1. INTRODUCTIN

Oprah Claims Group (Oprah Property), including 460 claims, situated at south of the Yukon River, is located approximately 61 km northwest of Carmacks, and 17 km west of the Minto airstrip, within Carmacks area, in Whitehorse Mining District, Yukon Territory (fig1). NTS Map Sheets are 115I/06 and 115I/11. The property is 100 % held by Canadian Dehua International Mines Group Inc. (Dehua Mines). Its latitude and longitude are 62 °28' N, 137 °09' W respectively. In 2011, geological, IP survey and soil sampling programs were employed by Dehua mines to explore Cu, Au deposit on more than thirty targets within Gonzo Claims Group based on the work of 2010.

2. PHYSIOGRAPHY AND ACCESS

The claims lie within the east edge of Dawson Range, Southwestern Yukon. The topography is moderate with long sinuous ridges incised by narrow valleys heading down varied directions to larger swampy creek valleys. Vegetation consists of moss, birch, poplar, and spruce with thick alder and buck brush. Elevations range from 600 to 1100 m generally.

Access to Oprah property was by helicopter from Carmacks, Yukon. There is all weather road access to Minto, where it is approximately 17 km away east to Oprah property. There are trails access to the property but no vehicle access to the property. Helicopter access service is generally available from Carmacks, Yukon.

3. LEGAL DESCRIPTION

Oprah claims group (Oprah property), including 460 claims (refer table 1,fig 2), 100 % held by Canadian Dehua International Mines Group Inc. (Dehua Mines), located within Carmacks area, in Whitehorse Mining District, Yukon Territory. Its latitude and longitude are 62 °28' N, 137 °09' W.

All 460 claims were renewed to date of Mar 18, 2015, based on the work done last year and acceptance of this report (table 1).

Table1 Oprah Claims

Grant Number	claim name	claims	expiration date	renew period
YD22181-YD22249	Oprah 01-69	69	Sep. 18, 2012	Mar 18, 2015
YD22252-YD22267	Oprah 72-87	16	Sep. 18, 2012	Mar 18, 2015
YD22270-YD22300	Oprah 90-120	31	Sep. 18, 2012	Mar 18, 2015

BEDROCK GEOLOGY

As the sparse distribution of bedrock outcrops, glacial deposits and vegetation cover, weathering, little is known about the regional geology. The level of awareness embodied in the 1:250,000 bedrock geology map

Regional geological map^[3]

There are 6 main bed rock formations were recognized:

Unit 1: (TQS) Tertiary and Quaternary sediments. Columnar jointed mafic volcanic rocks, tuff (SELKIRK volcanic rock);

Unit 2: (uKC) Carmacks groups, mainly mafic volcanic rocks of Late Cretaceous and Late Jurassic - Cretaceous Tantalus group of sedimentary rocks;

Unit 3: (mKgW) The early - middle Cretaceous - acid intrusive rocks;

Unit 4: (EJgA) Late Triassic - Early Jurassic granite batholith intrusions; in coarse-grained, foliated biotite - hornblende granodiorite;

Unit 5: (uTrP) Paleozoic andesite, mafic volcanic rocks;

Unit 6: (DMgPW) Paleozoic granitic schist (Yukon-Tanana Terrane).

4. HISTORY WORK

- MINFILE#151I 014 located in Oprah Property, where there was a long and complicated staking history work. In 1976, United Keno Mines reported that the area was primarily underlain by massive granodiorite within which they located copper mineralization in the form of malachite (up to 6 m wide, with 100-2800 ppm Cu and trace Ag and Au) in foliated granodiorite. A small IP survey conducted and no anomaly returned. Soil sampling on nearby claims outlined numerous spot Cu anomalies, but follow-up trenching did not uncover any substantial mineralisation.
- 1977, Sinclair carried out geological mapping in the vicinity of the Minto deposit, as well as reconnaissance-level geochemical studies of intrusive rocks in the area.
- 1984, a 1:250 000-scale geological map of the Carmacks map sheet was published by Tempelman-Kluit.
- 2001, a low-level airborne magnetic and radiometric survey was flown over the entire Minto-Williams Creek area by the Geological Survey of Canada and the Yukon Geology Program (Shives et al., 2002). No geological interpretation of this new geophysical data set has yet been published.
- 2003, stream sedimentary analyses of this regional area from the Yukon Regional Geochemical Database (Yukon geological Survey) have done, which may provide some sight.
- 2010, Dehua Mines has employed high precision airborne magnetic-radiometric survey by Precision GeoSurveys Ltd for field data information collection. The geophysical data was processed and interpreted by Mira and Aurora Geosciences on behalf of Dehua Mines based on exploration targeting requirement.

5. WORK DONE IN 2011

In 2011, Dehua Mines carried out ground exploration works in Oprah claims property which include geological, IP survey and soil sampling based on the high precision airborne magnetic survey flown in 2010.

The work in 2011 composed 3 periods:

March-June: Preparations

June- October: Field work

Nov.-Dec: Indoor paper work

Aurora Geosciences had delineated more than 30 different levels of exploration targets within Gonzo Property based on geophysical interpretation (fig 3). The aeromagnetic anomalies for each target range generally less than 300m × 300m. Soil sampling and IP survey along one kilometer line through the center of each aeromagnetic anomaly areas applied.

Figure3 Prospecting targets in Oprah property

5.1 Soil sampling and geophysical data acquisition

Soil sampling was carried out along 1 km section line; sampling spacing 50 m; 21 samples per line (Table 2).

Tools: gasoline-powered and manual soil sampling auger.

Sampling depth: Try to reach to the original residual - the soil B-C or C layer. C layer is in situ weathering products sandy soil, including original rock fragments.

For some following reasons, sampling may not always reaches to required layer.

- Ice and permafrost;
- Ancient alluvial river bed;
- Glacial deposits;
- Moorland and thick layer of talus in valleys

Induced polarization method

Instruments:

SQ-3C dual-frequency IP transmitter and receiver. The instrument is small, lightweight, no bulky power supply unit, particularly suitable in mountains of dense vegetation.

Data acquisition:

Take the same section with soil sampling survey;

Gradient method;

AB spacing: The average length was 1 km, varied depending on operating conditions (topography, ground resistivity, etc.).

MN: 25m

Data collected within the middle of 1 / 2 AB, collecting 20-35 data per line (Table2). of Chargeability and apparent resistivity data was acquired in each measuring point.

Problems:

- Frozen, rain, poor ground conductivity conditions will affect the stability and quality of data;
- Imprecise positioning in forests reducing the reliability of data

5.2 Data analysis and collation

Practice has indicated that copper deposit as the porphyry and hydrothermal type have a primary halo elements combination of Cu, Mo, Au, Ag, Bi, Hg, As, Sb, Pb, Zn. We use such element and/or their association to assess the targets.

Table 3 and fig 4 show the elements content distribution within Oprah claim group.

Table 3 Statistical analysis of elements content in soil

element		Au	Ag	Cu	Mo	Pb	Zn	Bi	Hg	As	Sb
OPRAH	max	0.199	3.43	669	7.6	57.2	190	0.53	5.75	68.1	5.98
	min	0	0	1.8	0	0	3.8	0	0	0.1	0
	mean	0.0054	0.06	30.27	0.689	6.69	70.93	0.086	0.021	6.17	0.368
	median	0	0.05	26.1	0.59	6.3	68.7	0.08	0.01	5.5	0.29
	Standard deviation	0.016	0.123	27.65	0.546	3.17	25.24	0.05	0.194	4.06	0.354

Fig4 Oprah claims graphic copper content in soil

5.3 Defining anomaly boundaries

The following methods usually taken to define the background and anomaly:

- Section graphic method
- Histogram solution
- Calculation

Calculate the normal background value Co and Standard deviation S , according to the formula: $Ca = Co \pm KS$

K is the reliability coefficient, a is the reliability. When $a = 0.05$, $K = 1.96$; $a = 0.01$ when, $K = 3$; $a = 0.1$, when, $K = 1.65$. Generally take $K = 2$, to determine the lower limit of abnormal.

- Comparison method

Based on the above methods and calculations, boundaries of background value of each element and obvious abnormalities in prospecting areas were determined as followings (Table 4).

Table4 Background and anomaly boundaries of elements

element	Au	Ag	Cu	Mo	Pb	Zn	Bi	Hg	As	Sb
background	/	0.082	30.69	0.906	6.179	67.03	0.086	0.023	6.147	0.429
Low limit of anomaly	/	0.29	72.2	5.377	11.83	112	0.183	0.385	15.37	1.198

Geophysical Data: Taking Consideration of climate, ground frosting, grounding resistance and the current intensity, signal stability, the obtained geophysical raw data is classified into three levels: reliable, acceptable, not reliable.

Table 5 indicates the statistical parameters and background value of chargeability (F_s) in prospecting area.

Table 5 The F_s statistical parameters and background of various areas

		F_s (%)	F_s _background value*
OPRAH	max	3.88	2.03
	min	0.61	
	mean	2.16	
	Standard deviation	0.584	

*Calculated after eliminating unreliable and obvious anomaly high value data

Prospecting experiences proves chargeability slightly higher than the background rate of the value do not rule out the possibility of mineralization. Currently, there is no generally accepted method of determining the boundaries of IP anomaly. According to background value and data variations, take 2.40 as the lower limit for IP anomaly.

5.4 Exploration target selection

5.4.1 Criteria of the target evaluation

- Element content value of soil analysis (filtered by background, weak anomaly and strong anomaly, Table 6).

Table 6 Different intensity of soil elements and abnormal values range

Element	Au	Ag	Cu	Mo	Pb	Zn	Bi	Hg	As	Sb
background	0.001	0.082	30.69	0.906	6.179	67.03	0.086	0.023	6.147	0.429
Lower limit of weak anomaly	0.005	0.29	72.2	5.377	11.83	112	0.183	0.385	15.37	1.198
Upper limit of weak anomaly	0.01	0.394	92.96	7.55	14.66	134.42	0.23	0.57	19.99	1.58

- Chargeability (F_s).

Anomalies lower limit: $F_s = 2.40$

Weak anomalies: $F_s = 2.40-2.80$

Strong anomalies: $F_s \geq 2.80$

- Data reliability;
- Others: mineralization signs, former focused exploration areas, registered MINFILE location;

5.4.2 Targets classification

- A:** With strong, continuous geochemical and geophysical survey point anomalies. Or accompany with other particularly high indicator elements. Data are reliable.
- B:** With both strong geophysical and geochemical survey point anomalies which are not in sequence (discontinuous). Data are reliable.
- C:** Only with strong, discontinuous geochemical anomalies;
- D:** There is a weak soil geochemical anomaly and IP anomaly;
- E:** Measured line with only strong geophysical anomaly;
- F:** With only weak geophysical anomaly;
- G:** No any anomaly

According to the above standards and conditions, made the following statistics on the raw data:

Gold content that greater than 30ppb of the survey point);

Silver content greater than 0.20ppm of the survey point);

Copper content > 93 ppm of the survey point (strong anomaly);

$F_s > 2.8\%$ of the survey point (strong anomaly);

According to the above classification criteria, statistics results and definition of strong, weak anomalies, targets are graded as shown in table 7 and fig 5.

Fig 5 Copper, gold, *Fs* anomaly in Oprah property

Table7 List of targets grading

Target grade	A	B	C	D	E	F	G
OPRAH		O11	O31	O05	O37	O3	O27
		O24B	O18	O13	O07	O6	O39
		O24A	O33		O38	O15	O19
		O29			O09	O25	O01
		O21			O10	O08	O02
					O16	O28	O03
					O17	O30	O26
					O22	O31	
					O23	O36	
					O35	O06	

6. CONCLUSIONS AND RECOMMENDATIONS

Key targets

O24B-O11-O24A

O24B-O11-O24A has a relatively high concentration of copper, gold compared with surrounding area. The highest copper content of soil samples (669ppm) came from east end of O11 line. Previous trenching in this area revealed a potassium alteration zones and copper mineralization. Mineralized rock samples collected here has a copper content 0.1%.

O37-O38-O7

A unique district with clearly continuous *Fs* high-value but without copper anomaly. Gold content in multiple samples are over 50ppb. Reasons need to be identified.

Recommendations for next step work

O24B-O11-O24A

- Re-analysis sample of particularly high value of copper;
- supplement soil sampling around special high copper anomalies.
- expand the exploration range to the northeast;

O24B-O11-O24A

- Identify the cause of IP anomaly

Appendix I

Statement of Expenditure for Oprah property

1. Expenditure on Oprah in period of Sep.18,2011 to April 15, 2012 is: **\$123877.99**.
(See following table)
2. Applied \$11500.00 for renewal 460 claims 2.5 year:

Expenditure on Oprah Claims (2011)

(after Sep.18, 2011)

item	unit cost	unit	amount
Helicopter rent payment	\$1280/hour	28 hours	35,840
Manpower expense	\$350/day/person	135 days	47,250
Accommodation	\$50/day/person	135 days	6,750
Tool and equipment	300/day	10 days	3,000
Transportation			4,100
Communication			400
Other supplies			900
Consulting			0.00
Sample assay			21,336.99
Office supplies			0.00
Insurance			3,500
Safety and labor protection			800

Total: \$123877.99

123,877.99

Appendix II

Statement of Qualification

I, Rongju Xie, do hereby certify that:

I am a geologist employed by *Canadian Dehua International Mine Group Inc.* and Dehua's Yukon project manager.

I graduated from *Guilin University of Technology*, Guilin, Guangxi, China in 1984, granted B.Sc. in geology.

In 1987, I acquired M.Sc. degree from *China University of Geosciences (Wuhan)*;

In 2000, I acquired PhD in Geosciences from *Central South University*, Changsha, China.

I studied in Geology and worked in mineral prospecting more than 20 years, and have related working experience both in China and Canada.

I involved in Dehua's exploration project in Yukon from the beginning, and carried out data collection, assessment report composition of this one.

Rongju Xie

Geologist
