## 1.0 Introduction

The Ida Oro Property is located 90km East of Dawson City, Yukon within the Dawson Mining District (Figure 1). The project area is made up of 3550 contiguous claims covering an area of approximately 71107 hectares. The Ida Oro Property is located within NTS map sheets 116A, 116B, and 115P.

### 1.1 Property Status

The Ida Oro property consists of 3550 registered claims. Breakdown of claim blocks are as follows: IDA ORO EXP (1184 claims), IDAORO (308 claims), Zorro (718 claims), Toro (580 claims), MLN (285 claims), KIETHS (322 claims), PILSNER (118 claims), and PANO (42 claims) (Figure 2). More details can be found in the September 27, 2010 Ryan Gold Corp press release (http://www.ryangold.com).

| Ida Oro Project Claim Summary | | |
|---|---|---|
| **Claim Group** | **Claims** | **Area** |
| IDAORO | 308 | 6386 |
| IDAORO EXP | 1184 | 23397 |
| PANO | 42 | 848 |
| ZORRO | 718 | 14500 |
| TORO | 580 | 11714 |
| MLN | 285 | 5430 |
| KEITHS | 322 | 6442 |
| PILSNER | 118 | 2390 |
| **Total** | **3550** | **71107** |

**Table 1: Ida Oro Property claim summary**

These claims have been compiled in groups <750 for assessment purposes and the breakdown of these assessment groupings can be found in Table 3 in section 2.0 and in Figures 12-18. Ownership details of these claim groups can be found in the Claim Status Reports within the certificates of work (Appendix H).

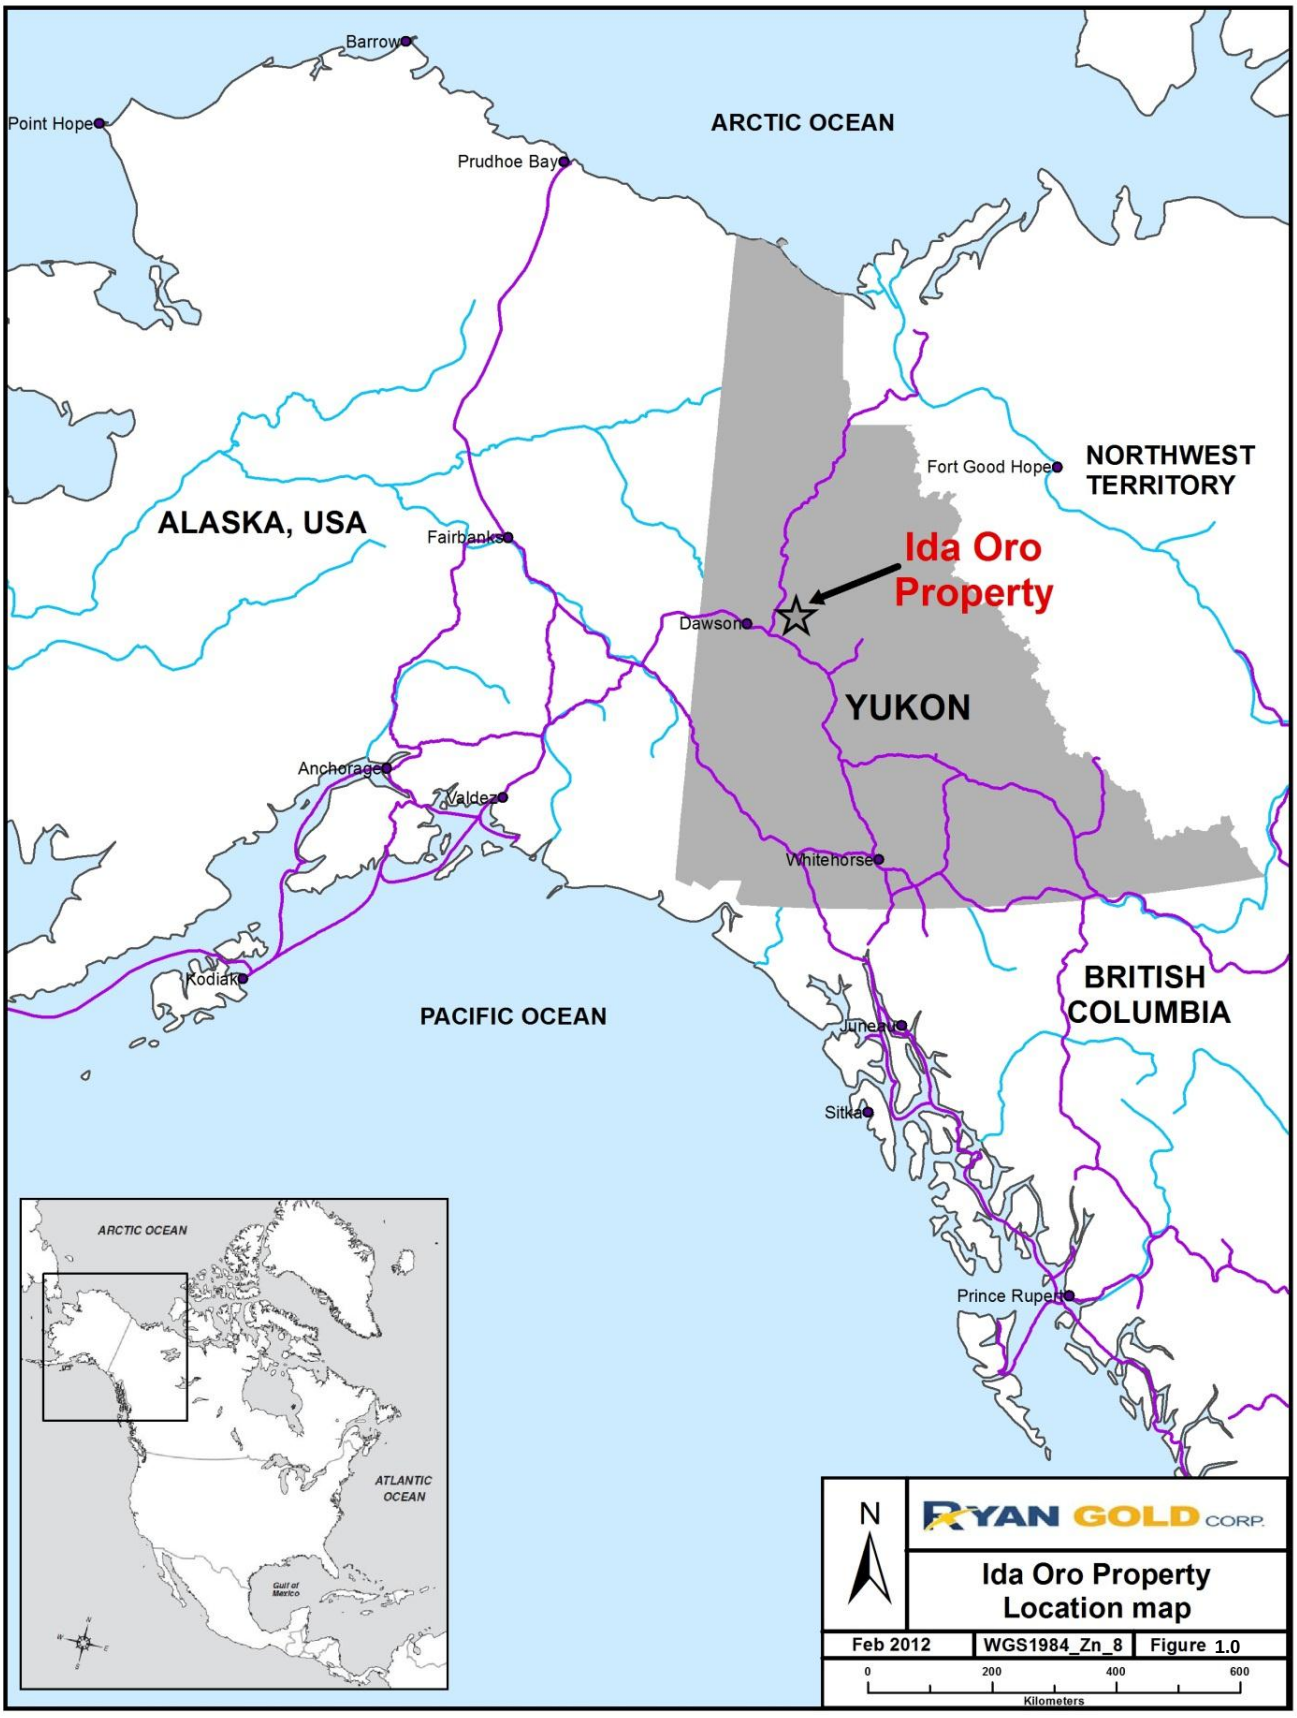

**Figure 1: Location Map, Ida Oro Property**

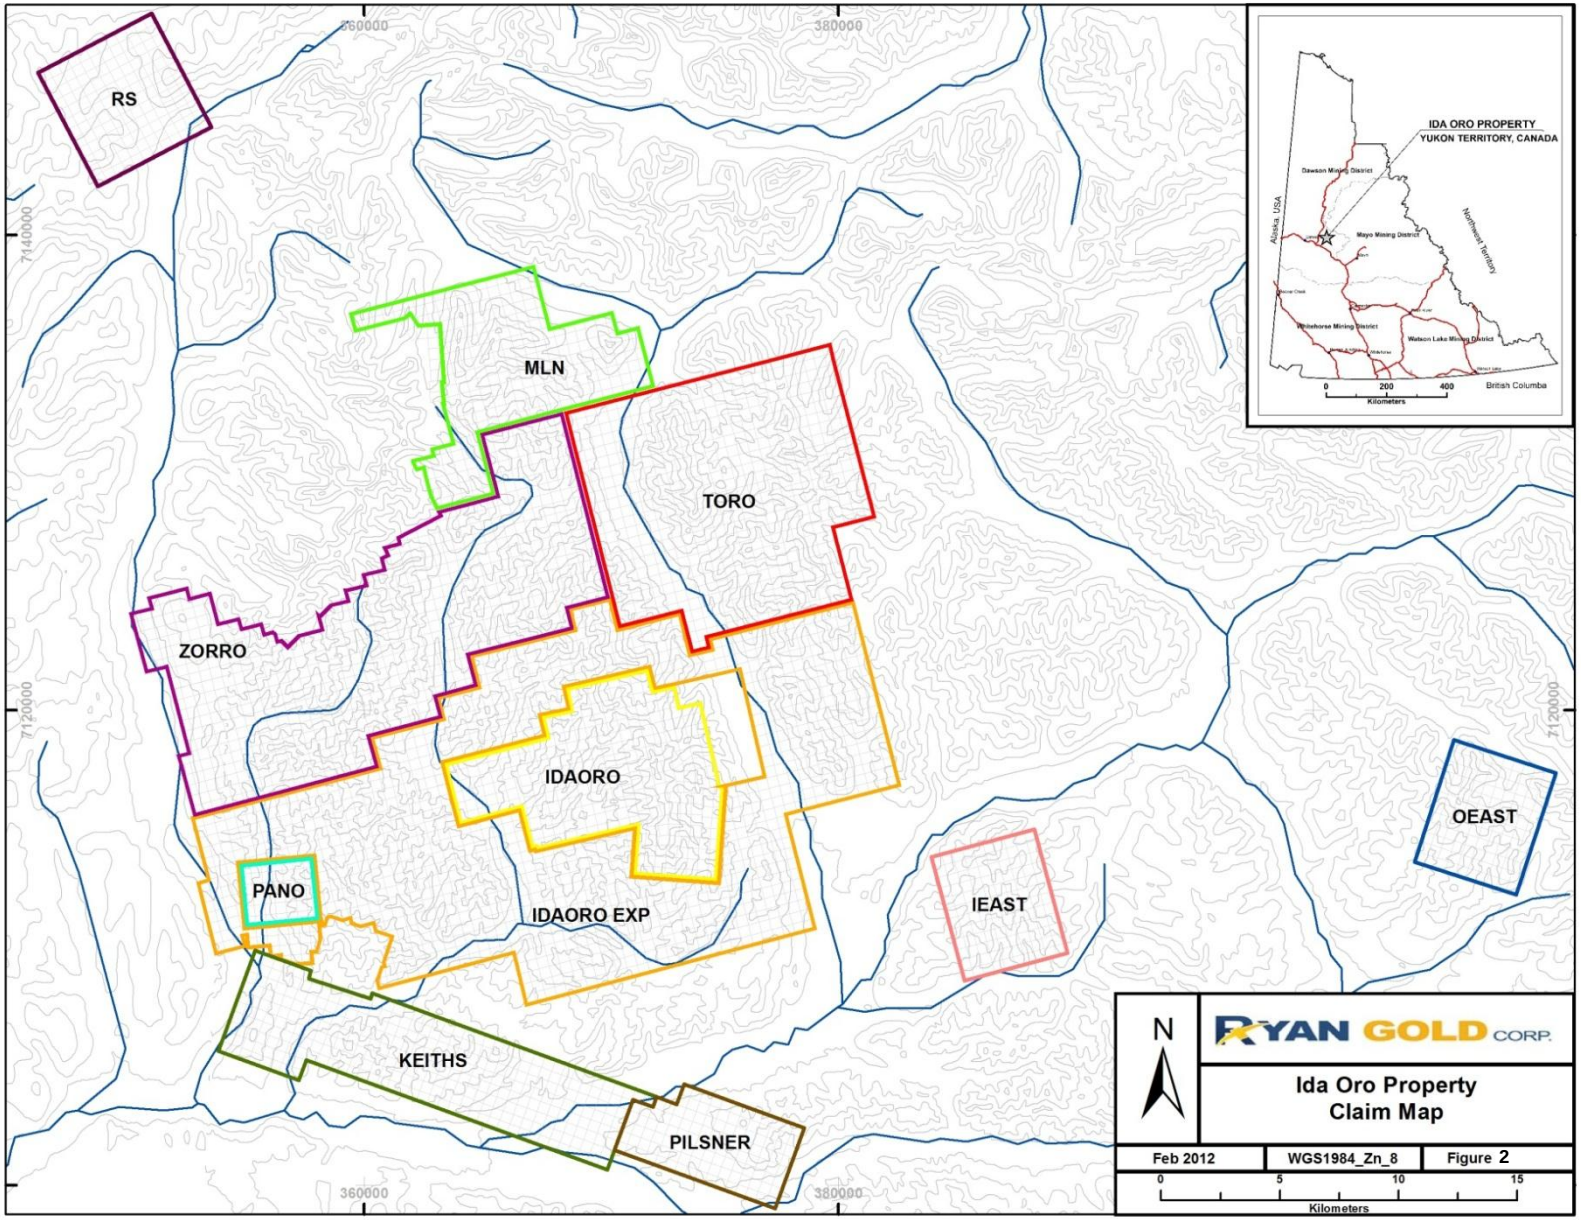

**Figure 2: Overview map showing claim blocks by name.**

## 1.2 Accessibility, Climate, Local Resources, Infrastructure and Physiography

The Ida Oro Property is located within the Olgilvie Mountain Range 90 km East of Dawson City, Yukon (Figure 1). The Brewery Creek Deposit (Golden Predator Corp.) is located 25km WSW of the project. Access to the project is by helicopter from Dawson City or from Brewery Creek Staging Area (Figure 3).

The land is unglaciated and consists of rugged ridgelines and valleys ranging from below 1000m to just over 1800m. The majority of the property is below treeline; however, most 2011 work was completed at or above the treeline on ridges and spurs. Land cover is mostly short evergreen and deciduous trees, shrubs in the valleys, and a moss and lichen coating of rocks above treeline. Major rivers and creeks within the project area include the Klondike River, Hamilton Creek, and Aussie Creek. Bedrock is abundant (>50%) above treeline and decreases rapidly to less than 1% in valleys and depressions.

The 2011 exploration and drill program was helicopter-supported (TransNorth Helicopters, A-Star, 206 Bell Jet Ranger, and Fireweed Helicopters, 204 Bell).

The region encompassing the Ida Oro Project has a sub-arctic continental climate with a summer mean of 10 degrees Celsius and a winter mean of minus 23 degrees Celsius. Summer and winter temperatures can reach up to 35 and minus 55 degrees Celsius, respectively. Dawson City, the nearest access point, has a daily average above freezing for 180 days per year.

## 1.3 Property History

The Ida Oro Project area was original staked by Rio Tinto Canadian Exploration Ltd. (Rio Canex), in 1979. Regional silt sampling conducted by the Geological Survey of Canada found anomalous arsenic, antimony and mercury, and RioCanex began working the property from 1979 to 1981 based on those results. The program included geologic mapping, rock and chip sampling, soil sampling, and blast trenching. In total, 1034 rock, and 3268 soil samples were taken over three years with 51 blast trenches sampled. Soils were analyzed for indicator elements As, Sb, and Hg; however, Au was not analyzed. The results of rock and chip sampling and trenching revealed a 300m by 800m zone of >500ppb Au in the central portion of the property. Rock chip samples returned a high value of 3820ppb Au in 1980 and trenching in 1981 returned a maximum value of 10.6g/t Au. In total, RioCanex expenditures totaled $79,500 over three years and in spite of each assessment report recommending that additional exploration work was warranted, no further exploration was performed in the following years and claims were allowed to lapse in 1986.

In 1987, The Ida Oro property was re-staked as IDA 1-23 and ORO 1-28 by Noranda Exploration Company Ltd. Exploration focussed on mapping and sampling of the central portion of the property. Between 1987 and 1989, 1597 soil, 323 rock, 218 chip and 21 grab samples were collected. Results confirmed previous anomalies.

The Ida claims were then picked up by Orinoco Gold Inc. in 1995 and work included 218 chip and 53 soil samples targeting the previously unexplored southernmost intrusive stock. Results returned three anomalous samples of 2.05, 5.49 and 9.27 g/t Au.

In 2000, NovaGold Resources acquired the Ida claims and performed rock sampling and mapping over the property. Results from 58 rock samples taken included 1.4, 2.9 and 4.5 g/t Au with an average of 0.43 g/t. Conclusions from the report noted the excellent potential of the property to host significant intrusive and sediment hosted gold deposits and recommended drilling in late 2000; however, no further exploration work was completed and claims were allowed to lapse.

From 2006 to 2009, Ida and surrounding were re-staked and optioned by Shawn Ryan and Henry Neugebauer and a joint venture agreement resulted. Rock and grid soil sampling confirmed the presence of gold mineralization over the property with several samples within a single soil line returning multi gram per ton gold proximal to historical anomalous zones.

## 1.4 Description of Undertakings

All 2011 exploration on the Ida Oro property occurred between May 12 and Oct 02 2011. The first crews mobilized to the Ida Oro property on June 4, 2011. The main Ida Oro camp was established by mid-July and drilling commenced on July 27, 2011. From June 19 to Sept 20 surficial geochemical sampling was undertaken across the Ida Oro property, supported by several small (<10man) camps and the main Ida Oro camp. After October 2 the main Ida Oro camp was shut down and field operations ceased. All supplies and crews working on the property were flown into camps by helicopter from Dawson City or from Brewery Creek. The camp served as a base for geological staff, drilling contractors, pad builders, soil samplers, and support staff.

### *1.4.1 Surficial Undertakings*

Surficial work consisted of soil sampling and bedrock geologic mapping.

Soil sampling (10109 samples)

Soil sampling was conducted by Groundtruth Exploration from various small camps within the Ida Oro property from June 19 to September 2, 2011 with the goal of discovering new areas of mineralization. Traverses consisted primarily of ridge and spur and contour sampling and 50m spacing was used.

Soil samples were collected primarily by hand auger from either the "B" or "C" horizons based on local conditions. Each sample was packaged in 4x6" kraft style paper sample bags, and information such as UTM easting and northing, soil type, color, terrain, and photographs are collected.

Bedrock geological mapping

Mapping on the Ida Oro property was conducted by Ryan Gold staff between June 4 and July 15, 2011. Mapping concentrated on the central claim area along ridgelines. Mapping culminated in the production of the Ida Oro geologic map (Figure 6) and cross section (Figure 7).

### *1.4.2 Drilling*

Drilling on the Ida Oro property took place between July 27th, 2011 and September 4th, 2011 with 11 diamond drill holes completed with two rigs for a total of 2854.50m. Drilling was contracted to Kluane Drilling Ltd. based out of Whitehorse, Yukon. Planned hole depths were 300m; however, holes were lengthened or shortened based on mineralization from core. Both HTW and NTW coring equipment were used in a raio of 2:1 with the initial 100m of HTW followed by 200m of NTW. Rigs, water lines and drilling equipment were mobilized and moved on site using helicopter support.

| Hole ID | UTM Easting | UTM Northing | Elevation (m) | Length (m) | Azimuth | Inclination |
|---|---|---|---|---|---|---|

**Table 2: Collar locations and associated information.**

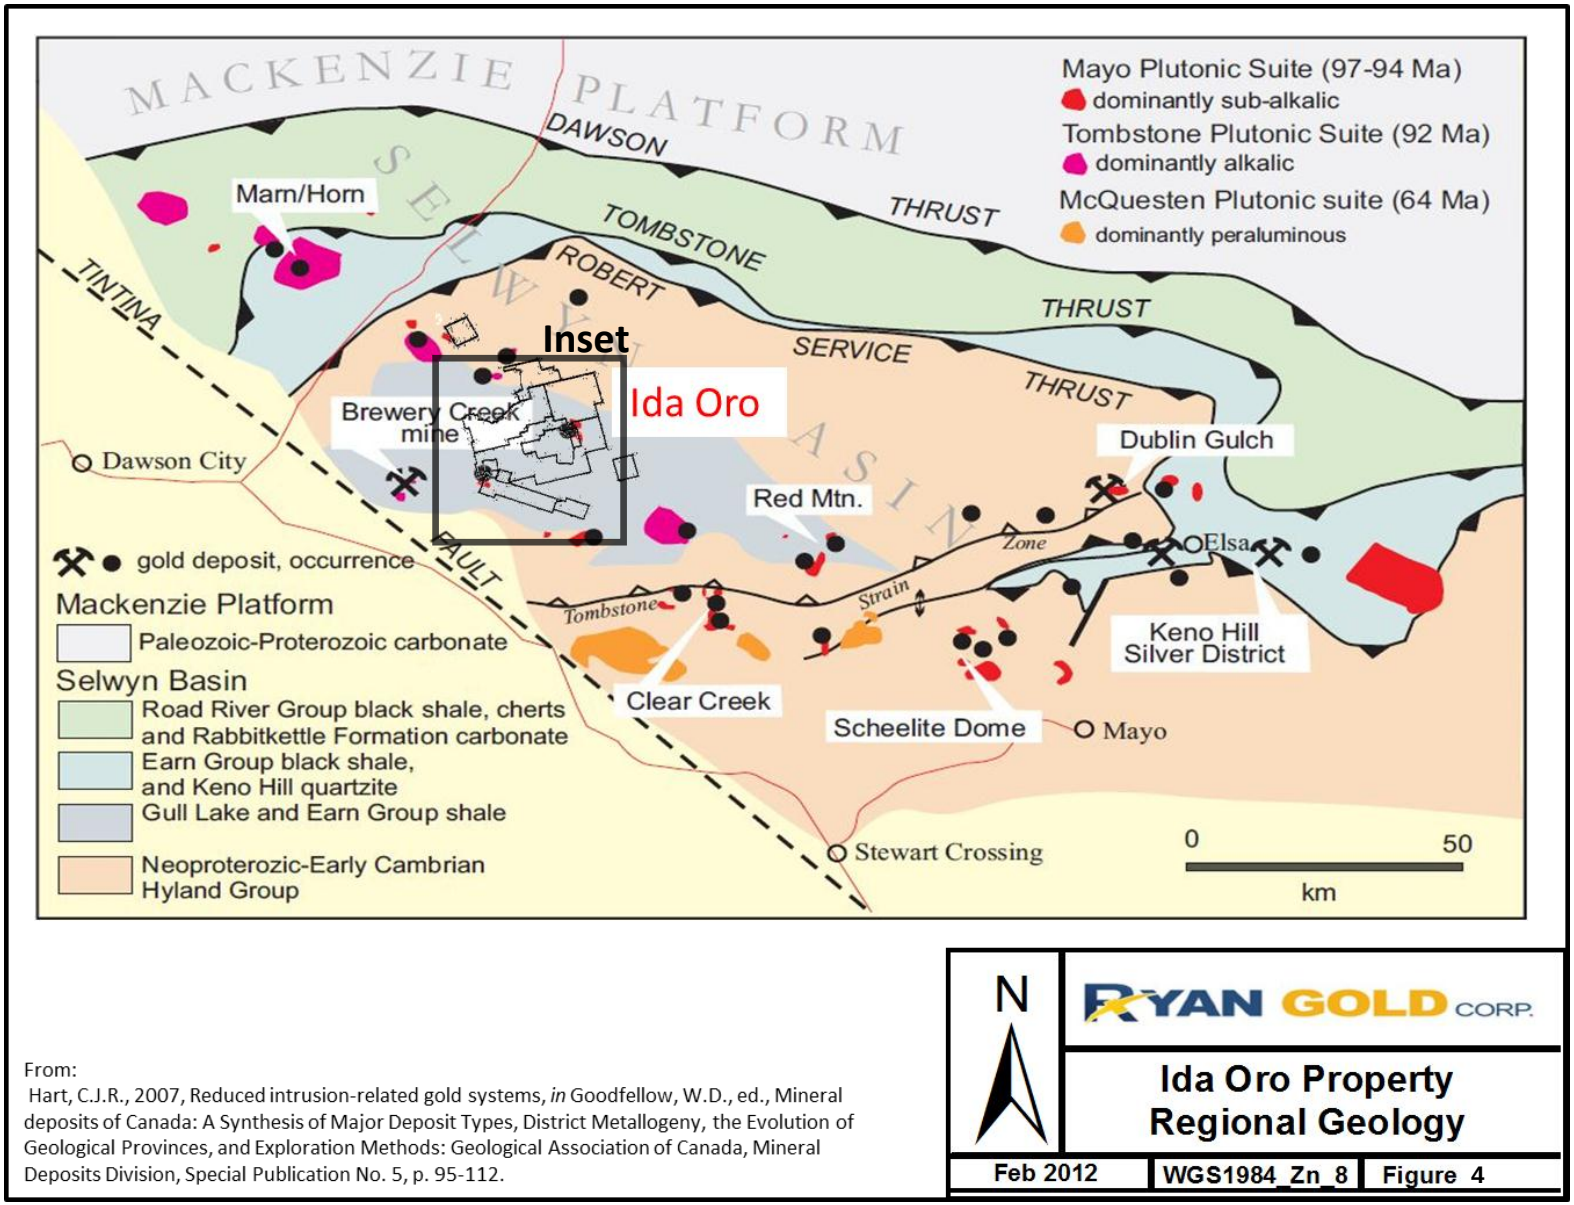

## 1.6 Regional Geology

The Ida Oro property lies within Selwyn Basin, part of the North American Cordilleran Miogeocline (Gordy and Anderson, 1993). The regional geology of the area was initially mapped in 1972 by Green at 1:250,000 scale. Although surrounding areas have been mapped at smaller scales (1:50,000), mapping of the property is confined to RioCanex and NovaGold Corp.

The Cordilleran Miogeocline records three major periods of geologic and tectonic evolution on the western edge of Ancestral North America. From the mid Proterozoic to late Precambrian, rifting of the cratonic margin led to deposition of a thick wedge (>10km) of clastic sediments known as the Windermere Supergroup. Sedimentation during this time was punctuated and separated by major regional deformation and rifting.

In the late Precambrian, tectonic quiescence led to the development of passive margin sedimentation. Two contrasting but contemporaneous facies belts parallel to the cratonic margin resulted. To the northeast, shallow water, carbonate and clastic shelf facies rocks known as the Mackenzie Platform were deposited in a variably subsiding near shore environment. To the southwest, offshelf slope and basin deep water facies developed forming the outer edge of the Miogeocline known as the Selwyn Basin (Gordy and Anderson, 1993).

The Selwyn Basin is comprised predominately of thick off-shelf siliclastic sedimentary sequences spanning from the Proterozoic through to the Triassic. Geographically, the Selwyn Basin is defined as a westward tapering package that accumulated on the sloping Precambrian Ancestral North America (Gabrielse and Yorath, 1991).

Hart, C.J.R., 2007, Reduced intrusion-related gold systems, *in* Goodfellow, W.D., ed., Mineral deposits of Canada: A Synthesis of Major Deposit Types, District Metallogeny, the Evolution of Geological Provinces, and Exploration Methods: Geological Association of Canada, Mineral Deposits Division, Special Publication No. 5, p. 95-112.

**Figure 4: Regional geology after Hart (2007)**

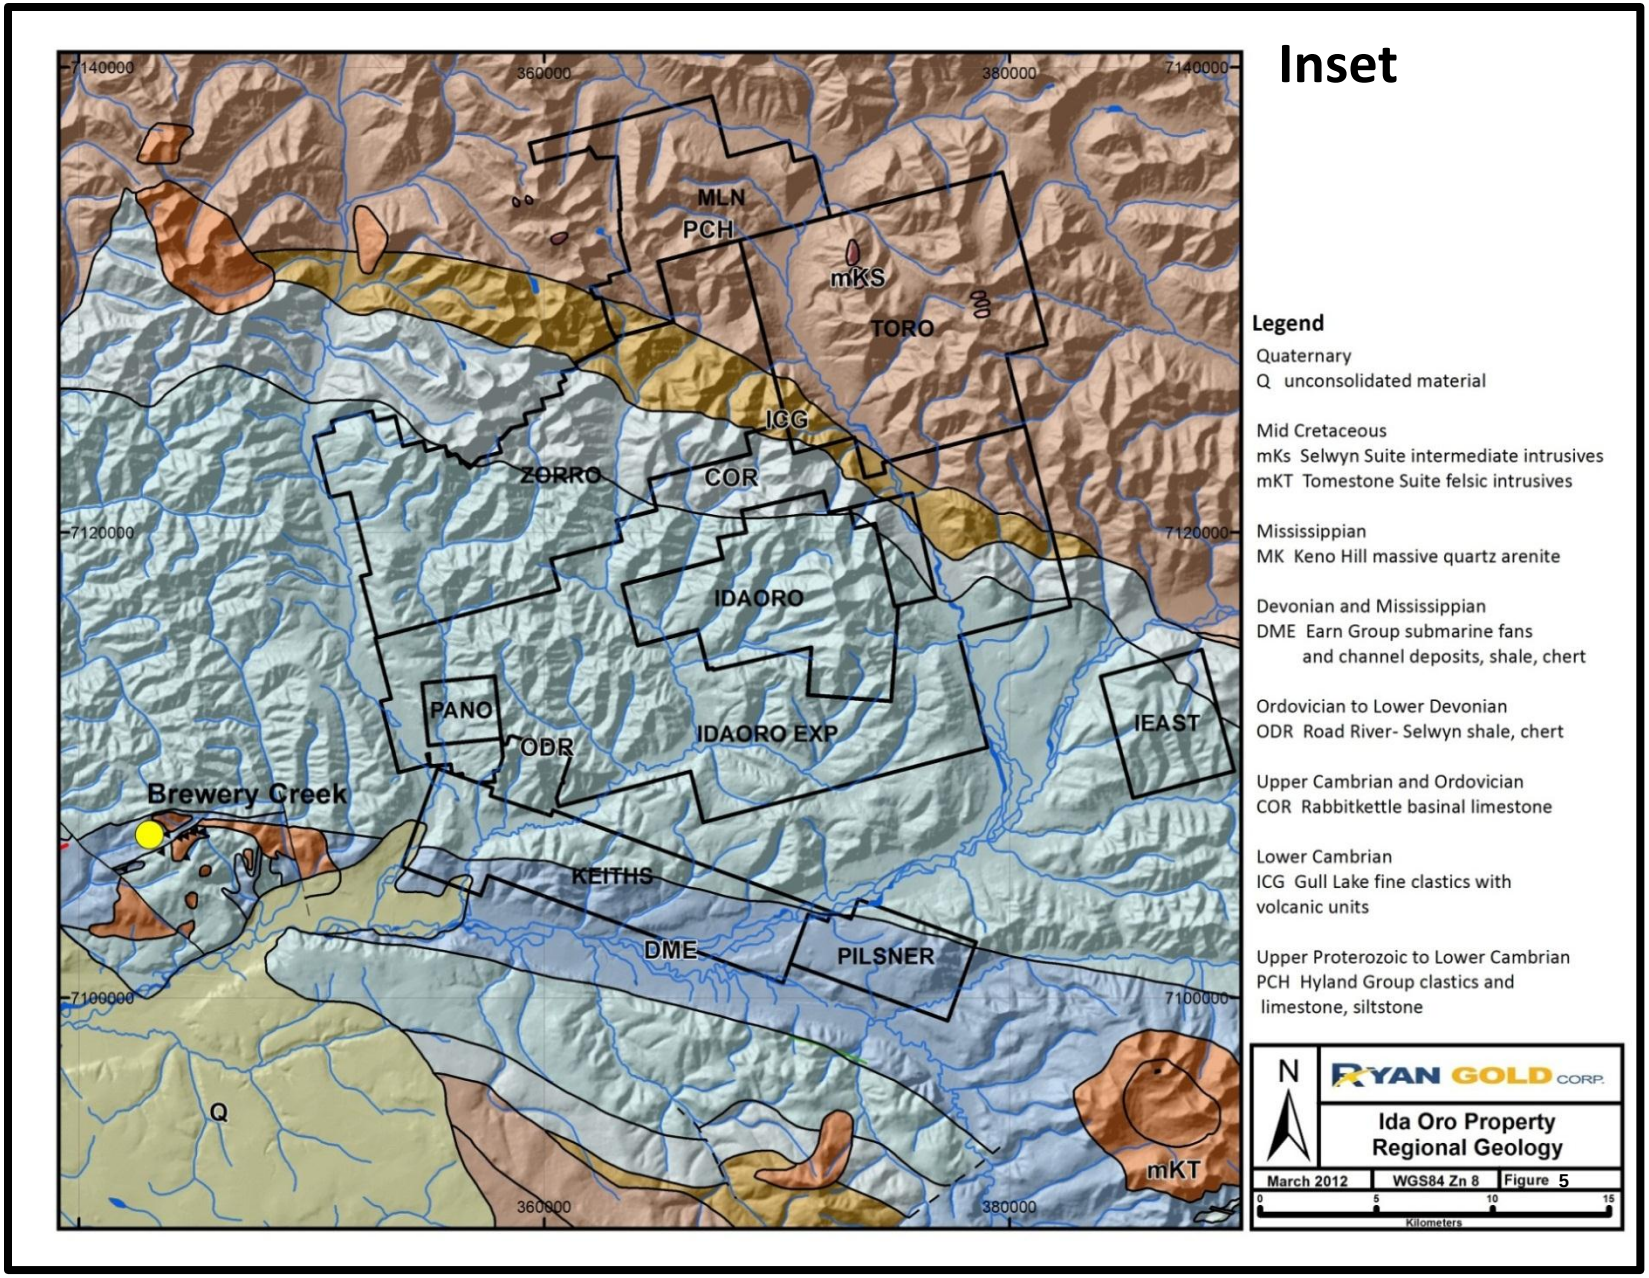

**Figure 5: Regional geology inset map showing claim blocks by name.**

## 1.7 Local Geology

The geology of the Ida Oro Property is characterized by a folded medisedimentary package of the Ordovician to Silurian Road River Group that has been intruded by several stocks and dykes of mid-cretaceous granodiorite to quartz monzonite of the Tombstone Plutonic Suite (TPS). Both rock packages have been intruded by a late stage mafic intrusive of lamprophyre, also of the TPS intrusives. Instrusive composition is gradational over the property and all sedimentary structures except remant bedding within the mapping area have been distroyed by contact metamorphism.

### Lithogy

Road River Group Sediments

Sediments on the Ida Oro property consist of thin to thick bedded cherts, silstones, shales, mudstones and minor sandstones (Plate 2A-B). The sedimentary package is loosely placed within the Road River Group based on composition, sedimentary structures, and mapped sedimentary units by Ryan Gold and previous companies. Age contraints for the sediments on the Ida Oro property come from graptolites *monograptus vomeriums* and *monograptus spiralis* found in 1981 by A. Winkler working for RioCanex and points to a lower Silurian age for sedimentary package.

TPS Intrusives

Felsic

Several stocks and dykes intrude sediments and make up the main N-S ridge in the central portion of the Ida Oro property (Figure 6 and7). Both composition and texture of intrusives is gradational from north to south and within intrusive bodies from diorite and granodiorite, to quartz monzonite. Texture varies from coarse grained equigranular to porphyritic with plagioclase and potassium feldspar being the primary phynocrysts up to several cms (Plate 2C-D). Groundmass composition is commonly feldspar +/- chlorite. Mafic mineralogy is primarily biotite and amphibole of which both are commonly altered by cholrite +/- calcite. Several highly altered dykes, which occur as discrete recessive

notches within ridgelines with intense clay alteration, are also believed to be part of the same suite of intrusives.

Mafic

Several small fine to coarse grained gabbroic/lamprophyre dykes outcrop in the north end of the Ida Oro property and were intersected by several drill holes in the 2011 season (Figure 6 and 7). This mafic unit commonly contains fresh sulphide mineralization of pyrrhotite +/- chalcopyrite. The unit has been extensively altered by amphibolization and biotitization of clinopyroxene, and saussuritization of feldspars (Plate 2E-F).

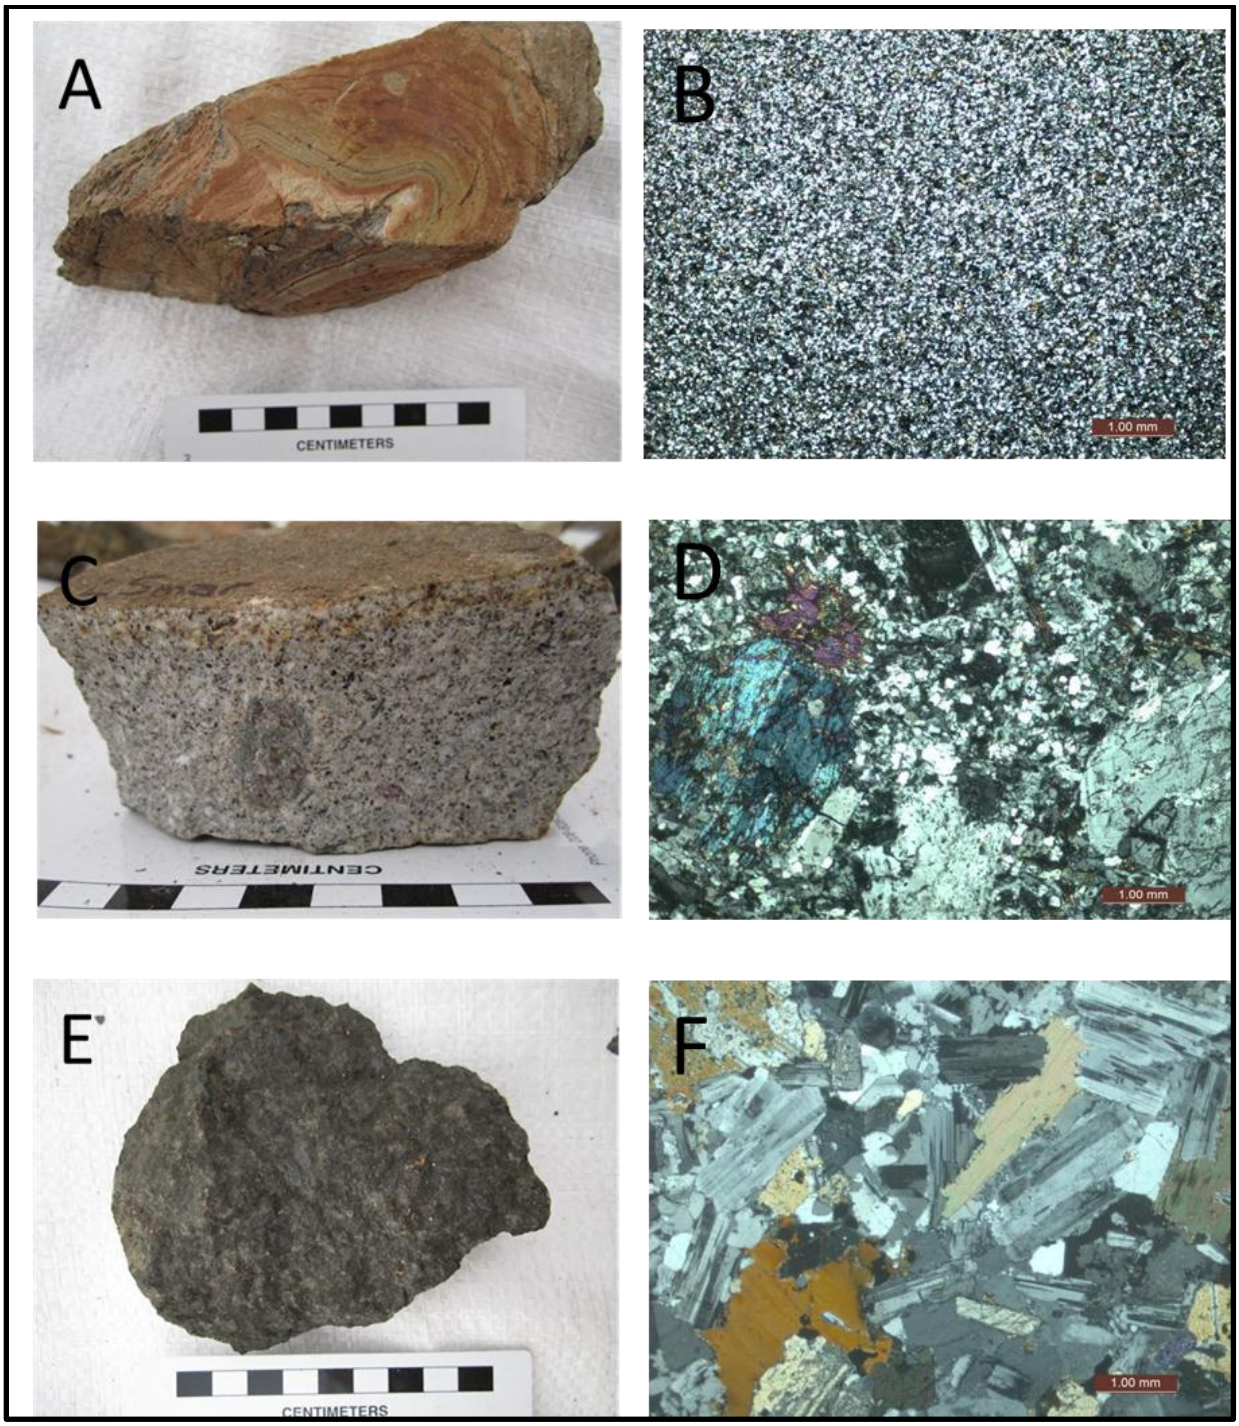

**Plate 2 A-F: Representative hand samples of lithology with corresponding thin section (cross-polarized).**

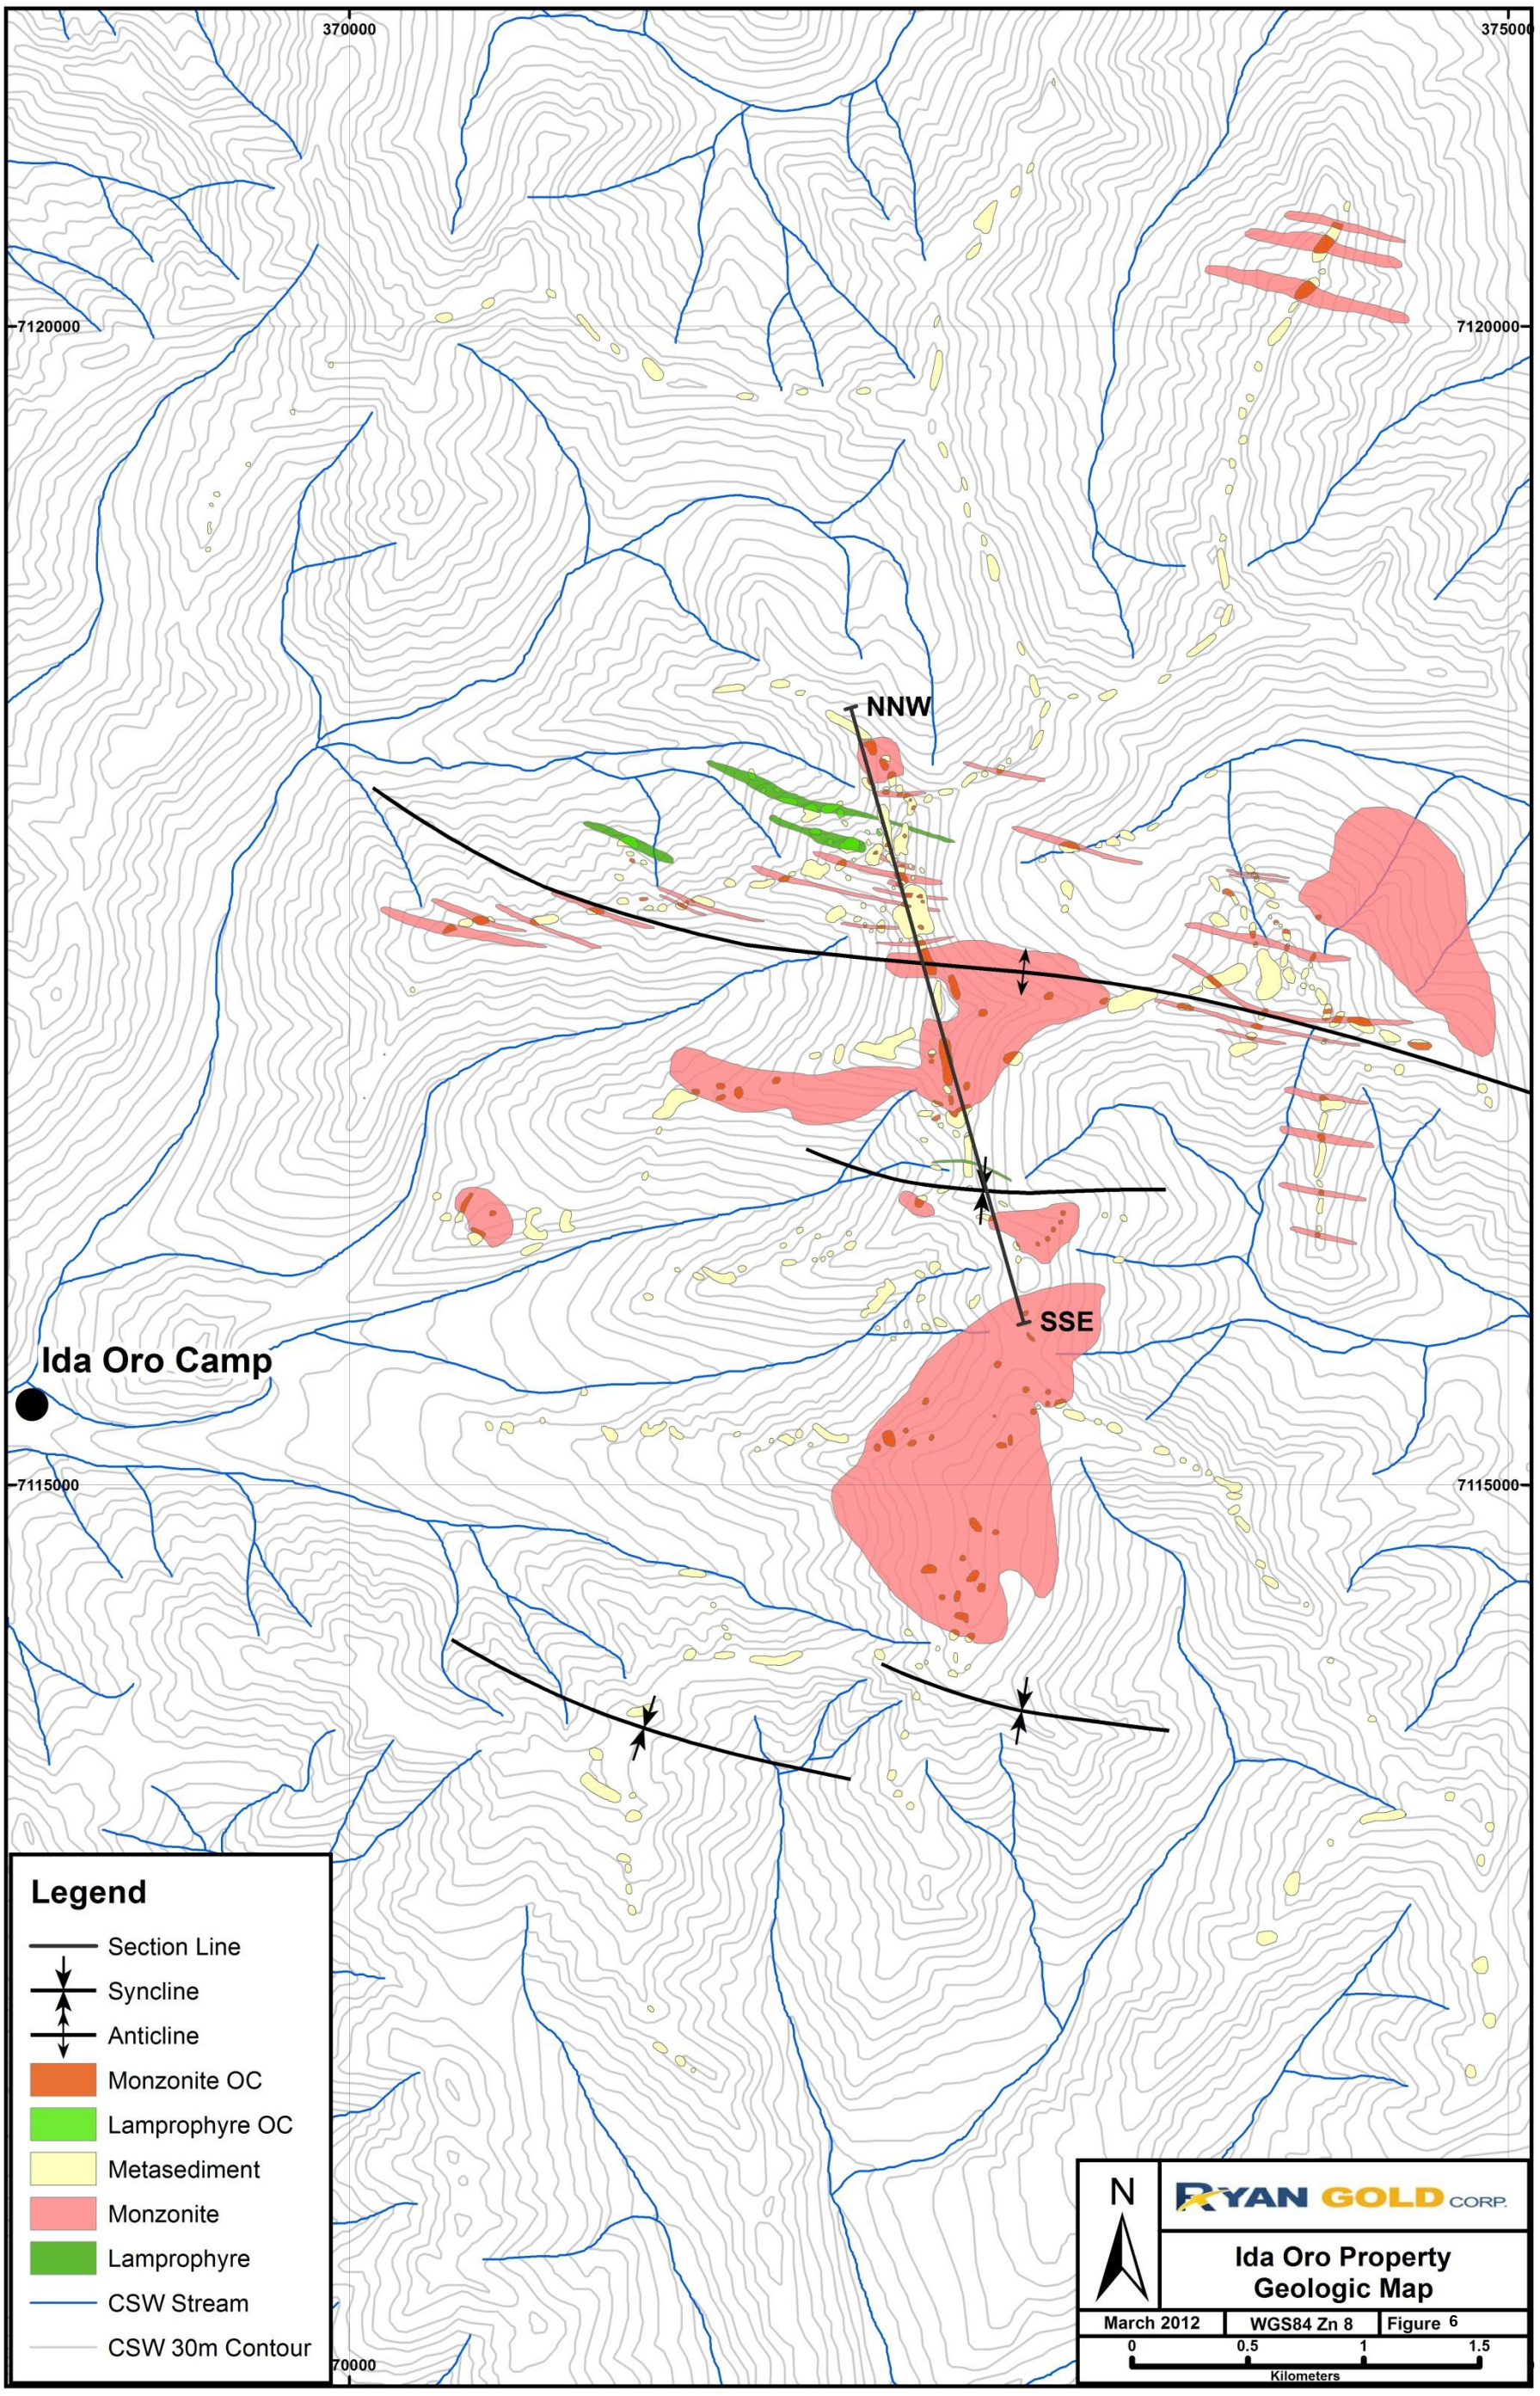

**Figure 6: Geologic map of central Ida Oro Property showing outcrop and interpreted geologic units and general structure.**

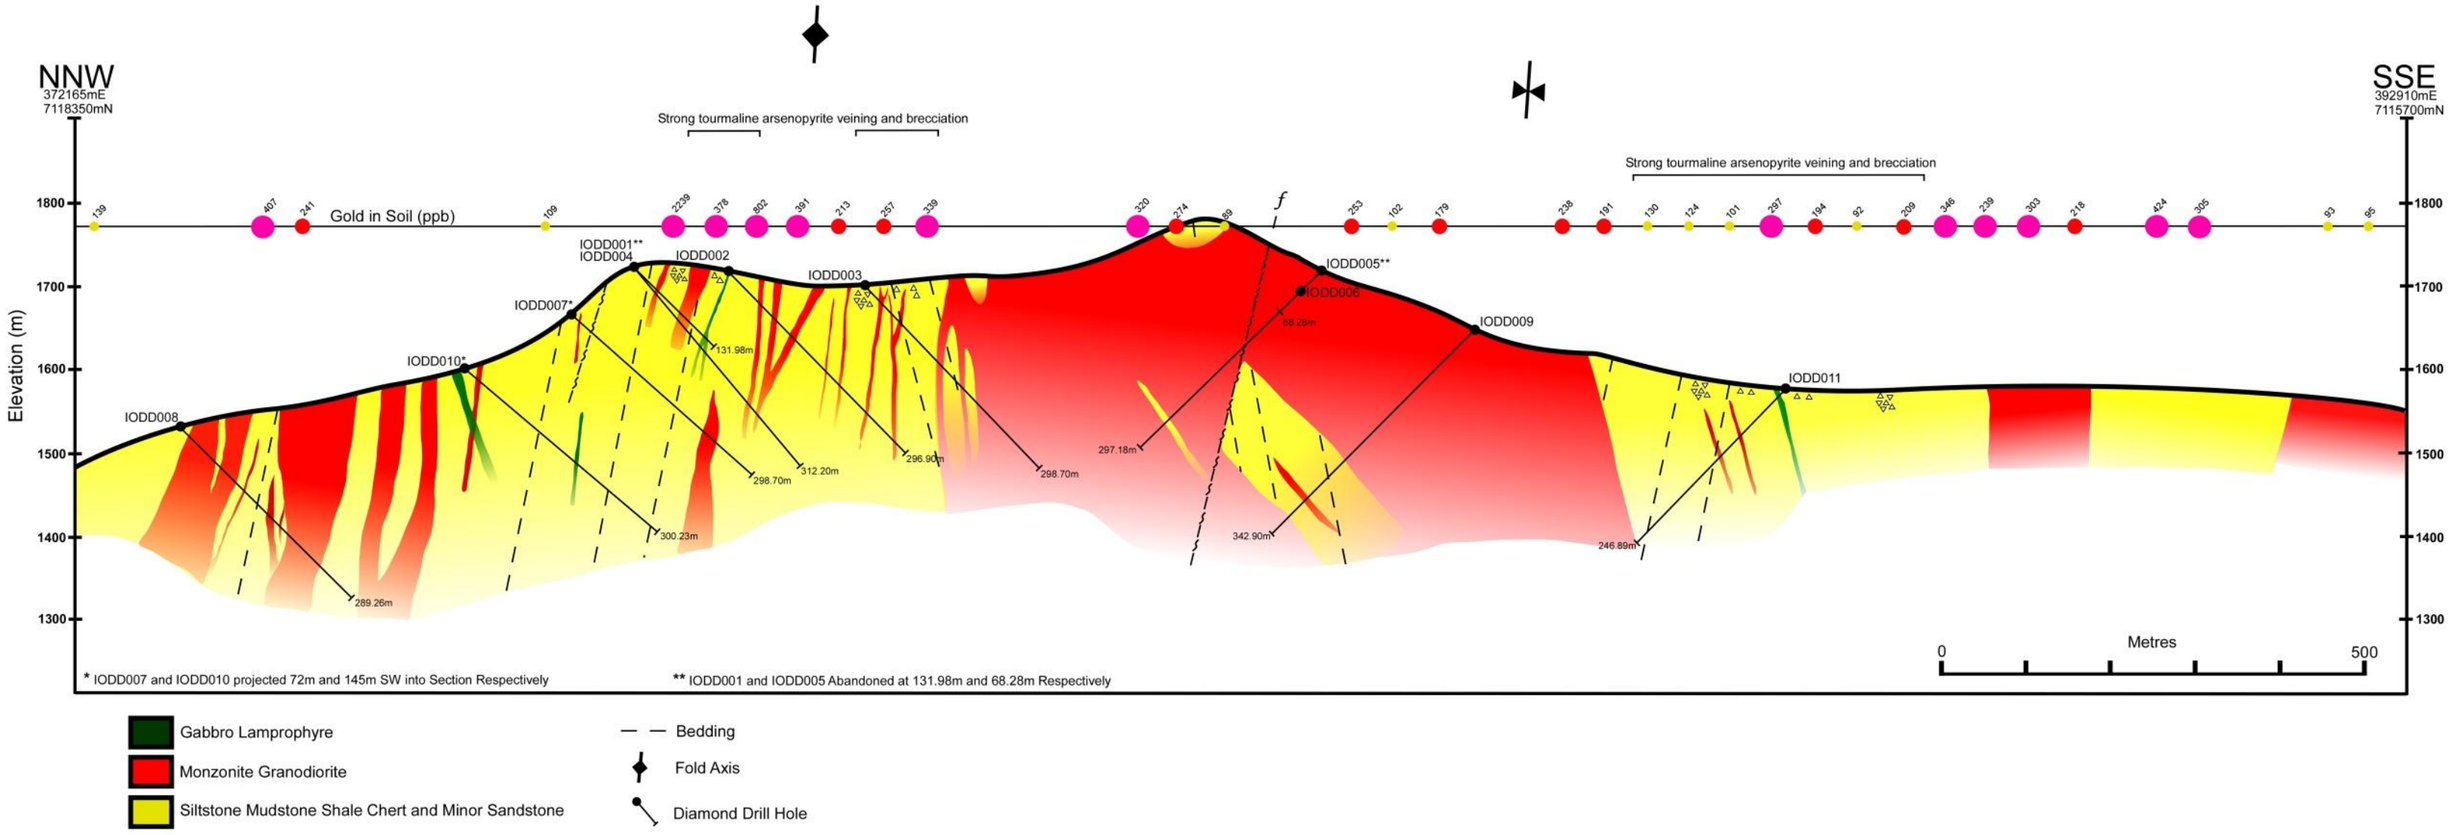

**Figure 7: Cross section through main N-S ridgeline (NNW-SSE in Figure 6) including all 2011 drill holes and surface gold in soil geochemistry.**

## 1.8 Deposit Type and Metallogeny

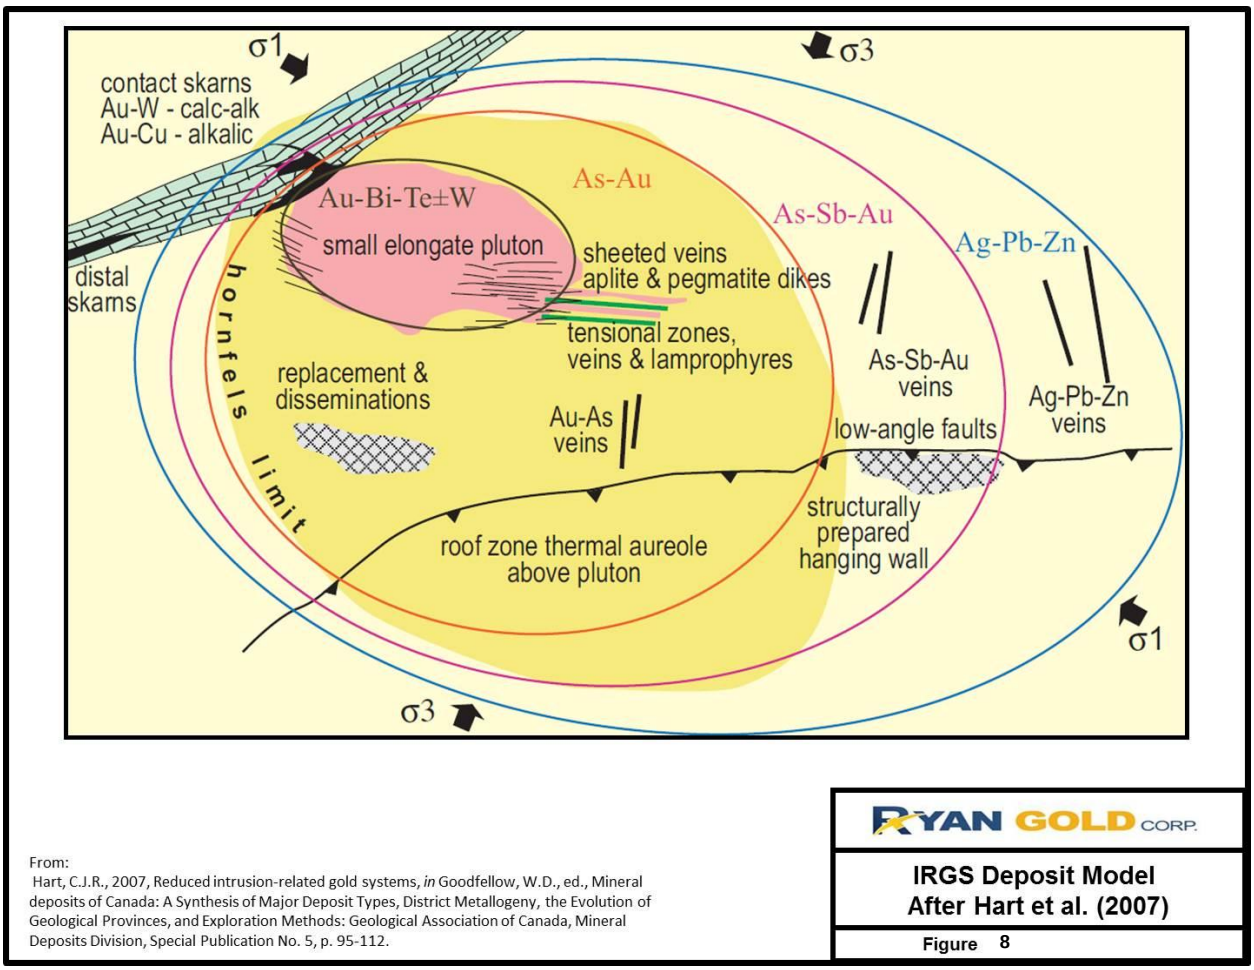

**Figure 8: Schematic illustration of Reduced Intrusion-Related Gold System (RIRGS) from Hart (2007)**

The current gold exploration model of Au metallogeny in the Selwyn Basin is the Intrusion Related Gold Systems (IRGS) as presented by Hart (2007)(Figure 8). These deposits are characterized by auriferous veins, skarns and replacements either in or proximal to plutons within weak post-collisional extension zones behind a thick continental margin (Hart, 2007). Mineralization is confined to regions of hydrothermal influence surrounding causative plutons, and are characterized by Au-W-As (proximal) to Ag-Pb-Zn (distal) metal associations, resulting in systematic mineral zonation. Correlation of RIRGS occurances and deposits have been traced from the west coast of Alaska to the Yukon-North West Territories Border (Figure 9).

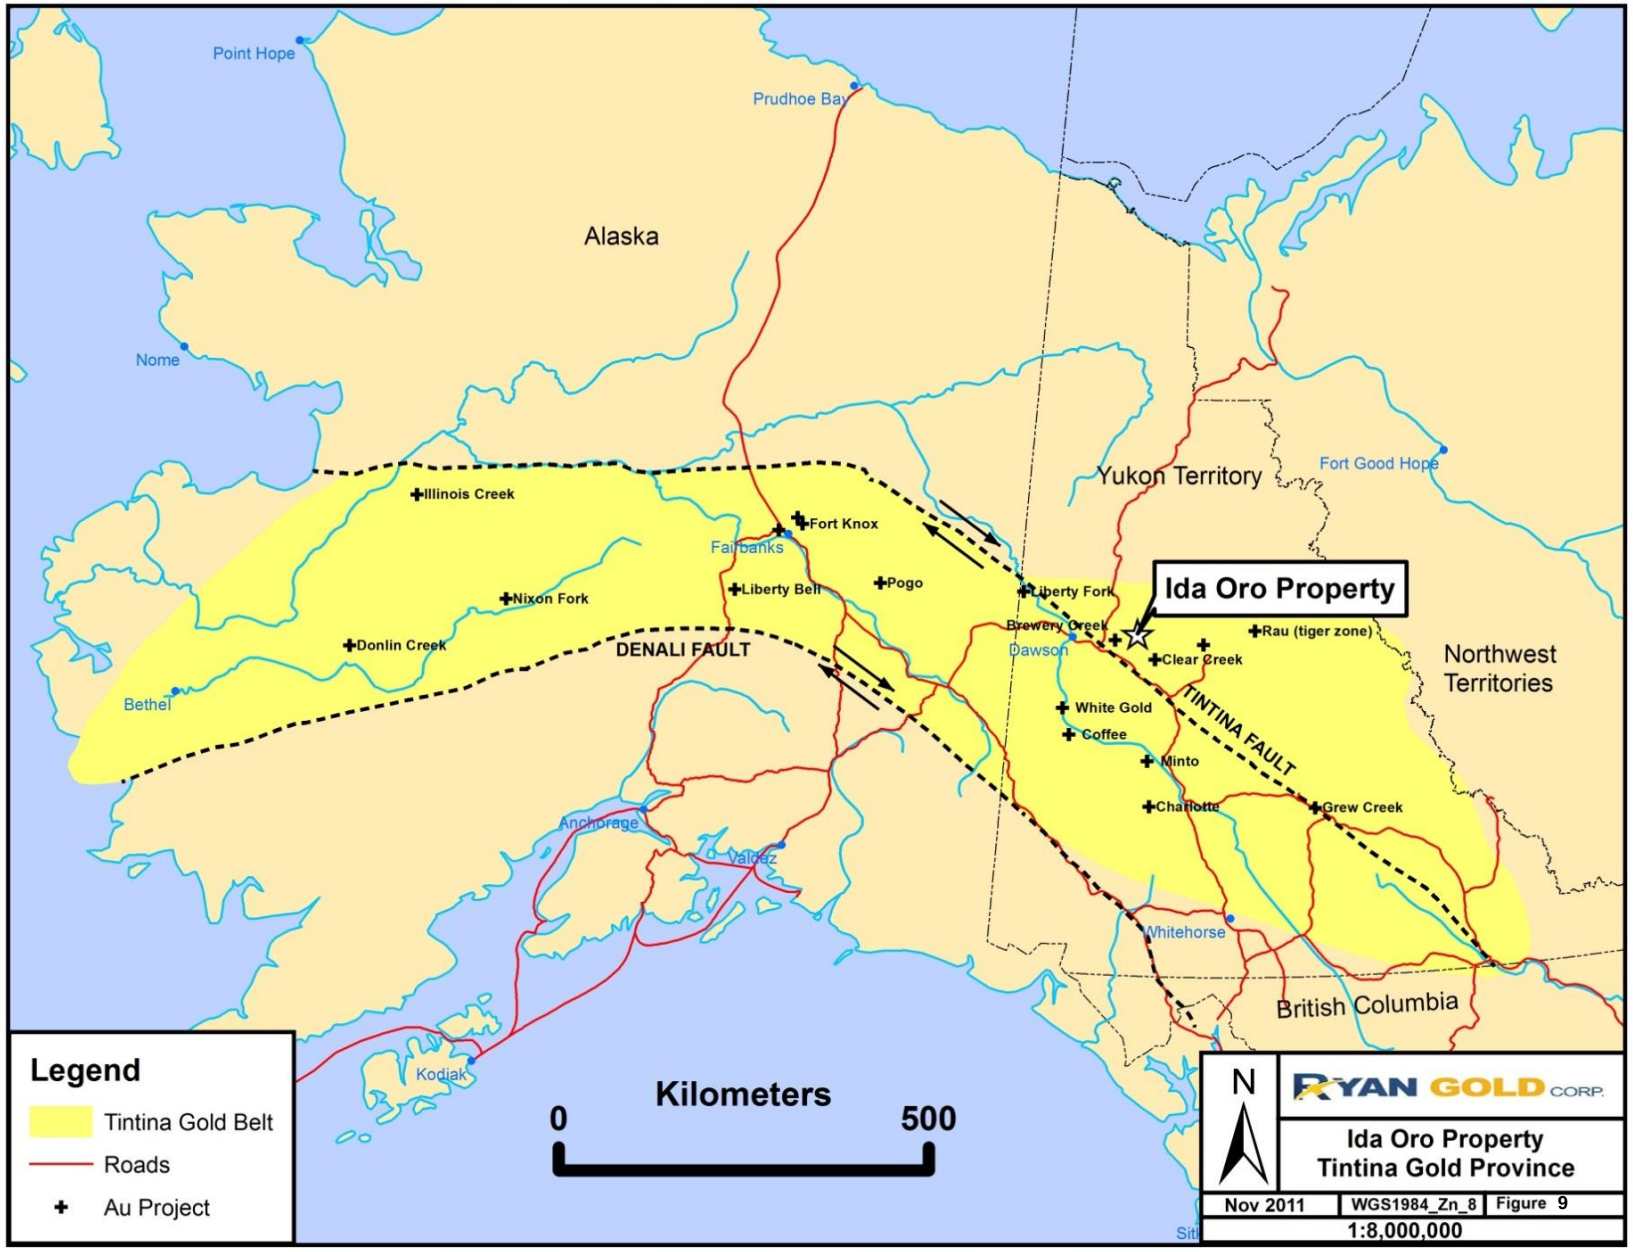

**Figure 9: Metallogeny map showing location of Ida Oro Property within Tintina Gold Province.**

## 2.0 List of claims by name and grant number being renewed

**Table 3: Summary of claims being renewed in this assessment report by claim grouping.**

# 3.0 Results of Surficial Undertakings

## 3.1 Assaying method

All soil samples were sent to Acme Analytical Laboratories in Vancouver, BC. Samples were weighed to 100g and processed through -80 mesh sieve. A method of aqua reagia digestion was used with ICP-MS finish for 37 elements. Fire assay fussion followed by ICP-MS finish was also completed for gold.

## 3.2 Results

Figure 19 shows the locations of all soil samples included in this assesmment. Figures 20-23 show Au geochemical maps for individual claim groups.

| Soil Au Values (ppb) | Percentiles | Count (>Soil Value) |
|---|---|---|
| 1 | 10 | 8070 |
| 2 | 20 | 6160 |
| 3 | 40 | 4546 |

# 4.0 Drilling

## 4.1 Drill Collar Locations and Methods

Drill hole loactions were planned and marked by Ryan Gold geologists using hand held IPAQ GPS equipment, and azimuth/inclination measurements were confirmed by a Brunton Transit compass once a platform was constrcted and drill rig moved on site. With the exception of IODD004, all holes were completed at a -45 degree angle from horozontal and downhole deviations were monitored using a Reflex Maxibor electronic multi shot survey tool. Tool malfunction early in the drilling season resulted in currupted or unobtained data for the first two drill holes.

Core was also oriented using Reflex EZ-Mark core orientation tool. The tool was fixed to the top end of core barrel and sent down hole while drilling commenced. After each run, the tool was activated and an orientation reading taken before breaking off bottom. Once the barrel was retrieved from the hole, an instrument was attached to the end of the tool which allowed for the reorientation of core to it original bottom-of-hole-down position. A mark was then placed on the bottom face of the core so that a bottom of hole line could be drawn down the length of hole at a later time.

Core obtained from the drillholes were placed in wooden core boxes with lids and placed in a specially made aluminum basket for transport by helicopter. Once received in camp core was checked for consistency, core orientaion markings, and recovery before being summary logged and stacked awaiting detailed logging and sampling.

After logging and sampling, core was labelled with hole ID and depths using permanent felt marker and aluminum dyno tape and stored in core racks proximal to core cutting facilities.

## 4.2 Drill Core Geology

### *4.2.1 IO North Zone*

**IODD001:** Exploration drilling of northern IO North zone. Drill hole depth is 131.98m, with 68.58m of HTW and 63.40m of NTW size core. The drill hole encountered challenging conditions at 68.58m and reduction was completed in order to continue with hole. At 131.98m, the drill rods became to stuck to continue and the decision was made to abandon the hole. The hole was not logged or sampled due to the decision to redrill the hole from surface.

**IODD002:** Exploration drilling of northern IO North zone. Drill hole depth is 296.90m, with 100.58m of HTW and 198.12m of NTW size core. The drill hole collared into silicified and hornfelsed metasediments of the Road River Group and encountered several sections altered monzonite of varying widths at 52.40m, 68.95m, 111.25m, 180.00m, 230.50m, and 272.50m. EOH 296.90m (Section 372423mE, Azi 161.7° in Appendix ).

**IODD003:** Exploration drilling of central IO North zone. Drill hole depth is 298.70m, with 97.54m of HTW, and 190.50m of NTW size core. The drill hole collared into brecciated and altered metasediments of the Road River Group, and intersected several sections of monzonite and granodiorite until 167.70m. The remainder of the hole continued and ended in fresh monzonite. EOH 298.70m (Section 372423mE).

**IODD004:** Exploration drilling of northern IO North zone. Drill hole depth is 312.20m, with 100.58m of HTW and 211.62m of NTW size core. The drill hole was a re-drilling of IODD001. The drill hole collared in highly altered and brecciated chert and metasediments of the Road River Group and intersected several 1 to 20 m sections of altered monzonite. Small sections of altered green lamprophyre were encountered at 119.30m, and 124.30m. EOH 312.20m (Section 372423mE).

### *4.2.2 IO South Zone*

**IODD005:** Exploration drilling of southern IO South zone. Drill hole depth is 68.28m, all with HTW size core. The drill hole collared and ended in variably altered and faulted

monzonite. Significant zones of fault gouge were intersected and reulted in hole abandonment. EOH 68.28m (Section 372559mE, Azi 160.2°)

**IODD006:** Exploration drilling of southern IO South zone. Drill hole total depth is 297.18m, with the collar beginning at 35.05m for a length of hole of 262.13m, with 38.10m of HTW and 224.03m of NTW size core. The drill hole was a re-drilling of IODD005. The drill hole collared in altereed monzonite, with multiple sections of fault gouge. A single section of siltstone was intersected from 255.30 to 268.80m. The hole ended in altered monzonite. EOH 297.18m (Section 372559mE).

*4.2.3 Thebe Zone*

**IODD007:** Exploration drilling of southern Thebe zone. Drill hole depth is 298.70m, with 100.58m of HTW and 198.12m of NTW size core. The drill hole collared in mudstone interbedded with siltstone of the Road River Group. Several sections of monzonite were intersected with widths from 3-20m  at 5.83, 98.00, and 211.68m. The hole ended in interbedded chert and mudstone. EOH 298.70m (Section 372363mE, Azi 017°).

**IODD008:** Exploration drilling of northern Thebe zone. Drill hole depth is 289.26m, with 100.58m of HTW and 188.68m of NTW size core. The drill hole collared in interbedded mudstone and siltstone and intersected long intervals of fresh, unaltered monzonite of up to 70m. The hole ended in interbedded siltstone and chert of the Road River Group. EOH 289.26m (Section 372251mE, Azi 160.9°).

**IODD010:** Exploration drilling of southern Thebe zone. Drill hole depth is 300.23m, with 105.16m of HTW and 195.07m of NTW size core. The drill hole collared and ended in interbedded and silicified siltstone, mudstone and chert of the Road River Group. Two sections of dark green lamprophyre were intersected at 164.05m, and 195.45m. EOH 300.23m (Section 372363mE, Azi 017°).

*4.2.4 Europa Zone*

**IODD009:** Exploration drilling of northern Europa Zone. Drill hole depth is 342.90m, with 108.20m of HTW and 234.70m of NTW size core. The drill hole collared in weathered monzonite, with a long section from 6-226m. Interbedded slitstone, mudstone

and minor chert was intersected from 226-300m, with occasional small (<1m) sections of monzonite. An additional section of porphyritic monzonite was intersected from 300.30-337.89m. The drill hole ended in a mixed and interbedded zone of siltstone, monzonite and quartzite. EOH 342.90m (Section 372559mE, Azi 160.2°).

**IODD011:** Exploration drilling in central Europa Zone. Drill hole depth is 246.89m, with 100.28m of HTW and 146.61m of NTW size core. The drill hole collared in interbedded chert and siltone of the Road River Group. Several sections of diabase with widths from 1 to 5m were intersected along to length of the hole. The drill hole ended in interbedded silicified siltstone and mudstone with minor diabase and monodiorite. EOH 246.89m (Section 372667mE, Azi 162.6°).

Drill holes in 2011 season were targeted to test a 2km x 1km region with coincident gold in soil anomaly, geophysically anomaly, and structual complexity as mapped by Ryan Gold geologists (Figure 10). The region is part of a larger prospective zone and is open to the south, east, and west (Figure 11).

## 4.3 Assaying Method

All core samples (3410 samples) were sent to Acme Analytical Labratories preperation facility: 77 Collins Lane, Lot #53 Whitehorse, YT Y1A 0A8 ,Canada. Then to the analytical laboratory: 1020 Cordova St. East Vancouver, BC V6A 4A3, Canada. Acme Lab has both ISO 9001:2000 and ISO 9001:2008 ratings and are therefore considered qualified to perform assaying work on all samples.

Samples sent to prep facilities were couted, weighed, crushed, split, and pulverized before shippment to the Vancouver assay facility. A four acid "near total" digestion, 36- element ICP-MSmethod was used as well as fire assay ICP-ES on Au performed. Overlimit Au assays were followed up with gravimetric finish.

### *4.3.1 QA/QC Program*

Ryan Gold Corp. established a sampling and assay control program with insertion of assay blanks, standards, and prearation duplicates, in addition to the internal QA/QC program of Acme Analytical Labs. Blank samples consisted of crushed granite (sourced from a garden

center in Whitehorse) that were known to have no significant mineralogy of interest. Three standard reference material's (SRM's) were used in 2011 program and were sourced from RockLabs, a commercial supplier. Preperation duplicates were prepared by the labraotry by splitting off a crushed portion of the sample (using a riffle splitter) which was then pulverized.

In addition to Acme Labs, 307 pulp rejects were sent to ALS Chemex in North Vancouver (212 Brooksbank Avenue, North Vancouver, British Columbia, V6J 2C1) for upire assaying. These were assayed using a similar method for gold only (ALS method 'Au-GRA-21'; fire assay with gavity finish on overlimit samples).

Table 5 (below) show mineralized intercepts for all 2011 drill holes.

| Drill Hole (#) | NORTHING (UTM) | EASTING (UTM) | AZIMUTH (°) | INCL. (°) | MINERALISATION FROM (m) | TO (m) | Interval (m) | Au (g/t) |

# 5.0 Summary and Recommendations

## 5.1 Surficial

Surficial mapping of the Ida Oro Property confirmed the presence of several felsic and mafic stocks and dykes intruding folded metasediments of the Road River Group. Additional mapping in 2012 should concentrate on structurally complex areas within the central property to better understand controls on mineralization. Additional mapping should be undertaken to better understand the stratigraphic sequence through the property. Finally, mapping should be completed to follow up on soil geochemical anomalies identified in the 2011 season.

Reconnaissance ridge and spur soil sampling defined areas of both diffused and discrete geochemical anomalies. These areas should be followed up by a grid soil sampling program to further define the magnitude and geometry of mineralization.

## 5.2 Drilling

The 2011 drilling program was successful and allowed for the confirmation that mineralization, historically reported at surface, continues at depth. Mineralization was intercepted in all but two drill holes, and as drilling was restricted to the main N-S ridgeline, prospective ground is open to the east, west, and south.

It is believed that mineralization is confined to sedimentary layers in the hinges of tight to isoclinal folds proximal to monzonite stocks and dykes through the central portion of the property. Additional mapping will aid in delineating these favorable structural features in order to plan additional drilling. It is recommended that drilling be extended south along the main N-S ridgeline to test the southern extension of the geophysical and gold in soil geochemical anomalies.

## Appendix B- Statement of Qualifications

I, Brook Lisson, resident of Victoria, British Columbia, do certify that:

1. I graduated from the University of Victoria in 2009 with a B.Sc. in Earth Sciences;
2. From January 2010 to present, I have been actively engaged in mineral exploration in Yukon Territory and am presently employed with Ryan Gold Corp. ;
3. I have personally participated in the field work and analysis of data for the filed undertakings herein.

Respectfully Submitted,

Brook Lisson, B.Sc

# Appendix H

## Certificates of Work

Yukon
Energy, Mines and Resources

QUARTZ MINING ACT FORM 4 SECTION 56

# APPLICATION FOR A CERTIFICATE OF WORK

*Version française*

Office Date Stamp

I, Robin Sudo ,

Land Manager/Ryan Gold Corp.

of #600 - 666 Burrard St., Vancouver, B.C. V6C 2X8

Phone 250-421-0939

make oath and say that:

1. I am the owner, or agent of the owner, of the mineral claim(s) to which reference is made herein.

2. I have done, or caused to be done, work, on the following mineral claim(s): (Here list claims on which work was actually done by number and name)

See MAP titled "IdaOro West Claim Map" attached

Ida 3 Claim / Grant # YA89421

situated at Klondike River Area Claim sheet No. 116A03+04; 116B01

in the Dawson Mining District, to the value of at least $325,900 dollars,

since the 16th day of July, 2011 to the 30th day of September 20 11 ,

to represent the following mineral claims under the authority of Grouping Certificate No. _____.
(Here list claims to be renewed in numerical order, by grant number and claim name, showing renewal period requested).

See Schedule "B" attached

3. The following is a detailed statement of such work: (Set out full particulars of the work done indicating dates work commenced and ended in the twelve months in which such work is required to be done as shown by Section 56).

See Schedule "C" attached

*** Report to follow***

Sworn before me at Cranbrook this 18th day of November 20 11 .

Wesley Rogers
Barrister & Solicitor
2nd Floor, 6 - 10th Ave S
Cranbrook, BC V1C 2M8

QUARTZ MINING ACT FORM 4 SECTION 56

# APPLICATION FOR A CERTIFICATE OF WORK

*Version française*

Office Date Stamp

I, Robin Sudo,

Land Manager/Ryan Gold Corp.

of #600 - 666 Burrard St., Vancouver, B.C. V6C 2X8

Phone 250-421-0939

make oath and say that:

1. I am the owner, or agent of the owner, of the mineral claim(s) to which reference is made herein.

2. I have done, or caused to be done, work, on the following mineral claim(s): (Here list claims on which work was actually done by number and name)

See MAP titled "IdaOro East Claim Map" attached

Oro28 Claim/YA88951

Ida 1 Claim/YA89419

situated at Hamilton Creek area Claim sheet No. 116A03+04+05; 116B01

in the Dawson Mining District, to the value of at least $301,025 dollars,

since the 16th day of July, 2011 to the 30th day of September 20 11,

to represent the following mineral claims under the authority of Grouping Certificate No. _____.

(Here list claims to be renewed in numerical order, by grant number and claim name, showing renewal period requested).

See Schedule "B" attached

3. The following is a detailed statement of such work: (Set out full particulars of the work done indicating dates work commenced and ended in the twelve months in which such work is required to be done as shown by Section 56).

See Schedule "C" attached

*** Report to follow***

Sworn before me at Cranbrook this 18th day of November 20 11.

Wesley Rogers

**Criteria(s) used for search:**

CLAIM DISTRICT: 1000002 CLAIM NAME: PILSNER, STELLA, TORO CLAIM STATUS: ACTIVE & PENDING REGULATION TYPE: QUARTZ

Total claims selected : 580

Left column indicator legend:

R - Indicates the claim is on one or more pending renewal(s).

P - Indicates the claim is pending.

Right column indicator legend:

L - Indicates the Quartz Lease.

F - Indicates Full Quartz fraction (25+ acres)

P - Indicates Partial Quartz fraction (<25 acres)

D - Indicates Placer Discovery

C - Indicates Placer Codiscovery

B - Indicates Placer Fraction

QUARTZ MINING ACT FORM 4 SECTION 56

# APPLICATION FOR A CERTIFICATE OF WORK

*Version française*

Office Date Stamp

I, Robin Sudo,

Land Manager/Ryan Gold Corp.

of #600 - 666 Burrard St., Vancouver, B.C. V6C 2X8

Phone 250-421-0939

make oath and say that:

1. I am the owner, or agent of the owner, of the mineral claim(s) to which reference is made herein.

2. I have done, or caused to be done, work, on the following mineral claim(s): (Here list claims on which work was actually done by number and name)

See MAP titled "Toro Claim Map" attached

situated at Hamilton Creek area Claim sheet No. 116A03+04+05+06; 116B01

in the Dawson Mining District, to the value of at least $286,800 dollars,

since the 19th day of June, 2011 to the 30th day of September 20 11,

to represent the following mineral claims under the authority of Grouping Certificate No. _____.
(Here list claims to be renewed in numerical order, by grant number and claim name, showing renewal period requested).

See Schedule "B" attached

3. The following is a detailed statement of such work: (Set out full particulars of the work done indicating dates work commenced and ended in the twelve months in which such work is required to be done as shown by Section 56).

See Schedule "C" attached

*** Report to follow***

Sworn before me at Cranbrook this 18th day of November 20 11.

QUARTZ MINING ACT FORM 4 SECTION 56

# APPLICATION FOR A CERTIFICATE OF WORK

*Version française*

Office Date Stamp

I, Robin Sudo ,

Land Manager/Ryan Gold Corp.

of #600 - 666 Burrard St., Vancouver, B.C. V6C 2X8

Phone 250-421-0939

make oath and say that:

1. I am the owner, or agent of the owner, of the mineral claim(s) to which reference is made herein.

2. I have done, or caused to be done, work, on the following mineral claim(s): (Here list claims on which work was actually done by number and name)

See MAP titled "Zorro and IdaOro Claim Map" attached

situated at East O'Brien Creek area Claim sheet No. 116A03+04+05; 116B01

in the Dawson Mining District, to the value of at least $295,550 dollars,

since the 19th day of June, 2011 to the 30th day of September 20 11 ,

to represent the following mineral claims under the authority of Grouping Certificate No. _____.
(Here list claims to be renewed in numerical order, by grant number and claim name, showing renewal period requested).

See Schedule "B" attached

3. The following is a detailed statement of such work: (Set out full particulars of the work done indicating dates work commenced and ended in the twelve months in which such work is required to be done as shown by Section 56).

See Schedule "C" attached

*** Report to follow***

Sworn before me at Cranbrook this 18th day of November 20 11 .

Wesley Rogers
