Certificate of Qualifications

I, Mark Fekete, having my place of residence at 178 Dennison Boulevard in Val d'Or in the Province of Quebec do hereby certify that:

1. I obtained a Bachelor of Science Degree in Geology from the University of British Columbia in 1986, I have been engaged as a Geologist continuously since 1986 and I am a Member in good standing of the Order of Geologists of Quebec (OGQ #553) and the Association of Professional Engineers and Geoscientists of British Columbia (APEGBC #31440), and I am a "qualified person" as defined in Section 1.2 in and for the purposes of National Instrument 43-101;
2. I have visited the Selwyn property on numerous occasions including most recently in June 2012;
3. I co-wrote and I am, as the senior author and qualified person, responsible for the contents of this technical report entitled "Memorandum Report of 2012 Surface Work on the Selwyn Property, SR 1 to 397(YE67401 to YE67797), Whitehorse Mining District, Yukon, NTS Sheet 115J09, 138°21'W., 62°65'N." based on my professional experience, a review of relevant reports and maps made available to me from government and corporate sources and my participation in the work programs described in the report;
4. I am not aware of any material fact or material change with respect to the subject matter of the report that is not disclosed in the report which, by its omission, makes the report misleading;
5. I am an Officer and Director, and I beneficially hold a number of shares in Stakeholder Gold Corp.;
6. I hold no direct interest in the Selwyn property as a result of my prior involvement with the property; and
7. I have read, and this report has not been prepared for the purposes, nor in full compliance with, National Instrument 43-101,1 and according to Form 43-101F1.

Respectfully submitted this 13th day of August 2012,

(s) "Mark Fekete"

Mark Fekete, P.Geo.

Certificate of Qualifications

I, Drew MacPhail, having my place of residence at 610 Church St. in Port Williams in the Province of Nova Scotia do hereby certify that:

1. I obtained a Bachelor of Science Degree in Geology from Acadia University in May 2012, I have been engaged as a Geologist in Training (“GIT”) continuously since May 2012 and I am not a “qualified person” as defined in Section 1.2 in and for the purposes of National Instrument 43-101;
2. I have visited the Selwyn property on numerous occasions including most recently in June 2012;
3. I co-wrote this technical report entitled “Memorandum Report of 2012 Surface Work on the Selwyn Property, Dawson Mining District, Yukon, NTS Sheets 115J09, 138°21’W., 62°65’N. Under the supervision of Mark Fekete, P.Geo.;
4. I am not aware of any material fact or material change with respect to the subject matter of the report that is not disclosed in the report which, by its omission, makes the report misleading;
5. I do not beneficially hold a number of shares in Stakeholder Gold Corp.;
6. I hold no direct interest in the Selwyn property as a result of any prior involvement with the property; and
7. I have read, and this report has not been prepared for the purposes, nor in full compliance with, National Instrument 43-101 and according to Form 43-101F1.

Respectfully submitted this 13th day of August 2012,

(s) “Drew MacPhail”

Drew MacPhail, G.I.T.

Introduction and Terms of Reference

Breakaway Exploration Management Inc. (“Breakaway”) was engaged by Stakeholder Gold Corp. (“Stakeholder”) to manage and report on a sampling program done on the Selwyn property (“Selwyn” or the “Property”) in Yukon in 2012. The goal of the program was to do preliminary reconnaissance testing for anomalous gold-in-soil on the Property by completing deep-auger-type sampling on pre-determined ridge and spur traverses. This memorandum report was prepared to complete statutory assessment work filings required under the Yukon Quartz Mining Act. It is not intended to and does not fully comply with National Instrument 43-101.

Location, Property Information and Access

The Selwyn property is located approximately 170 kilometres south-southwest of Dawson City in the Dawson Range of Yukon (Figure 1). It covers a section of the Selwyn River valley and adjacent uplands approximately 10 kilometres south of the Yukon River. The Property encloses an approximate area of 7,530 hectares within the Whitehorse Mining Division, and includes 397 contiguous, un-surveyed mineral titles SR 1 to 397 (YE67401 to YE67797) held 100% by Stakeholder (Figure 2). The approximate centre of the Property is described by 63° 65' North Latitude and 139° 21' West Longitude on N.T.S. Sheets 115J09. A list of claims is included herein as Appendix A.

There is no road access to the Property. Access to the claims is by helicopter, which can be chartered year round from Dawson City or Whitehorse. The Selwyn property is located in an isolated part of Yukon with relatively few local resources or infrastructure. The Property can be worked by helicopter from Dawson City or from an exploration camp set up on or near the Property. A camp can be supported from Dawson City, where services are limited, or from Whitehorse where a full range of services are locally available including line-cutting, geophysics, drilling, assaying, aircraft charters etc. Commercial barges operating on the Yukon River allow for fuel, supplies and equipment to be transported on the Yukon River to a point roughly 10 kilometres north of the Property.

Geology

The Property lies within the Yukon-Tanana Terrane that generally consists of several successions of layered sedimentary and volcanic rocks ranging from Late Proterozoic to Late Permian age that overlay the older Nisling Terrane. These complexly deformed layered rocks have been episodically intruded by various crystalline rocks in the Permian, Jurassic, Cretaceous and Tertiary periods. The intrusive events have been accompanied by volcanic activity especially in the Upper Jurassic to Lower Cretaceous. The Yukon-Tanana has been subjected to numerous prolonged deformational events including subduction and accretion that has led to significant structural thickening. Imbricated allochthonous terranes such as Slide Mountain Terrane are evidenced by altered ultramafic fragments.

Compilation work (Gordey and Makepeace, 1999) in the Yukon River area indicate that the area of the Selwyn property (Figure 3) is underlain by an assortment of Devonian and Mississippian metamorphic rocks (DMf and MSR) and Early to mid-Cretaceous intrusive rocks (MKg). The Property is bordered on the northeastern flank by the Finlayson Assemblage, a Devonian to Mississippian rock group generally composed of mafic to felsic meta-volcanics. The southwestern edge of the Property consists of the Simpson Range Suite which is characterized by foliated hornblende bearing meta-diorite to meta-tonalite. The majority of the Property however is underlain by a member of the Whitehorse Suite, an Early to mid-Cretaceous porphyritic granodiorite.

Figure 3 continued. Legend for Regional Geology

2012 Exploration

A soil geochemical survey was completed on Selwyn from June 13 to 18, 2012 by a five-man crew on foot with helicopter set-outs from Stakeholder's Ballarat camp located 60km to the northwest. Final results from the analytical work were received on July 21, 2012. Geologist Drew MacPhail (the "Junior Author") compiled the field data into digital maps and wrote this Report up to August 13, 2012. A detailed Statement of Work is included herein as Appendix A. The work was planned under the supervision of geologist Mark Fekete (the "Senior Author") and managed on a day-to-day basis by the Junior Author.

A total of 866 deep-auger-type soil samples including field duplicates were collected with hand augers at 50m sample intervals on pre-determined ridge and spur traverse lines. Sample locations were tagged in the field and recorded with HP iPAQ 200 series field computers running GeoInfoMobile and Tierra Mapper software paired with Holux GPS receivers in map datum UTM WGS84 Zone 7N. Sample locations (Figure 4) and descriptions are included as Appendix B. Soil sample material varied from colluvium to lithosoil. Sample depth varied from 20 to 90cm with an average depth of 41cm. Soil samples were placed in Kraft-type paper bags with the appropriate sample numbers marked in indelible ink. Batches of samples were subsequently dried, sealed in rice bags and shipped to Acme Analytical Laboratories Ltd. ("Acme") in Vancouver, B.C. for analysis. Samples were dried and sieved to -80 mesh size and analyzed for 36 elements (including gold) by 15 gram Aqua Regia digestion, ICP-MS finish (Appendix C). Acme is accredited under ISO 9001.

It is the Authors' opinion that the sampling procedures, security measures, sample preparations and analytical methods applied to the soil samples were diligently followed and are adequate to meet industry standards commonly accepted for this level of exploration. The Authors have relied upon the adequacy and accuracy of the analytical results provided by Acme. Independent verification of those results has not been undertaken. The Junior Author reconciled the field data with the analytical results and found no irregularities.

2012 Surface Results

The soil samples returned gold values ranging from below the detection limit (i.e. <5 parts per billion gold) to a maximum of 50.7ppb Au (Figure 5). A total of 24 samples returned values greater than 10ppb Au and are considered anomalous. All but three of these samples are located in the southwestern corner of the property and form two distinct clusters along two separate traverse lines. The western cluster includes seven anomalous samples up to maximum of 50.6ppb Au and stretches for approximately 440m. The eastern cluster includes eight anomalous samples up to a maximum of 50.7ppb Au and covers a distance of approximately 660m.

Silver, arsenic, copper, antimony, and zinc values were evaluated as calculated percentiles and plotted on thematic maps (Figures 1 to 10).

Table 1 - Calculated Percentiles

Field	Minimum	Maximum	Mean	Percentile70	Percentile90	Percentile95	Percentile98
Ag ppm	0.05	2.3	0.082	0.05	0.2	0.2	0.3
As ppm	0.7	71.1	7.735	8.45	10.85	13.575	22.99
Au ppb	0.25	50.7	2.725	2.8	4.9	6.85	10.51
Cu ppm	2.1	64.5	14.913	17.2	23.15	27.1	31.67
Sb ppm	0.05	11.7	0.626	0.6	1	1.3	1.8
Zn ppm	22	250	62.476	67	79	88	102.7

Interpretation of Results and Conclusions

The soil sample program outlined two areas in the southeastern corner of the property that are moderately anomalous and require further work. Results for other metals that are typically good pathfinder elements for gold do not correlate well with the two anomalous gold zones. Overall the values for these metals are relatively low compared to Stakeholder's regional database. However, there are a number of sites that show relatively strong concentrations on a percentile basis for certain metals and in some cases several metals combine to show coincident highs.

The ridge and spur sampling methodology may have been affected by the morphology of the Property which is characterized by broad table top ridges incised by extremely steep-sided valleys. The sampling may have been skewed by preferential selection of one rock type on the ridge tops. Also it appears that the overburden may be thicker on the ridges relative to the valley slopes.

Recommendations

It is recommended that exploration work continue on Selwyn with two days of prospecting and one day of stream sediment sampling. The prospecting should focus on the two gold anomalies found in the southwestern corner of the Property, and over areas where there is a concentration of pathfinder metals such as arsenic. Prospecting is preferred over soil sampling because of the ample amount outcrop on Selwyn. The one day of stream sediment sampling will provide preliminary geochemical data from all the major streams on the Property. Hopefully this will provide target areas for detailed soil sampling on the slopes of one or more stream valleys.

Appendix C - Analytical Certificates

1020 Cordova St. East Vancouver BC V6A 4A3 Canada

Acme Analytical Laboratories (Vancouver) Ltd.

www.acmelab.com

Client: **Stakeholder Gold Corp.**

203 - 680 Third Ave.
Val D'Or QC J9P 1S5 Canada

Submitted By: Mark Fekete

Receiving Lab: Canada-Whitehorse

Received: June 22, 2012

Report Date: July 21, 2012

Page: 1 of 12

CERTIFICATE OF ANALYSIS

WHI12000161.1

CLIENT JOB INFORMATION

Project: Selwyn
Shipment ID: 20120620074624
P.O. Number
Number of Samples: 320

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Corp.
203 - 680 Third Ave.
Val D'Or QC J9P 1S5
Canada

CC: Drew Macphail

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
Dry at 60C	320	Dry at 60C			WHI
SS80	320	Dry at 60C sieve 100g to -80 mesh			WHI
1DX2	320	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CERTIFICATE OF ANALYSIS

WHI12000162.1

CLIENT JOB INFORMATION

Project: Selwyn
Shipment ID: 20120620074936
P.O. Number
Number of Samples: 227

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Corp.
203 - 680 Third Ave.
Val D'Or QC J9P 1S5
Canada

CC: Drew Macphail

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
Dry at 60C	227	Dry at 60C			WHI
SS80	227	Dry at 60C sieve 100g to -80 mesh			WHI
1DX2	227	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CERTIFICATE OF ANALYSIS

WHI12000163.1

CLIENT JOB INFORMATION

Project: Selwyn
Shipment ID: 20120620074852
P.O. Number
Number of Samples: 320

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Corp.
203 - 680 Third Ave.
Val D'Or QC J9P 1S5
Canada

CC: Drew Macphail

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
Dry at 60C	320	Dry at 60C			WHI
SS80	320	Dry at 60C sieve 100g to -80 mesh			WHI
1DX2	320	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.
