1 Introduction

The 2011 exploration program on the Bridget property was conducted to test the potential for bulk tonnage gold mineralization. Parts of the Bridget property was identified and staked as an area of exploration interest by prospector Shawn Ryan prior to and following the discovery of gold at the White Gold prospect by Underworld Resources Ltd. ("Underworld"). Mr. Ryan had previously staked and performed preliminary exploration at the Bridget porphyry target where he identified anomalous soil geochemistry. On March 2nd, 2011 Ethos Capital Corp. ("Ethos") announced the acquisition of an option to purchase the Bridget property ("Bridget") from Shawn Ryan/Wildwood Exploration Inc. in consideration of certain cash commitments, shares and reservation of a 2% net smelter return royalty ("NSR").

1.1 Scope of Work

This report describes the previous exploration history, geology and mineral potential of the Bridget property, including work performed by Ethos Gold Corp during the period June 1, 2011 to October 9, 2011. A review of historical industry work and other information within the immediate and surrounding region is included. Regional geology, associated data and current exploration information have been reviewed to determine the geological setting and potential for mineralization.

The author worked on or supervised work on the property during the period June 1st to December 30th 2011. This report presents information based on a review of pertinent literature, results from geochemical surveys and historical findings, as well as conclusions and recommendations for future explorative work.

1.2 Work Program

The objective of 2011 exploration on the Bridget property, including all contiguous Ethos claims north of the Yukon River, was to detect a gold target with a significant gold-in-soil and geophysics response to warrant further work. A secondary objective was to evaluate the Bridget porphyry area originally identified by reconnaissance copper exploration in the early 1970's. The 2011 exploration on the Bridget property included collection and analysis of 9,457 soil samples, pit trenching, 296 prospecting and rock samples, 4,812 line kilometers of airborne magnetic and radiometric surveying, and ~150 airphotos to create 45 orthophotos of the Bridget property. A total of 385 man-days work was completed up to September 30, 2011 plus work by contractors. Minor amounts of work and man days were conducted during demobilization from October 1 to October 8, and AECOM billed in December for work also completed in early October. Ethos established a 'base camp' in Dawson at the Bonanza Gold Motel for the summer where between 5 and 10 personnel were rotated. Ethos contracted Heli-Dynamics of Whitehorse YT which provided a Bell 206 Long Ranger or a Bell 407 (or both) based at the "Druid" helipad in Dawson YT during 2011. Property access was provided via daily helicopter flight from Dawson to the targeted areas within each property. The airborne magnetics and radiometric survey was based in Kaminak Gold Corporation "Coffee" camp and used a Northern Air Support Long Ranger helicopter. The soil survey was contracted to Ground Truth Exploration of Dawson, YT who employed a series of locally mobile field camps on the Bridget property and were supported by TransNorth A-Star helicopter from the Thistle airstrip. The airphoto survey was based in Dawson and used a Piper Cherokee fixed-wing airplane to complete the photography.

1.3 Terms, Definitions & Units

The following terms and abbreviations are used within this report:

- Distances are reported in meters (m), kilometres (km) and feet (ft).
- Costs are reported in Canadian dollars (CAN$).
- Locational information is reported in both Latitude-Longitude and UTM grid (Easting, Northing) NAD83, Zone 7N.
- Geochemical data is reported in parts per million (ppm) the equivalent to grams per tonne (g/t) and ounces per tonne (oz/t), as well as parts per billion (ppb).
- QAQC refers to quality assurance and quality control.
- Geological ages include: Ka (thousand) and Ma (million) years ago.
- Elemental abbreviations include: antimony (Sb), arsenic (As), bismuth (Bi), copper (Cu), gold (Au), iron (Fe) and silver (Ag).
- Mineralogical abbreviations include: pyrite (Pyr) and pyrrhotite (Po) [iron sulphides], limonite (Lim) [hydrated iron oxide], magnetite (Mag) [iron oxide], chalcopyrite (Cpy) [copper sulphide] and molybdenite (Mo) [molybdenum sulphide].
- MINFILE showing refers to documented mineral occurrences compiled by the Yukon Geological Survey.
- Directional units include: north (N), east (E), south (S), west (W) and may be used in combination (*i.e.*, NNE for north-northeast).

1.4 Source Documents

The following sources of information were used in writing this technical report and include private company data and information available on the public domain:

- Review of published and scientific papers on geology on the region and on mineral deposit types
- Review of geological maps and reports completed by the Yukon Geological Survey and the Geological Survey of Canada
- Research on the Yukon Geological Survey's MINFILE database (http://servlet.gov.yk.ca/ygsmin/index.do) and Map Viewer (http://maps.gov.yk.ca/imf.jsp?site=YGS)
- Review of previously written assessment and YMIP reports at the Energy, Mines & Resources Library (http://www.emr.gov.yk.ca/library/)
- Review of publically available data, including news releases, on Ethos Gold Corp. (www.ethosgold.com/s/home.asp)
- Work directed and performed by the author on the Bridget Claims during June through early October, 2011.

1.5 Geotechnical Information

Ethos uses NAD83 Zone 7 coordinates for geographic positioning system ("GPS"). Coordinates are expressed in NAD83 Zone 7 unless specified otherwise. Ethos employees and consultants are provided with Garmin "GPSMap 62s" model GPS devices, which can automatically record continuous route tracks as well as set waypoint information. The Garmin GPS devices are assumed accurate to within 5 meters horizontally and within 10 meters on elevation. Cameras were synchronized with clocks on individuals GPS units so that photographs could be geo-tagged using Garmin Basemap software. Tracks were continuously recorded daily for mapping and prospecting surveys, waypoints entered with notes where

features of interest were encountered, and photographs tagged to individual waypoint and sample locations.

1.6 Limitations, Restrictions and Assumptions

The author has assumed that the previous and documented work on the property is valid and has not encountered any information to discredit such work.

1.7 Reliance on Other Experts

The author has relied in part upon work and reports completed by others in previous years and in the preparation of this technical report. The authors' opinion contained herein is based on information obtained to date, which in turn reflect various technical and economic conditions; given the nature of the mining industry, these conditions can change rapidly over relatively short periods of time. Furthermore, thorough checks to confirm results of such reports and work has not been completed and unless otherwise stated the author has not independently confirmed the accuracy of the data. To the authors knowledge there are no known litigations potentially affecting the Bridget project. Title documents and option agreements were reviewed for this study, this report does not constitute, nor is it intended to represent a legal opinion as to the validity of the title. The project is an early stage exploration property and therefore, the company has created limited surface disturbances.

1.8 Qualified Person and Participating Personnel

Mr. Peter Tallman, P.Geo., Chief Operating Officer (COO) of Ethos Gold Corporation (Vancouver, British Columbia) examined the property, geology and mineral potential to make recommendations for the next phase of exploration work in order. Mr. Tallman directed and worked on the property during the period June through October, 2011.

2 Property Location & Description

2.1 Location & Land Tenure

The ~43,060-hectare property is located in west-central Yukon in the White Gold district and is in an early exploration phase. The Bridget project (NTS map sheet 115J/15 & 16), centered at a latitude of 62°56'11"N and a longitude of 138°31'50"W lies approximately 130 km southeast of Dawson City which is 536 km north of Whitehorse via a paved highway. The claim block includes the Bridget 1-90, Cripple 1-957, Pedlar 1-994, U 1-118 and W 1-28 claims (refer to Table 1. Bridget Property Claim Summary). The project falls within the Dawson Mining District. The boundaries of the property have not been legally surveyed. Refer to Appendix I: Mineral Tenure of the Bridget for a detailed statement of claims.

Table 1. Bridget Property Claim Summary

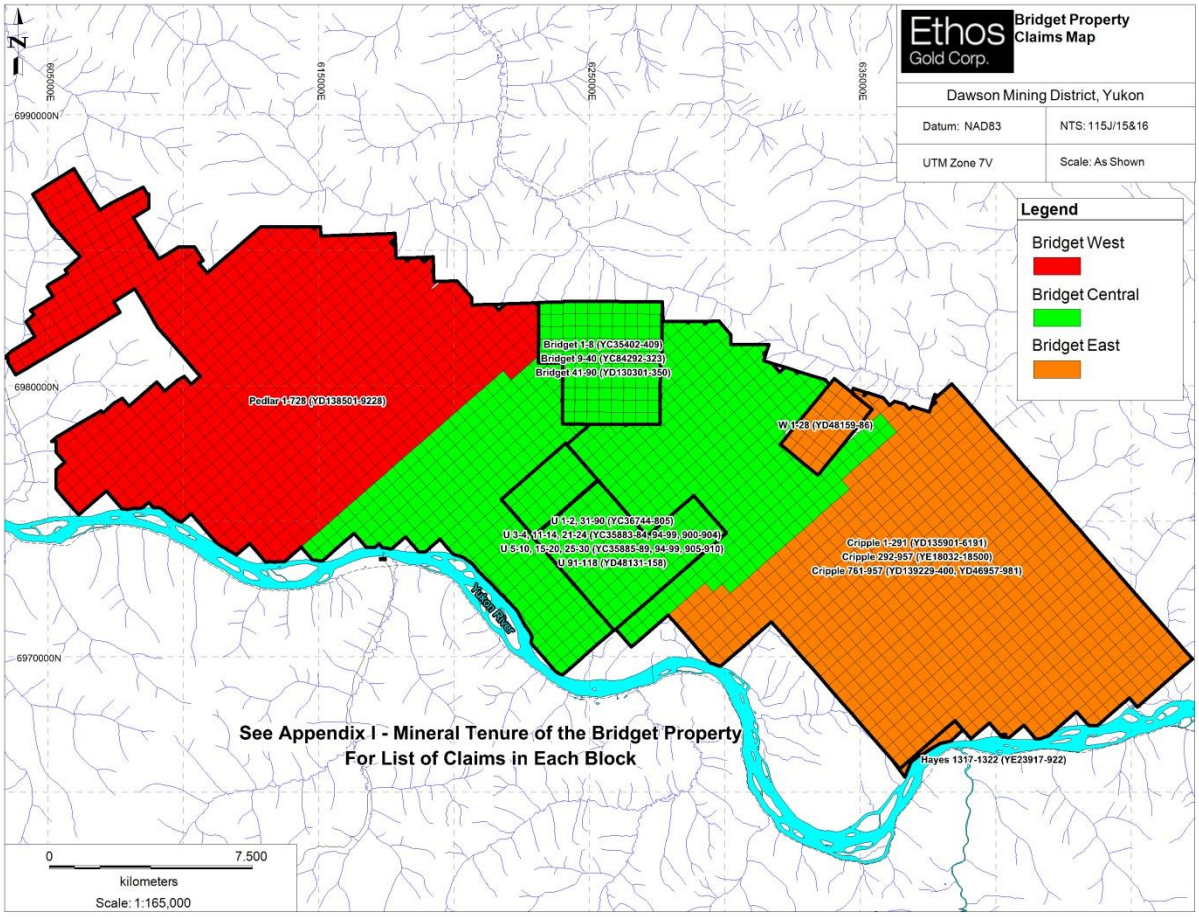

Figure 1. Bridget Property Claims Map

2.2 Underlying Agreements

The Bridget Property, consisting of the Bridget East, Bridget Central, and Bridget West grouped claim blocks claims were optioned from Shawn Ryan (70%) and Wildwood Explorations Inc. (30%) (the "vendors") by agreement dated March 2, 2011.

The Bridget property claims are located within the Traditional Territory of the Selkirk First Nation with overlap in the northwestern claim region with Tr'ondëk Hwëch'in (TH) First Nation. The closest First Nation surveyed land (SFN R-20A) lies approximately 7 km northeast of the property with additional small parcels along the Yukon River, 7-10 km to the west. The claims are situated on Crown Land and therefore the mineral claims fall under the jurisdiction of the Yukon Government. Surface rights would have to be obtained from the government should the property go into development.

According to the Yukon Quartz Mining Act, a mineral claim holder must perform $100 assessment work per claim, per year and document this work to maintain the title, or otherwise pay $100 in lieu per claim, per year to maintain title to the claims.

Early exploration activities do not require permitting, however significant drilling, trenching, blasting, line cutting and excavating may require a Mining Lands Use Permit (MLUP) that must be approved under the Yukon Environmental Socioeconomic Assessment Act (YESAA). To the author's knowledge, the property does not cover any environmental liabilities.

3 Accessibility, Local Resources, Infrastructure, Physiography & Climate

3.1 Access, Local Resources & Infrastructure

The project is centered at latitude of 62°54'31"N and longitude of 138°30'54"W (E626247, N6987841 NAD 83, Zone 7N). The claims are accessible via helicopter from Dawson City (130 km), which is 536 km north from Whitehorse via a paved highway. The property is also accessible by fixed wing to the Thistle Airstrip (E6995390, N586256 NAD 83, Zone 7N) or Scroggie Airstrip from Dawson, Carmacks, Minto or Whitehorse, followed by a ~15 km helicopter flight to the claims. Several charter aircraft companies provide services with a variety of aircraft types.

Dawson City, home of the historic 1896-1899 Klondike Gold Rush has approximately 1300 residents and draws nearly 60,000 visitors each year. Main industries in Dawson City are tourism and placer mining. Heavy equipment repair and rental, a lumber mill, freighting and trucking companies and a mining oriented labour force is available for contract exploration and mining work. An airport with air service to Whitehorse and Fairbanks, Alaska and two helicopter company bases are present providing transportation. Facilities include a health center, grocery stores, a police station, service stations (tire repair and propane sales), welding and machine shops, accommodation and restaurants. The nearest hydroelectric power source to the Bridget property is the Minto Mine, which lies approximately 75 km to the southeast, however the Yukon River is a potential barrier.

Figure 2. Bridget Property Location Map

3.2 Physiography & Climate

The Bridget property covers low rolling hills within the Dawson Range on the unglaciated Yukon Plateau. Elevations range from 1300' (396 m) around the Yukon River to 5158' (1572 m) in the southeastern corner on Selwyn Dome. Vegetation is typical boreal forest (white spruce, birch, poplar and black spruce) with sparse vegetation above elevations of 3500' (1067 m) dominated by buckbrush and sparse tree cover. The climate is characterized by continental subarctic conditions with average temperatures ranging from 15.6°C (60°F) in July to -26.7°C (-16°F) in January. The area has a northern interior climate with moderate precipitation (200 mm of rain and 160 mm of snow). Permafrost is common, especially on the north- and west-facing slopes. Rock exposure is poor, existing along creeks, small cliffs and ridge tops and along some slopes as talus.

The Bridget project is drained by the southerly flowing tributaries of the Yukon River, including Pedlar Creek and northerly flowing tributaries of Cripple Creek, and Scroggie Creek, a northerly flowing tributary of the Stewart River, and its upper tributaries (Pautler, 2011). Exploration in the region typically begins in late May and ends in late September.

4 Property History

The Bridget project region covers the Scroggie and Mariposa Creeks which are both major placer-producing streams. Pedlar and Cripple Creeks have also had intermittent gold production since the 1960s. The property covers the Scroggie, Baja and Onasick MINFILE occurrences (115J 072, 073 and 093). The Scroggie and Baja occurrences were staked to cover copper-moly-gold porphyry showings and the Onasick occurrence covers a uranium anomaly.

Modern exploration in the claim region began in 2005 and continued in 2008 with prospecting, a 32-line kilometer ground magnetometer survey and geochemical sampling. A total of 1,455 historical soil samples were collected on the property by Shawn Ryan. Soil sample analyses from the 2008 detailed soil grid indicate a geochemically anomalous area greater than 750 m in length with copper >200 to 711 ppm coincident with anomalous bismuth (≤ 155 ppm) and molybdenum (≤ 322 ppm) associated with a strong magnetic anomaly; similar to the mineralized regions at Minto (Capstone Mining Corp.) and Lucky Joe (Redtail Metals Corp.). In 2007, Underworld Resources outlined the Golden Saddle deposit (now Kinross Gold Corporation). Since the Underworld discovery of gold at Golden Saddle prospect, a modern-day gold rush has ensued in the region.

The property history summarized in Table 2, is based upon information from the YGS's MINFILEs for 115J 072, 073 & and 093 (Scroggie, Baja and Onasick); Deklerk (compiler), 2011), 'Mineral Industry Reports', various 'Yukon Exploration and Geology' and assessment reports.

Table 2. Bridget Property – Work History

1969	The Baja occurrence (now the Cripple claims) was originally staked as Baja 1-24 claims (*Y37454*) by Dawson Range Mines Ltd. following the discovery of the Casino copper-porphyry deposit to the south. Baja was optioned to Selco Exploration Company Ltd., which conducted reconnaissance soil sampling.
1970	The Scroggie occurrence (now the Bridget claims) was originally staked as the C claims (*Y57495* & *Y57601*) by Dawson Syndicate (Silver Standard Mined Ltd. &

	Asarco Exploration Company of Canada Ltd.)
1971-72	C-claims explored by grid soil sampling, mapping, hand trenching and an EM survey by Dawson Syndicate. Explorative work outlined a molybdenum and lesser copper soil anomaly, traces of chalcopyrite, molybdenite, pyrite and magnetite and weak skarn alteration (McMichael, 1973).
1977-80	The Onasick occurrence (now the U claims) was originally staked as the 3-2-Many 1-16 claims (*YA10228*) in a JV by Eldorado Nuclear Ltd. & Canadian Occidental Minerals Ltd., which carried out mapping, geochemical sampling, ground and airborne radiometric surveys. The JV added the NEF 1-34, 35-90 & 91-97 claims (*YA29660*, *YA32010* & *YA32762*) in 1978-79 and carried out geochemical and ground magnetic surveys. Results reported ≤535 ppm uranium from soil and clay-altered, brecciated rock chips from soil pits (Riley, 1978 and Osson, 1979 & 1980). N. Burmeister tied onto the block with the MK (*Y29723*), Sue (*YA29761*), Bri (*YA29769*) & SB (*YA29777*) claims in 1978 and performed a radiometric survey in 1979 and hand trenched in 1980.
1978-80	The Scroggie occurrence was restaked as SC (*YA29624*) & Bridget (*YA29793*) by N. Burmeister for Somex Ventures Ltd. In 1979 the Bridget 3-10 & 11-16 claims (*YA32590 & YA32598*) were added over the expired SC claims and optioned to Amax of Canada Ltd. who performed geological mapping (70 rock samples), geochemical sampling (160 soils & 52 stream-sediment samples), hand trenching and IP surveys in 1980. A 300 X 600 m coincident copper-moly soil anomaly open to the south, a broad IP and a separate magnetic anomaly were outlined with minor tungsten.
2004-05	The Scroggie occurrence was restaked as Bridget 1-8 (*YC35402*) by S. Ryan who prospected the claims and carried out a regional soil-sampling program.
2005-07	The Onasick occurrence was restaked as the U claims (*YC36744-883*) in 2005, carried out a small soil-sampling program in 2006 and subsequently optioned the claims to KRL International whom carried out a property-wide reconnaissance soil sampling program in 2006. A 100 X 500 m-long uranium-in-soil anomaly (<408 ppm) was delineated (Ryan, 2006). In 2007, KRL flew a helicopter magnetic and radiometric survey over the claim block.
2008	Ryan staked Bridget 9-40 (*YC84292*) to add to the Scroggie block and carried out a detailed magnetometer (38 line-km) and soil-sampling (595 samples) program over the central claims which outlined a 750 m-ling soil anomaly (200-711 ppm copper ± molybdenite, bismuth and ≤62 ppb Au.

Photo-plate 1. View of Bridget Porphyry Showing (from west) [Ethos 2011 photo].

5 Geological Setting

5.1 Regional Geology

The project is located on the 1:250,000-scale 115J (Stevenson Ridge) map-sheet, which was completed in 1974 by Templeman-Kluit (Geology, Snag, Yukon (NTS 115J/K), GSC Preliminary Map 16-1973). In 2005, Gordey and Ryan re-compiled map sheets 115N, 115) and part of 115J (GSC Open File 4970).

The property is located in the Yukon-Tanana terrane (*herein* YTT), which underlies much of central and western Yukon. Its history and tectonic evolution, particularly prior to mid-Mesozoic time, has been largely obscured by younger magmatism and tectonism. The YTT is primarily a product of episodic continental arc magmatism forming a sequence of accreted pericratonic terranes that form a large portion of the Omineca Belt. The terrane underlies part of the Tintina gold belt and hosts gold deposits related to Mesozoic intrusions, including the Sonora Gulch gold deposit and the Casino copper-gold-molybdenum porphyry located southeast of the Coffee project (Bennett *et al*., 2010). The widespread YTT is defined by metamorphosed and deformed sedimentary and volcanic rocks (schists and gneisses) that were accreted along foliation-parallel thrust faults and later deformed in the late Paleozoic, creating multiple penetrative rock fabrics. The TTY was intruded by a number of Mesozoic suites including the Late Cretaceous Dawson Range intrusions (felsic stocks and related rhyolite dykes). The

rocks were later tectonically staked along foliation-parallel trust faults during the Early Jurassic (Mortensen, 1996) and subsequent regional extension occurred between the middle Cretaceous and Eocene, accompanied by fault-controlled mafic and felsic magmatism (Gabrielse and Yorath, 1991).

The Bridget claims cover a portion of the unglaciated Yukon Plateau, however, the southeast corner of the block was glaciated during the Pre-Reid glaciation (*ca*. 3 Ma) along the Yukon River valley. The YTT in the area of interest is wedged between the northwest-striking Tintina fault to the northeast and the Denali fault to the southwest. The YTT in the region is largely Devonian to Mississipian Nasina Asseblage and Pelly Gneiss Suite metasediments which were intruded in the Jurassic by Aishihik Suite and later in the Tertiary by the Nisling Range Suite (see Table 3. Regional Geological Units).

Table 3. Regional Geological Units (Gordey, S.P. and Makepeace, A.J. (*compilers*), 2003).

Unit	*Age*	*Rock Type*
Nisling Range Suite (ETqN)	Early Tertiary (58-54 Ma) – Cretaceous?	Leucocratic, biotite granite; miarolitic alaskite; saccharoidal textured, mafic-poor biotite granite; biotite-hornblende granite to leucocratic granodiorite with sparse, white, alkali feldspar phenocrysts; biotite quartz monzonite (Nisling Range Suite, Nisling Range Alaskite, Coffee Creek Granite, Annie Ned Granite).
Aishihik Suite (EJgA)	Early Jurassic (192-185 Ma)	Medium- to coarse-grained, foliated biotite-hornblende granodiorite; biotite-rich screen and gneiss schlieren; foliated hornblende diorite to monzodiorite with local k-spar megacrysts.
Pelly Gneiss Suite (DMgPW; southwest)	Late Devonian and Mississippian (360-340 Ma)	Foliated medium grained, homogeneous biotite granite gneiss to biotite or hornblende granodiorite gneiss; massive to strongly foliated dioritic to granodioritic gneiss; includes interfoliated amphibolite, quartz-mica schist and phyllite.
Nasina Assemblage (DMN_3)	Devonian and Mississippian (410-323 Ma)	Quartzite, micaceous quartzite, quartz muscovite (+/- chlorite; +/- feldspar augen) schist, and minor metaconglomerate and metagrit as in (DMN_1), but may locally include significant Nisling Assemblage.

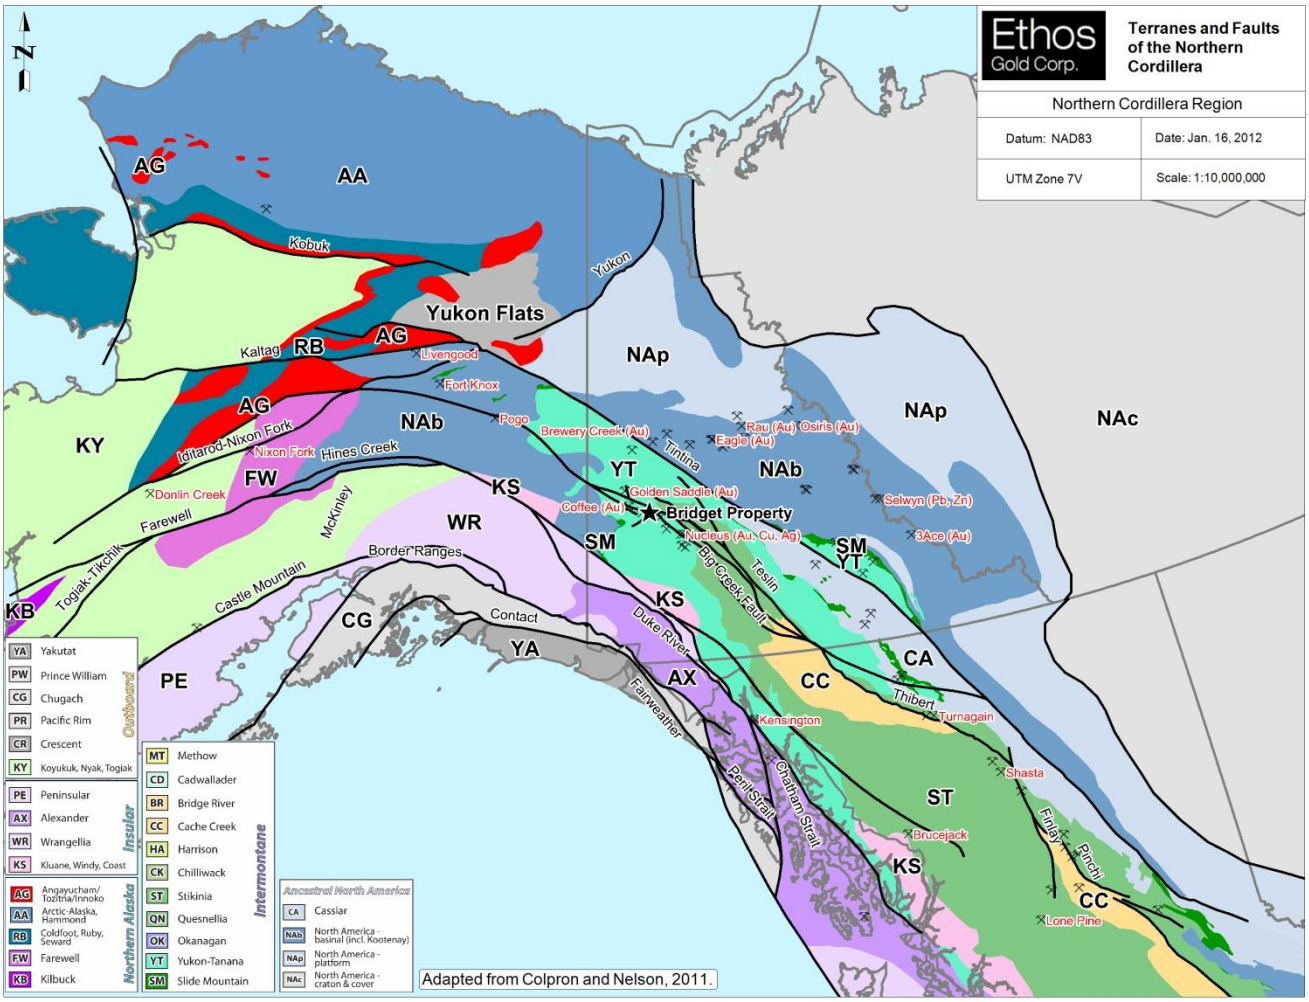

Figure 3: Regional geology

5.2 Property Geology

Basement rocks exposed on the property are primarily Late Devonian to Mississippian Pelly Gneiss Suite orthogneiss (360-340 Ma; DMgPW) and in the northern end of the claim block, Devonian to Mississippian-aged metasiliciclastic Nasina Assemblage (410-323 Ma, DMN_3). These units are interpreted to represent a siliciclastic basement with an older Devonian to Mississippian arc consisting of amphibolite and associated subvolcanic intrusions built on top (to the northeast). During the Early Jurassic, these units were intruded by large felsic stocks of the Aishihik Suite (192-185 Ma, EJgA). Later in the Early Tertiary, smaller felsic stocks and related dykes of the Nisling Range Suite (58-54 Ma, ETqN) intruded the aforementioned units. Within the Nasina Assemblage metasiliciclastics mapped on the property, a marble band with minor skarn alteration was located in the northern claim area (Booth *et al.*, 1980).

The Pelly Gneiss Suite orthogneiss that predominates on the property lies on trend to similar lithologies that underlie the White Gold property which includes the White Gold deposit of Kinross Gold Corporation. The orthogneiss is intruded by Nisling Range microporphyritic rhyolite to coarse-grained

quartz feldspar porphyry (Booth *et al.*, 1980). This stock was mapped as Tertiary but is now considered to be Cretaceous and synchronous with the Coffee Creek granite (see Templeman-Kluit, 1974 and Olsson, 1980). Pautler (2011) noted an aphanitic quartz eye porphyry of alaskite composition to the east of Selwyn Dome and observed similarities with the Late Cretaceous Prospector Mountain Suite which is intimately associated with mineralization in the southeastern portion of the Dawson Range copper-gold belt (from Freegold Mountain to Casino).

Northwest trending faults predominate on the map sheet, locally with more northerly trends and fewer (or more poorly documented) northeast trends (Pautler, 2011). These faults are evident by aerial lineaments and aeromagnetic lows. Pautler (2011) extended the Big Creek fault along the Yukon River and beyond along a major lineament and interpreted a northwest trending fault (a possible splay of the Big Creek fault) through the western project area (between White Gold and the Steward River, then along the Yukon River). A strong northwest-trending aerial and magnetic lineament, noted by Burmeister (1980a), traverses the southern Pedlar and U claims and may represent a major splay of the Big Creek fault (Pautler, 2011).

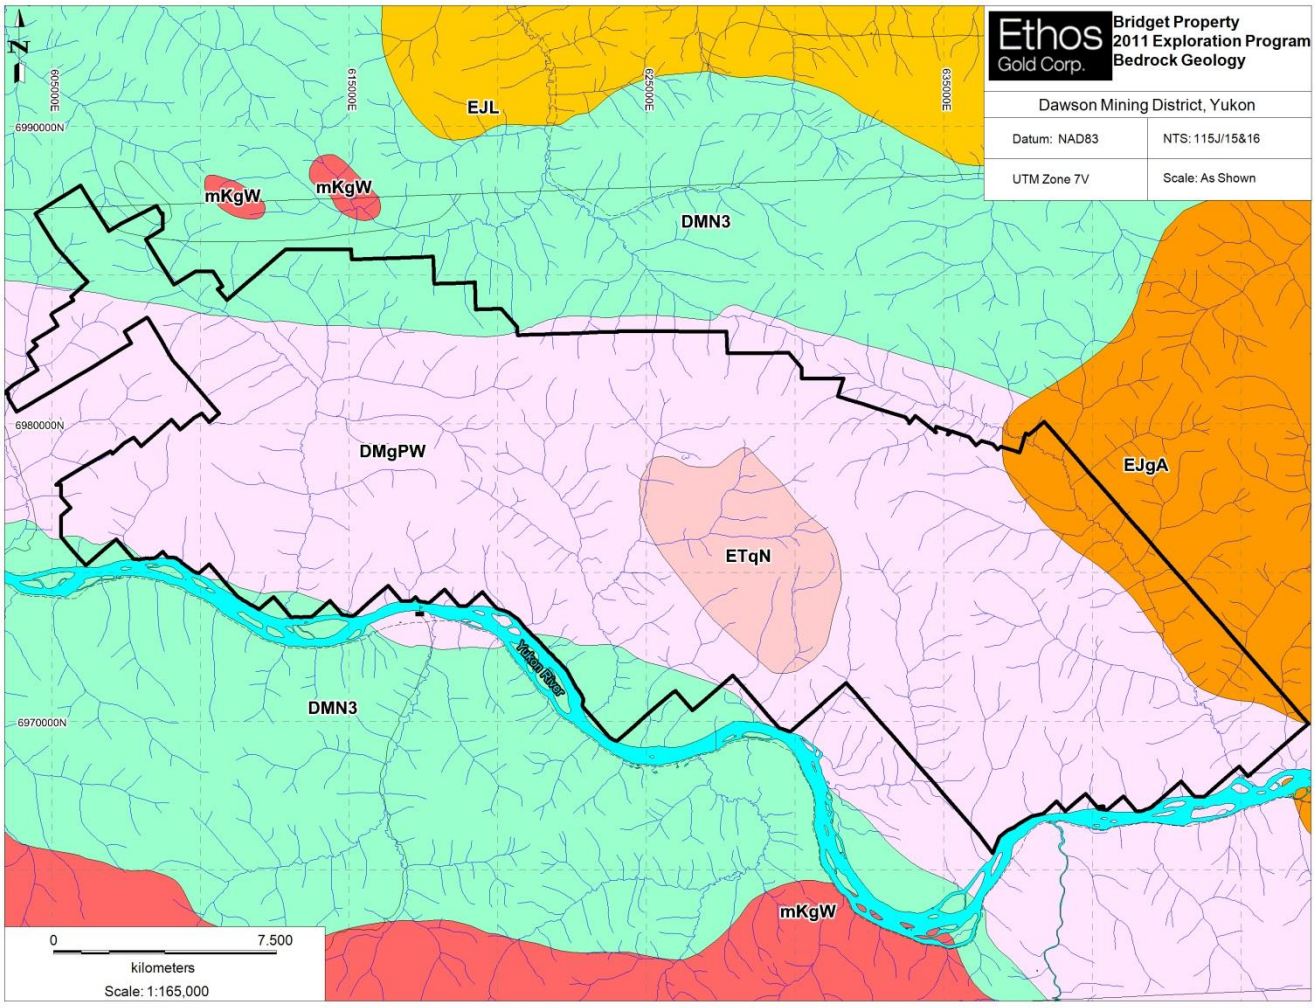

Figure 4. Bridget Property Bedrock Geology Map

6 Deposit Types & Mineralization

6.1 Deposit Type

The Bridget claims cover a portion of the Tintina Gold Belt, a 200 km-wide by 1,200 km-long arcuate metallogenic province that extends from British Columbia, through Yukon, to Alaska. The province is underlain by rocks of the YTT and is characterized numerous gold deposits including: Pogo and Fort Knox, True North, Donlin Creek, Shotgun (Alaska), and the White Gold (Yukon). The Pogo property has proven and probable reserves of 3.6 million ounces gold and measured and indicated resources of 1.7 million ounces gold. Donlin Creek has proven and probable reserves of 29.3 million ounces of gold and measured and indicated resources of 6 million ounces gold. Kinross Gold Corporations' White Gold deposit (the Golden Saddle discovery) is located thirty-five kilometers to the northeast. The White Gold deposit contains an indicated resource of 9,797.000 tonnes grading 3.2 g/t gold (1,005,000 ounces), potentially mineable by open pit methods using a cutoff of 0.5 g/t Au for the open pit and 2.0 g/t Au for underground (Weiershauser *et al.*, 2010). The deposit has additional inferred resources of 9,391,000 tonnes grading 1.91 g/t gold (578,000 ounces) (Weiershauser *et al.*, 2010).

Mineralization on the White Gold property, at the 'Golden Saddle' discovery is hosted within the Devono-Mississippian aged YTT rocks including metamorphosed intrusive rocks (felsic orthogneiss), as well as felsic and mafic metavolcanic rocks. Gold mineralization is associated with quartz veins, stockwork and breccia zones, as well as pyrite veinlets and disseminations, and includes cubic pyrite and visible gold (Pautler, 2011). Mineralization at Golden Saddle is largely structurally-controlled and models for mineralization include epithermal and intrusion related gold. Epithermal textures are evident within the veins and porphyry style alteration is suggestive of a younger intrusion at depth (Pautler, 2011). Extensive carbonate-sericite-potassic feldspar-silica alteration surrounds mineralized zones. The property has multiple mineralized zones, some of which are associated with Permian intrusive rocks, others are hosted by Nasina Assemblage (DMN_3) and part of the Golden Saddle is hosted by an ultramafic horizon.

More specifically, the Bridget project occurs within the 250 km-long northwest trending Dawson Range copper-gold belt which is characterized by YTT basement rocks intruded by voluminous Jurassic to Cretaceous intrusions (primarily the mid-Cretaceous Dawson Range batholith). Mineralization is associated with mid- to late Cretaceous intrusions, hosted by the intrusions and/or the older metamorphosed basement complex of the YTT and the northwest trending Big Creek fault (Pautler, 2011). The Dawson Range batholith lies ~6 km south of the project and is represented by primarily the Casino granodiorite phase. The Dawson Range copper-gold belt includes the Nucleus gold deposit of Northern Freegold Resources Ltd., with a NI 43-101 resources of 35.8 Mt of ore at a grade of 0.87 g/t Au using a 0.40 g/t cut-off grade for a total of 1.04 million ounces of gold (Cambell et al., 2009); Sonora Gulch of Northern Tiger Resources Ltd., where drill intersections include 1.0 g/t Au over 64 m, 5.0 g/t Au, 11.9 g/t Ag and 0.23% Cu over 26.6 m and 7.6 g/t Au and 155.5 g/t Ag over 6.0 m in three separate zones; the Casino porphyry copper-gold-molybdenum deposit of Western Copper Corporation with a NI 43-101 compliant proven and probably reserve of 914 million tonnes of mill ore grading 0.237 g/t Au, 0.212% Cu and 0.0235% Mo, and 78 million tonnes grading 0.427 g/t Au, 0.062% Cu of heap leach ore; the Coffee project of Kaminak Gold Corporation and the White Gold deposit (Pautler, 2011).

The Bridget property is considered prospective for near-surface, bulk tonnage intrusion-related to epithermal, structurally-controlled gold mineralization similar to that recently discovered at Coffee and the White Gold deposit and within the Tintina Gold Belt (Table 4). Furthermore, the project is

prospective for copper-gold mineralization similar in style to the Minto Mine of Capstone Mining Corporation and Casino Deposit of Western Copper Corporation.

Table 4: Gold deposits in the Tintina Gold Belt (Kinross 2012, Kaminak 2012, Donlin Gold 2012, Sumitomo Metal Mining 2012)

Deposit	Owner	Proven & Probable reserves	Measured & indicated	Host & Deposit Type
Pogo	Sumitomo Metal Mining Pogo LLC	3.6 M oz Au	1.7 M oz Au	Quartz-vein hosted in mid-Paleozoic gneiss
Donlin Creek	Donlin Gold	29.3 M oz Au	6 M oz Au	Quartz-vein and breccias hosted in felsic sill and dikes
Fort Knox	Kinross Gold Corp	4.3 M oz Au	1.4 M oz Au	Quartz, quartz-sercite, quartz pegmatite veins, stockwork, and shear zones hosted in intrusive granitic complexes.
White Gold (Golden Saddle)	Kinross Gold Corp.		1.6 M oz Au	Quartz-vein, stockwork and breccias hosted in Devonian-Mississippian felsic orthogneiss and felsic and mafic metavolcanics. Structurally controlled, epithermal and intrusion related
Coffee Project	Kaminak Gold Corp.		Drilling on going*	Quartz-vein, stockwork and breccias hosted in felsic orthogneiss, ultramafics and granites

*gold grades of 17.1 g/t over 15.5m, 1.08 g/t over 83.93 m, 6.3 g/t over 35 m, 2.21 g/t over 56.75 m and 1.92 g/t over 23 m, 2.36 g/t over 18 m, and 5.5 g/t over 11 m.

6.2 Mineralization

The Bridget project region covers the area adjacent to Scroggie and Mariposa Creeks which are both major placer-producing streams, plus the area of Pedlar and Cripple Creeks which have also seen some placer gold production since the 1960s. The property covers the Scroggie, Baja and Onasick MINFILE occurrences (115J 072, 073 and 093). The Scroggie and Baja occurrences were staked to cover copper-molybdenum-gold porphyry showings and the Onasick occurrence covers a uranium anomaly.

The most explored region on the claims is the Scroggie MINFILE showing, which occurs on the Bridget 4 claim. The showing covers a zone of minor chalcopyrite, molybdenite, pyrite and magnetite mineralization in quartz veins hosted by silicified biotite schist, exposed in trenches on the ridge crest near the northern margin of a >60 ppm molybdenum 730 X 250 m and a >100 ppm copper 900 X 360 m soil anomaly (Pautler, 2011). McMichael (1973) reported disseminated molybdenite from a 120 m-wide quartz-rich breccia as quartz vein fracture coatings and as disseminations in the host rock proximal to a northwest-trending shear zone. Pyrite, pyrrhotite and trace chalcopyrite occur as disseminations hosted by quartz-feldspar porphyry and minor epidote-rich skarn alteration was noted within a marble horizon (McMichael, 1973).

Amax Canada Ltd. performed geological mapping (70 rock samples), geochemical sampling (160 soils and 52 stream-sediment samples), hand trenching, and IP surveys in 1980 over the Scroggie area and outlined a 300 X 600 m coincident copper-molybdenum soil anomaly, coincident with a broad IP geophysical anomaly, and a separate magnetic high anomaly with anomalous tungsten geochemistry were outlined. Amax also reported 241 ppm Mo, 210 ppm Cu from rock grab samples from dynamited pit trenches. Silver Standard grab sampled float boulders from the area and reported 0.42% MoS2 and a speck of native gold was *[reportedly]* found in a quartz veinlet hosted by schist in the northeast grid areas (see Booth et al., 1980).

The Baja occurrence reportedly covers a copper-molybdenum-gold porphyry showing located within the Cripple 244 claim 7.5 km to the southeast of the Scroggie showing. However no work results were reported and the occurrence is considered 'unknown'.

The Onasick uranium anomaly is located within the Cripple 97 claim approximately 4.4 km south of Scroggie and 5.8 km to the WNW of the Baja occurrence. Work by Eldorado Nuclear Ltd and Canadian Occidental Minerals Ltd reported grab samples assaying ≤535 ppm uranium from soil and clay-altered, brecciated rock chips collected from soil pits (Riley, 1978 and Osson, 1979 & 1980). In 2006, KRL International carried out a property-wide reconnaissance soil sampling program which outlined a 100 X 500 m-long uranium-in-soil anomaly (<408 ppm; Ryan, 2006).

7 2011 Exploration Program

Ethos carried out its first exploration program on the Bridget property during the 2011 first field season. The objective of 2011 exploration on the Bridget property was to screen the property, primarily using ridge-and-spur soil sampling, to detect geochemically anomalous areas that would suggest a substantial zone of gold mineralization. The 2011 exploration on the Bridget property included collection and analysis of 9,457 soil samples, pit trenching, 296 prospecting and rock samples, 4,812 line kilometers of airborne magnetic and radiometric surveying, and ~150 airphotos to create 45 orthophotos of the Bridget property. A total of 385 man-days work was completed during the 2011 field season plus work by contractors up to September 30, 2011. Minor amounts of work and man days were conducted during demobilization from October 1 to October 8, and AECOM billed in December for work also completed in early October. Ethos established a 'base camp' in Dawson at the Bonanza Gold Motel for the summer where between 5 and 10 personnel were rotated. Ethos contracted Heli-Dynamics of Whitehorse YT which provided a Bell 206 Long Ranger or a Bell 407 (or both) based at the "Druid" helipad in Dawson YT during 2011. Property access was provided via daily helicopter flight from Dawson to the targeted areas within each property. The airborne magnetics and radiometric survey was based in Kaminak Gold Corporation "Coffee" camp and used a Northern Air Support Long Ranger helicopter. The soil survey was contracted to Ground Truth Exploration of Dawson, YT who employed a series of locally mobile field camps on the Bridget property and were supported by TransNorth A-Star helicopter from the Thistle airstrip. The airphoto survey was based in Dawson and used a Piper Cherokee fixed-wing airplane to complete the photography.

7.1 Soil Sampling

During 2011, Ethos' contracted Ground Truth Exploration Inc., of Dawson City, to complete the soil-sampling component of the exploration program. Ethos engaged Trans-North Helicopters who provided A-Stars from the Dawson, Yukon base to provide helicopter support to Ground Truth and

Ethos. Ethos also utilized Great River Air for fixed-wing aircraft logistical support to the nearby Thistle, Ballarat, and Scroggie airstrips.

Ground Truth planned each job and sample sites using ESRI ArcMap to sample over areas of exploration interest. Reconnaissance ridge and spur (also known as elevation contour) sampling was planned in advance with ESRI. The guide points were transferred to each soil sampler's GPS for use in the field and supplied with an accompanying small-scale topographic map.

During the 2011 field season a total of 9,457 ridge-and-spur soil samples were collected and submitted for analysis. The soil sample survey includes analysis of 355 field duplicates, 350 blanks, and 671 standards. Assay certificates are included in Appendix IV.

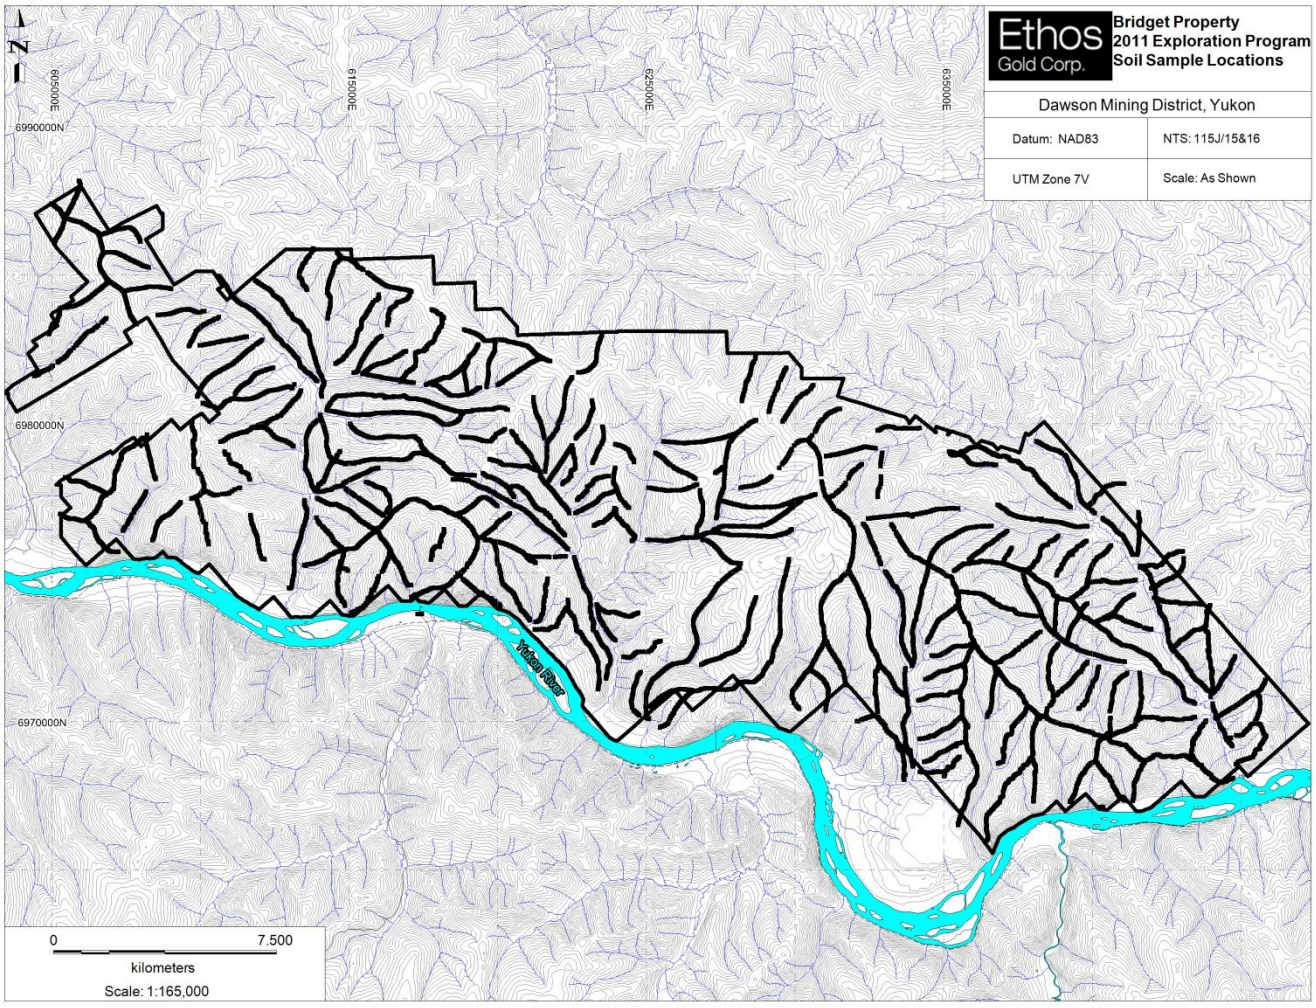

Figure 5. 2011 Soil Sample Location Map

The soil program was designed to identify gold targets that had a significant gold geochemical 'footprint' similar in size to those associated with large gold deposits elsewhere in the Tintina Gold Belt. Gold-in-soil results from the reconnaissance ridge-and-spur program were generally low, with only isolated

'spot' gold-in-soil anomalies identified. Arsenic-in-soil anomalies were also generally low, spotty, and isolated.

There is a soil response in the area of the Bridget porphyry, which has detailed grid soils covering approximately a square kilometer in area. This area has anomalous multi-element base metal geochemistry but lacks a gold-in-soil response. To have economic potential, this area needs to demonstrate the potential for a gold-bearing zone.

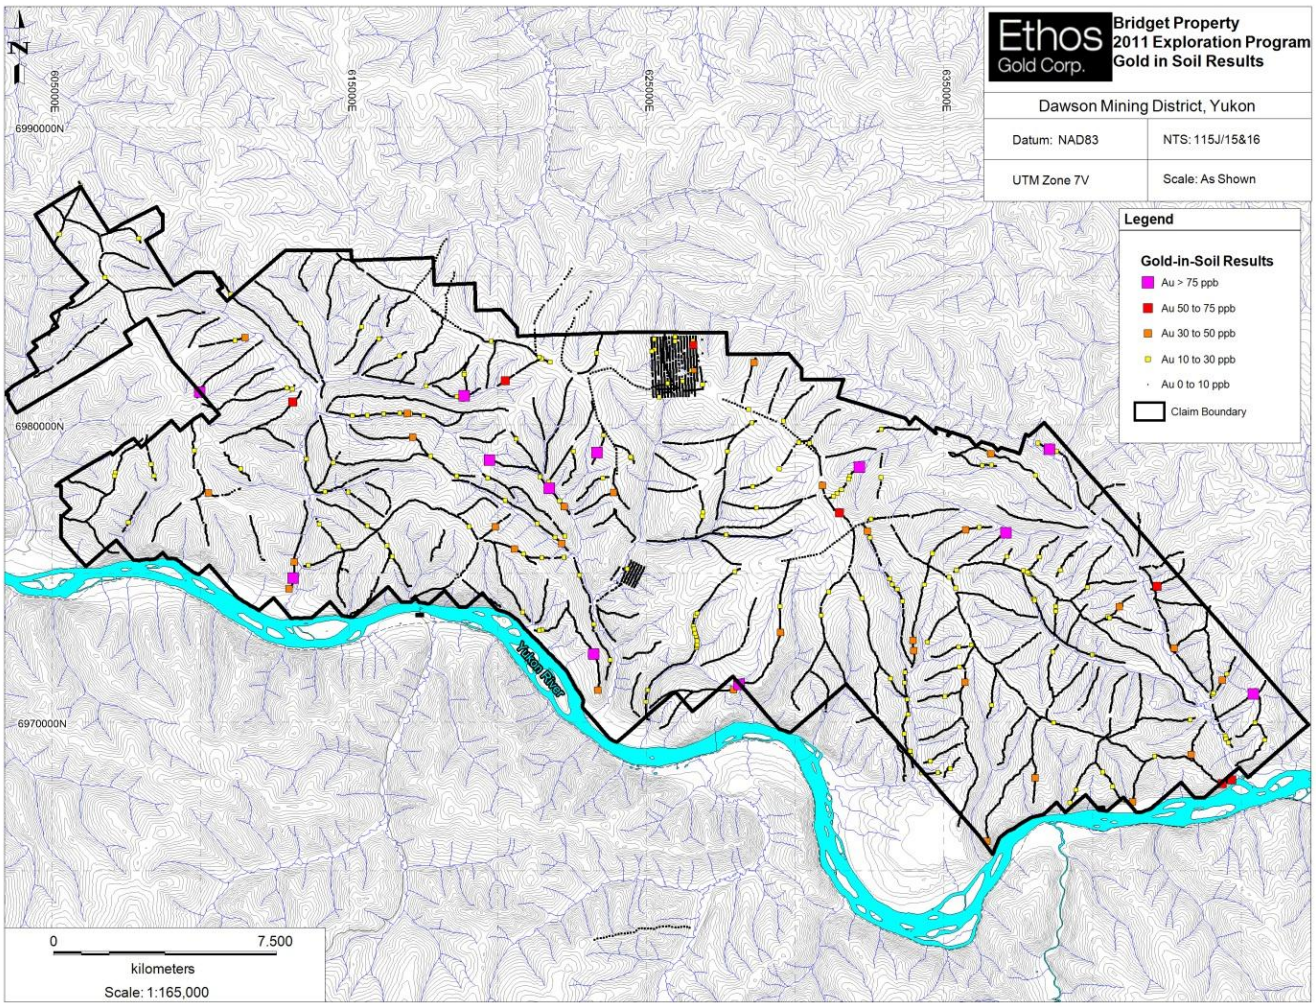

Figure 6. Gold-In-Soil Results

7.2 Prospecting

A total of 296 rock grab samples were collected on the Bridget property during the 2011 exploration program. Each sample location and description was recorded before being sent for assaying (rock sample assay certificates are in Appendix IV). Prospecting traverses were completed in the northern portion of the Bridget property in the area of the Bridget porphyry target and associated soil geochemical anomaly. Rock grab samples were collected during regional traverses across the property designed to assess prospectivity. Most of the prospecting traverses were conducted later in the

summer following receipt of soil geochemical results and were directed towards areas with gold-anomalous soil sites. No rock sample from prospecting contained an anomalous concentration of gold of >100 ppb Au. Anomalous values of tungsten were noted in the area of the Bridget porphyry (Figure 8) and sporadic samples in old blast pits (rarely) contained chalcopyrite and molybdenite in the same area. The first 60 rock samples collected from the Bridget property were lamped under UV light and several clots of scheelite were visible (white-blue fluorescence). No significant anomalous gold concentrations were identified by prospecting in the vicinity of the Bridget porphyry area.

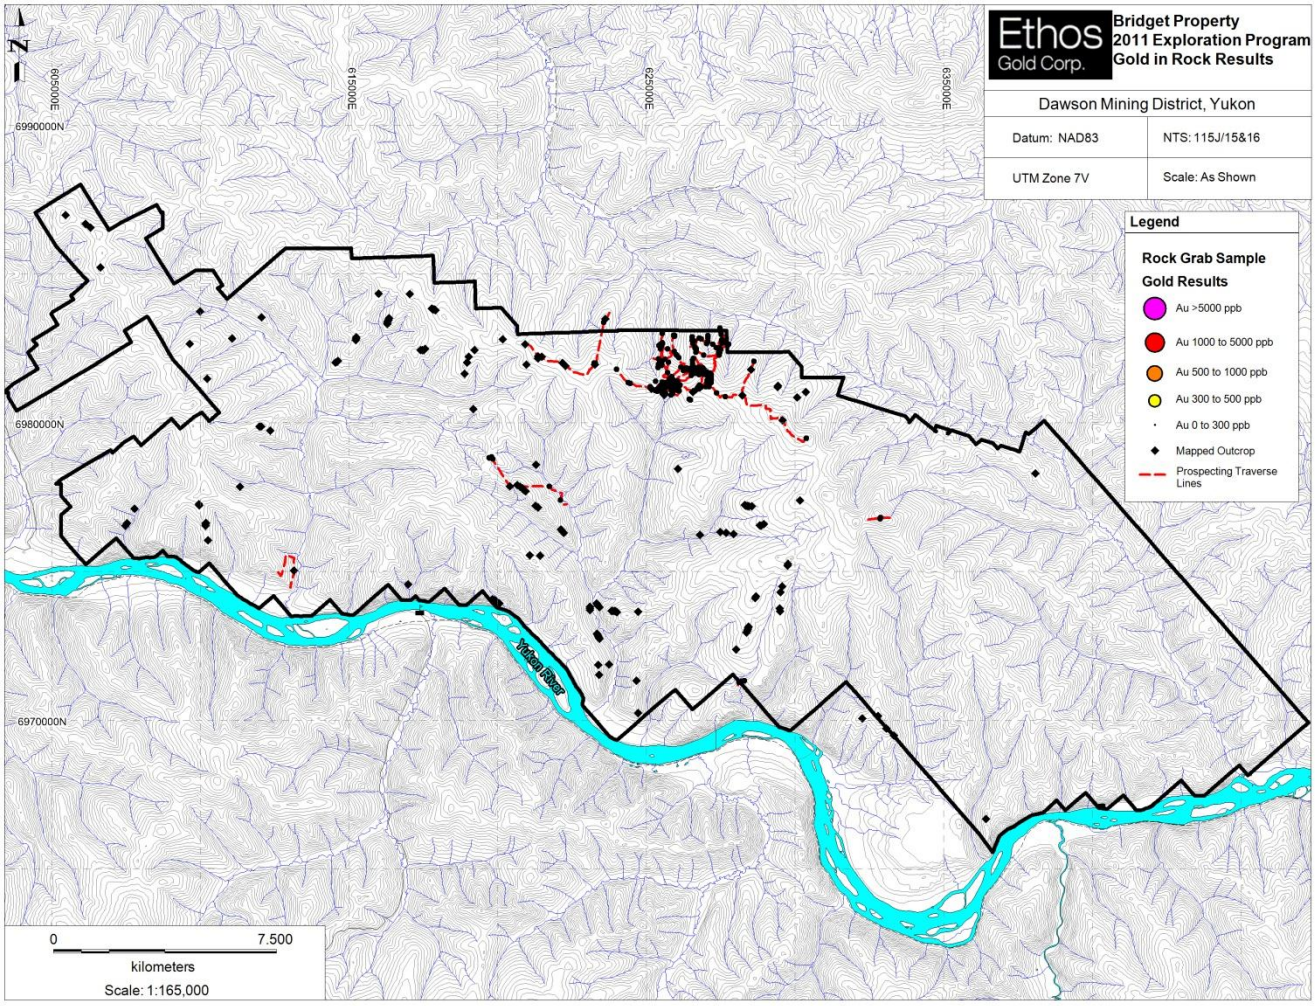

Figure 7. Prospecting Sample Location Map

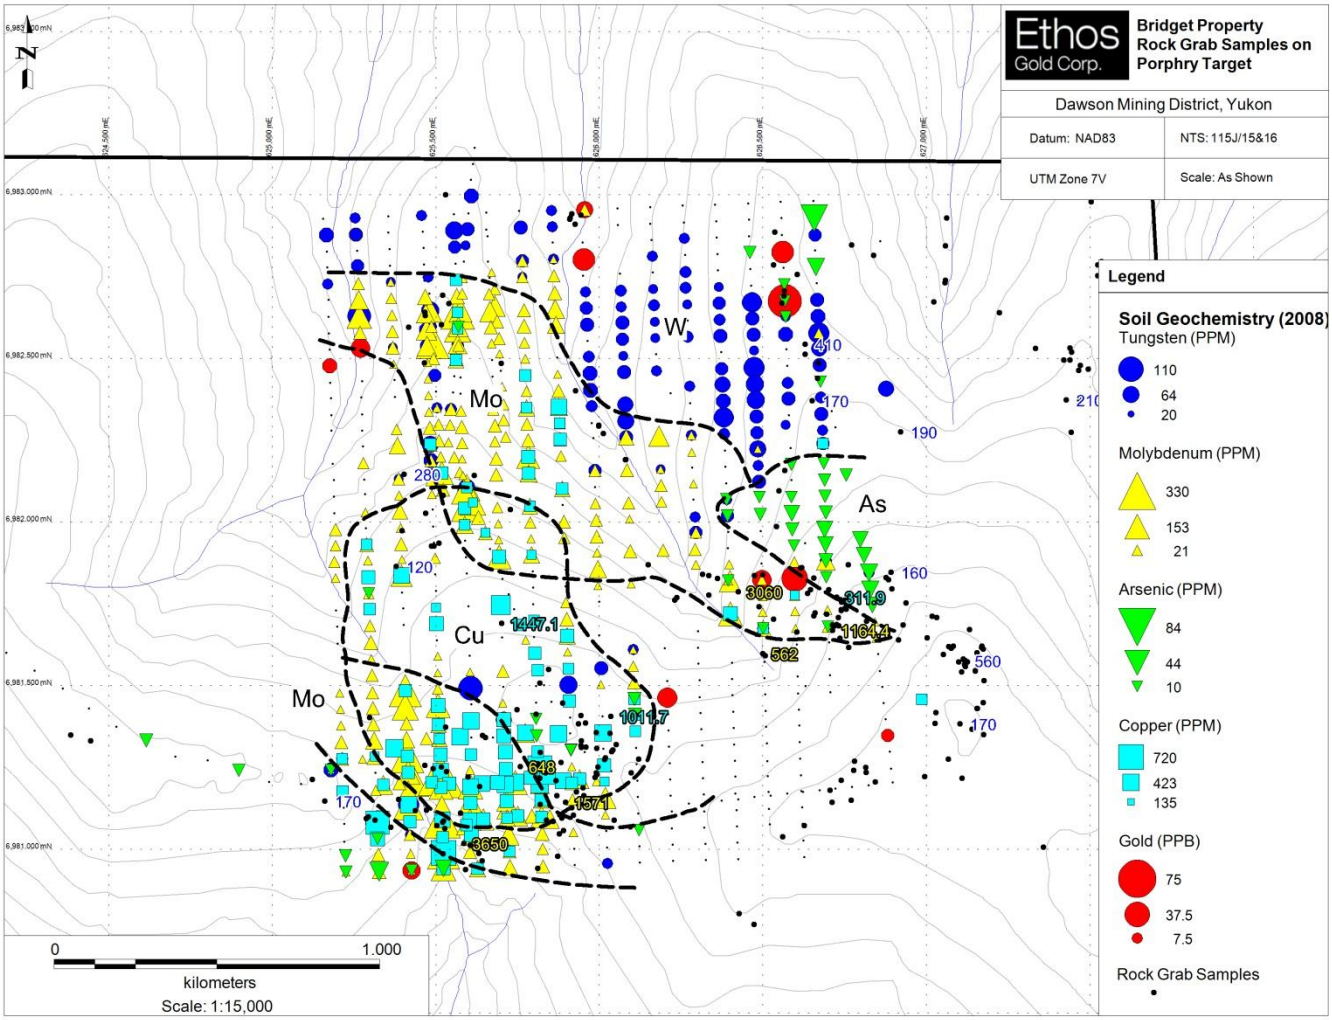

Figure 8. Bridget Porphyry Prospecting Sample Location Map plotted on anomalous soils.

7.3 Airborne Geophysics

During 2011, Ethos' employed New-Sense Geophysics Limited ("New-Sense") of Toronto, Ontario to complete 4,812 line-kilometers of helicopter magnetic and gamma-ray spectrometric (radiometric) surveying over the Bridget property as part of a larger survey covering Ethos' Betty, Hayes, Bridget, Wolf and Hen properties. Pre-survey calibration flight testing was conducted on the property on July 1 and July 2, 2011. Surveying commenced on July 8 and was completed August 12, 2011 as part of a total survey of 12,499 line kilometers.

The geophysical equipment was comprised of one high-sensitivity Cesium-3 magnetometer mounted in a fixed stinger assembly and a 1024-channel RS-500 spectrometer with four downward looking crystals (total 16 liters) and one upward looking crystal (total 4 liters) mounted in the storage compartment of the aircraft. Airborne ancillary equipment included digital recorders, fluxgate magnetometer, radar altimeter, and global positioning (GPS) receiver. The GPS receiver provided accurate real-time navigation and subsequent flight path recovery. The equipment was mounted on a Bell 206 B3 helicopter chartered from Northern Air Support based in Kelowna, British Columbia. Surface equipment included a

magnetic base station with GPS time synchronization, and a PC-based field workstation which was used to check the data quality and the completeness on a daily basis. Ethos also employed Williams Geophysics Limited (Brian Williams) of Hereford, United Kingdom to monitor the daily flight production, assess the data quality, and provide quality control during the term of the survey. The helicopter and pilot and survey engineer were based at the Coffee Camp operated by, and with permission of, Kaminak Gold Corporation. Ethos contracted JDS Energy and Mining Inc ("JDS") to install a fuel liner and containment berm sufficient for 120 drums of fuel to complete the entire survey. Ethos obtained 120 drums of Jet A fuel from Whitehorse, YT and delivered it by transport truck to the barge landing operated by JDS at Minto. Ethos contracted the JDS barge to transport the 120 drums of Jet A fuel to Kaminak's Coffee Camp and store them in the lined berm in early August prior to commencement of the survey. At the end of the contract, the fuel liner was sold to Kaminak.

Photo-Plate 2: Northern Air Support Bell 206 B3 helicopter with magnetometer mounted in a fixed stinger assembly used in survey.

The technical objective of the survey was to provide high-resolution total field magnetic (Figure 9) and radiometric maps suitable for anomaly delineation, detailed structural evaluation, and identification of lithological trends. The survey was flown at a nominal traverse line spacing of 100 meters with control line ("tie-line") spacing of 1,000 meters. The traverse lines were flown at 0 degrees or 180 degrees true north. Fully corrected magnetic and radiometric maps were prepared by New-Sense in their Toronto office after the completion of survey activities.

A full description of the survey parameters is included in Appendix VI entitled "Logistics Report for the High Resolution Helicopter Magnetic and Gamma-ray Spectrometric Airborne Geophysical Survey Flown Over Betty/Bridget/Hayes (BBH), Hen, and Wolf Blocks".

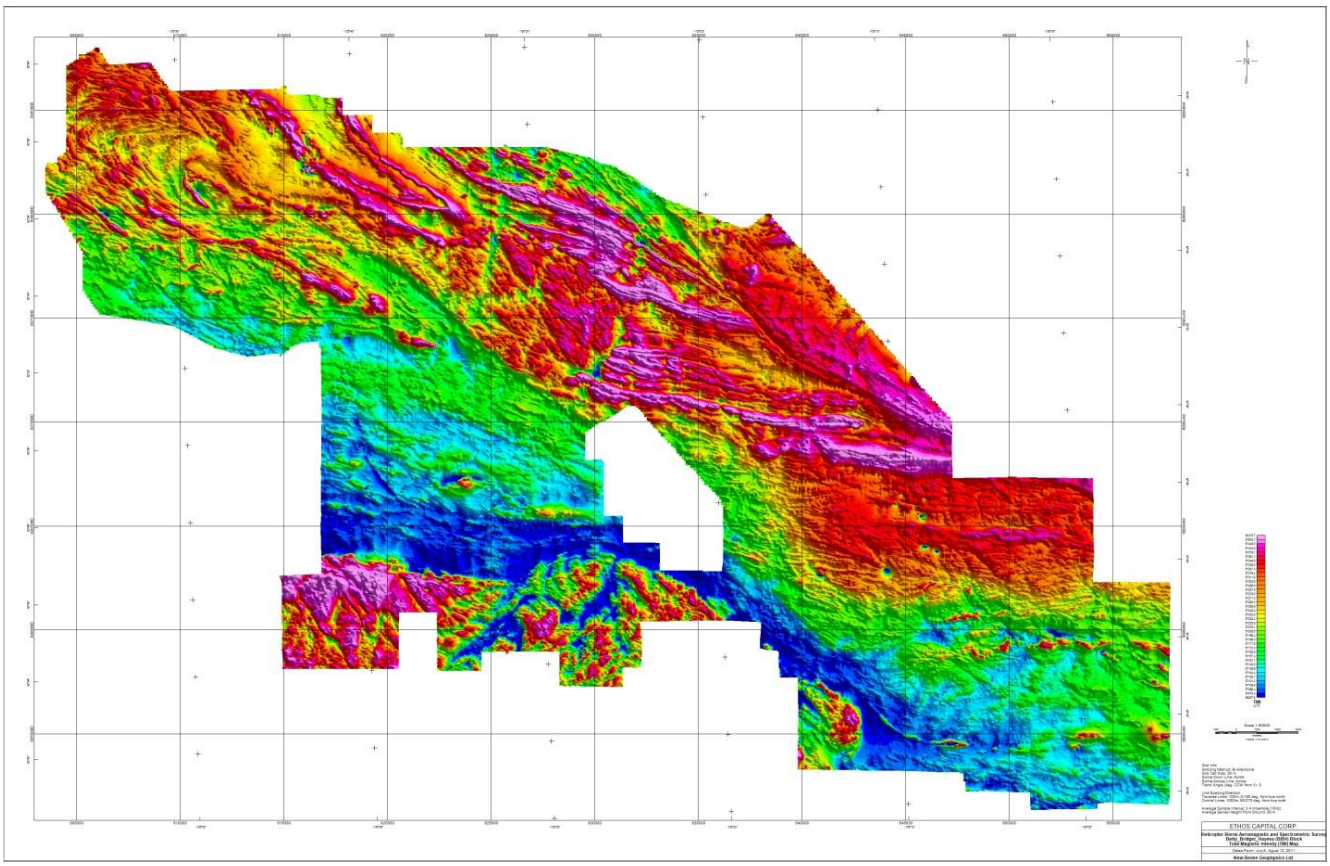

Figure 9. Total Magnetics Intensity Map

Results from the airborne total field magnetic intensity mapping (see Figure 9) shows the property is underlain generally by one folded (gneissic) terrain. The terrain shows regional isoclinal folding with none to minor transposition offset in hinges. Two interesting magnetic terrain breaks are evident; a north-south 005 azimuth break (kink?) that intersects the Bridget porphyry, and a northwest trending fault (with a more easterly trending south leg) located 20 km east of the Bridget porphyry which marks the contact with the Aishihik plutonic suite (see Figure 4 Bridget Geology Map: Unit EJgA). The fault marking the Aishihik plutonic suite has some corresponding anomalous gold-in-soil results (see Figure 10). A third magnetic break is interpreted to extend northwesterly and defines the southern boundary of the felsic stock (see Figure 4: Unit ETqN) and could continue northwesterly to define the axial plane of the prominent regional fold near the western end of the Bridget Property.

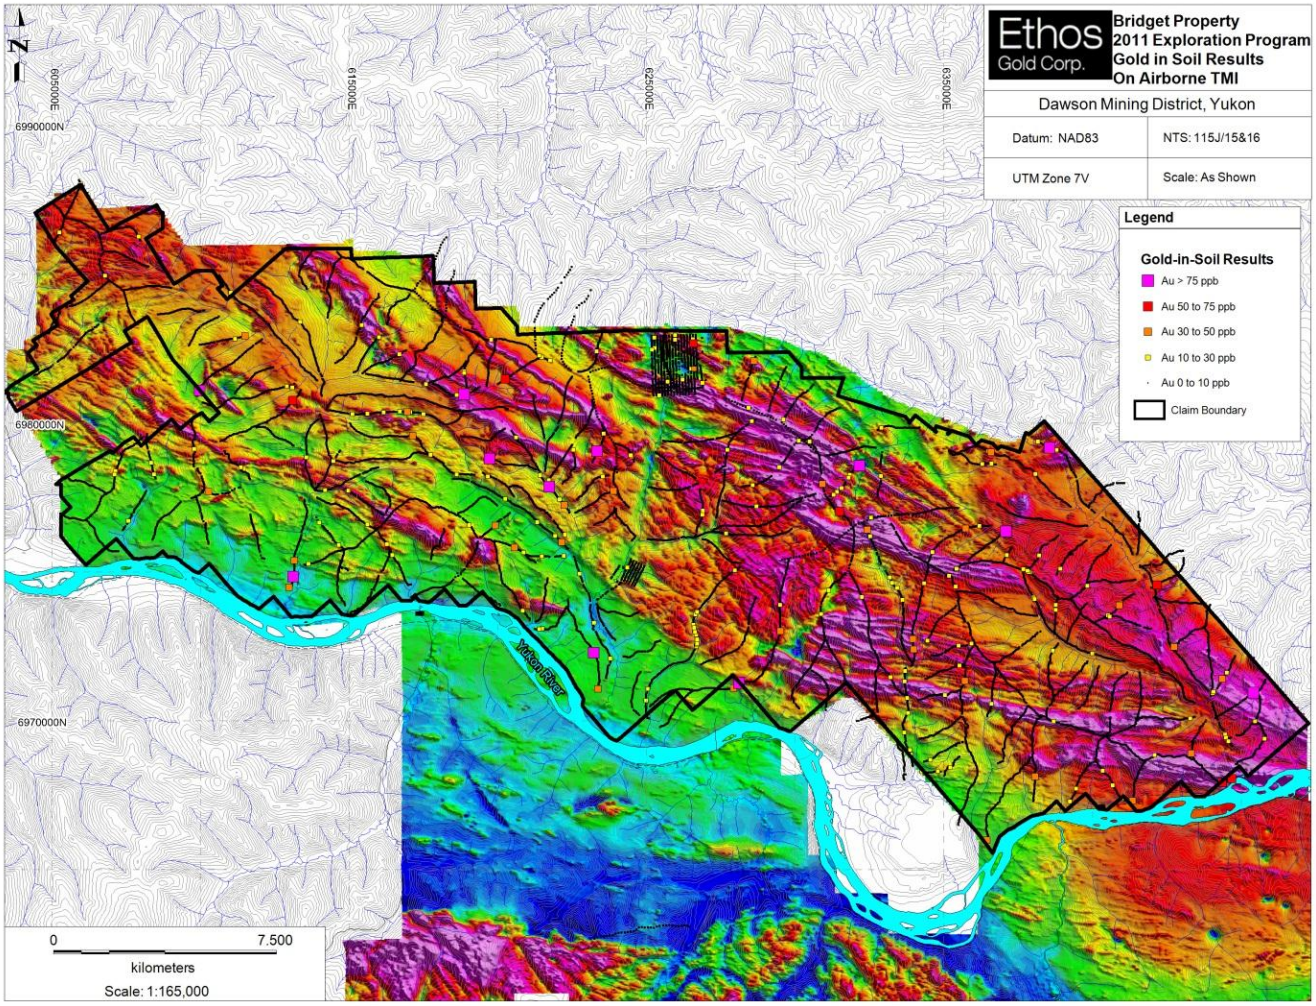

Figure 10. Gold-In-Soil Results & Total Magnetic Intensity

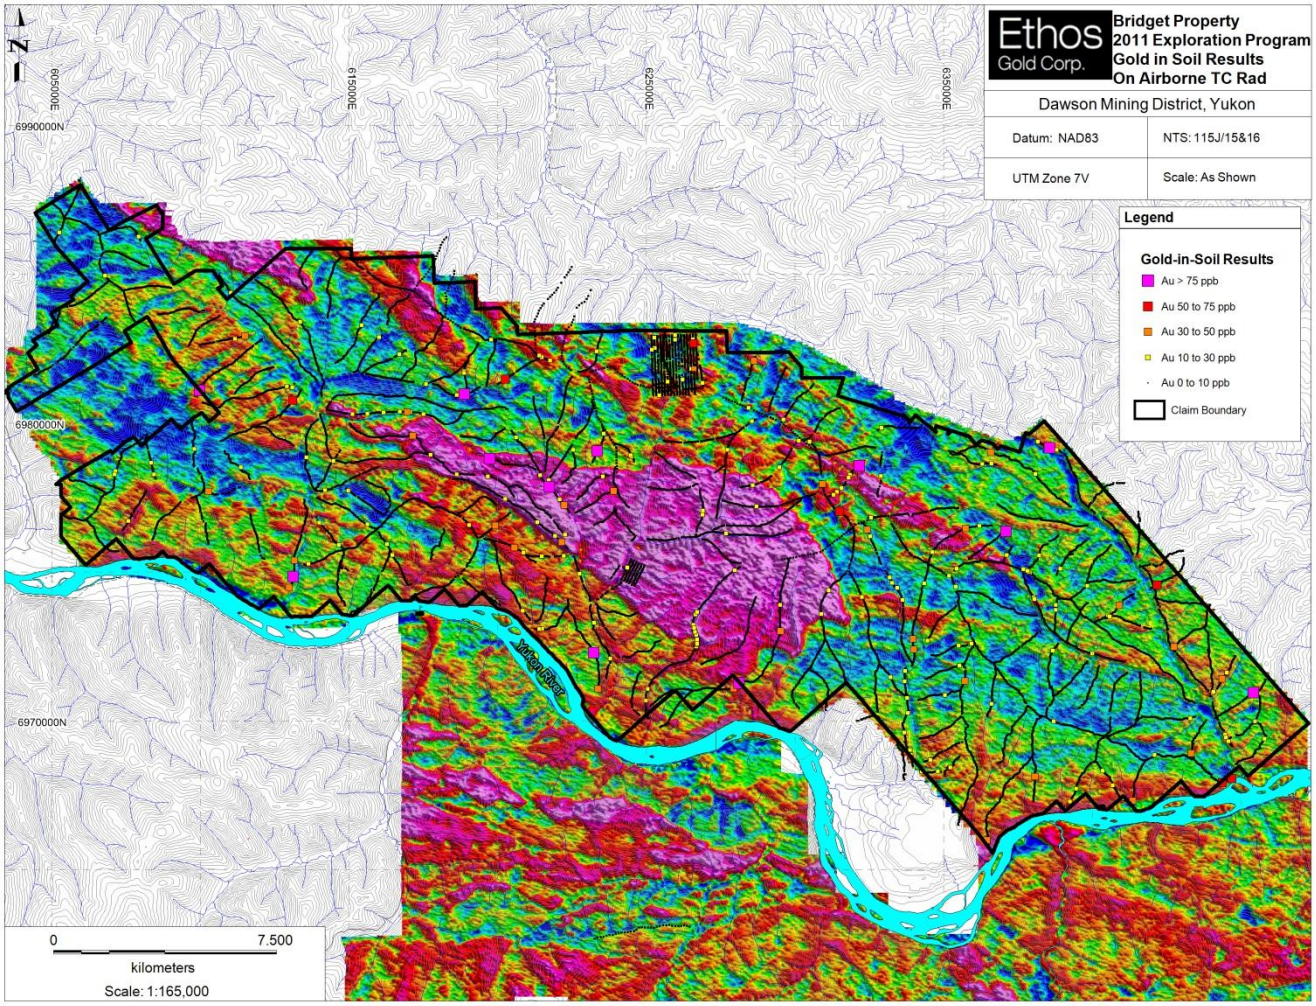

Figure 11. Gold-In-Soil Results & Total Count Radiometrics

The most prominent feature is a positive K-U-Th (all bands) radiometric anomaly in the center of the Bridget Property. The southern boundary of this feature, which corresponds to a mapped felsic intrusion (see Figure 4: Unit ETqN) is interpreted to be faulted along a northwest trend. To the northwest along trend near the western limit of the Bridget property this lineament is interpreted to map the axial plane of a regional-scale fold. There is no positive association to this feature with gold-in-soil anomalies.

7.4 Orthophotography

During 2011, Ethos' employed AECOM of Markham, Ontario to complete ~250 line-kilometers air-photo imagery over the Bridget property as part of a larger 366 line-kilometer air-photo imagery program covering Ethos' Betty, Hayes, Bridget, Wolf and Hen properties. Geographic Air Survey Ltd. (GAS) of Edmonton, Alberta performed the flight acquiring the aerial photography on behalf of AECOM on August 25th, 27th, and 30th, 2011.

GAS used a RC30 Aerial Camera with Airborne Kinematic GPS positioning and Forward Motion Compensator as well as a Trimble 1000 SSI airborne GPS system all mounted in an Aero Commander 690 A aircraft (the acquisition of the colour aerial photography adhered to the Interdepartmental Committee on Air Surveys (ICAS) Specification for Aerial Survey Photography 2000). Photographs were flown with variable sun angles of >30°, at the 1:20,000 scale (±1.0m vertical and horizontal), with 60% forward overlap and 30% side-lap suitable for stereoscopic viewing. Photograph indices were provided in a NTS 1:250,000-scale map sheet format. Flight lines were centered along the north and south perimeter boundaries of the property. A total of five flight lines were flown to collect approximately 150 airphoto images to cover all of the Bridget property area. The onboard Airborne GPS was utilized as the basis for ground control for the images as well as known survey monuments.

Ariel photograph image capture and processing was completed by AECOM who produced 45 individual orthophoto rectified images. The air-photo film was scanned using a Vexcel 4000HT photogrammetric scanner and processed with a variety of programs including SOCET SET, ARC GIS, OrthoVista, PCI, AutoCAD, and Adobe PhotoShop. AECOM produced a DEM (digital elevation model) and orthophotographs with 2m interval topographic contours. The true optic resolution was 10 microns or 0.20m ground resolution (Figure 12).

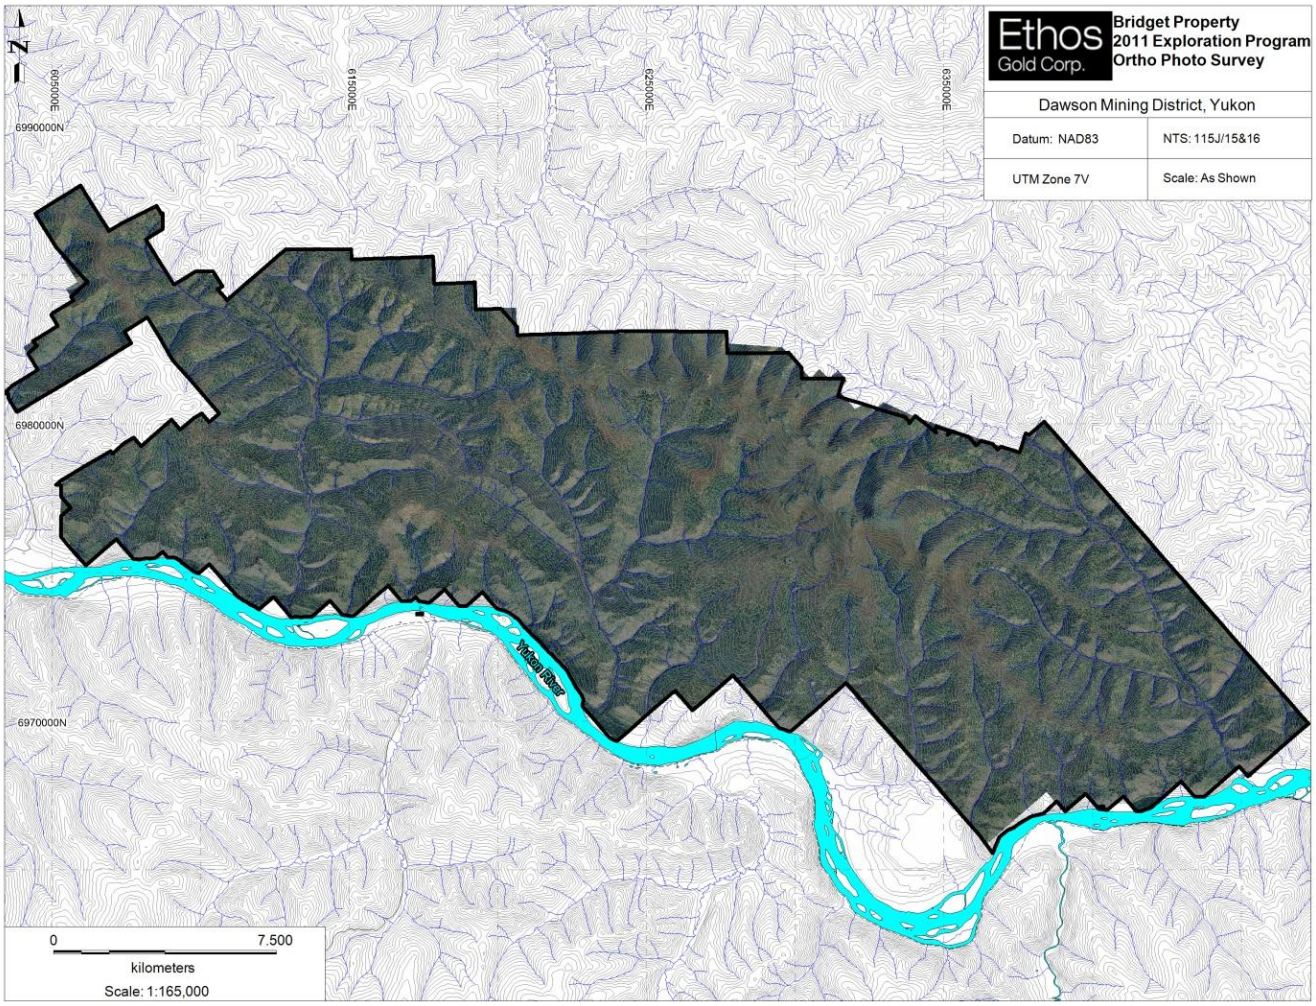

Figure 12. Bridget Property Orthophoto Mosaic

7.5 Permitting

Ethos contracted All-Terrane Exploration Mineral Exploration Services of Whitehorse, Yukon to apply for Class III Exploration permits on the Bridget property. The permit was received from Yukon Environmental and Socio-economic Assessment Board (YESAB) in July 2012 and is good for five years.

8 Drilling

No drilling has been completed on the Bridget claims to date.

9 Sampling Method & Analyses

Collection of rock and soil samples on the property during the 2011 field season was completed under the supervision of qualified geologists by experienced geological technicians. ACME Analytical Laboratories Ltd. was employed for geochemical sample analysis, ACME is an ISO 9001:2008 credited facility (certificate number FM 63007).

9.1 Sampling Method & Approach

9.1.1 Soil Samples

At each soil sample site, the Soil Technician identifies the most appropriate location to collect the sample and lays out a sheet of plastic (12” x 20” ore bag). The soil sample is taken using an Eijkelcamp hand-auger, at a depth of between 30 and 110 cm. Samplers strive to consistently collect C-horizon sample material. The soil is laid out on the sheet of plastic in the order it was recovered from the sample hole. Once the necessary amount of soil (400 - 500 g) has been obtained, the deepest soil is taken and placed in a bag labeled with the 3-letter project code and a unique 5-6 digit sample identification number. A representative rock chip sample is taken from the recovered soil and placed in a small (1” x 1.5”) bag labeled with the same project code and sample identification number. An aluminum metal tag inscribed with the sample identification number is attached to a rock or branch at the sample site along with a length of pink flagging tape. A duplicate sample is taken once for every 25 samples. At the sample site twice as much of the desired soil is acquired and then placed on the plastic sheet and homogenized before being placed into two sample bags. Both samples are given their own sample bag identification number. The data for both samples is recorded and a note is made indicating the duplicate and its corresponding sample identification number.

The GPS location of the sample site is recorded with a Garmin GPSMap 60cx or 76cx GPS device in UTM NAD 83 format, and the waypoint is labeled with the project name and the sample identification number. A Palm PDA device is used in the field to record the characteristics and description of the sample taken; this includes: sample identification number, soil colour, soil horizon, slope, sample depth, ground and tree vegetation and sample quality and any other relevant information. As well, the GPS coordinates are entered into the Palm device as a secondary backup in case of GPS failure.

Each night in the field, the GPS and Palm PDA devices are downloaded to a laptop computer and the data is verified on a sampler-by-sampler basis in proprietary database auditing software (“Dirtbagger 3000”) to ensure accurate data was recorded. The data is also mapped out daily using ESRI ArcMap to assure proper sample spacing and location. A backup of the sample data is made, copied onto a USB

memory stick and kept in a separate location from the laptop computer until job completion. Where possible, a backup is also sent via e-mail. The soil samples are packaged daily into fiber bags, sealed, and delivered via helicopter or fixed wing to Dawson where they are laid out on drying racks to air-dry, and then repackaged in labeled rice bags. Ground Truth personnel in Dawson deliver them to the ACME sample preparation lab in Dawson where a receipt for delivery is issued.

9.1.2 Rock Samples

Rock samples were collected (grab, chip, float), tagged and bagged in thick plastic (poly) rock sample bags, placed into a rice bag and sealed for shipment to ACME's sample preparation facility in Dawson City where Ethos personnel were issued a submittal receipt. Acme employees placed the fiber sacks on pallets, which were trucked daily by subcontractor Kluane Freight Lines to Acme's Whitehorse rock and soil preparation lab. Rocks were either crushed and split in Whitehorse or shipped via Air North air-freight to Acme's Vancouver lab to be crushed and split. The originating preparation lab is indicated on the final signed assay certificate. At each rock sample location detailed sample descriptions were collected and locations were marked with flagging and recorded with a GPS.

9.2 Sample Preparation, Analyses and Security

Each soil sample was analyzed by ACME Analytical Laboratories Ltd. in Vancouver, British Columbia for 36-element ICP-MS nitric-aqua regia digestion with a mass spectrometer finish; a 0.5 g sub-sample undergoes aqua regia digestion with ICP-MS analysis. Fifteen-grams of sample material was analyzed for Al, Sb, As, Ba, Bi, B, Cd, Ca, Cr, Co, Cu, Ga, Au, Fe, La, Pb, Mg, Mn, Hg, MO, Na, Ni, P, Ag, K, Sc, Sr, S, Tl, Th, Ti, Sn, W, U, V and Zn. Quality control procedures were implemented at the laboratory, involving regular insertion of blanks, standards and repeat analyses. Furthermore, soil sample field duplicates are routinely collected and inserted into the analytical stream as are pulp duplicates, as well as certified reference materials and blanks. ACME Labs prepared the samples in Dawson City and then shipped prepared samples to Vancouver for analysis. Soils are dried at 60^{o}C and sieved to collect up to 500 grams passing the -80 mesh fraction. For detailed laboratory sample preparation and analysis procedures are outlined in Appendix II. Soil samples for 2011 were primarily processed in ACME's Dawson City preparation lab however some samples were processed in the Whitehorse and Vancouver labs.

Rock samples are analyzed using specific Acme rock and drill core packages coded "Geo2" which consists of the code 1DX1, 3B01, and G601+G613 procedures as follows. Rock samples are analyzed for gold coded "3B01" using a 30 gram sub-sample by fire assay with an atomic absorption finish for concentrations under 10 g/t Au and a gravimetric finish if greater than 10 g/t Au. All rocks are also analyzed coded "1DX1" using a 0.5 g sub-sample which undergoes aqua regia digestion with ICP-MS analysis for 36 reporting elements using the same methodology as per soils.

Ethos uses protocols standard to the industry and professional QA/QC procedures for assaying including the use of duplicates, certified laboratory standard(s), prep and assay wash blanks.

1. Sample Preparation

Package	Description	Code	Unit Cost CDN$
Soils	Dry at 60°C, sieve (up to) 100g to -80mesh, up to ½ kg		
	Soils processed in Dawson City	SS80-DAW	2.85
	Soils processed in Whitehorse	SS80-WHI	1.85
	Sieve large samples: 80 mesh per ½ kg		0.80
Rock and Drill Cores	Crush 1kg to 80% passing 10mesh, split 250g and pulverize to 85% -200mesh	R200-250	6.20
	Extra crushing and saving rejects over 1kg, per kg		0.60

2. Sample Analysis

Package	Description	Code	Unit Cost CDN$
Soils	15g sample, aqua regia digestion, ICPMS finish for low detection limits	1DX2	15.20
Rocks and Drill Cores	A. Consists of:		
	1. 1DX1 – 0.5g sample, aqua regia digestion, ICPMS analysis	Geo2 (package)	23.40
	2. 3B01 – 30g sample, fire assay, AA or ICP finish (2 – 10,000 ppb)		
	B. (Over limit Au > 10,000 ppb) 30g sample, fire assay, gravimetric finish	G601+G612	15.85

Summary of analytical description and code for Acme Analytical soil and rock analyses packages used by Ethos during the 2011 exploration program.

10 Data Verification

The author visited the property in June and August 2011 to direct and conduct the explorative work. Geochemical data was verified by sourcing original analytical certificates and data. The QAQC procedures for soils indicate adequate reproducibility of standards, blanks and duplicate samples within acceptable error limits.

11 Adjacent Properties

Immediately adjoining the property to the north and northeast are the Lou, STV and Flora claims, staked in August 2010 by Pacific Ridge Exploration Ltd. to expand their Mariposa property. Recent results from drilling the Skookum showing at Mariposa has reported up to 2.44 g/t gold over 38.9 m and 2.59 g/t gold over 9.6 m from diamond drill hole 11MP-0112. To the west by the TAK claims owned by Farrel Andersen, Carl Schulze, Jackie Ziehe and Hinterland Metals Inc. To the northeast the claims are adjoined by the Toluamide claims owned by Gordon Richards. To the south, the property is bound by the Yukon River, on the other side of the river is Ethos' Betty property.

From a more regional perspective, properties within the Tintina Gold Belt include the Coffee (Kaminak Gold Corporation) and White Gold (Kinross Gold Corporation) projects. The Bridget project is located 40 km west of the Kaminak Coffee project. 2011 exploration season drilling on the project has defined gold

mineralization along the Coffee Creek structure reporting 17.1 g/t Au over 15.5m with wider intervals running 1.08 g/t Au over 83.93 m from drill core. Kinross' White Gold deposit (AKA- Golden Saddle) is located 35 kilometers to the northeast, reporting 9,797.000 tonnes (measured and indicated) of 3.19 g/t gold (1,005,000 ounces), with an additional 9,391,000 tonnes (inferred) of 1.91 g/t gold (578,000 ounces).

12 Mineral Processing & Metallurgical Testing

The project is at an early exploration phase and therefore no metallurgical testing has been carried out to date.

13 Mineral Resource & Reserve Estimate

There has not been sufficient work on the property to undertake a resource calculation.

14 Other Relevant Data and Information

To the author's knowledge, there is no additional information relevant to this technical report.

15 Interpretation and Conclusions

Large regional faults are inferred from magnetic and radiometric 'breaks' however deformation within the Bridget Property appears primarily to have accommodated shortening by folding without significant lateral offset faults or thrusts. Larger regional scale dextral offsets are located beyond the claim boundaries.

Reconnaissance ridge-and-spur gold-in-soil results generated isolated, usually single-site, anomalies. The survey did not reveal large target areas of geochemically anomalous gold or pathfinder elements that could focus exploration towards large bulk tonnage gold deposits. One of the interpreted faults near the northern boundary of the Bridget Property may have an association with anomalous gold-soils.

Limited prospecting on soil anomalies was completed in 2011. No significant gold results were obtained.

The area of the Bridget porphyry was examined. Outcrops containing potassic alteration, porphyritic textures, and locally chalcopyrite and molybdenite mineralization were identified. Rock assays also show anomalous tungsten mineralization. No sample contained anomalous gold concentrations. The area of the porphyry has potential for Casino-style bulk tonnage Cu-Mo-Au mineralization if there is gold present at Bridget.

16 Recommendations

The Bridget porphyry area should be examined in 2012. The porphyry is economically interesting if there is gold associated with the copper-molybdenum-scheelite mineralization. A program consisting of additional rock sampling of all units within the approximate 1 square kilometer area should be undertaken. There has been consideration given to the idea that a 'leach' cap exists at the Bridget porphyry which inhibits soil geochemical mobility, and limits the opportunity to directly sample for a gold assay. The leach cap at Casino extends approximately 100 meters below surface. To evaluate this

risk, a program of reverse circulation ("RC") drilling could be contemplated since an RC rig will be available to Ethos during the 2012 field season.

Prospecting the individual gold-anomalous soil site should be undertaken in 2012. Combined with the magnetic and radiometric information, prospecting can target these anomalous sites to determine if they are produced by bulk tonnage gold targets that could be economic. If prospecting yields interesting results, the individual areas should be surveyed with detailed (follow-up) soils, geological mapping, and conceptually either limited pit trenching or perhaps RC drill testing. The 2011 program was designed to accumulate first-pass exploration information and exploration results to date have yet to identify a gold target on the large Bridget property.

17 Statement of Expenditures

Expenditures on the Bridget Property, including the Betty East, Betty Central, and Betty West claim groupings, were incurred between June 1, 2011 and October 8, 2011.

Contractor	Type	Period (2011)	Amount
Ground Truth Exploration	Soil Survey	Jun 2 to Sep 30	$ 247,119.26
Acme Labs	Soil-Rock Analysis	Jun 2 to Sep 30	$ 188,350.45
Helicopter/Fixed Wing Aircraft	Soil Survey, Prospecting	Jun 2 to Sep 30	$ 332,450.78
Helicopter/Fixed Wing Fuel	Soil Survey, Prospecting	Jun 2 to Sep 30	$ 59,913.24
Airborne Geophysics	Airborne Mag/Radio	Jun 2 to Sep 30	$ 298,429.34
AECOM Engineering	Orthophoto	Jun 2 to Oct 9	$ 54,745.00
All-Terrane	Prospecting	Jun 2 to Sep 30	$ 46,520.74
Total to Oct 9, 2011			**$ 1,227,528.81**

*Helicopter/Fixed Wing Aircraft includes TransNorth, Helidynamics, Great River Air invoices.
*Airborne Geophysics includes New-Sense Geophysics, Williams Geophysics, JDS Mining (fuel for survey)

Expenditures certified correct,

Peter Tallman, P.Geo.
Chief Operating Officer, Ethos Gold Corp.

19 Statement of Qualifications

I, Peter Tallman, of Vancouver, British Columbia hereby certify that:

- I am a graduate of the University of Western Ontario with a Bachelor of Science (Geology) degree (1984).
- I am a practicing Professional Geoscientist (#02366) with the Professional Engineers and Geoscientists of Newfoundland and Labrador (PEGNL) since May 1991.
- I have practiced my profession as a geologist in Canada, throughout the America's as well as Australia and Africa continuously since graduation.
- I have held the position of executive officer and/or director of various publically listed Canadian corporations since 1995.
- I currently hold the position of Chief Operating Officer with Ethos Gold Corp., a company listed publically on the TSXV Exchange.
- I own shares and have been granted options to purchase shares in Ethos Gold Corp.
- I directed work on the Bridget Property during the period June 2 to September 1, 2011 and am the designated Qualified Person as defined by National Instrument 43-101 policy.

Dated in Vancouver, British Columbia this 18th day of April, 2012.

Peter Tallman, P.Geo.

Appendix III - Rock Sample Locations and Descriptions

Sample ID	Zone	Easting	Northing	Altitude (m)	Sample Description	Sample Type	Date
580501	7	625835	6981234	1135	QFP, 1-2% biotite, alt to chlorite, <1% dissem Py, tr Po, Magnetite, Cpy	RC, CGr	6/7/2011
580502	7	625818	6981217	1136	QFP, qz vns, buff-coloured; Mod Si alt; 2% Py, tr Cpy, mal	RC, CGr	6/7/2011
580503	7	625818	6981508	1161	Rhyolite, buff-tan, mod Si, wk-mod argillic (Arg) alt, <1% Py	Oc - Rc, CGr	6/7/2011
580504	7	625748	6981427	1160	Amphibolite, recrystallized, grn-blk, wk chl alt, 5% pyrite	Pit; C Gr	6/7/2011
580505	7	625530	6983000	976	Qz eye rhyolite; incl. Qz veins, tan, mod Si, Arg alt, 1-2% dissem pyrite	RC, CGr	6/7/2011
580506	7	625652	6981341	1146	Qz-Mon; pink-tan, wk-mod K-alt, wk ep alt; 2% secondary biotite, 1% Py, tr Cpy, Mag	Pit; grab	6/8/2011
580507	7	625824	6981243	1137	F. Por Mdior; veined, buff-tan, wk Si, Arg alt, 2% Py, <1% Po, tr Cpy, Mo	RC, CGr	6/8/2011
580508	7	625530	6981373	1126	Mdior, equigranular, buff-tan, weak Si, K, Phy alt, 1-2% Py, <1% Po, tr Cpy	Rc-flt, SCGr	6/8/2011
580509	7	625160	6981147	1161	Amphibolite, weakly calcareous (Calc), str Ep alt, tr Py in qz veins; green	Oc - Rc, CGr	6/8/2011
580510	7	625122	6981213	1169	Rhy, fractured, rare qz eyes, tan, weak sil, arg alt, 3% pyrite, mod-strongly oxidized	RC, CGr	6/8/2011
580511	7	624444	6981331	1190	Rhy, tan, wk K, phy, mod arg alt, <1% Py	RC, SCGr	6/8/2011
580512	7	624384	6981349	1186	Amphibolite, grey, loc brecciated, mod Si, strong graph alt, 2% f.gr Py	RC, CGr	6/8/2011
580513	7	623982	6981796	1222	Rhyolite, beige, mod. Fractured, mod arg, mod-strong sil alt, tr Py	RC, CGr	6/8/2011
580514	7	625297	6981402	1122	Rhyolite, qz veins, tan, weak-mod silica, weak argillic alt, tan; tr pyrite	Float - colluvium (CV); SCGr	6/10/2011
580515	7	625486	6981927	1063	Rhyolite, 3-4% Qz eyes, buff-tan, mod silica, weak Arg alt, <1% Py, tr Mo	Float - CV), CGr	6/10/2011
580516	7	625494	6981927	1065	Rhyolite, qz veins, tan, mod silica, weak Arg, lim alt, tan; tr pyrite, Moly	Float, SCGr	6/10/2011
580517	7	625509	6981935	1064	Amphibolite, recrystallized, grn-blk, wk chl, arg alt, 5% pyrite, tr Cpy	Rcrop - CV; SCGr	6/10/2011
580518	7	625520	6982080	1038	Qz-Fspar-Biotite Porphyry; weak K-spar, Arg alt; 2% Py, <1% Moly	Rcrop, CGr	6/10/2011
580519	7	625522	6982081	1038	Rhyolite, fractured, tan-buff, weak argillic, weak-mod silica alt; <1% Py, tr moly	Rcrop, CGr	6/10/2011
580520	7	625517	6982603	979	Quartz vein boulder; white, fractured, argillic lt + limonite al fractures	Float, grab	6/10/2011
580521	7	625468	6982631	972	Quartz vein boulders; fractured, tan, vuggy, dark sulphide (?)	Prox flt, CGr	6/10/2011
580522	7	625466	6982641	972	Int. Gneiss, grey-tan, 8% Qz +/- Py - Moly veins; strong K-alt; 5% Py, tr Moly	Prox flt, Grab	6/10/2011
580523	7	625521	6982694	975	Rhyolite, locally brecc; weak-mod ilica alt, wk ankeite (Ank) alt; tr pyrite	Float, CGr	6/10/2011
580524	7	625540	6982668	975	Rhyolite, fractured, mm-scale qz veins, tan, weak silica, Arg alt, <1% Py	Rcrop, CGr	6/10/2011
580530	7	632867	6976818	1572	Rhyolite dyke, f. Gr, massive, buff colour, weak silica alt	Rcrop, CGr	6/11/2011
580534	7	625870	6981164	1128	Qz-Bio Por, 5-6% Qz Vns, tan - beige, weak sil, arg, lim alt, <1% Py, tr Cpy	Rcrop, CGr	6/15/2011
580535	7	625896	6981144	1127	Sil. Gneiss (mafic volcanic?), sheeted Qz +/- Mo veins + Bismuthianite?,	Rcrop; grab	6/15/2011
580536	7	625819	6981296	1161	QFP, mod-strong sil matrix, mod arg alt, 5% Qz +/- Cpy veins, <1% Cpy, tr Mo, Py, <1% Cpy	Rcrop, CGr	6/17/2011
580537	7	625916	6981127	1129	QF Por, fractured, tan, mod sil, weak-mod arg, K-alt; <1% Mo, tr Cpy, tr-1% Py	Rcrop; grab	6/15/2011
580538	7	625921	6981104	1126	QF Por, 1-2% Bio, alt to chlorite, 10 - 12% Qz veins +/- Py, Mo; 2% frac cont + dissem Py	Rcrop, CGr	6/15/2011
580539	7	625811	6981261	1139	QF Por, f. grained, 4-5% Qz +/- Mo veins, mod sil matrix, <1% Py, tr Moly	Rcrop-SC; CGr	6/15/2011
580540	7	625758	6981253	1137	Qz Bio (QB) Por, 12% Qz Vns, 3% Bio, wk Kspar, arg alt; 1% Py, tr Cpy, tr Mo as clots	Rcrop, CGr	6/15/2011
580541	7	625598	6981221	1120	Gneiss, mod arg alt, minor Qz +/- Mo veins; 2% Py, tr Moly, Cpy	Rcrop; CGr, 2 sites	6/15/2011
580542	7	625634	6981192	1115	Qz vein, min 1.5m, mod lim, fractured, lim along fractures	Float; 1.5m chip	6/15/2011
580543	7	625532	6981237	1122	Rhyolite, qz veins, tan, limonitic, mod-str K-alt, Tr Moly, strong along one fracture	Float: CGr, 2 pieces	6/15/2011
580544	7	625517	6981251	1125	Pink rhyolite, 8-10% mm-cm scale qz veins +/- Py, Cpy, mod K, weak sil alt; 2% Py, <1% Cpy	Scrop, CGr, 3 pieces	6/16/2011
580545	7	625287	6981094	1129	F Grained rhy, 5-6% Qz veins, pink, mod K-alt, wk-mod sil; 2% dissem + vein-assoc Py	Talus-Rc; CGr	6/16/2011
580546	7	625386	6981153	1110	Rhyolite, veined, pink, mod Sil, K-alt; 2% Py	Talus-Scrop; CGr	6/16/2011
580547	7	625503	6981072	1077	Ta-Scrop; Rhyolite, veined - stokwork, 12-15% Qz veins, mod sil, K-alt; <1% clotty Py	Talus-Scrop; CGr	6/16/2011
580548	7	625885	6981095	1120	QF Por, 1-2% bio, 1% Qz-Py veinlets, tan, sugary matrix; 1-2% dissem Py	Rcrop, CGr	6/17/2011
580549	7	625858	6981085	1117	QF Por, mod-strong sil, f. Gr matrix, 4-5% Qz +/- Py veins; 1-2% dissem + vein Py, tr vein Mo	Rcrop - Scrop; CGr	6/17/2011
580550	7	625838	6981089	1114	QF Por, mod sil, weak Arg alt, 2% Qz +/- Mo veins; 2% dissem Py	Rcrop - Scrop; CGr	6/17/2011
580551	7	625873	6980979	1097	QB Por Monz, 2-3% Bio, weak-mod limonite; 4% dissem Py, tr Cpy	Rcrop- - prox CV; CGr	6/17/2011
580552	7	625995	6981252	1147	Rhyolite,10% sub-cm Qz +/- Py veins, weak sil, arg alt;2% frac cont + dissem Py	Rcrop, CGr	6/17/2011
580553	7	626014	6981159	1143	QFB Por, locally veined, mod arg alt of fspars, buff-tan; 3% dissem + clotty Pyrite	Rcrop, CGr	6/18/2011
580554	7	626045	6981089	1142	QFB Por, beige-tan, massive, 3% biotite, 3-4% dissem Py	Float (CV?); CGr	6/18/2011
580555	7	626094	6981069	1148	QFB Por, grey, weak limonite; 2% dissem Py	Float (CV?); CGr	6/18/2011
580556	7	625936	6981383	1148	QP Mon, 25-30% qz veins, locally banded, local mass vein Py, mod K alt; 2% Py	Rcrop, CGr	6/18/2011
580557	7	626424	6981787	1055	CV - Talus; 1 boulder of Qz-Moly vein, 5-6 cm wide, 3% banded Mo; 1-2% c gr Pyrite	CV - Talus; Grab	6/18/2011
580558	7	626334	6981777	1011	Qz-Hble Por Monz, 7-8% Qz eyes, chl after hble; 1% dissem Pyrite	Talus - CV; CGr	6/18/2011
580559	7	625998	6982296	908	QFP Monzonite, veined, tr Mo along one vein; 1% Py, trace Moly along one vein	Float (Placer); CGr	6/18/2011
580560	7	626713	6981669	1156	QFP, veined, tan, mod sil, arg, weak K, ser alt; 2-3% dissem Moly, tr Cpy, Py	Float to CV; CGr	6/21/2011
580561	7	626719	6981683	1154	QFP, massive, 5-6% Quartz, 50% Fspar porphyries, mod arg alt	CV - float, CGr	6/21/2011
580562	7	626725	6981687	1155	QFP, tan massive, weak sil, K, weak-mod arg alt, mod lim alt	CV - float, CGr	6/21/2011
580563	7	626752	6981737	1153	C gr QFP, mod sil, phy, weak-mod arg alt; 5% dissem and clotty Py, tr. Cpy	CV, SCGr	6/21/2011
580564	7	626741	6981756	1148	QFP, strong sil alt, buff-coloured, fine fractures, mod-strong sil; 4% Py, <1% frac-cont Mo	CV - Rcrop; SCGr	6/21/2011
580565	7	626737	6981763	1146	QFP, C. Grained, massive, mod phy alt of biotite, 5% dissem and clotty Py, tr dissem Cpy, Mal	CV - Rcrop; SCGr	6/21/2011
580566	7	626726	6981770	1143	QFP, c. grained, mod phy alt, weak sil, arg alt; 3-4% dissem Py, <1% diss Cpy, tr Moly	CV - Rcrop; Grab	6/21/2011
580567	7	627427	6982374	1044	QFB, biotite alt to ser/ chl; mod sil, wk K, Arg alt; 2% dissem Pyrite	Rcrop, CGr	6/21/2011
580568	7	627468	6982375	1047	QFB, weak phy alt of bio to ser/chl; weak K, Arg alt; 2% pyrite	Rcrop, CGr	6/21/2011
580569	7	627495	6982467	1034	QFP, very siliceous, mod arg alt of fspars, <1% Qz veining; 1% dissem euhedral pyrite	Rcrop, CGr	6/21/2011
580570	7	625890	6981057	1112	QP Monz, "almost rhyolitic" in texture; 5% Qz vns, mod sil alt; >1% Py, tr Cpy, Moly	Rcrop, CGr	6/24/2011
580571	7	625379	6981864	1062	Q Por, fine grained, 2-3% fine grained Qz veins, 2% Py, tr vein Moly	Rcrop, SCGr	6/24/2011
580572	7	625397	6981974	1052	Rhyolite, weakly fractured; mod sil, weak arg alt, 1% Py, tr Moly along fractures	CV - Rcrop, CGr	6/24/2011
580573	7	625469	6982027	1051	Rhyolite, 5-6% Qz veins +/- moly along edge	CV - Rcrop, Scrop; Grab	6/24/2011

CERTIFICATE OF ANALYSIS VAN11002503.2

CLIENT JOB INFORMATION

Project: PED
Shipment ID:
P.O. Number
Number of Samples: 225

SAMPLE DISPOSAL

PICKUP-PLP Client to Pickup Pulps
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
SS80	225	Dry at 60C sieve 100g to -80 mesh			VAN
Dry at 60C	225	Dry at 60C			VAN
1DX2	225	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN

ADDITIONAL COMMENTS

Version 2 : 1DX-U included.

Invoice To: Ethos Capital Corp.
Suite 680-789 West Pender St
Vancouver BC V6C 1H2

CERTIFICATE OF ANALYSIS WHI11000178A.2

CLIENT JOB INFORMATION

Project: PED
Shipment ID: PED01
P.O. Number
Number of Samples: 320

SAMPLE DISPOSAL

STOR-PLP Store After 90 days Invoice for Storage
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
SS80	320	Dry at 60C sieve 100g to -80 mesh			WHI
Dry at 60C	320	Dry at 60C			WHI
1DX2	320	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN

ADDITIONAL COMMENTS

Version 2 : 1DX-U included.

Invoice To: Ethos Capital Corp.
