Purpose of Traverse: collect soil samples, flag grid line  
for geophys, train Joshua

Traverse Route:

5000N - from 7750E → 7500E all E grid  
5100N - " 7500E → 7525E pts.

Notes:

- soggy in trees from heavy rain last night, rained briefly from time to time
- slightly late start but we got some work done & I trained up Josh on soil type, inclination, declination, compass & gps stuff
  - went through data points w/ boys & morning helped them set up routes to follow
  - tried practice run in parking lot night before.
  - had Murray get BasCamp for FPS but it is not able to turn pts into excel sheets.

- tempting to go up Koro Mtn for Sobice!

°C

Purpose of Traverse:

collected soils on S grid

Traverse Route:

S100N from 8000E → 7550E \*

S200N 7500E → 8000E 2

\* - pts didn't meet perfectly, some missing samples

2 - 100m spacing

Notes: - good day though soggy ground, used gum boots

- S100N extended station for station so grid did not meet from day before, missing ~50m

- line cutters came in tonight

June 23 - wet & cloudy, ok on N side Haldane  
- drove camp into McQueston after prepping, got fridge, nets, etc. - slung & packed all loads  
- cleared & built camp, I made kitchen frame  
- set up repeater w/ Murray.

Purpose of Traverse: get Josh started, joined Murray for prospecting

Traverse Route: Josh on line 7200N, West side  
- Murray & I checked out old adits  
& trenches, moving up N slope and to West

Notes: -showed me Equity's sampling procedure

-mainly quartzite &amp; diorite, saw some mineralized rock at Johnson adit

-ran through a sample entry on the Toughbook and introduced map method.

20 °C

Purpose of Traverse: prospect, collect rock samples, hike to main zone

Traverse Route: hiked up base line, then along roads to see trenches &amp; showings

Notes:

measurements on other side

3rd fault scarp (I985964) 202/72 W  
[CGF-June 25 - (F)]

- took 5 rock samples of mineralized picks along the way
- photos of geo features for Murray
- entering notes by hand & pts on GPS as I'm w/o tuff book

Rock Sample Series: I985960 I985964 (5 total)

Snow

16 °C

Purpose of Traverse: prospect south side of grid &amp; look for structures

Traverse Route: straight up (S) from camp, past Middlecott &amp; 2010 drill pad, past rusty schist patch, then along ridge to E, crossed Ewing fault contact &amp; back into quartzite

Notes: Map stations CGF-[HAD11-02]-01 → (GF-IJ06)  
- took 2 samples in schist, not very exciting but had Mn & Fe oxides.

- walked up past Robert service fault & then across Ewing later in arvo
- no exciting rocks along the way, quartzite all massive
- also no major structures popped out.

Date: June 27 2011

Property: Haldane

Weather: ☒ Wind ☒ Sun ☒ Clouds ☒ Rain ☒ Fog ☒ Drizzle ☐ Snow 13 °C

Purpose of Traverse: to check out linear features on west side of grid

Traverse Route: up base line to about 8000N, (maybe 7900N) then west beyond workings, through trees, to open blocky hillside (seen from other side yesterday); from there headed north <sup>up</sup> ridge to top of grid.

Notes: interesting area w/ n. table changes in rock type in hillside E-W

- some prospective, gossanous stones on the way which I sampled
- got into massive barren diorite which is marked on map from last yr
- this and nearby gtzite bluffs have strong planar jointing near vertical & N-S (180/62°W) (188/88°W)
- smaller rock & break in cliff band could be structure, striking 083°
- brought extra ref w/ samples to show features.

- noted line cutters' waypoints at stake in AM  
- bird landed on me

Purpose of Traverse:

check out strechuk prospect  
in next valley

Traverse Route:

up baseline to top of ridge, over  
& down road to showing  
- contoured outside low (1400m)  
to get out, & high (1550m) to  
come back

Notes:

- took lots of samples of oxidized  
rock, but did not truly find  
showing; a few structures too  
- good day but grueling w/ constant  
rain (v. small break), & slippery  
steep conditions; soaked.  
I slipped once but am ok, felt so  
tired at top of grid.

- saw <sup>cow</sup> moose at top of ridge in morning,  
only 100 yds out

18 °C

Purpose of Traverse: soil sampling along 8000N line,  
west sideTraverse Route: Walked up base line & Lendel  
west over hill to 7900E, then back  
to base line.

Notes:

good day, worked steady on  
25 m samples- swampy at W end, then good  
soils for 80% of line- only missed 3 N/S's, one at  
ephemeral creek & 2 near baseline  
in talus.
