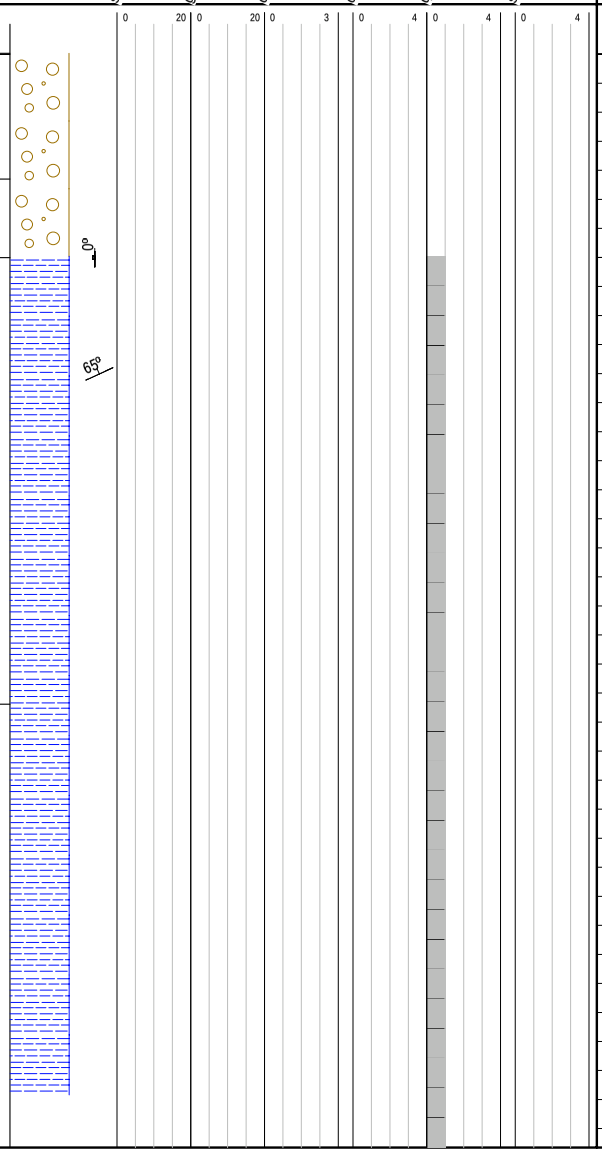
No recovery was recorded by the drillers.

| From | To | Rocktype & Description |
|---|---|---|
| 8.08 | 12.19 | Ssl |

**SILTSTONE**

The unit is a very finely laminated siltstone alternating equally with black to grey mudstone. Laminations range in thickness from 10mm to 1mm. The siltstone laminations are light grey in colour and almost always calcareous. It is unclear if the carbonate is primary or secondary.

**STRUCTURE**



The unit is extremely well bedded at high angles to the core axis. Minor folds were encountered with both open fold limbs and very tight folds limbs. These small folds are likely the development of a crenulation cleavage. There is a strong cleavage parallel to bedding, most likely a parting along the weak bedding planes. The amount of faulting is moderate but difficult to determine due to the proximity to surface.

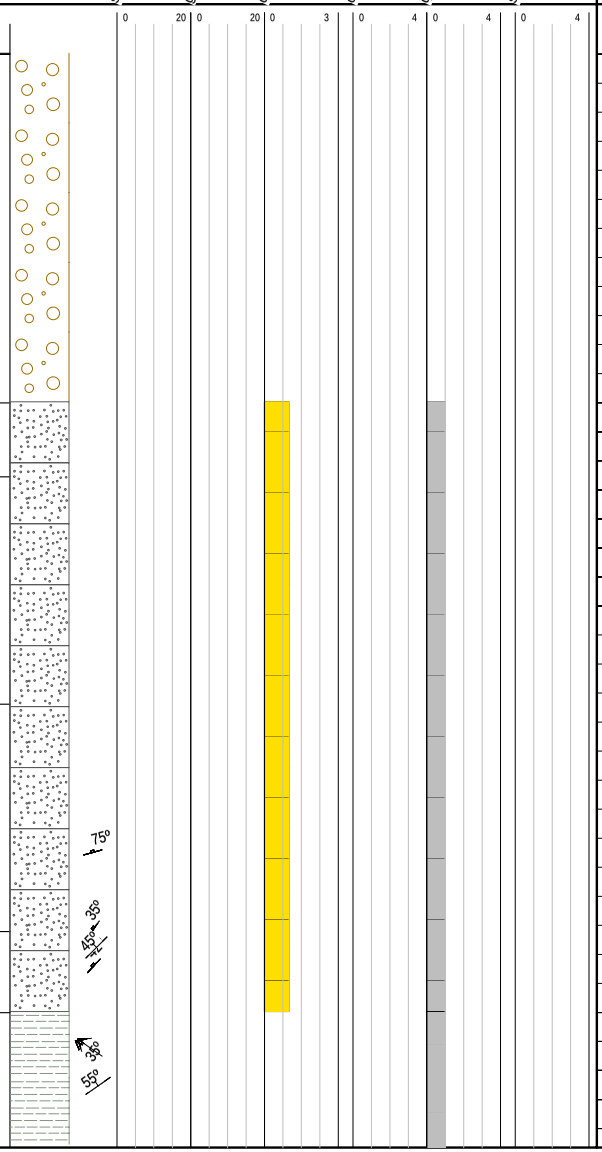
| **Location:** | 639536 m East 6982350 m North | **Length:** | 120.40 m |
| **Area:** | Lad_zone | **Date started:** | **Date completed:** |
| **Claim:** | AMB84 | 2008/07/13 | 2008/07/15 |
| **Logged by:** | M.Eckfeldt | | |
| **Drilled by:** | Kluane | | |
| **Assayed by:** | ALS_Chemex | | |
| **Core size:** | NTW | | |
| **Dip tests by:** | Reflex_MS | | |

**Objective:**

LD08-01 was drilled to test the subsurface extent of replacement style and fractured hosted vein style galena and sphalerite mineralization observed on surface. The hole was drilled down-dip of the surface showing, 40m to the south-west.

**SUMMARY LOG:**



0.00-3.35m-Overburden
3.35-26.01m-Sandstone and Mudstone
26.01-26.74m-Shear Zone
26.74-27.80m-Sandstone
27.80-30.14m-Shear Zone
30.14-60.96m-Sandstone and Mudstone. Trace Galena and Sphalerite
60.96-64.29m-Sedimentary Breccia
64.29-92.98m-Sandstone and Mudstone
92.98-94.43m-Barren Quartz Vein Breccia
94.43-120.40m-Sandstone and Mudstone

| | | SANDSTONE |
| | | Fine sandstone with interbedded grey mudstone. The sandstone is variable from a quartz rich sandstone to a nearly mud supported sandstone with 25% or more feldspar grains with some larger 1-2mm quartz grains. The unit shows a moderate green colouration suggesting a chloritic alteration. Some intervals appear to have a silica and chlorite alteration due to the hardness of the greenish veins and fracture coatings. The unit has common pyrite and pyrrhotite. The pyrrhotite appears with quartz stringers less than 2mm commonly cross-cutting bedding. The unit is very broken possibly due to its proximity to the surface. More obvious fault planes show slickensides. |

| | | MUDSTONE |
| | | The mudstone unit is of a light green to a pink tan colour as seen previously as interbeds within other units. Due to alteration throughout the hole, the true colour of the unit is not known. The unit is often cross-cut by pyrrhotite-quartz veins. Fractures possibly parallel to cleavage are often replaced by pyrrhotite and chlorite. Pinkish discolouration appear to appear in halo's around minor pyrrhotite and quartz stringers. |

| | | SANDSTONE |
| | | The unit is a silicified quartz rich sandstone as seen above. Some intervals have a dark pinkish-grey discolouration which fades in and out. Intervals without the discolouration have a higher amount of chloritic alteration, and often contain dark grey lithic grains. Pyrrhotite appears much less comon however there is some trace chalcopyrite. Some veining appears to have an argillic alteration, as they are soft and milky coloured. |

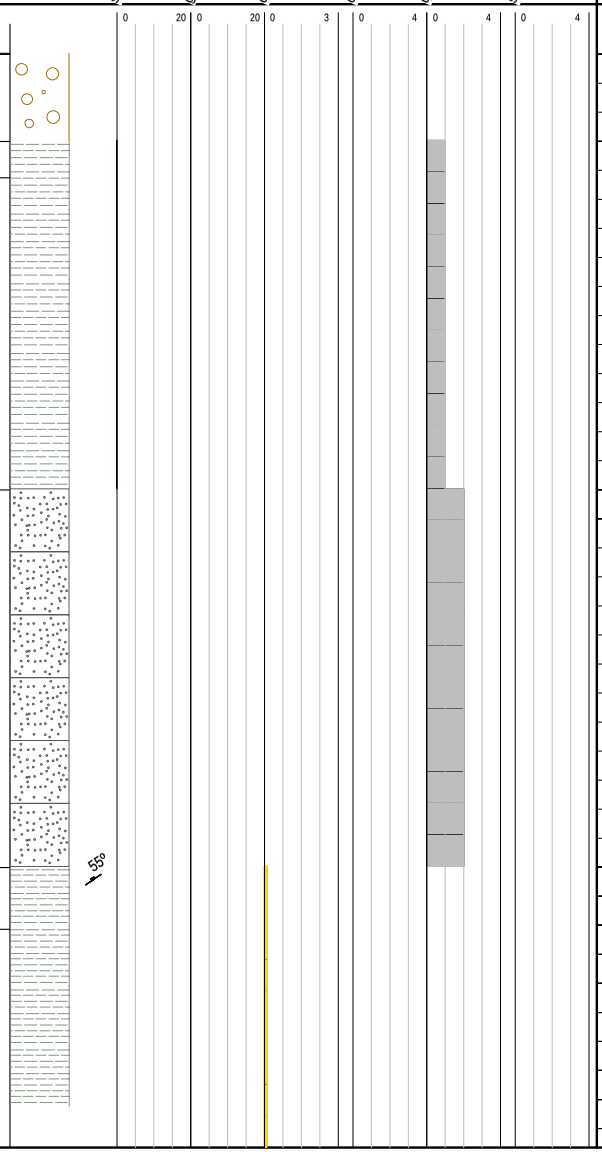
| **Proposed:** | LD08-B | **Dip:** | -45.2° |
| **Location:** | 639519 m East 6982364 m North | **Length:** | 94.49 m |
| **Area:** | Lad_zone | **Date started:** | **Date completed:** |
| **Claim:** | AMB84 | 2008/07/15 | 2008/07/17 |
| **Logged by:** | M.Eckfeldt | | |
| **Drilled by:** | Kluane | | |
| **Assayed by:** | ALS_Chemex | | |
| **Core size:** | NTW | | |
| **Dip tests by:** | Reflex_MS | | |

**Objective:**

As with LD08-01, the hole was drilled to test the subsurface extent of replacement and of fracture hosted vein style, galena and sphalerite mineralization. Both of which were observed in a surface showing 40m to the north-east.

**SUMMARY LOG:**



0.00-4.57m-Overburden
4.57-44.41m-Mudstone and Sandstone. Trace Galena and Sphalerite
44.41-52.82m-Chert
52.82-94.49m-Mudstone and Sandstone

SANDSTONE

The unit is a strongly silicified sandstone with faintly visible medium to coarse grained quartz. The unit is interbedded with some dark grey mudstone with a dark maroon tinge. Overall the unit is heavily cross-cut by fracture filling, chaotic quartz veins and sulphide veins. The unit has moderate chlorite alteration. Sulphide veins are clotty and generally comprised of pyrrhotite-pyrite and possibly galena and rare sphalerite.

| | | GREY MUDSTONE |
| | | The grey mudstone is as seen above with dark maroon colouration. The unit is interbedded with short strongly silicified sandstone intervals. The mudstone intervals are occasionally reduced to a tan colour. The unit is well bedded and highly fractured. Quartz veins and minor sulphide veins are chaotic and fracture filling. Sulphide veins are generally pyrrhotite-pyrite. Galena and sphalerite are trace. Major veins have an approximate preffered orientation of 15 degrees to core-axis. |

| **Drilled by:** | Kluane | | |
| **Assayed by:** | ALS_Chemex | | |
| **Core size:** | NTW | | |
| **Dip tests by:** | Reflex_MS | | |

**Objective:**

RB08-001 was drilled to test a soil anomaly. The hole is located just west of Trench 1, drilled at -45/010 to 150.88 metres depth. No mineralization was encountered, and no samples taken. Bedding runs parallel to the core axis for the majority of the hole; re-evaluation of drilling plan assessed.

**FAULT ZONE**

Fault zone developed through contact of grey sandstone and grey mudstone; the contact is roughly parallel TCA. Lots of broken to gougey mudstone. Local randomly oriented calcite veining. Possible fold hinge at 41.82m (90 degrees TCA), but it is questionable considering the core is pretty broken-up and bedding is parallel TCA.

| **Drilled by:** | Kluane | | |
| **Assayed by:** | ALS_Chemex | | |
| **Core size:** | NTW | | |
| **Dip tests by:** | Reflex_MS | | |

**Objective:**

RB08-002 was drilled to test the soil anomaly in the Robin Zone. It was drilled just north, and down-slope from RB08-001, at -50/190 to a depth of 148.74. Practically no mineralization was encountered; a very thin sphalerite microveinlet was found associated with some stockwork, but only amounts to trace quantities. No samples were taken.

| | | SANDSTONE: strongly broken and faulted unit. Competent pieces of core display sandstone as the main lithoogic unit. Sandstone is light to dark grey, fine to coarse grained. Minor interbeds of mudstone are found throughout. |
| | | Structure: Unit is strongly faulted with intervals of gouge and sections are detailed below: |
| | | -From 7.62-10.36m only 0.3m is recovered and it is gouge and clay material. |
| | | -From 9.14-10.14m is a faulted zone displaying 5-20cm sections of gouge between competent core pieces. |
| | | -From 11.89-12.43m is a fault zone with 80% gouge and 20% rock fragments. |
| | | -From 12.78-13.13m is a fault zone with 60% gouge and 40% rock fragments. |
| | | -From 15.3-15.86m is a fault zone with 40% gouge and 60% rock fragments. |
| | | -From 17.37-17.62m is a fault zone with 80% gouge and 20% rock fragments. |
| | | -From 18.5-19.5m is a fault zone with 50% gouge and 50% rock fragments. |
| | | -From 20.4- 22.86m is a fault zone with 95% gouge and 5% rock fragments. |

# CERTIFICATE TR08116374

Project: Andrew

P.O. No.: OVR08-01

This report is for 25 Rock samples submitted to our lab in Terrace, BC, Canada on 19-AUG-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK<br>HUGH BRESSER | DARCY BAKER<br>GENERAL EQUITY ENGINEERIN | ROBIN BLACK<br>COL GEOBASE |

## SAMPLE PREPARATION

| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-22 | Sample login - Rcd w/o BarCode |
| PUL-QC | Pulverizing QC Test |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Ag-OG46 | Ore Grade Ag - Aqua Regia | VARIABLE |
| Pb-OG46 | Ore Grade Pb - Aqua Regia | VARIABLE |
| Zn-VOL50 | Zn by titration | |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY EXPLORATION CONSULTANTS LTD.**
**ATTN: ROBIN BLACK**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

# CERTIFICATE TR08120119

Project: Andrew

P.O. No.: OVR08-01

This report is for 2 Rock samples submitted to our lab in Terrace, BC, Canada on 26-AUG-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK | DARCY BAKER | ROBIN BLACK |
| HUGH BRESSER | GENERAL EQUITY ENGINEERING | COL GEOBASE |

## SAMPLE PREPARATION

| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| PUL-QC | Pulverizing QC Test |
| LOG-22 | Sample login - Rcd w/o BarCode |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| ME-ICP41 | 35 Element Aqua Regia ICP-AES | ICP-AES |

To: **EQUITY EXPLORATION CONSULTANTS LTD.**
**ATTN: ROBIN BLACK**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

# CERTIFICATE TR08157423

Project: Andrew

P.O. No.: OVR08-01

This report is for 4 Rock samples submitted to our lab in Terrace, BC, Canada on 10-NOV-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK<br>HUGH BRESSER | DARCY BAKER<br>GENERAL EQUITY ENGINEERIN | ROBIN BLACK<br>COL GEOBASE |

## SAMPLE PREPARATION

| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-22 | Sample login - Rcd w/o BarCode |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| ME-ICP41 | 35 Element Aqua Regia ICP-AES | ICP-AES |

To: **EQUITY EXPLORATION CONSULTANTS LTD.**
**ATTN: ROBIN BLACK**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

# CERTIFICATE TR08108473

Project: Andrew

P.O. No.: 30-AD08-02

This report is for 37 Drill Core samples submitted to our lab in Terrace, BC, Canada on 5-AUG-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK | DARCY BAKER | ROBIN BLACK |
| ADRIAN BRAY | HUGH BRESSER | ¡ENERAL EQUITY ENGINEERIN( |
| COL GEOBASE | | |

## SAMPLE PREPARATION

| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| LOG-22 | Sample login - Rcd w/o BarCode |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY EXPLORATION CONSULTANTS LTD.**
**ATTN: DARCY BAKER**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

## CERTIFICATE OF ANALYSIS TR08108473

| Method | CERTIFICATE COMMENTS |
|---|---|
| ME-MS41 | Interference: Ca>10% on ICP-MS As,ICP-AES results shown. |
| ME-MS41 | Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g). |

# CERTIFICATE TR08116375

Project: Andrew

P.O. No.: 32-AD08-003

This report is for 10 Drill Core samples submitted to our lab in Terrace, BC, Canada on 19-AUG-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK<br>HUGH BRESSER | DARCY BAKER<br>GENERAL EQUITY ENGINEERIN | ROBIN BLACK<br>COL GEOBASE |

## SAMPLE PREPARATION

| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| LOG-22 | Sample login - Rcd w/o BarCode |
| SPL-21d | Split sample - duplicate |
| PUL-31d | Pulverize Split - duplicate |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY EXPLORATION CONSULTANTS LTD.**
**ATTN: DARCY BAKER**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

# CERTIFICATE TR08116376

Project: Andrew

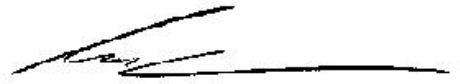
P.O. No.: OVR08-01

This report is for 48 Drill Core samples submitted to our lab in Terrace, BC, Canada on 19-AUG-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK<br>HUGH BRESSER | DARCY BAKER<br>GENERAL EQUITY ENGINEERIN | ROBIN BLACK<br>COL GEOBASE |

## SAMPLE PREPARATION



| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| LOG-22 | Sample login - Rcd w/o BarCode |
| CRU-QC | Crushing QC Test |
| PUL-QC | Pulverizing QC Test |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Cu-OG46 | Ore Grade Cu - Aqua Regia | VARIABLE |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY EXPLORATION CONSULTANTS LTD.**
**ATTN: DARCY BAKER**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

# CERTIFICATE TR08120843

Project: Andrew

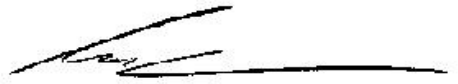
P.O. No.: OVR08-01

This report is for 28 Drill Core samples submitted to our lab in Terrace, BC, Canada on 26-AUG-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK | DARCY BAKER | ROBIN BLACK |
| HUGH BRESSER | GENERAL EQUITY ENGINEERIN | COL GEOBASE |

## SAMPLE PREPARATION



| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| LOG-22 | Sample login - Rcd w/o BarCode |
| PUL-QC | Pulverizing QC Test |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY EXPLORATION CONSULTANTS LTD.**

# CERTIFICATE TR08050913

Project: Andrew

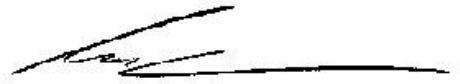
P.O. No.: OVR-08-01

This report is for 58 Drill Core samples submitted to our lab in Terrace, BC, Canada on 30-APR-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| DARCY BAKER | ROBIN BLACK | |

## SAMPLE PREPARATION



| ALS CODE | DESCRIPTION |
|---|---|
| LOG-22 | Sample login - Rcd w/o BarCode |
| WEI-21 | Received Sample Weight |
| PUL-QC | Pulverizing QC Test |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |
| LOG-24 | Pulp Login - Rcd w/o Barcode |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |
| Cu-OG46 | Ore Grade Cu - Aqua Regia | VARIABLE |
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| ME-MS41 | 51 anal. aqua regia ICPMS | |

## CERTIFICATE OF ANALYSIS TR08050913

| Method | CERTIFICATE COMMENTS |
|---|---|
| ME-MS41 | Interference: Ca>10% on ICP-MS As,ICP-AES results shown. |
| ME-MS41 | Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g). |

# CERTIFICATE TR08058682

Project: Andrew

P.O. No.: OVR08-01

This report is for 93 Drill Core samples submitted to our lab in Terrace, BC, Canada on 6-MAY-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK | DARCY BAKER | ROBIN BLACK |
| ADRIAN BRAY | HUGH BRESSER | GENERAL EQUITY ENGINEERIN |
| COL GEOBASE | | |

## SAMPLE PREPARATION

| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| CRU-QC | Crushing QC Test |
| PUL-QC | Pulverizing QC Test |
| LOG-22 | Sample login - Rcd w/o BarCode |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Ag-OG46 | Ore Grade Ag - Aqua Regia | VARIABLE |
| Pb-OG46 | Ore Grade Pb - Aqua Regia | VARIABLE |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY ENGINEERING LTD.**
**ATTN: DARCY BAKER**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

## CERTIFICATE OF ANALYSIS TR08058682

| Method | CERTIFICATE COMMENTS |
|---|---|
| ME-MS41 | Interference: Ca>10% on ICP-MS As,ICP-AES results shown. |
| ME-MS41 | Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g). |

## CERTIFICATE TR08058891

Project: Andrew

P.O. No.: OVR08-01

This report is for 63 Drill Core samples submitted to our lab in Terrace, BC, Canada on 7-MAY-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK<br>ADRIAN BRAY<br>COL GEOBASE | DARCY BAKER<br>HUGH BRESSER | ROBIN BLACK<br>¡ENERAL EQUITY ENGINEERIN( |

## SAMPLE PREPARATION

| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| LOG-22 | Sample login - Rcd w/o BarCode |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY ENGINEERING LTD.**
**ATTN: ROBIN BLACK**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

## CERTIFICATE OF ANALYSIS TR08058891

| Method | CERTIFICATE COMMENTS |
|---|---|
| ME-MS41 | Interference: Ca>10% on ICP-MS As,ICP-AES results shown. |
| ME-MS41 | Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g). |

# CERTIFICATE TR08061910

Project: Andrew

P.O. No.: OVR08-01

This report is for 49 Drill Core samples submitted to our lab in Terrace, BC, Canada on 12-MAY-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK | DARCY BAKER | ROBIN BLACK |
| ADRIAN BRAY | HUGH BRESSER | GENERAL EQUITY ENGINEERIN |
| COL GEOBASE | | |

## SAMPLE PREPARATION

| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| CRU-QC | Crushing QC Test |
| LOG-22 | Sample login - Rcd w/o BarCode |
| PUL-QC | Pulverizing QC Test |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Cu-OG46 | Ore Grade Cu - Aqua Regia | VARIABLE |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY ENGINEERING LTD.**
**ATTN: DARCY BAKER**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

## CERTIFICATE OF ANALYSIS TR08061910

| Method | CERTIFICATE COMMENTS |
|---|---|
| ME-MS41 | Interference: Ca>10% on ICP-MS As,ICP-AES results shown. |
| ME-MS41 | Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g). |

# CERTIFICATE TR08061900

Project: Andrew

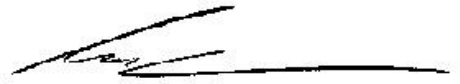
P.O. No.: OVR08-01

This report is for 49 Drill Core samples submitted to our lab in Terrace, BC, Canada on 12-MAY-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK<br>ADRIAN BRAY<br>COL GEOBASE | DARCY BAKER<br>HUGH BRESSER | ROBIN BLACK<br>¡ENERAL EQUITY ENGINEERIN( |

## SAMPLE PREPARATION



| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| CRU-QC | Crushing QC Test |
| LOG-22 | Sample login - Rcd w/o BarCode |
| PUL-QC | Pulverizing QC Test |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Pb-OG46 | Ore Grade Pb - Aqua Regia | VARIABLE |
| Cu-OG46 | Ore Grade Cu - Aqua Regia | VARIABLE |
| Pb-VOL70 | Pb by Titration | |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY ENGINEERING LTD.**

## CERTIFICATE OF ANALYSIS TR08061900

| Method | CERTIFICATE COMMENTS |
|---|---|
| ME-MS41 | Interference: Ca>10% on ICP-MS As,ICP-AES results shown. |
| ME-MS41 | Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g). |

# CERTIFICATE TR08061911

Project: Andrew

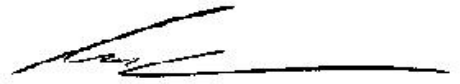
P.O. No.: OVR08-01

This report is for 35 Drill Core samples submitted to our lab in Terrace, BC, Canada on 12-MAY-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK<br>ADRIAN BRAY<br>COL GEOBASE | DARCY BAKER<br>HUGH BRESSER | ROBIN BLACK<br>¡ENERAL EQUITY ENGINEERIN( |

## SAMPLE PREPARATION



| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| CRU-QC | Crushing QC Test |
| LOG-22 | Sample login - Rcd w/o BarCode |
| PUL-QC | Pulverizing QC Test |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Pb-OG46 | Ore Grade Pb - Aqua Regia | VARIABLE |
| Cu-OG46 | Ore Grade Cu - Aqua Regia | VARIABLE |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY ENGINEERING LTD.**
**ATTN: DARCY BAKER**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

## CERTIFICATE OF ANALYSIS TR08061911

| Method | CERTIFICATE COMMENTS |
|---|---|
| ME-MS41 | Interference: Ca>10% on ICP-MS As,ICP-AES results shown. |
| ME-MS41 | Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g). |

# CERTIFICATE TR08065650

Project: Andrew

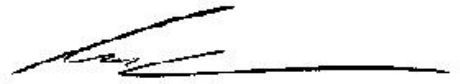
P.O. No.: OVR08-01

This report is for 63 Drill Core samples submitted to our lab in Terrace, BC, Canada on 20-MAY-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK<br>ADRIAN BRAY<br>COL GEOBASE | DARCY BAKER<br>HUGH BRESSER | ROBIN BLACK<br>GENERAL EQUITY ENGINEERIN |

## SAMPLE PREPARATION



| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| PUL-QC | Pulverizing QC Test |
| LOG-22 | Sample login - Rcd w/o BarCode |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Pb-OG46 | Ore Grade Pb - Aqua Regia | VARIABLE |
| Cu-OG46 | Ore Grade Cu - Aqua Regia | VARIABLE |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY ENGINEERING LTD.**
**ATTN: ROBIN BLACK**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

# CERTIFICATE TR08065652

Project: Andrew

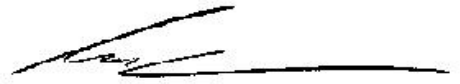
P.O. No.: OVR08-01

This report is for 45 Drill Core samples submitted to our lab in Terrace, BC, Canada on 20-MAY-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK<br>ADRIAN BRAY<br>COL GEOBASE | DARCY BAKER<br>HUGH BRESSER | ROBIN BLACK<br>¡ENERAL EQUITY ENGINEERIN( |

## SAMPLE PREPARATION



| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| LOG-22 | Sample login - Rcd w/o BarCode |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Pb-OG46 | Ore Grade Pb - Aqua Regia | VARIABLE |
| Cu-OG46 | Ore Grade Cu - Aqua Regia | VARIABLE |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY ENGINEERING LTD.**
**ATTN: ROBIN BLACK**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

## CERTIFICATE OF ANALYSIS TR08065652

| Method | CERTIFICATE COMMENTS |
|---|---|
| ME-MS41 | Interference: Ca>10% on ICP-MS As,ICP-AES results shown. |
| ME-MS41 | Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g). |

# CERTIFICATE TR08061909

Project: Andrew

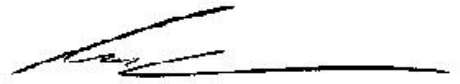
P.O. No.: OVR08-01

This report is for 70 Drill Core samples submitted to our lab in Terrace, BC, Canada on 20-MAY-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK<br>ADRIAN BRAY<br>COL GEOBASE | DARCY BAKER<br>HUGH BRESSER | ROBIN BLACK<br>¡ENERAL EQUITY ENGINEERIN( |

## SAMPLE PREPARATION



| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| PUL-QC | Pulverizing QC Test |
| LOG-22 | Sample login - Rcd w/o BarCode |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Pb-OG46 | Ore Grade Pb - Aqua Regia | VARIABLE |
| Cu-OG46 | Ore Grade Cu - Aqua Regia | VARIABLE |
| Zn-VOL50 | Zn by titration | |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY ENGINEERING LTD.**
**ATTN: ROBIN BLACK**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

## CERTIFICATE TR08061912

Project: Andrew

P.O. No.: OVR08-01

This report is for 1 Drill Core sample submitted to our lab in Terrace, BC, Canada on 12-MAY-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK<br>ADRIAN BRAY<br>COL GEOBASE | DARCY BAKER<br>HUGH BRESSER | ROBIN BLACK<br>GENERAL EQUITY ENGINEERIN |

## SAMPLE PREPARATION

| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| PUL-QC | Pulverizing QC Test |
| LOG-22 | Sample login - Rcd w/o BarCode |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION |
|---|---|
| ME-MS41 | 51 anal. aqua regia ICPMS |

To: **EQUITY ENGINEERING LTD.**
**ATTN: DARCY BAKER**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

# CERTIFICATE TR08065653

Project: Andrew

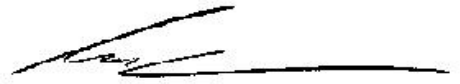
P.O. No.: OVR08-01

This report is for 60 Drill Core samples submitted to our lab in Terrace, BC, Canada on 20-MAY-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK<br>ADRIAN BRAY<br>COL GEOBASE | DARCY BAKER<br>HUGH BRESSER | ROBIN BLACK<br>¡ENERAL EQUITY ENGINEERIN( |

## SAMPLE PREPARATION



| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| LOG-22 | Sample login - Rcd w/o BarCode |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Pb-OG46 | Ore Grade Pb - Aqua Regia | VARIABLE |
| Cu-OG46 | Ore Grade Cu - Aqua Regia | VARIABLE |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY ENGINEERING LTD.**

# CERTIFICATE TR08061908

Project: Andrew

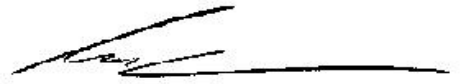
P.O. No.: OVR08-01

This report is for 43 Drill Core samples submitted to our lab in Terrace, BC, Canada on 20-MAY-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK<br>ADRIAN BRAY<br>COL GEOBASE | DARCY BAKER<br>HUGH BRESSER | ROBIN BLACK<br>GENERAL EQUITY ENGINEERIN |

## SAMPLE PREPARATION



| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| CRU-QC | Crushing QC Test |
| LOG-22 | Sample login - Rcd w/o BarCode |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Pb-OG46 | Ore Grade Pb - Aqua Regia | VARIABLE |
| Cu-OG46 | Ore Grade Cu - Aqua Regia | VARIABLE |
| Zn-VOL50 | Zn by titration | |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY ENGINEERING LTD.**
**ATTN: ROBIN BLACK**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

# CERTIFICATE TR08068457

Project: Andrew

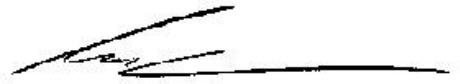
P.O. No.: OVR08-01

This report is for 35 Drill Core samples submitted to our lab in Terrace, BC, Canada on 26-MAY-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK | DARCY BAKER | ROBIN BLACK |
| ADRIAN BRAY | HUGH BRESSER | GENERAL EQUITY ENGINEERIN |
| COL GEOBASE | | |

## SAMPLE PREPARATION



| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| LOG-22 | Sample login - Rcd w/o BarCode |
| PUL-QC | Pulverizing QC Test |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Ag-OG46 | Ore Grade Ag - Aqua Regia | VARIABLE |
| Pb-OG46 | Ore Grade Pb - Aqua Regia | VARIABLE |
| Pb-VOL70 | Pb by Titration | |
| Zn-VOL50 | Zn by titration | |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY ENGINEERING LTD.**
**ATTN: ROBIN BLACK**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

# CERTIFICATE TR08065651

Project: Andrew

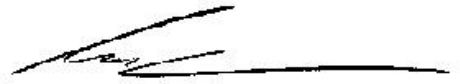
P.O. No.: OVR08-01

This report is for 33 Drill Core samples submitted to our lab in Terrace, BC, Canada on 20-MAY-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK<br>ADRIAN BRAY<br>COL GEOBASE | DARCY BAKER<br>HUGH BRESSER | ROBIN BLACK<br>¡ENERAL EQUITY ENGINEERIN( |

## SAMPLE PREPARATION



| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| LOG-22 | Sample login - Rcd w/o BarCode |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Pb-OG46 | Ore Grade Pb - Aqua Regia | VARIABLE |
| Cu-OG46 | Ore Grade Cu - Aqua Regia | VARIABLE |
| Pb-VOL70 | Pb by Titration | |
| Zn-VOL50 | Zn by titration | |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY ENGINEERING LTD.**
**ATTN: ROBIN BLACK**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

## CERTIFICATE OF ANALYSIS TR08065651

| Method | CERTIFICATE COMMENTS |
|---|---|
| ME-MS41 | Interference: Ca>10% on ICP-MS As,ICP-AES results shown. |
| ME-MS41 | Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g). |

# CERTIFICATE TR08068522

Project: Andrew

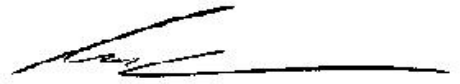
P.O. No.: OVR08-01

This report is for 57 Drill Core samples submitted to our lab in Terrace, BC, Canada on 26-MAY-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK | DARCY BAKER | ROBIN BLACK |
| ADRIAN BRAY | HUGH BRESSER | GENERAL EQUITY ENGINEERIN |
| COL GEOBASE | | |

## SAMPLE PREPARATION



| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| CRU-QC | Crushing QC Test |
| LOG-22 | Sample login - Rcd w/o BarCode |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Ag-OG46 | Ore Grade Ag - Aqua Regia | VARIABLE |
| Pb-OG46 | Ore Grade Pb - Aqua Regia | VARIABLE |
| Cu-OG46 | Ore Grade Cu - Aqua Regia | VARIABLE |
| Zn-VOL50 | Zn by titration | |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY ENGINEERING LTD.**
**ATTN: ROBIN BLACK**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

## CERTIFICATE OF ANALYSIS TR08068522

| Method | CERTIFICATE COMMENTS |
|---|---|
| ME-MS41 | Interference: Ca>10% on ICP-MS As,ICP-AES results shown. |
| ME-MS41 | Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g). |

# CERTIFICATE TR08068458

Project: Andrew

P.O. No.: OVR08-01

This report is for 42 Drill Core samples submitted to our lab in Terrace, BC, Canada on 26-MAY-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK | DARCY BAKER | ROBIN BLACK |
| ADRIAN BRAY | HUGH BRESSER | GENERAL EQUITY ENGINEERIN |
| COL GEOBASE | | |

## SAMPLE PREPARATION

| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| LOG-22 | Sample login - Rcd w/o BarCode |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Pb-OG46 | Ore Grade Pb - Aqua Regia | VARIABLE |
| Pb-VOL70 | Pb by Titration | |
| Zn-VOL50 | Zn by titration | |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY ENGINEERING LTD.**
**ATTN: ROBIN BLACK**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

# CERTIFICATE TR08068459

Project: Andrew

P.O. No.: OVR08-01

This report is for 27 Drill Core samples submitted to our lab in Terrace, BC, Canada on 26-MAY-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK<br>ADRIAN BRAY<br>COL GEOBASE | DARCY BAKER<br>HUGH BRESSER | ROBIN BLACK<br>GENERAL EQUITY ENGINEERIN |

## SAMPLE PREPARATION

| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| LOG-22 | Sample login - Rcd w/o BarCode |
| CRU-QC | Crushing QC Test |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Pb-OG46 | Ore Grade Pb - Aqua Regia | VARIABLE |
| Cu-OG46 | Ore Grade Cu - Aqua Regia | VARIABLE |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY ENGINEERING LTD.**
**ATTN: ROBIN BLACK**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

## CERTIFICATE OF ANALYSIS TR08068459

| Method | CERTIFICATE COMMENTS |
|---|---|
| ME-MS41 | Interference: Ca>10% on ICP-MS As,ICP-AES results shown. |
| ME-MS41 | Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g). |

# CERTIFICATE TR08075505

Project: Andrew

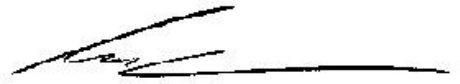
P.O. No.: OVR08-01

This report is for 67 Drill Core samples submitted to our lab in Terrace, BC, Canada on 6-JUN-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK<br>ADRIAN BRAY<br>COL GEOBASE | DARCY BAKER<br>HUGH BRESSER | ROBIN BLACK<br>¡ENERAL EQUITY ENGINEERIN( |

## SAMPLE PREPARATION



| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| CRU-QC | Crushing QC Test |
| LOG-22 | Sample login - Rcd w/o BarCode |
| PUL-QC | Pulverizing QC Test |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Pb-OG46 | Ore Grade Pb - Aqua Regia | VARIABLE |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

## CERTIFICATE OF ANALYSIS TR08075505

| Method | CERTIFICATE COMMENTS |
|---|---|
| ME-MS41 | Interference: Ca>10% on ICP-MS As,ICP-AES results shown. |
| ME-MS41 | Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g). |

# CERTIFICATE TR08068521

Project: Andrew

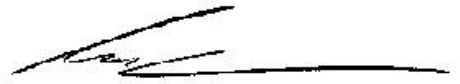
P.O. No.: OVR08-01

This report is for 45 Drill Core samples submitted to our lab in Terrace, BC, Canada on 26-MAY-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK | DARCY BAKER | ROBIN BLACK |
| ADRIAN BRAY | HUGH BRESSER | GENERAL EQUITY ENGINEERIN |
| COL GEOBASE | | |

## SAMPLE PREPARATION



| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| LOG-22 | Sample login - Rcd w/o BarCode |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Pb-OG46 | Ore Grade Pb - Aqua Regia | VARIABLE |
| Cu-OG46 | Ore Grade Cu - Aqua Regia | VARIABLE |
| Pb-VOL70 | Pb by Titration | |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY ENGINEERING LTD.**
**ATTN: ROBIN BLACK**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

# CERTIFICATE TR08068526

Project: Andrew

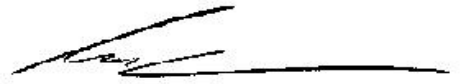
P.O. No.: OVR08-01

This report is for 13 Drill Core samples submitted to our lab in Terrace, BC, Canada on 2-JUN-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK | DARCY BAKER | ROBIN BLACK |
| ADRIAN BRAY | HUGH BRESSER | GENERAL EQUITY ENGINEERIN |
| COL GEOBASE | | |

## SAMPLE PREPARATION



| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| CRU-QC | Crushing QC Test |
| LOG-22 | Sample login - Rcd w/o BarCode |
| PUL-QC | Pulverizing QC Test |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Pb-OG46 | Ore Grade Pb - Aqua Regia | VARIABLE |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY ENGINEERING LTD.**
**ATTN: ROBIN BLACK**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

## CERTIFICATE OF ANALYSIS TR08068523

| Method | CERTIFICATE COMMENTS |
|---|---|
| ME-MS41 | Interference: Ca>10% on ICP-MS As,ICP-AES results shown. |
| ME-MS41 | Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g). |

# CERTIFICATE TR08068520

Project: Andrew

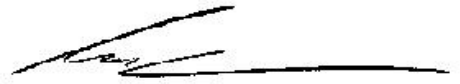
P.O. No.: OVR08-01

This report is for 29 Drill Core samples submitted to our lab in Terrace, BC, Canada on 26-MAY-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK | DARCY BAKER | ROBIN BLACK |
| ADRIAN BRAY | HUGH BRESSER | GENERAL EQUITY ENGINEERIN |
| COL GEOBASE | | |

## SAMPLE PREPARATION



| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| CRU-QC | Crushing QC Test |
| LOG-22 | Sample login - Rcd w/o BarCode |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Ag-OG46 | Ore Grade Ag - Aqua Regia | VARIABLE |
| Pb-OG46 | Ore Grade Pb - Aqua Regia | VARIABLE |
| Cu-OG46 | Ore Grade Cu - Aqua Regia | VARIABLE |
| Pb-VOL70 | Pb by Titration | |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY ENGINEERING LTD.**
**ATTN: ROBIN BLACK**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

## CERTIFICATE OF ANALYSIS TR08068520

| Method | CERTIFICATE COMMENTS |
|---|---|
| ME-MS41 | Interference: Ca>10% on ICP-MS As,ICP-AES results shown. |
| ME-MS41 | Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g). |

# CERTIFICATE TR08075507

Project: Andrew

P.O. No.: OVR08-01

This report is for 41 Drill Core samples submitted to our lab in Terrace, BC, Canada on 6-JUN-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK<br>ADRIAN BRAY<br>COL GEOBASE | DARCY BAKER<br>HUGH BRESSER | ROBIN BLACK<br>GENERAL EQUITY ENGINEERIN |

## SAMPLE PREPARATION

| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| CRU-QC | Crushing QC Test |
| LOG-22 | Sample login - Rcd w/o BarCode |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Pb-OG46 | Ore Grade Pb - Aqua Regia | VARIABLE |
| Cu-OG46 | Ore Grade Cu - Aqua Regia | VARIABLE |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY ENGINEERING LTD.**
**ATTN: DARCY BAKER**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

## CERTIFICATE OF ANALYSIS TR08075507

| Method | CERTIFICATE COMMENTS |
|---|---|
| ME-MS41 | Interference: Ca>10% on ICP-MS As,ICP-AES results shown. |
| ME-MS41 | Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g). |

# CERTIFICATE TR08075509

Project: Andrew

P.O. No.: OVR08-01

This report is for 20 Drill Core samples submitted to our lab in Terrace, BC, Canada on 6-JUN-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK<br>ADRIAN BRAY<br>COL GEOBASE | DARCY BAKER<br>HUGH BRESSER | ROBIN BLACK<br>GENERAL EQUITY ENGINEERIN |

## SAMPLE PREPARATION

| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| CRU-QC | Crushing QC Test |
| LOG-22 | Sample login - Rcd w/o BarCode |
| PUL-QC | Pulverizing QC Test |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Pb-OG46 | Ore Grade Pb - Aqua Regia | VARIABLE |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY ENGINEERING LTD.**
**ATTN: DARCY BAKER**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

## CERTIFICATE OF ANALYSIS TR08075509

| Method | CERTIFICATE COMMENTS |
|---|---|
| ME-MS41 | Interference: Ca>10% on ICP-MS As,ICP-AES results shown. |
| ME-MS41 | Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g). |

# CERTIFICATE TR08075508

Project: Andrew

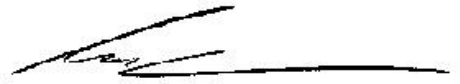
P.O. No.: OVR08-01

This report is for 17 Drill Core samples submitted to our lab in Terrace, BC, Canada on 6-JUN-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK | DARCY BAKER | ROBIN BLACK |
| ADRIAN BRAY | HUGH BRESSER | GENERAL EQUITY ENGINEERIN |
| COL GEOBASE | | |

## SAMPLE PREPARATION



| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| PUL-QC | Pulverizing QC Test |
| LOG-22 | Sample login - Rcd w/o BarCode |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY ENGINEERING LTD.**
**ATTN: ROBIN BLACK**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

## CERTIFICATE OF ANALYSIS TR08075508

| Method | CERTIFICATE COMMENTS |
|---|---|
| ME-MS41 | Interference: Ca>10% on ICP-MS As,ICP-AES results shown. |
| ME-MS41 | Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g). |

# CERTIFICATE TR08068525

Project: Andrew

P.O. No.: OVR08-01

This report is for 33 Drill Core samples submitted to our lab in Terrace, BC, Canada on 2-JUN-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK<br>ADRIAN BRAY<br>COL GEOBASE | DARCY BAKER<br>HUGH BRESSER | ROBIN BLACK<br>¡ENERAL EQUITY ENGINEERIN( |

## SAMPLE PREPARATION

| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| CRU-QC | Crushing QC Test |
| LOG-22 | Sample login - Rcd w/o BarCode |
| PUL-QC | Pulverizing QC Test |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Pb-OG46 | Ore Grade Pb - Aqua Regia | VARIABLE |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY ENGINEERING LTD.**
**ATTN: ADRIAN BRAY**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

# CERTIFICATE TR08068524

Project: Andrew

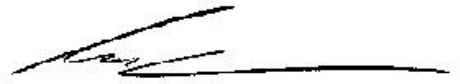
P.O. No.: OVR08-01

This report is for 22 Drill Core samples submitted to our lab in Terrace, BC, Canada on 2-JUN-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK<br>ADRIAN BRAY<br>COL GEOBASE | DARCY BAKER<br>HUGH BRESSER | ROBIN BLACK<br>¡ENERAL EQUITY ENGINEERIN( |

## SAMPLE PREPARATION



| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| LOG-22 | Sample login - Rcd w/o BarCode |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Pb-OG46 | Ore Grade Pb - Aqua Regia | VARIABLE |
| Cu-OG46 | Ore Grade Cu - Aqua Regia | VARIABLE |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY ENGINEERING LTD.**
**ATTN: DARCY BAKER**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

## CERTIFICATE OF ANALYSIS TR08068524

| Method | CERTIFICATE COMMENTS |
|---|---|
| ME-MS41 | Interference: Ca>10% on ICP-MS As,ICP-AES results shown. |
| ME-MS41 | Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g). |

# CERTIFICATE TR08075506

Project: Andrew

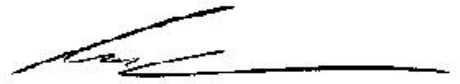
P.O. No.: OVR08-01

This report is for 26 Drill Core samples submitted to our lab in Terrace, BC, Canada on 6-JUN-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK<br>ADRIAN BRAY<br>COL GEOBASE | DARCY BAKER<br>HUGH BRESSER | ROBIN BLACK<br>GENERAL EQUITY ENGINEERIN |

## SAMPLE PREPARATION



| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| LOG-22 | Sample login - Rcd w/o BarCode |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Pb-OG46 | Ore Grade Pb - Aqua Regia | VARIABLE |
| Cu-OG46 | Ore Grade Cu - Aqua Regia | VARIABLE |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY ENGINEERING LTD.**
**ATTN: DARCY BAKER**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

## CERTIFICATE OF ANALYSIS TR08075506

| Method | CERTIFICATE COMMENTS |
|---|---|
| ME-MS41 | Interference: Ca>10% on ICP-MS As,ICP-AES results shown. |
| ME-MS41 | Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g). |

# CERTIFICATE TR08075500

Project: Andrew

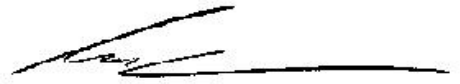
P.O. No.: OVR08-01

This report is for 13 Drill Core samples submitted to our lab in Terrace, BC, Canada on 6-JUN-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK<br>ADRIAN BRAY<br>COL GEOBASE | DARCY BAKER<br>HUGH BRESSER | ROBIN BLACK<br>¡ENERAL EQUITY ENGINEERIN( |

## SAMPLE PREPARATION



| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| LOG-22 | Sample login - Rcd w/o BarCode |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Pb-OG46 | Ore Grade Pb - Aqua Regia | VARIABLE |
| Cu-OG46 | Ore Grade Cu - Aqua Regia | VARIABLE |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY ENGINEERING LTD.**
**ATTN: ROBIN BLACK**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

# CERTIFICATE TR08075504

Project: Andrew

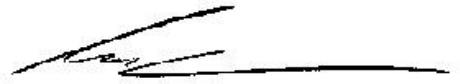
P.O. No.: OVR08-01

This report is for 64 Drill Core samples submitted to our lab in Terrace, BC, Canada on 6-JUN-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK<br>ADRIAN BRAY<br>COL GEOBASE | DARCY BAKER<br>HUGH BRESSER | ROBIN BLACK<br>¡ENERAL EQUITY ENGINEERIN( |

## SAMPLE PREPARATION



| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| CRU-QC | Crushing QC Test |
| LOG-22 | Sample login - Rcd w/o BarCode |
| PUL-QC | Pulverizing QC Test |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Pb-OG46 | Ore Grade Pb - Aqua Regia | VARIABLE |
| Cu-OG46 | Ore Grade Cu - Aqua Regia | VARIABLE |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

# CERTIFICATE TR08075501

Project: Andrew

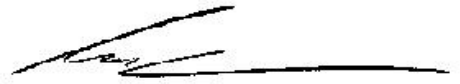
P.O. No.: OVR08-01

This report is for 24 Drill Core samples submitted to our lab in Terrace, BC, Canada on 6-JUN-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK<br>ADRIAN BRAY<br>COL GEOBASE | DARCY BAKER<br>HUGH BRESSER | ROBIN BLACK<br>¡ENERAL EQUITY ENGINEERIN( |

## SAMPLE PREPARATION



| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| LOG-22 | Sample login - Rcd w/o BarCode |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Ag-OG46 | Ore Grade Ag - Aqua Regia | VARIABLE |
| Pb-OG46 | Ore Grade Pb - Aqua Regia | VARIABLE |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY ENGINEERING LTD.**
**ATTN: DARCY BAKER**
**700 - 700 WEST PENDER ST.**
**VANCOUVER BC V6C 1G8**

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

## CERTIFICATE OF ANALYSIS TR08075501

| Method | CERTIFICATE COMMENTS |
|---|---|
| ME-MS41 | Interference: Ca>10% on ICP-MS As,ICP-AES results shown. |
| ME-MS41 | Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g). |

# CERTIFICATE TR08074798

Project: Andrew

P.O. No.: OVR08-01

This report is for 54 Drill Core samples submitted to our lab in Terrace, BC, Canada on 6-JUN-2008.

The following have access to data associated with this certificate:

| | | |
|---|---|---|
| HENRY AWMACK | DARCY BAKER | ROBIN BLACK |
| ADRIAN BRAY | HUGH BRESSER | GENERAL EQUITY ENGINEERIN |
| COL GEOBASE | | |

## SAMPLE PREPARATION

| ALS CODE | DESCRIPTION |
|---|---|
| WEI-21 | Received Sample Weight |
| LOG-24 | Pulp Login - Rcd w/o Barcode |
| CRU-QC | Crushing QC Test |
| LOG-22 | Sample login - Rcd w/o BarCode |
| PUL-QC | Pulverizing QC Test |
| CRU-31 | Fine crushing - 70% <2mm |
| SPL-21 | Split sample - riffle splitter |
| PUL-31 | Pulverize split to 85% <75 um |

## ANALYTICAL PROCEDURES

| ALS CODE | DESCRIPTION | INSTRUMENT |
|---|---|---|
| Zn-OG46 | Ore Grade Zn - Aqua Regia | VARIABLE |
| Ag-OG46 | Ore Grade Ag - Aqua Regia | VARIABLE |
| Pb-OG46 | Ore Grade Pb - Aqua Regia | VARIABLE |
| Cu-OG46 | Ore Grade Cu - Aqua Regia | VARIABLE |
| Pb-VOL70 | Pb by Titration | |
| Zn-VOL50 | Zn by titration | |
| ME-MS41 | 51 anal. aqua regia ICPMS | |
| ME-OG46 | Ore Grade Elements - AquaRegia | ICP-AES |

To: **EQUITY EXPLORATION CONSULTANTS LTD.**
