Summary

In August 2011 Stakeholder Gold Corp. completed a surface exploration program on the 61-claim (1,218ha) Thistle Mountain property located north of The Yukon River, some 130km southeast of Dawson City, Yukon. The work consisted of a preliminary ridge and spur deep auger-type geochemical soil survey. The goal of the work was to identify potential gold-in-soil anomalies.

The Thistle property is held 100% by Stakeholder Gold Corp. The Property is located in an isolated part of the Yukon with no local resources or infrastructure. Fuel, supplies and equipment can be flown in from Dawson City by helicopter or shipped in on the river by barge.

The Property lies within the Yukon-Tanana Terrane which consists of several successions of complexly deformed Late Proterozoic to Late Permian sedimentary and volcanic rocks episodically intruded by various intrusive rocks in the Permian, Jurassic, Cretaceous, and Tertiary periods. The intrusive events have been accompanied by volcanic activity especially in the Upper Jurassic to Lower Cretaceous. Limited mapping on the Property indicated that it is underlain by quartzites and quartz-biotite schists of the Nasina assemblage.

The underexplored nature of the Klondike-White Gold district was highlighted by Kaminak's Supremo discovery on its Coffee property in 2010 located approximately 15km southwest of Thistle Mountain and by Underworld's discovery of the Saddle and Arc zones in May 2009 on the White property located approximately 25km northwest of Thistle Mountain. Detailed geochemical surveys and closely spaced, low altitude, helicopter-borne geophysical surveys have been proven to be effective in the area. Due to the deeply weathered nature of the soils in this unglaciated area, it is very important to take samples from the deeper C-horizon.

A total of 510 deep auger-type soil samples were collected with hand augers at 50m sample intervals along predetermined GPS traverse lines. The samples were analyzed for 36 elements by ISO 9001-accredited Acme Analytical Laboratories Ltd.

The soil samples returned gold values ranging from below detection limit (i.e. <5ppb Au) to a maximum of 46.1ppb Au. The results identified five moderately anomalous soil samples spread out over the Property with a small cluster in the northern region.

The 2011 gold in soil results were disappointing. Better results were expected from this area because of the abundance of quartz float on the Property and its location on the ridge separating the rich placer deposits on Kirkman and Thistle creeks.

No further work is recommended at this time. However the Property is strategically located on Thistle Mountain adjacent to several active properties including Arcus' Touleary, Stakeholder's Ballarat, Kaminak's Kirkman, and Kinross's Thistle and Black Fox. It is recommended that the claims be maintained in the event that further work on any one of these properties leads to a new discovery.

Certificate of Qualifications

I, Mark Fekete, having my place of residence at 178 Dennison Boulevard in Val d'Or in the Province of Quebec do hereby certify that:

1. I obtained a Bachelor of Science Degree in Geology from the University of British Columbia in 1986, I have been engaged as a Geologist continuously since 1986 and I am a Member in good standing of the Order of Geologists of Quebec (OGQ #553) and the Association of Professional Engineers and Geoscientists of British Columbia (APEGBC #31440), and I am a "qualified person" as defined in Section 1.2 in and for the purposes of National Instrument 43-101;
2. I have visited the Thistle Mountain property on numerous occasions including most recently in July 2011;
3. I co-wrote and I am, as the senior author and qualified person, responsible for the contents of this technical report entitled "2011 Soil Geochemical Work On the Thistle Mountain Property Dawson Mining District, Yukon, NTS Sheets 115O03 and 115J14, 63°1'N. Lat., 139°11'W. Long.," based on my professional experience, a review of relevant reports and maps made available to me from government and corporate sources and my participation in the work programs described in the report;
4. I am not aware of any material fact or material change with respect to the subject matter of the report that is not disclosed in the report which, by its omission, makes the report misleading;
5. I am an Officer and Director, and I beneficially hold a number of shares in Stakeholder Gold Corp.;
6. I hold no direct interest in the Thistle Mountain property as a result of my prior involvement with the property; and
7. I have read, and this report has not been prepared for the purposes, nor in full compliance with, National Instrument 43-10, 1 and according to Form 43-101F1.

Respectfully submitted this 31st day of January 2011,

(s) "**Mark Fekete**"

Mark Fekete, P.Geo.

Certificate of Qualifications

I, Drew MacPhail, having my place of residence at 610 Church St. Port Williams, NS do hereby certify that:

1. I obtained a Bachelor of Science Degree in Geology from Acadia University in January 2012, I have been engaged as a Geologist in Training (“GIT”) continuously since January 2012 and I am not a “qualified person” as defined in Section 1.2 in and for the purposes of National Instrument 43-101;
2. I have not visited the Thistle Mountain property;
3. I co-wrote this technical report entitled “2011 Soil Geochemical Work On the Thistle Mountain Property Dawson Mining District, Yukon, NTS Sheets 115O03 and 115J14, 63°1’N. Lat., 139°11’W. Long.,” under the supervision of Mark Fekete, P.Geo.;
4. I am not aware of any material fact or material change with respect to the subject matter of the report that is not disclosed in the report which, by its omission, makes the report misleading;
5. I do not beneficially hold a number of shares in Stakeholder Gold Corp.;
6. I hold no direct interest in the Thistle Mountain property as a result of my prior involvement with the property; and
7. I have read, and this report has not been prepared for the purposes, or in full compliance with, National Instrument 43-10, 1 and according to Form 43-101F1.

Respectfully submitted this 31st day of January 2012,

(s) “Drew MacPhail”

Drew MacPhail, B.Sc., GIT

1. Introduction and Terms of Reference

Breakaway Exploration Management Inc. (“Breakaway”) was retained by Stakeholder Gold Corp. (“Stakeholder”) to write a technical report (the “Report”) describing the surface exploration work carried out on the Thistle Mountain property (“Thistle Mountain” or the “Property”) in Yukon in 2011. The Report describes the soil geochemical sampling survey completed.

The goal of the surface work was to identify areas of anomalous gold-in-soil that may be related to the gold bearing structures similar to Kaminak’s Supremo discovery on its Coffee property located approximately 15km southwest of the Property.

The Report is based primarily on the results of the work completed on Thistle Mountain in 2011 but also contains information obtained from a review of relevant reports and maps cited throughout the Report. The Report was prepared by Geologist in Training Drew MacPhail (the “Junior Author”) under the supervision of Professional Geologist Mark Fekete (the “Senior Author”). The Senior Author has visited and personally inspected the Property on numerous occasions most recently in July 2011. The Senior Author is the designated “qualified person” as defined in Section 1.2 in and for the purposes of National Instrument 43-101. The main purpose of the Report is to complete statutory assessment work filings required under the Yukon Quartz Mining Act. It is not intended to and does not fully comply with National Instrument 43-101. The Report contains specific recommendations and proposes a budget for further work.

The metric system is used for all units of measure mentioned in the Report and all dollar amounts are in Canadian funds unless otherwise stated. All figures presented in the Report are plotted in map projection UTM NAD 83, Zone 7 unless otherwise stated.

2. Reliance on Other Experts

The Authors may have relied on technical data and interpretations found in various sources cited throughout the report. The Authors may not have verified this information and take no responsibility for its accuracy or completeness. Reference to the compliance or non-compliance with NI 43-101 standards of historical information and data referred to in this Report are made where appropriate. The Authors do not offer any opinion concerning legal, title, environmental, political or other non-technical issues that may be relevant to the Report. The Report may contain links to several web-sites. The Authors take no responsibility for the functionality or content of these websites.

3. Location and Property Description

The Property covers an approximate area of 1,218 hectares within the Dawson Mining Division of Yukon. It consists of 61 claims making up one contiguous claim block located approximately 120km southeast of Dawson City (Figure 1). The approximate center of the block is described by 62°56’ North Latitude and 138°53’ West Longitude on N.T.S. Sheet 115O03 and 115J14. The Property un-surveyed mineral titles (Figure 2) are more fully described in Table 1 below.

Stakeholder Gold Corp.
NTS Sheet: 115J/14 & 115O/03
Date: November 26, 2011

The TM claims were acquired by staking in February 2011. The CC claims are held by Stakeholder under the terms of an agreement with the recorded holders Farrell J. Andersen (25%), Carl Michael Schulze (25%), Hinterland Metals Inc. (25%) and Jackie Ziehe (25%). Under the terms of the agreement, Stakeholder has the option to earn a 100% interest in the Property by paying \$40,000 cash and issuing 400,000 shares over a three year period subject to a 2.5% Net Smelter Returns royalty.

The mineral claims included in the Property were acquired under the Yukon Quartz Mining Act which grants only the hard rock mineral rights to the claim holder. The surface rights for the area of the Property are held by the Crown. To maintain the claims in good standing, a minimum of \$100 assessment work per claim must be completed annually. There are provisions to apply for more than one year work at a time up to a maximum of five years, to apply work from one claim to other adjoining claims (grouping) up to a maximum of 750 contiguous claims and to pay cash in lieu of work up to a maximum of five years. The Quartz Mining Land Use Regulations consist of a classification system based on varying levels of specific activities. These threshold levels categorize exploration activities into four classes of operation. Classes 1 through 4 represent activities with increasing potential to cause adverse environmental impacts.

Activities within a Class 1 program are defined as “grassroots” exploration with low potential to cause adverse environmental effects, and where activities and reclamation are completed within a year. A Class 1 program does not require government approval but the operator must comply with the certain operating conditions. An assessment under the Yukon Environmental and Socio Economic Assessment Act (“YESAA”) is not required for a Class 1 program.

Class 2 programs are considered to represent the upper level of “grassroots” exploration activities. A notification submitted through the Mining Lands Office which outlines the activities and how they will be reclaimed is required. These programs comprise activities that have a moderate potential to cause adverse environmental effects and therefore require an assessment through YESAA. All work and reclamation must be completed within one year.

All Class 3 and Class 4 programs require submission of a detailed “Operating Plan” to the Mining Lands Office. A YESAA assessment is required. The Operating Plan must be approved before any exploration activities can be undertaken. Operating Plans may entail multi-year exploration programs to allow greater flexibility for the operator.

The work described in this Report was completed as a Class 1 Program.

4. Accessibility, Local Resources, Infrastructure, Physiography and Climate

Access to the Property is restricted due to a lack of usable roads on or adjacent to the Property. A road that leads from a landing at the mouth of Kirkman Creek to a landing at the mouth of Ballarat Creek touches the southern end of the Property and provides limited access. The primary means of access is by fixed wing aircraft from Dawson City to the Kirkman Creek airstrip followed by helicopter to the Property.

The Thistle Mountain property is located in an isolated part of Yukon with relatively few local resources or infrastructure. The Property can be worked from Dawson City by helicopter or from an exploration camp set up on or near the Property. A camp can be supported from Dawson City, where services are limited, or from Whitehorse where a full range of services are available including line-cutting, geophysics, drilling, assaying, aircraft charters etc.

The Property straddles Thistle Mountain in the Dawson Range of Yukon. Unlike most parts of Yukon, the Dawson Range was not affected by the last period of continental glaciations and so it is characterized by low rolling hills incised with steep sided, V-shaped valleys. Bedrock is typically deeply weathered and there is very little (perhaps less than 5%) outcrop exposed; usually on ridges above tree-line or in rare canyons in the creek valleys. Elevations on the Property range from 700m to 1280m above sea level. Most of the Property lies below the tree-line and is covered by a typical boreal forest mix containing black spruce aspen and alder brush. North and west slopes are often covered with thick moss blanketing permafrost.

The Dawson City area is characterized by a semi-arid, sub-arctic continental climate with mild to hot summers and cold winters. Precipitation is generally light in the summer and overall clear skies and warm temperatures prevail. Heavy morning fog can be a problem for aircraft especially towards the end of the summer season. Forest fires are common and thick smoke at times may impede exploration work. Maximum snow accumulations in the winter are typically less than one meter. Due to the northerly latitude of the region, summer days are long and winter days very short. The best season for exploration is during the summer months from mid-May to mid-October. Although it is possible to work during the winter months, costs rise exponentially due to cold temperatures, inclement weather and short daylight hours.

5. Exploration History

The following exploration history of the Property has been compiled from the Yukon Energy and Mines and Resources Library and Yukon Geological Survey MINFILE database and private sources. There are no work assessment reports documented in the Yukon Geology database over the present Property. In 2010 Silver Quest Resources Inc. completed limited soil sampling and prospecting work on the CC claims (Baker and Swanton, 2011). A total of four rock samples and 105 soil samples were collected. One soil sample returned 100ppb Au but no specific gold anomalies were identified by the work. There is a gold-bearing quartz vein documented just beyond the easternmost point of the Property listed in Table 2 below:

Table 2 - MINFILE Showings

MINFILE No.	MINFILE Name	Link
115O 014	Total	115O 014

Quartz or hard rock prospecting in the Thistle Mountain area dates back to the Klondike Gold Rush of the 1890's and has continued sporadically since that time. Most of this work appears to have concentrated on the Black Fox vein described as a 0.9 metre wide quartz vein with pockets of galena, chalcopyrite and pyrite initially worked in 1901 (Andersen, 1999). The Property covers the ridge between Kirkman and Thistle creeks where placer mining is ongoing and documented historical production is estimated in excess of 63,000 ounces of gold.

6. Geology

The Property lies on the Nasina assemblage within the Yukon-Tanana Terrane which, due to large areas with little or no bedrock exposure and limited modern regional or detailed mapping, remains very poorly understood. Generally it consists of several successions of layered sedimentary and volcanic rocks ranging from Late Proterozoic to Late Permian age that overlay the older Nisling Terrane (Gordey and Makepeace, 1999). These complexly deformed layered rocks have been episodically intruded by various igneous rocks in the Permian, Jurassic, Cretaceous and Tertiary periods. The intrusive events have been accompanied by volcanic activity especially in the Upper Jurassic to Lower Cretaceous. The Yukon-Tanana has been subjected to numerous prolonged deformational events including subduction and accretion that has led to significant structural thickening. Imbricated allochthonous terranes such as Slide Mountain Terrane are evidenced by altered ultramafic fragments.

The Property lies within the White Gold district which is underlain primarily by Devonian to Mississippian quartzites and quartz-biotite schists and Late Devonian to Mississippian intermediate to mafic orthogneiss (Figure 3). The area is cut by numerous intrusions that are for the most part classified as Cretaceous. Limited mapping on the Property indicated that it is underlain by quartzites and quartz-biotite schists (DMN) of the Nasina assemblage (Figure 4).

7. Deposit Types

The Property lies within an underexplored part of the loosely defined Tintina Gold Belt. This metallurgical province has past production of 29.9 million ounces and 39.3 million ounces of resources for total gold resources of 69.2 million ounces. Notable gold deposits are Donlin Creek, Ft. Knox, Pogo and Brewery Creek. The underexplored nature of the Klondike-White Gold district was highlighted by Kaminak's Supremo discovery on its Coffee property in 2010 located approximately 15km southwest of Thistle

Mountain and by Underworld's discovery of the Saddle and Arc zones in May 2009 on the White property located approximately 25km northwest of Thistle Mountain.

The Klondike-White Gold district lies within the larger Dawson Range area where a number of known gold and porphyry copper deposits show a wide range of styles, geological settings and geochemical associations. Stakeholder's exploration effort at Thistle Mountain is not adhering to any firm deposit model but is instead based on practical survey methods that generate drill targets and have led to discoveries by other groups working in the area.

Detailed deep auger-type soil geochemical surveys have proven to be effective in the area, as shown by prospector Shawn Ryan's success on the Coffee and White properties. The Dawson Range generally shows deeply weathered, oxidized soils in an unglaciated environment. This simply means that in order to collect soils that best represent the underlying bedrock it is necessary to take relatively deep soil samples that are likely less weathered and less oxidized. Another useful exploration tool is to fly closely spaced, low altitude, helicopter-borne geophysical surveys to assist in interpreting bedrock units, structure, and alteration.

8. Mineralization

Very little *in situ* mineralization has been identified on the Property to date due primarily to the lack of outcrop. A number of quartz veins and quartz breccias have been uncovered with or without disseminated sulphides.

9. 2011 Exploration Work

9.1. Introduction

Exploration work in 2011 included a deep auger-type soil geochemical survey which sampled the ridge and spurs of the Property. Field work was completed from August 15 to August 20, 2011 and the analytical work was done from August 25, 2011 to November 25, 2011. A detailed Statement of Work is included herein as Appendix A. The Junior Author compiled the field data into digital maps and wrote this Report up to January 31, 2012.

9.2. Sampling and Analytical Procedures

The work was done on foot and by helicopter from a camp set up at the south end of the Property. A total of 510 soil samples, including field duplicates, were collected at stations 50m apart with lines that followed the ridges and spurs on the entire Property in such a way that would indicate potential gold anomalies.

Sample locations were tagged in the field and recorded with HP iPAQ 200 series field computers running GeoInfoMobile and Tierra Mapper software paired with Holux GPS receivers in map datum UTM WGS 84 Zone 7. Sample locations (Figure 5) and descriptions are included as Appendix B. A data CD is also included. Soil sample material varied from clay to sand with some humus samples. Sample depth varied from 20 to 90cm with an average depth of 45cm.

Soil samples were placed in Kraft-type paper bags with the appropriate sample numbers marked in indelible ink. Batches of samples were subsequently dried, sealed in rice bags and shipped to Acme Analytical Laboratories Ltd. ("Acme") in Vancouver, B.C. for analysis. Samples were dried and sieved to - 80 mesh size and analyzed for 36 elements (including gold) by 15 gram Aqua Regia digestion, ICP-MS finish (Appendix C). Acme is accredited under ISO 9001.

9.3. Data Verification

It is the Authors' opinion that the sampling procedures, security measures, sample preparations and analytical methods applied to the soil samples were diligently followed and are adequate to meet industry standards commonly accepted for this level of exploration. The Authors have relied upon the adequacy and accuracy of the analytical results provided by Acme. Independent verification of those results has not been undertaken. The Authors reconciled the field data with the analytical results and found no discrepancies.

9.4. Results

The soil samples returned gold values ranging from below detection limit (i.e. <0.5ppb Au) to a maximum of 46.1ppb Au. Five anomalous soil samples found spread out over the property with a strong sample of 46.1 ppb in the west central area. There was also a cluster of three anomalous samples in the northern section of the Property (Figure 6).

10. Adjacent Properties

In October 2001, Arcus Development Group Inc. announced the discovery of a volcanogenic massive sulphide system on the Touleary property immediately east of the Property (Arcus Press Release - October 4, 2011). Drilling within a 300 section of a 1,200m long zone of coincident geophysical and intermittent gold-in-soil geochemical anomalies intersected notable mineralization in four out of five drill holes. The best intersection was reported in hole TL11-05 and returned 7.18% Cu, 116gpt Ag, 3.55gpt Au and 4.03% Zn across 2.25m from 115.6m. A second zone in the same hole returned 1.44% Cu, 16.5gpt Ag, 0.77gpt Au and 0.29% Zn across 14.15m from 124.5m.

About 900m further east from the Touleary zone is Stakeholder's Ballarat zone where two very strong gold in soil anomalies were identified in 2010 (Hinterland Metals Inc. Press Release - October 28, 2010). Each anomaly appears to trend east-west for a minimum distance of 1000m on the Ballarat property. The southern anomaly is the best defined with maximum values up to 0.8gpt Au. The northern anomaly has numerous high values up to 0.2pgt Au.

Approximately 15km due north of the Property is Kinross's White Gold deposit with a current resource estimate at the Golden Saddle zone of 1,004,570 indicated ounces at 3.2gpt Au and 407,413 inferred ounces at 2.5gpt Au; and at the Arc Zone of 170,470 inferred ounces at 1.2gpt Au (Underworld Press Release - January 19, 2010). Kaminak's discovery hole of 15.5m over 17.1gpt Au at the Supremo zone (Kaminak Press Release - May 26, 2010) is located about 20km southwest of the Property.

The Authors have not verified the information made public on these adjacent properties and cautions that **any such information is not necessarily indicative of the mineralization on the Thistle Mountain property**. However, this information does indicate that the White Gold district is an underexplored area that has solid potential for hosting significant gold deposits.

11. Mineral Processing and Metallurgical Testing

To date no mineral processing or metallurgical testing has been completed at Thistle Mountain.

12. Mineral Resource and Mineral Reserve Estimates

To date no mineral resource or mineral reserve estimates have been completed at Thistle Mountain. The Property is at a "grassroots" level of exploration such that it is too early to make any resource or reserve estimates.

13. Other Relevant Data and Information

The Authors are not aware of any other relevant data and information or explanation to make this report more understandable and not misleading.

14. Interpretation of Results and Conclusions

The 2011 gold in soil results were disappointing. Better results were expected from this area because of the abundance of quartz float on the Property and its location on the ridge separating the rich placer deposits on Kirkman and Thistle creeks.

15. Recommendations

The ridge and spur soil sampling identified only moderately anomalous areas. No further work is recommended at this time. However the Property is strategically located on Thistle Mountain adjacent to several active properties including Arcus' Touleary, Stakeholder's Ballarat, Kaminak's Kirkman, and Kinross's Thistle and Black Fox. It is recommended that the claims be maintained in the event that further work on any one of these properties leads to a new discovery.

#Appendix A - Statement of Work Expenditures

I, MARK FEKETE

VAL D'OR, QUEBEC
of
Phone 819-874-8182
make oath and say that:

Office Date Stamp

1. I am the owner, or agent of the owner, of the mineral claim(s) to which reference is made herein.
2. I have done, or caused to be done, work, on the following mineral claim(s): (Here list claims on which work was actually done by number and name)

SEE ATTACHED SCHEDULE

situated at THISTLE MOUNTAIN Claim sheet No. 115J/14 & 115O/03

in the DAWSON Mining District, to the value of at least 30,014.85 dollars,

since the 2ND day of AUGUST 2011,

to represent the following mineral claims under the authority of Grouping Certificate No. _____.
(Here list claims to be renewed in numerical order, by grant number and claim name, showing renewal period requested).

SEE ATTACHED SCHEDULE

3. The following is a detailed statement of such work: (Set out full particulars of the work done indicating dates work commenced and ended in the twelve months in which such work is required to be done as shown by Section 56).

THE WORK INCLUDED A SOIL GEOCHEMICAL SURVEY OVER THE ENTIRE BLOCK OF 61 CLAIMS. THE

WORK BEGAN AUGUST 2ND, 2011 AND CONTINUED UNTILL SEPTEMBER 20TH, 2011. A TOTAL OF 510

SAMPLES WERE COLLECTED AT AN EXPENCE OF \$37,064. 97 SAMPLES WERE COLLECTED OFF THE CLAIMS

SUCH THAT THE TOTAL ELIGIBLE EXPENCES ARE \$30,014.85.

Sworn before me at _____ this _____ day of _____ 20 ____.

Appendix C - Analytical Certificates

1020 Cordova St. East Vancouver BC V6A 4A3 Canada

Acme Analytical Laboratories (Vancouver) Ltd.

www.acmelab.com

Client:

Stakeholder Gold Corp.

203 - 680 Third Ave.

Val D'Or QC J9P 1S5 Canada

Submitted By: Mark Fekete

Receiving Lab: Canada-Whitehorse

Received: September 08, 2011

Report Date: September 29, 2011

Page: 1 of 9

CERTIFICATE OF ANALYSIS

WHI11001327.1

CLIENT JOB INFORMATION

Project: Thistle Mountain
Shipment ID: 20110819 - 085900
P.O. Number
Number of Samples: 212

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Corp.
203 - 680 Third Ave.
Val D'Or QC J9P 1S5
Canada

CC: Lauren Wilson

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
SS80	212	Dry at 60C sieve 100g to -80 mesh			DAW
Dry at 60C	212	Dry at 60C			DAW
1DX2	212	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CERTIFICATE OF ANALYSIS

WHI11001462.1

CLIENT JOB INFORMATION

Project: Thistle Mountain
Shipment ID: 20110823112607
P.O. Number
Number of Samples: 305

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Corp.
203 - 680 Third Ave.
Val D'Or QC J9P 1S5
Canada

CC: Lauren Wilson

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
SS80	305	Dry at 60C sieve 100g to -80 mesh			DAW
Dry at 60C	305	Dry at 60C			DAW
1DX2	305	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only.
All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.
