INTRODUCTION

The Rau property is located in central Yukon along the northern edge of the Tintina Gold Belt, a band of intrusion-related gold deposits that extends across Yukon and Alaska. The property is primarily of interest for carbonate hosted gold but also hosts lead-zinc-silver and tungsten mineralization, which are often associated with intrusion-related gold elsewhere within the belt. The property is owned 100% by ATAC Resources Ltd. and is a part of the Rackla Gold Project.

This report describes an exploration program that was conducted on the majority of the claims comprising the property between April 17 and October 14, 2010 by Archer, Cathro & Associates (1981) Limited on behalf of ATAC. The author participated in and supervised that program, which consisted of soil geochemical sampling, airborne geophysical surveys, ground geophysical surveys and 18,450.42 m of diamond drilling in 85 holes. The author's Statement of Qualifications appears in Appendix I.

PROPERTY LOCATION, CLAIM DATA, ACCESS AND INFRASTRUTURE

The Rau property consists of 2798 contiguous mineral claims which are located in central Yukon at latitude 64°11´N and longitude 134°22´W on NTS map sheets 106D/01, 106D/02, 106D/06, 106D/07 & 106D/08 (Figure 1). Collectively, the property covers an area of approximately 56,500 hectares (565 km^2). The claims are all registered with the Mayo Mining Recorder in the name of Archer Cathro, which holds them in trust for ATAC. Specifics concerning claim registration are tabulated below while the locations of individual claims are shown on Figure 2.

Claim Name	Grant Number	Expiry Date*
Rau 1-64	YC50268-YC50331	April 28, 2024

1155-1250	YD09635-YD09730	April 28, 2015

* Expiry dates include 2010 work which has been filed for assessment credit but not yet accepted.

The property lies 100 km northeast of Mayo, the nearest supply centre. The closest road access is to the community of Keno City, situated about 49 km by road northeast of Mayo and 55 km by air southwest of the property. Mayo and Keno City can be reached in all seasons by two wheel drive vehicles using the Yukon highway system. The Wind River trail is also accessible via the

Yukon highway system from McQuesten Lake near Keno City and crosses the western portion of the property. This winter trail has been used intermittently by various exploration companies since it was built in the late 1960s.

In 2010, access to the property and daily logistical support were accomplished using a Bell 206L4 helicopter based on the property and a Hughes 500D helicopter based at the McQuesten camp. Both helicopters were operated by Fireweed Helicopters Ltd. of Whitehorse. A camp located at McQuesten Lake served as a staging area and as a base of operations for the helicopter borne geophysical surveys and soil sampling crews. If required, fixed wing aircraft can land at the Kathleen Lakes airstrip along the northeastern boundary of the property. These lakes are also suitable for float equipped aircraft.

A local road system, constructed in 2009 using a John Deer 450 bulldozer, provided access to the drills in the Tiger Valley. The road system is accessible with the use of four wheel drive ATV from camp to the main drill area.

EXPLORATION HISTORY

The approximate locations of various showings referred to in this section are shown on Figure 2.

The earliest reported exploration within the area now covered by the Rau property occurred in 1922 following the discovery of silver mineralization at Keno Hill when prospectors first identified and staked mineralized float occurrences at Carpenter Ridge in the far northwest corner of the current property. In 1924, reconnaissance work conducted by the Geological Survey of Canada discovered galena-calcite-siderite in float on the southwest end of Carpenter Ridge. A sample of this float returned 8.75 oz silver and 56.0% lead (Cockfield, 1925); however, the source of this mineralization was not found. Hand pits were dug in 1927 and 1928 but little record remains of the work completed during this period. All claims were ultimately dropped.

Nearby at Grey Copper Hill, 9 km to the southeast, silver-rich tetrahedrite float was discovered in 1923 by an independent prospector. This showing and other nearby prospects were staked later that year. Several investigatory adits were dug into the hillside during follow up exploration but eventually all claim holdings lapsed.

Between 1930 and 1974 Grey Copper Hill was staked several times by independent prospectors and exploration companies, including Cypress Resources Limited and United Keno Hill Mines Limited. Little work was reported (Hilker, 1969) and all claims ultimately expired.

Hesca Resources Corporation Ltd restaked Grey Copper Hill in 1974 and conducted prospecting, soil sampling, hand trenching and adit maintenance. In addition, two shallow, small diameter diamond drill holes totalling 56.3 m were drilled; however, the results from this drilling are not documented. No further work was done by Hesca and the claims were dropped (Deklerk and Traynor, 2004).

In spring 1978 Prism Resources Limited restaked the area and conducted prospecting and geochemical sampling later that year. Soil sampling identified several lead and silver anomalies; however, follow up prospecting failed to explain them (Sivertz, 1979). A sample collected from an outcrop of dolomite yielded 0.60% lead and 51.43 g/t silver, while a tetrahedrite sample collected near an old adit assayed 7000 g/t silver (Sivertz, 1980). Prism allowed the claims to lapse.

Grey Copper Hill was again restaked in 1983 by a prospector who conducted grid soil sampling later that year. This program delineated silver anomalies coincident with surface lineations. No further work was completed and the claims expired.

In 1988 Bonventures Limited staked the area and conducted limited blast trenching, prospecting, mapping plus soil and rock sampling. A gossan zone with pyrite and strong fracture filling malachite and azurite was identified between two collapsed adits (Carlyle, 1989). These claims eventually lapsed.

The area remained open until August of 2005 when an independent prospector staked four claims over the Grey Copper Hill showing. No work on these claims has been reported and they are now surrounded by the Rau property.

In the central part of the current Rau property, Cominco Limited staked the Beaver claims in 1968 based on results of regional geochemical sampling done the year before. Later that year, L. Elliott staked the nearby Now claims and optioned them to Cominco, which completed mapping and soil sampling in 1968 and 1969 (Johnson and Richardson, 1969a and b).

In 1977, Prism Joint Venture (Asamera Oil Corp, Chieftain Development Company Limited, Prism Resources Ltd, Siebens Oil & Gas Limited and E & B Exploration Limited) restaked Cominco's claims as part of a larger block that extended for about 20 km along the north side of the Beaver River. In 1979, Dome Petroleum Ltd replaced Siebens in the joint venture.

Prism conducted most of its activities around the original Beaver claims. Soil sampling and mapping were performed in 1977 (Montgomery and Dewonck, 1978) and additional soil sampling and trenching were done in 1978 (Prism Joint Venture, 1979a). In 1979 Prism completed six diamond drill holes totalling 610 m (Dewonck, 1980). This work focused primarily on sedimentary exhalite and Mississippi Valley type lead-zinc mineralization, but resulted in the discovery of a narrow gold-rich vein material (the Now Showing).

NDU Resources Ltd. staked claims over the Now Showing in 1987 to cover the lead, zinc and silver soil geochemical anomalies identified by Cominco and Prism. The following year, NDU conducted a geochemical sampling program which focused on the gold vein mineralization at the Now Showing (Cathro, 1989).

In 1977, 6.25 km further to the northwest, Prism conducted mapping, soil sampling and electromagnetic surveys. Numerous samples from that program returned high zinc-in-soil values ranging from 2100 ppm to 12.2%. One sample collected from a large transported gossan (Ocelot Showing) yielded 3.8 g/t silver, 800 ppm lead and 12.2% zinc (Montgomery and Cavey, 1978),

suggesting the metals were leached and remobilized in acidic groundwater before being reprecipitated when the fluids were neutralized. These promising results were not followed up. In 1977, Prism also performed minor soil sampling near a strong gossan developed along the eastern edge of the current Rau property (Kathy Showing) (Prism Joint Venture, 1979b).

In 1979 and 1980, Prism explored in two areas in the north central part of the current Rau property and conducted prospecting, soil geochemical sampling and one diamond drill hole. This work led to the discovery of scheelite mineralization at the Blue Lite and Flat Top Showings. Well mineralized tremolite skarn specimens from the Flat Top Showing assayed up to 8.4% WO_3, but most material graded below 0.04% (Churchill, 1980). No further work was done at either showing.

ATAC's interest in the area was prompted by an isolated, high gold value (150 ppb) reported by a regional-scale stream sediment geochemical survey, conducted by the Geological Survey of Canada (Hornbrook, et al 1990). This value is in the 99th percentile of gold results from the survey and is supported by a 99th percentile tungsten value (25 ppm). The sample was collected near the Rackla Pluton, east of the Tiger Zone.

In summer 2006, ATAC staked 64 claims to cover the anomalous drainage. During the staking, a number of rock and soil samples were collected, many of which returned anomalous values for tungsten and a few were notably enriched in gold, lead, zinc, silver and copper. Cursory prospecting relocated scheelite-bearing tremolite skarn (Flat Top Showing) and discovered tungsten in diopside-actinolite skarn and highly fractionated intrusive rocks, about 1500 m to the south.

In 2007 ATAC completed geological mapping, prospecting, grid soil sampling and helicopter-borne variable time-domain electromagnetic (VTEM) surveys (Eaton and Panton, 2008). This work partially delineated a large hydrothermal system centered on the largely buried Rackla Pluton. Following that program, ATAC staked an additional 32 claims, mostly to improve coverage around a very strong gold-in-soil anomaly outlined on the western edge of the grid.

ATAC and Yankee Hat Minerals Limited signed an option agreement in spring 2008 concerning 40 claims that covered the Rackla Pluton and the tungsten-bearing skarns. During the summer of 2008 Yankee Hat conducted prospecting and a total of 437.38 m of diamond drilling in three holes (Dumala, 2008). Several narrow skarn bands with weak to moderate tungsten mineralization were identified within the carbonate host rocks. The option agreement was terminated in late 2008 following poor results and the claims were returned to ATAC.

Also in the summer of 2008, ATAC conducted geological mapping, prospecting, soil and stream sediment geochemical sampling, 3423.21 m of diamond drilling in 18 holes and property-wide helicopter-borne magnetic variable time-domain electromagnetic (VTEM) surveys on the claims not covered by the Yankee Hat option agreement. Drilling identified three stacked, gold-bearing horizons in what is now known as the Tiger Zone. The central horizon (Discovery Horizon) contains gold in iron carbonate replacement and hosts the most abundant mineralization. In 2008 grid soil sampling and stream sediment sampling was extended to the northwest. Property wide geophysical and geochemical surveys completed later in the season suggested the trend extends

for as much as 22 km (Dumala, 2009). In response to positive results, ATAC added 1340 claims to cover the favourable stratigraphy along the anomalous trend.

In 2009, ATAC continued to delineate the Tiger Zone with an additional 58 diamond drill holes totalling 9578.30 m (Dumala and Lane, 2010). Drilling identified a significant oxide component to the northwest, within the Tiger Zone. Prospecting in 2009 also identified several new showings containing mineralization similar to that found at the Tiger Zone. These include the Cub, Lion, Jaguar, Panther, Cougar, Puma, Cheetah and Lynx Showings.

GEOMORPHOLOGY

The Rau property is roughly 66 km long and covers a diverse geomorphological setting. Much of the claim block covers low lying vegetated valley bottom and similarly covered low elevation ridge systems.

The core portion of the Rau property is situated in the Nadeleen Range of the Selwyn Mountains and is drained by creeks that flow into the Rackla and Beaver Rivers, which are both part of the Yukon River watershed. Local topography is alpine to subalpine and features north and south-trending rocky spurs and valleys that flank a main east-west trending ridge. Elevations range from 725 m alongside the Beaver River in the centre of the claim block to 1800 m atop a peak, referred to as Monument Hill. Outcrop is most abundant near ridge crests and in actively eroding creek beds. Most hillsides are talus covered at higher elevations and are blanketed by glacial till at lower elevations. Soil development is moderate to poor in most areas.

Treeline in the vicinity of the property is at about 1500 m. Slopes above that elevation are unvegetated. The density and size of vegetation gradually increases on lower slopes, and the valley floors are well treed with mature black spruce. Understorey typically consists of low shrubs and moss. Moderately steep, south facing slopes are well drained and are often lightly forested with poplar. Steep, north facing slopes are usually unvegetated. Gentler, spruce- and moss-covered terrain likely exhibits widespread permafrost.

GEOLOGY

Regional Geology

The Geological Survey of Canada performed geological mapping in the vicinity of the Rau property at 1:250,000 scale in the 1960s (Green, 1972) and 1970s (Blusson, 1978). More recent mapping in the area was completed at 1:50,000 scale by Indian and Northern Affairs Canada (Abbott, 1990 and Roots, 1990).

The Rau property lies within a band of regional-scale thrust and high angle reverse faults that imbricate rocks of Selwyn Basin and Mackenzie Platform (Figure 3). Selwyn Basin stratigraphy consists of regionally metamorphosed, basinal sediments of Neoproterozoic to Paleozoic age. Mackenzie Platform stratigraphy comprises dominantly shallow water carbonate and clastic sediments that were deposited from Mid-Proterozoic through Paleozoic times. Both packages of sediments were deposited on the western margin of ancestral North America.

The thrust faults were active during Jurassic to Cretaceous times (160 to 130 Ma), when the area underwent compressional orogenesis related to large-scale plate convergence (Fingler, 2005). During Late Cretaceous (94-90 Ma), intermediate to felsic plutons of the Tombstone Suite were emplaced (Mortensen et al, 2000). Another compressional orogenic event, which occurred about 65 Ma, was accompanied by emplacement of felsic intrusions assigned to the McQuesten Suite.

Figure 4 shows regional geology in central Yukon. It is a geological compilation that takes into account recent age dating and new unit correlations, which Charlie Roots prepared for the Yukon Geological Survey (Cathro, 2006).

The Tombstone, Dawson and Robert Service thrust faults plus a number of lesser thrust faults affect stratigraphy along the trend of the Rau claim block. All thrusts verge northeasterly and predate emplacement of the Tombstone Suite intrusions. The thrust panel that contains the Rau property approximately straddles the boundary between Selwyn Basin and Mackenzie Platform and includes units belonging to both tectonic elements.

Table I contains a brief summary of the main lithologies in the area of the Rau property.

Table I: Regional Lithological Units (after Roots *in* Cathro, 2006)

Tectonic Element	Age (Ma)	Unit and Lithologies
Rocks of Ancestral North America		
Mackenzie Platform	1700 - 1800	Gillespie Lake Group: orange-brown dolostone and sandstone.
Mackenzie Platform	540 - 390	Bouvette Formation: white and grey limestone with rare black shale.
Mackenzie Platform	540 - 420	Marmot Formation: dark green to brown mafic, vesicular and amygdaloidal volcanic flows.
Selwyn Basin	750? - 530	Hyland Group: brown quartz-mica schist, with rare limestone.
Selwyn Basin	530 - 500	Gull Lake Formation: brown and green shale, sandstone, conglomerate and volcanic tuff.
Selwyn Basin	500 - 480	Rabbitkettle Formation: dark silty limestone and limy mica-rich conglomerate.
Selwyn Basin	480 - 390	Road River Group: black shale, chert and limy siltstone.
Rock formed before orogenic event		
	390 - 350	Earn Group: black shale and chert with lesser pebble conglomerate, sandstone and grit.
	340	Keno Hill Quartzite: grey metamorphosed sandstone, minor black shale and phyllite.

Rocks formed during orogenic event

225	Galena Suite intrusions: brown and green diorite and gabbro.
200 - 250	Jones Lake and Mt. Christie Formations: sandstone, brown shale and dark limestone.

Rocks formed after orogenic event

90 - 94	Tombstone Suite intrusions: granite and granodiorite.
62 - 67	McQuesten Suite intrusions: granite with two types of mica.

Sediments younger than 3 Ma

0 - 3	Overburden: ice-deposited sand and gravel; river silt.

Property Geology

Very little detail geological mapping has been conducted within the current property boundary. Most work has focused within the favourable Bouvette Formation stratigraphy in close proximity to the Tiger Zone mineralization. The following descriptions are taken largely from previously documented government and historical mapping.

The Rau property lies within a northwest trending thrust package bound to the south by the Dawson Thrust and to the north by the Kathleen Lakes Fault. Stratigraphy within this package forms open folds that are aligned parallel to the thrusts and plunge gently to the southeast. Several high angle faults, which parallel the general structural trend, are inferred on the property and others could be present. One or more of these faults may have acted as a conduit for mineralizing fluids.

The **Bouvette Formation** is the most abundant inferred rock type shown on government based maps and is the principal focus of ATAC's exploration. It can be divided into three main units which young to the northeast. In order from oldest to youngest:

1) **Cambrian and Ordovician** – massive pale grey dolostone, oncolitic dolostone, minor quartzite and sandy dolostone.

2) **Ordovician and/or Silurian** – thin to medium bedded grey and buff weathering silty limestone; massive white limestone, well bedded tan and grey limestone in the upper part of the unit.

3) **Silurian and Devonian** – thick bedded to massive light grey dolostone and limestone. Dark grey, fetid limestone containing "two hole" and "star" crinoids at the top of the unit.

The thickness of the Bouvette Formation on the property is estimated to be at least 1400 m. The primary focus of mapping has been largely limited to the area around Monument Hill and the Tiger Zone within the Ordovician-Silurian strata hosting carbonate gold replacement mineralization Elsewhere the Bouvette Formation has not been mapped in detail and remains undifferentiated.

A narrow sliver of Middle Proterozoic **Fifteen Mile Group** dolostone lies beneath the Bouvette Formation, to the southwest. This unit is composed of chocolate to orange brown weathering, cryptalgal laminated, medium to thick bedded dolostone, overlain by rusty brown weathering, olive green siltstone and shale with lesser maroon black and buff shale.

The **Marmot Formation** consists of thin volcanic horizons that are interbedded with the Ordovician and/or Silurian Bouvette Formation. The horizons range from a few metres to about 20 m thick and comprise dark green to brown weathering mafic, vesicular volcanic flows, carbonate-cemented hyaloclastic breccias and volcanic-derived sandstone, grit and pebble and cobble conglomerate. Locally these horizons are magnetic. Although the Marmot Formation is volumetrically insignificant, it appears to have played an important role in localizing mineralization in the underlying carbonate by acting as an impermeable cap.

Devonian and Mississippian **Earn Group** is located in the southern half of the property and bounds the Bouvette Formation to the south, east and north. This unit is generally recessive weathering and is mostly composed of black shale and chert. To the south a high angle normal fault places Earn Group against Bouvette Formation, while a thrust fault marks the southeastern contact. To the north, the Earn Group conformably lies above Cambrian to Devonian shale and limestone, which has been placed against the Bouvette Formation by another high angle fault.

The central part of the property hosts numerous dykes and sills believed to represent a roughly 1000 m diameter granitic plug referred to as the "**Rackla Pluton**". The plug is mostly composed of coarse grained, equigranular, biotite-and muscovite-bearing granite that is locally miarolitic (Panton 2008). The dykes and sills typically range between 30 cm and 7 m in thickness. They are often more fractionated than the plug and include garnet bearing aplite and coarse pegmatite that locally features beryl, amazonite (a green variety of feldspar) and one or more tourmaline minerals (rubellite, indigolite and schorl). The pegmatite bodies comprise mainly orthoclase and quartz but often exhibit abundant lithium-and vanadium-rich micas on their margins.

On surface, the Rackla Pluton is mostly covered by glacial till and only aplite and pegmatite sills and dykes are visible. The pluton is best delineated by its airborne magnetic signature (Figure 10). At the property scale the pluton is represented by a strong magnetic high. When the data is collapsed to the area immediately surrounding the pluton and a high-pass filter is applied, the signature shows a core magnetic low with a fringing magnetic high.

Analysis of several small bodies of granitic aplite and pegmatite have yielded 40Ar/39Ar muscovite ages of 62.3 ± 0.7 Ma, 62.4 ± 1.8 Ma and 59.1 ± 2.0 Ma (Kingston, 2009 and Kingston et al., 2010). Based on this data and the composition of the intrusion, Kingston concludes that the Rackla Pluton does not likely belong to the McQuesten Suite (65.2 ± 2.0 Ma).

Skarn and minor hornfels are developed locally within the Bouvette Formation proximal to the intrusions. Skarn grades from distal tremolite-rich (iron-deficient) facies, which are most abundant near the Flat Top Showing (about 1000 m northwest of the pluton), to proximal actinolite-diopside ± garnet ± pyrrhotite (iron-rich) facies, which are found closer to the pluton and on the margins of some dykes and sills. Massive skarns are mostly developed at contacts between limestone and volcaniclastic horizons. Hornfels is restricted to thin volcaniclastic layers within the Marmot Formation. It is normally rusty weathering and often contains disseminated to semi-massive pyrrhotite. Limestone and dolomite are locally altered to marble and often contain disseminated, light grey scapolite crystals. The scapolite is difficult to recognize on freshly broken surfaces but stands out on weathered surfaces as prismatic randomly orientated crystals.

MINERALIZATION

Several types of mineralization are known to occur on the Rau property including: **1)** sediment-hosted replacement-style gold; **2)** zinc±silver±lead±gold±bismuth in limonite-rich veins and replacement bodies; **3)** scheelite in tremolite skarns; **4)** pyrrhotite±scheelite±chalcopyrite in actinolite-diopside±garnet skarns; **5)** wolframite± tantalite in granite; and **6)** gold bearing quartz-boulangerite veins. **7)** iron±zinc in hydromorphically transported gossans.

Replacement Style Gold Mineralization

Replacement style gold mineralization has been the primary focus of exploration. To date several showings have been identified with the Tiger Zone being the best understood and most aggressively explored.

The **Tiger Zone** is located 3 km west-northwest of the Rackla Pluton in a moderate to steep walled valley.

The Tiger Zone is a thick northwesterly trending body of carbonate replacement style gold mineralization hosted by a moderately northeast dipping horizon. It is currently 700 m long, 100 to 200 m wide and up to 96 m thick. Mineralization is developed within and adjacent to a regionally extensive corridor of highly strained rocks that are manifested as a 40 to 150 m wide zone of small scale folding and shearing. The geometry of the mineralized system is defined by a series of stacked and folded limestone horizons intercalated with locally extensive mafic flows and volcaniclastic units.

Most of the exploration has been directed toward the Discovery Horizon, although there is evidence of at least one additional stratabound interval of gold mineralization above the Discovery Horizon.

Due to a combination of topography, overburden and stratigraphic orientation, the Discovery Horizon is the only mineralized horizon observed at surface. It is exposed over a 75 m long by 10 m wide area on the east side of Tiger Creek. At the northeast end of this exposure, a hand trench dug in 2009 uncovered moderately oxidized limonite boxwork with remnant sulphide mineralization, capped by highly sericite altered volcaniclastic. Two samples of subcrop were

collected in 2008 from the area near this trench. They returned 22.5 g/t gold, greater than 1% arsenic, 415 ppm bismuth and 116 ppm tungsten; and 13.6 g/t gold, greater than 1% arsenic, 410 ppm bismuth and 51.9 ppm tungsten.

Gold occurs in both sulphide and oxide facies mineralization. Sulphide mineralization is accompanied by, and developed within, limestone which is replaced by ferruginous dolomite and iron carbonate minerals. Sulphide species consist of disseminated to banded pyrite, with subordinate arsenopyrite and pyrrhotite and minor bismuthinite and sphalerite. Small amounts of disseminated scheelite are also present. The main sulphide minerals exhibit at least three stages of mineralization. The best intersection from sulphide bearing mineralization averaged 4.04 g/t gold over 96.01 m from hole Rau-09-66.

Oxide mineralization is completely devoid of sulphide minerals and ranges from very competent, weakly porous limonitic mud to rubbly porous limonitic grit. The oxide appears texturally amorphous within most intersections but occasionally exhibits residual color banding that may represent relict sulphide textures. Complete oxidation extends up to 150 m from surface. The best oxide grades (e.g. hole Rau-09-19 which assayed 24.07 g/t gold across 28.04 m) and deepest oxidation occur where northerly trending extensional faults intersect the regional structure. The nature of the contacts between the oxide and sulphide facies is poorly understood, as is the gold distribution within the mineralized horizon and within individual sulphide species. Mineralization at the Tiger Zone remains open to extension along strike and down dip at both ends of the known zone, as well as at depth across a normal fault that locally defines the southwest margin of the favourable structural corridor.

Big Creek Resources explored and conducted a 610 m diamond drill program on Carpenter Ridge from 1990 to 1991. Drilling intersected a vein grading 9.5% combined lead-zinc over 5 m, and another grading 4.5% combined lead-zinc over 9.3 m (INAC, 1992). Trenching during this period yielded 64 g/t with 39% combined lead-zinc over 7.5 m. Mapping by the Yukon Geological Survey in the 1990's interpreted these veins as being related to Proterozoic aged Mississippi-Valley type replacement, similar to those of the Blende deposit 32 km to the east (Abbott, 1990). The claims were eventually abandoned and no further work was recorded at Carpenter Ridge.

Several other showings containing mineralization similar to that found at the Tiger Zone have been identified on the property. These include the Cub, Lion, Jaguar, Panther, Cougar, Puma, Cheetah and Lynx Showings. All of the showings are occurrences of mineralized float found on grassy or talus covered slopes and ridges.

The **Cub Showing** occurs 575 m to the east of the Tiger Zone. Mineralized float was found in a 110 m wide by 250 m long area on a south facing talus covered slope. The showing coincides with a strong bismuth-in-soil anomaly (>200 ppm). Float samples typically yielded greater than 200 ppm bismuth and include peak values of 1645 ppm, 1990 ppm and 6160 ppm. Rock samples returned peak gold values of 1.08 g/t and 1.15 g/t. A float sample taken from the southeastern edge of the showing contained 18.15 g/t silver, 4630 ppm lead and greater than 1% zinc. The sample that contained 1990 ppm bismuth also produced the highest tungsten value (223 ppm).

The **Lion Showing** was discovered while surveying the Tiger Zone drill access road. Here, strongly pitted orange-black limonite and orange-red limonitic siderite and dolomite cobbles were found 770 m west of the Tiger Zone. A sample of this material returned 0.17 g/t gold, greater than 1% arsenic, 2000 ppm lead, 2080 ppm tungsten and 1.36% zinc.

The **Jaguar Showing** is located on a grassy spur radiating outwards from the south side of Monument Hill. Thirteen samples were collected within a 400 m by 300 m area. Float samples generally consisted of dense, rusty purple, goethite-rich limonite with rare patches of quartz.

Two samples taken from this showing in 2009 returned 1.57 g/t and 2.81 g/t gold. Only cursory prospecting has been performed at this locale and the source of mineralization has yet to be identified.

The **Panther Showing** is situated along a ridge on the north side of Monument Hill. Limonite float was found within a north northeast trending recessive linear feature that marks the contact between limestone to the south and volcaniclastic to the north. A specimen returned 5.72 g/t gold, 5.01 g/t silver, 9460 ppm arsenic, 61.7 ppm bismuth, 94.9 ppm lead and 1070 ppm zinc. Limonitic float was also found downhill, to the north and yielded 0.06 g/t gold, 11.05 g/t silver, 6200 ppm arsenic, 47.3 ppm bismuth, 2100 ppm lead and 1.29% zinc. The source of mineralization has not yet been located.

The **Cougar Showing** is located in a north facing cirque, along the northwest slope of Monument Hill. Mineralized float is found in an avalanche chute which stretches approximately 600 m from the base of the hill to the ridge. This float train continues over the ridge and into the valley to the southeast. Cobbles of dense rusty limonite with rare blebby bismuthinite and galena in quartz occur in a talus field comprising mostly limestone with volcaniclastic material to the east and west. Mineralized float becomes more concentrated near the ridge, although no outcrop was located.

A number of samples collected from this float train produced elevated gold (1.57 g/t and 3.13 g/t) and silver values (483 g/t). Three samples taken near the ridge yielded greater than 1% bismuth; however, these samples were only slightly elevated for other elements. Arsenic values throughout the Cougar Showing were elevated and include peak values of 1.2% and 2.1%. Four samples yielded greater than 10% lead with a peak of 35.7%, while most samples contained below 5000 ppm lead. The sample yielding 1.57 g/t gold also contained 19.4% lead.

The **Puma Showing** is located on an east-facing slope approximately 750 m northwest of the Cougar Showing. Oxidized cobbles were found scattered along a grassy hillside in a 250 m by 450 m area. Many of the samples collected from this showing are dense, rusty, dark purple siderite and goethite containing patches of boxwork limonite. Other samples consisted of limonite or altered carbonate, with occasional narrow quartz veins containing bismuthinite and galena. Bismuthinite crystals, up to 3 cm long, were observed in one sample.

Six goethite or goethite rich limonite samples collected in 2009 returned gold values greater than 1.0 g/t including a peak value of 18.45 g/t gold. Silver ranged between 0.2 g/t and 68.8 g/t with four samples exceeding 100 g/t to a maximum of 241 g/t silver.

The **Cheetah Showing** is located approximately 800 m west northwest of the Puma Showing. A 500 m long by 100 m wide float train extends up a south facing slope to a ridge which is cut by a northeast trending linear. The linear was traced for approximately 30 m to the northeast until becoming buried in limestone talus. A sample of a purple brown, goethite rich boxwork limonite collected in 2009, returned 3.06 g/t gold.

The **Lynx Showing** is located 2.3 km west of Monument Hill and consists of isolated limonite float within a limestone talus field. This showing is located on the opposite side of the valley as the Cheetah Showing. A sample collected at the Lynx returned 0.24 g/t gold, 7290 ppm arsenic, 789 ppm lead and 5970 ppm zinc. A similar sample, collected 700 m to the east, yielded 1.45 g/t gold.

Scheelite Tremolite-Actinolite Skarns

Four known tungsten skarn showings occur on the Rau property. Three of these are located less than 1.5 km from the Rackla Pluton, while the fourth is located 4.8 km to the north. They are a combination of scheelite-tremolite and actinolite skarns containing varying concentrations of pyrite, pyrrhotite and rare chalcopyrite. These showings have associated moderate to strong tungsten, gold and copper soil geochemical anomalies (Dumala, 2009).

The **Hogs Back Showing** is located 800 m southwest of the pluton. This showing is exposed on the north and south side of a northwest trending gully. It was first identified in 2006 and followed up in 2007. The showing consists of three actinolite skarn layers occurring conformably within a portion of the Bouvette limestone sequence. Mineralization comprises finely disseminated to patchy pyrrhotite, pyrite and lesser chalcopyrite. Marbleisation of the surrounding limestone is variable but extends up to 5 m in areas. The skarn layers have been traced to the northwest for over 750 m and vary in thickness from 0.3 m to 6 m, averaging 0.8 m. The thickest and best mineralized exposure occurs at the southeast edge of a crosscutting drainage before disappearing to the southeast beneath cover. In general the exposed skarn horizons appear to thin to the northwest.

The two thickest packages of mineralization appear proximal to a pair of southwest striking, quartz muscovite pegmatite dykes. The northwesterly dyke is one metre wide and exposed along strike for only two metres, while the dyke to the southwest is three metres wide and exposed for ten metres. No direct contact was observed between the dykes and the skarns.

Select rock samples collected from this showing in 2006 and 2007 yielded peak values of 4010 ppm tungsten and 1.24 g/t gold from the north side of the showing (Dumala, 2008), while chip samples collected in 2009 from the south side returned gold values less than 0.05 g/t, and a peak tungsten result of 3110 ppm. A one metre chip sample of sugary weathered limestone containing fine grained pyrite that was taken between two skarn layers returned 0.45 g/t gold. A single diamond drill hole tested this showing in 2008; however, it was collared too far forward to test the skarn mineralization.

The **Ridge Crest Showing**, located on the southwest side of the Rackla Pluton, was discovered in 2009 while following up a gold-in-soil anomaly (990 ppb) within the 2007 sample grid. A 70

cm deep hand pit dug at this location revealed glacial till and grey limestone fragments. Two cobbles of rusty dark green pyroxene skarn and several oxidized skarn fragments were also extracted from this pit. Samples of the skarn yielded 0.02 g/t gold and 850 ppm tungsten. A dyke containing equigranular, coarse grained white to smoky quartz and minor muscovite with occasional patches of chlorite and trace fine grained sulphides occurs 15 m to the west. A float sample collected nearby returned 1060 ppm tungsten.

The **Flat Top Showing** occurs along a north trending ridge approximately 1.3 km northwest of the Rackla Pluton. It is localized along the contact between the Bouvette Formation and Earn Group strata. The showing is marked by approximately coincident, moderately to strongly anomalous gold, copper and tungsten soil geochemical values approximately 600 m long and up to 300 m wide. Scheelite in tremolite skarn was first found at this locale in 1979 by Prism. Prospecting in 2009 traced skarn mineralization around the nose of the ridge for 400 m.

Four types of skarn mineralization occur across a stratigraphic thickness of about 40 m. The first, found immediately above the contact, occurs as felted to radiating masses of acicular tremolite/actinolite or wollastonite/actinolite localized in a band that ranges from a few 10's of cm to a few metres thick. The second, found within unaltered carbonate rock, are masses of tremolite mixed with calcite found in 0.5 mm to 2 cm thick veinlets. Thirdly, an iron rich skarn consisting of coalescing aggregates of radiating acicular masses of tremolite/actinolite preferentially replaces the host carbonate. Rare interstitial green tourmaline or vesuvianite, calcite and quartz also occur with this skarn type. Finally extending upward from the contact is the most iron rich species. It contains felted masses of light green actinolite with local black tourmaline, biotite books, light grey to smoky quartz and patches of massive medium brown limonite.

Prism Resources reported rock samples assaying up to 8.38% WO_3 but most samples collected from the area grade less than 0.04% WO_3 (Churchill, 1980). One sample consisting of a quartz fragment surrounded by green actinolite with black tourmaline and traces of pyrrhotite returned 0.127 g/t gold. A single diamond drill hole tested the area in 2008 but it was collared too far downhill and only intersected shale belonging to the Earn Group.

The **Blue Lite Showing,** first discovered by Prism in 1979, is a scheelite tremolite skarn located 4.8 km northeast of the Rackla Pluton. The skarn mineralization is well exposed on a cliffy outcrop on the north side of a prominent peak. Mineralization consists of scheelite as disseminations with massive pyrrhotite and minor chalcopyrite. The skarn horizon disappears under talus to the east and grass to the west. The Blue Lite Showing is located along a high angle normal fault that dips to the south. This fault marks the contact between Devo-Mississippian clastics to the north and Devonian to Jurassic clastics to the south.

Samples collected by Prism in 1979 from this showing returned between 0.02% and 4.3% WO_3. A drill hole completed later that year yielded between 0.02% and 0.08% WO_3 in drill core across narrow widths. Three samples taken at the Blue Lite Showing in 2009 returned greater than 0.10% tungsten with a peak of 0.34%. Most of the other samples ranged from 200 to 950 ppm tungsten. Gold values were all below background, with a peak of 9 ppb.

Gold-Bearing Quartz-Boulangerite Vein

The **Now Showing** is situated within a pronounced northwest trending gully located approximately 8 km west of Monument Hill. Little outcrop is exposed here but abundant float occurs along more than 400 m of the gully. Mineralization was first discovered in 1969 by Cominco. Lead, zinc and copper anomalies were identified but no clear relationship between them was determined (Johnston and Richardson, 1969).

In the late 1970's Prism conducted soil sampling, mapping, trenching and diamond drilling. Results of this soil sampling included values up to 7.4 g/t silver, 2.51 % lead and 790 ppm zinc within extensive northwest trending anomalies. A rock sample collected from a hand dug pit graded 74 g/t silver, 2.15% lead and 790 ppm zinc (Montgomery and Dewonck, 1977). Two samples of quartz rubble containing boulangerite were retrieved from a partially completed trench. The trench failed to reach bedrock due to permafrost but the samples returned 38.06 g/t gold, 343.55 g/t silver, 47.2% lead and 0.01% zinc and 39.43 g/t gold, 581.49 g/t silver, 23.26% lead and 0.06% zinc.

The most encouraging drill results obtained by Prism were from two holes that tested beneath this trench. The first of these holes intersected boulangerite and sphalerite in a narrow quartz vein. A narrow interval yielded 1.51 g/t gold, 54.5 g/t silver, 2.74% lead and 5.26% zinc over 0.5 m. The second hole, drilled at a steeper angle from the same pad, intersected the mineralized quartz vein that assayed 3.50 g/t gold, 60.3 g/t silver, 4.64% lead and 0.04% zinc over 1.1 m. The other four drill holes were either not sampled or contained no significant intersections.

In 1988, NDU Resources collected rock samples in the areas identified by Cominco and Prism as being anomalous for zinc. Samples were collected from two blocky quartz veins, one with blebby galena and the other with jamesonite and boulangerite. The sample containing blebby galena graded greater than 1% lead while the sample containing jamesonite boulangerite contained greater than 1% lead and greater than 100 g/t silver (Cathro, 1989).

Prospecting by ATAC in 2009 revealed that these anomalies appears to follow stratigraphy but are locally overprinted by one or more vein faults. The deep gully located near the Now Showing trends slightly oblique to bedding and corresponds to a main fault. Three of the six holes drilled by Prism are believed to have intersected this and are represented by gougy intervals surrounded by zones of intense veining. These intervals were not sampled.

Transported Gossans

Two transported gossans occur on the Rau Property separated by approximately eighteen kilometres. The **Kathy Showing** comprises a 40 m wide by 30 m long brick red gossanous ferricrete slab, located approximately 750 m southeast of the Rackla Pluton. The gossan is situated downhill of a thrust fault that places Earn Group shale, to the south, over Bouvette Formation carbonates to the north. It is believed that the gossan is formed by fluids traveling along this thrust fault. Soil samples collected by Prism in 1978 returned silver values between 0.08 g/t and 25 g/t, lead values ranging from 32 to 90 ppm and zinc values ranging from 95 to 3900 ppm. Results for other elements were not reported.

The **Ocelot Showing** (also referred to as EL) is located 11.5 km northwest of Monument Hill and was first identified by Prism in 1978. The showing is marked by a 110 m long by 25 m wide gossan, which formed by the precipitation of iron oxides containing silver, lead and zinc from solutions traveling along a permeable horizon (Montgomery and Cavey, 1978). The gossan has a northwest orientation and parallels an adjacent topographic linear feature. The showing is most pronounced in a kill zone to the northwest, which originates at a weakly flowing spring.

The gossan is predominately dolomite rubble cemented by iron oxides and is surrounded by buff to orange weathering dolomite and limestone. Soil samples collected by Prism returned peak values of 3.8 g/t silver, 800 ppm lead and 12.2% zinc.

GEOCHEMISTRY

In 2010, crews performed grid sampling at the Now, Ocelot and Kathy showings and along trend of the Tiger Zone. Further to the northwest of the Ocelot Showing reconnaissance samples were collected along contour lines at intervals of either 50 m or 100 m. A total of 9606 soil samples were collected in 2010, the locations of which are shown on Figures 5 to 14.

Grid samples were collected at 50 m intervals along lines spaced 100 m apart in most areas, while detailed 50 m by 50 m grids were used over the Now, Jaguar and Kathy Showings. The relative line positions were established using handheld GPS, while sample spacing was maintained using compass and topofil. Sample sites are marked by wooden lath bearing aluminum tags inscribed with the corresponding sample number and the grid coordinates, where appropriate.

All soil samples were collected from holes, which were dug with a mattock or augered to depths of 20 to 50 cm below surface. The soil was taken from the bottom of the holes and placed in pre-numbered Kraft paper bags. Above treeline, the samples consisted of immature soils mixed with talus fines. At lower elevations, the sampled material mostly comprised residual soils mixed with glacially transported material.

The samples were transported from the property to Whitehorse in the custody of Archer Cathro employees. From there, they were shipped to ALS Chemex in North Vancouver. At the lab, soil samples were dried and screened to -35 mesh to produce a fine fraction, which was then pulverized to 85% passing 75 microns. Splits of the pulverized fraction were routinely dissolved in aqua regia and analyzed for 35 elements using the ICP-AES technique (ME-ICP41). All samples were also analyzed for gold using fire assay and ICP-AES (Au-ICP21). Certificates of Analysis appear in Appendix II.

Background and anomalous values for gold, silver, arsenic, bismuth, lead, and zinc are summarized in the following table. Background averages, weak, moderate, strong and very strong anomalous thresholds approximately correspond to the 50^{th}, 90^{th}, 98^{th}, 99^{th} and 99.9^{th} percentiles.

Table II: Geochemical Characteristics for Soil Samples

Level	Gold	Silver	Arsenic	Bismuth	Lead	Zinc
Background	3	0.3	17	1	32	182
Weak	24	1.9	106	8	367	1154
Moderate	86	3.8	255	30	782	2106
Strong	175	5.4	514	72	1207	3624
Very Strong	1062	13.6	3821	328	7624	1.25%
Peak	9880	102	>1%	699	2.15%	2.3%

(all values are ppm except gold which is ppb)

Grid sampling in 2010 yielded moderate to strongly anomalous lead and gold values at the Now and Puma showings. Results from the Ocelot showing are subdued by the thick overburden cover in the valley bottom; however, weakly to moderately anomalous lead and zinc values are present.

DIAMOND DRILLING

General

Drilling was done between May 16 and October 4 and was contracted to Superior Diamond Drilling of Kelowna, BC and Beaudoin Diamond Drilling Ltd. of Courtenay, BC. The work was completed with a Mandrill 1200, a JKS-3000 and two B-15 diesel-powered drills using BTW, NQ2, HQ3 and PQ equipment. A total of 18,450.42 m of diamond drilling were completed in 85 holes.

Most of the 2010 holes were located in and around the Tiger Zone and tested along a structural corridor over a strike length of 700 m (Figure 15). Individual drill sections are shown on Figures 16 to 39. Two scout holes were also located within the structural corridor, further along strike to the southeast of the Tiger Zone. Elsewhere, five holes were located at the Ocelot Showing (Figures 40 to 42), six at the Cheetah Showing (Figures 43 to 46), six at the Condor and Kitty Showings (Figures 47 to 50) three at the Now Showing (Figure 51) and one near the Kathy Showing (Figure 52).

Within the Tiger Zone, collar locations were determined relative to the local survey grid established in 2009. Once each drill hole was completed, a Trimble real time kinematic GPS was used to locate and record the final collar position. Collars are marked by scrap drill rods cemented into the hole, steel tag showing the hole number is affixed to each. All drill sites were constructed by hand using rock, soil and timber found nearby. Drill data for the holes is listed in Table III.

Table III: Drill Hole Data

Hole	Easting	Northing	Elev. (m)	Azimuth	Angle	Depth (m)
Rau-10-72	528405.4	7119422.4	1429.9	260.61	228	-60

Core was transported by helicopter from the drill sites to a logging area on the property, where recovery was measured and geological and geotechnical logging was performed. Geologically and mineralogically favourable intervals from each hole were split with one-half bagged and sent for analysis and the other half returned to the core box. All of the core is stored on the property. Appendix III contains the geological and geotechnical logs.

Core samples were flown by helicopter from the property to a staging area at McQuesten Lake, then transported to Whitehorse by truck, escorted by a representative of Archer Cathro. The samples were shipped from Whitehorse to ALS Chemex in North Vancouver. Core samples were dried and crushed to 70% minus 2 mm, before a 1.5 kg split was taken and pulverized to better than 85% minus 75 microns. To reduce cross contamination between samples during preparation, the equipment was washed twice with quartz silica sand. Splits of the pulverized fraction were routinely dissolved in aqua regia and analyzed for 48 elements using technique ME-MS61, which combined inductively coupled plasma (ICP) with mass spectroscopy (MS) and atomic emission spectroscopy (AES). Samples were analyzed for gold by fire assay finished with atomic absorption spectroscopy (Au-AA26). Certificates of Analysis are found in Appendix II.

Results

Drilling in the vicinity of the Tiger Zone intersected a stacked sequence of hydrothermally dolomitized limestone and volcaniclastic rocks that have been polyphase folded into a series of relatively complex synforms and antiforms. Sulphide mineralization is hosted within stratigraphically conformable layers of replacement hydrothermal dolomite and iron carbonate bound between volcaniclastic and karsted limestone beds. In 2010, the majority of drilling focused on oxide mineralization which occurs in the northwestern half of the Tiger Zone.

Mineralization occurs within a 150 to 200 m wide northwest trending corridor of highly strained carbonate strata that has been traced by diamond drilling over a strike length of 700 m. Regional mapping and prospecting suggests that this structural corridor is a high angle feature that extends for another 20 km or more along strike to the northwest. High grade oxide mineralization appears to occur where north trending high angle subordinate faults cut obliquely across this corridor.

Individual dolomite horizons range from 40 to 120 m thick. Gold occurs with sulphide minerals that wholly or partially replace the dolomite near the crest of local anticline. The sulphide minerals are locally concentrated beneath sericitized volcaniclastic beds, which may have acted as impermeable caps. To date, three mineralized horizons have been identified. The middle horizon (Discovery Horizon), which ranges in thickness from about 40 to 96 m, hosts the most continuous mineralization within the Tiger Zone.

The Discovery Horizon has been the primary focus of drilling to date and has produced the most significant intersections. This horizon is dominantly comprised of coarse grain dolomite and iron carbonates. The main sulphide minerals are pyrite and arsenopyrite while accessory minerals include pyrrhotite, bismuthinite, scheelite and sphalerite. The thickest intersection to date came from hole Rau-09-66, which averaged 4.04 g/t over 96.01 m. Gold values and sulphide abundance in this horizon are highest near the centre of the structural corridor and gradually decrease down dip to the northeast.

To the northwest, the Discovery Horizon (host and mineralization) is completely oxidized. The transition between oxidized and unoxidized material is relatively sharp, occurring over several metres. Oxidation is most intense around subordinate north trending structures where they intersect the northwest trending strain corridor. Holes along this subordinate structural trend include hole Rau-10-88 which intersected 60.44 m of oxide material grading 8.49 g/t gold and hole Rau-10-94, located 50 m to the northwest, which intersected 75.76 m of oxide material grading 5.57 g/t gold.

Oxide mineralization comprises clayey to sandy limonite and goethite with occasional coarse grain quartz fragments. The colour of the oxide mineralization is also quite variable. The most common end members are light yellowish orange, bright orange-brown and dark reddish brown. Textures are often obscured on the core surface but sometimes visible on split surfaces. Typical textures include honeycomb, banded, patchy and rare breccia.

To the southwest, the Discovery Horizon mineralization appears to truncate against a high-angle reverse fault that parallels the structural corridor. This structure is poorly understood and coarse white marble is typically found to the southwest in the footwall of the fault. Only a limited number of holes have tested the southwest side of the fault. The most significant of these holes was Rau-10-99 which intersected thick marble and volcaniclastic units. A 27.51 m wide interval of mineralized coarse grain dolomite was located within the volcaniclastic; however, it did not return any significant results.

The Upper Horizon ranges in thickness from 3 m to 12 m and is similar in appearance and composition to the Discovery Horizon. Gold values are typically lower than the Discovery

Horizon; however, a number of short gold-enriched intervals have been intersected, including 4.94 g/t gold over 7.62 m from hole Rau-10-87.

The Lower Horizon is an offset continuation of the Discovery Horizon located to the southeast and is pyrite dominant with only minor arsenopyrite. Accessory minerals include sphalerite, bismuthinite, galena and scheelite. Hole Rau-10-73 intersected 32.05 m grading 1.97 g/t gold.

Significant intersections from the 2010 diamond drilling are listed on the next page.

Table IV: Significant 2010 Drill Intersections

Hole #	Type	From (m)	To (m)	Interval (m)	Au (g/t)
Rau-10-72	Oxide	178.92	187.81	8.89	0.40

CH-10-04	Oxide	104.90	121.80	16.90	1.29

Significant intervals were calculated using strict criteria. For unoxidized, sulphide intervals, a cut-off grade of 0.50 g/t was used with a minimum interval width of 6.00 m and maximum internal waste block of 6.00 m. The minimum interval width for oxidized core was 6.00 m with a cut-off grade of 0.25 g/t gold, while the maximum internal waste block was 6.00 m with a cut-off grade of 0.20 g/t gold.

Typical unmineralized intersections comprised grey limestone with varying degrees of brecciation and dolomitization. Fossils (crinoids and coral) are often visible in the more massive

intervals. Fluid collapse breccia is the most common form of brecciation and is more frequent nearer to the structural corridor.

In drill core, the volcaniclastic horizons are visually and geochemically distinguishable from the surrounding limestone and dolomite. Unaltered, they consist of a dark forest green groundmass enclosing calcite amygdules; and where altered, they exhibit strong foliation and sericitiziation, which imparts a buff to tan colour. Geochemically they can be distinguished from the surrounding units by elevated values of the following elements: aluminum, barium, cobalt, chromium, gallium, potassium, lithium, niobium, nickel, phosphorus, tantalum, thallium, vanadium and yttrium. The volcaniclastic horizons often contain magnetite rich intervals. Marble sometimes occur adjacent to volcaniclastic horizons.

A grey to brown and white spotted volcaniclastic unit, referred to as the "Leopard Unit", occurs beneath the Discovery Horizon. Geochemically this unit is similar to the other volcaniclastic units; however, it has a high calcium content. This unit is almost always underlain by a narrow (less than 1 m) wide interval of black, pyritic shale.

Northwest of the Tiger Zone, six diamond drill holes were completed at the Condor Showing and one at the Kitty. A total of 1674.12 m was drilled in these two areas. Drilling at the Condor Showing targeted a geophysical anomaly identified by Condor Consulting, while the single hole at Kitty targeted a north trending structure. All of the holes intersected limestone and dolomite with narrow volcaniclastic intervals. Only thin intersections of oxide were encountered. No significant mineralization was encountered.

Drilling at the Ocelot targeted ground gravity and IP anomalies uphill from the transported gossan. A total of 1133.46 m of drilling in 5 holes was completed at the Ocelot showing. The only significant mineralization intersected was in hole OC-10-01, which intersected 4.23 m grading 552 g/t silver, 14.5% lead and 34.3% zinc from 49.12 m to 53.35 m.

Six diamond drill holes at the Cheetah Showing targeted a prominent linear feature corresponding to a 310 m long string of anomalous soil samples. Drilling intersected dolomite and limestone cut by a steeply dipping oxidized zone. The most significant intersection came from CH-10-04 and graded 1.29 g/t gold over 16.90 m. Although narrower and lower grade, similar oxide intervals were intersected in all of the other holes down dip of the linear.

At the Now Showing, three diamond drill holes targeted beneath and along strike of the historic trenches that exposed mineralization. All three holes were terminated before their target depths due to poor ground conditions and inadequate equipment. No significant mineralization was encountered.

QAQC

During the field season, samples were divided into batches, each containing 31 core samples, 2 standards, 2 blanks and 1 duplicate. A total of 221 standards and 229 blanks were inserted into the sample sequences. Blank samples comprise of landscaping marble obtained from a garden centre in Whitehorse. The weight of each blank sample was determined based upon the core

diameter of the surrounding samples. Blank weight for BTW, NQ, HQ and PQ are 4 kg, 5 kg, 7 kg or 8 kg respectively. Samples of this material were randomly selected and analyzed prior to the field season in order to use as a "blank". Tables summarizing QAQC results are contained in Appendix IV.

Prior to the field season, four sulphide standard samples were prepared by CDN Resource Laboratories Ltd. from core collected in 2009. Four oxide standard samples were purchased from Geostats Pty Ltd. Readily available skarn and silver-lead standards were used for drilling at the Kathy and Ocelot showings. Certificates for each of the standard samples are also contained in Appendix IV, while Table V summarizes the consensus and two standard deviation values for each of the standard samples used during the program.

Table V: Standard Sample Consensus Values

Standard	Sample	Consensus Value	2δ
ROS-1	G306-1	0.41 g/t Au	0.06
ROS-2	G399-2	1.46 g/t Au	0.18
ROS-3	G999-4	3.02 g/t Au	0.42
ROS-4	G306-3	8.66 g/t Au	0.66
RSS-5	2010-A	0.437 g/t Au	0.048
RSS-6	2010-B	1.83 g/t Au	0.21
RSS-7	2010-C	3.83 g/t Au	0.33
RESS-8	2010-D	2.72 g/t Au	0.35
OC-1	CDN-SE1	712 g/t Ag	57
OC-2	CDN-SE2	354 g/t Ag	21
SKARN	ML-1	0.332 g/t Au	0.026
SKARN	ML-5	2.43 g/t Au	0.13

Gold values from all but five of the blank samples were within acceptable range (≤0.05 ppm). The failed samples were from batches 12 (0.06 g/t), 31 (0.10 g/t), 42 (0.16 g/t), 73 (0.08 g/t) and 104 (0.38 g/t). New master pulps were created for all samples in batches 73 and 104 and were reanalyzed by the laboratory to ensure the results were accurate. The remaining samples were found to be within the ALS Chemex's accepted "carry-over" limit given the high gold values of the proceeding samples.

All but ten of the standard sample values are within the acceptable range. Gold values from the sample batches (2, 5, 9, 14, 33, 45, 58, 93, 85 and Cheetah 7) that included failed standards were reanalyzed by the laboratory to ensure results were accurate. Results from the reanalysis were typically consistent with the original values.

A total of 117 duplicate samples, prepared from quarter core, were collected and analyzed throughout the program. In general, there was little variation in gold values between the initial and duplicate samples. On average the duplicate samples show a 13% gain over the original sample. The most notable differences come from low grade samples where even a minor increase in grade translates to a significant percentage gain.

GEOPHYSICS

In late spring 2010, Geotech Ltd. was contracted to complete two helicopter-borne ZTEM (Z-axis tipper electromagnetic) and aeromagnetic geophysical surveys over the Rau property. The initial survey was conducted between May 27th and June 6th and comprised 331 line-kilometers, while the second survey was completed between June 14th and 22nd and totalled 3018.6 line-kilometres. The surveys were flown with an Astar B3 helicopter operated by Geotech, first from a temporary base at the Mayo Airport and later at the McQuesten camp. A copy of Geotech's reports can be found in Appendix V.

Strings of ZTEM conductors have been identified throughout the Rau Property. Many of these parallel to faults and bedding. An approximately 25 km long linear magnetic high, corresponding to the Marmot Formation can be traced through the centre of the property. Typically, conductors can be found along the south side of this magnetic feature.

A modified ground pole-dipole IP survey was completed at the Ocelot Showing by Aurora Geoscience of Whitehorse. The survey was done using a four person crew based out of the McQuesten camp between May 31 and June 10, 2010. Seven lines, totalling 7.7 line-km were tested by this survey. A copy of Aurora's report can be found in Appendix VI.

Section lines 9+600E to 9+700E all show strong chargeability high located towards the centre of each section line. This high coincides with geochemical anomalies and is along strike of the gossan. Unfortunately drilling did not adequately test these anomalies.

In June 2011, MWH Geo-Surveys, Inc. completed ground gravity surveys over four grids on the Rau Property. These grids were located over the Tiger, Ocelot, Condor and Puma showings. highs in close proximity to IP anomalies are located along the northwest edge of the Ocelot grid. At the Puma showing, a linear, north trending high is found along the western edge of the grid, near the ridgeline. No significant anomalies were identified at the Tiger or Condor showings. A copy of MWH's data and maps can be found in Appendix VII. Anomalous

Condor Consulting Inc. was contracted to supervise the ZTEM data collection and complete the final processing, analysis and interpretation of all of the geophysical surveys. A copy of Condor's report can be found in Appendix VIII.

In September 2011, Scintrex Limited was contracted to conduct a Bore-hole Gravity Meter survey at the Tiger Zone in order to determine a specific gravity for the oxide material. Eight holes were chosen for this survey (Rau-10-79, 82, 85, 86, 90, 96, 104 and 116). Following drilling, each of these holes was lined with PVC pipe so that it would remain open and allow for the down-hole survey. A copy of Scintrex's report can be found in Appendix IX.

Results from this survey indicate an average specific gravity for oxide material is 2.46 and 2.86 for the limestone. Measurements directly from core have given average values of 2.38 and 2.83 respectively for both of these unit types.

DISCUSSION AND CONCLUSIONS

The Rau property hosts a significant new carbonate replacement gold discovery in Yukon. At the Tiger Zone, a karsted limestone horizon within a northwest trending structural corridor has been replaced by coarse grain dolomite and hosts significant gold mineralization. North trending faults cut through this mineralization and serve as a conduit for fluids that are responsible for the intense oxidation at the Tiger Zone.

The identification and confirmation of the structural controls at the Tiger Zone, particularly on the oxide mineralization, has provided a model with which to understand the Tiger Zone and to locate similar mineralization elsewhere along trend. North trending structures, identified from airphotos, near geochemical anomalies, such as the Cheetah, Puma, and Cougar should be a high priority exploration target for future exploration.

Drilling in 2010 at the Tiger Zone was designed to produce quality data necessary to initiate a resource calculation. The tight drill spacing within the oxide zone provides a greater level of confidence in the grade and geological continuity. Prior to 2010, obtaining an accurate density for oxide material has proven difficult. Improved drilling techniques, a proper mud program and experience has resulted in much higher recovery of oxide material from which to take density measurements. Combined with the results of the bore-hole gravity survey, a higher level of confidence can now be placed on density measurements. The results from this year's drilling campaign will enable ATAC to proceed forward with a resource calculation.

The Rau project has the potential to host district-scale deposits. Systematic drilling along strike of the Tiger Zone, at the other known showings should be the focus of future exploration, starting with the Ocelot target. At the Tiger Zone, further definition drilling is recommended in order to better delineate and expand any resource. Follow up mapping, prospecting and sampling in order to evaluate geochemical anomalies and develop additional drill targets should be completed on the remainder of the property.

Respectfully submitted

APPENDIX I

STATEMENTS OF QUALIFICATIONS

STATEMENT OF QUALIFICATIONS

I, Matthew R. Dumala, geological engineer, with business addresses in Vancouver, British Columbia and Whitehorse, Yukon Territory and residential address in Vancouver, British Columbia, do hereby certify that:

1. I graduated from the University of British Columbia in 2002 with a B.A.Sc in Geological Engineering, Option l, mineral and fuel exploration.

2. I registered as a Professional Engineer in the Province of British Columbia on November 14, 2008 (License Number 32783).

3. From 2003 to present, I have been actively engaged in mineral exploration in the Yukon Territory.

4. I have personally participated in the fieldwork reported herein.

Matthew R. Dumala, P.Eng.

CERTIFICATE VA10071439

Project: RAU

P.O. No.: EL

This report is for 221 Soil samples submitted to our lab in Vancouver, BC, Canada on 4-JUN-2010.

The following have access to data associated with this certificate:

JOAN MARIACHER	BILL WENGZYNOWSKI	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-22	Sample login - Rcd w/o BarCode
PUL-QC	Pulverizing QC Test
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA10073648

Project: RAU

P.O. No.: Batch 1

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 10-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
As-OG62	Ore Grade As - Four Acid	VARIABLE
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

To: **ATAC RESOURCES LTD.**
ATTN: JOAN MARIACHER
C/O ARCHER, CATHRO & ASSOCIATES (1981) LIMITED
1016-510 W HASTINGS ST
VANCOUVER BC V6B 1L8

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA10073649

Project: RAU

P.O. No.: Batch 2

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 10-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-23	Pulp Login - Rcvd with Barcode
CRU-31	Fine crushing - 70% <2mm
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
As-OG62	Ore Grade As - Four Acid	VARIABLE
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

To: **ATAC RESOURCES LTD.**
ATTN: JOAN MARIACHER

CERTIFICATE VA10074880

Project: RAU

P.O. No.: Batch 3

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 10-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-23	Pulp Login - Rcvd with Barcode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

To: **ATAC RESOURCES LTD.**
ATTN: JOAN MARIACHER
C/O ARCHER, CATHRO & ASSOCIATES (1981) LIMITED
1016-510 W HASTINGS ST
VANCOUVER BC V6B 1L8

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA10076144

Project: RAU

P.O. No.: NOW

This report is for 263 Soil samples submitted to our lab in Vancouver, BC, Canada on 14-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

To: **ATAC RESOURCES LTD.**
ATTN: JOAN MARIACHER

CERTIFICATE VA10076145

Project: RAU

P.O. No.: NOW

This report is for 240 Soil samples submitted to our lab in Vancouver, BC, Canada on 14-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-21	Sample logging - ClientBarCode
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA10076146

Project: RAU

P.O. No.: NOW

This report is for 268 Soil samples submitted to our lab in Vancouver, BC, Canada on 14-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-22	Sample login - Rcd w/o BarCode
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Pb-OG46	Ore Grade Pb - Aqua Regia	VARIABLE
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES

CERTIFICATE VA10076147

Project: RAU

P.O. No.: BATCH 4

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 14-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
As-OG62	Ore Grade As - Four Acid	VARIABLE
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

CERTIFICATE VA10076148

Project: RAU

P.O. No.: BATCH 5

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 14-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-23	Pulp Login - Rcvd with Barcode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

To: **ATAC RESOURCES LTD.**
ATTN: JOAN MARIACHER

CERTIFICATE OF ANALYSIS VA10076148

Method	CERTIFICATE COMMENTS
ME-MS61	Interference: Ca>10% on ICP-MS As,ICP-AES results shown.
ME-MS61	REE's may not be totally soluble in this method.

CERTIFICATE VA10078942

Project: RAU

P.O. No.: NOW

This report is for 243 Soil samples submitted to our lab in Vancouver, BC, Canada on 17-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-21	Sample logging - ClientBarCode
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

To: **ATAC RESOURCES LTD.**
ATTN: JOAN MARIACHER

CERTIFICATE VA10078943

Project: RAU

P.O. No.: NOW

This report is for 255 Soil samples submitted to our lab in Vancouver, BC, Canada on 17-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-21	Sample logging - ClientBarCode
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA10078944

Project: RAU

P.O. No.: NOW

This report is for 249 Soil samples submitted to our lab in Vancouver, BC, Canada on 17-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA10078945

Project: RAU

P.O. No.: NOW

This report is for 234 Soil samples submitted to our lab in Vancouver, BC, Canada on 17-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA10078946

Project: RAU

P.O. No.: NOW

This report is for 193 Soil samples submitted to our lab in Vancouver, BC, Canada on 17-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA10078947

Project: RAU

P.O. No.: NOW

This report is for 263 Soil samples submitted to our lab in Vancouver, BC, Canada on 17-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA10078948

Project: RAU

P.O. No.: BATCH 6

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 17-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

CERTIFICATE VA10078949

Project: RAU

P.O. No.: BATCH 7

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 17-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-23	Pulp Login - Rcvd with Barcode
CRU-31	Fine crushing - 70% <2mm
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

To: **ATAC RESOURCES LTD.**
ATTN: JOAN MARIACHER

CERTIFICATE VA10079580

Project: RAU

P.O. No.: BATCH 9

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 17-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

To: **ATAC RESOURCES LTD.**
ATTN: JOAN MARIACHER

CERTIFICATE VA10079582

Project: RAU

P.O. No.: BATCH 8

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 17-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-23	Pulp Login - Rcvd with Barcode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
As-OG62	Ore Grade As - Four Acid	VARIABLE
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

To: **ATAC RESOURCES LTD.**
ATTN: JOAN MARIACHER
C/O ARCHER, CATHRO & ASSOCIATES (1981) LIMITED
1016-510 W HASTINGS ST
VANCOUVER BC V6B 1L8

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA10082195

Project: RAU

P.O. No.: RTI

This report is for 196 Soil samples submitted to our lab in Vancouver, BC, Canada on 21-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES

CERTIFICATE VA10082196

Project: RAU

P.O. No.: RTI

This report is for 239 Soil samples submitted to our lab in Vancouver, BC, Canada on 21-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-21	Sample logging - ClientBarCode
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA10082197

Project: RAU

P.O. No.: Rau Trend Infill

This report is for 285 Soil samples submitted to our lab in Vancouver, BC, Canada on 21-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA10082198

Project: RAU

P.O. No.: Rau Trend Infill

This report is for 115 Soil samples submitted to our lab in Vancouver, BC, Canada on 21-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-21	Sample logging - ClientBarCode
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA10082227

Project: RAU

P.O. No.: BATCH 13

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 21-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-23	Pulp Login - Rcvd with Barcode
CRU-31	Fine crushing - 70% <2mm
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
As-OG62	Ore Grade As - Four Acid	VARIABLE
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

To: **ATAC RESOURCES LTD.**
ATTN: JOAN MARIACHER

CERTIFICATE VA10082228

Project: RAU

P.O. No.: BATCH 11

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 21-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-23	Pulp Login - Rcvd with Barcode
CRU-31	Fine crushing - 70% <2mm
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
As-OG62	Ore Grade As - Four Acid	VARIABLE
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

To: **ATAC RESOURCES LTD.**
ATTN: JOAN MARIACHER

CERTIFICATE VA10082229

Project: RAU

P.O. No.: Batch 12

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 21-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Ag-GRA21	Ag 30g FA-GRAV finish	WST-SIM
Cu-OG62	Ore Grade Cu - Four Acid	VARIABLE
As-OG62	Ore Grade As - Four Acid	VARIABLE
ME-XRF05	Trace Level XRF Analysis	XRF
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

To: **ATAC RESOURCES LTD.**
ATTN: JOAN MARIACHER
C/O ARCHER, CATHRO & ASSOCIATES (1981) LIMITED
1016-510 W HASTINGS ST
VANCOUVER BC V6B 1L8

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA10082260

Project: RAU

P.O. No.: BATCH 10

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 21-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-23	Pulp Login - Rcvd with Barcode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
As-OG62	Ore Grade As - Four Acid	VARIABLE
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

To: **ATAC RESOURCES LTD.**
ATTN: JOAN MARIACHER
C/O ARCHER, CATHRO & ASSOCIATES (1981) LIMITED
1016-510 W HASTINGS ST
VANCOUVER BC V6B 1L8

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

Signature: Colin Ramshaw, Vancouver Laboratory Manager

CERTIFICATE VA10083884

Project: RAU

P.O. No.: BATCH 16

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 23-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-23	Pulp Login - Rcvd with Barcode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
As-OG62	Ore Grade As - Four Acid	VARIABLE
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

To: **ATAC RESOURCES LTD.**
ATTN: JOAN MARIACHER
C/O ARCHER, CATHRO & ASSOCIATES (1981) LIMITED
1016-510 W HASTINGS ST
VANCOUVER BC V6B 1L8

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA10083885

Project: RAU (Grey Copper Hill)

P.O. No.: GCH

This report is for 164 Soil samples submitted to our lab in Vancouver, BC, Canada on 23-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA10083886

Project: RAU

P.O. No.: BATCH 18

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 23-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-23	Pulp Login - Rcvd with Barcode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
As-OG62	Ore Grade As - Four Acid	VARIABLE
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

CERTIFICATE VA10083887

Project: RAU

P.O. No.: BATCH 14

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 23-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-23	Pulp Login - Rcvd with Barcode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
As-OG62	Ore Grade As - Four Acid	VARIABLE
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

To: **ATAC RESOURCES LTD.**
ATTN: JOAN MARIACHER
C/O ARCHER, CATHRO & ASSOCIATES (1981) LIMITED
1016-510 W HASTINGS ST
VANCOUVER BC V6B 1L8

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA10083888

Project: RAU(Grey Copper Hill)

P.O. No.: GCH

This report is for 163 Soil samples submitted to our lab in Vancouver, BC, Canada on 23-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-21	Sample logging - ClientBarCode
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

Project: RAU(Grey Copper Hill)

P.O. No.: GCH

This report is for 137 Soil samples submitted to our lab in Vancouver, BC, Canada on 23-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-21	Sample logging - ClientBarCode
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA10083930

Project: RAU

P.O. No.: BATCH 19

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 23-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
As-OG62	Ore Grade As - Four Acid	VARIABLE
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

To: **ATAC RESOURCES LTD.**
ATTN: JOAN MARIACHER

CERTIFICATE VA10083931

Project: RAU (Grey Copper Hill)

P.O. No.: GCH

This report is for 150 Soil samples submitted to our lab in Vancouver, BC, Canada on 23-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA10083932

Project: RAU

P.O. No.: BATCH 15

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 23-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
As-OG62	Ore Grade As - Four Acid	VARIABLE
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

CERTIFICATE VA10083933

Project: RAU

P.O. No.: BATCH 17

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 23-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-23	Pulp Login - Rcvd with Barcode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

To: **ATAC RESOURCES LTD.**
ATTN: JOAN MARIACHER
C/O ARCHER, CATHRO & ASSOCIATES (1981) LIMITED
1016-510 W HASTINGS ST
VANCOUVER BC V6B 1L8

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA10085427

Project: RAU

P.O. No.: Batch 21

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 28-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
As-OG62	Ore Grade As - Four Acid	VARIABLE
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

CERTIFICATE VA10085428

Project: RAU

P.O. No.: Batch 20

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 28-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-23	Pulp Login - Rcvd with Barcode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
As-OG62	Ore Grade As - Four Acid	VARIABLE
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

To: **ATAC RESOURCES LTD.**
ATTN: JOAN MARIACHER

CERTIFICATE VA10085624

Project: RAU(Grey Copper Hill)

P.O. No.: GCH

This report is for 220 Soil samples submitted to our lab in Vancouver, BC, Canada on 28-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-21	Sample logging - ClientBarCode
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA10085625

Project: RAU (Grey Copper Hill)

P.O. No.: GCH

This report is for 221 Soil samples submitted to our lab in Vancouver, BC, Canada on 28-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA10085626

Project: RAU (Grey Copper Hill)

P.O. No.: GCH

This report is for 142 Soil samples submitted to our lab in Vancouver, BC, Canada on 28-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-21	Sample logging - ClientBarCode
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA10085627

Project: RAU (Grey Copper Hill)

P.O. No.: GCH

This report is for 124 Soil samples submitted to our lab in Vancouver, BC, Canada on 28-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA10086247

Project: RAU Trend (EL)

P.O. No.: EL

This report is for 8 Rock samples submitted to our lab in Vancouver, BC, Canada on 29-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Ag-GRA21	Ag 30g FA-GRAV finish	WST-SIM
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
Pb-VOL70	Pb by Titration	
Zn-VOL50	Zn by titration	
As-OG62	Ore Grade As - Four Acid	VARIABLE
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

CERTIFICATE VA10086249

Project: RAU (Grey Copper Hill)

P.O. No.: GCH

This report is for 240 Soil samples submitted to our lab in Vancouver, BC, Canada on 28-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-21	Sample logging - ClientBarCode
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA10086505

Project: RAU

P.O. No.: MH

This report is for 210 Soil samples submitted to our lab in Vancouver, BC, Canada on 29-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-21	Sample logging - ClientBarCode
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

To: **ATAC RESOURCES LTD.**

CERTIFICATE VA10086506

Project: RAU

P.O. No.: MH

This report is for 189 Soil samples submitted to our lab in Vancouver, BC, Canada on 29-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA10086507

Project: RAU

P.O. No.: MH

This report is for 245 Soil samples submitted to our lab in Vancouver, BC, Canada on 29-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

To: **ATAC RESOURCES LTD.**

CERTIFICATE VA10086508

Project: RAU

P.O. No.: MH

This report is for 202 Soil samples submitted to our lab in Vancouver, BC, Canada on 29-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-21	Sample logging - ClientBarCode
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA10086509

Project: RAU

P.O. No.: MH

This report is for 163 Soil samples submitted to our lab in Vancouver, BC, Canada on 29-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA10087260

Project: RAU

P.O. No.: MH

This report is for 261 Soil samples submitted to our lab in Vancouver, BC, Canada on 29-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31	Pulverize split to 85% <75 um
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
SCR-43	Screen to -500um, discard plus
SCR-01	Screen - Save plus fraction

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA10087261

Project: RAU

P.O. No.: BATCH 23

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 29-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-23	Pulp Login - Rcvd with Barcode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
As-OG62	Ore Grade As - Four Acid	VARIABLE
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

CERTIFICATE VA10087262

Project: RAU

P.O. No.: BATCH 22

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 29-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-23	Pulp Login - Rcvd with Barcode
CRU-31	Fine crushing - 70% <2mm
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
As-OG62	Ore Grade As - Four Acid	VARIABLE
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

To: **ATAC RESOURCES LTD.**
ATTN: JOAN MARIACHER
C/O ARCHER, CATHRO & ASSOCIATES (1981) LIMITED
1016-510 W HASTINGS ST
VANCOUVER BC V6B 1L8

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA10087265

Project: RAU

P.O. No.: BATCH 24

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 29-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-23	Pulp Login - Rcvd with Barcode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
As-OG62	Ore Grade As - Four Acid	VARIABLE
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

CERTIFICATE VA10087266

Project: RAU

P.O. No.: BATCH 25

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 29-JUN-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
LOG-23	Pulp Login - Rcvd with Barcode
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
As-OG62	Ore Grade As - Four Acid	VARIABLE
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

To: **ATAC RESOURCES LTD.**
ATTN: JOAN MARIACHER

CERTIFICATE VA10089851

Project: RAU

P.O. No.: BATCH 29

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 3-JUL-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-23	Pulp Login - Rcvd with Barcode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
As-OG62	Ore Grade As - Four Acid	VARIABLE
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

CERTIFICATE VA10089852

Project: RAU

P.O. No.: BATCH 30

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 3-JUL-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-23	Pulp Login - Rcvd with Barcode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
As-OG62	Ore Grade As - Four Acid	VARIABLE
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

CERTIFICATE VA10089853

Project: RAU

P.O. No.: Batch # 28

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 3-JUL-2010.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	BILL WENGZYNOWSKI

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
LOG-24	Pulp Login - Rcd w/o Barcode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
As-OG62	Ore Grade As - Four Acid	VARIABLE
Au-AA26	Ore Grade Au 50g FA AA finish	AAS

To: **ATAC RESOURCES LTD.**
ATTN: JOAN MARIACHER
