1.0 Introduction and Summary

1.1 Introduction:

From June 1st to June 20th and August 10th to 13th, 2011 White Pine Resources Inc. completed reconnaissance soil sampling programs on the MONEY Project project. The MONEY project is comprised of the following contiguous but grouped individually properties: TOONIE claims, NICKEL claims and PENNY claims. This report acknowledges the work filed on all three groupings. Statements of expenditure for each grouping are calculated separately in this report. The programs consisted of a total of 4561 soil samples collected along ridge and spur traverses at 50m sample spacing across the three properties. 2200 soil samples were collected on the TOONIE property, 1380 soil samples were collected on the NICKEL and 981 soil samples were collected on the PENNY property respectively. The goal of the work was to identify potential gold bearing structures outlined by regional magnetic trends and favorable geology.

This soil programs were successful in identifying target areas for follow-up. Soil results from the phase one sampling included maximum values of: Au 475.1 ppb and Cu 452.9 ppm. Additional follow up grid soils sampling was conducted in 2011 field season beyond the scope of this report.

The 2012 field exploration program on the MONEY project is planned to include: geological mapping/prospecting, an additional phase of follow up grid soil sampling, trenching on soil anomalies, and potential diamond drilling, relying on positive results.

1.2 Summary

The MONEY project is located in West-Central Yukon within the Dawson Mining District on NTS mapsheets 115O/12,13 and 115N/09,16. It is situated on the West side of the Yukon River covering the lower end of the Sixtymile River and extending South on the Twentymile creek drainage and North up to Galena creek. It lies approximately 50km Southwest of Dawson City. The property is geographically centred at a latitude of 63˚38’ N and longitude of 140˚00’ W. The MONEY Project (TOONIE, NICKEL an d PENNY claims) is comprised of 1740 contiguous quartz claims, covering an aggregate area of approximately 35,000 hectares. The claims constituting the MONEY Project are held by: Shawn Ryan 70%, Wildwood Exploration 30% and all are optioned to White Pine Resources Inc.

The MONEY Project is located in the Klondike-White Gold Districts within the Tinitna Gold Belt, which hosts a number of regionally significant gold deposits- most notably the White Gold deposit owned by Kinross Gold Corporation (found 50 km to the Southeast), the Coffee Gold project owned by Kaminak Gold Corporation (80km Southeast) and the found adjacent South-East to the property.

The White Gold deposit of Kinross Gold Corporation, which contains an indicated resource of 9,797,000 tonnes grading 3.2 g/t Au, primarily mineable by open pit methods using a cutoff of 0.5 g/t Au for open pit and 2.0 g/t Au for underground *(Weiershäuser et al., 2010)* lies 55 km south-southeast of the project. The deposit types for the MONEY property may be intrusion related gold to epithermal models, which have been postulated for mineralization at the White Gold deposit on the White property.

The Coffee Gold project owned by Kaminak Gold Corporation is a recent gold discovery that was identified from extensive gold in soil anomalies. It has experienced two seasons of drill testing in 2010 & 2011 with eight separate zones of significant gold mineralization being identified, with intercepts grading up to 17.1g/t Au over 15.5m in drill core *(Chartier, 2012)*. No resource calculation has been made at the time of this report.

The Dime property (Stina Resources Inc.) is found adjacent to the SouthEast boundary of the MONEY project. 2009-2011 exploration activity on this project has resulted in the delineation of a significant gold in soil anomaly trending 4.5km with drill results grading up to 1.07g/t over 10.65m and 0.31g/t over 66.0m. Mineralization is occurring in silicified metasedimentary rocks found on the margins of a granitic stock, similar to the one occurring on the on the PENNY claims on the North side of the Sixtymile River.

Historic data is very minimal on the MONEY property. There are no Minfile occurrences documented by the Yukon Geological Survey on the property. The MONEY property contains stream sediment samples from the Yukon Regional Geochemical Database (2003), with at 95 ppb Gold anomaly on the PENNY claims in the South and a 37 ppb anomaly on the TOONIE claims in the North. A regional airborne magnetic/radiometric survey was flown by Shives et al. and was published in 2002. This survey identified prominent North trending magnetic structures that are associated with mineralization found on the Southerly adjacent Dime property.

2.0 Terms of Reference and Source Material

2.1 Terms, Definitions and Units

All geographic coordinates for sample locations and property scale references are reported in the NAD83 datum and projected to Universal Transverse Mercator (UTM) zone 7. Distances are reported in metric units, including metres (m) and kilometres (km). Any monetary references in this report are reported in Canadian dollars (CAD). Directional references are reported relative to True North. Standard elemental abbreviations are utilized when referring to analytical results, including Gold (Au), Copper (Cu). Unit abbreviations for analytical results are indicated where appropriate, including: parts per million (ppm), parts per billion (ppb), grams per tonne (g/t) and percent (%).

2.2 Source Documents

This report incorporates data from multiple sources including regional geochemical, geological and geophysical studied conducted by the Geological Survey of Canada and Yukon Geological Survey, available in public Open Files. Private Company data that is available in the public domain has also been utilized to create this report. Sources are listed in section 9.

3.0 Property Location and Description

3.1 Property Location

The MONEY project is situated in West-Central Yukon within the Dawson Mining District. It can be found on NTS mapsheet 115O/12,13 and 115N/9,16. Geographically, it situating on the West side of the Yukon River covering the lower end of the Sixtymile River, extending south onto Twentymile Creek and North to Galena Creek. The MONEY project is approximately 50km Southwest of Dawson City, Yukon, by air. It is geographically centred at a latitude of 63˚38' N and longitude of 140˚00' W. The MONEY Project is comprised of 1740 contiguous quartz claims covering an aggregate area of approximately 35,000 hectares.
(see figure 1)

3.2 Access

Access to the MONEY property is currently restricted to helicopter, based in Dawson City 50 km to the Northeast. Dawson City is accessed by year-round highway approximately 540 km North from Whitehorse, Yukon. Daily flight service is also available from Whitehorse to Dawson City. From Dawson City, a public airstrip exists on the Lower Sixtymile River adjacent to the property. This airstrip can be used to ferry fuel, gear and personnel to within 2 km of the MONEY Property boundary. (see figure 3)

3.3 Climate, Physiography and Infrastructure

The MONEY Project area has a subarctic continental climate with a summer mean of 10 degrees Celsius and winter mean temperature of -23 degrees Celsius. Summer temperatures can reach up to +35˚C and winter temperatures can drop to -55˚C.

The MONEY Project is located within the Klondike Plateau. This area is characterized by low rolling hills with highly incised V shaped valleys. Elevations on the property range from: 1000m to 335m. The project area is completely below the tree line, with a mix of White Spruce, Birch and Poplar on the South, East and West aspects and Black Spruce on the North facing slopes. Extensive areas of the property has been recently burned by lightning started forest fires; in 2003 on the Northern area of the MONEY and again in 2004 on the Southern half. Discontinuous permafrost occurs throughout the property on the Northerly aspects. The MONEY Project area was not affected by the last continental glaciation. Bedrock is typically intensely weathered and near surface, there is very little outcrop exposure on the property (< 2%).

3.4 Land Tenure

The MONEY Project is comprised of 1740 contiguous quartz claims covering an aggregate area of approximately 35,000 hectares. The claims constituting the MONEY are project held by Shawn Ryan and Wildwood Exploration Inc. The MONEY project is optioned to White Pine Resources Inc.

MONEY Property: List of Claims

TOONIE Claims

Claim Name	Grant Number	Expiry	Status	# Claims
TOONIE 1-140	YD88601-740	10/08/2012	Active	140
TOONIE 141-280	YD89701-840	16/11/2013	Active	140
TOONIE 281-496	YD98541-756	16/11/2013	Active	216
TOONIE 497-652	YD131307-462	16/11/2013	Pending	156

NICKEL Claims

Claim Name	Grant Number	Expiry	Status	# Claims
NICKEL 1-100	YD54385-484	10/08/2012	Active	100

PENNY 1-64	YD16525-588	10/08/2012	Active	100
PENNY 65-490	YD98115-540	16/11/2012	Active	426

(See figure 2: Claim Map)

4.0 Exploration History

The 2011 soil sampling program on the MONEY project was the first intensive examination for mineral potential on this ground. There is very little exploration history on this ground prior to the claims being staked by Shawn Ryan in 2010/2011.

There are no significant Minfile occurrences documented by the Yukon Geological Survey. In 2000, Phelps Dodge Corp. conducted a soil survey that covered a portion of the Southern Nickel Claims that returned a 4 station anomaly with a maximum value of 70ppb Au. In 2010, a small ridge and spur soil sampling program conducted by Shawn Ryan returned additional gold anomalies with maximum values of 47ppb Au.

The MONEY property contains 36 stream sediment samples from the Yukon Regional Geochemical Database (2003). Regionally anomalous values are found within the MONEY property. On the easterly flowing creek draining much of the TOONIE claims two silts returned values of 37 ppb and 35 ppb Au. These silts are coincident with anomalous soil results on the White Pine 2011 ridge and spur sampling program.
(see figure 4)

A regional airborne magnetic/radiometric survey was flown by Shives et al. and was published in 2002. This survey identifies the prominent North trending magnetic low

lineaments that are inferred to be prospective structures on the MONEY Project. (see figure 5)

5.0 Regional Geology

Geologically, the MONEY project lies within the Yukon-Tanana Terrane, Southwest of the Tintina Fault. The MONEY project is underlain by Devono-Mississippian metasedimentary rocks which include orthogneiss, amphibolite schist and gneiss and local horizons of quartzite. This has been intruded by a stock of Cretaceous granodiorite (Kg) in the central area of the property on the PENNY claims. The northern Portion of the PENNY and the complete TOONIE block are overlain by massive flows of andesite and basalt. *(Gordey and Ryan, 2005).* (See Figure 4)

Legend Descriptions for MONEY Geology: Figure 4
(GSC Open File 4970: Gordey and Ryan, 2005)

uKCv	CARMACKS GROUP: rhyodacite and dacite, commonly biotite and hornblende phyric, dominated by lesser andesite and basalt; minor rhyolite
DMt	ORTHOGNEISS (OLDER, 363-343 Ma): DMog, undivided orthogneiss; DMogg, pink to orange K-feldspar rich, granitic orthogneiss, commonly with biotite, banded to layered, commonly includes or associated with DMoga; DMoga, mainly K-feldspar augen
JKg	GRANITE/GRANODIORITE: Kg, pink to grey, locally porphyritic syenogranite to monzogranite plutons and dykes; Kgd, biotite-hornblende bearing granodiorite, locally foliated
mPums	ULTRAMAFIC-GABBRO: foliated to unfoliated amphibolite facies metagabbro, metapyroxenite, serpentinite and talc-siderite schist; mPums, dominantly serpentinite
Dma	AMPHIBOLITE: amphibolite schist and gneiss; metabasite; probably derived from mafic to intermediate volcanic or volcaniclastic rocks; locally associated with psammite or interlayered with orthogneiss
DMc	MARBLE: marble (metacarbonate) derived from pure to impure limestone; associated calc-silicate schist derived from calcareous metapelite
DMq	QUARTZITE: banded to massive, grey to white quartzite; apparantly clastic in origin, or in part, possibly derived from metachert
Er	PORPHYRY: Smokey quartz and K-feldspar phyric rhyolite to rhyodacite stocks and dykes, and possible rare flows
Dmps	QUARTZ-MICA SCHIST: undivided metasedimentary rocks dominated by metapsammite, semipelite and metapelite; commonly quartz-garnet-biotite-muscovite schist metapelite

6.0 2011 Exploration Field Program

6.1 Field Program Summary

This report summarizes the results of the phase one geochemical soil sampling program conducted on the MONEY property during June of 2011 (3572 Soil Samples) and a followup survey of 989 soil samples in August 2011. Soil sampling was contracted to Ground Truth Exploration Inc. of Dawson, YT and was approved and funded by White Pine Resources Inc. of Toronto, Ontario. Phase one Soil Sampling began on June 1st, 2011 and was completed on June 20th, 2011. Follow up soil sampling was conducted between August 10-13, 2011. A total of 4561 soil samples were collected on this survey, with 2200 samples collected on the TOONIE claims, 1380 on the NICKEL and 981 on the PENNY. The soil sampling program was designed as a comprehensive property wide survey to identify initial exploration targets, specifically anomalous values of gold and copper in soil. All major ridges and selected creek side contours were traversed and sampled at 50m intervals. Traverses were recommended by Shawn Ryan and project operations were supervised by Isaac Fage, president of Ground Truth Exploration Inc.

6.2 Sampling Protocol and Data Handling Procedures

All sampling traverses are pre-planned, with pre specified sampling intervals, typically 50m. Field technicians navigate to sample site using handheld GPS units. The soil sampler arrives at each sample site, identifies the most appropriate location to collect the sample and lays out a sheet of plastic (12”x20” ore bag). The soil sample is taken using an Eijklcamp brand hand auger at a depth of between 20cm and 110cm. Samplers strive to consistently collect C-Horizon sample material. Where necessary (rocky or frozen ground) a prospector's pick ('mattock') is used to obtain the sample. The soil is laid out on the sheet of plastic in the order it was recovered from the sample hole. Standardized photos are taken of the sample site- across slope, 5m from sample hole with auger inserted. With the necessary amount of soil (400-500 grams) has been collected, the deepest soil is taken and placed in a bag labeled with the 3-letter project and tagged with a unique barcode ID tag containing a unique 7 digit sample identification number. An aluminum metal tag inscribed with the sample identification number is attached to a rock or branch in a visible area at the sample site along with a length of pink flagging tape.

A field duplicate sample is taken once for every 25 samples. Both samples are given unique Sample identification number. The data for both samples is recorded and a note is made indicating the duplicate and its corresponding sample identification number.

The GPS location of the sample site is recorded with a Garmin GPSMap 60cx or 76cx GPS device in UTM NAD 83 format, and the waypoint is labeled with the project name and the sample identification number.

A weather proof handheld device equipped with a barcode scanner is used in the field to record the descriptive attributes of the sample collected. this includes: sample identification number (scanned into device at sample site), soil colour, soil horizon, slope, sample depth, ground and tree vegetation and sample quality and any other

relevant information. As well, the GPS coordinates are entered into the handheld device as a secondary backup in case of GPS failure.

Each night in the field, the GPS and Palm PDA devices are downloaded to a laptop computer. The data is verified and mapped on a sampler-by-sampler basis in proprietary database auditing and mapping software. At the end of each day, the crew boss inspects all samples for size and consistency as a quality check. Each sampler then repackages all samples for shipping- barcode scanning them as they are placed into a rice bag which is sealed with a barcoded security zip tie. Samples are shipped from the field to the lab on a daily basis, tracked by the unique ID on each security seal.

A backup of the sample data is made, copied onto a USB memory stick and kept in a separate location from the laptop computer until job completion. Where possible, a backup is also sent via e-mail on a daily basis.

6.3 Sample Preparation and Analysis

Samples were processed by Acme Labs in Vancouver with Aqua Regia digestion and analyzed with ICP-MS for 36 elements (Acme Labs 1DX-15 gram). Samples are Dried at 60°C, sieved at -80 mesh.

6.4 Interpretation

The MONEY project Phase one ridge and spur soil sampling program was successful in delineating target areas with observed anomalous values of gold and copper in soil. Results from the initial sampling campaign prompted an expansion of 148 claims on the Northwest boundary of TOONIE property, staked on July 22, 2011. A followup soil survey was conducted in mid August to further expand the anomaly. Results are plotted and summarized below.

Gold values in soil up to 475.1 ppb were observed on the phase one survey, with a 99th percentile value of 13ppb Au. Most notably, multi station gold anomalies were collected on parallel North-South oriented spur ridges on the TOONIE claims. The Western anomalous ridge saw a 10 station anomaly with Gold values over 13ppb and up to 84.4ppb Au. The Eastern ridge has a 4 station anomaly with all Gold values exceeding 48.6 ppb Au and a maximum value of 115.9 ppb Au. There are additional anomalous gold values on adjacent ridges in this area. These gold anomalies are coincident with anomalous Copper in soil and are not correlated to Arsenic. This zone is found in the Cretaceous Carmacks unit along a Northwest trending Mag high lineament. The PENNY property saw anomalous gold in soil in three areas, coincident with anomalous Arsenic in soil and North trending to magnetic low lineaments, found predominantly in the DMps Quartz-Mica Schist unit.
(see figure 10,12).

6.5 Recommendations

Further follow up is required to assess the potential of the anomalous gold and copper observed in the MONEY phase one soil program. Grid soil sampling over the anomalous target areas, trenching, ground geophysics and drilling are planned, dependent on the continued success of the results.

Appendix I: Statement of Work Expenditure:

TOONIE Claims

GroundTruth Exploration Inc. Contract Rates

Wage 15 man days Crew Boss @ $400.00 per day	$ 6,000.00
Wage 60 man days Technician @ $350.00 per day	$21,000.00
Travel – 20 man days @ $250.00	$ 5,000.00
Expediting – 16 hours @ $75/hour	$ 1,200.00
Sampling Supplies/Gear @ $1/sample	$ 2,200.00
GPS/Handheld/Barcode Scanner/Camera @ $18/man day	$ 1,350.00
Laptop/Software @ $50/day	$ 600.00
Satphone (2) @ $35/day * 12 days	$ 840.00
Chainsaw (2) @ $35/day * 12 days	$ 840.00
VHF Radio @ $5/man day	$ 375.00
Georeferenced Sample Site Photos @ $1/sample	$ 2,200.00
Database Management @ $0.50/sample	$ 1,100.00
Food – 75 man days @ $50/day	$ 3,750.00
Camp – 75 man days @ $35/day	$ 2,625.00

Total Ground Truth Sampling Charges	$49,080.00
Helicopter Cost - 28.4 Astar hours @ $1,800.00 per hour	$51,200.00
Assay Cost- 2200 soils @ $18.00 per sample	$39,600.00
Report Writing	$ 750.00
Total	**$140,630.00**

Appendix II: Statement of Qualifications

I, Isaac Fage, having my place of residence at 982 7th Avenue in Dawson City, Yukon Territory do hereby certify that:

1. I obtained an Advanced Diploma in Remote Sensing at the Graduate Level from the Centre for Geographic Sciences, in 2008 and prior to that graduated with a Bachelor of Arts from Dalhousie University in 2002.

2. I am President of Ground Truth Exploration Inc.; the contractor that conducted the exploration field program referred to in this report. I have been employed continuously in the Yukon mineral exploration industry since March 2004.

3. I have directly supervised the field work referred to in this technical report.

4. I have authored this technical report titled: Geochemical Report on the MONEY Property (February, 2012)

5. This report has not been prepared for the purposes, nor in full compliance with, National Instrument 43-101.

Respectfully Submitted on this 27th day of February, 2012

_____

Isaac Fage
