| <b>OTHER</b>   |
|--|
| <b>Weather</b><br>Snow, slippery road conditions.  |
| <b>Notes (incidents, other)</b><br>Move equipment onto sleeman grid with ATVs. Very slippery roads lead to difficulty getting gear up the hill, flagged down a Driller to help move our generator to transmitter site since we were unable to move it uphill with ATVs due to weight and road conditions. Set-out stationary electrodes, mother-line for current and test. |

| <b>Weather</b><br>Heavy Snow, very slippery road conditions.  |
| <b>Notes (incidents, other)</b><br>Generator no-start, Plug fouled, clean spark plug, add 1/2 litre oil. Put the Generator inside the tent to warm up, back to working order. Pack cables into L200N, very heavy windfall, steep ground. Lay-out wire and Stationary electrodes, begin survey of L200N. Replacement Tx in use. Survey slowed by steep/slippy terrain. Pick up cables, leave grid. |

|  |
|--|
| <b>OTHER</b>   |
| Weather<br>Over cast and clearing in the afternoon, slippery conditions.   |
| <b>Notes (incidents, other)</b><br>Set-out cables/train Allen on cables and survey technique and begin survey of L_800N. Steep and slippery terrain from 350E to 650E and high error on last two dipoles slowed production. Cables running across road @ 1000E needed to be picked up multiple times and relaid due to a cat traveling to and from a nearby drill sites, high traffic area. Drilling taking place near survey: estimated @ 100m south of line at station 750E and another drill @ 75m north of line station 850E. Pick up cables and leave grid. |

|--|
| <b>OTHER</b>   |
| Weather<br>Heavy Snow, slippery conditions.  |
| <b>Notes (incidents, other)</b><br>Drill sitting on L_1000N @ station 900, decide to survey L_1200N to avoid noisy data and traffic problems. L_1000 is last line on Sleeman grid with good road access and can be surveyed later. Set-out stationary electrodes, difficulty in finding good contact with ground due to rocky area. Set-out cables, discover line is not picketed correctly or back-sighted. Time lost filling in gaps in cable line due to short/ long stations, lack of chaining/cutting and correct pickets. Begin data aquisition on L_1200N, pick up cables and leave grid. |

|--|
| <b>OTHER</b>   |
| Weather  |
| Overcast, slippery conditions.   |
|  |
| <b>Notes (incidents, other)</b>  |
| <p>Difficulty finding good contact for infinite, site is between two roads and lots of loose boulders. Place stationary electrodes 40m south of Sation 0 on line 1800N. Lay-out and set-up snake and current wire. Begin survey of Line 1800N. Difficulty in aquiring data due to high amount of negative chagabilities, check over snake wire for cross-connections then move Cx up one station to put more distance between Cx and stationary electrodes. Difficulty in moving the spread, each move creates snags and rats-nests of wire due to amount of snow and slope of hill. Only 150m of data acquired due to time spent untagling wire and pulling back to original stations. Request assistance from office for new gear and survey method.</p> |

|   |  |
|---|--|
| <b>OTHER</b>  |  |
| Weather   |  |
| Cold overnight (-30 C),<br>clear and cold.  |  |
|   |  |
| <b>Notes (incidents, other)</b>   |  |
| Arrive at grid before sunrise, all three quads do not start due to cold overnight temperature. Start warming engine blocks with sunflower heater, finally get one quad to start. Jump-start other quads from Kawasaki and arrive at Tx tent @ 3:30. Call Stu to update equipment being sent in. Clean line of snake wire, leave grid. Tyler okays a spot in the garage to thaw excess ice from quads and storage overnight. Perform maintenance on quads. |  |

| Weather                                |
| Heavy Snow overnight,<br>Snow all day. |

|  |
|--|
| <b>Notes (incidents, other)</b>  |
| <p>Liam Fowlie, Dennis Bulmer and Allen Lee leave for Dawson to pick up gear @ Kluane freight. Josh LeBlanc and Mac Clohan in camp to service quads, clean air filters, remove remaining ice, test batteries, re-fix chains to wheels. Arrive back in camp w/ gear @ 10:30 due to poor condition of HWY and roads to camp. Re-fix chains to truck, finish oil change and service on quads, leave for grid. Begin shuttling equipment to Tx tent and to grid. Difficulty in accessing the grid due to snow drifts, Quads bog down. Finally get all gear moved to grid by 4pm, set up line and stage cables, salt and water stationary electrodes. Dennis Bulmer driving Polaris when the hay wire holding the (oversized)chain gave way and with the suspension compressed the loose chain caught on the left rear fender shearing it off almost completely. Quad un-usable due to lack of barrier between leg and turning wheel. Leave grid and park quads in camp @ garage.</p> |

|   |
|---|
| <b>OTHER</b>  |
| Weather   |
| Snow in the morning,<br>clearing in afternoon.  |
|   |
| <b>Notes (incidents, other)</b>   |
| Arrive at grid, test wire, broken. Fix multiple breaks in Current wire due to foxes. Water and salt on stationary electrodes. Set-out cables and Begin survey of L1800N. Station OE - 650E slow due to Kluane drills being moved off of grid, heavy traffic. Finish @ station 650 and pick up cables, stage cables at western end of line and leave grid. |

| Weather   |
| Overcast  |
|   |
| Notes (incidents, other)  |
| Quads in garage, doors frozen shut, thaw out doors, finally open with sledge. Four leave for grid to do 3-man IP while LF tries to start truck in camp. Truck no start (bertha), magnetic block heater on starter, tap starter and solenoid, jump-start no effect. Check leads, re-tap starter, solenoid and jump start, finally get the truck to start 11:30. Head to grid, arrive to find Mac Clohan and Dennis Bulmer soldering the base-radio cord. Cord was chewed to pieces during the night by a fox. Test radio, wire and move to line. Set-out remainin cables and finish surveying. LF pick up stationary electrodes, extend wire and current wire to new line. Dennis and Josh pick up wire on L_1800. Mac and Al pack out remaining gear to drill pump road on L_800N. Leave grid after dark. |

|  |  |
|--|--|
| <b>OTHER</b>   |  |
| Weather  |  |
| Clearing, windy and cold.  |  |
| <i>Notes (incidents, other)</i>  |  |
| Salt and water stationary electrodes, pack in current spooler, cables and test wire. Station errors between 200-600E, Line not back-sighted. Re-arrange potential wires and cables and begin data acquisition. No contact between stations 50E and 100E, no data. When moving up same problem encountered with Cx injection, no contact. Move first Cx station to 150 and begin data acquisition. Pick up cables and leave grid. |  |

| Weather  |
| Clear and cold.  |
|  |
| <b>Notes (incidents, other)</b>  |
| With help from GPD Staff (Olivier/Geo-tech) and a GPD truck we moved our gear from the top of the grid at the Tx site to the bottom of the access road to the grid. We used our truck to move most of it back to camp and began organizing our equipment. Excess equipment to be shipped with Kluane. LF and DB take excess equipment to Dawson to ship back to Whitehorse but due to new winter hours @ Kluane Freight they were not open and we were un-able to ship our gear. LF and DB back to camp, continue to organize equipment. |
