BH11-20	5.00	6.10	
BH11-20	6.10	7.00	6.10-70.10: Sms. Weakly weathered, very fine grained aphanitic red mudstone with frequent small faults and moderate clay alteration. The red mudstone is interbedded with minor sandy green mudstone lenses, average 2-5% Only one thick green mudstone bed is observed, from 47.25-49m. Deformation is most apparent by observing the green mudstone lenses wich indicate higly variable bedding and frequent crenulated zones. No veining or mineralization is observed.
