INTRODUCTION

This report has been prepared in accordance with the guidelines outlined by Yukon *Energy Mines Resources* (EMR) to detail the representation work undertaken and submitted for assessment for the of group of quartz mining claims collectively known by as the Myschka Claims by Overland Resources Limited (Overland) in 2010.

Claim Name		Grant No.
Myschka	13 - 16	YC 10279 – YC 10282
Myschka	19 - 20	YC 10285 – YC 10286
Myschka	33 - 40	YC 10299 – YC 10306
Myschka	47	YC 10313
Myschka	49 - 56	YC 10315 – YC 10322
Myschka	71 – 76	YC 10337 – YC 10342
Myschka	91 – 96	YC 10357 – YC 10362

Table1. List of Quartz Mining Claims subject of application for certificate of work owned by 90% Overland Resources Yukon Limited and 10% 18526 Yukon Inc

Work submitted for assessment on the purposes to EMR for the Myschka Claims was conducted from May 26th to June 2nd 2010 by Overland on quartz mining claims, AMB123-127 (YC09961-YC09965). These claims form part of a contiguous group of claims which include the Myschka Claims.

PROPERTY DESCRIPTION AND LOCATION

The Yukon Base Metal Project is situated 110 km north of the town of Faro, Yukon (Figure 1) and consists of 567 full and fractional Quartz Mineral Claims covering approximately 10 800 hectares within the Mayo Mining District (Figure 2). The Project is located within NTS map sheet 105K/16. The coordinates of the approximate center of the property are 62° 55' 33" N latitude and 132° 13' 7" W longitude (NAD 83, UTM Zone 8, 641 070 mE and 6 980 155 mN).

Claim Status

The Quartz Mineral Claims that comprise the Yukon Base Metal Project are owned 90% by Overland Resources Yukon Limited and 10% by 18526 Yukon Inc.

The claims lie on crown land, and surface rights belong to the crown. They do not lie within or near any park, special management zones, first nation settlement lands or land selections. However, they are situated within lands considered as traditional hunting and trapping areas by several first nation bands.

All claims are currently in good standing.

ACCESS, CLIMATE, LOCAL RESOURCES, INFRASTRUCTURE, PHYSIOGRAPHY

Access

The Yukon Base Metal Project is accessible by helicopter and short take off and landing-capable fixed-wing aircraft via a 400m unsealed airstrip located at 132°14'20" W and 62°56'20" N (UTM NAD83; 640,090mE and 6, 982,690mN). Heavy equipment and bulk supplies can be delivered to the property via an 85km winter trail which was re-established in winter 2008 from the North Canol Road at Dragon Lake.

Climate

Temperatures at the Yukon Base Metal Project typically range from 8°C to 26°C in the summer and from -30°C to +6°C in the winter. Annual precipitation ranges from 120mm to 200mm, including 0.8m to 1.5m of snow accumulation in the winter months.

Local Resources

No local communities or towns are within 50km of the Yukon Base Metal Project and as such all resources must be brought into the project area. Personnel for construction, mining, exploration, labour and support are available in the communities of Faro, Ross River and Watson Lake as well as the Territorial capital of Whitehorse. Faro and Ross River are 100km southwest and 115km south of the property respectively.

Infrastructure

Infrastructure near the Yukon Base Metal Project includes the Canol Road and Robert Campbell Highway. The Canol Road extends for 458km from the Yukon-Northwest Territories border to Johnson's Crossing on the Alaska Highway south of Whitehorse. Northeast of the Pelly River at Dragon Lake, the Canol road comes to within 60km of the Yukon Base Metal Project where the winter access trail into the property begins.

Physiography

The Yukon Base Metal Project is located within the South Fork Range of the Yukon Plateau, east of the Tintina Trench and west of the MacKenzie Mountains. The property occupies the west side of a wide valley, where elevations range from 1,000m to 1,800m above sea level. Several east flowing creek valleys cut moderate slopes across the Yukon Base Metal Project.

The vegetation at the Yukon Base Metal Project is alpine to sub-alpine with lower elevations being dominated by black and white spruce stands, typical of the Northern Boreal Forest.

REGIONAL GEOLOGY

The property is located within the Selwyn Basin of the Northern Cordillera; a continental margin rift-fill and cover sedimentary sequence off the coast of ancestral North America. Stratigraphic units of Yukon Geologic Survey regional mapping have the property lying within the Yusezyu and Narchilla Formations of the NeoProterozoic to Lower Cambrian Hyland Group. These comprise an upper thrust sheet overlying Paleozoic sequences of the Road River and Earn group sediments. Regionally the area has been intruded by Cretaceous felsic intrusives.

PROSPECT GEOLOGY

Yusezyu Formation sandstones dominate the 2010 mapping area. It ranges from fine- to coarse-grained, well rounded and sorted arenite to coarse-grained, sub-angular often poorly sorted lithic arenite containing $\leq 5\%$ feldspar grains. Large $\leq 2\text{mm}$ bluish quartz grains are

contained within the sandstones. Crude to massive bedding yielded no indication of younging directions.

Mudstone of the Narchilla Formation consists of red, green and grey, often laminated beds. It is highly fissile with a strong cleavage. This unit was found predominantly to the northeast of the mapped area.

Bedding trends throughout the property were striking to the northwest and dipping moderately to the northeast.

Mineralisation occurs within moderate-strong quartz/carbonate stockwork veining cross-cutting the Yusezyu Formation. Galena is characteristically found as 1-5cm blebs in quartz veins, occasionally as boulders up to 15cm across. Sphalerite occurs as vein infill within quartz/carbonate veins/stockwork in association with galena.

Outcrop exposure was not extensive enough to uncover or interpret discrete mineralized zones at surface but the area appears to contain a broad network of thin base-metal-bearing veins in quartz carbonate stockwork zones throughout the Darin prospect.

WORK CONDUCTED 2010

Work included review of previously drilled diamond drill core, general prospecting, geological mapping, geochemical soil sampling, and geochemical rock sampling.

All information and data documented in this report was obtained by employees or consultants employed by Overland Resources Yukon Limited with the exception of geochemical analysis, which were outsourced to ALS Chemex of Vancouver B.C.

Sampling Methodology

Rock Samples

All rock samples were collected in the following manner

1. Location recorded by handheld GPS in NAD83 Zone 8
2. Representative sample exceeding 400g of bedrock collected using a standard geological rock pick style hammer.
3. Samples sealed in clear plastic sample bags with a distinct sample ID
4. Samples dispatched to analytical laboratory.

Soil Samples

All soil samples were collected in the following manner

1. Location recorded by handheld GPS in NAD83 Zone 8
2. Use auger to sample the 'B' 'C' horizon of in situ soil
3. Collect a representative sample exceeding 400g
4. Samples sealed in brown paper sample bags with a distinct sample ID
5. Samples dispatched to analytical laboratory.

Assay Methodology

Rock samples were sent to ALS Labs in Whitehorse where all samples were weighed, dried and crushed to better than 70% -2mm then split to 250g and pulverized to better than 85% passing 75 microns. Samples were processed by aqua regia digestion and analyzed for a full element suite using ICP-MS and ICP-AES.

Soil samples were sent to ALS Labs in Whitehorse where they were weighed, dried and sieved to -180 micron (80 mesh). Samples were processed by aqua regia digestion and analyzed for a full element suite using ICP-MS and ICP-AES.

Previous Investigations

Documented historical work in the area includes geological mapping by Atlas in the late 1960s, rock sampling by Noranda in 2001/2002, soil sampling in 2007 by Overland, mapping, rock sampling and 13 holes (DN08-001 to DN08-013) totalling 1,699m of diamond drilling in 2008 by Overland.

Current Work for Assessment

Historic Drill Core/Mapping Review

An Overland geologist spent 4 days (May 27th-30th 2010) reviewing the diamond drill core from the 13 drill holes from 2008. This core was stored on site.

Updated interpretations of the geology and stratigraphy were made from this examination.

Bedrock Geology Mapping

An Overland geologist spent 3 days (May 31st – June 2nd 2010) mapping at 1:1000 scale over the Darin Prospect area. The focus of this work was to understand and develop targets on the northwest of previously defined extents of mineralisation at the Darin Prospect. Map included in appendices.

Rock Sampling

A total of 19 rock chip samples were collected during mapping (H031602-H031609, H031664, H031551, H031751-H031759). Sample locations and assay certificates included in appendices.

Soil Sampling

31 soil samples were collected (May 30th and 31st 2010) by Overland technicians to the south-west of the Darin Zone. This sampling programme was designed to provide additional information and expand upon previous soil sampling programmes. Sample locations and assay certificates are included in the appendices.

CONCLUSIONS AND RECOMMENDATIONS

Geochemical analysis of soil samples have indicated that a zone anomalous in zinc extends 200m further west in the southern portion of the prospect.

Mapping has shown that the surface extent of mineralisation previously mapped extends approximately 150m further to the northwest.

The mineralised system at the Darin Prospect is extensive and yet to be fully delineated. Drill testing of the higher value geochemical anomalies and geological targets is recommended.

STATEMENT OF QUALIFICATIONS

I, Alex Tolson the author of this report hereby certify that:

1. I am a graduate of the University of Western Ontario (2006) with an Honours Bachelor of Science degree in Geology and I have practiced my profession since 2004.

Dated at Vancouver, Canada, this 9th day of Dec.

Project: YBMP

P.O. No.:

This report is for 122 Soil samples submitted to our lab in Whitehorse, YT, Canada on 9-JUN-2010.

The following have access to data associated with this certificate:

HUGH BRESSER

ALEX TOLSON

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
DRY-22	Drying - Maximum Temp 60C
LOG-22	Sample login - Rcd w/o BarCode
SCR-41	Screen to -180um and save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION
ME-MS41	51 anal. aqua regia ICPMS

To: OVERLAND RESOURCES LTD.
ATTN: HUGH BRESSER
2ND FLOOR
675 MURRAY ST
WEST PERTH WA 6005
AUSTRALIA

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.
