By

Mark Fekete, P.Geo. and Marty Huber, B.Sc., G.I.T

October 26, 2012

Certificate of Qualifications

I, Mark Fekete, having my place of residence at 178 Dennison Boulevard in Val d'Or in the Province of Quebec do hereby certify that:

1. I obtained a Bachelor of Science Degree in Geology from the University of British Columbia in 1986, I have been engaged as a Geologist continuously since 1986 and I am a Member in good standing of the Order of Geologists of Quebec (OGQ #553) and the Association of Professional Engineers and Geoscientists of British Columbia (APEGBC #31440), and I am a "qualified person" as defined in Section 1.2 in and for the purposes of National Instrument 43-101;
2. I have visited the VO property on several occasions most recently in September 2011;
3. I co-wrote and I am, as the senior author and qualified person, responsible for the contents of this technical report entitled "2012 Surface Work on the VO Property Dawson Mining District, Yukon, NTS Sheet 115O05 (Excelsior Creek) 63°16'N. Lat., 139°41'W. Long." based on my professional experience, a review of relevant reports and maps made available to me from government and corporate sources and my participation in the work programs described in the report;
4. I am not aware of any material fact or material change with respect to the subject matter of the report that is not disclosed in the report which, by its omission, makes the report misleading;
5. I hold a 25% direct interest in the VO property as a result of my prior involvement with the property; and
6. I have read, and this report has not been prepared for the purposes, nor in full compliance with, National Instrument 43-101 and according to Form 43-101F1.

Respectfully submitted this 26th day of October 2012,

(s) "Mark Fekete"

Mark Fekete, P.Geo.

Certificate of Qualifications

I, Marty Huber, having my place of residence at 16 Flax Mill Dr. Conestogo in the Province of Ontario, do hereby certify that:

1. I obtained a Bachelor of Science Degree in Geology from Acadia University in May 2011, I have been engaged as a Geologist in Training (“GIT”) continuously since May 2011, and I am not a “qualified person” as defined in Section 1.2 in and for the purposes of National Instrument 43-101;
2. I have not visited the VO property;
3. I co-wrote this technical report entitled “2012 Surface Work on the VO Property Dawson Mining District, Yukon, NTS Sheet 115005 (Excelsior Creek) 63°16’N. Lat., 139°41’W. Long.” under the supervision of Mark Fekete, P.Geo.;
4. I am not aware of any material fact or material change with respect to the subject matter of the report that is not disclosed in the report which, by its omission, makes the report misleading;
5. I hold no direct interest in the VO property as a result of my prior involvement with the property; and
6. I have read, and this report has not been prepared for the purposes, nor in full compliance with, National Instrument 43-101 and according to Form 43-101F1.

Respectfully submitted this 26th day of October 2012,

(s) “Marty Huber”

Marty Huber, B.Sc., G.I.T.

Introduction and Terms of Reference

Breakaway Exploration Management Inc. (“Breakaway”) was engaged to carry out surface exploration on the VO property (“VO” or the “Property”) in Yukon in 2012. This technical report (the “Report”) describes the 2012 work which consisted of a soil geochemical sampling survey. The goal of the survey was to identify areas of anomalous gold-in-soil trends that may be related to gold bearing structures. The main purpose of the Report is to complete statutory assessment work filings required under the Yukon Quartz Mining Act. It is not intended to and does not fully comply with National Instrument 43-101.

Location and Property Description

The Property covers an approximate area of 750 hectares within the Dawson Mining Division of Yukon. It is located at the headwaters of Shamrock Creek, a tributary of the Yukon River, some 85km south of Dawson City (Figure 1). The approximate centre of the Property is described by 63°16’ North Latitude and 139°41’ West Longitude on N.T.S. Sheet 115O05. The Property includes 36 contiguous, un-surveyed mineral titles (Figure 2) more fully described in Table 1 below.

Table 1 - List of Claims

Claim Name	Tag No.	Expiry Date	#
VO 1 to 36	(YC95191 to YC95226)	4-Sept-12	36

In July 2011, Stakeholder entered into an option agreement whereby it may acquire a 100% interest in the 36-claim (750ha) VO property by paying \$40,000 cash and issuing 400,000 shares in stages over a three-year period subject only to a 2.5% net smelter returns royalty on any mineral production from the Property. Stakeholder will have the right to purchase 1.5% of the royalty for \$1.5 million and a right of first refusal on the remaining 1% royalty.

VO is located in an isolated part of Yukon with relatively few local resources or infrastructure. Access is restricted due to a lack of usable roads on or adjacent to the Property. The primary means of access is by helicopter from Dawson. The best season for exploration is during the summer months from mid-May to mid-October.

Previous Work, Geological Context, Deposit Model and Adjacent Properties

There is limited documented exploration work and there are no mineral showings known on VO.

The Property lies within the Yukon-Tanana Terrane (Figure 3) which, due to large areas with little or no bedrock exposure and limited modern regional or detailed mapping, remains very poorly understood. Generally it consists of several successions of layered sedimentary and volcanic rocks ranging from Late Proterozoic to Late Permian age that overlay the older Nisling Terrane. These complexly deformed layered rocks have been episodically intruded by various intrusive rocks in the Permian, Jurassic, Cretaceous and Tertiary periods. The intrusive events have been accompanied by volcanic activity especially in the Upper Jurassic to Lower Cretaceous. The Yukon-Tanana has been subjected to numerous prolonged deformational events including subduction and accretion that has led to significant structural thickening. Imbricated allochthonous terranes such as Slide Mountain Terrane are evidenced by altered ultramafic fragments.

The most recent regional mapping and compilation work in the Stewart River area (Ryan and Gordey, 2004) indicates that the Property (Figure 4) is primarily underlain by a Devonian to Mississippian Quartz-Mica Schist (DMps). The northwest portion of the property is intruded by a Mid- to Late-Paleozoic Ultramafic unit, dominantly serpentinite (mPums). A portion of the property to the southeast is underlain by intermediate to mafic amphibolites (DMa).

The Property lies within an underexplored part of the loosely defined Tintina Gold Belt. This metallogenic province has past production of 29.9 million ounces and 39.3 million ounces of resources for total gold resources of 69.2 million ounces. Notable gold deposits are Donlin Creek, Ft. Knox, Pogo and Brewery

Creek. The Klondike-White Gold district lies within the larger Dawson Range area where a number of known gold and porphyry copper deposits show a wide range of styles, geological settings and geochemical associations. Stakeholder's exploration effort at VO is not adhering to any firm deposit model but is instead based on practical survey methods that generate drill targets and have led to discoveries in the area including Underworld's (now Kinross) May 2009 discovery of the Saddle and Arc zones approximately 10km southeast of VO. More recently a significant discovery was announced by Comstock Metals Inc. on the QV claims that lie directly east of the VO claims including 2.3 grams per tonne gold over 89.9m from 43.8m in hole QV12-004 (Comstock Press Release - October 22, 2012). Mineralization at the Golden Saddle, Arc and QV zones are described as being related to breccia zones, quartz veins, stockwork and pyrite mineralization.

2012 Exploration

A soil geochemical survey was completed on VO in 2012 from August 21 to 23 by a four-man crew on foot with helicopter set-outs from Taku Gold Corp.'s Dominion camp located approximately 60km to the northwest. Final results from the analytical work were received on September 15, 2012. Geologist in Training Marty Huber (the "Junior Author") compiled the field data into digital maps and wrote this Report up to October 26, 2012. A detailed Statement of Work is included herein as Appendix A. The work was planned under the supervision of Professional Geologist Mark Fekete (the "Senior Author") and managed on a day-to-day basis by the Junior Author.

A total of 267 deep-auger-type soil samples including field duplicates were collected with hand augers at 50m sample intervals on pre-determined ridge and spur traverse lines as well as on north-south grid lines spaced 450m apart. Sample locations were tagged in the field and recorded with HP iPAQ 200 series field computers running GeoInfoMobile and Tierra Mapper software paired with Holux GPS receivers in map datum UTM WGS84 Zone 7N. Sample locations (Figure 5) and descriptions are included as Appendix B. Soil sample material consisted primarily of colluvium. Sample depth varied from 20 to 65cm with an average depth of 40cm. Soil samples were placed in Kraft-type paper bags with the appropriate sample numbers marked in indelible ink. Batches of samples were subsequently dried, sealed in rice bags and shipped to Acme Analytical Laboratories Ltd. ("Acme") in Vancouver, B.C. for analysis. Samples were dried and sieved to minus 80 mesh size and analyzed for 36 elements (including gold) by 15 gram Aqua Regia digestion, ICP-MS finish (Appendix C). Acme is accredited under ISO 9001.

It is the Authors' opinion that the sampling procedures, security measures, sample preparations and analytical methods applied to the soil samples were diligently followed and are adequate to meet industry standards commonly accepted for this level of exploration. The Authors have relied upon the adequacy and accuracy of the analytical results provided by Acme. Independent verification of those results has not been undertaken. The Junior Author reconciled the field data with the analytical results and found no irregularities.

Results

The soil samples returned gold values ranging from below detection limit (i.e. <0.5ppb Au) to a maximum of 8.8ppb Au. Overall the results were weak and did not show any anomalous clusters. Silver, arsenic, copper, antimony, and zinc values were evaluated as calculated percentiles and are presented as follows.

Table 2 - Soil Results

Field	Minimum	Maximum	Mean	Percentile70	Percentile90	Percentile95	Percentile98
Ag ppm	0.05	1.8	0.1331	0.2	0.3	0.3	0.4
As ppm	0.90	60.7	5.1939	6.0	8.1	9.49	10.35
Au ppb	0.25	8.8	1.9633	2.3	3.8	4.99	6.352
Cu ppm	9.2	146.1	32.412	34.2	59.8	80.88	108.1
Sb ppm	0.05	2.9	0.271	0.3	0.4	0.5	0.68
Zn ppm	17.0	232.0	53.8	58.0	72.8	81.9	88

Interpretation of Results and Conclusion

There were no gold-in-soil trends defined by the soil sampling. Results for other metals that are typically good pathfinder elements for gold do not correlate well with the higher gold values on the property. Overall the values for these metals are relatively low compared to Stakeholder's regional database.

Recommendations

No significant gold-in-soil anomalies have been defined and no suitable drill targets have been identified. Therefore no further work is justified for the VO property at this time.

Submitted By: Mark Fekete

Receiving Lab: Canada-Whitehorse

Received: August 27, 2012

Report Date: September 04, 2012

Page: 1 of 10

CERTIFICATE OF ANALYSIS

WHI12000782.1

CLIENT JOB INFORMATION

Project: VO
Shipment ID: 20120823190833
P.O. Number
Number of Samples: 267

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Corp.

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
Dry at 60C	267	Dry at 60C			WHI
SS80	267	Dry at 60C sieve 100g to -80 mesh			WHI
1DX2	267	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. ** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.
