Mayo, Watson Lake and Whitehorse Mining Districts YUKON TERRITORY

Prepared by:
Joyia Chakungal, PhD

May 2012

Adelaide Street East
Suite 2800
Toronto, Ontario, M5C 2V9

SUMMARY

The Nug project area straddles the North Canal Road ~ 135 km northeast of Faro in east-central Yukon, near the border with the Northwest Territories. The project area comprises 9 prospects - three situated in the Watson Lake Mining District within the traditional territory of the Kaska Dena First Nation (MacEast, How & Otter); five situated in the Mayo Mining District within the traditional territory of the Nacho Nyak Dun First Nation (Nordic, Nug, SMR, Golden & PDM); and one prospect (Oly) that straddles the Mayo, Whitehorse and Watson Lake Mining districts as well as the traditional territory of both the Nacho Nyak Dun and Kaska Dena First Nations.

The 2011 exploration program for the NUG project area was three-fold and included bedrock mapping and sampling, regional soil and geophysical surveys. The work was carried out by three crews – one 7 person bedrock mapping team; two 10 person soil sampling teams; and an airborne geophysics team which was organized by Precision Geosurveys Inc.

In summary, deformed metasediments in the vicinity of monzo-granodioritic bodies are characterized by the development of regular spaced fractures and networks of irregularly spaced hairline fractures that are most easily recognized in chert lithologies. Metasediments encompassing the intrusive bodies at surface are part of the Devono-Mississippian Earn Group (Nug and Oly prospects) or the Mississippian Keno Hill Quartzite (Nordic prospect) and are characterized by orange-red weathering colours typical of a hornfels aureole, and the presence of pyrite \pm arsenopyrite \pm pyrrhotite. With proximity to large intrusive bodies, foliation and fracture parallel sills of pyrite \pm pyrrhotite bearing plutonic material and arsenian pyrite bearing quartz-carbonate veins is typical. Elevated Au values in both soil and rock samples are consistently obtained in samples of quartz-carbonate vein material, and to a lesser extent sulphide bearing plutonic sills. An absence of elevated values in metasedimentary samples collected above aeromagnetic anomalies where plutonic rocks are not exposed may be a consequence of distance to the metamorphic aureole which may be buried at depth along with an intrusive body.

1. INTRODUCTION

The Nug project area straddles the North Canol Road ~ 135 km northeast of Faro in east-central Yukon, near the border with the Northwest Territory (Figure 1). The project area encompasses 9 prospects - three situated in the Watson Lake Mining District within the traditional territory of the Kaska Dena First Nation (MacEast, How & Otter); five situated in the Mayo Mining District within the traditional territory of the Nacho Nyak Dun First Nation (Nordic, Nug, SMR, Golden & PDM); and one prospect (Oly) that straddles the Mayo, Whitehorse and Watson Lake Mining districts as well as the traditional territory of both the Nacho Nayak Dun and Kaska Dena First Nations. In summer 2011 work on all properties except MacEast, How and Otter was carried out in late July through to late August. Operations for the PDM program were based out of the community of Faro in late July, under the direction of H.Jin, and will not be discussed here. Information provided in this report is a summary of the work carried out on the Golden, Nug, Oly, SMR and Nordic prospects, under the direction of the author.

2. PROPERTY, LOCATION AND ACCESS

The project area is situated in a part of the territory that was last affected by the McConnell glaciation between 26-18 thousand years ago (Bond, 2004). The surrounding terrain is moderate to densely timbered below 1300 m (4265 feet), and characterized by the presence of alpine vegetation at higher altitudes. Outcropping of the underlying bedrock is sparse at altitudes below 1300 m, most commonly restricted to rounded ridge tops and primarily consisting of angular felsenmeer, with less than 10% at lower elevations (e.g. Golden, SMR, south Oly). Where altitudes exceed 1300 m, outcropping of bedrock is abundant and in places virtually inaccessible (e.g. Nordic, Oly).

The initial 7 person field crew based operations out of a temporary, tent based fly camp that was set-up immediately off the North Canol Road, within the Oly block at longitude 62°N 50.050' and latitude 130°W 56.411'. All work conducted from the North Canol camp was helicopter supported by a B2 (Astar) contracted through Trans North Helicopters in Whitehorse. Both the machine and the pilot were stationed in, and operated out of RYG's North Canol camp. The helicopter was also used to support two 10 person Ground Truth Exploration (GT) soil surveying crews – one operating from a camp situated along the North Canol Road (~ 10 km east of RYG camp), the second crew operating from a camp situated on the north shore of Oly Lake.

Properties discussed in this report are located within the traditional territory of either the Kaska Dena or Nacho Nyak Dun First Nations (Figure 1) who have settled their land claims in the area. More specifically, the land in which the mineral claims are situated is Crown Land such that the mineral claims fall under the jurisdiction of the Yukon Government. Readers are directed to Appendix A for detailed, property specific claim distribution maps.

2.1 Golden

The Golden prospect is situated in central Yukon within the Mayo Mining District, extending over four 1:50k map sheets including NTS 105J/13&14, 105O/03&04, centered over longitude 62°N 56.904' and latitude 131°W 20.697'. The property comprises 1802 contiguous claims spanning ~363 km², its southern border approximately 5 km north of the South MacMillan River (Figure 1; Appendix A). Access to the property is by helicopter only. Claims are registered with the Mayo Mining Recorder - 884 claims to Shawn Ryan (100%), 686 claims to RYG (100%), 232 claims to 45127 Yukon Inc. (30%) and RYG (70%).

2.2 Nug

The Nug prospect is situated in the Mayo Mining District, its south-western boundary abutting the northeastern boundary of the Golden prospect (Figure 1).

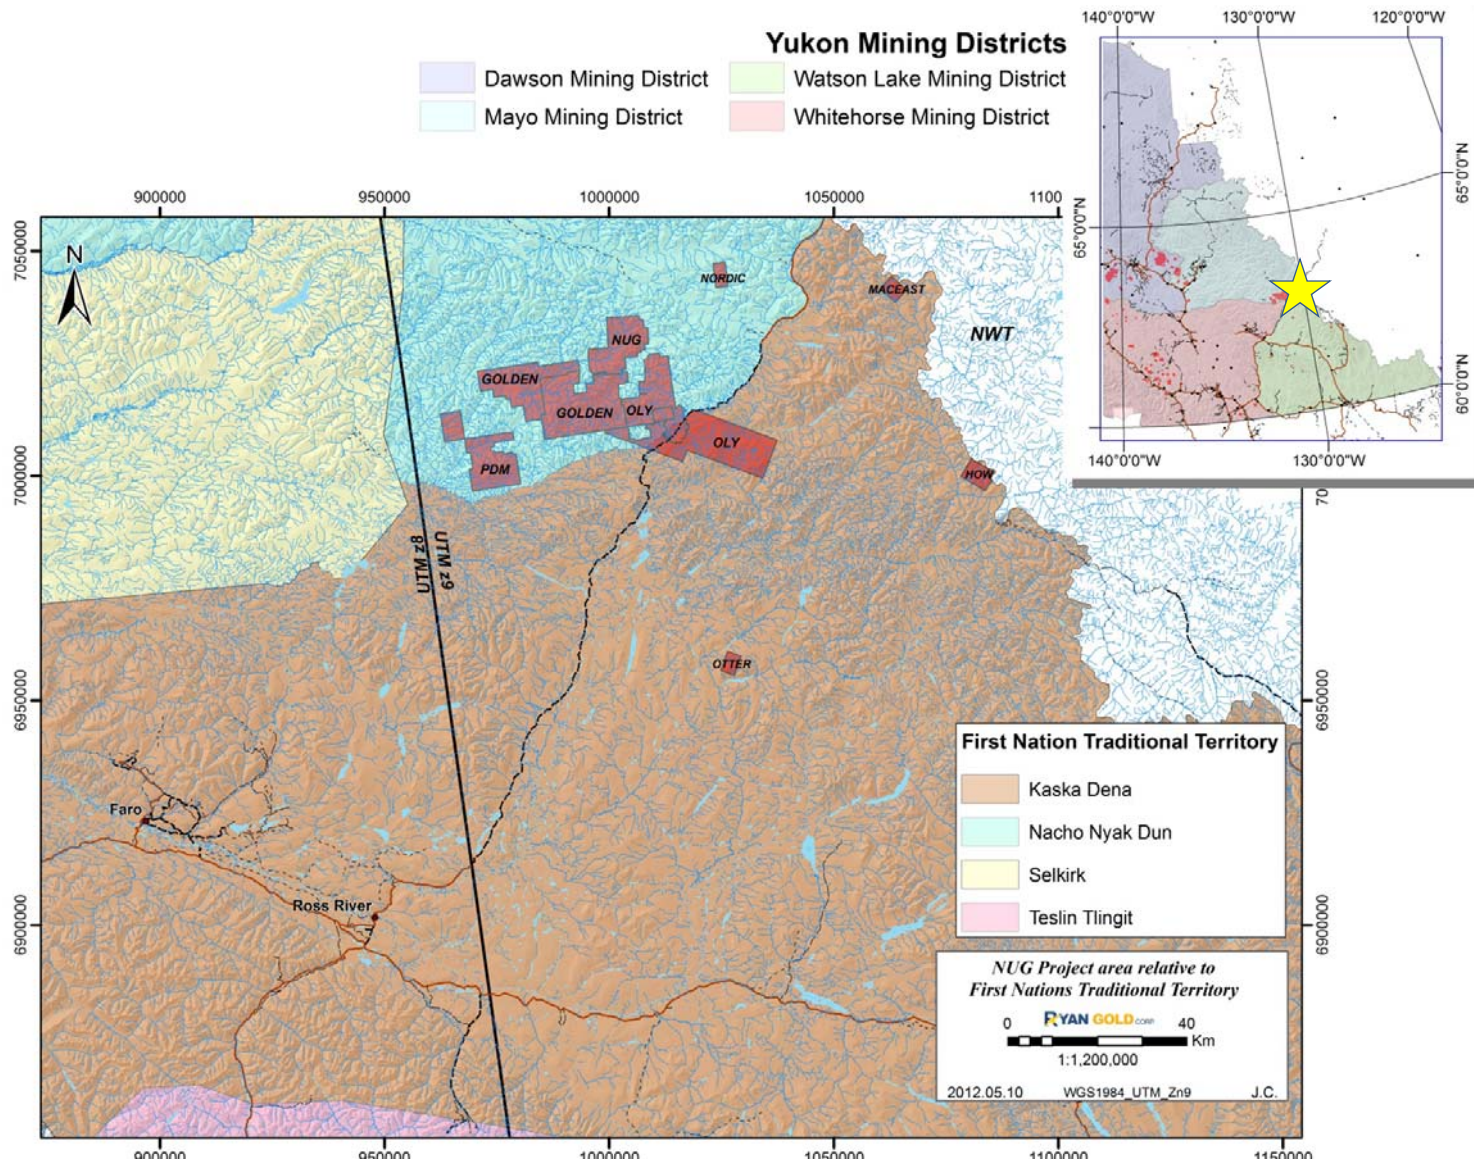

Figure 1: (a) Index map illustrating distribution of Yukon Mining districts. Yellow star indicates location of the map presented in (b). (b) Distribution of properties in the NUG project area relative to Faro, Ross River, and First Nations Traditional Territories.

The property comprises 543 contiguous claims spanning 110 km² extending over three 1:50k map sheets including NTS 105J/14, 105O/02&03, centered over longitude 63°N 02.391' and latitude 131°W 01.345'. Access to the property is by helicopter only. Claims are registered with the Mayo Mining Recorder - 315 claims to Shawn Ryan (100%), 228 claims to 45127 Yukon Inc. (30%) and RYG (70%).

2.3 Oly

The Oly prospect is the largest of the five properties discussed in this report, comprising 1873 contiguous claims spanning 374 km². The property abuts the eastern and southeastern boundaries of the Golden block, extending over five 1:50k map sheets including NTS 105J/10, 14-16; 105O/02, centered over longitude 62°N 55.639' and latitude 130°W 55.375'. Access to the extreme northern and southern reaches of property is by helicopter only, while the area straddling the North Canol Road may in places be accessible by foot and/or ATV. The prospect extends over three mining districts such that 756 claims situated northwest of the South MacMillan River are registered with the Mayo Mining recorder; 68 claims bound by the South MacMillan River on the northwest and the North Canol Road to the southeast are registered with the Whitehorse Mining recorder; and the remaining 1049 claims situated southeast of the North Canol Road are registered with the Watson Lake Mining recorder. Ownership of individual claims is varied - 592 claims to Shawn Ryan (100%), 1153 claims to RYG (100%) and 232 claims to 45127 Yukon Inc. (30%) and RYG (70%).

2.4 SMR

Completely encompassed by the Oly prospect on all four sides, the SMR comprises 60 contiguous claims spanning ~12 km². The prospect is situated within NTS 105J/15 centered over longitude 63°N 02.391' and latitude 131°W 01.345'. Claims are all registered with the Mayo Mining recorder and are under the ownership of 45127 Yukon Inc. (30%) and RYG (70%).

2.5 Nordic

Of the five prospect areas discussed in this report, the Nordic is the eastern most block located 18 km from the northeastern most corner of the Nug block. Alternatively, the 72 contiguous claims spanning ~15 km² lie 15 km northwest of the South MacMillan River centered over longitude 63°N 08.86' and latitude 130°W 33.071' in NTS 105O/02. Claims are registered with the Mayo Mining recorder and under the ownership of 45127 Yukon Inc. (30%) and RYG (70%).

3. EXPLORATION HISTORY

Based on the MINFILE database of the Yukon Geological Survey (YGS IDS, 2011), a plethora of mineral occurrences have been described in the region of the Nug project area (Figure 2). Also in the region are a number of claim blocks, some abutting RYG prospects (Figure 2) and owned by a variety of companies who staked their claims largely during the staking rush of 2010 some having expanded on their claim holdings in 2011 to encompass more ground. Mineralization styles that are of particular exploration interest in the area include vein/breccia hosted gold (e.g. RYG properties in NUG project area); porphyry/sheeted vein hosted gold (e.g. Harlen prospect of Alexco Exploration Canada Corp.); sediment hosted lead-zinc (e.g. Tom prospect at MacMillan Pass) and gold (e.g. Oro prospect of Cathro Resource Corp.); and lesser skarn related gold and/or tungsten mineralization.

3.1 Nug Prospect

The Nug prospect was first staked in August 1983 as the Nuke cl 1-8 (YA77305) by a joint venture between Canada Tungsten Mining Corporation Ltd and Canamax Resources who performed a small soil

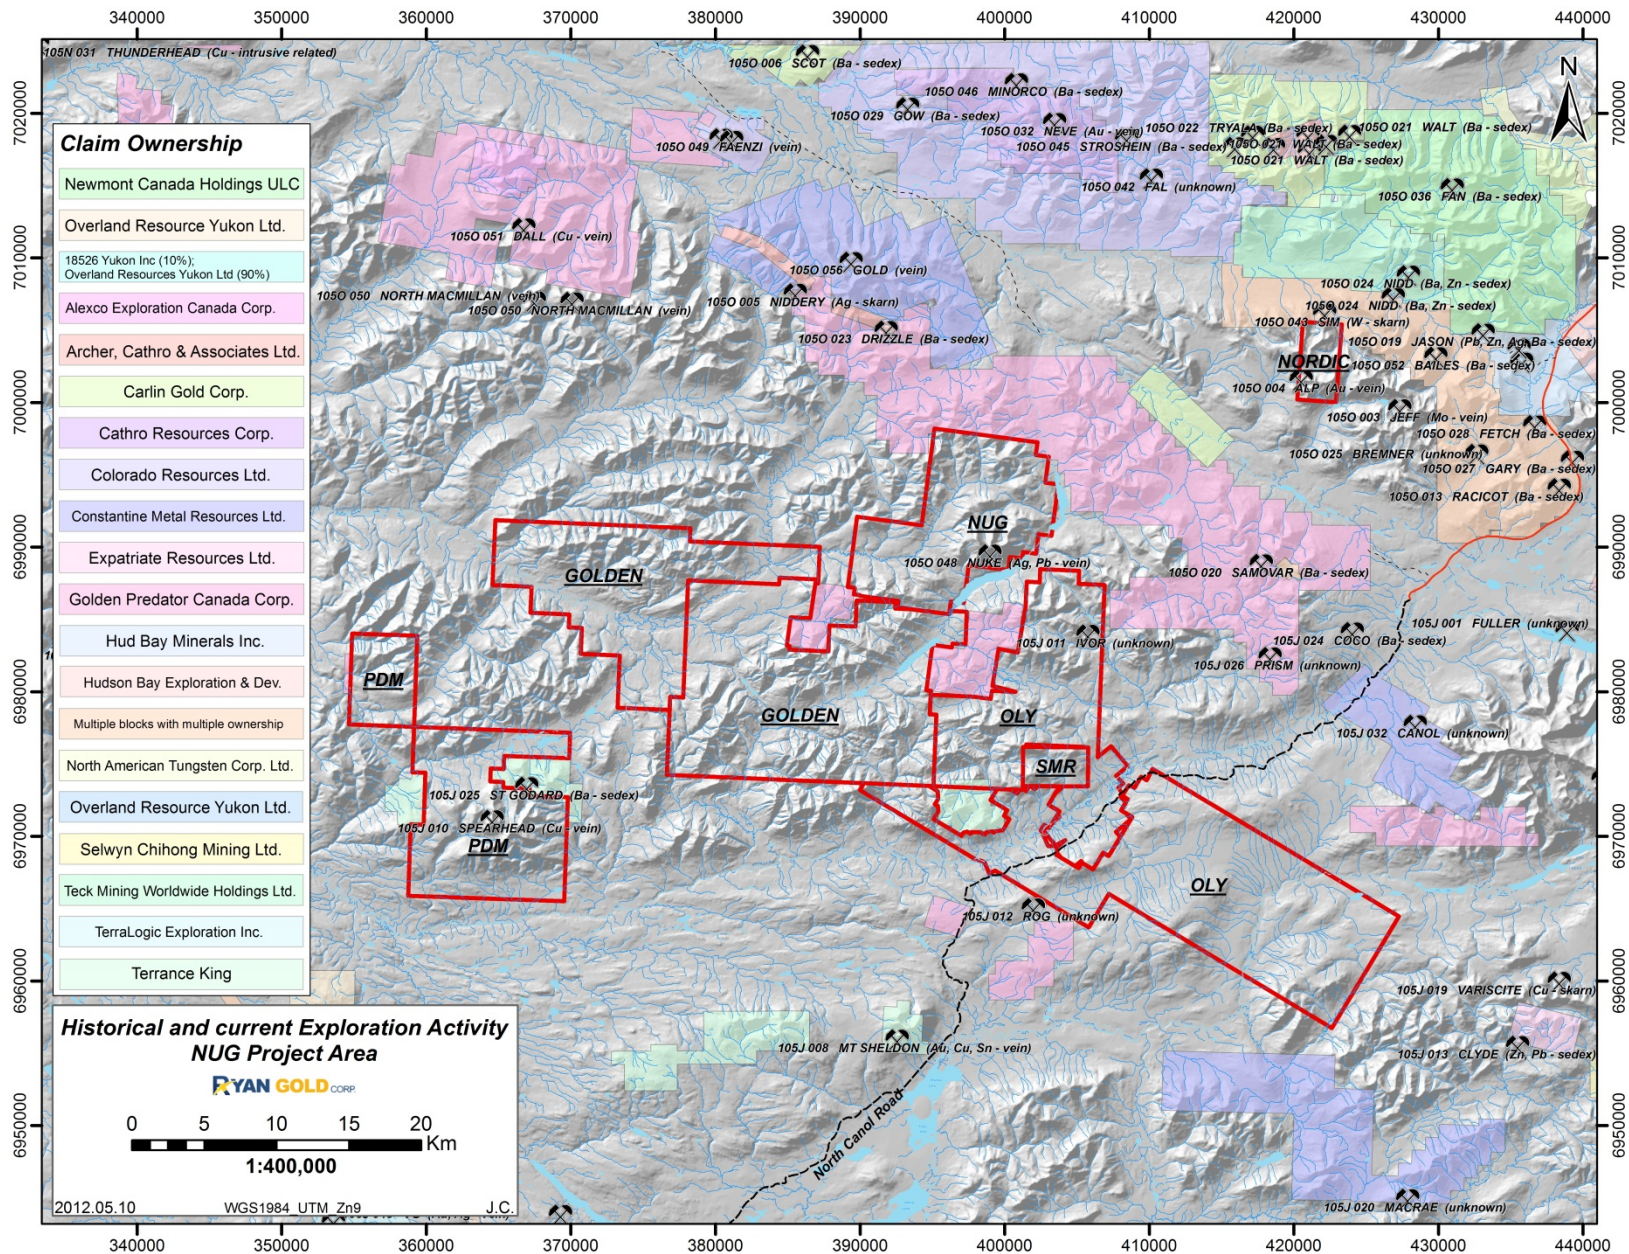

Figure 2: Distribution of RYG claim blocks (outlined in red) relative to active claims owned by a variety of companies/individuals in the NUG project area. # = MINFILE occurrences from the Yukon Geological Survey database (YGS IDS, 2011).

sampling and bedrock mapping and program later that year. Additional claims (Nuke cl 9-48 (YA77452)) were added to the joint venture group's holdings in early 1984, on which geological mapping, rock and soil sampling were carried out later that year. In spring 1996, Eagle Plains Resources Ltd and Miner River Resources Ltd restaked the ground as Nug cl 1-6 (YB65237) and carried out small prospecting and rock sampling programs in 1996 and 1997 demonstrating variable, though widespread gold mineralization associated with the Nug Stock (Kreft, 1998). Eagle Plains and Miner River amalgamated to form a single company in June 1999.

3.2 Oly Prospect

Originally staked in the vicinity of elevated zinc in stream-sediments, the Ivor cl 1-48 (Y14172) was staked in late 1967 by Atlas Exploration Ltd for the Hess Syndicate, a joint venture with Quebec Cartier Mining Company Ltd and Phillips Brothers (Canada) Ltd. Exploration of the Ivor prospect in 1968 included geological mapping and grid soil sampling.

In the fall of 1997, after Hemlo Gold Mines Inc obtained encouraging gold results in rock and soil samples collected during their 1996 exploration program, the Beethoven cl 1-96 (YB99893) was staked ~ 3 km to the southwest of the Ivor prospect by Viceroy Exploration (Canada) Inc. Viceroy Exploration continued geological mapping and geochemical (silt, soil and rock) sampling in 1998. In March 1999, NovaGold Resources Inc acquired 100% of Viceroy's interest and later in 1999, carried out geological mapping and geochemical (silt, soil and rock) sampling across the central and eastern portions of the property. Exploration carried out by NovaGold highlighted the occurrence of auriferous mineralization within argillically altered portions of bedrock in contact with a quartz-bioite monzoite stock in addition to arsenopyrite veining up to 300 metres outbound in adjacent country rock (Shultze, 2000).

4. REGIONAL GEOLOGY

Bedrock geology underlying the NUG project area forms part of Ancestral North America, and was most recently mapped by the Yukon Geological Survey in 1990 (Abbott, in press). Rock packages predominantly include late Proterozoic - early Paleozoic deep water siliciclastic and shallow water carbonate units that both formed and fringed the Selwyn basin. Rock units that define the basin and its shallow water counterparts developed on a passive margin that extended along the west coast of Ancient North America (Laurentia) in the early Paleozoic. During subsequent Mesozoic convergence, the passive margin with all of its cover sequence were deformed and intruded by Mesozoic plutonic rocks, and overlain by Quaternary (Qb) glacial till that was deposited during the McConnell Glaciation (26-18 ka).

Details of the bedrock geology underlying the NUG project area prospect and tectonic concepts surrounding their subsequent deformation and displacement are briefly discussed here. For more details, the reader is referred to the Overview of Yukon Geology and references therein, provided by the Yukon Geological Survey (Israel, S. et al. 2011) and available for download on the survey's website. Property scale geological maps and corresponding legend are presented in the following section.

The oldest bedrock exposed in the project area (i.e. PDM prospect which is not discussed in this report) includes Neoproterozoic – early Cambrian coarse-medium grained sandstone, calcareous sandstone and minor limestone of the Yusezyu Formation - the basal unit of the Hyland Group which defines the Selwyn Basin (Gordey and Anderson, 1993). In south and east Yukon proximal to the border with NWT, units of the Yusezyu Formation (unit PCH in Figure 3) grade upward at the basin to platform edge, into the time equivalent lower Cambrian Gull Lake Formation (unit ICG). Transgression of the sea onto the passive margin in the late Cambrian – Ordovician resulted in deposition of finely laminated calcareous siltstones of the Rabbitkettle Formation (unit COR). Following this transgression, in late Ordovician through early Devonian, the Selwyn Basin was dominated by sedimentation of the Road River Group (unit ODR) - a thick package of black siliceous mudstone, chert and siltstone (Cecile and Norford, 1991).

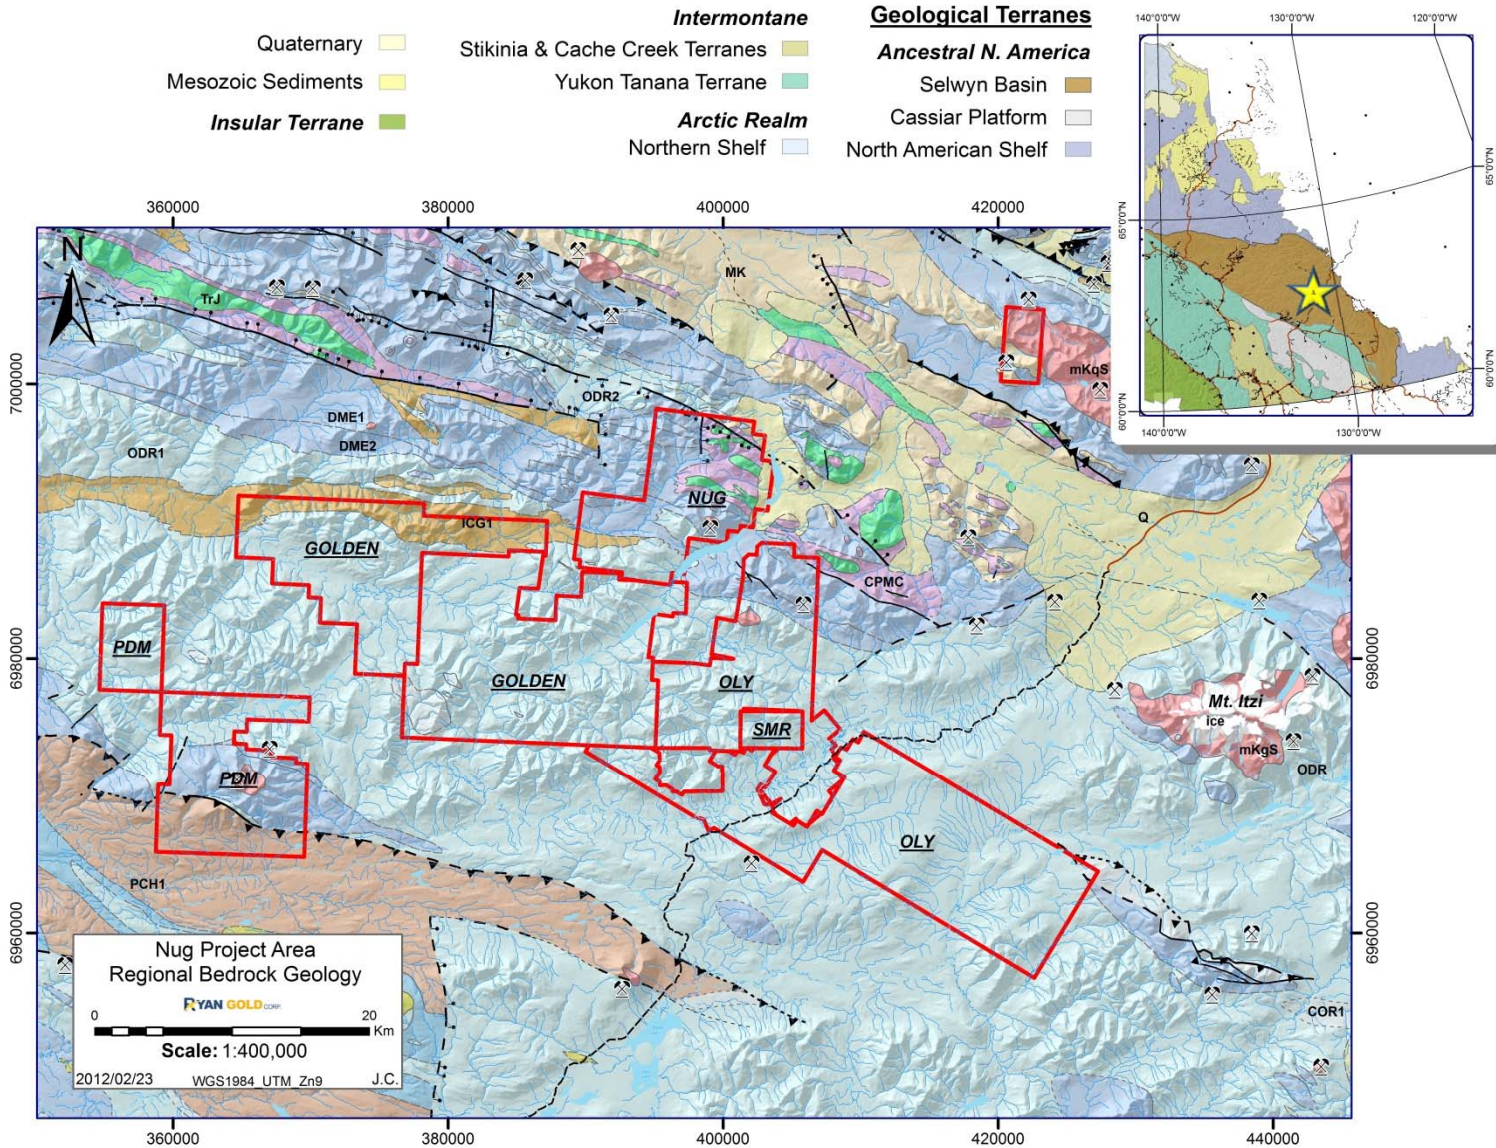

Figure 3: (a) Index map illustrating distribution of geological terranes in that have been identified in the territory. Yellow star indicates location of the map presented in (b). (b) Distribution of properties in the NUG project area with respect to the underlying geology of Gordey and Makepeace (2001). Unit abbreviations that are relevant to the Golden, Nug, Oly, SMR and Nordic prospects will be discussed in this report. For details and all other unit descriptions not presented here, the reader is directed to Gordey and Makepeace (2001). # = MINFILE occurrences from the Yukon Geological Survey database (YGS IDS, 2011).

As sedimentation ensued, percolation of metal-rich brines through seafloor springs onto the basin floor likely led to the precipitation and preservation of stratiform lead-zinc deposits within the Selwyn Basin (e.g. Howard's Pass and Anvil Range).

During the mid-Devonian (~390 Ma) a rise in sea level forced the west Laurentian coastline to migrate inland (eastward) resulting in the submergence of the Selwyn Basin and deposition of black shale and siltstone beds with lenses of sandstone in eastern and northern Yukon (Gordey, 1991). Uplift and erosion in the region of central Yukon at that time resulted in the production and deposition of the Earn Group (unit DME) comprising thick bedded chert-pebble conglomerate, that funneled eastward within submarine channels in the direction of Macmillan Pass. By the Mississippian epoch, river deltas flooded the shallow marine environment depositing the sandy Keno Hill quartzite (unit MK). From Pennsylvanian - early Jurassic (318-178 Ma) thin-bedded carbonates, calcareous and siliceous sandstones interbedded with green, moderately cherty shales accumulated (unit CPMC) in a platform environment that developed in eastern and northern Yukon, and subsequently overlain with brown sandy shale of the Jones Lake formation.

With convergence and accretion of continental and oceanic terranes to the western margin of North America beginning in the mid-Jurassic has resulted in telescoping of the units described above to the east, towards NWT. Generation and intrusion of Cretaceous plutonic material into rocks with Ancient North American affinity is associated with this convergence which continues through to today.

4.1 Regional Geophysics

At the onset of the 2011 field season, regional airborne geophysical data for the area was made available through the Geological Survey of Canada and presented in Figure 4 (Lowe et al. 2003). The region, which is predominantly underlain by siliciclastic rocks that overly the sediments of the Selwyn Basin proper, is characterized by moderate aeromagnetic responses (i.e. orange tones) interrupted by areas dominated by aeromagnetic highs (positive responses, i.e. white – pink tones) rimmed with low responses ± low response centers (i.e. blue tones) such that they appear as 'donuts'. Based on the work of Hart (2007), such donut responses are characteristic of Cretaceous, felsic, ilmenite-series plutons and more specifically are associated with reduced intrusion related gold systems in which pyrrhotite is the dominant sulphide. The distinct signature may be used to identify a system that is exposed at surface (i.e. PDM, Nug, Oly, Nordic prospects) or one that may be buried at depth (i.e. Golden, SMR prospects).

5. 2011 EXPLORATION PROGRAM

The 2011 exploration program for the NUG project area was three-fold and included bedrock mapping and sampling, regional soil and geophysical surveys. Certificates of work are presented in Appendix B.

As mentioned earlier, the Nug project encompasses an area that includes nine prospects (Figure 1), five of which are discussed here. The Golden, Nug, Oly, SMR and Nordic prospects were mapped by a three - four person team July 30th – August 26th, 2011 - the main objective being to conduct reconnaissance level bedrock mapping and sampling of areas with existing (2007/2008) soil data to correlate where possible, geochemical anomalies in soils with features observed in the bedrock (i.e. lithology; contact metamorphism; veining/fracturing). Upon completion of the primary objective for each prospect, mapping and sampling was extended to ridges and spurs along which soil samples were/planned to be collected in summer 2011 as well as areas characterized by aeromagnetic high signatures. Results of the mapping are presented in Appendix C and summarized below.

Reconnaissance bedrock mapping of the Nug project area was conducted concomitantly with regional ridge and spur soil survey at 50 m spacing between sample sites (Figure 5). The soil survey was overseen by Ground Truth Exploration Inc. (GT), with two 10 person field crews. Beginning in late July through to September 2011, a total of 17121 soils were collected in kraft bags at 50 m intervals (see Table 1 for

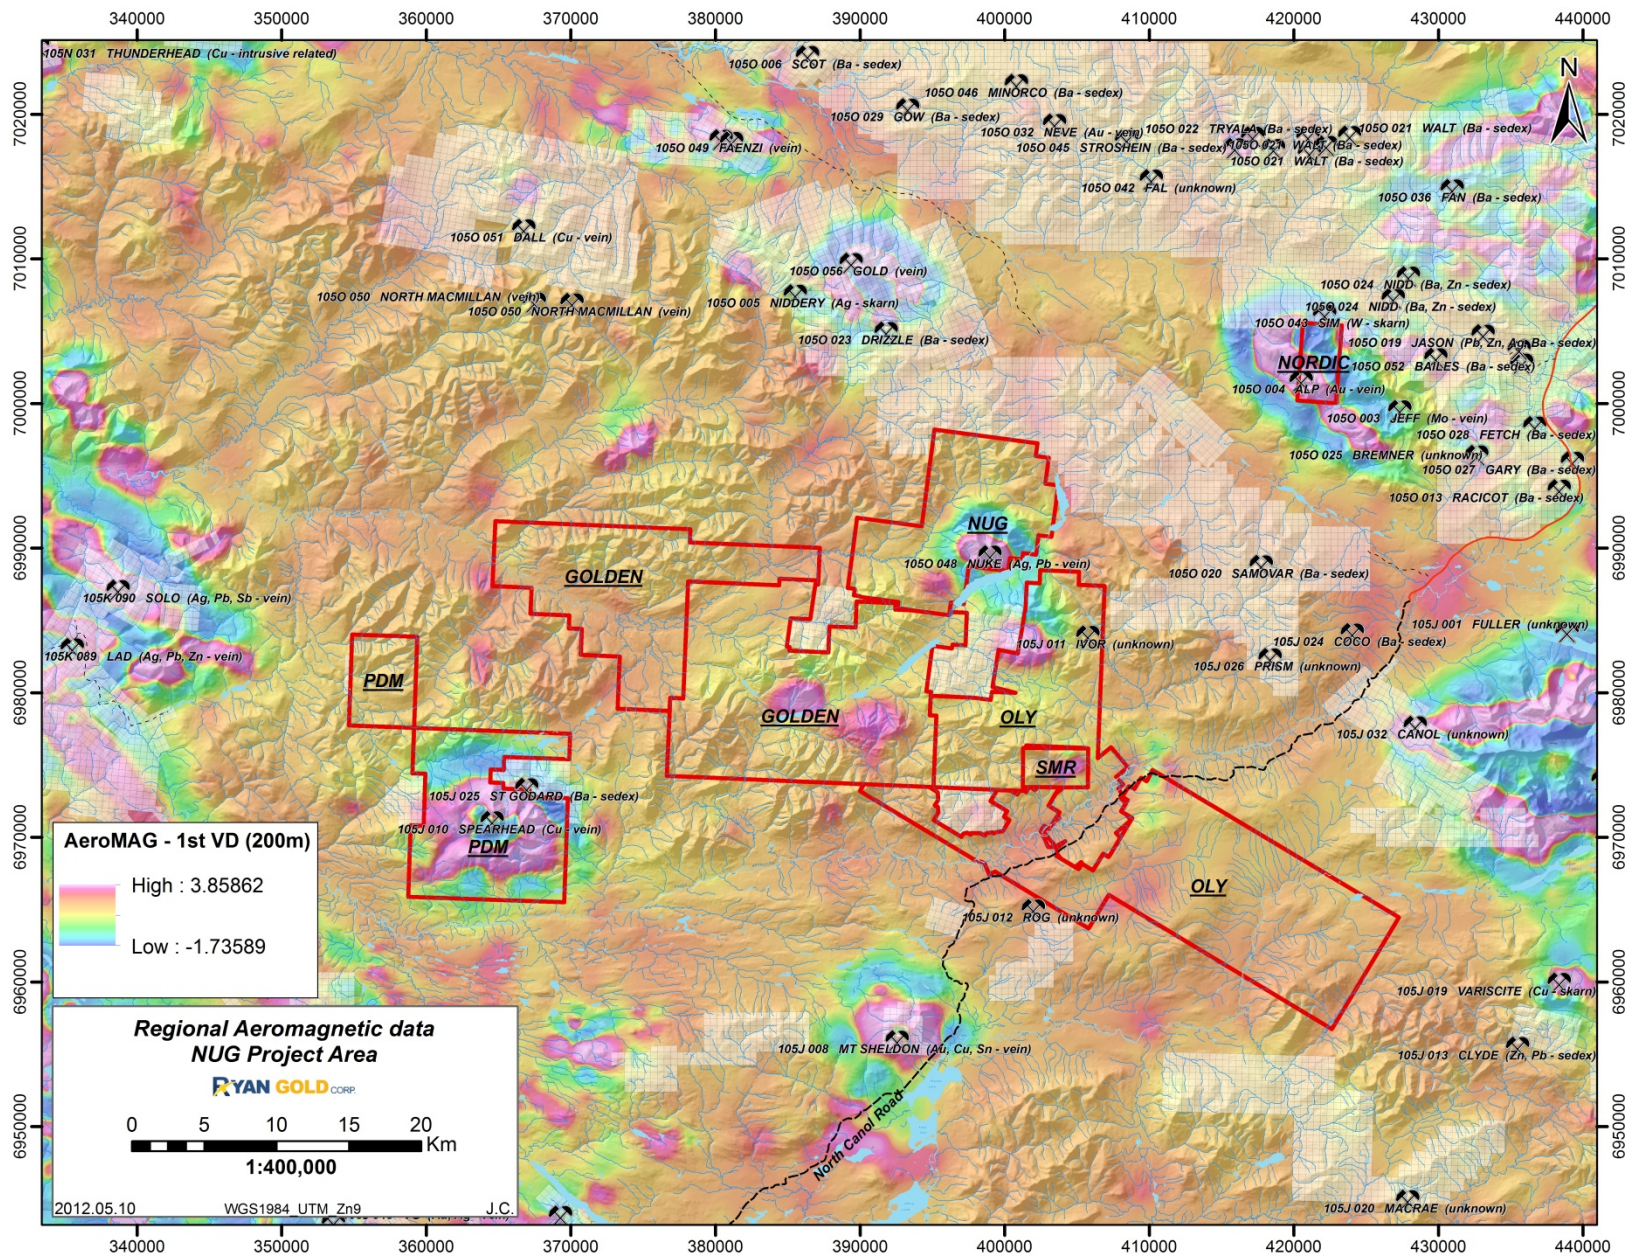

Figure 4: Distribution of RYG claim blocks (outlined in red) relative to claims owned by other companies (gridded polygons) in the NUG project area, with respect to the regional aeromagnetic data (Lowe et al. 2003). # = MINFILE occurrences from the Yukon Geological Survey database (YGS IDS, 2011).

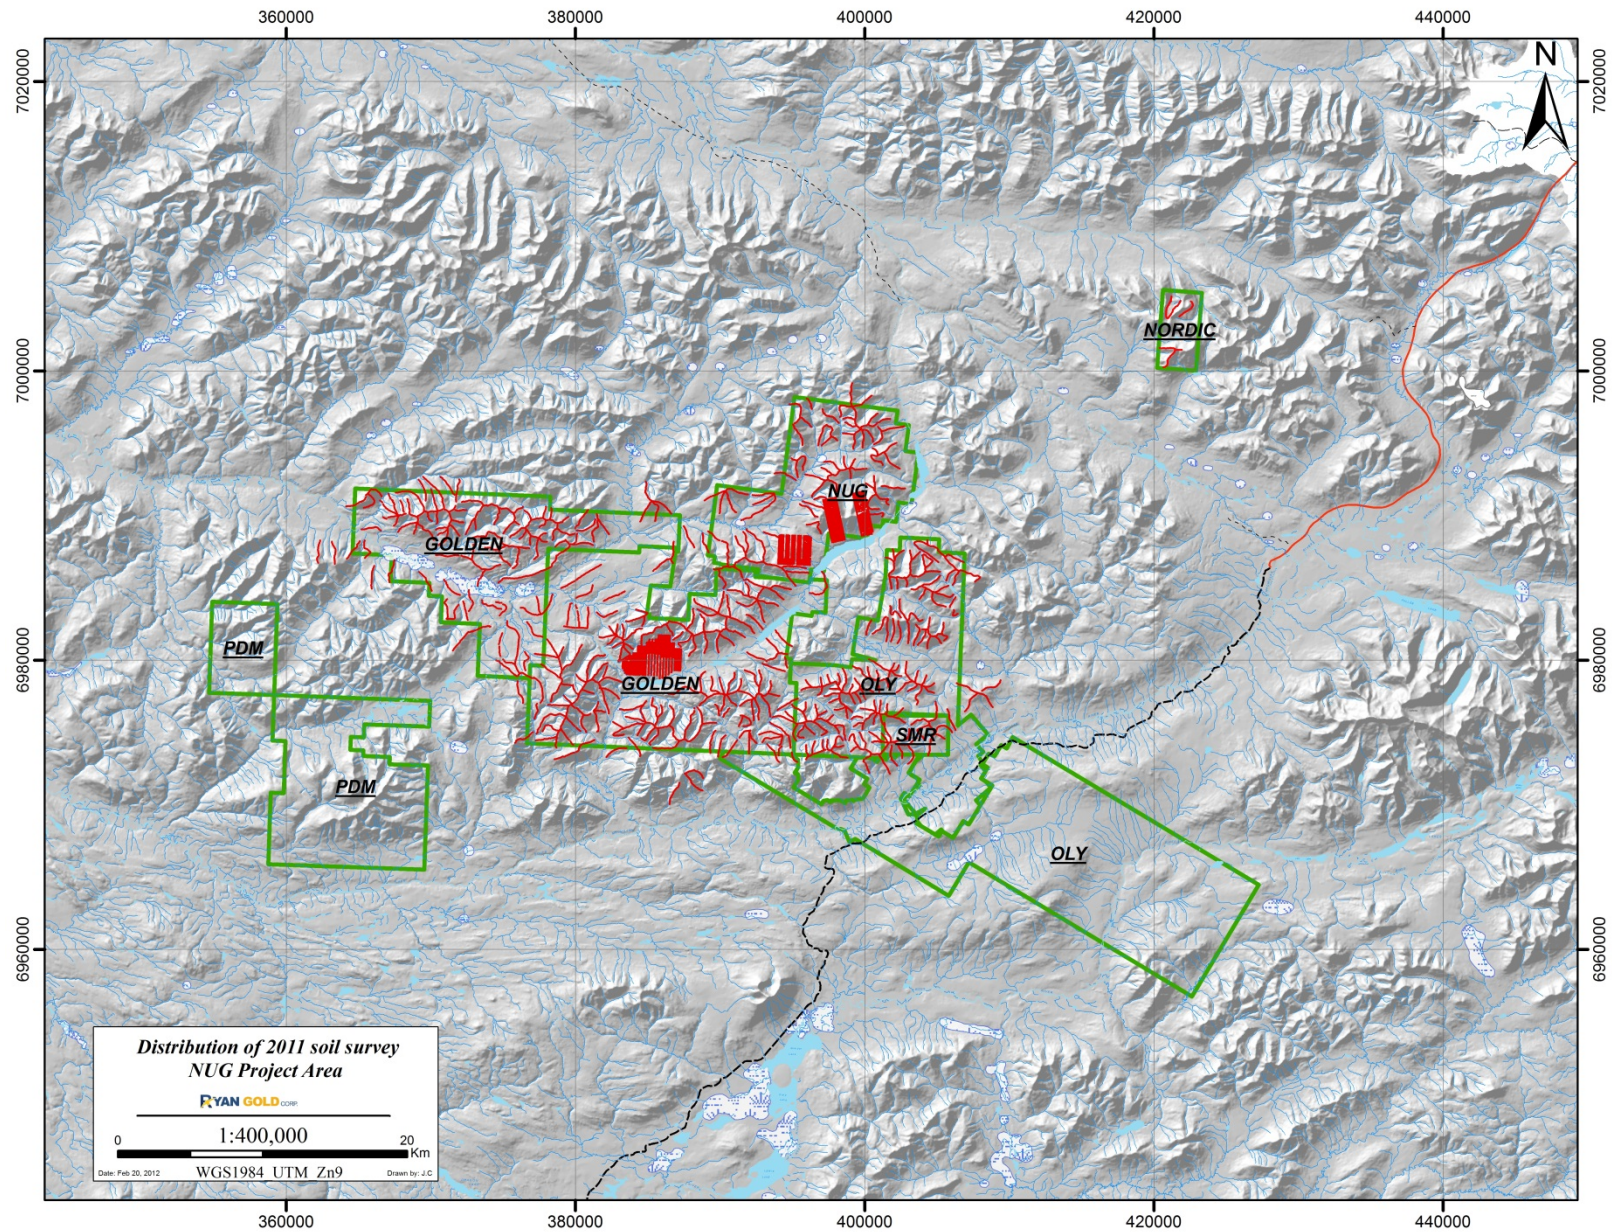

Figure 5: Distribution of the regional ridge and spur soil survey conducted by Ground Truth Exploration Inc. in late summer 2011. Prospect boundaries are highlighted in green while soil survey lines are highlighted in red.

details). To ensure that samples were taken from the ‘C’ soil horizon, soils were collected from pits drilled with hand manipulated soil augers to depths of ~ 40-70 cm. Photographs and details of each sample location are recorded in GT’s company database. For highlights of Au in soil results, the reader is referred to geological maps presented in Appendix E and the summary of results discussed below.

Table 1: Statistics for NUG project area: Golden, Nug, Oly/SMR and Nordic prospects.

Prospect	Geological Observations	Samples	
		Soil	Rock
Golden	195	9434	35
Nug	94	3968	44
Oly/SMR	111	3560	19
Nordic	79	159	12

Soil samples were shipped and processed by ACME at their lab facilities in Whitehorse, Yukon. Samples were processed and analyzed as outlined by the 1DX2 analytical package, permitting analyses of 36 elements by ICP-MS using 15 g of each sample. Rock samples collected during the program were also shipped and processed by ACME in Whitehorse. Whole rock samples were processed and analyzed as outlined by the 1DX analytical package, permitting analyses of 36 elements by ICP-MS and Au by fire assay (Exploration Package 2Geo – Group 1DX (Aqua Regia/ICP-MS 0.5g) + Group 3B (fire geochem Au)). Geochemical

Last but not least, an airborne geophysical survey was flown over the NUG project area by Precision GeoSurveys Inc. The survey which was carried out from August 16, 2011 to September 25, 2011, saw the acquisition of 10,214 line kilometers of high resolution magnetic and radiometric data over ground that includes the Golden, Nug and Oly/SMR prospects (Figure 6). The survey lines were flown at 100 meter spacing with tie lines flown at 1 km spacing. For details of the survey, the reader is referred to Precision GeoSurvey’s project summary report in Appendix G.

6. 2011 FIELD PROGRAM – SUMMARY OF RESULTS

A total of 6 days was spent mapping the Golden prospect; 5 days each on the Nug and Oly/SMR prospects and one day on the Nordic. The following is a summary of field observations made by the bedrock mapping crew and how they might relate to soil results of the 2011 survey. Geological maps for each prospect are available in Appendix C, corresponding field photos in Appendix D and Au in soil maps with respect to the underlying bedrock geology in Appendix E. Geochemical results of rocks and soils are presented in Appendix F.

6.1 Prospect Geology

Geology underlying the five prospects is similar, with the exception of the Golden prospect for which details are provided below. The main lithologies observed in the area (i.e. Nug, Oly/SMR) largely belong to the Ordovician – Devonian Road River Group (ODR) and includes carbonaceous shale (\pm diagenetic pyrite) interbedded with grey – turquoise chert and siltstone. Overlying this unit are thickly bedded sandstones and chert pebble conglomerates interbedded with silver-grey weather shales of varying carbon content \pm diagenetic pyrite, of the Devono-Mississippian Earn Group (DME). In the Nordic, and at the very northern tip of the Nug prospect, metasediments of DME give way to thick bedded quartz arenites of the Mississippian Keno Hill Quartzite (MK). Together, all three metasedimentary units have been tightly deformed into upright, north-northeast verging folds that have been overprinted by later deformation in the brittle regime. Broadly speaking, late brittle faulting and development of a regular spaced fracture cleavage is most prevalent in proximity to granodiorite bodies that daylight in the Nug, Oly and Nordic prospects (Figure 7) over areas characterized by positive aeromagnetic signatures (Figure 6).

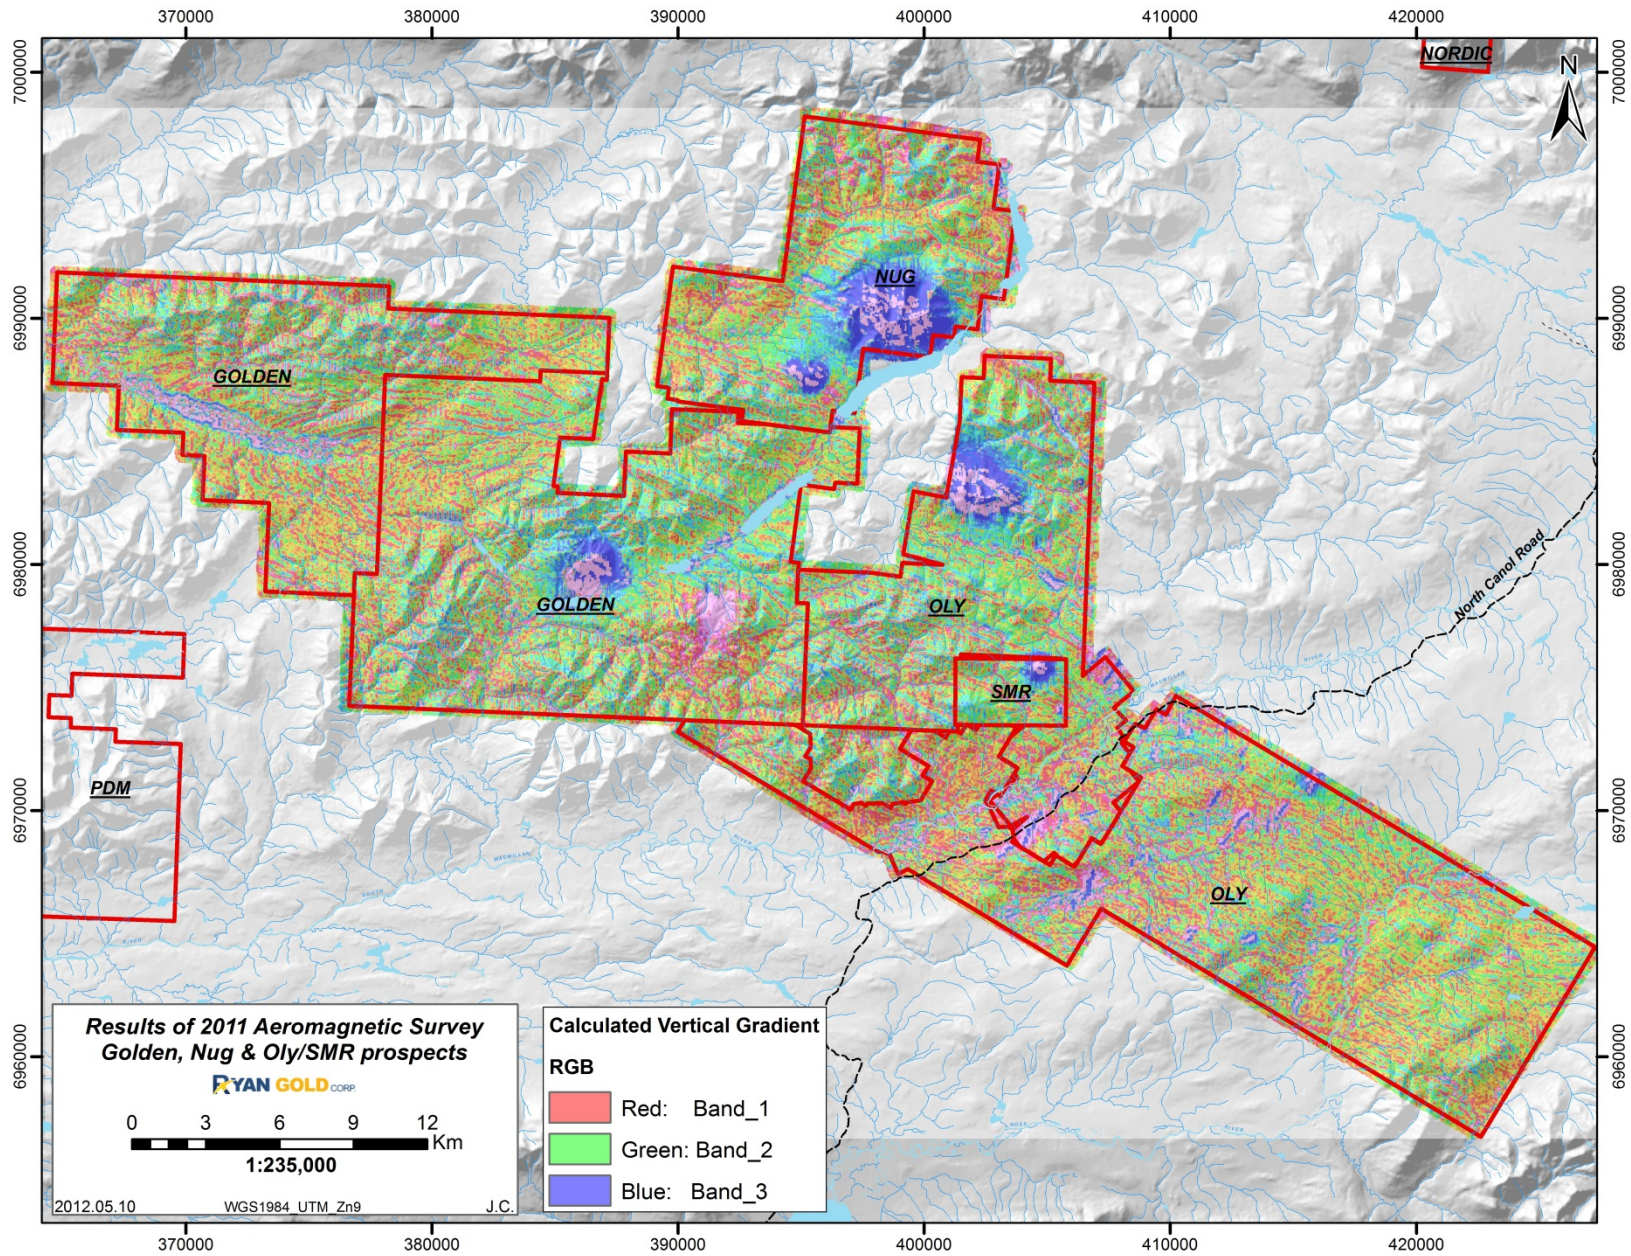

Figure 6: Distribution of RYG claim blocks (outlined in red) relative to the high resolution aeromagnetic survey that was flown at the end of the summer, 2011 by Precision GeoSurveys Inc. The reader is referred to Appendix G for radiometric survey and the company's summary of results.

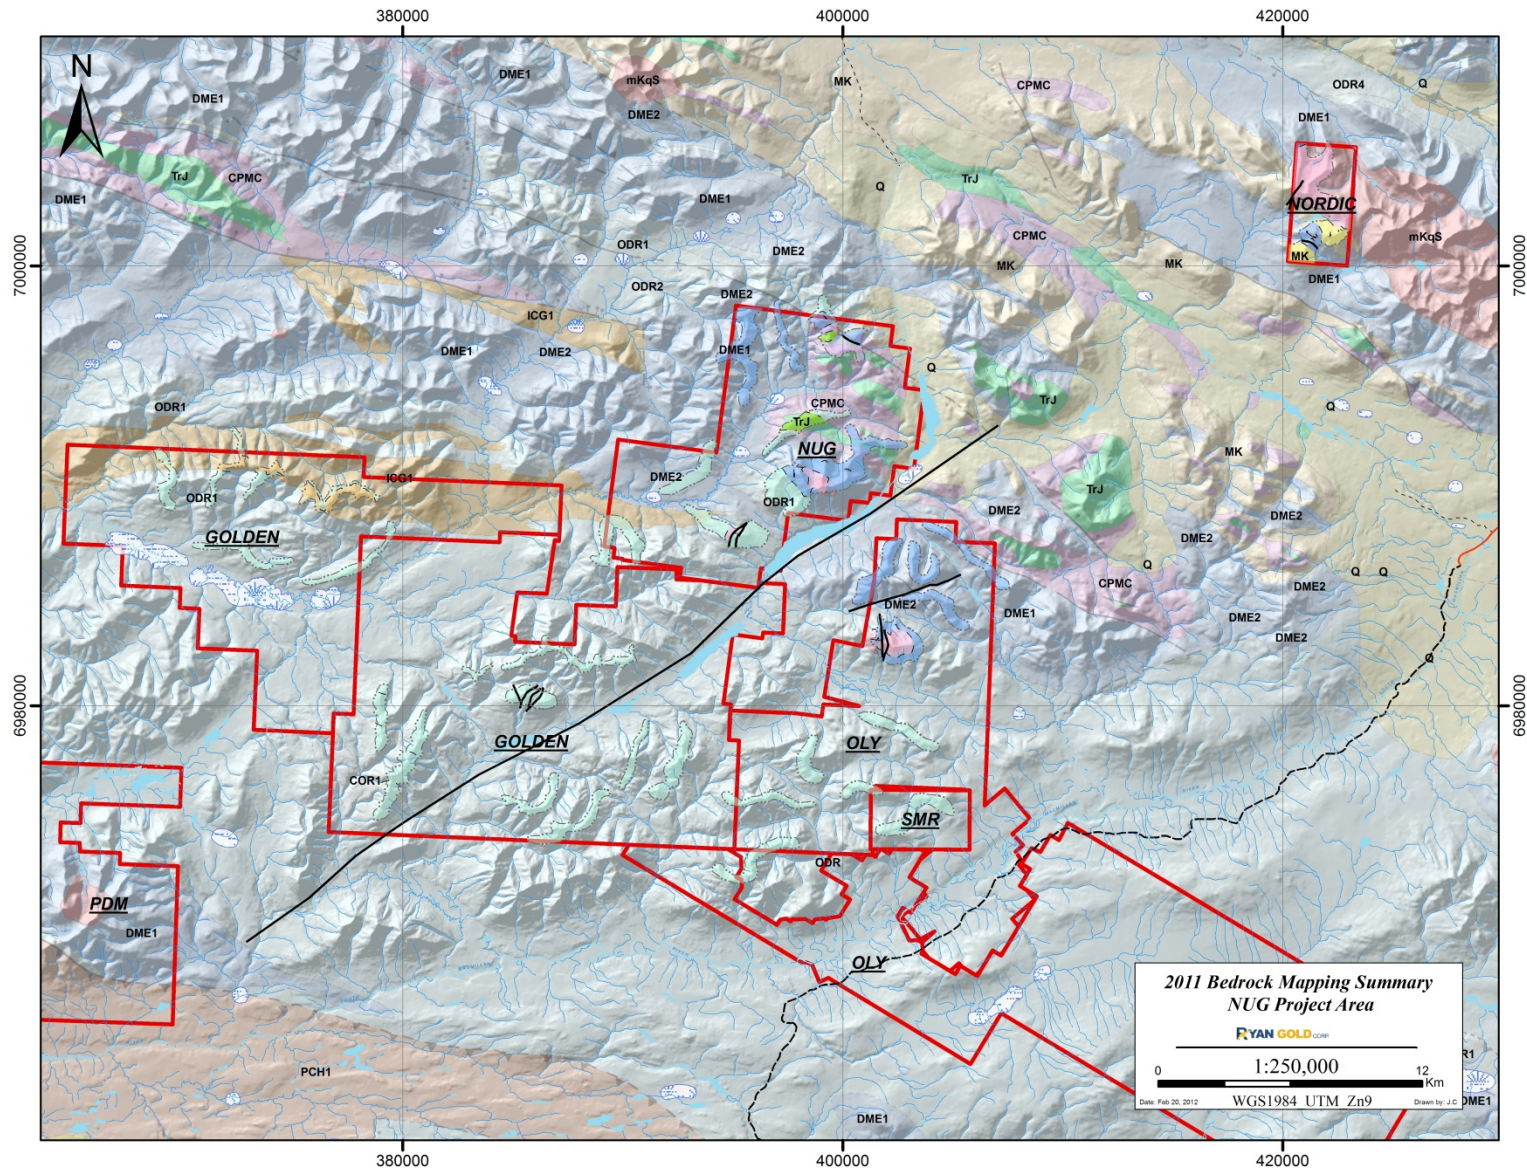

Figure 7: Summary of 2011 bedrock mapping results for the NUG project area (Golden, Nug, Oly/SMR and Nordic) superimposed over regional bedrock map of Gordey and Makepeace (2001). Polygons drawn based on 2011 observations are outlined with dotted grey lines. For detailed geology maps of individual prospect refer to Appendix C.

Without concrete geochronological data, plutonic bodies are presumed to be mid-Cretaceous in age. Metasediments immediately adjacent to these plutonic bodies exposed at surface are affiliated with the Devonian-Mississippian Earn Group (e.g. Nug and Oly) or Mississippian Keno Hill Quartzite (e.g. Nordic) and characterized by a bright orange-red weathering colour that is typical of hornfelsed sediments as is the presence of very fine, interconnected networks of irregularly shaped and spaced fractures. Sulphide minerals most commonly observed within lithologies forming the hornfels aureole include pyrite \pm arsenopyrite \pm pyrrhotite (in order of decreasing abundance). Also observed in such settings are foliation and fracture parallel sills of pyrite \pm pyrrhotite bearing plutonic material and arsenian pyrite bearing quartz-carbonate veins with which scorodite alteration is typical. Of the bedrock samples that were collected for geochemical analysis, those collected from scorodite altered, arsenopyrite bearing quartz-carbonate veins regularly yielded the highest Au in rock values (e.g. Nug prospect - 1200 – 4000 ppb Au; Oly – 630 ppb Au; Nordic – 3700 ppb Au).

Although positive anomalies in the aeromagnetic data for the Golden and SMR prospects do exist (Figure 6), plutonic bodies were not observed at surface on either property. The SMR is underlain by carbonaceous shales and associated cherts of the Road River Group, similar to the Oly block, though alteration and/or mineralization was not noted in the field therefore, the prospect will not be discussed further here.

In contrast the Golden prospect, though largely underlain by lithologies characteristic of the Road River Group, preserve outcrops of lower Cambrian siltstones of the Gull Lake Group in the north part of the prospect and calcareous siltstones of the Cambrian – Ordovician Rabbitkettle Formation in the south (Figure 7 and Appendix C). In the vicinity of the aeromagnetic anomalies, the underlying bedrock is that of the Road River Group. Evidence for alteration and/or mineralization in outcrop is minimal and weathering colours typical of the hornfels aureoles as seen in the prospects to the east, was absent. Pyrite \pm arsenopyrite are found in the metasediments when sulphides are present. Perhaps the most interesting texture noted in the bedrock immediately overlying the aeromagnetic high, most particularly in the grey-turquoise cherts, is the preservation of a network of irregularly spaced and shaped hairline fractures that may be indicative of a pluton at depth. Rock samples collected from outcrops characterized by the presence of the hairline fracture network did not yield impressive results, the highest value (\sim 24 ppb Au) coming from a sample that was collected to the north east of where a buried intrusion is presumed to be.

6.2 Regional Soil Survey

Due to the abundance of soil data, only Au in soil results are presented on the bedrock maps for each property in Appendix E. In summary, with the exception of the SMR block, elevated gold values (i.e. > 200 ppb) on all properties are consistently obtained from soil samples collected in the area of positive aeromagnetic responses above known plutonic bodies. The highest Au in soil value (> 5000 ppb) was obtained from a sample collected above the sizable granodioritic pluton that is exposed in the northern part of the Nug prospect.

7. CONCLUSIONS & RECOMMENDATIONS

In the NUG project area, deformed metasediments in the vicinity of positive response aeromagnetic anomalies are commonly characterized by the development of regular spaced fractures and networks of irregularly spaced hairline fractures that are most easily recognized in chert lithologies. Where they are exposed at surface, positive aeromagnetic anomalies have been correlated with plutonic bodies suggesting in areas where exposure is absent, aeromagnetic signatures may highlight the location of plutonic bodies at depth.

To date, metasediments encompassing the intrusive bodies that have been mapped at surface are part of the Devonian-Mississippian Earn Group (Nug and Oly prospects) or the Mississippian Keno Hill Quartzite

(Nordic prospect) and are characterized by orange-red weathering colours typical of a hornfels aureole, and the presence of pyrite \pm arsenopyrite \pm pyrrhotite. Within the hornfels metasediments, and with proximity to the large intrusive body, foliation and fracture parallel sills of pyrite \pm pyrrhotite bearing plutonic material and arsenian pyrite bearing quartz-carbonate veins is typical. Elevated Au values in both soil and rock samples are almost always obtained in samples of quartz-carbonate vein material, and to a lesser extent sulphide bearing plutonic sills. The absence of elevated values in metasedimentary samples collected above aeromagnetic anomalies where plutonic material is not exposed at surface may be a consequence of being too far away from the metamorphic aureole which may be buried at depth along with the intrusive body. In other words, the 'juicy' hornfels aureole was not sampled.

Based on the data presented in this report, and assuming the Ryan Gold Corp. intends to retain all of its NUG project area prospects for further exploration work, recommendations for future work includes:

- i) Detailed, follow-up property scale mapping beginning in areas where anomalous Au in soils (2011) values were obtained, expanding outward from anomalous areas targeting gulleys and valleys in an effort to fill-in the existing ridge and spur bedrock data.
- ii) In conducting follow-up property scale mapping, try to determine whether or not elevated Au in rock samples are restricted to small sills and quartz-carbonate veins that intrude encompassing metasediments immediately proximal to the larger intrusive body.
- iii) Establish whether elevated Au values are specific to a certain sedimentary package (i.e. Earn Group and Keno Hill Quartzite vs. Road River Group)
- iv) Consider trenching or possibly drilling in the vicinity of the positive aeromagnetic responses present in the Golden prospect, to establish whether or not mineralization may be present at depth.

8. STATEMENT OF QUALIFICATIONS

I, Joyia Chakungal, of residential address in Mendenhall Subdivision, Yukon Territory do hereby certify that:

1. I am a graduate of the University of Western Ontario (1999) and Dalhousie University (2002 & 2007) with a Bachelor of Science, Master of Science and PhD in Earth Sciences.
2. Since 2006, upon completion of the PhD degree, I have practiced my profession as a full-time geologist.
3. I was hired by the Ryan Gold Corp. in the spring of 2011, and have actively engaged in mineral exploration in Yukon since that time.
4. I personally supervised the bedrock mapping and rock sampling program carried out on the property discussed in this report.
5. I have completed this report on behalf of my employer, the Ryan Gold Corp.

Joyia Chakungal, PhD

APPENDIX B
NUG PROJECT AREA:

CERTIFICATES OF WORK
GOLDEN, NUG, OLY/SMR & NORDIC PROSPECTS

May 2012

J. Chakungal
Project Geologist

I, Robin Sudo
Land Manager/Ryan Gold Corp.
 of #600 - 666 Burrard St., Vancouver, B.C. V6C 2X8
 Phone 250-421-0939
 make oath and say that:

Office Date Stamp

1. I am the owner, or agent of the owner, of the mineral claim(s) to which reference is made herein.
2. I have done, or caused to be done, work, on the following mineral claim(s): (Here list claims on which work was actually done by number and name)

See Schedule A attached

 NUG Group 1 Claims

situated at Gold River Claim sheet No. 105O03+04 + 105J13+14

in the Mayo Mining District, to the value of at least \$193,400 dollars,

since the 23rd day of July to the 26th day of September 2011,

to represent the following mineral claims under the authority of Grouping Certificate No. _____
 (Here list claims to be renewed in numerical order, by grant number and claim name, showing renewal period requested).

See attached Schedule B

3. The following is a detailed statement of such work: (Set out full particulars of the work done indicating dates work commenced and ended in the twelve months in which such work is required to be done as shown by Section 56).

See attached Schedule C - Airbore Geophysics/Schedule C - Mapping & Rock Sampling/Schedule C - Soil Sampling

TOTAL EXPENDITURES = \$195,280.43

***** Report to Follow *****

Sworn before me at Cranbrook BC this 14 day of April 2012
Donald Paolini
 Barrister & Solicitor
 Notary Public 2nd Floor, 6 - 10th Ave. S. Owner or Authorized Agent

NUG PROJECT AREA:

BEDROCK MAPPING RESULTS
GOLDEN, NUG, OLY/SMR & NORDIC PROSPECTS

May 2012

J. Chakungal
Project Geologist

An index map of the NUG project area on which 2011 bedrock mapping results have been superimposed over the regional bedrock map of Gordey and Makepeace (2001). Refer to pages 15 and 16 for the lithological and symbol legends.

Geological Legend (for Golden, Nug, Oly/SMR and Nordic prospects)

Mid-Cretaceous

mKqS	mKqS	Selwyn Suite: resistant, blocky, fine to coarse grained equigranular to porphyritic (K-feldspar) biotite quartz monzonite and granodiorite and minor quartz diorite; porphyritic biotite hornblende granite with large smoky grey quartz phenocrysts and locally K-feldspar phenocrysts.
mKgS	mKgS	

Triassic

TrJ	TrJ	Jones Lake: brown weathering, fine-grained calcareous grained sandstone, argillite and shale; ripple cross-laminated and bioturbated; massive, light grey weathering, fine crystalline, dark grey limestone; minor orange weathering platy limestone.
-----	-----	---

Paleozoic (lower Cambrian - Permian)

CPMC	CPMC	Mount Christie: green-grey weather, bioturbated cherty shales; thin to medium bedded, light grey-green to black chert; black siliceous slate and siltstone; minor quartzite, limestone and dolostone; locally abundant, large grey barite nodules.
MK	MK	Keno Hill: massive to thick bedded quartz arenite; thin to medium bedded quartz arenite interbedded with black shale or carbonaceous phyllite; local scour surfaces and shale intraclasts; locally foliated and lineated.
DME1	DME1 DME1b	Earn: thinly bedded, laminated slate interbedded with fine- to medium-grained chert, quartz arenite and wacke; thick members of chert pebble conglomerate; black siliceous siltstone; nodular and bedded barite; rare limestone. 1b) carbonaceous shales.
ODR	ODR	Road River Group: graptolitic carbonaceous shale interbedded with carbonaceous - grey chert (1) overlain by green-orange, bioturbated argillite and dolomitic siltstone (2).
COR	COR	Rabbit Kettle: basinal limestone (1) that may locally include older and younger basinal pelitic strata undivided (2)
ICG1	ICG1	Gull Lake: shale, siltstone and mudstone, locally bioturbated, with minor quartz sandstone; rare green-grey chert; local basal limestone and limestone conglomerate; phyllite to quartz-muscovite-biotite schist (garnet sillimanite staurolite andalusite).

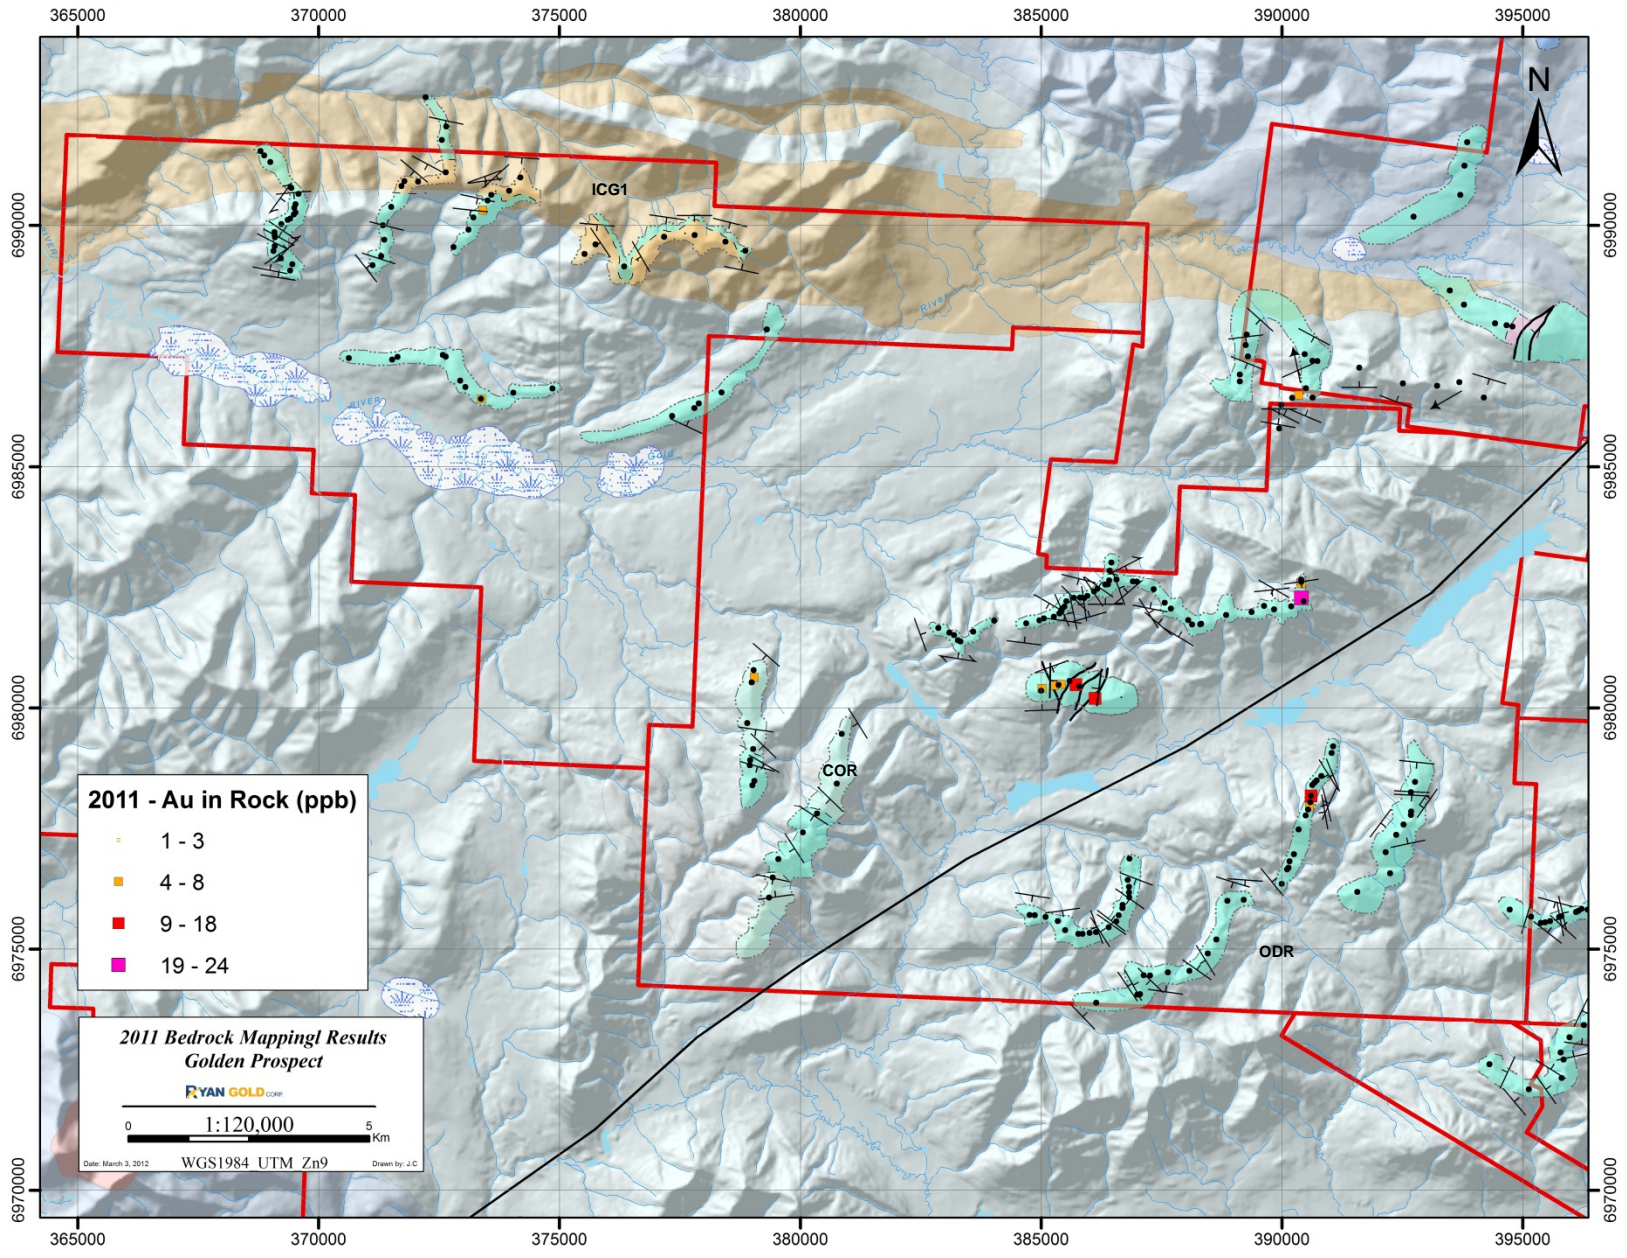

Late Proterozoic - Early Paleozoic

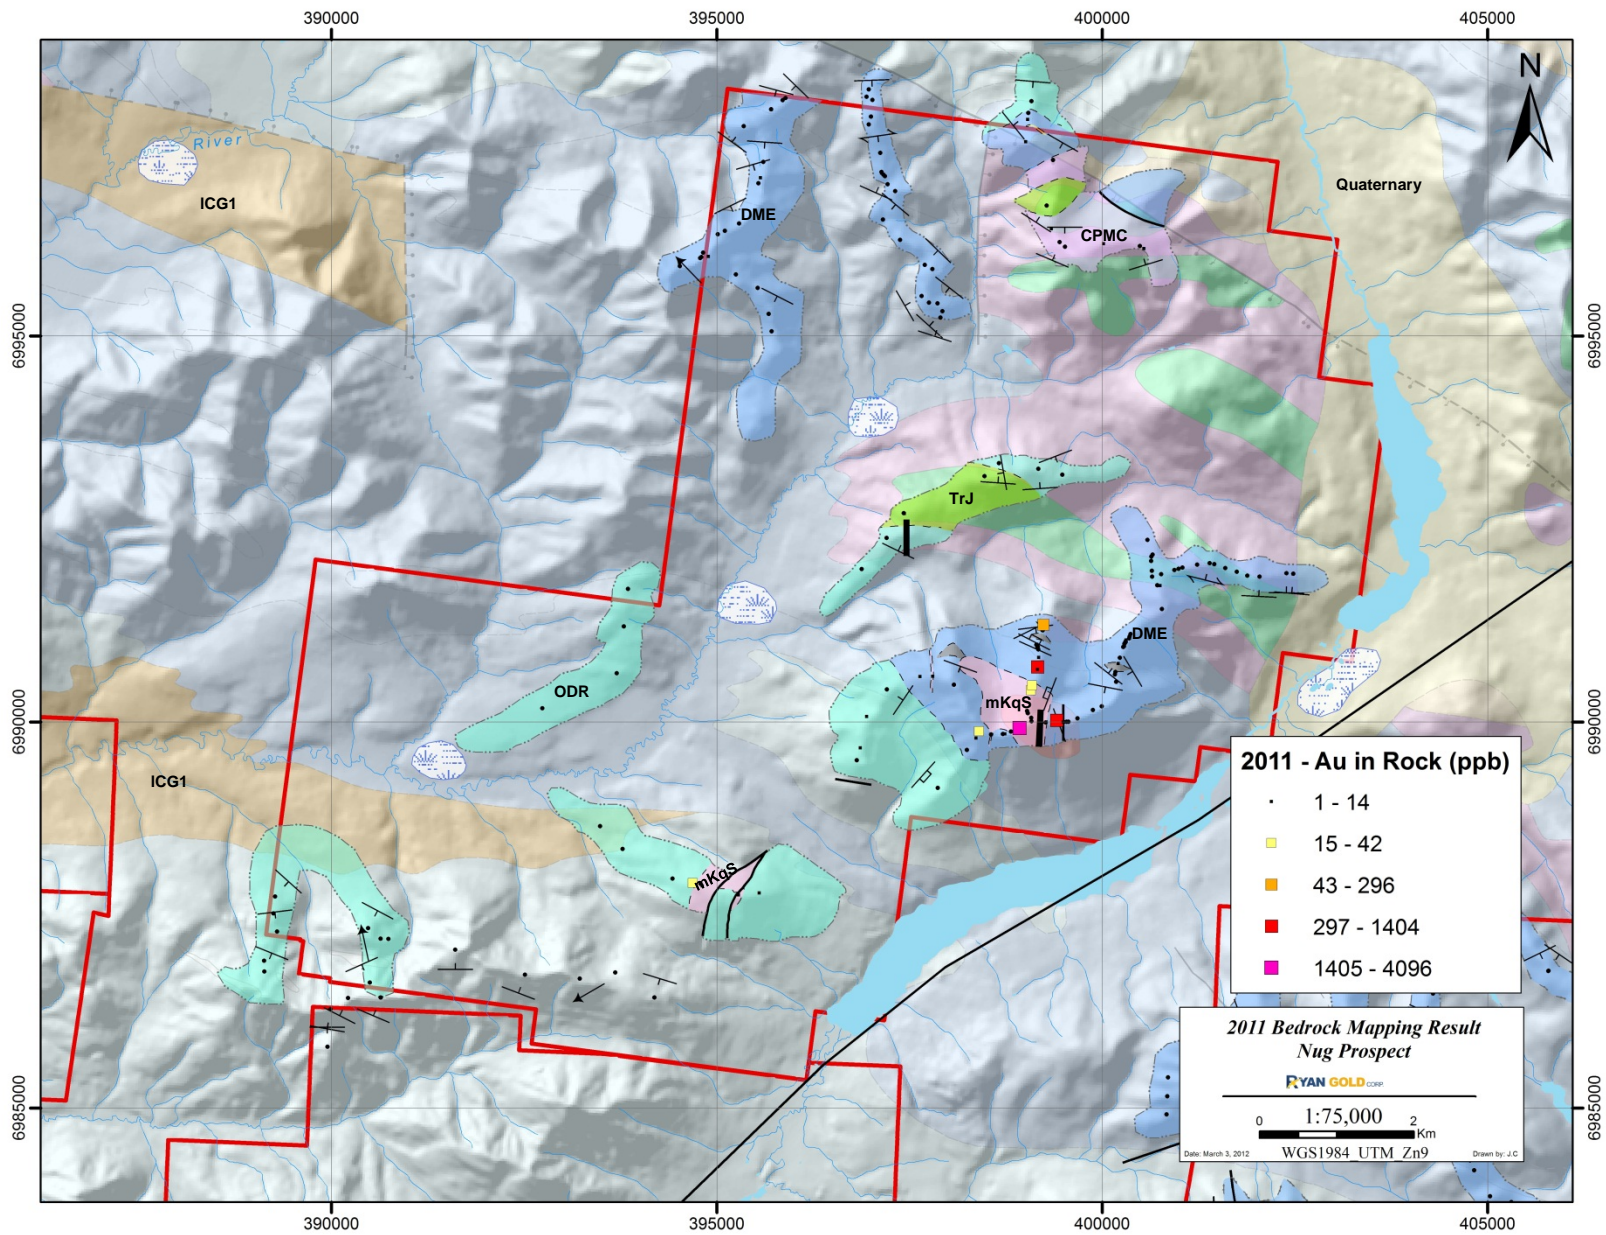

PCH	Hyland Group: coarse turbiditic clastics (1), limestone (2) and fine clastics typified by maroon and green shale (3); may include younger (4) units; includes scattered mafic volcanic rocks (5)
-----	--

APPENDIX D
NUG PROJECT AREA:

FIELD PHOTOS
GOLDEN, NUG, OLY/SMR & NORDIC PROSPECTS

May 2012

J. Chakungal
Project Geologist

Plate 1: Calcareous siltstone and sandstone of the lower Cambrian Gull Lake Formation exposed in the northern part of the Golden prospect. View to the west.

Plate 2: Photo micrographs of the lower Cambrian Gull Lake Formation highlighting sedimentary textures that are frequently observed in the calcareous siltstones and sandstones of this unit, Golden prospect.

Plate 3: a) An outcrop of grey-green weathering chert belonging to the Cambro-Ordovician Road River Group, north Golden prospect. View to the northeast. b) Network of hairline fracture development in Road River chert exposed in the Golden prospect. Outcropping was in the area characterised by a positive response in the regional aeromagnetic data, which may be indicative of an intrusion at depth.

Plate 1: Well bedded siltstones and cherts comprising the Cambro-Ordovician Road River Group (ODR), Nug prospect. View to the northeast.

Plate 2: Photo micrographs of a) burrows and b) brachiopods (?) in talus exposures of ODR, Nug prospect.

Plate 3: Outcrops of carbonaceous shales and siltstones of the Earn Group, few hundred metres north of their contact with a large granodioritic intrusion, Nug prospect. A) View to the west.

Plate 4: Thinly bedded siltstones of the Carboniferous to Permian Mount Christie Formation (CPMC), north Nug prospect. View in photograph is to the north.

Plate 5: Thick bedded fine grained sand- and siltstone of the Triassic Jones Lake Group (TrJ), north Nug prospect. View in photograph is to the northwest.

Plate 6: Outcrop of presumed Cretaceous, biotite - granodiorite, Nug prospect. View is to the west – southwest.

Plate 7: Photomicrographs illustrating textural and compositional variations of the Cretaceous intrusive unit exposed in north-central Nug prospect.

Plate 1: Well-bedded sandstone and conglomerate of the Devonian – Mississippian Earn Group (DME), Oly prospect. View is to the southwest.

Plate 2: Photomicrographs illustrating textures observed in outcrops of DME, Oly prospect. **a)** Chert pebble conglomerate and **b)** carbonaceous shales and siltstone interbedded with limestone. Note internal offset of bedding along small faults which developed during a phase of late brittle faulting, possibly a consequence of the emplacement of the neighboring granodiorite pluton.

Plate 3: a) Outcrop of biotite – granodiorite that is presumed to be Cretaceous in age, Oly prospect. View is to the northeast. b) Fresh surface of the biotite granodiorite, illustrating the medium grained texture that is prevalent throughout the unit.

Plate 4: a) Sheeted quartz veins observed in an outcrop of the Cretaceous granodiorite, Oly prospect. b) Foliation/bedding parallel, fracture filling, quartz-carbonate vein bearing massive arsenopyrite found in DME with proximity to the contact with the granodiorite, Oly prospect.

Plate 1: a) Shales of varying Carbon content belonging to the Devonian – Mississippian Earn Group (DME), Nordic prospect. View is to the west - northwest. b) Close-up photomicrograph of DME shales, note 'pencil' like weathering pattern indicating the rock package has undergone deformation.

Plate 2: a) Thickly bedded, fine-medium grained sandstones of the Mississippian Keno Hill Quartzite (MK). View to the southwest, Nordic prospect. b) Close-up photomicrograph of a boulder of MK, note that the quartzites of this unit are dark grey in colour and locally preserve thin, sheeted veins particularly with proximity to a large intrusive body. Nordic prospect.

Plate 3: Looking northeast to the contact between grey-white weathering biotite – granodiorite/monzogranite and orange-red weathering, medium-fine grained sandstones of MK, Nordic prospect.

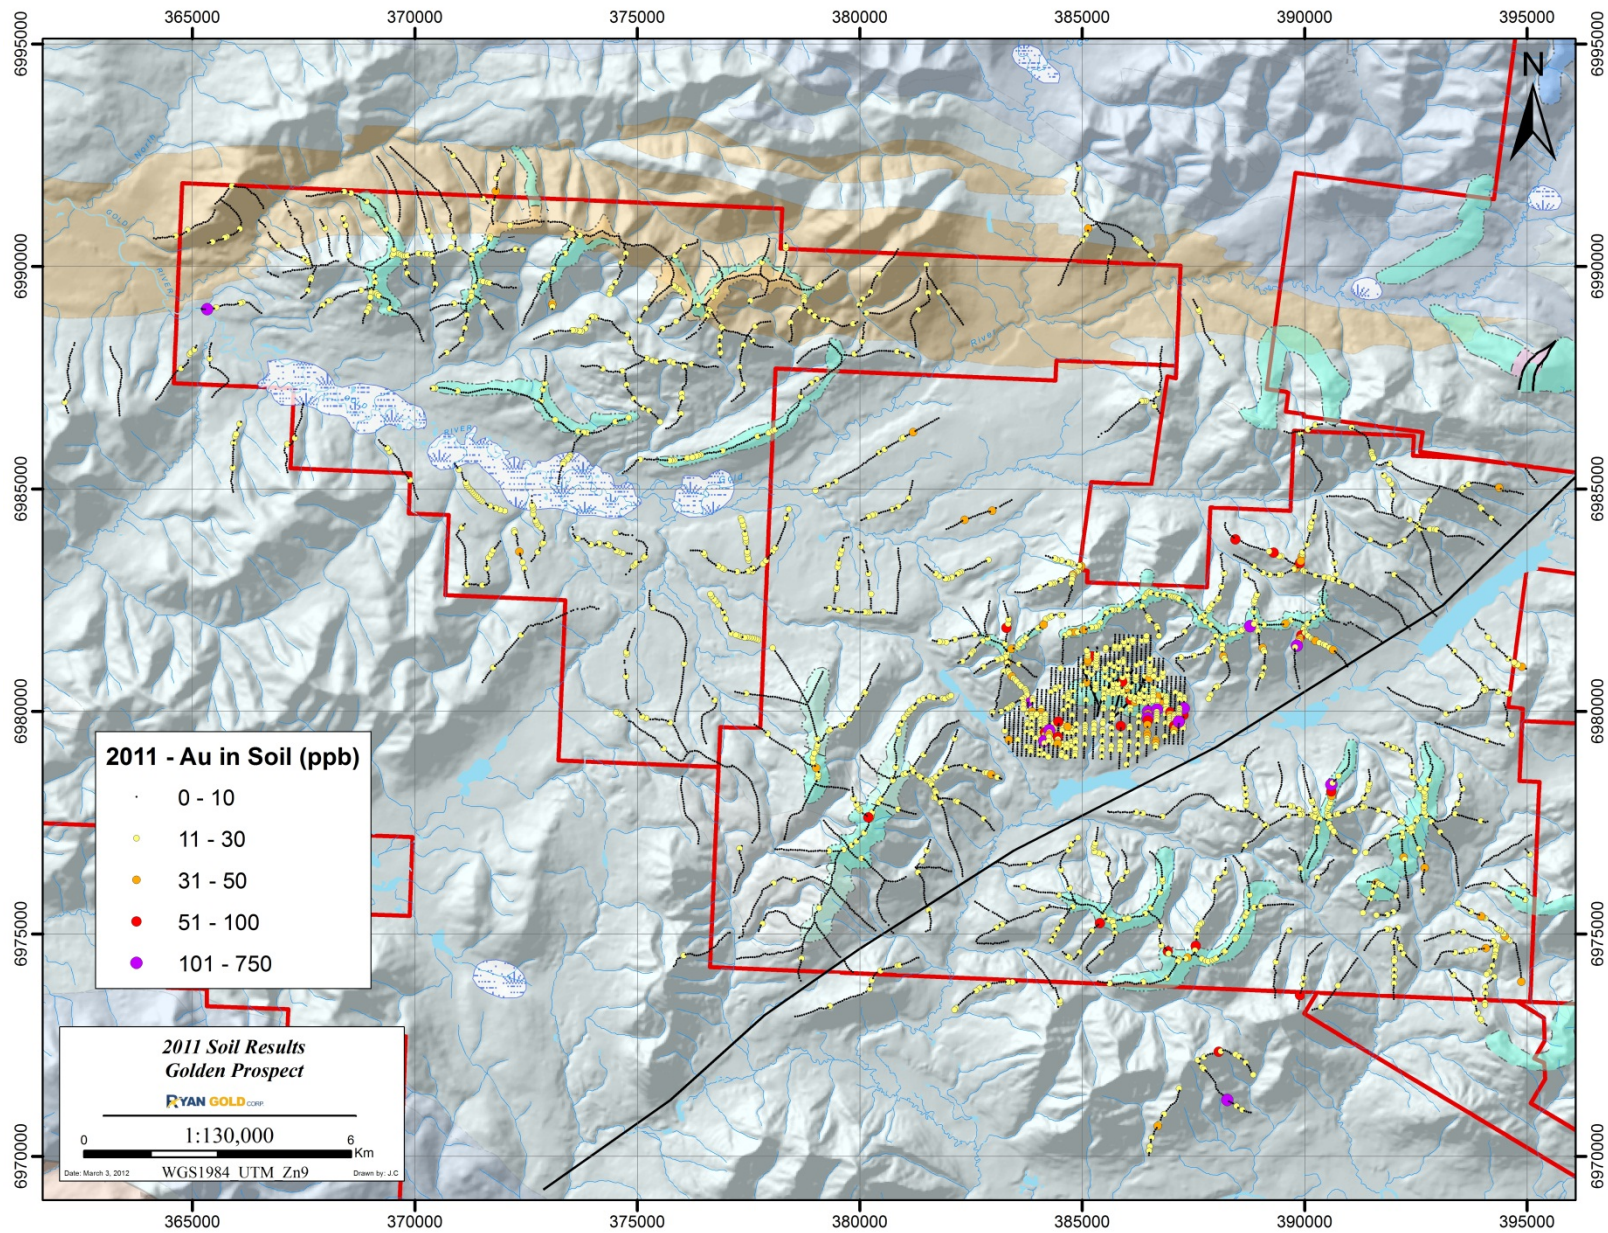

Plate 4: a) Photomicrograph of an arsenopyrite bearing monzogranitic sill/dike found in DME, Nordic prospect. b) Photomicrograph of a ‘cleaner’ arsenopyrite bearing monzogranitic sill/dike, Nordic prospect.

CLIENT JOB INFORMATION

Project: NUG
Shipment ID: NUG002
P.O. Number
Number of Samples: 34

SAMPLE DISPOSAL

STOR-PLP Store After 90 days Invoice for Storage
DISP-RJT Dispose of Reject After 90 days

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Ryan Gold Corp.
600 - 666 Burrard St.
Vancouver BC V6C 1H2
Canada

CC: Hua Jin

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
R200-250	30	Crush, split and pulverize 250 g rock to 200 mesh			WHI
3B01+3B04	34	Fire assay fusion Au by ICP-ES	50	Completed	VAN
1DX1	34	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

Client: **Ryan Gold Corp.**
600 - 666 Burrard St.
Vancouver BC V6C 1H2 Canada

Submitted By: Mike Skead
Receiving Lab: Canada-Dawson City
Received: August 24, 2011
Report Date: September 13, 2011
Page: 1 of 12

CERTIFICATE OF ANALYSIS

DAW11000207.1

CLIENT JOB INFORMATION

Project: NUG
Shipment ID: NUG2011-0
P.O. Number
Number of Samples: 320

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Ryan Gold Corp.
600 - 666 Burrard St.
Vancouver BC V6C 1H2
Canada

CC: Ian Gendall
Shawn Ryan
Isaac Fage

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
SS80	320	Dry at 60C sieve 100g to -80 mesh			WHI
Dry at 60C	320	Dry at 60C			WHI
1DX2	320	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CERTIFICATE OF ANALYSIS

DAW11000208.1

CLIENT JOB INFORMATION

Project: NUG
Shipment ID: NUG2011-0
P.O. Number
Number of Samples: 320

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Ryan Gold Corp.
600 - 666 Burrard St.
Vancouver BC V6C 1H2
Canada

CC: Ian Gendall
Shawn Ryan
Isaac Fage

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

SS80	320	Dry at 60C sieve 100g to -80 mesh			WHI
Dry at 60C	320	Dry at 60C			WHI
1DX2	320	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CERTIFICATE OF ANALYSIS

DAW11000210.1

CLIENT JOB INFORMATION

Project: NUG
Shipment ID: NUG2011-0
P.O. Number
Number of Samples: 320

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Ryan Gold Corp.
600 - 666 Burrard St.
Vancouver BC V6C 1H2
Canada

CC: Ian Gendall
Shawn Ryan
Isaac Fage

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
SS80	320	Dry at 60C sieve 100g to -80 mesh			WHI
Dry at 60C	320	Dry at 60C			WHI
1DX2	319	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CERTIFICATE OF ANALYSIS

DAW11000213.1

CLIENT JOB INFORMATION

Project: NUG
Shipment ID: NUG2011-01
P.O. Number
Number of Samples: 320

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Ryan Gold Corp.
600 - 666 Burrard St.
Vancouver BC V6C 1H2
Canada

CC: Ian Gendall
Shawn Ryan
Isaac Fage

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab

Dry at 60C	320	Dry at 60C			WHI
1DX2	320	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

Dry at 60C	320	Dry at 60C			WHI
1DX2	320	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
SS80	320	Dry at 60C sieve 100g to -80 mesh			WHI
Dry at 60C	320	Dry at 60C			WHI
1DX2	317	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

NUG Project
Soil Geochemistry

Client: **Ryan Gold Corp.**
600 - 666 Burrard St.
Vancouver BC V6C 1H2 Canada

Submitted By: Mike Skead
Receiving Lab: Canada-Dawson City
Received: August 12, 2011
Report Date: September 10, 2011
Page: 1 of 13

CERTIFICATE OF ANALYSIS

DAW11000216.1

CLIENT JOB INFORMATION

Project: NUG
Shipment ID: NUG2011-02
P.O. Number
Number of Samples: 333

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Ryan Gold Corp.
600 - 666 Burrard St.
Vancouver BC V6C 1H2
Canada

CC: Ian Gendall
Shawn Ryan
Isaac Fage

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
SS80	333	Dry at 60C sieve 100g to -80 mesh			WHI
Dry at 60C	333	Dry at 60C			WHI
1DX2	332	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.
