December 20, 2011

Summary

On August 19, 2011 Stakeholder Gold Corp. completed a surface exploration program on the 10-claim (207ha) Coffee property located on Coffee Creek, some 130km southeast of Dawson City, Yukon. The work included a grid deep auger-type soil geochemical survey. The goal of the work was to identify potential gold-bearing structures by outlining geochemical trends.

The Coffee property is held 100% by Stakeholder Gold Corp. The Property is located in an isolated part of the Yukon with no local resources or infrastructure. Fuel, supplies and equipment can be flown in from Dawson City by helicopter.

No work has been completed on the Coffee property previous to Stakeholder's surface exploration program in 2011.

The Property lies within the Yukon-Tanana Terrane which consists of several successions of complexly deformed Late Proterozoic to Late Permian sedimentary and volcanic rocks episodically intruded by various intrusive rocks in the Permian, Jurassic, Cretaceous, and Tertiary periods. The intrusive events have been accompanied by volcanic activity especially in the Upper Jurassic to Lower Cretaceous. Limited mapping on the Property indicated that it is underlain by quartzites and quartz-biotite schists of the Nasina Terrane.

The Property lies in the underexplored Klondike-White Gold district of the loosely defined Tintina Gold Belt. Stakeholder's exploration effort at Coffee is based on practical survey methods that generate drill targets and have led to discoveries in the area including Kaminak's Supremo discovery on its Coffee property located approximately 10km west of Coffee. Detailed geochemical surveys and closely spaced, low altitude, helicopter-borne geophysical surveys have been proven to be effective in the area. Due to the deeply weathered nature of the soils in this unglaciated area, it is very important to take samples from the deeper C-horizon.

A 290-sample deep auger-type soil geochemical grid survey was completed over the entire Property on August 19, 2011. The soil samples were collected with hand augers at 50m sample intervals spaced 100m apart along predetermined GPS traverse lines. The samples were analyzed for 36 elements by ISO 9001-accredited Acme Analytical Laboratories Ltd.

The soil samples returned gold values ranging from below detection limit (i.e. <5ppb Au) to a maximum of 28.2ppb Au. The results were poor and the better results are very spread out over the Property. There were no gold-in-soil trends defined by the deep auger-type soil sampling.

After a detailed 290-sample deep auger-type soil geochemical grid survey over the entire Property identified no significant gold-in-soil anomalies no further work is recommended at this time.

Certificate of Qualifications

I, Mark Fekete, having my place of residence at 178 Dennison Boulevard in Val d'Or in the Province of Quebec do hereby certify that:

1. I obtained a Bachelor of Science Degree in Geology from the University of British Columbia in 1986, I have been engaged as a Geologist continuously since 1986 and I am a Member in good standing of the Order of Geologists of Quebec (OGQ #553) and the Association of Professional Engineers and Geoscientists of British Columbia (APEGBC #31440), and I am a "qualified person" as defined in Section 1.2 in and for the purposes of National Instrument 43-101;
2. I have visited the Coffee property on numerous occasions including most recently in July 2011;
3. I co-wrote and I am, as the senior author and qualified person, responsible for the contents of this technical report entitled "Surface Work Performed from August 19, 2011 to November 28, 2011 on the Coffee Property, Whitehorse Mining District, Yukon, NTS Sheets 115J14, 62°51'N. Lat., 139°07'W. Long.," based on my professional experience, a review of relevant reports and maps made available to me from government and corporate sources and my participation in the work programs described in the report;
4. I am not aware of any material fact or material change with respect to the subject matter of the report that is not disclosed in the report which, by its omission, makes the report misleading;
5. I am an Officer and Director, and I beneficially hold a number of shares in Stakeholder Gold Corp.;
6. I hold no direct interest in the Coffee property as a result of my prior involvement with the property; and
7. I have read, and this report has not been prepared for the purposes, nor in full compliance with, National Instrument 43-10, 1 and according to Form 43-101F1.

Respectfully submitted this 20st day of December 2011,

(s) "**Mark Fekete**"

Mark Fekete, P.Geo.

Certificate of Qualifications

I, Neda Dokic, having my place of residence at 60 Stope Way in Whitehorse in the Territory of the Yukon do hereby certify that:

1. I obtained a Bachelor of Science Degree in Geology from Acadia University in May 2011, I have been engaged as a Geologist in Training (“GIT”) continuously since May 2011 and I am not a “qualified person” as defined in Section 1.2 in and for the purposes of National Instrument 43-101;
2. I have not visited the Coffee property;
3. I co-wrote this technical report entitled “Surface Work Performed from August 19, 2011 to November 28, 2011 on the Coffee Property, Whitehorse Mining District, Yukon, NTS Sheets 115J14, 62°51’N. Lat., 139°07’W. Long.,” under the supervision of Mark Fekete, P.Geo.;
4. I am not aware of any material fact or material change with respect to the subject matter of the report that is not disclosed in the report which, by its omission, makes the report misleading;
5. I do not beneficially hold a number of shares in Stakeholder Gold Corp.;
6. I hold no direct interest in the Coffee property as a result of my prior involvement with the property; and
7. I have read, and this report has not been prepared for the purposes, or in full compliance with, National Instrument 43-10, 1 and according to Form 43-101F1.

Respectfully submitted this 20st day of December 2011,

(s) “Neda Dokic”

1. Introduction and Terms of Reference

Breakaway Exploration Management Inc. (“Breakaway”) was retained by Stakeholder Gold Corp. (“Stakeholder”) to write a technical report (the “Report”) describing the surface exploration work carried out on the Coffee property (“Coffee” or the “Property”) in Yukon in 2011. The Report describes the soil geochemical sampling survey completed.

The goal of the surface work was to identify areas of anomalous gold-in-soil that may be related to the gold bearing structures similar to Kaminak’s Supremo discovery on its Coffee property located approximately 10km west of the Property.

The Report is based primarily on the results of the work completed on Coffee in 2011 but also contains information obtained from a review of relevant reports and maps cited throughout the Report. The Report was prepared by Geologist in Training Neda Dokic (the “Junior Author”) under the supervision of Professional Geologist Mark Fekete (the “Senior Author”). The Senior Author has visited and personally inspected the Property on numerous occasions most recently in July 2011. The Senior Author is the designated “qualified person” as defined in Section 1.2 in and for the purposes of National Instrument 43-101. The main purpose of the Report is to complete statutory assessment work filings required under the Yukon Quartz Mining Act. It is not intended to and does not fully comply with National Instrument 43-101. The Report contains specific recommendations and proposes a budget for further work.

The metric system is used for all units of measure mentioned in the Report and all dollar amounts are in Canadian funds unless otherwise stated. All figures presented in the Report are plotted in map projection UTM NAD 83, Zone 7 unless otherwise stated.

2. Reliance on Other Experts

The Authors may have relied on technical data and interpretations found in various sources cited throughout the report. The Authors may not have verified this information and take no responsibility for its accuracy or completeness. Reference to the compliance or non-compliance with NI 43-101 standards of historical information and data referred to in this Report are made where appropriate. The Authors do not offer any opinion concerning legal, title, environmental, political or other non-technical issues that may be relevant to the Report. The Report may contain links to several web-sites. The Authors take no responsibility for the functionality or content of these websites.

3. Location and Property Description

The Property covers an approximate area of 207.5 hectares within the Whitehorse Mining Division of Yukon. It consists of 10 claims making up two non-contiguous claim blocks (Figure 2) as more fully described in Table 1 below. The two blocks straddle Coffee Creek, a tributary to the Yukon River (Figure 1). The approximate centre of the north block is described by 62°52’11” North Latitude and 139°07’51” West Longitude and the south block is described by 62°51’00” North Latitude and 139°07’00” West Longitude on N.T.S. Sheets 115J14.

Table 1 - List of Claims

			10

In February 2010 Hinterland Metals Inc. acquired the Property by staking. In June 2011 Hinterland transferred 100% of its interest in the Property to Stakeholder as part of a plan of arrangement whereby all of Hinterland Yukon holdings were spun out to Stakeholder (Hinterland Press Release - June 8, 2011).

Coffee Properties
Figure 2. Claim Map
Stakeholder Gold Corp.
NTS Sheet: 115J/14
Date: November 29, 2011

The mineral claims included in the Property were acquired under the Yukon Quartz Mining Act which grants only the hard rock mineral rights to the claim holder. The surface rights for the area of the Property are held by the Crown. To maintain the claims in good standing, a minimum of \$100 assessment work per claim must be completed annually. There are provisions to apply for more than one year work at a time up to a maximum of five years, to apply work from one claim to other adjoining claims (grouping) up to a maximum of 750 contiguous claims and to pay cash in lieu of work up to a maximum of five years. The Quartz Mining Land Use Regulations consist of a classification system based on varying levels of specific activities. These threshold levels categorize exploration activities into four classes of operation. Classes 1 through 4 represent activities with increasing potential to cause adverse environmental impacts.

Activities within a Class 1 program are defined as “grassroots” exploration with low potential to cause adverse environmental effects, and where activities and reclamation are completed within a year. A Class 1 program does not require government approval but the operator must comply with the certain operating conditions. An assessment under the Yukon Environmental and Socio Economic Assessment Act (“YESAA”) is not required for a Class 1 program.

Class 2 programs are considered to represent the upper level of “grassroots” exploration activities. A notification submitted through the Mining Lands Office which outlines the activities and how they will be reclaimed is required. These programs comprise activities that have a moderate potential to cause adverse environmental effects and therefore require an assessment through YESAA. All work and reclamation must be completed within one year.

All Class 3 and Class 4 programs require submission of a detailed “Operating Plan” to the Mining Lands Office. A YESAA assessment is required. The Operating Plan must be approved before any exploration activities can be undertaken. Operating Plans may entail multi-year exploration programs to allow greater flexibility for the operator. The work described in this Report was completed as a Class 1 Program.

4. Accessibility, Local Resources, Infrastructure, Physiography and Climate

Access to the Property is restricted due to a lack of usable roads on or adjacent to the Property. The primary means of access is by helicopter from Dawson City or the Minto airstrip on the Klondike highway. It is roughly the same distance from each location to the Property.

The Coffee property is located in an isolated part of Yukon with relatively few local resources or infrastructure. The Property can be worked from Dawson City by helicopter or from an exploration camp set up on or near the Property. A camp can be supported from Dawson City, where services are limited, or from Whitehorse where a full range of services are available including line-cutting, geophysics, drilling, assaying, aircraft charters etc.

The Property straddles Coffee Creek in the Dawson Range of Yukon. Unlike most parts of Yukon, the Dawson Range was not affected by the last period of continental glaciations and so it is characterized by low rolling hills incised with steep sided, V-shaped valleys. Bedrock is typically deeply weathered and there is very little (perhaps less than 5%) outcrop exposed; usually on ridges above tree-line or in rare canyons in the creek valleys. Elevations on the Property range from 457m to 792m above sea level. Most of the Property lies below tree-line and is covered by a typical boreal mixture of pine, spruce, balsam fir, aspen and birch trees, and willow and alder brush. North and west slopes are often covered with thick moss blanketing permafrost.

The Dawson area is characterized by a semi-arid, sub-arctic continental climate with mild to hot summers and cold winters. Precipitation is generally light in the summer and overall clear skies and warm temperatures prevail. Heavy morning fog can be a problem for aircraft especially towards the end of the summer season. Forest fires are common and thick smoke at times may impede exploration work. Maximum snow accumulations in the winter are typically less than one meter. Due to the northerly latitude of the region, summer days are long and winter days very short. The best season for exploration is during the summer months from mid-May to mid-October. Although it is possible to work during the winter months, costs rise exponentially due to cold temperatures, inclement weather and short daylight hours.

5. Exploration History

The following exploration history of the Property has been compiled from the Yukon Energy and Mines and Resources Library and Yukon Geological Survey MINFILE database. There is no exploration work documented within the area of the present Property. There is one mineral showing documented adjacent to the Property listed in Table 2 below:

Table 2 - MINFILE Showings

MINFILE No.	MINEFILE Name	Link
115J 058	Vegus	115J 058

The MINFILE description of the Vegus showing is vague and does not provide much information about the showing.

6. Geology

The Property lies within the Yukon-Tanana Terrane which, due to large areas with little or no bedrock exposure and limited modern regional or detailed mapping, remains very poorly understood. Generally it consists of several successions of layered sedimentary and volcanic rocks ranging from Late Proterozoic to Late Permian age that overlay the older Nisling Terrane. These complexly deformed layered rocks have been episodically intruded by various intrusive rocks in the Permian, Jurassic, Cretaceous and Tertiary periods. The intrusive events have been accompanied by volcanic activity especially in the Upper Jurassic to Lower Cretaceous. The Yukon-Tanana has been subjected to numerous prolonged deformational events including subduction and accretion that has led to significant structural thickening. Imbricated allochthonous terranes such as Slide Mountain Terrane are evidenced by altered ultramafic fragments.

The Property lies within the White Gold district which is underlain primarily by Devonian to Mississippian quartzites and quartz-biotite schists and Late Devonian to Mississippian intermediate to mafic orthogneiss (Figure 3). The area is cut by numerous intrusions that are for the most part classified as Cretaceous. Gordey and Makepeace (1999) indicate that the Property is underlain by quartzites and quartz-biotite schists (DMN) of the Nasina Terrane (Figure 4).

7. Deposit Types

The Property lies within an underexplored part of the loosely defined Tintina Gold Belt. This metallogical province has past production of 29.9 million ounces and 39.3 million ounces of resources for total gold resources of 69.2 million ounces. Notable gold deposits are Donlin Creek, Ft. Knox, Pogo and Brewery Creek. The underexplored nature of the Klondike-White Gold district was highlighted by Kaminak's Supremo discovery on its Coffee property in 2010 located approximately 10km west of Coffee and by Underworld's discovery of the Saddle and Arc zones in May 2009 on the White property located 40km northwest of Coffee,.

The Klondike-White Gold district lies within the larger Dawson Range area where a number of known gold and porphyry copper deposits show a wide range of styles, geological settings and geochemical associations. Stakeholder's exploration effort at Coffee is not adhering to any firm deposit model but is instead based on practical survey methods that generate drill targets and have led to discoveries by other groups working in the area.

Detailed deep auger-type soil geochemical surveys have proven to be effective in the area, as shown by prospector Shawn Ryan's success on the Coffee and White properties. The Dawson Range generally shows deeply weathered, oxidized soils in an unglaciated periglacial environment. This simply means that in order to collect soils that best represent the underlying bedrock it is necessary to take relatively deep soil samples that are likely less weathered and less oxidized. Another useful exploration tool is to fly closely spaced, low altitude, helicopter-borne geophysical surveys to assist in interpreting bedrock units, structure, and alteration.

8. Mineralization

Very little *in situ* mineralization has been identified on the Property to date due primarily to the lack of outcrop. A number of quartz veins and quartz breccias have been uncovered with or without disseminated sulphides.

9. 2011 Exploration Work

9.1. Introduction

Exploration work in 2011 included a detailed deep auger-type soil grid geochemical survey which covered the entire Property with soil samples. Field work, supervised by the Senior Author, was completed on August 19, 2011 and the analytical work was done from August 25, 2011 to November 28, 2011. A detailed Statement of Work is included herein as Appendix A. The Junior Author compiled the field data into digital maps and wrote this Report up to December 20, 2011.

9.2. Sampling and Analytical Procedures

The work was done on foot by a crew flown to the Property by helicopter from a camp at Kirkman Creek. A total of 290 soil samples, including field duplicates, were taken at stations 50m apart with lines spaced 100m apart using GPS traverse lines. These soil sample locations were selectively chosen to cover the entire Property in such a way that would indicate potential gold trends rather than spot anomalies.

Sample locations were flagged in the field and recorded with HP iPAQ 200 series field computers running GeoInfoMobile and Tierra Mapper software paired with Holux GPS receivers in map datum UTM WGS 84 Zone7. Sample locations (Figure 5 and 6) and descriptions are included as Appendix B. A data CD is also included. Soil sample material varied from clay to sand with some humus samples. Sample depth varied from 20 to 90cm with an average depth of 43cm.

Soil samples were placed in Kraft-type paper bags with the appropriate sample numbers marked in indelible ink. Batches of samples were subsequently dried, sealed in rice bags and shipped to Acme Analytical Laboratories Ltd. ("Acme") in Vancouver, B.C. for analysis. Samples were dried and sieved to - 80 mesh size and analyzed for 36 elements (including gold) by 15 gram Aqua Regia digestion, ICP-MS finish (Appendix C). Acme is accredited under ISO 9001.

9.3. Data Verification

It is the Authors' opinion that the sampling procedures, security measures, sample preparations and analytical methods applied to the soil and rock samples were diligently followed and are adequate to meet industry standards commonly accepted for this level of exploration. The Authors have relied upon the adequacy and accuracy of the analytical results provided by Acme. Independent verification of those results has not been undertaken. The Authors reconciled the field data with the analytical results and found no discrepancies.

9.4. Results

The soil samples returned gold values ranging from below detection limit (i.e. <0.5ppb Au) to a maximum of 28.2ppb Au. These results are relatively weak and very spread out over the Property. There were no gold-in-soil trends defined by the soil sampling (Figure 7).

10. Adjacent Properties

No gold deposits are known to exist on the properties immediately adjacent to the Property. Significant gold mineralization has been reported approximately 10km west of Coffee at Kaminak's discovery hole of 15.5m over 17.1gpt Au at the Supremo zone (Kaminak Press Release - May 26, 2010). Approximately 40km northwest of Coffee lies Kinross's White Gold deposit with a current resource estimation at the Golden Saddle zone of 1,004,570 indicated ounces at 3.2gpt Au and 407,413 inferred ounces at 2.5gpt Au; and at the Arc Zone of 170,470 inferred ounces at 1.2gpt Au (Underworld Press Release - January 19, 2010).

The Authors have not verified the information made public on these adjacent properties and cautions that **any such information is not necessarily indicative of the mineralization on the Coffee property.** However, this information does indicate that the White Gold district is an underexplored area that has solid potential for hosting significant gold deposits.

11. Mineral Resource and Mineral Reserve Estimates

To date no mineral resource or mineral reserve estimates have been completed at Coffee. The Property is at a “grassroots” level of exploration such that it is too early to make any resource or reserve estimates.

12. Mineral Processing and Metallurgical Testing

To date no mineral processing or metallurgical testing has been completed at Coffee.

13. Other Relevant Data and Information

The Authors are not aware of any other relevant data and information or explanation to make this report more understandable and not misleading.

14. Interpretation of Results and Conclusions

The gold-in-soil results were generally weak. The few anomalous results found on the Property were spread out and did not identify any gold-in-soil trends or zones.

15. Recommendations

Based on the poor soil geochemical results returned from the 2011 work, no further work is recommended at this time. The Property is strategically located within Kaminak’s very active Coffee property. It is recommended that the Property be maintained pending further developments in the area.

QUARTZ MINING ACT FORM 12 SECTION 55
APPLICATION TO GROUP MINERAL CLAIMS

WHITE HORSE MINING DISTRICT

Office Date Stamp

I, (We) the undersigned owners or agent(s) of the owners of following mineral claims.

(Additional sheets or an appendix may be used) (Claim names and grant numbers to be listed in sequence eg. TOM 1-40, YC10001 - YC10040)

GRANT NUMBER	CLAIM NAME	MAP SHEET
SEE ATTACHED	SCHEDULE.	
	EX 19-24	

Give notice of intention to group the said claims for the performance of work and do hereby apply under the provisions of section 55 of the *Quartz Mining Act* for a certificate in form 6.

I (We) hereby certify that the above claims are adjoining as shown on the attached sketch

Dated at Val d'Or, Quebec

This 2nd day of February, 2012

Applicant(s)

Access to Information and Protection of Privacy Act

The personal information requested on this form is collected under the authority of and used for the purpose of administering the *Quartz Mining Act*. Questions about the collection and use of this information can be directed to the Mining Records Office, Mineral Resources, Department of Energy, Mines and Resources, Yukon Government, Box 2703, Whitehorse, Yukon Territory, Y1A 2C6 (867) 667-3190

Appendix C - Analytical Certificates

1020 Cordova St. East Vancouver BC V6A 4A3 Canada

Acme Analytical Laboratories (Vancouver) Ltd.

www.acmelab.com

Client: **Stakeholder Gold Corp.**

203 - 680 Third Ave.
Val D'Or QC J9P 1S5 Canada

Submitted By: Mark Fekete
Receiving Lab: Canada-Whitehorse
Received: August 25, 2011
Report Date: November 26, 2011
Page: 1 of 7

CERTIFICATE OF ANALYSIS

WHI11001448.1

CLIENT JOB INFORMATION

Project: COFFEE
Shipment ID: 2011083105602
P.O. Number
Number of Samples: 166

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Corp.
203 - 680 Third Ave.
Val D'Or QC J9P 1S5
Canada

CC: Lauren Wilson

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
Dry at 60C	166	Dry at 60C			DAW
SS80	166	Dry at 60C sieve 100g to -80 mesh			DAW
1DX2	166	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CERTIFICATE OF ANALYSIS

WHI11001449.1

CLIENT JOB INFORMATION

Project: COFFEE
Shipment ID: 20110823111259
P.O. Number
Number of Samples: 124

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Corp.

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
Dry at 60C	124	Dry at 60C			DAW
SS80	124	Dry at 60C sieve 100g to -80 mesh			DAW
1DX2	124	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.
