GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS				Photo	DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Arsenopyrite	Type	Conc. (%)		
0.00	7.45	7.45					OVB														Overburden hosting an abundance of granodiorite clasts.
7.45	12.19	4.74				mKgW	GRD	MG		GY		3I									Oxidized rubbly granodiorite intermixed with oxidized clay gouge.
										OR											
12.19	17.37	5.18				mKgW	GRD	MG		WH		3-4I		ARG	3I	<1					Argillic altered granodiorite with patches if weak propyllitic alteration. The interval is moderately oxidized and hosts a few pyrite stringers.
									DK	GN				PRO	2I						
										OR											
			13.94	14.80	0.86	mKgW	GRD	MG	DK	GY		3I									Dark grey unaltered granodiorite that has been moderately oxidized along fracture surfaces.
17.37	47.50	30.13				mKgW	GRD	MG	DK	GN			2-3I	PRO	2I						Weakly propyllitic and weak to moderately silicified granodiorite. The upper portion of the interval is rubbly and partially clay altered
			18.27	18.62	0.35	mKgW	GRD	MG		GN				PHC	3I						Moderate phyllic altered granodiorite carbonate/pyrite v veinlets.
										GY											
			21.90	22.20	0.30	mKgW	GRD	MG		GN				PHC	3I						Moderately phyllic altered granodiorite.
										GY											
			24.94	25.26	0.32	mKgW	GRD	MG		GN	EN			PHC	3-4I						Moderately-strong phyllic envelope around a quartz/carbonate vein.
			29.90	30.68	0.78	mKgW	GRD	MG		GN			3I	PHC	3I						Moderately silicified and phyllic altered granodiorite.
										GY											
			33.34	33.55	0.21	mKgW	GRD	MG		GN			3I	PHC	3I	<1					Moderately silicified and phyllic envelope hosting disseminated pyrite. The envelope
										GY											
			34.75	34.93	0.18	mKgW	GRD	MG		WH				ARG	4I						Strongly argillic altered granodiorite with a weak propyllitic overprint.
									DK	GN				PRO	2I						
			36.39	38.71	2.32	mKgW	GRD	MG		WH				ARG	3-4I	2.00					Moderate to strongly argillic altered granodiorite with a weak propyllitic overprint and
									DK	GN	PA			PRO	2-3I						
			41.44	42.52	1.08	mKgW	GRD	MG		WH		3I		ARG	3I	2.00					Moderately oxidized and moderately argillic altered granodiorite hosting an abundance (8) quartz pyrite veinlets.
										OR											
47.50	81.38	33.88				mKgW	GRD	MG		GY											Primarily unaltered granodiorite with patches of trace to moderate propyllitic alteration.
									DK	GN	PA			PRO	1-3I						
			49.13	49.40	0.27	mKgW	GRD	MG		WH		3I		ARG	3I						Moderately oxidized and moderately argillic altered granodiorite with a moderate propyllitic overprint.
									DK	GN				PRO	3I						
										OR											
			62.84	64.69	1.85	mKgW	GRD	MG		GN				PHC	1-3I						Trace to moderately phyllic altered granodiorite hosting nine quartz/pyrite veinlets.
										GY											
			72.29	72.78	0.49	mKgW	GRD	MG	LT	GN	EN			PHC	3-4I						Moderate to strong phyllic envelope around two quartz/pyrite veins.
			75.29	78.33	3.04	mKgW	GRD	MG	DK	GN				PRO	2-3I	1.00					Weak to moderately propyllitic altered granodiorite hosting disseminated pyrite and a few chlorite stringers.
										GY											
81.38	93.63	12.25				mKgW	GRD	MG	LT	GN				PHC	3-4I	<1					Moderately phyllic altered granodiorite. Strong phyllic envelopes surround quartz/sulphide veins and are moderately silicified. The interval hosts trace amounts of disseminated pyrite and contains multiple patches of moderate propyllitic overprint.
										GY			3I								
									DK	GN	PA			PRO	3I

			85.23	89.70	4.47	mKgW	GRD	MG	DK	GN				PRO	2-3I						Weak to moderately propyllitic altered with a few patches of moderate argillic alteration.
										WH	PA			ARG	3I						
93.63	107.90	14.27				mKgW	GRD	MG	DK	GN				PRO	2-3I						Weak to moderately propyllitic altered granodiorite.
										GY											
			94.00	94.32	0.32	mKgW	GRD	MG		WH				ARG	4I						Strongly argillic altered granodiorite with a weak propyllitic overprint.
									DK	GN				PRO	2I						
			96.36	97.22	0.86	mKgW	GRD	MG		WH				ARG	3I						Moderately argillic altered granodiorite with a weak phyllic overprint.
									LT	GN				PHC	2I						
			99.16	103.70	4.54	mKgW	GRD	MG	DK	GN				PRO	3-4I						Moderately silicified and moderate to strongly propyllitic altered granodiorite.
										GY			3I								
107.90	109.93	2.03				mKgW	GRD	MG	LT	GN				PHC	3I	10.00					Moderately phyllic and moderately silicified granodiorite hosting an ab abundance of quartz sulphide mineralization in the center of the interval.
										GY			3I								
109.93	118.09	8.16				mKgW	GRD	MG	DK	GN				PRO	3I						Moderately silicified and propyllitic altered granodiorite
										GY			3I								
			112.50	114.54	2.04	mKgW	GRD	MG		WH				ARG	3I						Moderately argillic altered granodiorite with a moderate potassic overprint and patches of moderate propyllitic alteration.
										PK				POT	3I						
									DK	GN	PA			PRO	3I						
118.09	119.08	0.99				mKgW	GRD	MG		WH				ARG	3I						Moderately argillic altered granodiorite with a moderate potassic overprint and patches of moderate propyllitic alteration.
										PK				POT	3I						
									DK	GN	PA			PRO	3I						
119.08	136.74	17.66				LKqP	FEL			GY											Grey quartz feldspar porphyry dyke. Dyke contains an abundance of fractures in filled with clay gouge.
			129.16	129.26	0.10	mKgW	GRD	MG		GY		2I	2I								Weakly silicified granodiorite that has been weakly oxidized.
										BN											
136.74	146.52	9.78				mKgW	GRD	MG		WH				ARG	3I						Moderately argillic altered granodiorite with a weak potassic overprint and small patches of moderate propyllitic alteration. There are moderate to strong phyllic envelopes surrounding quartz sulphide veins. Argillic alteration has a weak phyllic overprint.
									LT	GN	EN			PHC	3-4I						
									DK	GN	PA			PRO	3I						
										PK				POT	2I						
			138.72	140.08	1.36	mKgW	GRD	MG	LT	GN	EN			PHC	3I	1.00					Moderate phyllic envelope around a smokey quartz breccia vein.
			142.55	143.04	0.49	mKgW	GRD	MG	LT	GN	EN			PHC	3I	1.00					Moderate phyllic envelope around a 2cm pyrite vein.
			144.02	144.96	0.94	mKgW	GRD	MG	LT	GN	EN		3I	PHC	3I						Moderate phyllic envelope around three pyrite veinlets that has been moderately silicified.
146.52	150.74	4.22				LKqP	FEL			GY											Grey to dark grey quartz feldspar porphyry dyke.
									DK	GY											
150.74	178.44	27.70				mKgW	GRD	MG	DK	GN				PRO	3I						Moderately propyllitic altered granodiorite with large patches of weak to moderate phyllic alteration.
										GY											
									LT	GN				PHC	2-3I						
			154.78	157.74	2.96	mKgW	GRD	MG	LT	GN				PHC	2-3I						Weak to moderately phyllic altered granodiorite.
			158.68	161.98	3.30	mKgW	GRD	MG	LT	GN				PHC	2-3I						Weak to moderately phyllic altered granodiorite hosting quartz pyrite veinlets.

2° Structure Type	From (m)	To (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS		DESCRIPTION	Photo
						Type	Conc. (%)		
VT	18.49	18.50	83.00			Py	10.00	White carbonate vein (0.4cm) hosting disseminated pyrite.	
GO	20.98	21.32						Broken up grey gouge vein.	
DK	23.38	23.39	40.00					Pink and purple aplite dyke.	
VN	24.92	24.94	85.00			Py	5.00	Grey quartz and white carbonate vein hosting disseminated pyrite and paralleled by two pyrite stringers.	
VN	30.75	30.77	20.00			Py	40.00	Blebby pyrite and chlorite vein.	
						Cl	60.00		
VN	33.45	33.46	89.00			Py	50.00	Milky white quartz and blebby pyrite vein.	
BX	36.85	37.67				Py	5.00	Silicified grey to black breccia hosting disseminated to semi-massive pyrite. The breccia transitions into partially to fully gouge altered grey and white breccia hosting disseminated pyrite.	
VT	41.45	42.48	65.00		8.00			Eight milky white to grey quartz veinlets hosting disseminated to blebby pyrite.	
DK	44.93	44.06	25.00					Pink aplite dyke.	
DK	46.80	46.96	45.00					Pink aplite dyke.	
VN	47.08	47.09	75.00			Py	2.00	0.6cm smokey quartz veinlet bounded on either side by a white 0.2cm carbonate veinlet hosting disseminated pyrite.	
DK	47.13	47.39	45.00					Pink aplite dyke.	
VT	62.85	63.90			9.00	Py	1.00	Nine grey quartz veinlets hosting disseminated pyrite.	
VN	64.65	64.67	70.00			Py	<1	Smokey quartz vein hosting trace amounts of disseminated pyrite.	
VN	72.38	72.50	80.00		2.00			Two 1cm grey quartz veins hosting disseminated to blebby pyrite	
VT	81.59	82.78			10.00			Ten 0.2 to 0.6cm grey quartz veinlets hosting disseminated pyrite.	
VN	84.20	84.25	60.00			Py	40.00	Smokey quartz vein hosting disseminated to blebby calcite and minor amounts of white carbonate.	
VN	85.06	85.10	70.00			Py	50.00	Grey quartz and white carbonate vein hosting disseminated to blebby pyrite and disseminated galena.	
						Gn	8.00		
GO	89.36	89.38	65.00			Py	<1	White gouge vein hosting trace amounts of disseminated pyrite.	
VN	90.18	90.26	60.00			Py	5.00	Dark grey quartz vein hosting blebby pyrite and chlorite. Quartz vein is cross-cut by light orange 1cm carbonate vein.	
						Ch	8.00		
GO	90.44	90.45	60.00			Py	1.00	White gouge vein hosting trace amounts of disseminated pyrite.	
VN	91.08	91.09	70.00			Py	90.00	Grey quartz and massive pyrite vein.	
VN	91.38	91.47	70.00			Py	40.00	Dark grey quartz vein hosting blebby pyrite and chlorite. Quartz vein is cross-cut by light orange 1cm carbonate vein.	
						Ch	10.00		
VN	92.09	92.12	70.00			Py	1.00	Grey quartz and white carbonate vein hosting trace amounts of disseminated pyrite.	
VN	92.70	92.74	75.00			Py	1.00	Smokey quartz and white carbonate vein hosting trace amounts of disseminated pyrite.	
VN	93.14	93.16	50.00			Py	5.00	White gouge vein hosting disseminated pyrite.	
VN	95.58	95.60	80.00			Py	<1	Grey quartz vein hosting disseminated pyrite and haematite.	
						He	1.00		
VT	101.90	104.05			11.00	Py	80.00	Eleven pyrite veinlets ranging from 0.2 to 0.9 cm.	
VN	108.86	109.43				Py	30.00	Grey to smokey quartz vein hosting disseminated to massive pyrite. The upper 1/3 host two 2cm light tan ankerite veins and multiple black sulphide stringers. Pyrite abundance increases with depth until it forms a 12cm massive pyrite vein.	
VT	111.35	111.36	65.00			Py	100.00	Pyrite veinlet.	
VN	112.28	112.30	50.00			Py	80.00	White carbonate and blebby pyrite vein.	
VT	114.38	114.39				Py	5.00	0.8cm white carbonate and grey quartz veinlet hosting disseminated pyrite.	
GO	130.23	131.63	30.00					Brown and orange gouge zone with a 1mm to 1cm clasts of quartz feldspar porphyry dyke.	
VT	138.76	138.77	85.00			Py	10.00	0.8cm white carbonate and grey quartz veinlet hosting disseminated pyrite.

SUMMARY

From (m)	To (m)	Interval	Unit	Comments
0.00	5.79	5.79	OVB	19ft casing and overburden.
5.79	25.14	19.35	GRD	Unaltered granodiorite with pervasive oxidation, crosscut by quartz-carbonate veinlets.
25.14	26.37	1.23	GRD	Weakly propyllitic granodiorite, crosscut by quartz veins with phyllic-argillic envelopes.
26.37	28.00	1.63	FEL	Maroon mafic porphyry dyke with moderate sericite alteration.
28.00	50.43	22.43	GRD	Unaltered granodiorite with fracture-limited oxidation, crosscut by quartz-carbonate veinlets.
50.43	88.28	37.85	GRD	Strongly phyllic and argillic granodiorite with mottled green-pink colouration.
88.28	114.92	26.64	GRD	Weakly propyllitic granodiorite, crosscut by quartz veins with phyllic-argillic envelopes.
114.92	119.50	4.58	FEL	Pink quartz feldspar porphyry dyke with sericite altered feldspar phenocrysts.
119.50	269.32	149.82	GRD	Weakly propyllitic granodiorite, crosscut by quartz veins with phyllic-argillic envelopes.
269.32	301.82	32.50	GRD	Moderate-strong propyllitic granodiorite with crosscutting quartz-carbonate veins with phyllic
301.82	307.17	5.35	GRD	Argillic-phyllic altered granodiorite with mottled pink-green colouration and silicification.
307.17	322.17	15.00	GRD	Unaltered granodiorite with phyllic vein envelopes with patchy argillic and potassic alteration.

			174.00	175.76	1.76	mKgW	GRD	MG	LT	GY	XL			PHC	3I						Moderate-strong phyllic altered granodiorite crosscut by quartz veins.
									MD	GN											
			200.60	201.61	1.01	mKgW	GRD	MG	LT	GY	RB			PHC	3I						Moderate-strong phyllic altered granodiorite crosscut by quartz veins with short rubble and clay altered interval.
									MD	GN				CLY	1I						
			216.00	217.86	1.86	mKgW	GRD	MG	LT	GY	XL			PHC	3I						Moderate-strong phyllic altered granodiorite crosscut by quartz veins with short rubble and clay altered interval.
									MD	GN											
			241.66	244.50	2.84	mKgW	GRD	MG	LT	GY	XL		4I	PHC	3I						Moderate phyllic alteration with patchy potassic, often crosscut by quartz veins and veinlets that intensely silicify the granodiorite.
									MD	GN				POT	2I						
			248.63	252.01	3.38	mKgW	GRD	MG	LT	GY	XL		3I	ARG	3I						Moderate argillic with patchy phyllic alteration in granodiorite. Crosscut by quartz veins and veinlets that moderately silicify granodiorite.
									MD	GN				PHC	2I						
			262.18	264.29	2.11	mKgW	GRD	MG	LT	PK	XL			PHC	3I			Se	1.00		Mottled green and pink granodiorite with phyllic alteration with patchy potassic alteration. Crosscut by quartz veins.
									MD	GN	PA			POT	2I						
			265.27	266.13	0.86	mKgW	GRD	MG	LT	GY				PHC	3I						Phyllic granodiorite.
									MD	GN											
			267.03	269.32	2.29	mKgW	GRD	MG	LT	GY											Unaltered granodiorite crosscut by a black siliceous dyke.
									MD	GN											
269.32	301.82	32.50				mKgW	GRD	MG	MD	PK	XL		2I	PRO	3I						Moderate-strong propyllitic granodiorite with patchy phyllic, argillic, and potassic alterations. Phyllic is found in vein envelopes around crosscutting quartz-carbonate veins. Hosts weakly disseminated pyrite in phyllic envelopes. Often silicified granodiorite adjacent to thick quartz veins.
										GN	PA			ARG	2I						
														POT	2I						
														PHC	3I						
			290.54	292.58	2.04	mKgW	GRD	MG	LT	PK	XL			ARG	3I						Moderate argillic interval.
										GN				PRO	2I						
			293.07	295.82	2.75	mKgW	GRD	MG	LT	PK	XL			ARG	3I						Weak propyllitic overprinted by moderate argillic-phyllic alteration. Crosscut by quartz veins/veinlets. Rubbly from 294.74-295.72m. Mottled pink-green, with original textures becoming obliterated.
										GN	RB			PHC	3I						
														PRO	2I						
301.82	307.17	5.35				mKgW	GRD	MG	LT	GN	XL		2I	ARG	3I	1.00		He	3.00		Dominantly argillic-phyllic altered granodiorite with patchy propyllitic and potassic. These alterations result in a mottled green-pink colouration, and silicification around quartz veins leads to partial obliteration of original granodiorite textures.
									MD	PK	PA			PHC	3I						
														PRO	2I						
														POT	2I						
			303.22	305.76	2.54	mKgW	GRD	MG	LT	PK	XL			POT	3I						Moderate potassic alteration leading to pink granodiorite.

2° Structure Type	From (m)	To (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS Type	MINERALS Conc. (%)	DESCRIPTION	Photo
VT	20.20	53.15	65.00		31.00	He	20.00	First 8 boxes are crosscut by evenly distributed white quartz veinlets with purple hematite staining. Staining is comb at veinlet edges and rim euhedral white quartz crystals. Angles vary from 10-90 degrees TCA. Hosts trace crystalline hematite (silvery).	
VN	52.97	53.07	70.00			He	10.00		
						Py	6.00		
VT	61.47	110.05	65.00		64.00	He	20.00	Evenly distributed white quartz veinlets with purple hematite staining that follows textures and crystal boundaries. Crystalline silver hematite is sometime visible.	
VN	61.87	62.00	70.00		3.00			Three white quartz-carbonate veins. No sulphide mineralization.	
VN	69.08	69.19	60.00					Blended grey-off-white massive quartz vein.	
GO	75.29	75.48	90.00			Py	1.00	Strongly gouged phyllic granodiorite with dark grey quartz vein hosting disseminated pyrite.	
GO	80.12	80.36	60.00					Moderately gouged phyllic granodiorite.	
VN	81.19	81.28	60.00			He	2.00	Weakly clay altered massive green-brown-white quartz vein. Weak purple hematite staining and sericite books.	
						Se	3.00		
VT	83.84	84.10	50.00		5.00	Py	5.00	White, weakly clay altered quartz veinlets with purple hematite staining and disseminated pyrite.	
VN	90.74	90.76	40.00					Off-white massive quartz vein.	
VT	91.81	93.47	70.00		7.00			White-off-white chalcedony veinlets.	
VN	93.67	93.71	45.00			Py	5.00	Weakly banded light-medium grey vein with blebby pyrite.	
VN	100.31	100.74	80.00		2.00	He	3.00	Milky massive quartz veins with subangular clasts of phyllic granodiorite and weak hematite staining.	
VN	103.74	103.84	35.00					Alternating bands of smoky-white massive quartz.	
VT	108.49	108.51	90.00					Dark smoky quartz veinlet.	
VT	110.00	111.06	80.00		9.00				
GO	111.30	111.45	90.00					Moderately gouged phyllic granodiorite.	
GO	112.69	112.88	70.00					Moderately gouged phyllic granodiorite.	
GO	113.01	113.15	30.00					Moderately gouged phyllic granodiorite.	
VN	114.15	114.41	55.00		2.00	Py	3.00	Two weakly banded milky-smoky quartz veins with trace disseminated pyrite.	
VN	114.65	114.71	60.00			Py	2.00	Off-white-dark grey quartz vein with weak netting of white quartz by dark grey quartz. Dark grey quartz hosts disseminated pyrite.	
VN	119.64	119.65	50.00			Py	2.00	Weakly-moderately clay altered white-dark grey quartz vein with disseminated pyrite.	
VT	119.76	119.83	90.00		2.00			Two off-white-yellow massive calcite veinlets.	
VT	120.09	124.53	70.00		9.00	He	10.00	White-off-white massive quartz veinlets with red-purple hematite staining. Rare silvery crystalline hematite visible.	
VT	120.46	120.47	30.00					Smoky massive quartz veinlet with discontinuous carbonate-filled microfractures along veinlet edges.	
VT	122.13	122.88	80.00		7.00			Seven dark smoky quartz veinlets that are somewhat dendritic and contain lenses of white massive quartz.	
VN	123.41	123.43	40.00			Py	2.00	2cm thick quartz vein made of alternating bands of white quartz and green-stained quartz with chlorite. Hosts disseminated pyrite.	
VN	126.04	126.08	70.00		2.00	Py	30.00	Two 2cm thick dark grey-black massive smoky quartz veins hosting blebby pyrite in high abundance, even bordering on massive pyrite.	
DY	126.91	127.00	90.00					9cm of light green quartz feldspar porphyry dyke, with some green sericite altered feldspar phenocrysts.	
VN	127.83	127.87	60.00					2.5cm thick white semi-translucent quartz vein with a discontinuous dark grey semi translucent quartz veinlet along the uphole border. Dark grey quartz hosts blebs of pyrite 1-2mm in diameter.	
VT	128.24	128.26	70.00		2.00			Two 1-2mm thick white quartz veinlets with purple hematite staining along their outer borders.	
VT	130.90	130.91	70.00			He	20.00	White weakly banded quartz veinlet with central dark green chlorite veinlet, and a purple hematite stained quartz-chlorite interface.	
VN	132.68	132.70	45.00					Off-white-light green banded quartz vein. Green is from chlorite.	
VT	134.08	134.11	80.00		2.00	He	10.00	Two quartz veinlets of white translucent comb quartz with central white opaque massive quartz. Purple hematite stained the comb to massive quartz interface.	

PROPERTY NAME

2° Structure Type	From (m)	To (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS		DESCRIPTION	Photo
						Type	Conc. (%)		
VN	134.34	134.40	70.00			He	5.00	Light grey-white massive-weakly banded quartz vein with moderately gouged uphole border and pink hematite staining.	
VN	135.95	135.97	50.00					Light green-white semi translucent quartz vein. Green is from chlorite impurities.	
VT	137.77	138.62	80.00		6.00			Off-white-cream chalcedony veinlet.	
DY	139.02	139.32	90.00					Flow banded light-medium green-tan quartz feldspar porphyry dyke. Crosscut by carbonate veinlets and one quartz-hematite veinlet.	
VT	139.14	139.15	70.00			He	20.00	Off-white massive quartz veinlet with purple hematite staining.	
VT	139.60	139.61	60.00			He	5.00	White massive quartz veinlet with purple hematite stained borders.	
VT	140.94	140.95	80.00			He	7.00	White massive quartz veinlet with purple hematite stained borders.	
VT	142.37	144.26	70.00		6.00	He	6.00	Six off-white-pink banded quartz veinlets with weak purple hematite stained borders.	
VT	144.98	147.00	70.00		3.00			Three off-white-pink banded quartz veinlets.	
VN	146.06	147.61	60.00		3.00			Off-white-white-light green weakly banded quartz veinlets.	
VN	151.03	151.04	50.00			Gn	5.00	White-milky weakly banded quartz vein with weak purple hematite staining along quartz bands. Hosts massive fine-grained galena and massive honey brown sphalerite along the centre axis.	
						Sp	5.00		
						He	4.00		
VN	151.74	151.76	60.00			Py	3.00	White weakly banded quartz vein with a thick central veinlet of dark green chlorite. White quartz is weakly hematite stained purple. Disseminated pyrite is hosted in chlorite.	
						He	6.00		
VN	154.10	154.12	70.00					White-green weakly banded quartz vein	
VT	157.31	157.32	70.00					White massive quartz veinlet with dark green chlorite veinlet along uphole border.	
VT	160.26	160.27	50.00			He	40.00	White clay altered cockade quartz with purple hematite staining along the cockade crystal edges.	
VN	160.28	160.30	45.00			Py	6.00	Grey banded quartz vein hosting blebby-disseminated pyrite ad disseminated fine-grained arsenopyrite. Ends at rubbly phyllic granodiorite.	
						As	3.00		
VT	163.53	163.54	70.00					Massive white-grey quartz veinlet.	
VT	166.26	166.34	60.00		4.00			White-green massive quartz veinlets. Green colouration is due to chlorite alteration	
VT	166.59	167.11	50.00		3.00			White massive quartz veinlets with dark green chlorite inclusions.	
VN	170.53	172.19	70.00			Py	20.00	Complex 2.5cm vein: Banded-crustiform grey translucent and white quartz. Commonly purple stained by hematite. Hosts blebby fine-grained pyrite and disseminated arsenopyrite.	
						As	5.00		
VN	172.17	172.19	70.00			Py	8.00	Moderately clay altered smoky quartz vein with blebby fine-grained pyrite.	
VN	172.30	172.34	35.00			Py	20.00	White-grey banded quartz vein with grey fine-grained pyrite between each successive band.	
VT	172.96	172.97	70.00			He	4.00	White massive quartz veinlet, intensely red hematite stained.	
VN	174.24	174.26	60.00			Py	6.00	White-grey netted quartz vein with dark grey veinlet borders, with blebby-disseminated fine-grained pyrite.	
VN	175.28	175.34	60.00			Py	6.00	Grey-white quartz-chalcedony vein with smoky quartz vein that brecciates the white quartz. Smoky quartz hosts angular white quartz clasts and disseminated fine-grained pyrite.	
DY	178.01	178.05	30.00					Pink-green aplite dyke crosscut by a 45 degree white quartz veinlet.	
VN	186.48	186.54	45.00			Py	2.00	White-milky central quartz veinlets with grey translucent quartz veinlets on each side. Grey quartz has frequent offshoots that net white quartz.	
VN	187.59	187.61	45.00			Py	4.00	Grey-white central quartz veinlet with smoky quartz veinlet borders, hosting disseminated fine-grained pyrite.	
VT	187.78	187.87	45.00		5.00			Five white translucent-milky quartz veinlets, three of which have vugs.	
VN	188.61	188.67	30.00					White-green massive quartz vein with weak clay alteration.	
VT	189.75	189.78	20.00					White-green crackled quartz veinlet that weakly nets the granodiorite.	
VN	195.57	195.58	80.00					White semi translucent quartz vein with green chlorite staining.	
VT	191.60	191.64	70.00		2.00			Two white semi translucent quartz veinlets with no sulphides.	
VT	193.15	193.16	45.00					Green-white chlorite veinlet. White where clay altered, mostly at edges and cracks.	

PROPERTY NAME

2° Structure Type	From (m)	To (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS		DESCRIPTION	Photo
						Type	Conc. (%)		
GO	193.74	193.79	70.00					Weakly-moderately gouged phyllic granodiorite.	
VN	194.05	195.07	35.00					Weakly banded white-grey semi translucent quartz vein with chlorite staining at borders.	
VN	194.24	194.26	70.00			He	10.00	Weakly banded white-grey semi translucent quartz vein with purple hematite staining at borders.	
GO	200.62	201.20	40.00			Py	3.00	Weakly gouged phyllic granodiorite crosscut by three massive quartz veins (white-grey semi translucent, with disseminated pyrite). Hosts disseminated pyrite.	
VN	203.53	203.55	30.00					Grey-green-white crackled quartz veins, green is from chlorite inclusions.	
VN	204.21	204.24	80.00			Py	2.00	White-grey semi translucent quartz vein with indistinct borders that bleed into the surrounding granodiorite. Hosts disseminated pyrite.	
VT	208.89	208.90	30.00					Milky-white quartz veinlet.	
VT	214.67	215.28	60.00		2.00			White-green quartz veinlet due to chlorite inclusions.	
VN	216.50	216.59	60.00			Py	6.00	White-grey quartz vein with weak-moderate clay alteration, and smoky quartz veinlets hosting disseminated fine-grained pyrite.	
VT	218.45	226.24	70.00		14.00			Fourteen white-milky, weakly banded-massive quartz veinlets.	
VN	225.27	225.32	80.00			Py	8.00	Complex quartz vein: alternating bands of white-grey semi translucent quartz.	
VN	228.24	228.29	70.00					5cm thick quartz vein: 1.5cm green-white translucent mossy quartz, 3.5cm off-white banded quartz with 1cm central green-grey translucent quartz vein. Grey-green quartz brecciated off-white quartz.	
VN	232.20	232.27	60.00			Py	1.00	White-grey semi translucent banded-comb quartz vein with <1mm thick smoky quartz veinlets hosting trace disseminated pyrite.	
GO	234.12	234.32	50.00					Weakly gouged granodiorite hosting two banded white-milky quartz veins.	
GO	234.58	234.90	70.00					Weak-moderate gouge in propyllitic granodiorite.	
VN	235.34	238.34	60.00		8.00			Eight weakly banded-crustiform white semi translucent and milky quartz veins and veinlets.	
VT	240.85	240.86	50.00					White quartz and green chlorite veinlet.	
VN	242.35	242.37	60.00			Ca	10.00	Off-white-cream chalcedony-quartz vein, with central vugs filled with calcite.	
VN	242.79	242.81	90.00			Ca	30.00	Vuggy white-off-white quartz calcite vein.	
VT	243.02	243.03	20.00			Py	10.00	Grey light-dark semi translucent quartz veinlet. Dark grey hosts disseminated pyrite and arsenopyrite.	
						As	3.00		
VN	243.22	243.31	70.00			Py	10.00	White-milky semi translucent vuggy-cockade quartz vein crosscutting a 1cm thick dark grey massive quartz vein. Dark grey quartz is heavily mineralized by blebby-disseminated pyrite, blebby honey brown sphalerite, and disseminated-mossy arsenopyrite. White quartz is often vuggy.	
						Sp	20.00		
						Gn	3.00		
						As	5.00		
VN	243.31	244.09	60.00		12.00	Py	5.00	Densely spaced grey-white semi translucent quartz veins in phyllic granodiorite. Darker grey quartz tends to host sulphides such as disseminated-blebby fine-grained pyrite, blebby honey brown sphalerite, and disseminated mossy arsenopyrite. White quartz is often vuggy.	
						Sp	2.00		
						As	1.00		
VN	244.22	244.25	50.00		2.00			White weakly banded quartz vein.	
VT	245.52	245.54	50.00			He	10.00	Banded white semi translucent quartz veinlet with red hematite staining.	
VT	246.45	247.98	70.00		2.00			White 1mm thick quartz veinlets with discontinuous calcite-filled microfractures along veinlet borders.	
VN	249.80	250.09	60.00			Py	8.00	Complex, thick quartz vein: alternating bands of white-grey quartz of varied translucence. Lighter grey-white quartz tend to be vuggy, while darker grey quartz hosts disseminated-blebby pyrite and disseminated arsenopyrite.	
						As	2.00		
VT	250.70	252.00	30.00		5.00			White-milky weakly banded quartz veinlets with green chlorite borders.	
VT	251.77	257.51	80.00		20.00			White-milky weakly banded quartz veinlets.	
VN	257.71	260.05	30.00		4.00	He	10.00	White semi translucent quartz veins with dark green chlorite bands and red-purple hematite staining.	
VT	262.61	262.62	70.00					Weakly banded light-medium semi translucent grey quartz veinlet.	

PROPERTY NAME

2° Structure Type	From (m)	To (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS		DESCRIPTION	Photo
						Type	Conc. (%)		
VT	262.92	262.93	60.00			Py	6.00	White-grey semi translucent massive quartz veinlet hosting mossy-disseminated fine-grained pyrite.	
VN	263.31	263.34	45.00			He	5.00	Alternating bands of green massive chlorite and milky massive quartz, with weak red hematite staining.	
VN	263.97	264.00	30.00			Py	1.00	Weakly-moderately clay altered grey opaque massive quartz vein hosting trace disseminated pyrite.	
VT	266.48	266.50	80.00		2.00	Cb	8.00	White-off-white semi translucent vuggy quartz veinlets with carbonate-filled vugs.	
VT	267.61	267.62	90.00					Weakly banded white-pink quartz veinlet.	
DY	268.17	268.44	90.00					Black siliceous dyke. Fine-grained, with 2-3mm diameter white quartz eyes.	
VN	269.82	269.85	80.00					Cream-off-white crustiform chalcedony vein.	
VT	270.40	270.41	35.00					4mm veinlet with 2mm dark green massive chlorite and 2mm white massive quartz.	
VN	264.18	264.26	70.00			Py	10.00	Rubbly and clay altered medium-dark grey semi translucent banded quartz vein hosting disseminated-mossy fine-grained pyrite in dark grey quartz.	
VN	271.10	271.18	60.00			Py	1.00	Thick vein of banded-crustiform with semi translucent quartz, hosting trace disseminated pyrite.	
VN	274.28	274.32	80.00			Py	1.00	Grey-green vuggy and clay altered quartz vein. White clay alteration seen at vein edges. Hosts trace disseminated pyrite.	
VT	274.84	274.85	70.00					White chalcedony veinlet.	
VN	275.18	275.43	70.00					Thick zone of closely spaced brown-white semi translucent massive quartz veins with indistinct borders that bleed into each other and the surrounding granodiorite. Quartz is vuggy and crackled.	
VN	276.16	276.31	60.00			Py	2.00	Thick zone of closely spaced grey semi translucent massive quartz veins with indistinct borders that bleed into each other and the surrounding granodiorite.	
VN	276.57	277.44	80.00		3.00			Three banded white-light grey semi translucent massive quartz.	
VN	278.28	278.34	80.00		2.00			Grey-white semi translucent weakly banded massive quartz.	
VN	278.75	278.79	80.00			Py	1.00	White massive-vuggy quartz carbonate vein containing <1mm thick dark grey quartz stringers hosting trace disseminated pyrite.	
VN	280.40	280.45	60.00			Py	1.00	White-orange massive-vuggy quartz vein with red hematite staining and trace disseminated pyrite.	
VN	282.05	282.14	70.00		3.00	Py	12.00	Three white-pink semi translucent crustiform-massive quartz and chalcedony veins. Hosts disseminated-blebby pyrite in phyllic envelope, with disseminated honey brown sphalerite and disseminated sericite books.	
						Sp	2.00		
						Se	2.00		
GO	282.38	282.41	60.00					Moderately gouged phyllic granodiorite with possible grey quartz vein.	
VN	282.99	283.19	80.00			Py	4.00	White-grey massive-vuggy quartz vein that hosts brecciated clasts of phyllic granodiorite. Hosts disseminated fine-grained pyrite and 1mm groups of radiating acicular arsenopyrite needles.	
						As	2.00		
VT	284.98	285.68	80.00		10.00	He	5.00	Ten veinlets of white comb-crustiform quartz with central white translucent quartz. Sometimes stained purple by hematite.	
VN	286.75	286.83	80.00					White-cream-grey semi translucent massive-vuggy quartz vein.	
VT	288.01	288.49	90.00		3.00			Three white-grey weakly banded quartz veinlets.	
VT	289.08	289.75	80.00		3.00	Py	15.00	Three grey-white translucent quartz veinlets hosting disseminated pyrite and discontinuous pyrite stringers at their centres.	
VT	292.32	293.75	60.00		3.00			Three banded white quartz veinlets.	
VT	298.21	298.23	80.00		2.00			Weakly banded milky quartz veinlets.	
VN	299.94	299.97	30.00					Weakly-moderately clay altered chlorite and quartz vein.	
VN	300.24	300.25	90.00					White-cream chalcedony vein.	
VN	302.11	302.14	70.00			He	3.00	White-off-white translucent vuggy quartz vein with angular clasts of white chalcedony veinlets. Weakly hematite staining.	
VT	302.73	303.03	80.00		3.00			White-milky alternating bands of quartz in three veinlets.	
VN	302.88	302.91	80.00					Massive grey translucent quartz vein crosscut by a milky quartz veinlet, hosting subangular grey quartz clasts.	
VN	303.10	303.14	90.00					Weakly banded crustiform-crackled white quartz vein.	
VT	303.37	304.26	30.00		7.00			Seven green chlorite veinlets with weak clay alteration.

From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite		Type	Conc. (%)	Photo	
0.00	38.71	38.71			0.00		GRD		MD	GY	MA					<<1					Fresh grey granodiorite with phyllic alteration halos surrounding sulphide-bearing veins and veinlets. Trace propylitic alteration. Limonite staining generally restricted to fractures. Fine, trace disseminated pyrite.
			7.11	12.22	5.11		GRD		LT	GN		3.00		PHC	4.00	1.00		Sp	<1		Light green phyllic altered granodiorite. Limonite staining on fractures. Patches of fresher granodiorite. Quartz veinlets throughout (often containing disseminated pyrite, galena and sphalerite).
																		Ga	<1		
			17.90	19.17	1.27		GRD		LT	GN		2.00		PHC	4.00	3.00		As	<1		Light green phyllic alteration halo enveloping 14cm crustiform quartz and quartz-carbonate vein hosting pyrite, arsenopyrite, galena and sphalerite.
																		Sp	<1		
																		Ga	<1		
			26.27	27.07	0.80		GRD		LT	GN		2.00		PHC	4.00	1.00					Phyllic alteration enveloping sphalerite and pyrite bearing veinlets.
38.71	40.30	1.59					GRD		LT	WH		3.00		PHC	3.00						Phyllic altered, light green granodiorite. Localized crustiform veinlets, small clay altered fault zones. Weak argillic alteration with trace potassic alteration. White-green-pink overall colour.
									LT	GN				POT							
														ARG							
40.30	70.73	30.43					GRD		MD	GY	MA	1.00		PHC	1.00	<1					Fresh and weakly propylitic altered granodiorite. Grey-green colour. Patches of weak phyllic alteration. Occasional dark-fine stringers and quartz veinlets. Quartz veins occasionally hosting pyrite, see secondary structures. Weak argillic alteration at end of interval.
									MD	GN				PRO	2.00						
			45.36	46.44	1.08		GRD		LT	GN				PHC		<1					Patchy argillic (with potassic overprinting) and phyllic alteration. Sulphide-bearing veinlets described in secondary structures.
			51.09	58.91	7.82		GRD		LT	GY				POT	1.00						Weakly argillic and potassic altered. Trace phyllic alteration. Localized disseminated
														ARG							
														PHC							
			63.39	64.70	1.31		GRD		LT	WH				POT	2.00						Weakly argillic and potassic altered granodiorite. Trace phyllic alteration. Localized disseminated pyrite and sulphide-bearing veins with phyllic alteration halos (see secondary structures log).
									LT	PK				ARG	2.00						
														PHC	1.00						
70.73	76.17	5.44					GRD		MD	OR		4.00		PHC	1.00						Oxidized and fragmented granodiorite with varying alterations. Patches with quartz eyes, argillic alteration and phyllic alteration. Localized quartz veinlets hosting sulphides (see secondary structures). Weak to strong argillic alteration. Grading from oxidized throughout t patches to fractures.
									LT	GN				ARG	2.00						
76.17	123.10	46.93					GRD		MD	GN		1.00		PHC	3.00	<1		Sp	<1		Alternating phyllic (weak to strong), argillic (weak to moderate) and weakly propylitic altered granodiorite. Less patches of limonite staining and more competent rock than previous interval. Localized sulphide-bearing veins within phyllic alteration (see secondary structures log), mineralization including sphalerite and pyrite. Few friable patches (associated with argillic alteration).
									LT	GN				PRO	2.00			Py	<1		
														ARG	3.00						
			85.98	89.65	3.67		GRD		MD	GY				PRO	1.00						Fresher interval of weakly propylitic altered granodiorite.

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite		Type	Conc. (%)	Photo	
			89.65	91.38	1.73		GRD		MD	OR		4.00									Oxidized granodiorite. Heavily limonite stained. Patches are soft and/or friable.
			107.43	108.60	1.17		GRD		MD	OR		4.00									Heavily oxidized granodiorite. Limonite stained with fault gouge at contact with previous interval (hanging wall). Competent core with quartz eyes, heavily limonite stained.
			108.60	109.40	0.80		GRD		LT	GN				PHC	4.00						Strongly phyllic altered granodiorite.
			121.64	123.10	1.46		GRD		LT	GN		4.00		PHC	3.00						Phyllic alteration with patchy limonite staining over alteration. Some friable material.
									MD	OR											
123.10	223.68	100.58					GRD		MD	GN				PHC	1.00	<1					Weakly propylitic altered granodiorite with patches phyllic alteration enveloping sulphide-bearing veins and veinlets (see secondary structures log). Moderate propylitic alteration and heavy chloritization on fractures proximal to dyke.
									MD	GY				PRO	2.00						
			133.35	137.82	4.47		GRD		LT	GN				PHC	4.00	1.00		Gn	<1		Moderate argillic alteration grading into strong phyllic alteration. Quartz veins within phyllic altered zones host sphalerite, pyrite and galena. Grades out from phyllic alteration to argillic to weak propylitic altered granodiorite.
														ARG	2.00			Sp	<1		
			138.38	138.79	0.41		GRD		MD	OR	RU	4.00									Rubbly, extremely oxidized and limonite stained granodiorite.
			144.04	149.57	5.53		GRD		LT	GN				PHC	4.00	<1					Alternating phyllic and argillic (with potassic overprinting) altered granodiorite. Quartz and quartz-carbonate veinlets throughout (localized sulphide mineralization; see secondary structures log).
									LT	PK				ARG	3.00						
														POT	2.00						
			155.14	160.06	4.92		GRD		MD	GN				PHC	3.00	1.00					Moderately phyllic altered granodiorite with abundant dark-fine stringers (many hosting disseminated and small blebs of pyrite). A couple larger (cm scale) mineralized veins (see secondary structures log).
									LT	GN											
			160.49	170.60	10.11		GRD		MD	GY	MA										Very fresh granodiorite.
			173.98	175.57	1.59		FEL		LT	GY	PO										Quartz-feldspar-porphyry dyke. Varying size of phenocrysts (largest in center of interval, up to 4mm). Colours varying from light and dark grey-green to grey-purple. Quartz-carbonate veinlets throughout.
									DK	GY											
									DK	PU											
			196.40	200.46	4.06		GRD		LT	GN				PHC	4.00	<1	<1	Sp	<1		Strongly phyllic altered granodiorite with weak argillic/moderate potassic alteration at beginning of interval. Abundant sulphide mineralization and veining (see secondary structures log).
																		Gn	<1		
			218.05	219.80	1.75		GRD		LT	GN				PHC	3.00	2.00					Moderately phyllic altered granodiroite hosting blebby and disseminated pyrite.
223.68	226.32	2.64					GRD		LT	GN	PA			PHC	3.00						Granodiorite with patchy alteration. Alternating weak propylitic, moderate argillic and moderate phyllic alteration. Quartz veining within phyllic alteration (see secondary structures log). Argillic patches are friable.
														ARG	3.00						
														PRO	2.00						
226.32	237.26	10.94					FEL		LT	GY	PO					4.00					Quartz-feldspar porphyry dyke with varying phenocrysts size and colours from light grey, dark grey and grey-purple. Some phenocrysts light green colour (smectite?). Quartz-carbonate veinlets throughout with localized sulphide mineralization (see secondary structures log).
									MD	GY

						Py	2.00		
						Sp	1.00		
VT	268.00	268.12	40.00			Py	2.00	Milky quartz veinlets (5mm, 7mm and 8mm in widths) at 40-50 degrees to-core-axis. Hosting blebby and fine disseminated pyrite.	
VN	269.75	270.20	10.00		1.00	Py	1.00	Shallow (10 degrees to-core-axis) milky quartz vein hosting blebby and fine disseminated pyrite. Abundant blebby pyrite on fracture (at beginning of interval). 6cm in width.	
FT	270.90	271.32	7.00			Py	<1	Green chlorite rich fault zone (~1cm in width). Orientated 7 degrees to-core-axis.	
VT	273.64	274.10	10.00			Py	<1	Chlorite and quartz-carbonate veinlet (7mm in width) hosting trace disseminated pyrite.	
VN	280.09	280.21	85.00		2.00	Py	<1	Stringy smoky quartz and white quartz-carbonate veins hosting trace disseminated pyrite. 1.1cm and 26cm in widths.	
VT	287.04	287.15	30.00					Dark aphanitic veinlet (aphanitic sulphides?).	
FT	287.30	287.94	65.00		2.00			Clay altered and phyllic altered fault gouge (moderately to well developed faulty zone). 6.5cm and 1.9cm widths.

From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Arsenopyrite	Type	Conc. (%)	Photo	
0.00	7.75	7.75					OVB														Overburden
7.75	59.00	51.25				mKgW	GRD	MG		WH		3-4I		ARG	3-4I						Moderate to strongly oxidized and argillic altered granodiorite granodiorite. Argillic alteration has a weak propyllitic overprint. Oxidation is patchy with depth.
									DK	GN	PA			PRO	2I						
										OR	PA										
59.00	66.14	7.14				mKgW	GRD	MG		GY		3I									Grey granodiorite with moderate oxidation along fracture surfaces that decrease with depth.
66.14	77.40	11.26				mKgW	GRD	MG		WH				ARG	3I						Moderate argillic altered granodiorite with a moderate propyllitic overprint. Contains a few patches of moderate phyllic alteration. The interval host multiple white carbonate veinlets.
									DK	GN				PRO	3I						
									LT	GN	PA			PHC	3I						
			74.95	76.60	1.65	mKgW	GRD	MG		GY											Grey granodiorite.
77.40	203.35	125.95				mKgW	GRD	MG		GY											Grey granodiorite with the occasional patch of argillic alteration.
										WH				ARG	3I						
			78.18	78.53	0.35	mKgW	GRD	MG	LT	GN	EN			PHC	3I						Moderate phyllic envelope surrounding a grey quartz vein which hosts trace amounts of disseminated pyrite.
			81.38	81.68	0.30	mKgW	GRD	MG	DK	GN				PRO	3I						Moderate propyllitic and argillic altered granodiorite.
										WH				ARG	3I						
			92.50	97.00	4.50	mKgW	GRD	MG	LT	GN				PHC	3I						Moderate phyllic altered granodiorite with a few patches of moderate argillic alteration. The interval hosts multiple grey quartz and white carbonate veins and veinlets.
										WH	PA			ARG	3I						
			103.00	104.54	1.54	mKgW	GRD	MG	LT	GN				PHC	3I						Moderate phyllic altered granodiorite hosting a patch of partially altered clay gouge.
			105.55	105.83	0.28	mKgW	GRD	MG	LT	GN	EN			PHC	3I						Moderate phyllic envelope surrounding a grey quartz and tan carbonate vein hosting disseminated pyrite.
			106.41	107.20	0.79	mKgW	GRD	MG		WH				ARG	3I						Moderate argillic granodiorite with a weak potassic overprint. Hosts multiple small phyllic envelopes around white carbonate veinlets.
										PK				POT	2I						
									LT	GN	EN			PRO	3I						
			108.62	109.86	1.24	mKgW	GRD	MG		WH				ARG	3I						Moderate argillic granodiorite with a weak potassic overprint. Hosts multiple small phyllic envelopes around white carbonate veinlets.
										PK				POT	2I						
									LT	GN	EN			PHC	3I						
			110.40	112.14	1.74	mKgW	GRD	MG	LT	GN	EN			PHC	3I						Moderate phyllic envelope around a brecciated quartz carbonate vein.
			115.00	115.45	0.45	mKgW	GRD	MG	LT	GN	EN			PHC	3I						Moderate phyllic envelope surrounding a tan carbonate and grey quartz vein hosting disseminated pyrite.
			117.70	117.90	0.20	mKgW	GRD	MG	LT	GN	EN			PHC	3I						Moderate phyllic envelope surrounding two milky white to smokey quartz veinlets hosts disseminated pyrite.
			127.02	134.10	7.08	mKgW	GRD	MG	LT	GN				PHC	3I						Alternating patches of moderate phyllic alteration and moderate argillic altered granodiorite with a weak potassic overprint.
										WH				ARG	3I						
										PK				POT	2I

			135.80	136.45	0.65	mKgW	GRD	MG	LT	GN				PHC	3I						Moderate phyllic altered granodiorite with ~30cm of partially altered to clay gouge in the center.
			146.28	146.50	0.22	mKgW	GRD	MG	LT	GN	EN			PHC	3I						Moderately silicified and moderate phyllic envelope surrounding a quartz carbonate vein hosting disseminated pyrite.
										GY											
			146.50	148.50	2.00	mKgW	GRD	MG		WH				ARG	2-3I						Weak to moderate argillic altered granodiorite with a weak to moderate potassic overprint.
										PK				POT	2-3I						
			148.50	149.52	1.02	mKgW	GRD	MG	DK	GN				PRO	3I	1.00					Moderate propyllitic altered granodiorite hosting disseminated pyrite and is partially altered to grey gouge.
			160.00	162.72	2.72	mKgW	GRD	MG		WH				ARG	3I						Moderate argillic altered granodiorite with a moderate potassic overprint hosting multiple quartz carbonate veins with small to moderate phyllic envelopes.
										PK				POT	3I						
									LT	GN	EN			PHC	3I						
			163.33	163.80	0.47	mKgW	GRD	MG	LT	GN	EN			PHC	3I						Moderate phyllic envelope surrounding two tan carbonate veinlets.
			163.80	166.10	2.30	mKgW	GRD	MG		WH				ARG	3I						Moderately argillic altered granodiorite with a moderate potassic overprint.
										PK				POT	3I						
			166.10	168.70	2.60	mKgW	GRD	MG		GN				PHC	3-4I						Moderate to strongly phyllic altered granodiorite hosting multiple quartz carbonate veins and carbonate veinlets. The phyllic alteration is strongest around veins and veinlets.
			172.72	173.23	0.51	mKgW	GRD	MG	LT	GN				PHC	3I						Moderate phyllic alteration hosts an abundance of white veinlets and stringers.
			178.10	179.49	1.39	mKgW	GRD	MG	LT	GN				PHC	3I						Moderate phyllic envelope surrounding a silicified and brecciated smokey quartz and white carbonate vein hosting disseminated pyrite.
			187.33	188.55	1.22	mKgW	GRD	MG	LT	GN				PHC	3I						Moderate phyllic envelope hosting multiple quartz sulphide veins.
			189.35	194.16	4.81	mKgW	GRD	MG		WH				ARG	3I						Moderate argillic altered granodiorite with a moderate potassic and weak propyllitic overprint.
										PK				POT	3I						
									DK	GN				PRO	2I						
			200.94	201.85	0.91	mKgW	GRD	MG		WH				ARG	3I						Moderate argillic altered granodiorite with a moderate potassic and propyllitic overprint.
										PK				POT	3I						
									DK	GN				PRO	3I						
203.35	213.16	9.81				mKgW	GRD	MG	LT	GN				PHC	3I						Moderate phyllic altered granodiorite. The upper 2/3 are partially altered too clay gouge and the bottom 1/3 hosts multiple quartz sulphide veins.
										GY											
			209.20	209.97	0.77	mKgW	GRD	MG		WH				ARG	3I						Moderate argillic altered granodiorite with a moderate potassic and propyllitic overprint.
										PK				POT	3I						
									DK	GN				PRO	3I						
213.16	237.55	24.39				mKgW	GRD	MG		WH				ARG	3I						Moderate argillic altered granodiorite with a moderate potassic and weak propyllitic overprint with patches of moderate propyllitic altered granodiorite.
										PK				POT	3I						
									DK	GN				PRO	2I						
									DK	GN	PA			PRO	3I						
			222.51	223.58	1.07	mKgW	GRD	MG	LT	GN				PHC	3I						Moderate phyllic altered granodiorite.
			228.82	230.84	2.02	mKgW	GRD	MG	DK	GN				PRO	3I						Moderate propyllitic altered granodiorite with a weak potassic overprint.
										PK				POT	2I						
			235.18	235.80	0.62	mKgW	GRD	MG	LT	GN	EN			PHC	3I						Moderate phyllic envelope around a smokey quartz sulphide vein.

VN	330.06	330.67	50.00			Py	25.00	The 1st 2/3 of the vein are grey to smokey quartz vein hosting disseminated to massive pyrite, arsenopyrite, sphalerite and galena along with trace amounts of disseminated chalcopyrite. In the last 1/3 of the vein, tan carbonate becomes more dominant and parallels and surrounds clasts of quartz sulphide mineralization. A 7cm vein of massive tan carbonate which hosts disseminated pyrite, galena and sphalerite is present at the bottom of the vein. The carbonate vein is bounded on either side by ~1-1.5cm zoned sphalerite veins which in turn are bounded by 0.5-0.8cm galena veinlets.

SUMMARY

From (m)	To (m)	Interval	Unit	Comments
0.00	35.00	35.00	GRD	Oxidized granodiorite with patchy argillic alteration.
35.00	44.29	9.29	GRD	Moderatly oxidized and argillic altered granodiorite.
44.29	139.15	94.86	GRD	Granodiorite with patchy argillic alteration and multipl
				phyllic envelopes around quartz or carbonate veins.
139.15	144.36	5.21	GRD	Propyllitc altered granodiorite.
144.36	145.05	0.69	GRD	Phyllic altered granodiorite hosting dissemianted pyri
145.05	145.28	0.23	FEL	Quartz feldspar porphyry dyke.
145.28	145.58	0.30	GRD	Phyllic altered granodiorite hosting dissemianted pyri
145.58	158.12	12.54	GRD	Propyllitc altered granodiorite.
158.12	160.73	2.61	GRD	Phyllic altered granodiorite hosting dissemianted pyri
160.73	165.82	5.09	GRD	Propyllitc altered granodiorite.
165.82	195.87	30.05	GRD	Granodiorite with patchy propyllitic alteration.
195.87	196.89	1.02	GRD	Phyllic envelope surround a black breccia vein.
196.89	204.27	7.38	FEL	Quartz feldspar porphyry dyke.
204.27	205.2	0.93	GRD	Phyllic alteration hosting quartz/sulphide veins.
205.20	258.17	52.97	GRD	Granodioite with a multile small propyllitic patches an
	EOH			phyllic envelopes.

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Arsenopyrite	Type	Conc. (%)	Photo	
0.00	6.10	6.10																			20ft of casing.
0.00	5.72	5.72				mKgW	GRD	MG	MD	GY		3.00									HQ core. Alternating fresh and highly oxidized, friable core. Mud and overburden within interval.
									MD	OR											
5.72	8.23	2.51				mKgW	GRD	MG	MD	GY		2.00									Start of NQ core. Fresh granodiorite with patches of fragmented, highly oxidized/limonite stained core.
									LT	OR											
8.23	32.74	24.51				mKgW	GRD	MG	MD	GY		1.00		PRO	2.00						Very weakly propyllitic altered granodiorite with limonite staining on fractures and minor patches on core. Patches of highly oxidized/friable rock present.
									MD	GN											
			8.23	9.26	1.03	mKgW	GRD	MG	LT	GN		3.00		PHC	3.00						Moderately phyllic altered granodiorite with limonite staining overprinting the phyllic alteration.
									MD	OR											
			12.12	16.18	4.06	mKgW	GRD	MG	LT	GN		2.00		PHC	3.00	1.00					Patchy moderate phyllic, moderate argillic and weak propyllitic alteration. Patchy
									LT	OR				ARG	3.00						
														PRO	2.00						
			18.60	19.15	0.55	mKgW	GRD	MG	LT	OR		4.00		ARG	4.00						Strong argillic alteration and strong oxidation. Soft, clay altered (sticky clay, can break core with hands).
			20.42	32.61	12.19	mKgW	GRD	MG	LT	GN				PHC	3.00						Alternating weak propyllitic, moderate phyllic and weak to moderate argillic altered
									MD	GY				ARG	2.00						
														POT	1.00						
														PRO	2.00						
32.74	40.40	7.66				mKgW	GRD	MG	LT	GN		3.00		PHC	3.00	1.00		To	2.00		Dominantly phyllic altered granodiorite (moderate, some strong) with patches of argillic alteration and crumbly/friable core. Several patches of weak, crumbly, heavily oxidized core. Vuggy carbonate textures and veining present with pyrite mineralization (see secondary structures log). 1 vein hosting massive tourmaline.
									LT	OR											
40.40	55.53	15.13				mKgW	GRD	MG	MD	GY				PRO	1.00						Fresh to weakly propyllitic altered granodiorite. Grey with slight green tinge. Small, localized patches of phyllic alteration enveloping quartz-carbonate veinlets and smoky quartz veinlets/ Chlorite staining on some fractures (proximal to veinlets and phyllic alteration).
									MD	GN				PHC	1.00						
55.53	124.05	68.52				mKgW	GRD	MG	MD	GY		1.00		PRO	2.00						weakly propyllitic altered granodiorite. Grey with slight green tinge. Small, localized patches of phyllic alteration enveloping quartz-carbonate veinlets and smoky quartz veinlets. Few larger quartz-carbonate veins (see secondary structures log). Few patches of argillic alteration with friable rock, often limonite stained.
										GN				ARG	1.00						
														PHC	1.00						
			61.07	62.56	1.49	mKgW	GRD	MG	LT	GN		2.00		PHC	2.00						Patchy argillic and (weak to moderate) phyllic alteration with quartz-carbonate veins (see secondary structures). 25cm of limonite stained, crumbly, weak core.
														ARG	3.00						
			65.93	69.70	3.77	mKgW	GRD	MG	LT	GN		2.00		PHC	3.00	<1		Sp	<1		Moderate to strong phyllic alteration with sulphide-bearing vein at end of interval. Limonite staining on fractures and some surfaces. Small developing faults. Clay altered fault gouge/clay altered vein present, hosting semi-massive pyrite (potential for high grade zone, limonite stained, clay altered).

KLAZA

Hole: DDH-12-100 **Logger Name: Nicole Marsh**

Depth (m)		DESCRIPTION
190.07		Granodiorite hangingwall, quartz-feldspar porphyry dyke footwall. Hanging wall is silicified, phyllic altered granodiorite. Pyrite and trace galena hosted in smoky quartz (+minor quartz-carbonate) vein at contact. Footwall hosts disseminated pyrite within dyke for 12cm (grading out). Abrupt contact at 76 degrees to-core-axis.
209.57		Quartz-feldspar-porphyry dyke hangingwall, granodiorite footwall. Abrupt contact at 65 degrees to-core-axis. Blebby pyrite hosted in silicified granodiorite and quartz veins at contact. Pyrite and sphalerite mineralization in larger vein proximal to contact (in footwall).
331.16		Granodiorite hangingwall, quartz-feldspar porphyry dyke footwall. Abrupt contact at 22 degrees to-core-axis.
336.65		Quartz-feldspar-porphyry dyke hangingwall, granodiorite footwall. Abrupt contact with ~7mm of fault gouge. Contact/fault gouge at 12 degrees to-core-axis.

2° Structure Type	From (m)	To (m)	Interval (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS		DESCRIPTION	Photo
							Type	Conc. (%)		
VT	8.42	8.87	0.45			3.00			Carbonate veinlets and minor smoky quartz hosting disseminated pyrite. Heavy limonite staining. Veinlets up to 2mm in width, various orientations (weakly netted?).	
VN	12.97	13.19	0.22	85.00			Py	2.00	Vein consisting of smoky quartz, white quartz-carbonate, limonite stained stringers and dark blue aphanitic mineral.	
VN	20.74	20.83	0.09	75.00		1.00	Py	2.00	2.6cm smoky quartz vein and quartz-carbonate veinlet. Quartz vein hosting blebby and disseminated pyrite. Adjacent to heavily oxidized and argillic altered zone.	
VT	28.00	28.44	0.44	70.00		14.00			Grey quartz veinlets (up to 5mm in width).	
VN	29.78	29.84	0.06	85.00		1.00			Stringy, white/creamy quartz-carbonate vein with minor fine-dark-blue mineral. 3.2cm in width.	
VT	32.89	32.95	0.06	70.00		3.00	Py	1.00	Dark-fine stringers hosting disseminated pyrite. All stringers at 70 degrees to-core-axis.	
VT	33.19	33.25	0.06	45.00		1.00	Gn	<1	Pinching out smoky quartz and white quartz-carbonate vein hosting trace galena and blebby oxidized mineral (oxidized brown, sphalerite?). 0.9cm in width.	
FT	34.63	35.03	0.40	10.00			To	5.00	Shallow, clay altered fault zone hosting semi-massive black tourmaline and disseminated pyrite (fragments of altered vein?). Very soft. 10 degrees to-core-axis.	
							Py	<1		
VT	35.84	35.88	0.04	70.00		1.00	Py	1.00	Grey veinlets of small dyke(?). Fine grey with white phenocrysts (or clasts, could be brecciation) and hosting disseminated pyrite. 70 degrees to-core-axis. 1cm in width.	
VN	36.65	37.34	0.69	30.00		1.00	To	30.00	Milky quartz vein hosting abundant acicular, radiating and massive black tourmaline and blebby pyrite. Quartz-carbonate veinlets cross cutting main vain at 30 degrees to-core-axis (3x). Slight vuggy texture within quartz-carbonate. Highly fragmented at edges/around vein. Mottled vein.	
							Py	5.00		
VT	44.55	47.18	2.63	80.00		3.00	Py	<1	Carbonate and dark-fine mineral (+quartz?) hosting fine disseminated pyrite. 3mm, 2mm and 1mm. 80 degrees to-core-axis. Small, weak propyllitic alteration envelope.	
VT	50.79	50.84	0.05	50.00		1.00	Py	1.00	Carbonate and dark-fine mineral (+quartz?) hosting minor blebby pyrite at 50 degrees to-core-axis. Small phyllic alteration enveloping veinlet.	
VT	50.90	50.92	0.02	90.00		2.00	Py	1.00	Carbonate and dark-fine mineral (+quartz?) veinlet hosting minor blebby pyrite at 90 degrees tca. 2mm and 3mm widths.	
VN	58.15	58.21	0.06	65.00		1.00	Py	2.00	White and creamy (slight pink) quartz-carbonate (+-ankerite) and minor smoky quartz vein hosting blebby pyrite. 3cm in width. Orientated 5 degrees to-core-axis.	
FT	61.39	61.43	0.04	75.00		1.00			Fault gouge at 75 degrees to-core-axis. 1.6cm in width.	
VN	61.42	61.47	0.05	65.00		1.00			1.8cm grey-quartz vein.	
VN	62.25	62.29	0.04	75.00		1.00	Py	<1	Creamy and white quartz-carbonate and smoky quartz vein with fine-blue mineral. 2.1cm in width.	
VT	65.97	66.00	0.03	75.00		2.00	Py	1.00	Smoky quartz and white quartz-carbonate veinlets. Up to 3mm in width.	
VT	66.35	66.68	0.33			5.00			White/creamy quartz-carbonate veinlets with weak crustiform texture. Orientated 40 to 80 degrees to-core-axis.	
VN	68.65	68.91	0.26	10.00					Smoky quartz and creamy quartz-carbonate vein hosting black tourmaline. 1.3cm in width.	
VN	68.25	69.06	0.81	12.00		2.00	Py	1.00	Smoky quartz and creamy quartz-carbonate vein hosting fine dark-grey mineral and disseminated and semi-massive pyrite. 1.1cm in width. Tourmaline surrounding vein.	
VT	69.69	70.35	0.66			3.00	Py	2.00	Dark-grey chalcedony veinlet (changes orientation at sharp angles, minor vuggy texture) and white chalcedony vein cross cutting stringers and veinlets if quartz-carbonate and smoky quartz veinlets. Quartz and quartz-carbonate veinlets host blebby pyrite.	
VN	70.41	70.60	0.19	70.00		2.00	Py	15.00	2 smoky quartz veins with dark-fine-blue mineral (aphanitic sulphides?) and quartz carbonate. 11cm and 6cm in widths. Veins at contact with fault gouge. Large blebs of pyrite and smaller blebby galena and sphalerite. Much of sphalerite is oxidized.	
							Gn	1.00		
FT	70.60	71.79	1.19	20.00		1.00	Py	3.00	Light orange and brown (limonite stained and muddy), cay altered fault gouge or extremely clay altered vein. Disseminated pyrite, massive pyrite and remnants of smoky quartz veins throughout (at least 2 sulphide-bearing veins).

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Arsenopyrite	Type	Conc. (%)	Photo	
0.00	4.57	4.57					OVB														Overburden.
4.57	8.57	4.00				mKgW	GRD	MG	LT	GY	RU	3.00		ARG	1.00						Fragmented and oxidized granodiorite with patch of friable argillic altered core. Some limonite staining on fractures but dominantly on fractures.
										OR											
8.57	16.35	7.78				mKgW	GRD	MG	MD	OR	MO	3.00	2.00	ARG	1.00						Heavily oxidized granodiorite. Limonite staining on all but a short interval core. Patches of mottled and silicified core with weaker argillic altered patches. Zones of rubble and fragmentation.
											RU										
16.35	29.97	13.62				mKgW	GRD	MG	MD	GY	PA	2.00		ARG	1.00						Alternating weakly propylitic altered granodiorite with staining restricted to fractures, phyllic altered granodiorite with patchy limonite staining and argillic altered friable core. Zones of rubble and fragmentation.
									MD	OR				PHC	2.00						
									MD	GN				PRO	1.00						
29.97	31.21	1.24				mKgW	GRD	MG	LT	WH				POT	4.00						Moderately argillic altered granodiorite with strong potassic overprinting.
									LT	PK				ARG	3.00						
31.21	33.33	2.12				mKgW	GRD	MG	LT	PK			3.00	PHC	3.00						Pink silicified/bleached granodiorite grading into green, silicified granodiorite (phyllic altered).
									MD	GN											
33.33	44.45	11.12				LKqP	FEL	FG	LT	PK	PO	3.00		POT	4.00						Quartz-feldspar-porphyry dyke. Pink with some grey patches.
44.45	45.50	1.05				mKgW	GRD	MG	DK	GY						2.00		Py	2.00		Dark grey-green granodiorite with approximately 15cm of mineralization of black-
																		Gn	1.00		
																		Sp	<1		
45.50	61.72	16.22				mKgW	GRD	MG	MD	GY		2.00		PRO	1.00						Weakly propylitic altered granodiorite with trace argillic and phyllic alteration. Limonite staining on many fractures. Localized hematite staining on fractures (heavy hematite at 54.90m).
										GN											
61.72	67.39	5.67				mKgW	GRD	MG	LT	GN		1.00		PHC	2.00						Broken/fragmented and altered granodiorite. Bleached appearance for much of core. Phyllic, potassic and argillic alterations. Some friable patches. Minor hematite staining on localized fractures.
														POT	1.00						
														ARG	1.00						
67.39	72.93	5.54				mKgW	GRD	MG	LT	GY	PA			PHC	3.00						Patchy, altered granodiorite. More competent than previous interval. Moderate to strong phyllic, fresher/weak propylitic, trace argillic and trace potassic alteration. Overall light green (slightly bleached) colouration with some grey-green (fresh) colours. Fault gouge within interval. Patch of abundant brassy, fine pyrite at 71.30m-71.33m (30% pyrite).
														PRO	2.00						
														ARG	1.00						
														POT	1.00						
72.73	76.10	3.37				LKqP	FEL	FG	LT	GN	PO										Light green, porphyritic quartz-feldspar-porphyry dyke. Small fault zones throughout (1-3cm). Phenocrysts stained light green.
76.10	78.20	2.10				mKgW	GRD	MG	LT	GN	FR			PHC	3.00						Highly fragmented and altered granodiorite. Fault gouge at contact with dyke. Bleached, green granodiorite (relict granodiorite textures hardly visible).
78.20	79.70	1.50				mKgW	GRD	MG	MD	GY	FR										Broken granodirorite. Weakly proplyllic altered with trace potassic alteration.
79.70	80.60	0.90				mKgW	GRD	MG	LT	WH											Extremely altered fault gouge.

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS				Photo	DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Arsenopyrite	Type	Conc. (%)		
80.60	83.33	2.73				mKgW	GRD	MG	LT	GN											Phyllic altered granodiorite. Patches of weak and friable core. Quartz-carbonate veins throughout, small patches of strong potassic alteration. 18cm interval of dark-purple/dark-green chlorite and hematite rich core (hard and fragmented).
83.33	88.28	4.95				mKgW	GRD	MG	MD	GY				PHC	1.00						Weakly propylitic altered granodiorite with small phyllic altered vein and veinlets. Small, localized patches of friable core. Heavy chlorite on some fractures and localized hematite. Trace potassic alteration.
														PRO	2.00						
														POT	1.00						
88.28	90.89	2.61				mKgW	GRD	MG	LT	GN				PHC	3.00						Phyllic altered granodiorite with patchy (weak to moderate) argillic alteration + patch of strong potassic alteration. Faults and veining described in secondary structures log.
														ARG	2.00						
														POT	1.00						
90.89	96.22	5.33				mKgW	GRD	MG	LT	GN				PHC	3.00						Light green, clay altered fault gouge with short intervals of competent rocks. Fragments of rock (phyllic altered granodiorite) with localized bands of grey sulphide gouge.
96.22	97.00	0.78				mKgW	GRD	MG	DK	GY				PRO	1.00						Medium to dark grey clay altered fault gouge (slight green tint).
														ARG	2.00						
97.00	101.98	4.98				mKgW	GRD	MG	MD	GY				PRO	1.00						Medium-grey fault gouge with short intervals of weakly argillic altered granodiorite. Salt and pepper colouration. Abundant chlorite replacement of hornblendes.
														ARG	3.00						
101.98	106.30	4.32				mKgW	GRD	MG	MD	GY				ARG	3.00						Salt and pepper coloured, very weak granodiorite. Abundant chlorite replacement of hornblendes, Some fault gouge (same as previous description).
														PRO	1.00						
106.30	108.62					mKgW	GRD	MG	DK	GY											Medium dark-grey gault gouge with light green tinge.
108.62	117.13	8.51				mKgW	GRD	MG	LT	GN	MO			PHC	3.00	<1					Mottled, phyllic altered granodiorite with patchy potassic overprint. Highly fragmented for much of interval. Veining and sulphide mineralization described in secondary structures log.
									LT	PK				POT	2.00						
117.13	137.58	20.45				mKgW	GRD	MG	MD	GY				PRO	2.00						Weakly propylitic altered granodiorite with localized hematite on fractures (such as 17.96m) and staining on surfaces. Blue-green tint to core (abundant chlorite) with patches of light green phyllic alteration enveloping quartz and quartz-carbonate veins and veinlets. Few patches of argillic alteration. Trace potassic alteration.
										GN				PHC	1.00						
														POT	1.00						
			124.76	127.69	2.93	mKgW	GRD	MG	LT	GN	PA			PHC	3.00						Patchy granodiorite. Patchy/alternating alterations of light green (weak or moderate) phyllic and (weak to moderate) propylitic alteration. Trace potassic alteration. Quartz and quartz-carbonate veining within phyllic alteration.
									MD	GY				PRO	2.00						
			130.63	135.00	4.37	mKgW	GRD	MG	LT	GN				PHC	2.00	<1		Gn	<1		Weak to moderately phyllic altered granodiorite. Fault zones and quartz-carbonate veining throughout. Light to medium green. Some crustiform textures present and pyrite mineralization.
														PRO	2.00						
137.58	138.08	0.50				mKgW	GRD	MG	LT	GN	MO			POT	2.00						Mottled coloured granodiorite surrounding 2 aplite dykes (with crystals up to 2mm). Aplite dykes are medium pink. Faulting and abundant chlorite within interval.

Hole: DDH-12-101 Logger Name: Nicole Marsh

Depth (m)		DESCRIPTION
33.33		Granodiorite hangingwall, quartz-feldsapr-porphry dyke footwall. Fault gouge at contact and vein hosting blebby galeba proximal to contact (Hangingwall). Disseminated pyrite within hangingwall. Abrupt contact.
44.45		Quartz-feldspar-porphry dyke hangingwall, granodiorite hangingwall. Fault gouge at contact (orientated 30 degrees tca), then fragmented dark-grey granodiorite hosting pyrite stringers. Abrupt contact.
72.73		Granodiorite hangingwall, quartz-feldspar-porphry dyke footwall. Abrupt contact with ~2cm of fault gouge at contact.
76.01		Quartz-feldspar-porphry dyke hangingwall, granodiorite footwall. Mint green granodiorite fault gouge at contact (60 degrees tca). Abrupt contact. Granodiorite is bleached after gouge.

2° Structure Type	From (m)	To (m)	Interval (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS		DESCRIPTION	Photo
							Type	Conc. (%)		
VN	82.30	82.53	0.23				Py	2.00	Slightly brecciated granodiorite with dark-fine mineral matrix. Vein hosting disseminated pyrite. Netted, dark mineralization with crustiform quartz-carbonate vein cutting brecciated vein at 80 degrees to-core-axis (1.5cm in width). ~21cm of brecciated and netted vein.	
	82.62	82.73	0.11	85.00					Netted, smoky quartz vein with band of whit quartz-carbonate (1cm wide). 9cm in width.	
FT	82.75	82.79	0.04	70.00					~1cm of highly clay altered fault gouge. Grey aphanitic sulphide gouge.	
VN	82.83	82.98	0.15	65.00		2.00	Py	1.00	Grey quartz and white quartz-carbonate veins hosting fine disseminated pyrite and black aphanitic sulphides. 2.2 and 4.6cm in widths.	
VT	85.52	89.85	4.33	65.00		5.00	Py	<1	Quartz and quartz-carbonate veinlets up to 9mm in width. Orientated 60-70 degrees to-core-axis. Trace disseminated pyrite.	
FT	89.58	90.31	0.73	53.00		3.00			Fault zones. 1 moderately developed (5cm) and 2 poorly developed (4.8c and 3.3cm in widths). Clay alteration present.	
VN	90.24	90.30	0.06	45.00			Py	<1	Banded vein of grey mineral, quartz-carbonate and quartz hosting minor blebby pyrite. 1.4cm in width.	
									entering heavily faulted zone	
FT	90.89	96.20	5.31			14.00			Extremely faulted zone with ~14 individual faults with short intervals of competent granodiorite (fragmented) between faults. First fault in interval is orientated at 18 degrees to-core-axis, others at 50, 28, 35, 65 degrees (varying). Length ranging rom 5cm to 30cm (with one or a few together making a larger interval of 1.1m).	
FT	96.23	98.13	1.90	55.00		2.00			2 fault zones at 55 degrees to-core-axis. Dark/medium grey. ~53 and <60cm zones (rain washed away some gouge),	
FT	106.14	108.02	1.88						Dark-grey , clay altered fault gouge with slight green tint. Unknown angle. Highly clay altered for at least 1.1m.	
									leaving heavily faulted zone	
VT	108.20	108.24	0.04	60.00					8mm chlorite and quartz green veinlet.	
VT	109.09	110.45	1.36			4.00			White and green carbonate + green chlorite and grey-vitreous quartz veinlets. 2mm to 9mm in width. Orientated 25, 35 and 40 degrees to-core-axis.	
VN	111.61	111.70	0.09	45.00					Green chlorite and quartz vein with minor quartz-carbonate. 3cm in width.	
VN	111.75	111.80	0.05	30.00					Vitreous white quartz vein. 1.3cm in width, within friable zone (fault zone?).	
VN	112.07	112.12	0.05				Py	<1	Smoky-vitreous quartz and creamy quartz-carbonate vein hosting disseminated pyrite.	
VT	112.54	112.60	0.06	28.00		3.00	He	5.00	2 Vuggy creamy quartz carbonate veinlets crosscutting and offsetting (dextral, by 3mm) a smoky quartz veinlet hosting hematite. Quartz-carbonate veinlets orientated at 28 degrees to-core-axis, quartz at 50 degrees to-core-axis.	
VN	113.22	113.33	0.11	75.00		2.00			2 carbonate veins (rimmed by minor quartz). 1.3cm and 1.8cm in width.	
FT	113.98	116.65	2.67	60.00		4.00			4 small clay altered fault zones. Generally ~1cm with one 20cm zone. At least two zones at 60 degrees to-core-axis.	
FT	114.92	115.04	0.12	30.00		1.00	Py	<1	Banded/crustiform white quartz-carbonate and smoky quartz hosting disseminated pyrite.	
VN	115.35	115.50	0.15	10.00		1.00	Py	1.00	1cm grey-quartz and creamy quartz-carbonate veinlet hosting disseminated pyrite and some ankerite. Situated on top of core (4cm over core, 8mm into core). Almost horizontal (to-core-axis), fragmented (therefore uncertain of length).	
VN	116.90	117.12	0.22	65.00		2.00			Weakly crustiform white-creamy-pink carbonate, ankerite and quartz-carbonate veins at 65 degrees to-core-axis. 8mm and 2cm in width.	
FT	119.97	132.97	13.00			8.00			8 fault zones. 4 moderately developed, 4 poorly developed. Range of orientations (including 40, 70, 35 and 65 degrees to-core-axis). 1cm to 10cm in width.	
VN	122.82	123.01	0.19	7.00		7.00			shallow, mottled vein situated on top of core. Pink-ankerite, green quartz-chlorite, smoky quartz, hematite stained quartz and white quartz carbonate. Ends abruptly at upper contact (small fault without clay alteration?). ~3cm wide on surface of core.	

KLAZA

							Type	Conc. (%)		
FT	160.12	160.85	0.73						Clay altered fault gouge zone. Small zones orientated 35 and 20 degrees to-core-axis. ~2cm and 3cm zones.	
VN	160.54	160.63	0.09						Netted creamy quartz-carbonate vein.	
VN	167.07	167.10	0.03	75.00			Py	1.00	Vein consisting of stringy and crustiform quartz-carbonate, vitreous quartz and blue fine mineral. 1.5cm vein and 2 stringers hosting pyrite.	
VT	172.75	172.80	0.05	45.00			Py	1.00	Creamy quartz-carbonate and green highly silicified halo hosting disseminated pyrite.	
VN	172.83	172.92	0.09	50.00			Py	5.00	Vein consisting of smoky quartz, dark black/grey aphanitic sulphides, and white quartz-carbonate. Hosting blebby and disseminated pyrite. Overall dark-grey colour. 2.1cm in width.	
VN	173.09	173.30	0.21	60.00					Stringy/mottled grey quartz-carbonate vein. Some vuggy textures. 2.1cm and 3.0cm in width. Orientated at 60 and 55 degrees to-core-axis.	
VN	173.30	173.40	0.10	65.00					7.2cm carbonate vein.	
FT	175.00	175.20	0.20	25.00					Clay altered fault gouge. White-green colour.	
VN	177.24	177.32	0.08	65.00			Py	3.00	Banded, weakly crustiform and vuggy vein consisting of dark-grey quartz (w/ chlorite), vuggy/crustiform quartz-carbonate and dark aphanitic sulphides. Smoky quartz hosting pyrite. 4 pyrite bearing stringers at same orientation within interval. Vein is 3.2cm in width.	
FT	180.95	181.86	0.91	80.00		4.00	Py	<1	Weak to moderate developed fault zones with some grey sulphide gouge (overall white-grey). ~4 zones. Disseminated pyrite throughout interval. Faults orientated at 65 and 80 degrees (dominantly 80) to-core-axis. More fault gouge than solid core.	
ST/VT	182.47	183.13	0.66			24.00			Slightly pink and white quartz-carbonate veinlets and stringers. Abundant and in various orientations to weakly netted. Several veinlets at 55 and 40 degrees. At least 24 veinlets/stringers.	
VT	183.90	184.69	0.79				Py	2.00	Mottled vein within developing fault zone. Offsets present. Blebby and disseminated pyrite hosted within vitreous quartz with dark aphanitic sulphides + netted grey chalcedony + minor quartz-carbonate.	
FT	184.69	184.79	0.10	75.00					Weakly developed fault zone at 75 degrees to-core-axis.	
FT	185.60	185.70	0.10	45.00					Clay altered fault gouge zone with some grey sulphide gouge. 4cm in width, orientated 40 degrees to-core-axis. Light green overall.	
VN	185.75	185.88	0.13	50.00					White quartz-carbonate, rosy quartz (hematite stained?) and smoky quartz banded vein hosting disseminated pyrite.	
VN	187.96	188.15	0.19	23.00					Chalcedony and quartz-carbonate netted/stringy vein.	
FT	191.93	192.37	0.44	45.00					Developing fault zone at 45 degrees to-core-axis, with bands of grey sulphide gouge.	
FT	192.56	192.95	0.39	70.00					Fault gouge zone. 70 degrees at upper contact, 90 degrees at lower contact.	
				90.00						
VN	192.95	193.00	0.05	90.00					Brecciated vein at 90 degrees to-core-axis. Dark-grey matrix with granodiorite clasts.	
VN	198.53	198.62	0.09	40.00			Py	<1	Banded yellow quartz-carbonate, chalcedony(?), smoky quartz and dark-blue aphanitic sulphide vein. 2.6cm in width. Trace disseminated pyrite.	
VT	203.34	203.40	0.06	40.00					8mm black vein (with small granodiorite clasts) cross-cut by quartz-carbonate stringer.	
FT	212.10	212.18	0.08	45.00					Small clay altered fault gouge zone. Hangingwall is carbonate flooded for 3cm. ~5cm zone. Minor grey sulphide gouge.	
FT	212.80	212.90	0.10	55.00					Weakly developed fault gouge zone. ~9cm in width.	
VN	212.90	213.10	0.20	40.00					Weakly brecciated vein with convoluted quartz-carbonate and quartz. Smoky quartz and quartz-carbonate matrix with carbonate clasts(?). Blebby pyrite hosted within quartz. At contact with fault. Very green footwall hosting fine disseminated pyrite.	
VN	213.95	214.03	0.08	18.00					Green quartz-chlorite band/vein offset by thin fault infilled with green quartz-chlorite. Larger 1.2cm vein at 60 degrees to-core-axis offset by stringer at 18 degrees in opposing direction.	
VT	215.42	215.60	0.18	18.00					Vibrant green chlorite-quartz veinlet with white carbonate and red hematite. 1cm in width.	
VN	220.05	220.14	0.09	39.00					Chlorite-quartz and quartz banded being. Vibrant and dark green bands + creamy band of quartz-carbonate.	

KLAZA

2° Structure Type	From (m)	To (m)	Interval (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS		DESCRIPTION	Photo
							Type	Conc. (%)		
VT	222.27	222.36	0.09	40.00					Band of vibrant green chlorite-quartz vein and band of dark-purple densely netted hematite with interstitial smoky quartz.	
ST	222.36	222.53	0.17						Netted chlorite and hematite stringers.	
VT	223.60	223.76	0.16	70.00					Small grey and vitreous quartz (+minor carbonate) hosting disseminated pyrite, crosscutting chlorite-quartz veinlet (vibrant green, stringy, orientated 16 degrees in opposing direction). Pyrite bearing veinlet at 70 degrees to-core-axis. Interval includes both vein and veinlet.	
VT	225.81	225.84	0.03	80.00					3 closely spaced veinlets with light green phyllic alteration halo. Grey quartz, white quartz-carbonate and white-pink quartz-carbonate.	
FT	227.82	227.95	0.13	30.00					Weakly developed fault zone. Chlorite rich. 1.6cm in width. Minor clay alteration.	
FT	228.88	229.05	0.17	40.00					Grey and green clay altered fault zone. Well developed and moderately developed (1/2 each).	
VN	230.10	238.15	8.05	40.00			Py	1.00	Smoky quartz and minor quartz-carbonate vein hosting semi-massive pyrite. 1.5cm in width.	
FT	231.90	232.14	0.24	50.00					Friable fault gouge with minor clay alteration. Light green colour.	
VN	232.45	232.55	0.10				Py	2.00	Fragmented vein next to clay gouge (unknown width). Banded grey-quartz and white quartz-carbonate vein hosting blebby and semi-massive pyrite and blebby galena. ~6.5cm in width and at least 3.5cm of grey clay altered fault gouge (sulphide gouge hosting lose crystals of pyrite).	
							Gn	<1		
FT	233.25	233.30	0.05	40.00					2cm of crumbly (some clay alteration) fault gouge adjacent to vibrant green quartz-chlorite veinlet and stringers.	
VN	238.07	238.15	0.08	40.00					Banded vein of quartz and quartz-carbonate with creamy, blue and grey colours. 2cm in width.	
VN	242.41	242.50	0.09	46.00					Creamy + pink quartz-carbonate (+- ankerite) and minor vitreous quartz. 2.7cm crustiform vein.	
VN	243.40	243.50	0.10	40.00					4cm crustiform and vuggy creamy quartz-carbonate and smoky quartz vein.	
VN	245.11	245.27	0.16	15.00					Banded quartz-carbonate and quartz vein hosting dark aphanitic sulphides + 6mm of highly clay altered gouge on upper contact. Orientated ~15 degrees to-core-axis. Vein is 1.4cm in width.	
FT	247.50	247.73	0.23	80.00					Moderately to well developed fault gouge. Light green colour.	
VT	250.33	250.42	0.09	60.00		3.00			Carbonate, chlorite and quartz-carbonate (+minor quartz) veins. Orientated 60, 60 and 70 degrees to-core-axis.	
FT	253.26	253.34	0.08	70.00					Friable, weakly clay altered fault zone. Light green and blue-green colours.	
VN	255.07	255.12	0.05	51.00			Py	10.00	Grey and white quartz vein hosting pervasive blebby pyrite with thin pink and yellow bands of quartz carbonate. 1cm in width.

SUMMARY

From (m)	To (m)	Interval	Unit	Comments
0.00	50.03	50.03	GRD	Unaltered, heavily oxidized, rubbly-fractured granodiorite with calcite crystal growth in vugs and on fractures.
50.03	84.26	34.23	GRD	Very weak propyllitic granodiorite crosscut by occasional quartz veinlets with phyllic envelopes.
84.26	158.75	74.49	GRD	Moderate propyllitic granodiorite with patchy argillic alteration and phyllic envelopes on crosscutting veins.
158.75	174.47	15.72	GRD	Unaltered granodiorite with crosscutting quartz-carbonated veinlets.
174.47	288.65	114.18	GRD	Weak propyllitic granodiorite with long patches of hematite-rich rubbly-stained zones, patchy argillic alteration and phyllic envelopes on crosscutting veins.
288.65	298.45	9.80	GRD	Strongly propyllitic granodiorite with phyllic envelopes on crosscutting veins. Prominent vein
298.45	305.99	7.54	FEL	Green-brown quartz feldspar porphyry dyke.
305.99	312.74	6.75	GRD	Moderate propyllitic granodiorite hosting a thick vein zone with strong sulphide mineralization and epithermal textures.
312.74	334.37	21.63	GRD	Unaltered granodiorite with two major mineralized quartz veins.

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS				Photo	DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite		Type	Conc. (%)		
0.00	50.03	50.03				mKgW	GRD	MG	MD	BN	FR	5I	2I					LI	8.00		Unaltered, heavily oxidized, rubbly-fractured granodiorite. Oxidation is pervasive and very strong, and often breaks competent core to clayey mud and pebbles. Oxide staining is strongest on fracture faces and pervasive until 29.70m. Calcite crystal growth is seen in vugs and some fracture faces. Weak silica flooding after 32.61m.
										GY	RB							GO	6.00		
50.03	84.26	34.23				mKgW	GRD	MG	MD	GN		2I		PRO	1I						Unaltered granodiorite grades into very weak propyllitic, giving a hint of green colour. Crosscut by occasional quartz veinlets with phyllic envelopes.
										GY											
			72.62	72.91	0.29	mKgW	GRD	MG	MD	PK	XL			ARG	4I						Strong argillic granodiorite.
										GY											
84.26	158.75	74.49				mKgW	GRD	MG	MD	GN	XL			PRO	3I						Moderate propyllitic granodiorite with crosscutting veins with phyllic envelopes and patchy argillic. Some short patches of disseminated fine-grained pyrite.
										GY	PA										
			90.83	92.03	1.20	mKgW	GRD	MG	MD	GN	XL			PHC	3I						Moderate phyllic due to overlapping phyllic vein envelopes.
										GY											
			100.49	102.14	1.65	mKgW	GRD	MG	MD	GN	PA			PHC	2I	1.00					Moderate phyllic with patchy argillic, crosscut y a thick (32cm) vein zone of smoky quartz. Hosts weakly disseminated pyrite.
										GY				ARG	4I						
			106.28	109.68	3.40	mKgW	GRD	MG	MD	GN	FR			PRO	4I			HE	3.00		Strong propyllitic granodiorite with red hematite staining along fractures and crosscutting veinlets.
										GY											
			112.27	114.24	1.97	mKgW	GRD	MG	MD	GN	RB			PHC	4I	1.00					Strongly phyllic altered granodiorite crosscut by quartz veins. Weakly gouged-clay altered and somewhat rubbly.
										GY	GO										
			121.24	122.02	0.78	mKgW	GRD	MG	MD	GN	XL			PHC	3I			HE	8.00		Moderate phyllic granodiorite crosscut by three white quartz veinlets. Mottled green-pink due to pink hematite staining.
										PK											
			133.58	135.22	1.64	mKgW	GRD	MG	MD	GN	FR		2I	PRO	3I			HE	8.00		Moderate propyllitic granodiorite with partial texture destruction by silica flooding, showing quartz eyes. Mottled green-pink due to pink-red hematite staining and weak potassic alteration crosscut by white calcite veinlets.
										PK				POT	2I			CA	####		
			146.27	150.70	4.43	mKgW	GRD	MG	MD	GN	GO			PRO	3I			HE	6.00		Moderate-strong propyllitic granodiorite with moderate-strong clay alteration and gouge. Strong hematite red-staining. Rubbly, crosscut by quartz veins.
										RD	RB			CLY	3I						
			152.84	158.49	5.65	mKgW	GRD	MG	MD	GN	GO			PRO	3I			HE	6.00		Moderate-strong propyllitic granodiorite with moderate-strong clay alteration and gouge. Strong hematite red-staining. Rubbly, crosscut by quartz veins.
										RD	RB			CLY	3I						
158.75	174.47	15.72				mKgW	GRD	MG	MD	GY	XL										Unaltered granodiorite with crosscutting quartz-carbonate veinlets.
174.47	288.65	114.18				mKgW	GRD	MG	MD	GN	PA			PRO	2I						Weak propyllitic granodiorite with crosscutting quartz-carbonate veins with phyllic envelopes, and patchy argillic alteration.
										GY				PHC	2I						
														ARG	2I						
			188.06	190.12	2.06	mKgW	GRD	MG	MD	GN	XL			PRO	4I						Dark green-red granodiorite due to overprinting propyllitic and hematite.
										RD				HEM	3I						
			190.84	191.43	0.59	mKgW	GRD	MG	MD	GN	RB			PRO	4I						Strongly propyllitic granodiorite with moderate clay alteration. Rubbly and crumbled.
														CLY	3I						
			191.64	192.28	0.64	mKgW	GRD	MG	MD	GN	XL			PHC	3I						Moderate-strong phyllic granodiorite crosscut by netted-clay altered quartz-carbonate veinlets.

From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite		Type	Conc. (%)		
			194.16	194.65	0.49	mKgW	GRD	MG	MD	BK				HEM	5I						Very strongly hematized granodiorite.
										RD											
			196.75	197.90	1.15	mKgW	GRD	MG	MD	GN				PHC	4I	1.00					Strongly phyllic granodiorite hosting disseminated-blebby pyrite.
			197.90	199.83	1.93	mKgW	GRD	MG	MD	GN	RB			HEM	4I						Strongly hematized granodiorite with patchy argillic and propyllitic. Crosscut by quartz-carbonate veinlets. Rubbly toward the end of the interval.
										RD	PA			ARG	2I						
														PRO	2I						
			212.45	213.03	0.58	mKgW	GRD	MG	MD	GN	CR			PRO	4I				CL	#	Intensely chloritized granodiorite crosscut by thin quartz veinlets.
			213.03	216.97	3.94	mKgW	GRD	MG	MD	GN	RB			HEM	4I						Strongly hematized granodiorite with patchy argillic and propyllitic. Crosscut by quartz-carbonate veinlets. Rubbly toward the end of the interval.
										RD	PA			ARG	1I						
														PRO	3I						
			245.11	296.03	50.92	mKgW	GRD	MG	LT	GN	GO			PHC	3I						Moderately phyllic envelope around crosscutting quartz-calcite veinlets.
									MD												
			267.67	273.76	6.09	mKgW	GRD	MG	MD	GN	FT			PHC	4I				HE	#	Weakly faulted moderate-strong phyllic granodiorite with patchy red hematite staining-alteration. Crosscut by white-cream quartz-carbonate veins and veinlets.
										RD				HEM	2I						
			273.76	288.01	14.25	mKgW	GRD	MG	MD	GN	PA			PRO	4I						Moderate-strong propyllitic granodiorite with patchy argillic and phyllic, especially seen as halos around crosscutting quartz veins. Weak dendritic hematite alteration gives a red colouration, especially on quartz veins.
										CR				ARG	2I						
288.65	298.45	9.80				mKgW	GRD	MG	MD	GN	PA			PHC	3I						Strongly propyllitic granodiorite with patchy strong-moderate phyllic envelopes on crosscutting veins. Weakly faulted, with some argillic outer halos on veins. Hosts a prominent vein zone with 7-10 thick veins with strong mineralization and epithermal textures, with complete sulphide suites.
														HEM	2I						
														PHC	3I						
298.45	305.99	7.54				LKqP	FEL	FG	MD	GN	PO			PRO	4I						Thick green-brown quartz feldspar porphyry dyke with 1-3mm sericite altered quartz and feldspar phenocrysts. Brown dyke shows stronger flow banding than green dyke. Has thick, heavily mineralized dyke selvedges.
										BN	GO			ARG	2I						
305.99	312.74	6.75				mKgW	GRD	MG	MD	GN	XL			SER	3I				SE	#	Dominantly moderate propyllitic granodiorite with a thickly mineralized dyke selvedge. Hosts a thick vein zone with the full sulphide suite and veins showing strong epithermal textures. Weakly gouged, especially near the dyke.
										GY											
312.74	334.37	21.63				mKgW	GRD	MG	MD	GY	XL										Unaltered granodiorite with occasional (1-2 per metre) white quartz-carbonate veinlets. Crosscut by two major quartz veins between 324-325m depth.

VN	29.63	29.64	60.00			Py	3.00	Vuggy white-brown oxide-stained quartz carbonated vein with disseminated pyrite, and evidence of sulphide removal.	
VT	34.82	35.64	80.00		5.00			Banded white-grey quartz-calcite veinlets with heavy brown oxide staining.	
VT	54.06	54.07	60.00					White massive-banded quartz veinlet with heavy oxide staining.	
VN	54.45	54.47	50.00			Py	10.00	Grey-white translucent banded quartz vein with blebby pyrite.	
VT	56.58	61.66	60.00		9.00			Nine milky-grey weakly banded quartz veinlets.	
VT	62.06	63.66	70.00		2.00	Py	6.00	Two banded white-grey quartz veinlets, hosting blebby-disseminated pyrite along white-grey quartz contacts.	
VT	65.69	66.31	75.00		8.00	Py	1.00	Eight white-grey massive quartz veinlets with varying degrees of clay alteration. Hosts weakly disseminated pyrite.	
VN	73.01	73.05	80.00			Py	15.00	4cm quartz vein. First 2cm is grey semitranslucent quartz with fine grained pyrite veinlets. Second 2cm is milky-white quartz vein.	
VN	75.43	75.45	60.00			Py	3.00	Banded off-white-milky semitranslucent quartz vein with disseminated pyrite along band interfaces.	
VN	80.11	80.13	75.00			Py	10.00	Milky-light pink banded-crustiform quartz vein, with disseminated fine-grained pyrite along the outer edges.	
VT	80.98	80.99	65.00			Py	6.00	Weakly banded white-grey quartz veinlet with red disseminated hematite and blebby pyrite.	
						He	4.00		
VT	85.87	86.52	60.00		9.00	Py	8.00	Nine white-grey banded-vuggy quartz veinlets hosting blebby-disseminated pyrite and possible-infrequent trace disseminated arsenopyrite.	
						As	1.00		
VN	86.81	87.33	80.00		3.00	Py	1.00	White vuggy-banded quartz veins with pink-red hematite staining and trace disseminated fine-grained pyrite.	
						He	12.00		
VN	88.00	88.03	70.00			Py	8.00	White-grey undulatory banded quartz vein with disseminated-blebby pyrite and a fine-grained pyrite stringers.	
VN	91.22	91.24	60.00			Py	10.00	Discontinuous-weakly banded milky-grey quartz vein hosting disseminated fine-grained pyrite stringers.	
VN	91.80	91.87	50.00			Py	20.00	7cm smoky quartz vein that brecciated an earlier cream chalcedony veinlet, and is crosscut-mixed with milky quartz veinlets and lenses. Smoky quartz hosts fine-grained disseminated pyrite and discontinuous pyrite stringers.	
VT	97.63	97.71	40.00		2.00	Py	6.00	Grey quartz veinlets with interstitial white-milky quartz, stained by red hematite and hosting disseminated-blebby fine-grained pyrite.	
						He	8.00		
VN	101.38	101.70	55.00			Py	25.00	Thick smoky quartz vein with crosscutting-blended relationships with several later cream-milky vuggy-crustiform quartz veinlets. Crosscut by discontinuous pyrite stringers. Smoky-grey quartz hosts disseminated-blebby pyrite and blebby sphalerite.	
						Sp	1.00		
VT	105.32	105.76	70.00		4.00			Four white-milky massive quartz veinlets.	
VN	105.87	106.00	50.00		2.00			Two weakly-moderately clay altered grey weakly banded quartz veins.	
VN	111.13	111.14	80.00					White massive quartz-calcite vein.	
VN	112.93	113.48	30.00		3.00	Py	10.00	Three thick (3-4cm) banded white-grey-smoky quartz veins with white vuggy quartz, grey-smoky quartz hosts disseminated pyrite. Vein envelopes are weakly-moderately clay altered.	
VT	117.04	117.59	60.00		6.00			Six white semitranslucent crustiform-massive quartz veinlets.	
VT	120.24	121.94	70.00		9.00			Nine white weakly banded quartz veinlets.	
VT	125.02	125.03	45.00			Py	2.00	White-grey semitranslucent quartz veinlets with disseminated pyrite.	
VN	129.65	129.66	70.00			Py	3.00	Banded white-smoky-yellow quartz vein with disseminated-blebby pyrite.	
VT	134.36	135.01	30.00		14.00			White calcite veinlets with red hematite staining, acting as points of weakness in the rock.	
VT	140.01	140.02	90.00			Py	4.00	White-smoky banded translucent quartz veinlet with disseminated pyrite.	
VN	142.15	142.17	80.00			Py	10.00	Grey-white semitranslucent banded quartz vein with disseminated pyrite along the colour contacts.	
VN	146.72	147.00	20.00			He	40.00	Thick, strongly clay altered and red hematite stained milky quartz vein.	
VN	147.15	147.23	70.00			Py	8.00	Thick, weakly banded-crustiform white-cream quartz vein with disseminated-blebby pyrite.	
VN	148.01	148.04	70.00			Py	5.00	Milky-smoky clay altered quartz vein with disseminated pyrite.	
VN	148.15	148.27	60.00			Py	6.00	Milky-smoky blended-mixed quartz vein with disseminated pyrite.	
VN	150.65	150.72	20.00			Py	2.00	Heavily red-purple hematite stained, fractured and clay altered quartz vein.	
						He	30.00		
VN	152.84	158.36	35.00		12.00	Py	20.00	Heavily red-purple hematite stained, fractured and clay altered quartz veins. Exact number of veins is difficult to determine due to heavy fracturing and gouge.	
						He	30.00

2° Structure Type	From (m)	To (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS		DESCRIPTION	Photo
						Type	Conc. (%)		
VN	158.62	158.75	60.00			Py	15.00	Alternating bands of smoky-white crustiform quartz with crosscutting netted carbonated veinlets and blebby-disseminated pyrite hosted in smoky quartz.	
VT	170.40	170.50	45.00		3.00	Py	20.00	Discontinuous white-smoky quartz veinlets with disseminated-blebby pyrite.	
VN	172.24	172.27	75.00			Py	15.00	White-smoky thinly banded quartz vein with 2cm mossy yellow-white massive quartz central vein. Pyrite stringers and disseminated-blebby pyrite hosted in smoky quartz and along vein borders in phyllic envelopes.	
VN	181.43	181.99	60.00		7.00			Weakly crustiform cream-pink-white chalcedony and carbonate veinlets.	
VN	182.54	182.72	30.00		2.00	Py	1.00	Two weakly banded-discontinuous white-cream-grey quartz veins with trace disseminated fine-grained pyrite.	
VN	183.11	183.40	50.00			Py	7.00	White-grey blended with weak banding and crustiform quartz. Isolated pyrite-rich smoky quartz lenses and discontinuous veinlets.	x
VT	189.26	189.27	30.00			Py	3.00	Semitranslucent white-cream quartz veinlet with disseminated pyrite.	
GO	190.87	191.36	70.00					Moderately gouged propyllitic granodiorite.	
VN	191.95	192.05	80.00			Py	8.00	White-cream-grey branching and weakly crustiform quartz vein, with a crosscutting smoky quartz veinlet hosting disseminated pyrite.	
VT	196.74	197.84	30.00		6.00	Py	10.00	Six white-cream discontinuous weakly banded quartz veinlets hosting fine-grained disseminated-blebby pyrite.	
VT	199.40	200.73	30.00		13.00			Several white, red-stained calcite veinlets (some veins) crosscutting granodiorite at angles between 20-50 degrees, averaging at 30 degrees TCA.	
VT	211.87	211.92	70.00		2.00	Py	1.00	Two weakly banded white-smoky semitranslucent quartz veinlets, hosting trace disseminated pyrite.	
GO	212.30	212.45	60.00					Moderately gouged granodiorite.	
VT	212.92	215.60	30.00		4.00	Py	8.00	Four white calcite veinlets at varying lower angles (0-45 degrees), with red hematite staining and disseminated fine-grained pyrite.	
						He	20.00		
VT	224.95	224.96	70.00					Milky banded quartz veinlet with white calcite at its centre.	
VN	231.34	231.37	90.00			Py	15.00	Poorly defined smoky quartz vein with parallel-shallowly crosscutting white quartz-carbonate veinlets. Smoky quartz hosts blebby-disseminated pyrite, blebby-disseminated arsenopyrite, and blebby honey brown sphalerite.	
						Sp	2.00		
						As	6.00		
VT	231.81	231.83	60.00			Py	10.00	Smoky-grey quartz veinlet with parallel-oriented fine-grained discontinuous pyrite stringers.	
VN	231.88	231.90	70.00					Massive-crackled semitranslucent grey quartz vein hosting angular clasts of white-milky quartz and granodiorite.	
VT	232.01	232.02	60.00			Py	15.00	Smoky-grey quartz veinlet with parallel-oriented fine-grained discontinuous pyrite stringers and disseminated pyrite in its phyllic envelopes.	
VT	232.05	232.06	75.00			Py	5.00	Cream-white chalcedony veinlet with discontinuous grey-white quartz veinlets on either side. Hosts disseminated pyrite in the grey-white quartz.	
VT	232.10	232.12	55.00			Py	8.00	Grey massive semitranslucent quartz veinlet with central discontinuous smoky quartz veinlets. Grey quartz hosts disseminated pyrite, smoky quartz hosts disseminated-blebby pyrite and arsenopyrite.	
						Sp	3.00		
						As	5.00		
VT	235.38	238.97	65.00		9.00	Py	1.00	Nine weakly banded white-grey quartz veinlets with dark green chlorite borders, hosting weakly disseminated pyrite.	
VN	240.25	240.27	90.00			Py	8.00	White-grey banded semitranslucent quartz vein with disseminated pyrite.	
FT	240.71	241.78	35.00					Long, moderately developed fault zone with many 30 degrees TCA fractures.	
VN	242.27	242.28	80.00			Py	2.00	1cm banded grey-smoky-cream quartz vein with disseminated pyrite.	
VT	244.84	245.50	75.00		5.00	Py	2.00	White-cream semitranslucent banded quartz veinlets with weakly disseminated pyrite.	
GO	245.31	245.32	80.00			Py	2.00	Strongly gouged-clay altered white-grey quartz vein hosting disseminated pyrite.	
VN	245.80	245.86	70.00					Cream weakly crustiform-massive quartz vein.	
VN	252.50	252.53	10.00			He	15.00	Mossy-massive olive green epidote vein with disseminated red hematite.	
VN	261.72	261.74	75.00			Py	6.00	Undulatory banded white-cream-grey quartz-calcite veins hosting disseminated pyrite in semitranslucent grey quartz.	
VT	264.23	264.24	70.00					White-cream crustiform chalcedony veinlet.	
FT	267.56	267.67	60.00					Moderately faulted propyllitic granodiorite with moderate red hematite staining on a slickenside.	
GO	268.78	268.08	40.00					Moderately gouged phyllic granodiorite with crosscutting white semitranslucent quartz vein.	
VT	268.41	268.43	30.00					Moderately clay altered white massive quartz vein.	
VT	270.26	270.27	45.00			Py	10.00	White massive-weakly banded quartz veinlet with disseminated-blebby pyrite.	
VN	270.47	270.51	75.00					Cream chalcedony vein with central massive white calcite vein.	
VT	271.05	271.89	65.00		6.00	Py	5.00	White massive-weakly crustiform quartz with disseminated-blebby pyrite.

VN	272.22	272.74	70.00		5.00	Py	10.00	Five weakly banded milky-cream-grey semitranslucent quartz veins with disseminated-blebby mossy pyrite. Shows weak vugs.	
VT	272.95	273.03	85.00		3.00	Py	10.00	Three grey quartz veinlets that bleed out into the host granodiorite. Hosts discontinuous pyrite stringers, disseminated pyrite, and disseminated-blebby sphalerite and arsenopyrite.	
						As	5.00		
						Sp	3.00		
VN	272.40	273.52	70.00			Py	15.00	Thick quartz vein made of alternating cream-grey-white-smoky quartz bands. Crosscut by fine-grained discontinuous pyrite stringers, and discontinuous honey brown sphalerite stringers. Hosts disseminated-blebby pyrite, blebby honey brown sphalerite, and blebby galena.	
						Sp	8.00		
						Gn	6.00		
VT	276.31	287.03	65.00		30.00			Thirty cream-white chalcedony veinlets with thick phyllic envelopes.	
VN	288.34	288.40	80.00					Milky-cream vuggy chalcedony-quartz vein.	
VN	288.50	288.61	85.00			Py	8.00	Thick quartz vein. 9cm massive-crustiform milky quartz-chalcedony veins, then 2cm banded grey-smoky quartz vein with discontinuous fine-grained pyrite and honey brown sphalerite stringers. Also hosts blebby-disseminated pyrite and finely matted small acicular crystals of arsenopyrite (possibly a sulphosalt).	
						Sp	12.00		
						As	5.00		
VT	291.34	291.45	60.00		4.00	Py	15.00	Four massive-weakly banded milky quartz veinlets with parallel discontinuous fine-grained dark pyrite stringers.	
VN	292.63	292.74	55.00			Py	6.00	Thick milky quartz vein showing complex netted-crustiform-colloform textures. Hosts 1mm subangular clasts of a brecciated grey translucent quartz veinlet. Uphole border is paralleled by a thin, discontinuous fine-grained dark bronze pyrite stringer.	x
GO	292.76	292.98	50.00		2.00			Two strongly gouged white-grey quartz veinlets.	
VT	294.44	294.46	20.00					Low angle faulted white massive calcite veinlet.	
FT	295.08	295.11	30.00					Moderately faulted white massive calcite veinlet in propyllitic granodiorite.	
VN	296.97	297.06	50.00			Py	20.00	Milky semitranslucent massive quartz vein with indistinct edges. Hosts disseminated-blebby pyrite throughout. Uphole border is netted by very thin cream carbonate veinlets, and significant blebby-disseminated pyrite is hosted in the crosscut phyllic granodiorite.	x
VT	297.12	297.18	40.00		2.00	Py	40.00	Two smoky-grey quartz veinlets with weak banding. Hosts discontinuous fine-grained dark grey-bronze pyrite stringers.	
VN	297.37	297.61	50.00			Py	30.00	Complex vein: first 10 cm is massive milky quartz hosting massive pyrite (approximately 70% of the first 10cm). Followed by 2cm of massive milky quartz hosting massive-felted acicular crystals of arsenopyrite, with interstitial blebs of honey brown sphalerite and blebby-massive galena along the downhole edge of the massive arsenopyrite vein. Then 7cm of milky-grey crustiform-vuggy-feathery quartz hosting a 2cm parallel vein of blebby-massive honey brown sphalerite and blebby-massive galena. Ends with 3cm of mixed milky-grey semitranslucent and weakly banded quartz hosting blebby-disseminated pyrite and dark bronze discontinuous pyrite stringers.	x

2° Structure Type	From (m)	To (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS		DESCRIPTION	Photo
						Type	Conc. (%)		
VN	298.06	298.43	65.00			Py	10.00	Thick dyke selvedge with complex relationship and heterolithic breccia. First 2-3cm is grey-white semitranslucent quartz finely netted-brecciated by milky quartz veinlets, hosting disseminated-blebby pyrite, blebby galena, blebby honey brown sphalerite, and disseminated pyrite. Next is 2-3cm of semi massive-crustiform milky quartz with weak vugs and 1-2mm interstitial translucent quartz. Next, 3-4cm of grey-white semitranslucent quartz finely netted-brecciated by thin milky quartz veinlets, hosting disseminated-blebby pyrite, disseminated-blebby honey brown sphalerite, disseminated-blebby galena, and blebby-disseminated arsenopyrite. Followed by 2-4cm of black siliceous breccia, where subangular 2mm clasts of adjacent units are hosted within. Black silica is consistently mineralized by fine-grained disseminated pyrite with occasional blebs of pyrite. Then, 4cm of cream-orange-grey blended-brecciated weakly oxide stained massive quartz. Hosts several large clasts of the preceding black breccia. 5-6cm orange oxide stained quartz brecciating a weakly banded grey quartz vein. Some clasts have been partially-fully replaced by pyrite and galena. Final 14cm is grey-smoky quartz that brecciated phyllic granodiorite. Grey-smoky quartz was then brecciated by a milky quartz vein, and then crosscut by brown-orange oxide stained massive quartz veinlets. Hosts disseminated-massive pyrite, blebby-massive galena, blebby-disseminated honey brown sphalerite, and disseminated-blebby arsenopyrite.	x

SUMMARY

From (m)	To (m)	Interval	Unit	Comments
0.00	8.32	8.32	OVB	Overburdern with dyke clast and gouge alteration.
8.32	11.08	2.76	FEL	Oxidized and gouge altered quartz feldspar dyke.
11.08	18.60	7.52	GRD	Oxidized and strongly phyllic altered granodiorite.
18.60	26.10	7.50	FEL	Oxidized quartz feldspar porphyry dyke.
26.10	31.40	5.30	GRD	Phyllic alteration with disseminated pyrite and gouge.
31.40	34.41	3.01	GRD	Propyllitc altered granodiorite.
34.41	145.05	110.64	GRD	Granodiorite with small phyllic envelopes around veir
145.05	147.05	2.00	GRD	Phyllic alteration hosting black breccia.
147.05	151.13	4.08	FEL	Quartz feldspar porphyry dyke.
151.13	152.74	1.61	GRD	Phyllic alteration hosting disseminated pyrite.
152.74	169.99	17.25	GRD	Grey granodiorite with multiple phyllic envelopes
169.99	171.77	1.78	GRD	Phyllic envelope around quartz/sulphide veins.
171.77	309.74	137.97	GRD	Granodiorite with patches of propyllitic and phyllic alt.
309.74	317.59	7.85	GRD	Multiple phyllic envelopes hosting quartz/sulpide vein
				and dissmeinated to blebby sulphides.
317.59	352.65	35.06	GRD	Granodiorite with patches of argillic and phyllic
EOH				alteration.

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Arsenopyrite	Type	Conc. (%)	Photo	
0.00	8.32	8.32					OVB			OR		4I									Brown and orange overburden with large clasts of brown quartz feldspar porphyry dyke. The majority of the interval is intensely gouge altered. Oxidation and gouge alteration obscures textures and rock type.
										BN											
8.32	11.08	2.76				LKqP	FEL			OR		4I									Appears to be an intensely oxidized and gouge altered quartz feldspar porphyry dyke.
										BN											
11.08	18.60	7.52				mKgW	GRD	MG		OR		4I		PHC	4I						Strongly oxidized, strongly phyllic altered granodiorite. Oxidation obscures the majority of the phyllic alteration. There are a few patches of un-oxidized strong phyllic altered granodiorite. Appears to have manganese staining along fractures.
									LT	GN	PA										
18.60	26.10	7.50				LKqP	FEL			GY		4I									Strongly oxidized grey and purple quartz feldspar porphyry dyke.
										PU											
26.10	31.40	5.30				mKgW	GRD	MG		BL		2I		PHC	4I	1.00					Moderately silicified, weakly oxidized and strongly phyllic altered granodiorite. Interval hosts multiple quartz sulphide vein zones and gouge zones along with disseminated pyrite.
										GY	PA		3I								
31.40	34.41	3.01				mKgW	GRD	MG	DK	GN				PRO	2-3I						Weak to moderately propyllitic altered granodiorite.
										GY											
34.41	352.65	318.24				mKgW	GRD	MG		GY											Grey granodiorite. Host small phyllic envelopes around carnonate veins and veinlets.
			60.60	61.35	0.75	mKgW	GRD	MG	DK	GN				PRO	3I						Moderately propyllitic altered granodiorite.
			65.14	65.54	0.40	mKgW	GRD	MG		WH	PA			ARG	3I						Alternating patches of moderate argillic and propyllitic alteration.
									DK	GN	PA			PRO	3I						
			65.54	65.70	0.16	mKgW	GRD	MG		GN				PHC	3I						Moderate to strongly phyllic altered granodiorite hosting disseminated pyrite,
										GY											
			69.45	69.81	0.36	mKgW	GRD	MG	LT	GN	EN			PHC	3I						Moderate phyllic envelope surrounding a quartz/carbonate vein hosting disseminated pyrite.
			71.93	72.66	0.73	mKgW	GRD	MG	LT	GN	EN			PHC	3I						Moderate phyllic envelope surrounding a quartz/carbonate vein hosting disseminated
			76.27	78.83	2.56	mKgW	GRD	MG	LT	GN				PHC	3I						Moderate phyllic altered granodiorite hosting multiple carbonate veins.
			83.87	84.17	0.30	mKgW	GRD	MG	LT	GN				PHC	3I						Moderate phyllic envelope surrounding a tan carbonate vein.
			91.56	92.34	0.78	mKgW	GRD	MG		WH				ARG	3I						Rubbly moderate argillic altered granodiorite that has been partially gouge altered.
			93.57	104.63	11.06	mKgW	GRD	MG	DK	GN				PRO	2-3I						Weak to moderately propyllitic altered granodiorite.
			105.80	106.59	0.79	mKgW	GRD	MG		WH				ARG	4I						Moderate argillic granodiorite with a weak to moderate potassic altered granodiorite.
										PK				POT	3I						
			109.27	109.54	0.27	mKgW	GRD	MG	DK	GN				PRO	4I						Strongly propyllitic altered granodiorite.
			119.00	120.90	1.90	mKgW	GRD	MG	LT	GN				PHC	3I						Moderate phyllic altered granodiorite hosting a few quartz sulphide veinlets.
			123.46	124.81	1.35	mKgW	GRD	MG	DK	GN				PRO	2I						Strongly propyllitic altered granodiorite.
			131.94	133.20	1.26	mKgW	GRD	MG		WH				ARG	3I						Moderately argillic altered granodiorite with a weak potassic overprint and patches of moderate propyllitic alteration.
										PK				POT	2I						
									DK	GN	PA			PRO	3I						
			133.20	133.44	0.24	mKgW	GRD	MG		GN	EN			PHC	4I						Strong phyllic envelope surrounding a white carbonate pyrite vein.

COMMENTS

Highly faulted and fragmented (poor recovery). EOH 131.98 m.

KLAZA

Hole: DDH-12-104 **Logger Name:** Nicole Marsh **Date:** Aug 2012

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Arsenopyrite	Type	Conc. (%)	Photo	
0.00	30.00						GRD		MD	OR		3.00									Oxidized, fractures and fragmented granodiorite with intervals of crumbly, extremely oxidized material. Limonite staining on almost all fractures, goethite staining on some fractures and lesser localized hematite staining. Limonite staining on some surfaces of core.
									MD	GY											
30.00	50.09						GRD		MD	GY		2.00									
										PK				POT	2.00						Pink-grey granodiorite with limonite staining on some fractures. Localized heavy goethite staining on fractures (+ dusty goethite). Trace argillic alteration and patches of friable rock. Localized intense oxidization (vibrant orange limonite staining throughout).
										PU				ARG	1.00						
			32.61	38.97			GRD		MD	OR		4.00									Highly fragmented, friable and limonite stained granodiorite. Intervals of clay altered gouge. Dusty, intense limonite on some fractures.
50.09	52.29						GRD		MD	OR		4.00	4.00	PHC	3.00						Phyllic altered and silicified granodiorite with intense patches of limonite staining (localized limonite pitting). Quartz-carbonate veining present (see secondary structures). Hematite and goethite staining on some fractures. Small patch of intense clay alteration. Blob of white-green-blue clay alteration at 51.10m.
									LT	GN											
52.29	69.68						GRD		MD	GY		2.00		PHC	1.00	<1					Grey-purple granodiorite with patchy limonite staining on surfaces, especially associated with phyllic alteration. Trace argillic alteration. Heavy goethite staining on localized fractures and limonite staining on majority of fractures (localized dusty coating). Patchy light green phyllic alteration. Veining within phyllic alteration. Colouration due to weak potassic alteration(?).
										PU				POT	2.00						
										PK											
69.98	78.72						GRD		MD	GY	PA	1.00		PRO	2.00						Grey granodiorite with green tint. Weakly propylitic altered granodiorite with patches of
										GN				PHC	2.00						
														ARG	1.00						
78.72	85.66						GRD		LT	GN				PHC	3.00			He	1.00		Weak to moderately phyllic altered granodiorite with abundant zones of fault gouge and friable rock. Altered granodiorite. Overall light mottled white-blue-green colours. Patchy potassic overprinting. Localized hematite staining and dusty coating.
									LT	BL				POT	1.00						
85.66	92.74						GRD		LT	WH											
									MD	GY	RU			ARG	3.00						Extremely fragmented and friable propylitic and argillic altered granodiorite. Soft feldspars and abundant chlorite (replacing horneblende). Localized hematite staining on fractures. Trace potassic alteration. >80% crumbly core.
										BL				PRO	3.00						
														POT	1.00						
92.74	93.27						GRD		LT	GN	EN			PHC	4.00	<1					Light green, strong phyllic alteration enveloping quartz-carbonate and grey vitreous quartz veins and 2mm fault zones. Disseminated pyrite present. Approximately 60% competent core, 40% weak core.
93.27	99.50						GRD		LT	GN	GO			PRO	2.00	<1					Highly fragmented granodiorite. Light blue-green and pink mottled colours. Minor potassic alteration. Extremely faulted, abundant clay altered fault gouge (more gouge than competent core). Trace disseminated pyrite. Patchy hematite staining on competent core. Moderate argillic altered with propylitic (weak to moderate) overprinting, and phyllic altered granodiorite with potassic overprinting (or he staining?).
									LT	BL	RU			PHC	2.00

GO	35.10	36.00							Limonite stained and clay altered gouge. Unknown angle.	
VN	51.20	51.25		70.00					1.4cm stringy white-quartz carbonate vein with silicified and phyllic alteration halo and limonite staining.	
VN	59.49	59.55		55.00					White carbonate vein at 55 degrees to-core-axis. Limonite staining and some limonite/goethite pitting. Vein within phyllic altered and silicified zone.	
VN	64.21	64.24		63.00			Py	<1	Banded smoky quartz, white-quartz carbonate vein hosting fine disseminated pyrite. Limonite pitted and heavy limonite staining. 1.7cm in width. Vibrant green phyllic alteration.	
VN	64.35	66.40		55.00					White quartz-carbonate vein with smoky quartz hosting fine disseminated pyrite. 1.9cm in width.	
VN	70.85	70.93		35.00					Grey (light-grey and dark-grey) fault gouge. Clay altered and minor sulphide gouge hosting small crystals if pyrite throughout. Blebby pyrite within footwall. 7cm in width.	
VT	70.55	70.58		65.00			Py	1.00	Quartz veinlet hosting blebby and disseminated pyrite.	
VN	72.26	72.30		85.00			Py	3.00	White-vitreous quartz, creamy + pink + yellow quartz-carbonate vein hosting disseminated and blebby pyrite, trace galena and oxidized sphalerite(?). 1.2cm in width with silicified alteration halo.	
							Gn	<1		
VT	73.55	73.67		55.00		2.00			2 white quartz-carbonate veinlets at 50 and 60 degrees to-core-axis. 7mm and 4mm in width.	
VN	78.03	78.06		85.00					Grey chalcedony, white quartz-carbonate and minor blue-grey vitreous quartz hosting blebby and disseminated pyrite. Stringy vein. 2.1cm in width.	
GO	78.82	79.38		70.00					Clay altered gouge with grey sulphide gouge (overall light green colour with some grey sulphide gouge) until 79.12, then white-pink less clay altered fault gouge until the end of the interval. 54cm total width.	
FT	80.34	84.80				11.00			Clay altered fault gouge zones. Very soft, white with pink and/or green tint. 2cm to 16cm in width. Carrying angles (45 to 80 degrees to-core-axis). Highly hematite stained clay gouge at 83.40m.	
VN	85.02	85.10		90.00		2.00			Blotchy, grey-vitreous quartz and pink ankerite vein and veinlet hosting disseminated pyrite. Vein and veinlet within developing fault zone. Minor clay alteration. 3.4cm vein at approximately 90 degrees to-core-axis.	
GO	92.75	92.85		55.00			Py	<1	Carbonate, smoky quartz and chlorite vein hosting disseminated pyrite + 1mm of clay altered gouge at lower contact. 1.5cm in width.	
VN	92.85	93.09		6.00			Py	<1	Netted/blotchy vein of quartz-carbonate and minor smoky quartz hosting disseminated pyrite. Sulphide gouge within cracks. Band is 6.5cm in width and orientated at 60 degrees to-core-axis.	
FT	94.10	108.81							Heavily fragmented and faulted, weakly to well developed fault gouge.	
FT	114.00	114.37							Heavily fragmented and faulted, weakly to well developed fault gouge.	
VT	117.12	117.18		45.00		1.00			Carbonate veinlet rimmed by vibrant green chlorite. 8mm in width. Orientated at 45 degrees to-core-axis.	
VT	121.55	121.59		70.00					White quartz-carbonate veinlet at 70 degrees to-core-axis. 8mm in width.	
VT	123.12	123.16		70.00					Quartz and carbonate vuggy quartz-carbonate veinlet within phyllic alteration (with hematite staining). 4mm in width.	
VT	126.82	129.00				15.00			White quartz-carbonate stringers and thin veinlets at various orientations (20-80 degrees to-core-axis).

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite		Type	Conc. (%)	Photo	
0.00	44.56	44.56				mKgW	GRD	MG	LT	GY	RB	4I									Heavily oxide stained/weathered granodiorite. No epithermal alteration. Fractured and rubbly until 25.50m. Pervasive oxide staining until 25.40m, and fracture-limited staining crosscut by rare quartz-carbonate veins that sometimes have narrow phyllic envelopes.
									MD	OR	FR										
			0.00	5.18	5.18	mKgW	GRD	MG	DK	BN	RB	5I									HQ drill through heavily oxidized granodiorite. Redrill-bit change material from 4.57-5.18m.
									MD	OR	FR										
			5.18	8.11	2.93	mKgW	GRD	MG	MD	GY	FR	3I									NQ drilling begins. Semi competent unaltered granodiorite with strongly oxidized fractures.
										OR											
			11.75	13.10	1.35	mKgW	GRD	MG	MD	GY	FR	3I									Semi competent unaltered granodiorite with strongly oxidized fractures.
										OR											
			17.75	19.50	1.75	mKgW	GRD	MG	MD	GY	FR	3I									Semi competent unaltered granodiorite with strongly oxidized fractures.
										OR											
			25.50	44.56	19.06	mKgW	GRD	MG	MD	GY	FR	2I									Semi competent unaltered granodiorite with strongly oxidized fractures.
										OR											
44.56	55.16	10.60				mKgW	GRD	MG	MD	GY	XL	1I		PRO	3I						Moderate-weak propyllitic granodiorite with patchy argillic and quartz-calcite veins with phyllic envelopes.
										GN				ARG	2I						
			44.56	46.78	2.22	mKgW	GRD	MG	LT	GY	XL			PHC	2I						Moderate argillic altered granodiorite crosscut by four quartz-calcite veins with phyllic envelopes.
										PK				ARG	3I						
55.16	65.50	10.34				mKgW	GRD	MG	LT	GY	XL			PHC	2I						Unaltered granodiorite with weak phyllic vein envelopes on crosscutting quartz veinlets.
65.50	84.58	19.08				mKgW	GRD	MG	MD	GY	XL			PRO	3I						Moderate-weak propyllitic granodiorite with patchy argillic alteration and phyllic envelopes on crosscutting quartz veinlets.
										GN	PA			ARG	2I						
			66.79	67.37	0.58	mKgW	GRD	MG	LT	GY	XL			ARG	2I						Moderate argillic granodiorite.
										PK											
			67.71	68.65	0.94	mKgW	GRD	MG	LT	GY	XL			ARG	3I						Moderate argillic granodiorite.
										PK											
84.58	89.73	5.15				mKgW	GRD	MG	MD	GY	XL			PRO	3I						Moderate propyllitic with phyllic-argillic vein envelopes on crosscutting veins.
										GN	PA										
89.73	131.84	42.11				mKgW	GRD	MG	MD	GY	XL			PRO	3I						Propyllitic granodiorite with patches of weak phyllic-argillic on crosscutting veinlets.
										GN	PA			ARG	2I						
														PHC	2I						
			103.32	106.21	2.89	mKgW	GRD	MG	LT	GY	XL			ARG	3I						Thick argillic envelopes due to crosscutting veinlets with phyllic patches.
										GN	PA			PHC	2I						
			107.04	109.44	2.40	mKgW	GRD	MG	MD	GY	XL			ARG	3I						Thick argillic envelopes due to crosscutting veinlets with phyllic patches, with several strongly crustiform quartz.
									LT	GN	PA			PHC	2I						
			110.60	112.34	1.74	mKgW	GRD	MG	MD	GN	XL			PRO	4I						Very strong propyllitic, nearly obliterating the original textures.

KLAZA

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS				Photo	DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite		Type	Conc. (%)		
			115.34	116.54	1.20	mKgW	GRD	MG	MD	GY	XL			ARG	3I						Thick argillic envelopes due to crosscutting veinlets with phyllic patches, with several strongly crustiform quartz.
									LT	PK				PHC	2I						
			125.23	126.38	1.15	mKgW	GRD	MG	LT	GY	XL			ARG	3I						Moderately argillic granodiorite.
										GN	PA										
			128.13	130.96	2.83	mKgW	GRD	MG	MD	GN	XL			PRO	5I						Very strong propyllitic granodiorite crosscut by calcite veinlets and weak-moderate gouge.
											GO										
131.84	149.38	17.54				mKgW	GRD	MG	MD	GN	XL			PRO	2I						Unaltered granodiorite with patchy weak propyllitic alteration. Crosscut by quartz veinlets with weak phyllic envelopes.
										GY	PA										
149.38	180.98	31.60				mKgW	GRD	MG	MD	GN	XL			PRO	3I						Moderate propyllitic granodiorite with patchy phyllic alteration due to overlapping envelopes on crosscutting quartz veins. One thick massive quartz vein (163.6-164.3m) is rubbly and contains pyrite. Granodiorite hosts a thick dyke selvedge where it is interfingered by porphyry dyke.
										GY	PA										
			155.82	157.39	1.57	mKgW	GRD	MG	MD	GN	XL			PHC	3I						Phyllic envelopes on closely-spaced quartz veins overlap to produce thick interval. Crosscut by cream-white-grey banded-crustiform quartz veinlets.
										GY											
			163.30	164.52	1.22	mKgW	GRD	MG	LT	GN	XL			PHC	4I	I					Phyllic granodiorite crosscut by a thick massive quartz vein with disseminated pyrite. Quartz vein is completely reduced to rubble, with strong clay alteration along a rich sulphide veinlet.
										GY	RB										
			168.84	171.60	2.76	mKgW	GRD	MG	LT	GN	XL			PHC	4I						Weakly clay altered phyllic granodiorite crosscut by closely spaced quartz veins.
										GY				CLY	2I						
			171.98	172.93	0.95	mKgW	GRD	MG	MD	GN	XL			ARG	3I						Moderate argillic alteration with patchy propyllitic granodiorite.
									LT	PK				PRO	2I						
			180.69	180.98	0.29	mKgW	GRD	MG	MD	GN	XL			PHC	4I	6.00		GN	2.00		Black breccia dyke selvedge with pyrite and galena mineralization and weak clay alteration.
									DK	BK				CLY	2I						
180.98	189.61	8.63				LKqP	FEL	FG	LT	BN	PO			SER	2I						Mottled brown-green quartz feldspar porphyry dyke with sericite altered quartz and feldspar phenocrysts. Crosscut by netted white quartz-carbonate veinlets. Crosscut by clay altered-gouged phyllic granodiorite where dyke possibly diverged, or cut through in two stages.
									MD	GN											
			182.56	183.90	1.34	mKgW	GRD	MG	MD	GN	XL			PHC	3I						Moderate phyllic and clay altered granodiorite with stronger clay alteration at dyke contacts.
										GY				CLY	3I						
189.61	197.21	7.60				mKgW	GRD	MG	MD	GN	XL			PRO	3I						Moderate propyllitic granodiorite with thick mineralized dyke selvedge with a phyllic and argillic alteration halo.
										GY	PA			ARG	2I						
														PHC	2I						
			189.61	190.98	1.37	mKgW	GRD	MG	MD	GN	XL			PHC	4I			PY	###		Thickly veined and mineralized dyke selvedge. Crosscut by varying white-grey-smoky quartz veins with pyrite and galena.
									DK	BK								GN	3.00		
			190.98	191.51	0.53	mKgW	GRD	MG	LT	PK	XL			ARG	4I						Strongly argillic granodiorite.

						GO	15.00		
VN	28.19	28.21	60.00			PY	8.00	White-grey semitranslucent banded quartz vein with blebby-disseminated pyrite along the band contacts.	
VN	39.22	39.23	70.00					White-orange oxide weathered quartz vein.	
VT	40.91	40.92	90.00			PY	10.00	Milky-off-white weakly crustiform quartz veinlet hosting disseminated pyrite at its edges.	
VN	45.98	46.02	30.00					Translucent grey quartz vein with subangular 5mm clasts of phyllic granodiorite.	
VN	46.22	46.30	50.00					White massive calcite vein.	
VN	47.09	47.12	60.00		2.00			Two crosscutting cream-white chalcedony veins.	
VN	47.29	47.30	75.00					White-yellow crustiform chalcedony vein with central vugs filled by white calcite.	
VT	50.04	53.12	70.00		6.00	PY	3.00	White-grey semitranslucent banded quartz veinlets with dark green chlorite envelopes hosting disseminated pyrite.	
VN	54.72	54.81	60.00			PY	6.00	Thick grey-smoky banded quartz vein crosscut by cream chalcedony veinlets, and paralleled by a 3cm calcite vein with well developed rhombic crystals on its downhole border. Grey-smoky quartz hosts disseminated pyrite.	
VT	56.53	56.54	80.00			PY	20.00	<1mm thick smoky-milky quartz veinlet with blebby-disseminated pyrite.	
VT	57.72	59.51	30.00		2.00	PY	15.00	Two 2mm thick smoky-milky quartz veinlet with blebby-disseminated pyrite.	
VN	60.77	60.80	70.00			PY	8.00	White-yellow-cream crustiform-massive quartz vein with interstitial white calcite. Hosts bright red discontinuous hematite stringer on its uphole border and blebby-disseminated pyrite.	
						HE	5.00		
VT	61.70	64.41	60.00		7.00	PY	3.00	Seven discontinuous milky-smoky quartz veinlets hosting disseminated pyrite with dark green chlorite envelopes.	
VT	65.73	65.75	45.00			PY	6.00	White coarse grained quartz-calcite veinlet hosting blebby pyrite with dark green chlorite envelope.	
VT	79.72	81.57	60.00		2.00	PY	3.00	White banded quartz-calcite veinlet with trace disseminated pyrite.	
VN	84.86	84.90	30.00			PY	10.00	Milky crustiform quartz vein with parallel grey quartz veinlets on its downhole border. Red hematite staining in grey quartz hosting disseminated-blebby pyrite.	
						HE	10.00		
VT	87.64	88.03	70.00		3.00			Grey massive-vuggy cryptocrystalline quartz veinlets.	
VT	92.29	92.30	45.00			PY	6.00	White massive semitranslucent quartz veinlet with disseminated-blebby pyrite and red hematite staining.	
						HE	6.00		
VT	94.74	94.75	85.00			PY	3.00	White weakly banded quartz veinlet with disseminated pyrite in its phyllic envelope.	
VN	94.92	94.94	30.00			HE	5.00	Grey massive-crustiform translucent quartz vein with weak pink-red hematite staining along the borders.	
VN	95.12	95.16	85.00			PY	3.00	Grey-white semitranslucent banded quartz vein with weak pink-red hematite staining along the borders.	
VT	98.90	98.98	60.00		3.00	PY	1.00	Three white-milky weakly banded quartz veinlets with weakly disseminated pyrite.	
VT	100.69	101.17	75.00		2.00	PY	1.00	Two white-milky weakly banded quartz veinlets with weakly disseminated pyrite.	
VT	103.49	104.27	80.00		3.00			Grey semitranslucent banded quartz veinlets.	
VT	107.30	107.34	75.00		5.00			Two grey translucent quartz veinlets (40 degrees) are crosscut by 3 (90 degrees) cream chalcedony veinlets.	
VT	107.80	109.02	90.00		7.00			Seven crustiform cream-white chalcedony veinlets with vugs.	
VT	108.25	108.29	80.00		3.00			White vuggy-crustiform chalcedony veinlets.	
VN	108.38	108.46	70.00					Vein consisting of three crackled crustiform chalcedony veinlets that have been weakly brecciated by a translucent quartz vein.	
VN	108.48	108.00	65.00		2.00			Vuggy-massive grey semitranslucent quartz veins, each 1.5cm wide.	
VT	109.00	109.02	80.00					Cream vuggy-crustiform chalcedony veinlet.

2° Structure Type	From (m)	To (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS		DESCRIPTION	Photo
						Type	Conc. (%)		
VN	109.13	109.18	80.00					Phyllic netted by milky crustiform-vuggy chalcedony veinlets.	
VT	111.67	111.70	45.00			HE	5.00	Milky crustiform quartz veinlet with weak red hematite staining.	
GO	111.73	111.77	60.00					Moderately gouged white-grey quartz vein.	
VN	111.87	111.91	45.00			HE	20.00	Grey translucent quartz vein with weak purple-red hematite staining.	
VT	115.47	115.48	80.00			PY	60.00	White massive quartz vein with 3mm blebby pyrite along its central axis.	
VN	115.57	115.60	80.00			PY	8.00	Grey-milky quartz vein brecciating phyllic granodiorite, hosting subrounded phyllic granodiorite clasts and disseminated-blebby pyrite.	
VT	115.70	115.81	70.00		7.00	PY	6.00	Seven closely spaced milky-smoky quartz veinlets with disseminated pyrite and possible trace arsenopyrite.	
						AS	1.00		
VN	115.90	115.93	80.00					Grey translucent quartz vein brecciated by crosscutting white-cream chalcedony veinlets, with central vugs filled by white translucent quartz.	
VN	116.42	116.44	60.00			PY	8.00	White weakly banded quartz vein with interstitial grey translucent quartz and a smoky quartz veinlet on its uphole border. Darker quartz hosts blebby-disseminated pyrite.	
VN	119.78	119.80	70.00			PY	3.00	White-grey banded quartz vein hosting disseminated pyrite, and weakly clay altered.	
VT	122.84	122.85	30.00			PY	3.00	White-grey banded quartz vein hosting disseminated pyrite, and weakly clay altered.	
FT	123.84	123.85	60.00					Moderately developed fault zone.	
VN	123.94	124.00	50.00			HE	20.00	Moderate clay altered white-grey banded quartz vein with red hematite staining.	
GO	128.72	128.88	30.00			PY	1.00	Moderately developed gouged quartz vein with disseminated pyrite.	
GO	129.74	130.08	20.00					Strong-moderately developed gouge zone.	
DY	130.96	131.18	55.00			PY	1.00	Fine-grained mafic porphyry dyke with weakly disseminated pyrite.	
VT	133.80	133.81	50.00					White crustiform quartz-chalcedony veinlet.	
VT	137.52	137.76	40.00			HE	15.00	Weakly developed fault zone with red hematite staining on fractures.	
VN	138.65	138.70	40.00			PY	5.00	Netted-banded white-grey quartz vein with disseminated pyrite.	
VT	143.70	145.82	60.00		5.00	PY	2.00	Five discontinuous white-grey translucent quartz veinlets with thick propyllitic-phyllic envelopes and weak red hematite staining and disseminated pyrite.	
						HE	3.00		
VT	146.59	150.28	70.00		6.00	PY	5.00	White massive quartz veinlet with disseminated pyrite.	
VN	149.50	149.63	40.00		2.00	PY	3.00	Two discontinuous grey translucent quartz veins with intense red-purple hematite staining and weak clay alteration.	
						HE	25.00		
VN	154.30	154.37	70.00		3.00			White-cream crustiform quartz-chalcedony veins.	
VT	156.00	157.37	75.00		19.00	PY	3.00	Nineteen white-grey-cream quartz veinlets with banded-crustiform textures and interstitial white calcite. Hosts disseminated pyrite.	
VN	163.51	164.32	30.00			PY	8.00	Thick massive white quartz vein that has been broken to rubble, and hosts blebby-disseminated pyrite. Ends with 2cm thick border of clay altered dark grey sulphide-rich vein hosting disseminated pyrite.	
VN	164.92	164.99	90.00		2.00	PY	6.00	Two white-grey semitranslucent quartz veins hosting disseminated pyrite.	
FT	166.20	166.32	70.00					Moderately developed fault zone.	
VT	166.50	166.56	25.00		2.00	PY	10.00	Two white weakly banded quartz veinlets hosting disseminated pyrite.	
FT	166.73	168.55	60.00		3.00			Moderately developed fault zone in propyllitic granodiorite.	
VN	169.06	169.14	30.00			PY	1.00	Thick, white-grey banded-vuggy quartz vein hosting trace disseminated pyrite and blebby ankerite.	
						AK	10.00		
VT	169.57	169.58	20.00			PY	6.00	Low angle grey-white banded quartz veinlet hosting disseminated-blebby pyrite	
VT	169.66	170.10	80.00		9.00	PY	6.00	Cram-grey banded quartz veinlets hosting disseminated pyrite.	
VN	170.21	170.59	50.00			PY	10.00	Thick, rubbly grey-white-cream-smoky banded quartz vein. White-cream quartz is vuggy, and smoky quartz hosts blebby pyrite.	
VN	170.62	170.79	45.00			PY	3.00	Grey-white vuggy-banded moderately clay altered quartz vein with disseminated pyrite.	
VN	171.19	171.79	60.00			PY	1.00	Grey quartz vein brecciating phyllic granodiorite. Hosts 3mm angular clasts with disseminated pyrite.	
VN	171.62	171.64	80.00			PY	30.00	White massive quartz vein with interstitial pink calcite and hosts massive pyrite.	

KLAZA

2° Structure Type	From (m)	To (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS		DESCRIPTION	Photo
						Type	Conc. (%)		
VN	173.92	173.94	90.00					Vuggy-crustiform quartz-chalcedony vein with white-cream outer layers and yellow innermost layer.	
VT	174.55	174.71	90.00		2.00	PY	10.00	Two cream-grey-white semitranslucent banded quartz veinlets hosting disseminated pyrite.	
VT	175.15	175.17	25.00			HE	10.00	Green-grey quartz vein with red hematite staining.	
VN	176.90	176.97	90.00			PY	8.00	Complex quartz vein, mostly grey quartz with smoky quartz lenses, crosscut by cream-yellow banded-crustiform chalcedony veinlets. Chalcedony veinlets have interstitial white calcite. Hosts blebby pyrite.	
VT	179.86	180.19	80.00		6.00	PY	20.00	Six grey-smoky semitranslucent quartz veinlets with discontinuous central pyrite veinlets.	
VN	180.68	180.94	80.00			PY	20.00	Black breccia dyke selvedge. Black quartz hosts blebby-massive pyrite, discontinuous galena veinlets, blebby chalcopyrite, and blebby arsenopyrite. Also hosts 1-4mm angular granodiorite clasts and is moderately gouged near the dyke contact.	
						CP	5.00		
						AS	5.00		
						GN	10.00		
VT	180.95	182.55	45.00		9.00	PY	1.00	Weakly gouged grey quartz veinlets crosscutting quartz feldspar porphyry dyke. Trace pyrite.	
BX	182.55	182.59	30.00			PY	5.00	White quartz vein brecciating a thick chlorite vein. Chlorite clasts are 1cm (on average), and show weak orange oxidation stains. Quartz is vuggy-comb texture. Downhole border is paralleled by discontinuous fine-grained pyrite veinlets.	
GO	183.34	184.89	90.00			PY	3.00	Thick gouged quartz veins (white-smoky-grey banded) at the dyke selvedge.	
VN	189.61	190.98	75.00			PY	30.00	Thick complexly interacting quartz veins at the dyke selvedge. Generally: milky semitranslucent quartz crosscut by netted calcite veinlets at varying angles and thick discontinuous massive pyrite veins up to 10cm thick. White quartz is often crackled, with either calcite or fine-grained pyrite filling the cracks. Pyrite blebs often occur where there are intersecting cracks. Arsenopyrite and chalcopyrite are found as blebs in masses of pyrite throughout the selvedge. Selvedge is crosscut by a particularly galena-rich smoky quartz vein between 190.12-190.17m. Galena is massive-blebby, and has 1-2mm hexagonal crystals of honey brown sphalerite along its edges. Selvedge gets weakly-moderately gouged from 190.75-190.97m	x
						GN	10.00		
						AS	8.00		
						CP	3.00		
						SP	2.00		
VT	192.95	193.05	85.00		3.00	PY	10.00	Grey-white-smoky banded quartz veinlets with lenses of crustiform-vuggy white quartz with central vugs filled by white calcite. Grey-smoky quartz hosts disseminated-blebby pyrite.	
VN	193.30	193.33	80.00			PY	10.00	Grey-white semitranslucent banded quartz vein with blebby-disseminated pyrite preferentially oriented to the bands.	
VT	195.71	195.89	70.00		2.00	PY	10.00	Two veinlets of white semitranslucent massive quartz hosting blebby pyrite.	
VT	196.05	197.21	85.00		4.00	PY	15.00	4mm veinlet of white translucent quartz with dark green chlorite borders, hosting blebby pyrite.	
VT	200.69	200.70	90.00					White banded-crustiform chalcedony veinlet.	
VT	204.52	204.89	80.00			PY	1.00	Milky weakly banded and clay altered quartz veinlet with trace disseminated pyrite.	
DY	204.57	205.13	90.00		3.00			Pink fine-grained aplite dykes, 2-3cm thick.	
FT	217.88	220.75	30.00					Thick fault zone in phyllic granodiorite with patches of gouge. Crosscut by quartz veinlets.	
VT	217.88	220.75	60.00		11.00	PY	2.00	White-grey quartz veinlets hosting weakly disseminated pyrite, crosscutting a fault zone.	
VN	218.71	218.77	80.00			PY	2.00	Grey-green massive-crackled quartz vein hosting weakly disseminated pyrite, crosscut by cracks with calcite infill.	
GO	219.42	220.51	30.00			PY	3.00	Moderate gouged phyllic granodiorite hosting clayey remnants of grey-white quartz veins with disseminated-blebby pyrite.	
VN	221.66	222.58	25.00		3.00	PY	15.00	Three dark grey clay gouged quartz veins hosting significant disseminated pyrite.	
GO	221.66	223.01	30.00			PY	1.00	Moderate-strong gouged phyllic granodiorite with three crosscutting mineralized quartz veins (see previous entry). Hosts disseminated pyrite.	
VN	223.63	223.72	30.00			PY	15.00	Thick white-grey massive opaque quartz vein hosting disseminated-massive pyrite in its phyllic envelope.	
VT	228.52	228.53	70.00			PY	6.00	Grey-white banded opaque quartz veinlet hosting disseminated-blebby pyrite on band contacts.	
VT	230.68	230.76	40.00		2.00	PY	1.00	Two 1cm thick grey massive quartz veins hosting trace disseminated pyrite.

SUMMARY

From (m)	To (m)	Interval	Unit	Comments
0.00	62.91	62.91	GRD	Unaltered granodiorite with pervasive oxide staining, with patchy potassice and propyllitic alteration. Crosscutting quartz veinlets have phyllic-argillic envelopes.
62.91	68.27	5.36	GRD	Phyllic altered granodiorite with patchy argillic alteration.
68.27	80.07	11.80	GRD	Unaltered granodiorite with phyllic-argillic vein envelopes on crosscutting quartz veins.
80.07	91.21	11.14	GRD	Patchy phyllic-argillic granodiorite with many crosscutting quartz veins.
91.21	92.14	0.93	FEL	Tan-red quartz feldspar porphyry dyke.
92.14	230.52	138.38	GRD	Thick moderate-weak propyllitic granodiorite with weak potassic, giving mottled pink-green colouration. Many patches of phyllic and argillic alteration on crosscutting veins.
230.52	241.13	10.61	FEL	Maroon quartz feldspar porphyry dyke with crosscutting calcite veinlets.
241.13	258.47	17.34	GRD	Weak-moderate propyllitic with patchy argillic alteration, crosscut by occasional quartz veinlets.

Hole: DDH-KL-12-107 **Logger Name:** Teresa Cruz **Date: August 14, 2012**

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite		Type	Conc. (%)	Photo	
0.00	62.91	62.91				mKgW	GRD	MG	MD	GY	XL	3I	2I	ARG	2I						top of hole consists of unaltered granodiorite with pervasive oxidation to 53.5m depth, and fracture limited staining continues. Patchy weak potassic alteration and very weak propyllitic alterations are found, as well as phyllic grading into argillic in vein envelopes. Granodiorite is crosscut by quartz-carbonate veinlets. Oxidation is strongest on argillic alteration.
										BN	PA			PHC	1I						
														PRO	1I						
														POT	2I						
			36.25	41.08	4.83	mKgW	GRD	MG	MD	OR	XL	3I		ARG	3I			HE	5.00		Argillic granodiorite, heavily-moderately orange oxide stained, and red-stained by hematite at the end of the interval.
										RD				HEM	2I						
			44.81	45.77	0.96	mKgW	GRD	MG	MD	OR	XL	3I		ARG	3I						Moderate orange oxide-stained argillic granodiorite.
											RB										
			47.00	47.85	0.85	mKgW	GRD	MG	MD	OR	XL	2I		PHC	2I						Argillic granodiorite crosscut by quartz veinlets with phyllic envelopes and heavy oxide staining.
										GN	PA			ARG	3I						
			53.05	57.65	4.60	mKgW	GRD	MG	MD	PK	XL	2I		ARG	3I						Argillic granodiorite crosscut by quartz veinlets with phyllic envelopes and heavy oxide staining.
										GN				PHC	2I						
62.91	68.27	5.36				mKgW	GRD	MG	MD	OR	XL	2I		PHC	3I						Dominantly phyllic overlapping vein envelopes, with patchy argillic. Oxidation staining is strong in argillic intervals. Two extremely friable fault crumbled segments. Hosts several mineralized quartz veins.
									LT	GN	FT			ARG	2I						
68.27	80.07	11.80				mKgW	GRD	MG	MD	GY	XL			ARG	1I						Unaltered granodiorite with argillic-phyllic quartz vein envelopes on crosscutting white quartz veinlets.
80.07	91.21	11.14				mKgW	GRD	MG	MD	GN	XL			PHC	3I						Patchy phyllic-argillic granodiorite where phyllic is found in vein envelopes and argillic on the outer envelopes. Crosscut by frequent mineralized quartz veins/veinlets.
									LT	PK	PA			ARG	2I						
			81.21	81.64	0.43	mKgW	GRD	MG	MD	GN	XL			ARG	3I						Moderately argillic granodiorite.
									LT	WH	PA										
			84.30	85.82	1.52	mKgW	GRD	MG	MD	WH	XL			ARG	3I						Moderately argillic granodiorite.
									LT	PK	PA										
			85.82	86.92	1.10	mKgW	GRD	MG	MD	GN	XL			PRO	3I						Moderately propyllitic granodiorite.
									LT	GY	PA										
			86.92	87.30	0.38	mKgW	GRD	MG	MD	WH	XL			ARG	3I						Moderately argillic granodiorite.
									LT	PK	PA										
			87.30	87.79	0.49	mKgW	GRD	MG	MD	GN	XL			PRO	2I						Weak propyllitic granodiorite.
										GY											
			87.79	89.03	1.24	mKgW	GRD	MG	MD	GN	XL			ARG	3I						Moderately argillic granodiorite.
										WH											
			89.03	91.21	2.18	mKgW	GRD	MG	MD	GN	XL			PRO	2I						Weak propyllitic granodiorite.
										GY											
91.21	92.14	0.93				LKqP	FEL	FG	LT	TN	PO			SER	2I						Tan-red quartz feldspar porphyry dyke with strained quartz and feldspar phenocrysts with moderate sericite alteration.

KLAZA

Hole: DDH-KL-12-107 Logger Name: Teresa Cruz Date: August 14, 2012

Depth (m)		DESCRIPTION
91.21		Sharp 90 degree contact between Hanging Wall (HW) propyllitic granodiorite and Foot Wall (FW) quartz feldspar porphyry dyke. No mineralized selvedge.
92.14		Sharp 80 degree contact between HW quartz feldspar porphyry dyke and FW propyllitic granodiorite. No mineralized dyke selvedge.
230.52		Clay gouged 80 degree sharp contact between HW phyllic granodiorite and FW quartz feldspar porphyry dyke, with 3cm chill margin in the FW.
241.13		Sharp 30 degree contact between HW quartz feldspar porphyry dyke and FW propyllitic granodiorite.

VT	14.71	14.72	30.00			PY	1.00	Weakly banded milky quartz veinlet with trace pyrite.	
GO	15.13	15.30	75.00					Orange-stained weakly gouged granodiorite.	
VN	15.68	15.75	65.00			PY	3.00	Heavily orange-stained banded grey-milky quartz vein with disseminated fine-grained pyrite.	
VT	17.43	17.45	60.00			PY	8.00	White-grey semitranslucent banded quartz veinlet with disseminated-blebby pyrite.	
FT	26.13	27.27	90.00		2.00			Two 4-5cm thick friable faults.	
VN	26.55	26.69	80.00		3.00	GO	15.00	Heavily oxide-stained veins of white-grey vuggy and clay altered quartz.	
FT	31.60	32.39	30.00			LI	20.00	Rubbly and oxide-stained fault zone.	
VT	34.32	35.98	50.00		2.00			two white massive-weakly banded calcite veinlets with strong oxide staining at their edges.	
FT	36.21	37.69	40.00			LI	10.00	Moderately faulted strongly oxide-stained granodiorite.	
VN	36.83	36.85	45.00			PY	8.00	First 3mm of vein is white massive calcite, last 7mm is white-grey crystalline quartz. Bordered by fine-grained disseminated pyrite, and blebby pyrite is found in the quartz portion.	
VN	39.19	39.23	35.00					Vein width varies between 1-7cm. White-pink massive quartz-calcite vein that brecciated the orange-red oxide-stained granodiorite.	
VN	40.22	40.95	20.00		6.00			Six low angle quartz veins that are pervasively red-orange stained by oxidation.	
VT	41.40	41.41	60.00			PY	10.00	White banded quartz carbonate veinlet with discontinuous galena stringers and blebby pyrite.	
						GN	20.00		
VN	42.49	42.50	80.00			PY	10.00	Very thinly banded smoky-grey quartz vein hosting disseminated-blebby pyrite, galena, and chalcopyrite. Central white calcite veinlet.	
						GN	20.00		
						CP	5.00		
VT	42.54	42.63	50.00		3.00	PY	10.00	Three white-smoky discontinuous weakly banded quartz veinlets. Smoky quartz hosts disseminated pyrite.	
VT	43.04	43.05	70.00			HE	10.00	White-grey massive calcite veinlet with blebby red hematite.	
VT	43.58	43.59	70.00			PY	30.00	Grey translucent quartz veinlet, that is tinted blue in some places due to interstitial blebby-disseminated galena crystals. Hosts disseminated-blebby pyrite and discontinuous pyrite stringers.	
						GN	20.00		
VT	47.10	47.45	65.00		2.00	PY	4.00	Two white massive quartz veinlets with disseminated pyrite and hematite at the veinlet border.	
						HE	8.00		
VT	49.63	49.65	70.00					Orange stained crystalline quartz veinlet.	
VT	52.23	52.24	50.00			PY	10.00	White-grey banded quartz veinlet with disseminated fine grained pyrite in the grey quartz and the 3cm phyllic envelope.	
VN	53.12	53.14	90.00			PY	8.00	Grey massive opaque quartz vein with disseminated pyrite and blebby honey brown sphalerite.	
						SP	5.00		
VT	54.34	54.35	90.00			PY	20.00	Translucent dark grey banded quartz veinlet with central discontinuous chalcopyrite veinlet and disseminated-blebby pyrite throughout.	
						CP	20.00		
VN	54.42	54.50	70.00			TO	5.00	Poorly defined grey quartz vein with carbonate-filled cracks and blebby schorl tourmaline.	
VT	55.92	55.93	60.00			PY	10.00	Banded grey-white quartz veinlet with blebby-disseminated pyrite.	
VN	56.99	57.01	75.00			PY	15.00	Banded grey-white quartz veinlet with white calcite lenses and hosts disseminated-blebby pyrite.	
VT	58.11	59.70	60.00		3.00	PY	6.00	White-grey banded quartz veinlets with disseminated pyrite.	
VN	63.05	63.07	50.00			PY	3.00	Smoky quartz vein with two thick white-orange crustiform quartz veinlets inside. Hosts disseminated pyrite.	
FT	64.36	65.07	90.00					Friable faulted zone.	
VT	65.83	66.04	80.00		7.00	PY	6.00	Closely spaced and crosscutting quartz veinlets, dominantly grey-white quartz with disseminated pyrite.	
VT	66.41	66.61	70.00		6.00	PY	8.00	Closely spaced and crosscutting quartz veinlets. Dominantly white-grey-smoky quartz hosting disseminated pyrite and galena.

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite		Type	Conc. (%)	Photo	
0.00	52.56	52.56				mKgW	GRD	MG	MD	GY	XL	3I	2I	PHC	2I			LI	8.00		Unaltered granodiorite with phyllic vein envelopes on crosscutting quartz veins that grade out into argillic. Patchy silica flooding. Interval is host to several faults, with significant rubble and gouge sections. Crosscut by occasional carbonate veinlets.
									LT	OR	RB			ARG	2I						
			0.00	5.70	5.70	mKgW	GRD	MG	MD	GY	XL	4I						LI	8.00		Very rubbly and oxidized granodiorite. Strong limonite presence on fracture faces.
									LT	OR	RB										
			7.06	8.67	1.61	mKgW	GRD	MG	MD	BN	XL	3I	4I					LI	6.00		Strongly silica flooded granodiorite, turned orange-brown by oxide staining.
									LT	OR	FL										
			14.07	16.08	2.01	mKgW	GRD	MG	MD	GN	FR	4I		ARG	3I			LI	8.00		Moderate argillic granodiorite with strong oxide staining and weak clay alteration, crosscut by unmineralized quartz veinlets.
									LT	OR				CLY	2I						
			18.13	22.48	4.35	mKgW	GRD	MG	MD	GY	GO	3I	3I	ARG	2I						Dominantly argillic granodiorite with silica flooding from crosscutting quartz veinlets and moderate oxidation. Interval is fractured, with a short interval of gouge. Silica flooded section is heavily oxide stained to a homogeneous brown.
									LT	OR	FR										
			23.40	26.40	3.00	mKgW	GRD	MG	LT	GN	FR	3I		PHC	2I			LI	8.00		Weakly phyllic granodiorite that grades outward into argillic with increasing distance from the vein. Crosscut by quartz veinlets and a pink aplite dyke.
														ARG	1I						
			30.49	31.34	0.85	mKgW	GRD	MG	LT	GN	XL	2I		PHC	2I			LI	5.00		Weak phyllic granodiorite with weak argillic at each end of the interval. Two 10-15cm fault zones that are rubbly. Moderate orange oxide staining on fracture faces. Crosscut by white quartz veins.
										BN											
			35.69	36.23	0.54	mKgW	GRD	MG	LT	GN		2I		PHC	2I			LI	5.00		Weak phyllic granodiorite with weak argillic at each end of the interval. Two 10-15cm fault zones that are rubbly. Moderate orange oxide staining on fracture faces. Crosscut by white quartz veins.
										OR											
			38.05	40.67	2.62	mKgW	GRD	MG	LT	GN	FR	3I		PHC	2I			LI	8.00		Weak phyllic granodiorite weak argillic at the ends of the interval. Two 10-15cm fault zones that are rubbly. Moderate orange oxide staining on fracture faces. Crosscut by white quartz veins.
										OR				ARG	2I						
52.26	81.95	29.69				mKgW	GRD	MG	MD	GN	PA			ARG	3I						Moderate-weak argillic with patchy propyllitic and phyllic vein envelopes. Rubble due to faulting and drilling. Crosscut by quartz-carbonate veinlets.
										PK	RB			PHC	2I						
														PRO	2I						
			52.26	56.53	4.27	mKgW	GRD	MG	MD	GN	PA			ARG	3I						Alternating patches of phyllic and argillic with increasing distance from the quartz veins.
									LT	PK				PHC	2I						
			56.53	59.12	2.59	mKgW	GRD	MG	MD	GN				PRO	1I						Weak propyllitic overprinting by weak potassic granodiorite, crosscut by white quartz-calcite veinlets and stringers.
										PK				POT	1I

			59.12	60.88	1.76	mKgW	GRD	MG	MD	GN				PHC	3I						Phyllic vein envelope, grading into argillic with distance from the crosscutting quartz veins.
									LT	PK				ARG	2I						
			60.88	62.79	1.91	mKgW	GRD	MG	MD	GN	XL			PRO	2I			TO	3.00		Weak propyllitic granodiorite with crosscutting quartz-carbonate stringers. Rubbly.
										GY											
			62.79	63.88	1.09	mKgW	GRD	MG	LT	GN	XL			ARG	3I						Moderate-weak argillic granodiorite with narrow weak phyllic vein envelopes on crosscutting quartz veins.
										PK				PHC	2I						
			63.88	66.10	2.22	mKgW	GRD	MG	MD	GN	XL			PRO	2I						Weak propyllitic granodiorite with crosscutting quartz-carbonate stringers. Rubbly.
										PK	RB										
			66.10	71.39	5.29	mKgW	GRD	MG	MD	GN	XL			PRO	3I						Moderate propyllitic overprinted by moderate argillic, resulting in a green-pink mottled colour. Crosscut by quartz veinlets.
										PK	PA			ARG	3I						
			71.39	73.71	2.32	mKgW	GRD	MG	MD	GN	XL			ARG	3I	1.00					Moderate argillic with phyllic vein envelopes on many crosscutting veins and veinlets.
									LT	GY	RB			PHC	3I						
			73.71	81.95	8.24	mKgW	GRD	MG	MD	GN	XL			ARG	3I	1.00		GN	1.00		Thick vein zone of argillic granodiorite with phyllic envelopes on many crosscutting mineralized quartz veins and veinlets. Short gouged and clay altered zone (73.76-75.43m). Several veins are thick and rich in sulphides.
										GY				PHC	3I						
														CLY	2I						
81.95	107.37	25.42				mKgW	GRD	MG	MD	GY	XL			PHC	1I						Unaltered granodiorite with rare quartz veinlets with weak phyllic envelopes.
											RB										
107.37	111.75	4.38				LKqP	FEL	FG	MD	BN	PO			SER	1I						Fine grained quartz feldspar porphyry dyke with quartz and feldspar phenocrysts between 0.05-1.0cm diameter. Crosscut by white calcite veinlets.
										GY											
111.75	139.03	27.28				mKgW	GRD	MG	MD	GY	XL			PRO	2I						Weakly propyllitic granodiorite with gradational phyllic-argillic vein envelopes. Crosscut by several prominent mineralized quartz veins and aplite dykes. Hosts a gouged-rubble zone.
										GN	RB										
			111.75	113.86	2.11	mKgW	GRD	MG	MD	GY	XL			ARG	3I						Moderate argillic overprinted by weak phyllic. Generally, an unmineralized dyke selvedge, crosscut by occasional quartz-carbonate veinlets.
										GN	RB			PHC	2I						
			119.18	122.08	2.90	mKgW	GRD	MG	MD	GY	GO			PHC	3I						Moderate phyllic grading into weak argillic that has been faulted and gouged. Now shows moderate rubble development and clay alteration, crosscut by mineralized quartz veins.
									LT	GN	RB			ARG	2I						
											FT			CLY	3I						
139.03	153.46	14.43				mKgW	GRD	MG	MD	GY	XL			ARG	4I						Frequently alternating patches of argillic and phyllic, with occasional overprinting. Mottled green-pink colouration is typical, and interval is rubbly-gouged in some places.
									LT	GN	RB			PHC	2I						
										PK	PA			PHC	2I

VN	31.07	31.10	30.00					Cream banded chalcedony vein with white calcite filling vugs.	
VN	35.72	35.74	35.00					Vuggy-banded milky quartz vein with white translucent coarse grained crystalline quartz at the centre.	
FT	38.05	38.15	45.00					Friable fault zone in argillic granodiorite.	
FT	38.45	38.61	35.00					Fault zone with strong oxide and clay alteration.	
VN	39.87	40.13	65.00		2.00			White quartz-carbonate veinlets.	
VN	46.13	46.20	35.00					Grey-white blended-massive quartz vein with small (<1mm) clasts of unaltered granodiorite.	
VN	59.39	59.40	45.00			PY	2.00	Cream-grey banded quartz vein with disseminated pyrite hosted along bands.	
VN	63.25	63.30	60.00					Milky-grey opaque banded quartz vein crosscut by white massive calcite veinlets.	
VN	63.45	63.48	60.00					White-milky weakly crustiform quartz vein.	
VN	64.40	64.42	60.00			PY	8.00	White-smoky semitranslucent quartz vein with blebby pyrite hosted in the smoky quartz.	
VT	66.42	68.27	50.00		10.00	PY	8.00	White-grey banded quartz veinlets hosting disseminated pyrite.	
VT	68.79	71.76	50.00					White-cream banded quartz-chalcedony veinlets.	
FT	71.93	72.27	30.00					Friable, clay-rich fault zone.	
VN	72.54	73.59	70.00		3.00	PY	3.00	Three banded white-cream-grey quartz veins showing weak clay alteration, hosting disseminated pyrite along band margins and within grey quartz.	
VN	73.75	73.78	40.00			PY	8.00	Milky massive quartz vein with smoky quartz stringer adjacent and crosscutting. Smoky quartz hosts disseminated-blebby pyrite and chalcopyrite.	
						CP	5.00		
FT	73.78	75.44	50.00			PY	3.00	Faulted and gouged interval of phyllic granodiorite with moderate clay alteration. Crosscut by mineralized quartz veins/veinlets, hosting pyrite. Vein structure/textures are difficult to determine due to faulting.	
ST	75.44	76.73	60.00		20.00	PY	10.00	Many cream-grey-smoky quartz stringers, oriented at an average angle of 60 degree, ranging between 40-90 degrees. Quartz stringers are generally discontinuous, massive, with weak clay alteration. Hosts disseminated pyrite.	
VN	75.76	75.88	40.00			PY	8.00	Thick crustiform-vuggy quartz vein. Hosts a 1.5cm veinlet of zoned honey brown sphalerite and blebby galena on the uphole border, and a higher concentration of blebby-massive galena with blebby honey brown zoned sphalerite near the uphole border. Disseminated-blebby pyrite is hosted throughout.	
						SP	15.00		
						GN	12.00		
VN	76.28	76.39	80.00		2.00	PY	10.00	Two 3cm and 6cm thick white massive-vuggy quartz veins with large vugs filled by yellow-massive calcite. Vugs are lined by cream comb quartz and cream-yellow mossy quartz.	x
						GN	15.00		
VN	76.85	76.95	45.00			PY	8.00	Thick quartz vein with 1.5-2cm white translucent comb quartz along the uphole border, while the rest of the vein is white-yellow mossy quartz, crosscut by vuggy cream chalcedony veinlets. Hosts interstitial blebby pyrite, chalcopyrite, honey brown sphalerite, and galena.	x
						GN	8.00		
						SP	4.00		
						CP	6.00		
VN	77.03	77.17	60.00			PY	8.00	Vuggy-mossy white-cream-yellow quartz vein hosting disseminated pyrite and honey brown sphalerite throughout. Blebby-massive galena is hosted along the up and down hole borders. Blebby pyrite is hosted in the galena masses. Some large vugs are filled by white calcite.

DY	107.37	108.07	50.00		4.00			Four thin quartz feldspar porphyry dyke offshoots that brecciate propyllitic granodiorite into 5mm subrounded clasts. Dyke widths as follows: 3cm, 2.5cm, 1cm, 1.5cm.	
VT	108.71	110.03	25.00		9.00			White calcite veinlets, typically massive.	
DY	111.97	112.01	45.00					Red-maroon porphyry dyke offshoot, breccia phyllic granodiorite into angular clasts.	
DY	113.72	113.80	60.00					Red-maroon porphyry dyke offshoot, breccia phyllic granodiorite into angular clasts.	
DY	114.28	114.31	50.00			HE	10.00	Red-maroon porphyry dyke offshoot, breccia phyllic granodiorite into angular clasts, crosscut by a 30 degree white massive calcite veinlet.	
VT	115.34	117.70	45.00		12.00			Twelve evenly spaced white quartz stringers with orange-coral pink potassic envelopes approximately 3mm wide.	
DY	118.41	118.44	60.00					Pink-orange (coral) fine-grained aplite dyke.	
BX	119.38	119.45	70.00			PY	15.00	Grey translucent quartz vein brecciating phyllic-argillic granodiorite. Hosts blebby-disseminated pyrite and chalcopyrite.	
						CP	8.00		
GO	119.45	120.34	70.00			PY	5.00	Weakly gouged and clay altered argillic-phyllic granodiorite, with stronger clay development on crosscutting quartz veins with disseminated pyrite.	
GO	121.35	121.78	65.00			PY	3.00	Moderately gouged phyllic granodiorite crosscut by grey quartz veinlets with disseminated pyrite.	
VN	121.78	121.85	75.00			PY	10.00	White semitranslucent quartz vein that brecciates a smoky quartz vein. Angular clasts range from 1mm-2cm diameter and host disseminated-blebby pyrite.	X
VN	125.02	125.04	80.00					Pink quartz vein with central white massive calcite veinlet.	
VT	126.08	126.09	55.00			PY	5.00	Banded-weakly clay altered white-grey quartz veinlet with disseminated-blebby pyrite.	
VT	127.32	131.18	70.00			PY	3.00	White-dark grey massive quartz veinlets with thin argillic-phyllic envelopes, hosting disseminated pyrite.	
VN	132.83	132.86	70.00			PY	5.00	White semitranslucent massive-crackled quartz vein, with smoky quartz infilling cracks, bringing in disseminated pyrite.	
VT	134.32	134.33	60.00					White massive semitranslucent quartz vein.	
VN	136.86	136.89	65.00					Pink-cream massive chalcedony vein.	
VT	139.08	139.25	55.00		4.00	PY	2.00	White-grey weakly banded semitranslucent quartz veinlets with disseminated pyrite.	
VN	139.52	139.54	60.00			PY	2.00	White-grey weakly gouged quartz vein, with banding and interstitial calcite. Hosts disseminated pyrite.	
VN	139.90	139.97	80.00		2.00	HE	15.00	Two white massive quartz-calcite veins with red hematite staining	
GO	141.21	142.08	70.00			PY	5.00	Weakly gouged phyllic granodiorite with ten sulphide-bearing quartz veinlets that have been altered beyond description.	
VT	142.32	143.03	60.00		9.00	PY	5.00	Banded white-dark grey quartz veinlets with disseminated pyrite.

SUMMARY

From (m)	To (m)	Interval	Unit	Comments
0.00	25.18		GRD	Oxidized granodiorite with patches of ARG alteration.
	76.89		GRD	Fresh granodiorite with patchy PHC and ARG alt.
	88.61		GRD	Patchy PRO and ARG alt. with trace POT overprintin
	157.74		GRD	Fresh granodiorite.
	200.81		GRD	Patchy PRO, PHC and ARG altered granodiorite.
	206.09		GRD	Propylitic altered granodiorite.
	240.00		GRD	Fresh granodiorite.
	261.89		GRD	Propylitic altered granodiorite.
	270.66		GRD	PHC altered granodiorite. Highly veined, hosting pyrit
				galena, aresenopyrite, chalcopyrite and spahlerite.
	276.98		FEL	Quartz-feldspar-porphry dyke.
	277.64		GRD	PHC alterd granodiorite. Milky quartz vein hosting
				pervasive blebby pyrite (at contact with dyke).
	325.22			Fresh granodiorite.

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS				Photo	DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Arsenopyrite	Type	Conc. (%)		
0.00	2.98						OVB														Overburden and rubble.
2.98	7.40						GRD		MD	OR	PA	4.00		PHC	3.00						Highly oxidized granodiorite. Phyllic and argillic alteration underlying pervasive limonite staining. Black goethite staining (and some dendrites radiating from fractures), especially on fractures. Abundant dusty limonite and brown-red hematite. Generally hard core, although fractured.
														ARG	2.00						
7.40	10.52						GRD		MD	OR	PA	4.00		ARG	3.00						Highly oxidized granodiorite. Patchy moderate to strong argillic (soft/crumbly) and fragmented hard granodiorite (heavily limonite stained). Limonite and goethite staining throughout.
10.52	11.95						GRD		LT	GY		2.00									Faintly limonite stained granodiorite with goethite and limonite staining on fractures. Patches of crumbly/friable core.
									MD	OR											
11.95	12.48	0.53				mKgW	GRD	MG	LT	WH		3.00		ARG	4.00						Friable, strong argillic altered granodiorite. Limonite stained/oxidized.
12.48	22.65	10.17				mKgW	GRD	MG	MD	OR		3.00		SIL	2.00						Oxidized granodiorite. Patchy silicification, argillic and phyllic alteration underneath limonite staining. All fractures heavily limonite and/or goethite stained.
														PHC	2.00						
			18.60	20.42	1.82	mKgW	GRD	MG	MD	OR	RU	4.00									Oxidized granodiorite. Dominantly crumbly/friable rock and rubble (lost recovery).
			20.79	21.58	0.79	mKgW	GRD	MG	DK	BK		5.00									Intensely oxidized granodiorite. Soft, extremely goethite and limonite stained
									MD	OR											
22.65	25.18	2.53				mKgW	GRD	MG	LT	GY	MA	2.00									Light grey granodiorite. Unaltered apart from limonite and goethite staining on
25.18	28.70	3.52				mKgW	GRD	MG	MD	OR		4.00									Strong argillic altered granodiorite (with patches of unaltered granodiorite). Very friable/crumbly core associated with argillic alteration. Heavy limonite staining and lesser amounts of goethite staining.
28.70	47.38	18.68				mKgW	GRD	MG	LT	GY	MA	2.00		PRO	1.00						Unaltered granodiorite apart from limonite staining (and minor goethite staining) on fractures. Patchy oxidized, friable core. Grading into very weak propylitic alteration near end of interval.
			29.85	31.71	1.86	mKgW	GRD	MG	LT	GY		3.00		SIL	1.00						Oxidized granodiorite. Patchy oxidization. Limonite and lesser amounts of goethite staining. Trace silicification.
									MD	OR											
			41.76	42.30	0.54	mKgW	GRD	MG	MD	OR	EN	4.00		PHC	3.00						Phyllic (or propylitic) altered granodiorite underlying heavy, patchy limonite staining. Phyllic and propylitic is light blue-green colour. Phyllic alteration enveloping small quartz vein.
									LT	BL-GN											
47.38	51.71	4.33				mKgW	GRD	MG	LT	GN	PA			PHC	2.00	<1		Gn	<1		Patchy, altered granodiorite. Patchy moderate argillic alteration with potassic overprint (moderate) and (weak to moderate) phyllic alteration enveloping veins. Few patches of fresher granodiorite (weakly propylitic altered). Limonite staining associated with phyllic alteration. Limonite staining on all fractures and some surfaces around fractures. Veins described in secondary structures.
									LT	PK				ARG	3.00						
									LT	WH				POT	3.00						
														PRO	1.00						
														OXI	2.00						
51.71	76.89	25.18				mKgW	GRD	MG	MD	GY-GN				PRO	2.00	<1					Very weakly propylitic altered granodiorite with patches of weak phyllic alteration (3 patches, 1.38m in total). Trace pyrite alteration. Chlorite staining on many fractures.
														PHC	1.00						

KLAZA

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Arsenopyrite	Type	Conc. (%)	Photo	
			60.15	65.00	4.85	mKgW	GRD	MG	LT	GN				PHC	3.00						Moderately phyllic altered granodiorite with strong phyllic alteration enveloping sulphide-bearing veins. First 53cm is argillic altered with increasing phyllic overprint, grading into phyllic alteration. Minor argillic alteration at end of interval. Patch of weak propylitic alteration for 1.1m.
														PRO	1.00						
			67.90	71.37	3.47	mKgW	GRD	MG	LT	GN				PHC	3.00	<1					Weak to moderate phyllic and moderately argillic (with potassic and phyllic overprint) altered granodiorite. 48cm of argillic alteration in total. Crustiform quartz-carbonate vein hosting pyrite within interval (see secondary structures).
														ARG	3.00						
														POT	2.00						
76.89	82.42	5.53				mKgW	GRD	MG	MD	GY				PRO	2.00						Weakly propylitic altered granodiorite with small patches of friable argillic altered granodiorite.
														ARG	1.00						
82.42	88.61	6.19				mKgW	GRD	MG	MD	GY-BL				PRO	2.00	<1					Altered granodiorite. Weak to moderate argillic (with weak potassic overprint) and weak to moderate propylitic alteration with patches of friable core. Veins hosting pyrite described in secondary structures log.
														ARG	2.00						
														POT	1.00						
88.61	157.74	69.13				mKgW	GRD	MG	MD	GY				PRO	1.00						Fresh granodiorite with patchy, weal propylitic alteration. Light grey colour with minor green tint. Chlorite on many fractures. Trace phyllic alteration enveloping veins (see secondary structures). Localized hematite on fractures (occurring with chlorite). Few friable zones.
			147.56	151.20	3.64	mKgW	GRD	MG	MD	GY				PRO	2.00						Fragmented and crumbly, weakly propylitic altered granodiorite.
			151.84	155.73	3.89	mKgW	GRD	MG	LT	GN	FR			PRO	2.00						Crumbly and fragmented granodiorite. Patchy phyllic, argillic and propylitic alteration. More phyllic and propylitic alteration than argillic alteration. Vein at 154.53m (see secondary structures log). Abundant chlorite replacement of hornblende.
									MD	GY	PA			PHC	3.00						
														ARG	3.00						
157.74	169.10	11.36				mKgW	GRD	MG	LT	WH	PA			PRO	2.00	<<1					Patchy, altered granodiorite. Weak to moderate propylitic alteration with patches of (moderate to strong) argillic alteration and weak (some moderate) phyllic alteration. Argillic is weakly potassic and phyllic overprinted. Veining within more competent phyllic alteration and argillic zones are friable. Argillic and propylitic alteration dominate.
									MD	GN				PHC	2.00						
														ARG	3.00						
														POT	1.00						
169.10	177.22	8.12				mKgW	GRD	MG	LT	GN	PA			PHC	3.00						Patchy, altered granodiorite. ~60% phyllic and ~40% propylitic altered granodiorite. Weakly propylitic altered granodiorite with phyllic alteration enveloping quartz and quartz-carbonate veinlets. Weak to moderate phyllic alteration.
									MD	GN				PRO	2.00	<<1					
177.22	181.53	4.31				mKgW	GRD	MG	LT	GN	PA			PHC	3.00						Weak to moderate phyllic altered granodiorite with localized tourmaline. Veining described in secondary structures log. Localized hematite staining and stingers.
181.53	184.39	2.86				mKgW	GRD	MG	MD	GN-I	PA			PRO	3.00						Patchy, altered granodiorite. Moderately propylitic altered (or weakly phyllic altered?) granodiorite with patches of moderate to strong argillic alteration (friable) with weak potassic overprint (~60cm of argillic alteration). First 60cm of interval has finer grains than surrounding granodiorite and is hematite and chlorite stained (darker green-purple colour).

Hole: DDH-12-109 **Logger Name: Nicole Marsh**

Depth (m)		DESCRIPTION
270.66		Granodiorite hanging wall, quartz-feldspar-porphyry dyke footwall. Abrupt contact. Clay alteration (blue-green colour, chlorite rich). Fragmented, small milky quartz vein at or near contact, containing blebby arsenopyrite and pyrite. Abundant mineralized veins proximal to contact within hangingwall. More veining in hangingwall than footwall.
276.98		Quartz-feldspar-porphyry dyke hangingwall, granodiorite footwall. Abrupt contact at 60 degrees t0-core-axis, with ~3mm of clay altered gouge. Milky quartz vein at contact with pervasive blebby pyrite and chalcopyrite (see secondary structures log).

2° Structure Type	From (m)	To (m)	Interval (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS Type	MINERALS Conc. (%)	DESCRIPTION	Photo
VN	5.45	5.54	0.09	36.00		1.00			White translucent quartz vein. Pitted/vuggy. 1cm in width. Orientated 36 degrees to-core-axis.	
VT	6.75	6.88	0.13	45.00					Pitted (and vuggy?) quartz veinlets. Pitting more visible than veins due to intense oxidization. Band of veinlets orientated at 45 degrees to-core-axis and ~10cm in width. Hematite and goethite within vugs.	
VT	25.55	25.70	0.15	15.00		2.00			Very soft, limonite stained vein (extremely altered, unsure of original composition) and hematite stained band. Both ~5mm in width and orientated at 15 and 30 degrees to-core-axis. Within soft, friable argillic zone.	
				30.00						
VT	30.70	30.75	0.05	80.00					Vitreous grey-white quartz vein (or intense silicification?). Highly oxidized bands of limonite within vein. ~4cm in width.	
VN	41.96	41.99	0.03	85.00					Vitreous grey quartz and oxidized (limonite stained) carbonate vein with blue-green alteration halo. 2.5cm in width.	
VT	48.03	48.15	0.12	60.00		5.00			5 quartz-carbonate stringers and veinlets at 60 degrees to-core-axis, crosscut by 2 carbonate veinlets at 33 degrees to-core-axis (in same direction).	
				33.00		2.00				
VN	48.20	48.58	0.38	50.00			Gn	<1	2 veins comprised of vuggy quartz-carbonate, white calcite, white and grey vitreous quartz , dark blue aphanitic sulphides(?) and band of brecciation (siliceous matrix with angular carbonate clasts; clasts from 1mm to 3cm). Vein hosts blebby galena and blebby pyrite. Disseminated pyrite within green phyllic alteration halo. veins 21cm and 1.8cm in width. Limonite pitting and minor vuggy textures present.	
							Py	3.00		
VN	51.46	51.69	0.23	60.00					Brecciated/banded vein. 50% of vein is white carbonate matrix with extremely limonite stained and sub-angular clasts. Other 50% is quartz-carbonate breccia matrix with smaller rounded clasts (mm scale). Also, 1cm of quartz and quartz-carbonate stringers at lower end of vein. Upper contact of vein is extremely oxidized; dusty limonite and goethite for 1.5cm. Vein is 9cm in width. Disseminated pyrite hosted in quartz.	
VN	52.90	52.97	0.07	42.00		4.00	Py	3.00	Vitreous quartz and white quartz-carbonate vein hosting disseminated pyrite and blebby pyrite. 1.6cm in width.	
VN	52.98	53.09	0.11	40.00			Py	1.00	2 grey/smoky quartz veinlets (with minor quartz-carbonate) hosting disseminated pyrite.	
VT	56.55	56.65	0.10	35.00			Py	1.00	Vitreous grey quartz and white quartz-carbonate veinlet hosting blebby pyrite. 9mm in width.	
VN	61.02	61.14	0.12	55.00			Py	1.00	White and grey quartz-carbonate and vitreous grey quartz vein hosting dark aphanitic sulphides, disseminated pyrite and blebby pyrite. 4.8cm in width.	
VT	62.55	63.58	1.03	70.00		2.00			Quartz and quartz-carbonate veinlets with small phyllic alteration halos.	
VN	64.20	64.27	0.07	80.00			Py	1.00	Banded/stringy vein of grey vitreous quartz, yellow carbonate, white quartz-carbonate and fine dark-blue stringers. Quartz and stringers host disseminated pyrite. 6.7cm in width.	
VN	68.29	68.46	0.17	70.00			Py	2.00	Crustiform vein composed of vitreous quartz, yellow and white carbonate, pink and white quartz-carbonate and 3.1cm of brecciation at upper contact (siliceous matrix quartz-carbonate and carbonate clasts; mm scale clasts). Vein is 7cm in width and hosting blebby pyrite, + 7mm crustiform quartz-carbonate pink quartz-carbonate veinlet.	
FT	68.66	68.69	0.03	80.00					2.8cm of clay altered fault gouge. Dense clay.	
VN	87.25	87.34	0.09	38.00			Py	5.00	White and pink carbonate vein with trace hematite (within argillic alteration). 2cm in width.	
FT	87.38	87.48	0.10	30.00					Moderately developed fault gouge at 30 degrees to-core-axis. 2.6cm in width.	
VT	91.08	91.13	0.05	65.00			Py	5.00	Quartz-carbonate and smoky quartz veinlet hosting blebby pyrite. 6mm in width.	
VN	93.21	93.25	0.04	65.00			Py	10.00	1.4cm vein. Vitreous quartz and less white quartz-carbonate.	
ST	95.54	95.64	0.10			3.00	Py	3.00	White carbonate and fine-dark chlorite stringers hosting disseminated pyrite. Slightly netted. 3 occurrences of netted veinlets. 70 to 85 degrees to-core-axis.

VN	261.21	261.26	0.05	60.00			Py	<1	Vitreous quartz and white quartz-carbonate with dark-blue-fine mineral (aphanitic sulphide?). Minor disseminated pyrite. 2.8cm in width.	
VN	262.64	262.81	0.17	80.00			Gn	1.00	Yellow and white quartz-carbonate vein hosting blebby galena. Weakly crustiform. 2.0cm vein at 80 degrees to-core-axis, 1.4cm at 60 degrees to-core-axis.	
VT	263.16	263.19	0.03	60.00					Vuggy and highly crustiform white quartz-carbonate veinlet. 2.5mm in width. Orientated at 60 degrees to-core-axis.	
VT	264.11	264.14	0.03	50.00			Py	1.00	Quartz and quartz-carbonate veinlet forking in two, hosting aphanitic sulphide stringers, blebby pyrite and disseminated pyrite.	
									start of zone (hangingwall of dyke)	

KLAZA

2° Structure Type	From (m)	To (m)	Interval (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS		DESCRIPTION	Photo
							Type	Conc. (%)		
VN	265.72	265.87	0.15	70.00			Py	7.00	Siliceous, banded vein. Band of brecciation (grey siliceous matrix with small clasts of granodiorite and quartz carbonate up to 5mm in width) bordered by vitreous grey quartz and stringy white quartz-carbonate. Quartz hosts blebby pyrite and dark aphanitic sulphides. 11.3cm in width.	
VN	266.65	267.13	0.48	65-80		4.00	Py	1.00	4 milky quartz veins hosting minor quartz-carbonate. Hosting blebby and disseminated pyrite and stringers of dark aphanitic sulphides. 6cm vein at 65 degrees to-core-axis, 4.3cm at 50 degrees to-core-axis, 1.3cmat 80 degrees to-core-axis and 1.7cm at 60 degrees to-core-axis.	
VN	267.29	267.55	0.26				Py	55.00	Milky quartz vein hosting abundant massive and blebby pyrite and chalcopyrite. Abundant blebby pyrite in footwall and hangingwall of vein. 20.2cm true width.	
							Cp	10.00		
VN	267.57	267.82	0.25	57.00		2.00	Sp	30.00	Milky quartz vein with pervasive sulphide mineralization. Blebby pyrite, galena, sphalerite and arsenopyrite + acicular arsenopyrite. ~5% quartz-carbonate. 2..1cm and 1.8cm veins.	
							As	15.00		
							Gn	15.00		
							Py	15.00		
VT	268.08	270.65	2.57			8.00	Py	4.00	Milky quartz (and minor quartz-carbonate) veinlets hosting blebby pyrite, disseminated pyrite and black aphanitic sulphides. 40 (x2), 24, 60, 70 (x2) and 50 degrees to-core-axis (+1 unknown angle).	
VT	268.91	270.66	1.75	43.00		3.00	Py	4.00	Quartz veinlets hosting blebby pyrite and sphalerite and arsenopyrite in the vein at contact with dyke. Orientated 40 and 45 degrees to-core-axis.	
							Sp	1.00		
VT	272.03	272.15	0.12	25.00			To	1.00	Quartz-carbonate veinlet hosting acicular tourmaline. Veinlet forks in two.	
VN	276.94	278.21	1.27	60.00			Py	55.00	Pervasive blebby pyrite hosted in milky quartz vein. At lower contact with dyke. ~3mm of fault gouge at contact. 23.0cm in width.	
									end of zone (footwall of dyke)	
VN	289.22	289.26	0.04	85.00		2.00	Py	<1	2 veins. 1 crustiform white and pink quartz-carbonate vein (2cm) and 1 vitreous quartz vein hosting blebby pyrite (1.6cm).	
VN	306.14	306.47	0.33	12.00			Py	2.00	Shallow carbonate-chlorite and vitreous quartz vein hosting blebby pyrite. Vein forks in two. 1.5cm in width (before forking in two).	
VT	321.60	325.15	3.55	80.00		3.00	Py		3 quartz-carbonate veinlets, with small light green phyllic alteration envelopes. 6mm, 7mm and 8mm (orientated 70, 80 and 85 degrees to-core-axis).

SUMMARY

From (m)	To (m)	Interval	Unit	Comments
0.00	8.10	8.10	OVB	Oxidized overburden with granodiorite boulders.
8.10	74.14	66.04	GRD	Oxidized granodiorite with patches of phyllic alteratio
74.14	92.38	18.24	GRD	Argillic altered granodiorite with phyllic patches.
92.38	99.69	7.31	FEL	Partially gouge altered quartz feldspar porphyry dyke
99.69	103.03	3.34	GRD	Quartz/carbonate breccia and phyllic granodiorite.
103.03	209.14	106.11	GRD	Granodiorite with patchy phyllic alteration that hosts
				disseminated pyrite and quartz/sulphide veins.
209.14	214.76	5.62	GRD	Phyllic granodiorite hosting quartz/pyrite vein zones.
214.76	224.00	9.24	GRD	Large alternating patches phyllic and argillic alteratio
224.00	248.16	24.16	GRD	Propyllitic altered granodiorite with phyllic envelopes
				around quartz pyrite/veins and veinlets.
248.16	249	0.84	GRD	Argillic alteration with a phyllic overprint.
249.00	283.38	34.38	GRD	Phyllic granodiorite with patchy propyllitic alteration.
283.38	284.96	1.58	FEL	Grey quartz feldspar porphyry dyke.
284.96	345.64	60.68	GRD	Argillic with phyllic overprinting and phyllic envelopes
345.64	376.96	31.32	GRD	Silicified propyllitic altered granodiorite.
376.96	395.33	18.37	GRD	Argillic alteration with propyllitic for the last 10m.

0.00	8.10	8.10				mKgW	GRD	MG		BN		3I									Oxidized overburden with granodiorite boulders, some of which are silicified.
										GY	PA		4I								
8.10	10.27	2.17				mKgW	GRD	MG		GY			4I								Strongly oxidized granodiorite.
10.27	18.70	8.43				mKgW	GRD	MG		GN				PHC	4I						Strongly oxidized and strongly phyllic altered granodiorite with patches of strong silicification. Oxidation obscures textures.
										GY	PA										
										OR		4I									
18.70	36.83	18.13				mKgW	GRD	MG		OR		3I									Grey granodiorite with patchy oxidation that decreases with depth.
										GY											
			20.42	20.82	0.40	mKgW	GRD	MG		GN				PHC	4I	1.00					Strongly phyllic altered granodiorite hosting disseminated pyrite along with a grey /orange oxidized gouge vein.
										GY											
			23.33	33.24	9.91	mKgW	GRD	MG		GN				PHC	3-4I	1.00					Moderately oxidized, moderate to strongly phyllic altered granodiorite with patchy argillic altered granodiorite. Strong phyllic patches host disseminated pyrite.
										GY	PA										
										OR		3I									
										WH	PA			ARG	3I						
			34.38	34.58	0.20	mKgW	GRD	MG		GN	EN			PHC	4I	1.00					Strong phyllic envelope surrounding a milky white quartz and blebby vein hosting disseminated pyrite.
										GY											
36.83	64.84	28.01				mKgW	GRD	MG		GN				PHC	2-4I	5.00					Weak to strong phyllic altered granodiorite hosting an abundance of pyrite veinlets and disseminated pyrite. Phyllic alteration increases with depth.
										GY											
64.84	71.14	6.30				mKgW	GRD	MG		GY											Granodiorite with moderate oxidation along fractures.
										OR	PA	3I									
74.14	92.38	18.24				mKgW	GRD	MG		WH				ARG	3I						Moderately argillic altered granodiorite with patches of moderate potassic overprint an moderate phyllic envelopes.
										PK	PA			POT	3I						
									LT	GN	EN										
			75.29	80.27	4.98	mKgW	GRD	MG		GN				PHC	4I	I					Moderately silicified , weak to moderately oxidized and strongly phyllic altered
										GY	PA										
										OR		2-3I									
			82.63	83.17	0.54	mKgW	GRD	MG		GN	EN			PHC	3I	3.00					Moderate phyllic envelope hosting disseminated to blebby pyrite. The envelope surrounds a quartz carbonate vein which hosts disseminated pyrite and galena.
			85.13	85.68	0.55	mKgW	GRD	MG	LT	GN	EN			PHC	3I						Moderate to strong envelope surrounding fourteen pyrite veinlets.
			89.40	89.99	0.59	mKgW	GRD	MG	LT	GN	EN			PHC	3-4I	1.00					Moderate to strong phyllic envelope surrounding a quartz/pyrite vein and hosts disseminated pyrite.
			90.81	90.98	0.17	mKgW	GRD	MG		GN				PHC	4I	1.00					Moderate phyllic envelope surrounding two quartz/pyrite veinlets and hosting disseminated pyrite.
										GY											
			92.14	92.38	0.24	mKgW	GRD	MG		GN				PHC	4I						Strongly phyllic altered granodiorite hosting an abundance of tan carbonate veinlet's and stringers.
										GY											
92.38	99.69	7.31				LKqP	FEL			GY											Grey partially gouge altered quartz feldspar porphyry dyke.

KLAZA

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS				Photo	DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Arsenopyrite	Type	Conc. (%)		
			99.00	99.69	0.69	LKqP	FEL			GY											Intermixed quartz feldspar porphyry dyke and silicified phyllic altered granodiorite. The interval alternated between dyke hosting granodiorite clasts and granodiorite hosting clasts of dyke. The granodiorite hosts disseminated pyrite and the entire interval in partially gouge altered.
									DK	GY			3I								
99.69	100.17	0.48					BXA			TN											Tan carbonate and grey gouge breccia hosting disseminated pyrite.
										GY											
100.17	103.03	2.86				mKgW	GRD	MG		GN				PHC	3I						Partially gouge altered moderate phyllic altered granodiorite hosting a large white/grey quartz vein.
103.03	209.14	106.11				mKgW	GRD	MG		GY											Grey granodiorite with occasional large patches of weak to moderate haematization along fractures. Contains a few patches of weak argillic alteration.
										RD				HEM	2-3I						
										WH	PA			ARG	2I						
			113.22	115.30	2.08	mKgW	GRD	MG		GN				PHC	3-4I	1.00					Moderate to strong phyllic altered granodiorite hosting a quartz sulphide vein, a massive sulphide vein and disseminated pyrite.
			116.15	116.62	0.47	mKgW	GRD	MG		GN				PHC	3-4I	1.00					Moderate to strong phyllic altered granodiorite hosting six pyrite stringers.
										GY											
			135.73	136.54	0.81	mKgW	GRD	MG		WH				ARG	3I						Moderately argillic altered granodiorite with a moderate potassic overprint.
										PK				POT	3I						
			136.54	137.97	1.43	mKgW	GRD	MG		GN				PHC	3-4I	3.00					Moderate to strong phyllic envelope surrounding a grey/green gouge vein hosting disseminated pyrite and a smokey quartz/white carbonate vein hosting disseminated to semi-massive pyrite, blebby sphalerite and disseminated arsenopyrite.
			144.86	145.74	0.88	mKgW	GRD	MG		GN				PHC	3I	<1					Moderately phyllic and haematite stained granodiorite hosting trace pyrite.
									DK	RD				HEM	3I						
			145.74	147.50	1.76	mKgW	GRD	MG	DK	GN				PRO	3I	<1		Ep	3.00		Moderately propyllitic altered granodiorite that has been moderately silicified and has a weak haematite staining along fractures. The interval host disseminated pyrite and epidote.
										GY			3I								
										RD				HEM	2I						
			150.39	153.07	2.68	mKgW	GRD	MG	DK	GN				PRO	2I	<1		Ep	3.00		Weakly propyllitic altered granodiorite that has been moderately silicified. The interval hosts disseminated pyrite and epidote and has weak haematite staining along fractures.
										GY			3I								
										RD				HEM	2I						
			156.78	157.40	0.62	mKgW	GRD	MG		WH	PA			ARG	3I						Alternating patches of moderate argillic alteration with a moderate potassic overprint and moderate propyllitic alteration.
										PK	PA			POT	3I						
									DK	GN	PA			PRO	3I						
			157.84	158.42	0.58	mKgW	GRD	MG		GN				PHC	3-4I	<1					Moderate to strong phyllic altered granodiorite which hosts disseminated pyrite.
										GY											
			159.23	160.26	1.03	mKgW	GRD	MG	LT	GN				PHC	2-3I						Weak to moderate phyllic altered granodiorite.
			161.23	161.80	0.57	mKgW	GRD	MG		GN				PHC	4I	1.00		Gn	<1		Strongly phyllic altered granodiorite that has been moderately silicified and hosts a smokey quartz/sulphide vein.
										GY			3I

														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Arsenopyrite	Type	Conc. (%)	Photo	
			163.90	165.06	1.16	mKgW	GRD	MG		WH	EN			ARG	3I	<1					Moderate argillic envelope with a moderate potassic overprint around a moderate to strong phyllic envelope that is moderately silicified. Phyllic envelope hosts disseminated pyrite. The phyllic envelope is surrounding a black breccia.
										PK	EN			POT	3I						
										GN	EN			PHC	3-4I						
										GY			3I								
			169.24	170.53	1.29	mKgW	GRD	MG		GN	EN			PHC	3-4I	<1					Moderate to stronger phyllic envelope surrounding a black gouge vein which hosts disseminated pyrite.
										GY											
			171.66	181.79	10.13	mKgW	GRD	MG	DK	GN				PRO	2I	<1		Ep	3.00		Weakly propyllitic and moderately phyllic altered granodiorite with a weak haematite staining along some fracture surfaces. The interval hosts disseminated pyrite and epidote.
										GY			3I								
										RD				HEM	2I						
			182.68	184.17	1.49	mKgW	GRD	MG		GN	EN			PHC	3-4I	1.00					Moderate to strongly phyllic envelope surrounding grey quartz and semi-massive pyrite vein. The interval is moderately silicified and hosts disseminated pyrite.
										GY			3I								
			185.41	186.12	0.71	mKgW	GRD	MG	LT	GN				PHC	3I						Moderately phyllic altered granodiorite.
			195.10	203.55	8.45	mKgW	GRD	MG		GN				PHC	3-5I	<1					Moderate to strongly phyllic altered granodiorite with a high abundance of quartz/sulphide veins, veinlets and stringers. The large quartz sulphide veins have intense phyllic and strongly silicified envelopes. These envelopes host minor amounts of disseminated sulphides.
										BL	EN			PHC	5I						
										GY	EN		4I								
			203.55	206.35	2.80	mKgW	GRD	MG		WH	PA			ARG	3I						Moderate phyllic alteration alternating with moderate argillic alteration with a weak phyllic overprint.
									LT	GN	PA			PHC	2-3I						
209.14	214.76	5.62				mKgW	GRD	MG		GN				PHC	3-4I	1.00					Moderate to strong phyllic altered granodiorite hosting disseminated pyrite, pyrite veinlets and an abundance of quartz carbonate veins which hosts disseminated pyrite. Phyllic altered granodiorite is strongest around veins and vein zones.
214.76	216.27	1.51				mKgW	GRD	MG		WH	PA			ARG	3I						Alternating patches of moderate propyllitic and moderate argillic alteration.
									DK	GN	PA			PRO	3I						
216.27	220.22	3.95				mKgW	GRD	MG	LT	GN				PHC	3I						Moderately phyllic altered granodiorite with a patches of moderate argillic alteration. The interval hosts multiple white carbonate and grey quartz veins and veinlets which hosts disseminated pyrite and one large grey quartz and white carbonate vein hosting semi-massive pyrite.
										WH	PA			ARG	3I						
220.22	223.62	3.40				mKgW	GRD	MG		GN				PHC	3-4I						Moderate to strong phyllic altered granodiorite hosting disseminated pyrite and an abundance of pyrite veinlets and quartz pyrite veins.
										GY											
223.62	224.00	0.38				mKgW	GRD	MG		WH				ARG	3I						Moderate argillic altered granodiorite with a moderate potassic overprint.
										PK				POT	3I						
224.00	248.16	24.16				mKgW	GRD	MG	DK	GN				PRO	1-2I						Trace to weakly propyllitic altered granodiorite with a patch of weak to moderate phyllic alteration and moderate to strong phyllic envelopes surrounding quartz pyrite veins and veinlets.
									LT	GN	PA			PHC	2-3I						
										GN	EN			PHC	3-4I

						Type	Conc. (%)		
BX	342.87	342.97	85.00			Py	1.00	Dark grey to black breccia with a smokey quartz matrix and grey quartz and phyllic granodiorite clasts. Quartz matrix and clasts hosts disseminated pyrite.	
VN	343.57	343.59	60.00			Py	10.00	Tan carbonate vein hosting blebby pyrite.	
VN	343.68	343.70	40.00			Py	50.00	Grey quartz vein hosting disseminated to blebby pyrite.	
BN	345.37	345.40	70.00			Py	10.00	Band of intensely silicified granodiorite hosting disseminated to blebby pyrite.	
VN	345.90	345.91	75.00			Py	5.00	Grey quartz and white carbonate vein hosting disseminated to blebby pyrite and haematite.	
						He	15.00		
VN	347.49	347.67	50.00			Py	7.00	Milky white quartz vein with a net texture of pyrite stringers. The vein hosting disseminated to blebby pyrite and haematite.	
						He	7.00		
VT	350.92	351.25			4.00	Py	10.00	Four 0.1-0.3cm white carbonate veinlets hosting disseminated pyrite.	
VT	351.89	351.90	85.00			Py	80.00	Tan carbonate veinlet hosting blebby pyrite.	
BX	352.98	353.15	65.00		2.00	Py	1.00	Two 1cm grey breccia veins that are minorly gouge altered.	
VN	354.78	354.79	80.00			Py	50.00	Grey and milky white quartz vein hosting disseminated to blebby pyrite.	
VN	356.19	356.20	70.00			Py	80.00	Smokey quartz vein hosting disseminated to blebby pyrite.	
GO	359.64	360.06				Py	5.00	Grey gouge zone hosting clasts of phyllic altered granodiorite and smokey quartz/carbonate vein. The clasts host disseminated to blebby pyrite.	
VN	360.24	360.25	55.00			Py	5.00	Dark grey vein hosting disseminated pyrite.	
VT	360.78	360.79	80.00			Py	10.00	Grey quartz veinlet hosting disseminated to blebby pyrite.	
VN	364.23	364.24	70.00			Py	35.00	Grey quartz veinlet hosting blebby pyrite.	
VN	366.18	366.20	85.00			Py	5.00	Smokey quartz vein cross-cut by tan carbonate veinlets and stringers. Vein hosts disseminated pyrite.	
VT	367.19	367.75	80.00		4.00	Py	25.00	Four 0.1-0.3cm grey quartz veinlets hosting disseminated to blebby pyrite.	
VN	367.83	369.10	20.00			Py	10.00	Grey and milky white quartz vein hosting disseminated to blebby pyrite and haematite.	
						He	3.00		
VN	369.44	369.55	25.00			Py	15.00	Grey and milky white quartz vein hosting disseminated to blebby pyrite and haematite.	
						He	2.00		
VN	375.25	375.26	70.00			Py	5.00	Grey quartz vein cross-cut by tan carbonate stringers and hosts disseminated pyrite.	
VT	376.36	379.00			19.00	Py	30-70	Nineteen 0.1-0.5cm veinlet hosting disseminated pyrite varying from 30-70%.	
GO	377.15	377.17	80.00			Py	<1	Grey gouge vein hosting disseminated pyrite.	
GO	377.74	377.77	32.00			Py	<1	Grey gouge vein hosting disseminated pyrite.	
GO	379.22	379.46				Py	1.00	Grey gouge zone hosting grey quartz clasts with disseminated pyrite.	
GO	379.57	379.59	50.00			Py	1.00	Grey gouge zone hosting grey quartz clasts with disseminated pyrite.	
VN	379.62	379.63	80.00			Py	1.00	Grey quartz vein hosting disseminated to blebby pyrite.	
GO	379.76	379.82	80.00			Py	1.00	Grey to black gouge vein hosting disseminated pyrite.	
VN	383.76	383.77	85.00			Py	10.00	White carbonate and smokey quartz vein hosting disseminated to blebby pyrite.	
VN	386.39	386.40	45.00			Py	10.00	Smokey quartz vein hosting disseminated to blebby pyrite.	
VT	387.62	387.63	30.00			Py	5.00	Milky white quartz veinlet hosting disseminated pyrite and haematite.	
						He	3.00		
VT	387.12	387.13	85.00			Py	15.00	Grey quartz veinlet hosting disseminated to blebby pyrite.	
VN	388.52	388.56	50.00			Py	6.00	A 1cm smokey quartz vein hosting disseminated pyrite. Quartz vein runs parallel to a 3cm white calcite vein.	
GO	388.56	388.66	35.00			Py	10.00	Grey to dark grey gouge hosting silicified phyllic granodiorite clasts which hosts disseminated pyrite.	
VN	389.22	389.23	85.00			Py	3.00	Milky white quartz vein hosting blebby pyrite.

SUMMARY

From (m)	To (m)	Interval	Unit	Comments
0.00	6.76	6.76	GRD	Unaltered granodiorite with strong to intense oxidation.
6.76	23.83	17.07	GRD	Argillic altered granodiorite with patchy phyllic alteration and moderate oxidation.
23.83	25.04	1.21	FEL	Tan-grey to dark red-pink quartz feldspar porphyry dyke.
25.04	34.82	9.78	GRD	Unaltered granodiorite with patchy argillic and phyllic envelopes around pyrite-hosting veins and veinlets.
34.82	63.68	28.86	GRD	Argillic altered granodiorite with patchy phyllic alteration around veinlets, and light to moderate oxidation.
63.68	126.02	62.34	GRD	Lightly silicified granodiorite with patchy phyllic alteration envelopes around veins and veinlets, occasionally hosting pyrite.
126.02	128.37	2.35	FEL	Silicified quartz feldspar porphyry dyke, with undulatory striations showing colour zonation, and clay alteration of feldspars.
128.37	137.38	9.01	GRD	Argillic altered granodiorite with patchy phyllic and potassic envelopes around quartz-carbonate stringers and veinlets.
137.38	154.03	16.65	FEL	Grey quartz feldspar porphyry dyke.
154.03	167.70	13.67	FEL	Green quartz feldspar porphyry dyke, with patchy hematite staining and undulatory striations in red, orange, green and brown.
167.70	171.28	3.58	GRD	Argillic altered granodiorite with patchy propylitic and potassic alteration.
171.28	191.11	19.83	FEL	Green to orange quartz feldspar porphyry dyke with biotite and hornblende fine phenocrysts.

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS				Photo	DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Arsenopyrite	Type	Conc. (%)		
0.00	5.18	5.18					GRD	MG	MD	BN		3I									Oxidized and fragmented overburden with granodiorite.
									MD	GY	PA										
5.18	6.76	1.58				mKgW	GRD	MG	MD	OR		5I									Intensely oxidized granodiorite, fractured and broken.
									MD	GY											
6.76	6.90	0.14				mKgW	GRD	MG	MD	GY		2I	2I	PRO	3I						Propylitically altered granodiorite, with quartz-carbonate veinlets and netted hematite stringers. Hematite rims on K-feldspar. Light silicification.
									DK	GN				POT	2I						
6.90	10.89	3.99				mKgW	GRD	MG	LT	GN	PA	1I	1I	PHC	2I						Phyllically altered granodiorite, light to moderate alteration around veinlets. Patchy argillic traces. Oxidation on fracture planes.
									MD	GY				ARG	1I						
10.89	17.08	6.19				mKgW	GRD	MG	LT	GY	PA	3I	1I	ARG	3I						Weak to strong patchy argillically altered granodiorite, with strong oxidation on fractures and veins. Patchy light phyllic overprinting.
									LT	GN				PHC	2I						
									MD	OR											
17.08	23.83	6.75				mKgW	GRD	MG	LT	GY		4I	3I	ARG	4I						Strongly argillic altered and oxidized granodiorite. Pervasive orange oxidation, black on fractures and stringers. Patchy silicification throughout.
									MD	OR											
23.83	25.04	1.21				LKqP	FEL	FG	MD	TN	PO	3I	2I								Quartz-feldspar porphyry dyke. Colour zonation from tan-grey to dark red-pink. Patchy silicification. Strong oxidation on fractures. Subrounded to rouned phenocrysts, some altered to soft white clay. With depth, increasing oxidation obscures dyke textures.
									DK	RD											
25.04	25.67	0.63				mKgW	GRD	MG	MD	GY		3I	3I	ARG	4I	<1					Argillic altered granodiorite. Silicification decreases with depth from quartz-feldspar porphyry dyke contact. Pervasive oxidation. Fine disseminated pyrite near dyke contact.
										OR											
25.67	29.67	4.00				mKgW	GRD	MG	MD	GY		2I		PHC	1I	<1					Relatively unaltered granodiorite, oxidized on fractures. Trace phyllic alteration near veinlets and stringers.
29.67	31.85	2.18				mKgW	GRD	MG		WH	PA	2I		ARG	4I			SP	<1		Argillic altered granodiorite with patchy phyllic overprinting around veins and veinlets. Fine disseminated pyrite and medium sphalerite blebs in veinlets and phyllic envlope around veinlets.
									LT	GN				PHC	2I						
31.85	34.82	2.97				mKgW	GRD	MG	MD	GY		2I									Relatively unaltered, lightly oxidized granodiorite.
34.82	37.48	2.66				mKgW	GRD	MG		WH		3I		ARG	4I						Strong to intensely argillitic altered granodiorite, pervasively oxidized.
									MD	OR											
37.48	45.63	8.15				mKgW	GRD	MG	LT	GY	PA	2I	2I	ARG	3I	1.00					Argillic altered granodiorite with light phyllic overprinting enveloping veins and veinlets of quartz + pyrite + fine black sulphides. Patchy oxidation, predominantly on fracture surfaces, and patchy silicification. Disseminated pyrite blebs, near quartz-pyrite veins.
									LT	GN				PHC	2I						
45.63	46.97	1.34				mKgW	GRD	MG	MD	OR	FR	5I	2I	ARG	4I						Intensely oxidized argillic altered granodiorite with coarse clear quartz phenocrysts. Most textures obscured by oxidation. Encompassing very fragmented, possible fault zone.
46.97	50.26	3.29				mKgW	GRD	MG	LT	GY	PA	2I		ARG	3I						Moderately argillic altered granodiorite with light to moderate phyllic overprinting. Patchy oxidation.
									LT	GN				PHC	2I

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Arsenopyrite	Type	Conc. (%)	Photo	
50.26	52.96	2.70				mKgW	GRD	MG	MD	GY	PA	2I	2I	PHC	2I						Granodiorite with patchy light phyllic alteration. Light to moderate silicification.
									LT	GN											
52.96	59.10	6.14				mKgW	GRD	MG	LT	GY	MO	2I		ARG	4I						Strongly argillic altered granodiorite with overprinting phyllic and potassic alteration enveloping veins.
										WH				PHC	2I						
														POT	2I						
			54.65	57.42	2.77	mKgW	GRD	MG	LT	OR	RB	4I		ARG	4I						Moderate to intensely argillic altered, oxidized rubble and fractured granodiorite. Possible fault zone?
59.10	63.68	4.58				mKgW	GRD	MG	LT	GY	PA	2I		ARG	3I	1.00					Moderate phyllic alteration overprinting moderate argillic altered granodiorite, with patchy potassic traces, all enveloping quartz-carboante-pyrite veining. Patchy oxidation obscures some textures. Extensive quartz-carboante veins and stringers.
									LT	GN				PHC	3I						
														POT	1I						
63.68	88.50	24.82				mKgW	GRD	MG	MD	GY	MA	1I	2I			<1					Lightly silicified granodiorite. Patchy oxidation, predominantly on fractures. Traces of fine disseminated pyrite. Quartz-carbonate stringers, veinlets and veins, with phyllic and potassic alteration envelopes.
			67.20	68.50	1.30	mKgW	GRD	MG	LT	GN	EN			ARG	3I	1.00					Argillic altered granodiorite overprinted by moderate phyllic and light potassic envelope surrounding pyrite-chalcopyrite-quartz-carbonate vein. Disseminated pyrite hosted in the granodiorite.
														PHC	3I						
														POT	2I						
			70.29	70.72	0.43	mKgW	GRD	MG	LT	GN	PA			PHC	3I	<1					Light to moderate phyllic alteration of granodiorite, surrounding 4 quartz-carbonate veinlets and hosting trace disseminated pyrite.
			72.50	73.15	0.65	mKgW	GRD	MG	LT	GN	PA			PHC	2I	<1					Light phyllic and potassic alteration of granodiorite, encompassing 2 quartz-carbonate veinlets.
														POT	2I						
			78.13	80.06	1.93	mKgW	GRD	MG	LT	RD	MO	3I		ARG	4I						granodiorite with moderate to intense argillic alteration, coated with dark red-pink oxidation in patches. Intensity of alteration decreases down hole.
										WH											
			80.74	80.90	0.16	mKgW	GRD	MG	MD	GY	EN			PHC	3I	1.00					Phyllic and potassic alteration envelope around 2 quartz-carbonate veinlets. Fine disseminated pyrite.
									LT	GN				POT	2I						
			82.35	84.35	2.00	mKgW	GRD	MG	LT	GY	PA	2I		ARG	2I						Patchy argillic altered granodiorite with overprinting phyllic alteration. Oxidation on fractures and veins.
									LT	GN				PHC	3I						
			87.06	87.87	0.81	mKgW	GRD	MG	MD	GY	PA	2I		ARG	2I	1.00					Envelope of altered granodiorite around quartz-pyrite veins. Light argillic alteration grading to phyllic and potassic towards veins.
									LT	GN	EN			PHC	3I						
														POT	2I						
88.50	94.30	5.80				mKgW	GRD	MG	MD	GY	PA	2I		ARG	2I	1.00					Patchy alternating zones of fresh granodiorite and argillic altered granodiorite, overprinted by phyllic and potassic alteration, around quartz-pyrite veinlets and veins.
									LT	GN				PHC	2I						
														POT	2I						
94.30	97.07	2.77				mKgW	GRD	MG	MD	GY	MA		3I								Moderately silicified granodiorite, otherwise unaltered.

KLAZA

Hole: DDH-KL-12-111 Logger Name: Gareth Wolff

Depth (m)		DESCRIPTION
	23.83	Contact between argillic altered granodiorite and felsic plagioclase-quartz porphyry dyke. Orange limonitic gouge on contact. 55 deg to core axis (TCA) attitude of contact.
	25.04	Strongly oxidized contact between oxidized felsic dyke and silicified granodiorite. Orange limonite gouge on contact.
	126.02	Contact between phyllic and argillic altered granodiorite and silicified quartz-feldspar porphyry dyke. Orange limonitic gouge on contact.
	128.37	Gradational contact between felsic dyke and argillic altered granodiorite. Pink-red gouge coating contact zone, with extensive colour variation.
	137.38	Contact between argillic altered, silicified granodiorite, and silicified quartz-feldspar porphyry dyke. White gouge on contact.
	167.70	Contact between oxidized dyke and argillic altered granodiorite, at 65 degrees TCA.
	171.28	Contact between argillic altered granodiorite and dark green striated quartz-feldspar porphyry dyke, at 60 degrees TCA.

						Type	Conc. (%)		
VT	6.76	6.90	60.00		4.00			Quartz-carbonate veinlets with hematite and limonite rims.	
VT	7.07	10.72	50-60		13.00			Quartz-carbonate veinlets to stringers, white to black, variably oxidized.	
VN	11.77	11.79	70.00		1.00			1.5cm layered milky to clear quartz-carbonate vein, black on rims.	
VN	13.08	13.10	80.00		1.00			2cm milky to clear quartz vein with fine breccia at edge.	
VT	13.90	14.22	80.00		3.00			3 milky quartz veinlets with clear quartz centres.	
VN	17.96	17.98	75.00		1.00			Oxidized quartz vein with black selvages.	
VT	23.88				1.00			Irregular dark grey chalcedonic quartz veinlet.	
VT	25.12	25.60	60.00		4.00			4 milky quartz veinlets at approximately 60 degrees to core axis (TCA).	
VT	26.29		70.00		1.00	Py	1.00	Milky quartz veinlet, 2mm wide, hosting pyrite blebs in selvage.	
ST	28.34	28.38	45.00		1.00			Hematite stained quartz stringer.	
VN	29.85	29.89	60.00		1.00	Py	10.00	Milky to clear crustiform quartz-carbonate-pyrite vein, 3cm wide, oxidized, hosting pyrite in disseminated blebs and fine stringers.	
VN	30.60	30.62	80.00		1.00	Py	5.00	Quartz-pyrite crustiform limonitic vein. Fine black sulphide (?) along selvages.	
VN	30.64	30.68	50.00		1.00	Py	10.00	Comb quartz vein, 1cm wide, hosting fine pyrite and medium-grained black sphalerite blebs. Fine traces of arsenopyrite. Fine black sulphide(?) selvages. Surrounded by phyllic alteration envelope with pyrite blebs.	
						Sp	5.00		
						As	<1		
ST	31.17	31.23			5.00			5 variably oriented oxidized quartz stringers.	
VT	31.57	31.59	70.00		2.00	Py	2.00	2 quartz veinlets with fine-grained pyrite, surrounded by phyllic alteration envelope.	
ST	32.61	37.50			10/m			Oxidized quartz-carbonate stringers. Predominantly at 40-50 degrees TCA, some at <30 degrees TCA.	
VT	38.58	38.63	40.00		1.00	Py	5.00	2-3mm quartz-pyrite veinlet, with milky quartz, fine pyrite, and stringers of fine black sulphide(?). Fine quartz brecciation.	
VT	41.05	41.11	Various		6.00	Py	20-70	1-8mm quartz-pyrite veinlets, with fine black sulphide(?).	
VN	42.06	42.10	75.00		1.00	Py	10.00	2cm vein, fine black, possible sulphide. Fine disseminated pyrite.	
VN	42.10	42.13	65.00		1.00	Py	<1	1cm crustiform quartz vein, milky, traces of pyrite.	
VT	45.41		70.00		1.00	Py	50.00	Milky to grey quartz veinlet with pyrite and fine black sulphide(?).	
VT	45.47	45.53	Various		3.00	Py	<1	Clear to grey quartz veinlets with fine black sulphide(?), 1-5mm wide.	
FT	45.94	46.97			1.00			Strongly oxidized rubble, possible fault zone.	
VT	49.11		60.00		1.00	Py	5.00	Milky quartz veinlet hosting pyrite blebs.	
VT	49.60	50.15	10.00		1.00			Irregular smoky quartz veinlet with hematite staining.	
VT	50.64	53.15	Various		10/m			Milky quartz-carbonate veinlets and stringers, oxidized, at varying orientations.	
VN	53.50	53.55	40.00		1.00			3cm milky to clear crustiform quartz vein, oxidized at edges and enveloped by phyllic alteration. Cross-cut by carbonate stringers.	
FT	54.65	57.42			1.00			Extensive rubble, possible fault zone.	
VN	57.85	57.90	65.00		1.00	Py	3.00	Crustiform smoky to milky quartz vein, hosting disseminated pyrite. Vuggy, 5cm wide.	
VT	58.97	59.02	80.00		2.00			2 irregular milky quartz veinlets, 5cm spacing.	
VT	59.22	59.65	20.00		4.00			Irregular milky quartz veinlets, at low angle to core axis.	
VN	59.69	59.82	65.00		1.00	Py	5.00	Crustiform smoky to milky quartz vein, with patches of fine quartz breccia. Variably oxidized. 11cm wide. Fine disseminated pyrite.	
VT	60.18	60.50	Various		3.00			Milky unmineralized quartz veinlets.	
GO	61.30	61.32			1.00			Orange oxidized gouge, at contact with vein.	
VN	61.30	61.48	50.00		1.00	Py	2.00	16cm crustiform quartz vein. Bands of smoky to milky quartz, variably brecciated. Fine disseminated arsenopyrite and blebs and stringers of pyrite.	
						As	5.00		
ST	67.12	67.83	30-40		5.00			5 unmineralized milky quartz-carbonate stringers.	
VN	68.03	68.04	70.00		1.00	Py	40.00	1cm crustiform quartz-pyrite vein, milky to smoky quartz and massive pyrite. Blebs of chalcopyrite.

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Arsenopyrite	Type	Conc. (%)	Photo	
0.00	5.18	5.18					OVB														Overburden
5.18	9.44	4.26					GRD		MD	OR	RU	5.00									Intensely oxidized granodiorite. Bright orange, pervasive limonite staining. Soft and friable. Patchy occurrences of hematite.
9.44	20.81	11.37					GRD		MD	OR		4.00									Very strong oxidized granodiorite. More competent than previous interval, with patches of soft and friable core. Patches with feldspars altering to soft white clays. Pervasive limonite staining with patchy goethite and hematite staining. Oxidized patches with quartz eyes.
									DK	BL											
20.81	40.33	19.52					FEL		MD	OR		4.00									Oxidized and limonite stained quartz-feldspar-porphyry dyke. Patchy limonite staining and goethite staining in fractures. Patches of soft, clay altered dyke. White carbonate veinlets spread throughout (less is oxidized zones). Grey and grey-purple colour under limonite staining.
									LT	PU											
									LT	GY											
40.33	43.32	2.99				mKgW	GRD	MG	MD	GY-BL		3.00	3.00	PHC	3.00	1.00		Sp	<1		Moderately silicified and moderate to intensely phyllic altered granodiorite hosting disseminated and blebby pyrite throughout. Blebby galena and sphalerite hosted within veins and stringers (see secondary structures log). Light green and grey-blue colours. Patchy limonite staining on surface of core and staining on all fractures (some goethite on fractures).
									LT	GN	PA							Gn	<1		
43.32	48.00	4.68				mKgW	GRD	MG	MD	OR	PA	4.00		PHC	2.00						Highly oxidized granodiorite. Patchy limonite staining (on all fractures) and
									LT	BK				ARG	2.00						
48.00	57.65	9.65				mKgW	GRD	MG	MD	OR		3.00		ARG	1.00						Generally unaltered granodiorite, apart from patchy limonite staining and
									MD	GY											
			53.04	54.10	1.06	mKgW	GRD	MG	MD	OR		4.00		ARG	2.00						Argillic altered and intensely limonite stained and oxidized granodiorite. Hard, weak
57.65	58.33	0.68																			
58.33	132.57	74.24				mKgW	GRD	MG	MD	GY	MA			PRO	1.00						Unaltered granodiorite with patches of weak propylitic alteration. Grey colour. Small/rounded, finer grained xenoliths throughout.
			81.89	88.32	6.43	mKgW	GRD	MG	MD	GN				PRO	2.00						Weak to moderate propylitic altered granodiorite with 50cm phyllic alteration at beginning of interval.
														PHC	1.00						
			93.05	93.98	0.93	mKgW	GRD	MG	MD	LT	WH			ARG	3.00	<<1					Moderately argillic altered granodiorite with weak potassic overprint t and small patches of phyllic alteration (possibly an overprint) enveloping quartz/quartz-carbonate vein (hosting disseminated pyrite).
														PHC	2.00						
			93.46	100.70	7.24	mKgW	GRD	MG	LT	GN	PA			PHC	3.00	<1		Gn	<1		Patchy, altered granodiorite. Moderate to strong phyllic alteration enveloping quartz and quartz-carbonate veining (vein hosting sphalerite, galena and pyrite at 99.58m; see secondary structures log), phyllic and potassic overprinting moderate argillic alteration and an interval of weak propylitic alteration. Approximately 65% phyllic)50cm of argillic, 88cm of propylitic).
									MD	GN				ARG	3.00			Sp	<1		
														PRO	2.00						
			100.70	101.36	0.66	mKgW	GRD	MG	MD	GN				PRO	2.00						Weak to moderately propylitic altered granodiorite.
			108.48	109.66	1.18	mKgW	GRD	MG	LT	GN				PHC	3.00			Py	<1		Altered granodiorite. First half of interval is moderately argillic altered granodiorite with phyllic and potassic overprinting. 2nd half is moderate to strong phyllic alteration enveloping quartz-carbonate veinlet (hosting disseminated pyrite).
									LT	WH				ARG	3.00						
														POT	1.00						

KLAZA PROPERTY

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS				Photo	DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Arsenopyrite	Type	Conc. (%)		
			114.49	115.41	0.92	mKgW	GRD	MG	LT	WH	PA			ARG	3.00						Moderately argillic altered granodiorite with small phyllic alteration halos enveloping veinlets. Weak potassic and trace phyllic overprinting. Weak phyllic alteration at end of interval.
									LT	PK				POT	2.00						
														PHC	2.00						
			118.63	123.30	4.67	mKgW	GRD	MG	LT	GN				PHC	4.00						Very light green phyllic altered granodiorite (moderate to strong alteration, patches of abundant light green sericite). Slightly bleached appearance. Patchy silicification.
														SIL	3.00						
			125.48	127.06	1.58	mKgW	GRD	MG	MD	GN				PRO	3.00						Weak to moderate propylitic altered granodiorite. Medium to dark green.
									DK	GN											
			127.06	130.15	3.09	mKgW	GRD	MG	LT	GN	PA			ARG	3.00						Argillic and phyllic altered granodiorite with patches of dark green propylitic alteration and rubble. Patchy potassic overprinting argillic alteration (and minor phyllic overprinting). Hematite stained veinlets + quartz and quartz-carbonate veinlets present.
									LT	PK				POT	2.00						
														PHC	3.00						
132.57	136.30	3.73				mKgW	GRD	MG	LT	PK				ARG	3.00						Argillic and phyllic altered granodiorite with patches of dark green propylitic alteration and rubble. Patchy potassic overprinting argillic alteration (and minor phyllic overprinting). Quartz and quartz-carbonate veinlets present. More argillic than phyllic alteration (more argillic than previous description).
									LT	GN				POT	2.00						
														PHC	3.00						
136.30	156.52	20.22				mKgW	GRD	MG	MD	GY-GN				PRO	2.00						Weak (to moderate) propylitic altered granodiorite with carbonate veinlets and stringers in the more propylitic altered zones. Medium green-grey colour.
			137.19	143.30	6.11	mKgW	GRD	MG	LT	GN				ARG	3.00						Patchy altered granodiorite. Moderate argillic alteration with phyllic and potassic overprinting (weak to moderate) and patch of green-blue propylitic alteration. Majority is argillic altered with patches of weak to strong propylitic (alone). Patch of hematite staining and localized hematite staining on fractures from 144.25-144.90m.
									LT	PK				PHC	3.00						
														PRO	2.00						
			145.30	148.44	3.14	mKgW	GRD	MG	MD	BL-GN				PRO	3.00						Moderate to strong propylitic altered granodiorite with localized heavy hematite on a few fractures (2 heavy, approximately 2 weakly stained fractures). Dark to medium blue-green colour. Trace pyrite within carbonate vein. Dyke at 147.55-147.70m (see secondary structures log). Dyke is dark green and purple and fine grained (altered mafic dyke? not magnetic).
			153.44	155.80	2.36	mKgW	GRD	MG	LT	GN				PHC	3.00	<1					Light green moderate to strong phyllic altered granodiorite with patch of abundant sericite. Brecciated vein present (see secondary structures log).
156.52	192.68	36.16				mKgW	GRD	MG	LT	GY				PRO	1.00						Unaltered granodiorite with small phyllic alteration halos enveloping veins and veinlets, and patches of weak propylitic alteration.
														PHC	1.00						
192.68	260.97	68.29				mKgW	GRD	MG	MD	GN				PRO	2.00						Weakly propylitic altered granodiorite with intervals of unaltered granodiorite. Phyllic alteration enveloping veins. Patches of friable granodiorite.
														PHC	1.00						
			200.94	206.97		mKgW	GRD	MG	LT	GN				ARG	2.00						Patchy, altered granodiorite. Patchy (weak to moderate) argillic, (weak to moderate) phyllic and weak propylitic alteration. Some crumbly short intervals (up to 50cm). Patch of moderate potassic overprinting. Moderate argillic ay lower contact with weak phyllic overprint.

296.38	298.35	1.97				mKgW	GRD	MG	LT	GN	PA			PRO	2.00						Moderate to strong argillic altered granodiorite with weak to moderate propylitic and weak to strong potassic overprinting. Patchy overprinting. Overall light green-blue patchy colours (with pink and light green).
														ARG	3.00						
														POT	2.00						
298.35	302.49	4.14				mKgW	GRD	MG	MD	BL-GN				PRO	3.00						Blue-green patchy propylitic altered granodiorite (weak to strong propylitic alteration overall). Patchy weak to moderate argillic alteration with weak to strong propylitic overprinting. Phyllic alteration enveloping vein and veinlets (see secondary structures log).
											PA			ARG	2.00						
														PHC	1.00						
302.49	309.84	7.35				mKgW	GRD	MG	LT	WH	BX					<1					BRECCIATED ZONE. Overall heterolithic gouge breccia with white, grey and light-grey-green gouge. Several breccias described below. Phyllic altered granodiorite between subintervals. Contacts between gouge breccia and granodiorite are at low angles to-core-axis.
									LT	GY											Stage 1: Grey siliceous breccia with smoky grey quartz matrix. Quartz-carbonate and phyllic altered granodiorite clasts (granodiorite is veined by white, yellow and pink quartz-carbonate +-ankerite). Siliceous grey breccia cuts granodiorite.
																					Stage 1B: Perhaps near the same time as stage 1A (could also be at same time as stage 2) is netted/brecciating creamy-quartz-carbonate brecciating altered granodiorite. Least abundant breccia.
																					Stage 2A: White carbonate (calcite?, massive and with minor prismatic crystals) brecciated veined granodiorite and siliceous-grey breccia. Clasts are generally angular (to sub-angular). Most clasts 4mm to 5cm in with. 1 large 12cm clast contains banded grey-quartz, yellow + white quartz-carbonate vein hosting disseminated pyrite (could also be granodiorite in-situ, being brecciated by carbonate).

KLAZA PROPERTY

Hole: KL-DD Logger Name: Nicole Marsh

Depth (m)		DESCRIPTION
20.81		Granodiorite hangingwall, quartz-feldspar-porphry dyke. Extremely oxidized contact. Hangingwall is intensely goethite and limonite stained and limonite pitted. Contatc is approximate, could also be within 3cm gouge zone at 20.89m. Footwall is also oxidized, but less intesnelt. Cracks heavilt limonite stained, some hemaite and minor limonite pitting. Fault froximal to contact (see secondary structures log).
40.33		Quartz-feldspar-porphy dyke hanginwall, granodiorite footwall. Abrupt contact. Limonite stained and clay altered fault gouge at contact (9cm). Fine disseminated pyrite within hangingwall and vein proximal to contact (see secondary structures log). Phyllic altered granodiorite at contact.
261.45		Granodiorite hangingwall, quartz-feldspar-porphry dyke footwall. Extremely oxidized contact. Hangingwall is intensely goethite and limonite stained and limonite pitted. Contatc is approximate, could also be within 3cm gouge zone at 20.89m. Footwall is also oxidize. Footwall has thin fractures containing clay altered gouge (proximal to contact).
262.34		Quartz-feldspar-porphry dyke hangingwall, milky quartz vein (hosted within granodiorite) footwall. Abrupt contact at 60 degees tca. Quartz-feldspar-poprhry dyle is soft/weak at cnract with at least 2cm of clay altered fault gouge. Footwall is heavily mineralized and pitted milky quartz vein with black and grey sulphide gouge and aphanitic sulphides.
263.11		Granodiorite hangingwall, quartz-feldspar porphry dyke footwall. Abrupt contact at 45 degrees tca (gouge within footwall at 70 degrees tca). 2cm milky quartz vein with netted black aphanitic sulphdies and disseminated pyrite at contact hangignwall). Hanginwall is intensely altered. No mineralization within foottwall (competent dyke immediately).
266.17		Quartz-feldspar-porphry dyke hangingwall, granodiorite footwall. Abrupt contact at 70 degrees tca. Banded vein in footwall hosting disseminated pyrite, comprised of grey breccia (grey siliceous matrix with green granodiorite and/or dyke clasts), calcite breccia, and quartz hosting black aphanitic sulphdides, blebby pyrite and semi-massive pyrite. hangingwall is soft and appears sheared (at 80 degrees tca). Soft dyke for 4cm into hanginwall.

VN	163.97	166.76	2.79	55.00		3.00	Py	<1	Carbonate and vitreous quartz vein hosting disseminated and blebby pyrite, orientated at 55 degrees to-core-axis. 2 veinlets cut by massive carbonate vein at 40 degrees to-core-axis (in same direction).	
				40.00						
ST	173.00	176.42	3.42	75.00		4.00	Py	<1	Carbonate stringers with fine disseminated pyrite, orientated 70-80 degrees to-core-axis.	
VT	183.62	183.68	0.06	52.00					White carbonate veinlet with stringy hematite and black-fine-mineral. 5mm in width.	
VT	185.53	185.58	0.05	73.00			Py	<1	Carbonate and quartz crustiform stringy veinlet with disseminated pyrite. 5mm in width.	
VN	186.50	186.60	0.10						White massive carbonate (calcite) bordered by creamy-quartz carbonate and vitreous quartz, banded vein. 7.8cm at widest and 4.6cm at thinnest sections. ~50% calcite.	
VT	193.71	195.25	1.54	70.00		2.00	Py	<1	Carbonate and quartz-carbonate weakly crustiform veins at 70 degrees to-core-axis. 9mm each. Disseminated pyrite within dark-green strong phyllic alteration alteration envelope (silicified).	
VT	201.18	202.05	0.87	80.00		4.00			4 stringy quartz (+carbonate) veinlets. White and grey.	
VT	201.43	201.97	0.54	80.00					Grey quartz veinlet at 80 degrees and 2 veinlets at 40 degrees to-core-axis.	
GO	203.79	203.90	0.11	45.00					6.5cm of grey sulphide gouge.	
VN	204.06	204.13	0.07	58.00					Grey quartz veinlet at 80 degrees and 2 veinlets at 40 degrees to-core-axis.	
VT	209.74	210.15	0.41	13.00			Ep	2.00	Green quartz-epidote veinlet. ~4mm in width.	
VT	219.03	219.13	0.10	60.00					Creamy chalcedony (or quartz-carbonate?), vitreous grey quartz and white calcite vein. Dominantly chalcedony. Bands and weakly crustiform pink ankerite. 7.4cm in width.	
VT	222.90	222.98	0.08	60.00		3.00			Vuggy white/pink quartz-carbonate (+- ankerite). Stringy vein and veinlets with netted smoky quartz. 5mm, 6mm and 3cm wide grey chalcedony and quartz veinlets.	
DK	223.95	224.17	0.22	68.00					Green-grey siliceous dyke(?) hosting 1.5cm quartz vein and black stringers. Vein and stringers bearing black aphanitic sulphides(?) and blebby pyrite. Abrupt upper contact and gradational lower contact. Contact ~68 degrees to-core-axis. 20.0cm in width.	
VT	230.18	231.43	1.25			7.00			Quartz and quartz-carbonate veinlets up to 9mm in width (most 1-3mm). Orientated 55 to 70 degrees to-core-axis.	
VN	242.37	242.45	0.08	72.00			Py	1.00	White (slightly pink) quartz-carbonate (+- ankerite) crustiform vein with stringy white-yellow quartz-carbonate and quartz at edges of vein hosting blebby pyrite. Also, 2 veinlets of quartz-carbonate at same orientation, hosting blebby pyrite. Vein is 1.7cm in width.	
VT	244.07	244.47	0.40			4.00			Quartz and quartz-carbonate veinlets orientated at 40, 60, 65 and 70 degrees to-core-axis, with yellow and pink colours. Veinlet at 65 degrees is crustiform.	
VN	245.55	245.65	0.10	80.00		2.00	Gn	<1	2 veins. 2.8cm vein consisting of grey siliceous breccia with chalcedony clasts and 7mm of calcite. 2nd vein is 1cm of stringy beige quartz-carbonate hosting minor blebby galena.	
VN	248.34	248.45	0.11	70.00		2.00			Brecciated vein and veinlet with blue fine matrix and phyllic altered granodiorite clasts, quartz-carbonate veinlet and 3 stringers (1 quartz, 1 fine-blue, 1 calcite). Brecciated vein is 1.4cm and veinlet is ~3mm in width, orientated at 70 degrees to-core-axis	
VT	260.02	260.07	0.05	55.00					Banded veinlet (chlorite stained quartz, grey vitreous quartz and white quartz-carbonate). 7mm in width.	
VN	261.24	261.34	0.10	50.00					Light grey chalcedony vein with yellow quartz-carbonate and thin band of breccia (white quartz-carbonate and calcite matrix with siliceous clasts). 4.o cm in width, orientated at 50 degrees to-core-axis.	
VT	261.35	261.42	0.07	40.00					Stringy yellow quartz-carbonate and ark green chlorite veinlet hosting dark aphanitic sulphides.	
VT	261.43	261.48	0.05	60.00					5mm white quartz-carbonate veinlet at contact with dyke.	

KLAZA PROPERTY

2° Structure Type	From (m)	To (m)	Interval (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS		DESCRIPTION	Photo
							Type	Conc. (%)		
FT	261.50	262.34	0.84			5.00			Small clay altered fault gouge zones. 2mm, 5cm, 6mm zones that are well developed (orientated at 62, 50, and 70 degrees to-core-axis. 2cm and 5cm partly developed fault gouge zones (orientated at 50 and 70 degrees to-core-axis).	
VN	262.34	262.92	0.58	70.00			As	3.00	Pitted, milky quartz vein hosted within granodiorite. Extremely pitted with pervasive semi-massive to massive pyrite within pitting, surface of core and altered granodiorite. Dark-grey sulphide gouge and black aphanitic sulphides netted through core. Milky quartz hosting blebby arsenopyrite, sphalerite, galena and black aphanitic sulphides. 49cm in width.	
							Sp	1.00		
							Gn	1.00		
							Py	20.00		
GO	263.11	263.24	0.13	50.00					Soft, clay altered fault gouge zones (within dyke). ~2.9 cm and 1.5cm in width (at 50 and 60 degrees to-core-axis).	
				66.00						
SH	266.09	266.14	0.05	70.00					Sheared, chlorite rich, soft quartz-feldspar-porphyry dyke. Sheared at ~70 degrees to-core-axis.	
VN	266.14	266.44	0.30	60.00			As	7.00	Diverse vein. First ~8cm is grey-green with bands of breccia (fine grey matrix with siliceous small clasts to larger green granodiorite clasts), bands of quartz and fine blue-mineral. ~2cm of netted/brecciating white carbonate with quartz and granodiorite clasts. Remainder of vein is vitreous dark quartz (dark from aphanitic sulphides?) and milky quartz hosting blebby pyrite, blebby arsenopyrite and semi-massive pyrite. 26cm in width at orientated at 60 degrees to-core-axis. Blebby pyrite hosted within phyllic altered alteration footwall.	
							Py	10.00		
VT	274.60	274.64	0.04	60.00			Py	5.00	Weakly crustiform white quartz-carbonate (and vitreous quartz) veinlet hosting disseminated pyrite. 8mm in width, orientated at 60 degrees to-core-axis.	
VN	286.57	287.23	0.66	15.00					Stringy, pink quartz-carbonate, vibrant green quartz-chlorite vein with hematite and highly acid-reactive fault gouge in nose of vein (with light brecciation in nose of vein). 4.5cm in width, orientated at 15 degrees to-core-axis.	
VN	287.42	287.57	0.15	50.00			To	1.00	Semi-banded vein of yellow quartz-carbonate and grey vitreous quartz hosted in sericite and muscovite rich granodiorite. Vein hosting blebby and disseminated pyrite and tourmaline. Adjacent granodiorite is intensely phyllic altered and silicified. 16cm in width at 50 degrees to-core-axis.	
							Py	10.00		
VT	288.70	288.82	0.12	30.00					Completely hematite replaced veinlet at 30 degrees to-core-axis. 3mm in width.	
VN	292.57	292.64	0.07	62.00					Siliceous breccia vein. Light grey siliceous semi-vitreous matrix with sub-angular to angular clasts (<1mm too 1.5cm clasts). White small carbonate clasts and larger (cm scale) green phyllic altered granodiorite clasts. 3.4cm in width.	
VT	293.96	293.33	-0.63	24.00			He	15.00	Fragmented, pervasively hematite stained/replaced vein, with minor quartz. Abundant chlorite haloing vein. 9mm in width and orientated at 24 degrees to-core-axis.	
VN	300.69	300.73	0.04	70.00			Py	3.00	Grey vitreous quartz and white quartz-carbonate vein with dark-blue aphanitic stringers hosting disseminated and blebby pyrite. 1.7cm in width.	
VN	302.52	302.76	0.24	65.00					Fault gouge breccia with granodiorite clasts at 90 degrees to-core-axis. See geo log for additional description.	
VN	303.41	304.70	1.29						2 very light-grey, soft breccia veins. Appears bleached with hardly visible clasts. <5mm bleached clasts of granodiorite(?). 1st vein is orientated at 70 degrees at upper contact and 50 degrees at lower contact (3cm in width). 2nd vein is approximately 5cm in width and orientated at 35 degrees to-core-axis.	
VN	304.15	304.29	0.14						Shallow, massive carbonate vein with pink crustiform carbonate at ~28 degrees to-core-axis. Carbonate vein truncated by breccias (at 30 degrees at upper contact and 60 degrees at lower).	
GO	305.41	306.48	1.07	68.00					6mm of grey-sulphide gouge at contact between gouge-breccia and granodiorite, orientated at 6 degrees to-core-axis.

SUMMARY

From (m)	To (m)	Interval	Unit	Comments
0.00	5.18	5.18	GRD	Oxidized overburden and unaltered granodiorite.
5.18	21.59	16.41	GRD	Argillic altered granodiorite with patchy oxidation and phyllic alteration around veins and veinlets.
21.59	61.58	39.99	GRD	Lightly silicified granodiorite, with zones of argillic alteration.
61.58	70.57	8.99	GRD	Argillic altered granodiorite with phyllic envelopes around pyrite-hosting quartz veins and veinlets.
70.57	81.27	10.70	GRD	Silicified, potassic altered granodiorite with argillic and phyllic envelopes around quartz veinlets.
81.27	82.58	1.31	FEL	Dark grey quartz feldspar porphyry dyke, with calcite-lined vugs and clay alteration of feldspars.
82.58	86.10	3.52	GRD	Argillic to phyllic alteration envelope around veinlets and veins, with pervasive potassic alteration.
86.10	148.44	62.34	GRD	Lightly silicified and potassic altered granodiorite, cross-cut by quartz veins and veinlets with argillic to phyllic alteration envelopes.

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Arsenopyrite	Type	Conc. (%)	Photo	
0.00	5.18	5.18				mKgW	GRD	MG	MD	GY	RB	4I		ARG	3I						Oxidized overburden, with patches of unaltered granodiorite and strong to intense argillic alteration (possible boulders). Oxidized clay and silt.
5.18	7.80	2.62				mKgW	GRD	MG		WH	FR										
									MD	OR		4I		ARG	4I						Argillic altered granodiorite, with moderate to intense orange oxidation.
7.80	21.59	13.79				mKgW	GRD	MG	MD	BN	PA	3I	2I	ARG	3I	<1					Argillic altered granodiorite with patchy oxidation. Patches of moderately silicified, unaltered granodiorite. Oxidation frequently obscures other alteration. Traces of phyllic alteration around veins and veinlets. Trace disseminatd pyrite, concentrated around veins and veinlets.
									LT	GY				PHC	1I						
			7.80	8.50	0.70	mKgW	GRD	MG	LT	GN	EN	3I		ARG	2I	2.00					Phyllic and argillic envelope encompassing 2.5cm quartz-carbonate vein. Grades from argillic to phyllic towards the vein. Pyrite blebs in vein selvage.
									MD	BN				PHC	2I						
			17.10	18.60	1.50	mKgW	GRD	MG	LT	GN	EN	3I		ARG	3I	1.00					Phyllic and argillic envelope around 2cm quartz-carbonate vein, phyllic alteration closest to the vein. Fine disseminated pyrite in phyllic envelope.
										WH				PHC	2I						
21.59	47.38	25.79				mKgW	GRD	MG	MD	GY	MA	1I	2I			<1					Light to moderately silicified granodiorite, relatively unaltered. Contains zones of moderate to intense argillic alteration and traces of phyllic and potassic alteration.
			24.75	26.52	1.77	mKgW	GRD	MG	MD	OR		4I		ARG	4I						Strong to intensely argillic altered and oxidized granodiorite.
			26.75	26.85	0.10	mKgW	GRD	MG	LT	OR	RB	4I		ARG	5I						Intensely argillic granodiorite, altered to rubble and granules.
			27.53	28.87	1.34	mKgW	GRD	MG	MD	OR	PA	3I		ARG	4I	1.00					Envelope of altered granodiorite encompassing quartz-carbonate veinlet. Argillic alteration grading into patchy propylitic and potassic alteration near veinlet. Patchy oxidation on fracture surfaces. Fine pyrite in selvage on veinlet.
									MD	GN	EN			PRO	3I						
														POT	3I						
			32.05	32.35	0.30	mKgW	GRD	MG	LT	OR		3I		ARG	4I						Moderate to intense argillic altered and oxidized granodiorite.
			33.33	33.85	0.52	mKgW	GRD	MG	MD	OR	RB	3I		ARG	5I						Intensely argillic altered granodiorite, fragmented and oxidized.
			35.94	36.89	0.95	mKgW	GRD	MG		WH	EN	2I		ARG	4I						Strong to intense argillic envelope around quartz-carbonate stringers. Intensity and oxidation decreases away from unaltered granodiorite and towards stringers.
									LT	GY											
			38.45	40.01	1.56	mKgW	GRD	MG		WH	EN	2I		ARG	4I	<1					Alteration envelope around quartz-carbonate veinlet. Intense argillic altered granodiorite at outside edges of envelope, with argillic intensity decreasing towards veinlet. Light phyllic overprint close to veinlet. Trace potassic overprint throughout. Trace fine pyrite near veinlet.
									LT	GN				PHC	2I						
														POT	1I						
			41.00	43.20	2.20	mKgW	GRD	MG		WH	PA	2I		ARG	4I	1.00					Argillic altered granodiorite envelope, intensely altered at outside edges. Oxidation on fractures. Encompasses 3 pyrite-bearing quartz-carbonate narrow veins, with 1-3cm phyllic haloes.
									LT	GN	EN			PHC	2I						
			44.25	45.22	0.97	mKgW	GRD	MG		WH	EN	2I		ARG	4I	<1					Argillic altered granodiorite, most intense at edges of envelope. Envelope encompassing quartz-carbonate veinlet. Phyllic overprint closest to veinlet. Trace fine pyrite. Patches of potassic alteration throughout.
									LT	GN				PHC	2I						
														POT	2I						
47.38	61.58	14.20				mKgW	GRD	MG	MD	GY	PA	1I	2I	PHC	2I	<1					Light to moderately silicified granodiorite, with zones of argillic and phyllic alteration. Patches of potassic alteration. Trace oxidation on fractures.
														POT	1I

VT	117.19	118.34	70.00		8.00			8 irregular carbonate veinlets, predominantly at 70 degrees to core axis.	
VT	119.37	119.42	60.00		4.00	Py	1.00	4 interwoven quartz-carbonate veinlets, in phyllic and potassic alteration envelope with fine pyrite.	
VT	119.68	120.28	70.00		5.00			Quartz-carbonate veinlets in phyllic and potassic alteration envelopes.	
VT	121.10	121.21	70.00		4.00			4 milky crustiform quartz veinlets.	
VT	121.21	121.35				Py	5.00	Netted and interwoven quartz veins and veinlets, smoky, hosting disseminated pyrite.	
VT	122.01	122.34	60.00		5.00	Py	20.00	5 quartz-pyrite veinlets, hosting fine massive pyrite, in phyllic alteration envelope.	
VT	123.00	123.03	55.00		1.00	Py	15.00	Milky to smoky quartz veinlet hosting pyrite stringers, encompassed by 10cm phyllic alteration envelope.	
ST	123.63	124.01	55.00		3.00			3 quartz-carbonate stringers encompassed by phyllic envelopes.	
VT	125.12	126.48	60-70		3.00			3 milky quartz veinlets with phyllic and potassic selvages.	
VT	126.87	126.91	75.00		5.00	Py	1.00	5 smoky to milky quartz veinlets hosting pyrite blebs in selvages.	
VT	127.18	127.22	65.00		2.00	Py	40.00	2 parallel quartz veinlets hosting disseminated pyrite, at 1cm separation, in phyllic alteration envelope.	
VT	127.30	127.35	70.00		3.00	Py	30.00	3 parallel quartz veinlets, milky to smoky, hosting disseminated pyrite, in phyllic alteration envelope.	
VT	127.56	128.70	20.00		5.00			Milky quartz-carbonate crustiform veinlets.	
GO	129.58	129.65			1.00			Orange oxidized gouge and rubble, possible fault.	
VN	129.65	130.10	5.00		1.00			4-5cm crustiform quartz-carbonate vein with hematite bands, fine breccia, and grey chalcedonic banding. Moderately oxidized.	
ST	132.43	132.64	50.00		8.00			8 quartz-carbonate stringers with phyllic alteration selvages.	
ST	135.55	135.89	70.00		2.00			2 carbonate stringers with black rims.	
VT	136.49	136.51	60.00		1.00	Py	<1	Quartz-carbonate veinlet with traces of pyrite. 1cm phyllic envelope on either side.	
ST	136.72	136.90	70.00		3.00			Quartz-carbonate stringers with purple hematite staining and potassic and phyllic alteration envelope.	
ST	136.94	137.07						Netted carbonate stringers at varying orientations.	
BX	137.55	137.57	80.00		1.00			Quartz breccia, smoky aphanitic matrix with angular milky 1-2mm diameter quartz clasts.	
VN	138.18	138.34	70.00		3.00			3 milky crustiform carbonate-quartz veins, 1.2cm wide, in phyllic alteration envelope.	
VT	138.86	139.04	50-60		3.00	Py	10.00	Smoky quartz-carbonate veinlets hosting disseminated pyrite, with 2-3cm phyllic selvages on either side.	
BX	139.38	139.41	60.00		1.00	Py	1.00	Dk grey siliceous aphanitic matrix, 1mm phyllic altered granodiorite clasts. Hosting fine pyrite.	
BX	139.42	139.60	50.00		1.00	Py	5.00	15cm breccia, dark grey-green siliceous matrix, <1mm to 1.5cm subangular to subrounded phyllic-altered granodiorite clasts. Fine disseminated pyrite.	
BX	139.64	139.68	50.00		1.00			1cm siliceous breccia with phyllic-altered granodiorite clasts.	
VT	139.46		70.00		1.00	Py	10.00	Milky quartz veinlet hosting disseminated pyrite.	
VT	139.80	139.90	30.00		1.00			Clear to milky quartz-carbonate veinlet with 1-2cm wide phyllic and potassic selvage on either side.	
VT	140.22	140.26	70.00		2.00	Py	5.00	2 milky to purple quartz-carbonate veinlets hosting pyrite blebs.	
BX	140.26	140.32	50.00		1.00	Py	10.00	3.5cm wide breccia zone, fine siliceous matrix, 1-4mm granodiorite clasts. One rounded relict quartz clast, 2.5cm diameter.	
VT	140.75	141.42	50-70		5.00			5 carbonate-quartz veinlets in phyllic envelope.	
VT	142.46	142.49	55.00		1.00			Net-textured milky quartz veinlet with potassic and phyllic envelope.	
VT	142.84	143.01	60.00		6.00			Milky to black carbonate veinlets.	
VT	143.47	144.53	20-70		9.00			Milky quartz-carbonate veinlets, lightly phyllic altered selvages.	
VT	145.35	145.40	55.00		1.00			Milky quartz-carbonate veinlet with phyllic envelope.	
VT	145.49	145.52	60.00		1.00			Crustiform smoky to milky carbonate veinlet.	
ST	145.52	148.11	50.00		12/m			Carbonate stringers in phyllic and potassic envelope.	
VT	148.09	148.13	55.00		2.00			Vuggy, net-textured smoky quartz veinlets, interwoven.

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS				Photo	DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite		Type	Conc. (%)		
0.00	12.20	12.20					OVB	FG	MD	BN		5I		CLY	5I						40' casing: strongly weathered overburden and redrill material. HQ casing. Mainly broken down to strongly oxidized clays.
									DK	OR											
12.20	37.72	25.52				mKgW	GRD	MG	MD	GN	RB	4I		ARG	3I			LI			Unaltered granodiorite with patchy argillic and phyllic vein envelopes. Interval is very strongly oxidized due to softness. Crosscut by several mineralized and altered quartz veins with heavy oxide staining. An altered vein between 17.10-17.37m hosts yellow scorodite, with high goethite-limonite presence along the same vein.
									DK	OR	PA			PHC	3I			GO			
																		SO			
			14.21	15.23	1.02	mKgW	GRD	MG	MD	GN	RB	4I		ARG	3I			LI			Moderate argillic granodiorite with strong oxidation.
									MD	OR											
			37.24	37.72	0.48	mKgW	GRD	MG	MD	BN	RB	3I		PHC	3I	8.00					Moderate oxidized and clay altered mineralized dyke selvedge. Too altered to distinguish original textures and veining. Hosts disseminated medium grained pyrite crystals. Dominantly phyllic.
										GY				CLY	3I						
37.72	40.48	2.76				LKqP	FEL	FG	MD	BN	RB	3I									Strongly oxide-stained, rubbly quartz feldspar porphyry dyke with 0.2-1mm sericite and oxide altered quartz/feldspar phenocrysts, showing no strain or flow directions.
									LT	OR											
40.48	44.95	4.47				mKgW	GRD	MG	MD	BN	RB	4I		PHC	3I	10.00					Short granodiorite interval between two quartz feldspar porphyry dykes, and thus
									DK	GY	GO			CLY	3I						
			40.48	41.76	1.28	mKgW	GRD	MG	MD	BN	RB	4I		PHC	3I	8.00		LI	15.00		Mineralized dyke selvedge: heavily oxide and clay altered with moderate-weak gouge.
									DK	GY	GO			CLY	3I						
			43.61	44.95	1.34	mKgW	GRD	MG	MD	BN	RB	3I		PHC	3I						Mineralized dyke selvedge: heavily oxide and clay altered with moderate-weak gouge.
									DK	GY	GO			CLY	3I						
44.95	46.09	1.14				mKgW	GRD	MG	MD	BN	RB			CLY	2I						Strongly oxide-stained, rubbly quartz feldspar porphyry dyke with 0.2-1mm sericite and oxide altered quartz/feldspar phenocrysts, showing no strain or flow directions.
														SER	2I						
46.09	47.85	1.76				mKgW	GRD	MG	MD	GY	XL			ARG	2I						Competent recovery begins at 46.09m. Unaltered granodiorite with patchy argillic alteration and mineralized dyke selvedge following the porphyry dyke contact. Granodiorite is dark grey with some crosscutting quartz veinlets.
											PA										
			46.09	46.69	0.60	mKgW	GRD	MG	MD	GY	XL			PHC	3I	10.00					Mineralized dyke selvedge with phyllic granodiorite and clay alteration.
											GO			CLY	3I						
			46.69	47.85	1.16	mKgW	GRD	MG	MD	GY	XL			ARG	3I						Moderate argillic granodiorite with rare crosscutting pyrite-quartz veinlets.
									LT												
47.85	96.15	48.30				mKgW	GRD	MG	MD	GY	XL		3I	PRO	3I						Moderate propyllitic granodiorite with patchy argillic and phyllic vein envelopes on crosscutting mineralized quartz-carbonate veins. Moderate silica flooding begins after approximately 68m depth.
										GN	PA			ARG	2I						
														PHC	2I						
			52.48	53.39	0.91	mKgW	GRD	MG	LT	WH	XL			ARG	4I						Strongly argillic granodiorite.
										PK											
			53.39	53.75	0.36	mKgW	GRD	MG	MD	GY	XL		2I	PHC	4I						Strong phyllic with weak silicification crosscut by a thick quartz-pyrite vein.
									DK	GN											
			66.46	68.00	1.54	mKgW	GRD	MG	MD	GY	XL		4I	ARG	3I						Moderate argillic with phyllic vein envelopes on low quartz veins with some gouge.
									LT	GN				PHC	3I						

KLAZA

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite		Type	Conc. (%)	Photo	
			68.00	70.67	2.67	mKgW	GRD	MG	MD	GY	XL			PRO	3I						Moderate propyllitic granodiorite strongly silica flooded, destroying most original textures.
										GN	FL										
			70.67	72.30	1.63	mKgW	GRD	MG	LT	GN	XL			ARG	4I						Moderate-strong argillic granodiorite with rare crosscutting mineralized quartz veinlets, with phyllic envelopes. 8cm clay altered and gouged interval.
										WH				CLY	2I						
														PHC	2I						
			80.58	82.55	1.97	mKgW	GRD	MG	MD	GN	XL			PHC	3I	1.00					Moderate phyllic granodiorite hosting disseminated pyrite with a central 45cm argillic interval. Ends in a 22cm thick friable fault zone.
										GY				ARG	3I						
			85.49	86.44	0.95	mKgW	GRD	MG	MD	GY	XL			PHC	4I						Strong phyllic granodiorite crosscut by a single prominent quartz vein with rich sulphide mineralization.
									LT	GN											
			94.16	96.15	1.99	mKgW	GRD	MG	MD	GY	XL			PHC	4I	1.00					Moderate phyllic granodiorite due to prominent crosscutting quartz veins, with argillic alteration where quartz veins are farther apart.
									LT	GN				ARG	3I						
96.15	115.67	19.52				mKgW	GRD	MG	MD	GY	XL		2I	PRO	2I						Weakly propyllitic granodiorite with patchy silicification and argillic alteration, especially near crosscutting quartz veinlets/veins, where phyllic envelopes grade out into argillic. Silica flooding is sourced from the veins.
										GN	FT			ARG	3I						
														PHC	2I						
			99.11	100.60	1.49	mKgW	GRD	MG	MD	GY	XL		4I								Strongly silica flooded granodiorite, obliterating original granodiorite textures.
										GN	FL										
			100.60	101.03	0.43	mKgW	GRD	MG	MD	GY	XL			ARG	3I						Moderate argillic granodiorite overprinted by propyllitic.
									LT					PRO	2I						
			102.30	102.61	0.31	mKgW	GRD	MG	LT	GY	XL			ARG	4I						Strong argillic granodiorite crosscut by a mineralized quartz vein.
										GN											
			104.75	105.26	0.51	mKgW	GRD	MG	LT	GY	XL			ARG	4I						Weakly faulted argillic overprinted by phyllic with a crosscutting quartz vein.
										GN	FT			PHC	2I						
			105.26	106.81	1.55	mKgW	GRD	MG	MD	GY	XL		3I	PRO	3I						Moderate propyllitic with moderate silica flooding.
										GN	FL										
			106.81	108.21	1.40	mKgW	GRD	MG	MD	GY	XL	2I	3I	PHC	4I	3.00					Strong phyllic alteration around mineralized quartz veins, that grades into argillic with increasing distance from veins.
										GN				ARG	2I						
			112.81	113.41	0.60	mKgW	GRD	MG	LT	GY	XL			ARG	4I						Strong argillic granodiorite with fractures and moderate crumbling.
										WH	FR										
115.67	119.26	3.59				mKgW	GRD	MG	MD	GY	XL		2I	ARG	3I	1.00		CP	1.00		Argillic with phyllic on prominent crosscutting quartz veins. Weakly silica flooded for last 1 m of interval.
									LT	GN				PHC	3I						
119.26	135.03	15.77				mKgW	GRD	MG	MD	GY	XL			PRO	3I						Moderate-weak propyllitic granodiorite with patchy argillic and a thick phyllic interval due to overlapping quartz vein envelopes.
										GN	PA			PHC	3I						
														ARG	2I						
135.03	142.93	7.90				mKgW	GRD	MG	LT	GY	XL			PHC	4I						Dominantly strong phyllic granodiorite with patchy argillic. Rubbly where phyllic is strongest, with many crosscutting quartz veins.
										GN	RB			ARG	3I						
			135.03	138.42	3.39	mKgW	GRD	MG	LT	WH	XL			ARG	4I						Moderately argillic granodiorite with weak clay alteration of feldspar phenocrysts.
										GN				CLY	2I						
			138.42	142.93	4.51	mKgW	GRD	MG	MD	GY	XL			PHC	4I	2.00					Strong phyllic alteration due to closely spaced and often clay altered quartz veinlets with sulphides.

2° Structure Type	From (m)	To (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS Type	MINERALS Conc. (%)	DESCRIPTION	Photo
VN	17.10	17.37	15.00			LI	10.00	Very strongly oxidized quartz vein, now rendered soft and hosting yellow-orange scorodite, limonite, and goethite. Rubbly and fractured.	
						GO	10.00		
						SO	20.00		
VT	21.11	21.49	60.00		5.00	PY	1.00	Five white massive quartz veinlets with moderate oxide staining and weak clay alteration. One veinlet hosts disseminated pyrite.	
VT	27.53	27.75	20.00			PY	10.00	Quartz veinlet with heavy clay alteration. Now dark grey clay and rubble, with fine-medium grained pyrite crystals.	
VN	27.75	27.97	30.00					Massive grey quartz vein with small vugs.	
VT	29.43	30.51	20.00		2.00	PY	80.00	Two 1mm thick quartz-pyrite veinlets with narrow, well-defined phyllic envelopes (2mm thick)	
VT	31.15	31.16	30.00			PY	8.00	Quartz veinlet with heavy clay alteration. Now dark grey clay and rubble, with fine-medium grained pyrite crystals.	
VN	40.72	41.76	60.00		6.00	PY	10.00	Dyke selvedge: six quartz-carbonate veinlets/veins hosting disseminated-blebby pyrite in clay altered dyke selvedge. Difficult to distinguish the textures due to oxide alteration.	
VT	42.05	43.83	60.00		5.00	PY	6.00	5 quartz-pyrite veinlets. Too rubbly to be sure of number and orientation of veinlets.	
VT	43.90	45.00	45.00		8.00	PY	5.00	8 quartz-pyrite veinlets, some with yellow scorodite. Too rubbly to be sure of number and orientation of veinlets.	
						SO	3.00		
VN	46.01	46.08	90.00			PY	8.00	Thick massive-cracked grey quartz vein hosting disseminated-blebby pyrite, with some calcite infilling cracks.	
VT	46.09	46.69	70.00		12.00	PY	20.00	Dyke selvedge with closely spaced clay altered quartz veinlets hosting disseminated-blebby pyrite.	
VN	53.56	53.59	70.00			PY	70.00	white massive quartz vein hosting massive pyrite.	
FT	57.07	57.39	40.00					Friable crumbled fault zone.	
VT	58.55	58.83	60.00		2.00	PY	40.00	Two 2-3mm quartz veinlets with blebby-massive pyrite and chalcopyrite.	
						CP	10.00		
VN	62.08	62.09	80.00			PY	5.00	1cm thick massive white quartz vein hosting blebby pyrite.	
VN	63.70	63.84	30.00		2.00			Two crosscutting massive white calcite veins, that sit at opposing 30 degree angles.	
VN	66.99	67.03	45.00			PY	20.00	White massive quartz vein with blebby pyrite at the centre.	
VN	67.29	67.32	20.00			PY	10.00	Low angle banded white-grey quartz vein hosting blebby pyrite and dark grey clay altered sulphides.	
GO	71.23	71.30	70.00					Gouged argillic granodiorite	
VT	71.48	71.49	80.00			PY	40.00	White massive quartz veinlet with blebby-interstitial pyrite.	
VT	71.90	71.91	75.00			PY	5.00	Grey quartz veinlet hosting disseminated pyrite and blebby hematite.	
						HE	10.00		
DY	79.96	80.02	90.00					Medium pink aplite dyke.	
VN	81.21	81.26	90.00			PY	40.00	banded smoky-white quartz vein with several crosscutting discontinuous pyrite veinlets and blebby chalcopyrite.	
						CP	5.00		
GO	81.87	81.91	60.00			PY	5.00	Gouged argillic granodiorite.	
VN	82.00	82.02	70.00			PY	30.00	Banded white-grey-smoky quartz vein with orange oxide staining, hosting blebby pyrite and chalcopyrite.	
						CP	5.00		
VN	85.79	85.85	65.00			PY	30.00	Thick grey-smoky quartz vein crosscut by two white massive calcite veinlets and a 2cm thick pyrite vein. Pyrite is massive and ghost bladed.	
						SP	6.00		
VT	89.00	89.47	55.00		3.00	PY	8.00	White massive quartz veinlets with disseminated-blebby pyrite.	
VN	90.40	90.42	60.00			PY	20.00	White-grey semitranslucent quartz vein hosting disseminated-blebby pyrite.	
VT	92.67	92.68	45.00			PY	2.00	White clay altered quartz veinlet hosting disseminated pyrite.	
VN	94.67	94.72	80.00			PY	10.00	Milky-smoky banded quartz vein hosting disseminated pyrite in the smoky quartz, and honey brown sphalerite along the milky to smoky quartz contacts.	
						SP	8.00		
GO	94.95	94.98	85.00			PY	10.00	Moderately gouged and clay altered grey-white quartz vein hosting disseminated-blebby pyrite.	
VN	95.41	95.44	75.00			PY	20.00	Massive grey translucent quartz vein hosting discontinuous pyrite veinlets and disseminated-blebby pyrite.	

KLAZA

2° Structure Type	From (m)	To (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS		DESCRIPTION	Photo
						Type	Conc. (%)		
VN	97.59	97.63	70.00			PY	10.00	Grey weakly banded semitranslucent quartz vein with disseminated-blebby pyrite.	
VN	100.15	100.20	40.00			PY	2.00	White quartz vein with poorly defined borders that flood the surrounding granodiorite.	
VN	102.43	102.45	45.00			PY	10.00	White-grey blended quartz vein with smoky quartz stringers. Hosts blebby pyrite and pyrite-replaced angular clasts.	
VN	103.00	103.03	35.00					White massive calcite vein.	
VT	104.96	104.97	25.00					White massive calcite veinlet.	
VN	105.42	105.66	55.00		4.00	PY	35.00	Four white-grey semitranslucent quartz veins/veinlets hosting massive-blebby pyrite and discontinuous pyrite veinlets.	
VT	105.71	105.72	50.00			PY	20.00	White massive semitranslucent quartz veinlet hosting blebby pyrite and galena.	
						GN	15.00		
VN	105.94	106.01	25.00			PY	10.00	White-grey massive-crackled quartz vein hosting disseminated pyrite.	
VN	106.11	106.31	25.00			PY	8.00	Moderately clay altered and rubbly, oxide-stained quartz vein hosting disseminated-blebby pyrite.	
VT	106.74	107.15	40.00		5.00	PY	6.00	White-grey quartz veinlets hosting blebby pyrite and discontinuous pyrite stringers.	
VN	107.37	107.50	40.00			PY	60.00	Thick quartz vein. First 2cm is smoky quartz brecciating white quartz. Next 3cm is milky opaque quartz vein hosting massive pyrite and chalcopyrite. Final 3cm is a massive pyrite vein.	x
						CP	15.00		
VT	107.75	107.81	80.00		2.00	PY	20.00	Two vuggy white-smoky-grey quartz veinlets hosting discontinuous pyrite stringers.

VN	109.56	109.57	80.00			PY	60.00	White massive quartz vein almost totally replaced by pyrite.	
VN	110.80	110.29	75.00		2.00	PY	20.00	White-grey banded quartz veins hosting blebby-disseminated pyrite.	
VT	110.70	110.71	85.00			PY	10.00	White calcite veinlet hosting blebby pyrite with dark green chlorite borders.	
VN	110.98	111.01	50.00			PY	25.00	White quartz vein with poorly defined borders, hosting blebby-massive pyrite.	
FT	112.76	113.39	40.00					Friable fault zone.	
VN	113.77	113.79	80.00			PY	30.00	White poorly defined quartz vein with parallel white massive calcite veinlet and cream banded chalcedony veinlet. Hosts massive pyrite in white quartz.	
VN	114.44	115.70	70.00		7.00	PY	5.00	Seven white-grey poorly defined quartz veinlets with cream carbonate-filled discontinuous cracks. Hosts disseminated pyrite and crystalline sericite.	
						SE	3.00		
VN	116.73	116.75	60.00			PY	6.00	White discontinuous massive calcite vein with parallel smoky quartz veinlets and disseminated pyrite.	
VT	117.69	117.86	80.00		3.00	PY	10.00	Three grey quartz veinlets with disseminated pyrite in their phyllic envelopes.	
VN	117.96	118.28	60.00			PY	40.00	Thick, complex quartz vein: First 16cm are rich in pyrite and chalcopyrite, hosted in mixed masses and blebs in grey semitranslucent quartz with interstitial white calcite. Last 18cm consists of a vuggy smoky quartz breccia hosting granodiorite and grey quartz clasts, some of which have been replaced by pyrite. White massive calcite is found interstitially.	x
						CP	30.00		
VN	118.58	121.24	70.00		6.00	PY	6.00	Four white-grey semitranslucent quartz veins with poorly defined borders, hosting disseminated-blebby pyrite.	
VN	123.36	123.40	45.00			PY	15.00	Banded milky-smoky-grey quartz vein hosting blebby pyrite, elongate parallel to bands.	
VN	123.65	123.67	70.00			PY	20.00	White-cream semitranslucent quartz vein hosting blebby pyrite.	
VN	125.09	125.11	60.00			PY	10.00	White-cream semitranslucent quartz vein hosting blebby pyrite and red hematite.	
						HE	6.00		
VT	127.36	127.43	50.00		4.00			Four 1mm thick pyrite veinlets.	
VN	127.88	128.09	80.00					Weakly clay altered white massive calcite veins.	
VN	128.30	129.04	75.00	5.00		PY	8.00	Five white-grey quartz veins with parallel cream carbonate veinlets, hosting disseminated pyrite and red hematite.	
						HE	3.00		
VN	128.35	128.52	5.00			PY	5.00	Grey-white massive quartz vein hosting red blebby hematite at its centre, and disseminated pyrite throughout. Truncated by a quartz-carbonate veinlet at both ends.	
						HE	15.00		
VT	131.53	131.54	60.00			PY	8.00	Grey translucent quartz veinlet hosting blebby pyrite at its centre.	
VN	131.66	131.68	75.00			PY	30.00	White translucent quartz vein with comb texture. Massive pyrite is hosted at its centre, interstitial to the comb crystals.

SUMMARY

From (m)	To (m)	Interval	Unit	Comments
0.00	44.94	44.94	GRD	Unaltered, oxidized granodiorite.
44.94	76.21	31.27	GRD	Weakly propyllitic-unaltered granodiorite.
76.21	82.79	6.58	GRD	Moderate argillic granodiorite with patchy propyllitic and potassic alteration.
82.79	93.60	10.81	FEL	Quartz feldspar porphyry dyke.
93.60	126.89	33.29	GRD	Weak propyllitic granodiorite with patches of argillic-phyllic alteration.
126.89	127.64	0.75	FEL	Quartz feldspar porphyry dyke with 5% biotite crystals.
127.64	178.21	50.57	GRD	Weak propyllitic granodiorite with patches of argillic-phyllic alteration.
178.21	181.97	3.76	GRD	Weak argillic granodiorite crosscut by chlorite-rich and hematite stained veins.
181.97	198.58	16.61	GRD	Moderate propyllitic granodiorite with patchy argillic alteration.
198.58	204.54	5.96	GRD	Unaltered granodiorite with patchy propyllitic.
204.54	207.89	3.35	GRD	Moderate argillic granodiorite.
207.89	231.77	23.88	GRD	Weak propyllitic granodiorite containing a very stongly mineralized vein zone.
231.77	233.24	1.47	FEL	Quartz feldspar porphyry dyke.
233.24	279.5	46.26	GRD	Unaltered granodiorite with patchy weak potassic alteration.

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite		Type	Conc. (%)	Photo	
0.00	44.94	44.94				mKgW	GRD	MG	MD	GY	XL	3I		ARG	2I			LI	8.0		Unaltered granodiorite with moderate oxidation. Oxidation is fracture limited to >70.5m depth, and pervasive to approximately 13m depth. Oxidation is strongest in argillic patches, and is pervasive in argillic until approximately 52m. Crosscut by calcite-quartz veins/veinlets with varying degrees of oxide staining. Several veins host silver crystalline hematite and pyrite.
										BN				PHC	1I			GO	3.0		
										OR											
			0.00	13.59	13.59	mKgW	GRD	MG	MD	WH	XL	3I		ARG	3I			LI	12.0		Argillic granodiorite with pervasive oxide-staining and short sections of crumbling. Crosscut by quartz-calcite veinlets with oxide-staining and hosting hematite and pyrite.
										BN											
										OR											
			18.55	22.10	3.55	mKgW	GRD	MG	MD	WH	XL	3I		ARG	3I			LI	10.0		Argillic granodiorite with pervasive oxide-staining and short sections of crumbling. Crosscut by quartz-calcite veinlets with oxide-staining and hosting hematite and pyrite.
										OR											
			24.79	25.79	1.00	mKgW	GRD	MG	MD	WH	XL	3I		ARG	3I			LI	10.0		Argillic granodiorite with pervasive oxide-staining and short sections of crumbling. Crosscut by quartz-calcite veinlets with oxide-staining and hosting hematite and pyrite.
										OR											
			32.67	34.64	1.97	mKgW	GRD	MG	MD	WH	XL	3I		ARG	3I			LI	10.0		Argillic granodiorite with pervasive oxidation and 3cm gouge interval. Crosscut by thick quartz vein and aplite dyke.
										OR											
			37.81	38.40	0.59	mKgW	GRD	MG	MD	WH	XL	3I		ARG	3I			LI	8.0		Argillic granodiorite with pervasive oxidation and 3cm gouge interval. Crosscut by thick quartz vein.
									LT	OR											
			40.88	42.28	1.40	mKgW	GRD	MG	MD	GY	XL	2I		ARG	2I			LI	6.0		Weak argillic with pervasive oxidation.
										OR											
			43.90	44.57	0.67	mKgW	GRD	MG	MD	WH	XL	2I		ARG	3I			LI	6.0		Moderate argillic with pervasive oxidation.
									LT	OR											
44.94	76.21	31.27				mKgW	GRD	MG	MD	GY	XL	2I	2I	PRO	2I						Weak propyllitic-unaltered granodiorite. Propyllitic dominates, and is a product of vein alteration envelopes. Patchy argillic and phyllic envelopes on crosscutting quartz-carbonate veinlets. Patchy silica flooding produces occasional quartz eyes.
										GN				ARG	2I						
										BN				PHC	2I						
			50.90	52.55	1.65	mKgW	GRD	MG	LT	GN	XL	3I		ARG	2I						Weak argillic overprinted by phyllic with pervasive oxidation staining. Crosscut by two thick oxidized quartz veins.
										OR				PHC	2I						
			52.55	54.63	2.08	mKgW	GRD	MG	MD	GY	XL		2I								Weakly silicified unaltered granodiorite.
											FL										
			56.20	56.76	0.56	mKgW	GRD	MG	LT	WH	XL			ARG	3I						Moderately argillic granodiorite.
										PK											
			57.06	58.80	1.74	mKgW	GRD	MG	LT	GN	XL			ARG	3I						Overprinting argillic and phyllic alterations with crosscutting quartz veins.
										PK				PHC	2I						
			60.93	64.31	3.38	mKgW	GRD	MG	LT	GN	XL			ARG	3I						Overprinting argillic and phyllic alterations, crosscut by grey-smoky quartz veins and veinlets.

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite		Type	Conc. (%)	Photo	
									MD	PK	RB			PHC	2I						
			69.43	70.42	0.99	mKgW	GRD	MG	MD	GN	XL			ARG	3I						Mottled green-pink due to overprinting phyllic-argillic alterations. Crosscut by white-grey quartz veinlets.
										PK				PHC	2I						
			70.42	76.21	5.79	mKgW	GRD	MG	MD	GN	XL			PRO	3I						Moderate propyllitic with weak potassic alteration throughout. Crosscut by occasional quartz-carbonate stringers.
										PK				POT	2I						
76.21	82.79	6.58				mKgW	GRD	MG	MD	GN	RB			ARG	3I						Dominantly argillic granodiorite, with patchy propyllitic and potassic, giving a mottled green-pink colour. Weakly brecciated by thick quartz veins between 81.00-81.38m. Leads into a poorly mineralized dyke selvedge with strong chalcedony presence.
									LT	PK				PRO	2I						
														POT	2I						
82.79	93.60	10.81				LKqP	FEL	FG	LT	GY	RB			SER	2I						Light grey quartz feldspar porphyry dyke with sericite-clay altered feldspar-quartz phenocrysts 0.1-2mm in diameter. Crosscut by calcite veinlets.
											PO										
93.60	96.03	2.43				mKgW	GRD	MG	MD	GN	XL			PRO	2I			HE	5.0		Dominantly argillic granodiorite, with patchy propyllitic and potassic, giving a mottled green-pink colour. Crosscut by white calcite veinlets with significant red hematite staining.
									LT	PK				CLY	2I						
96.03	99.09	3.06				mKgW	GRD	MG	MD	GN	XL		2I	PRO	2I						Weak propyllitic granodiorite with silica flooding.
										PK											
99.09	102.91	3.82				mKgW	GRD	MG	MD	GN	XL			PRO	2I	1.00					Weak propyllitic, argillic, and phyllic granodiorite with weak white clay alteration throughout crosscut by frequent mineralized quartz veins and veinlets.
									LT	PK	PA			ARG	2I						
														PHC	2I						
														CLY	2I						
102.91	126.89	23.98				mKgW	GRD	MG	MD	GN	XL		1I	PRO	1I						Very weakly propyllitic granodiorite with consistent pink potassic alteration, and weak silica flooding and quartz eye development. Patches of phyllic-argillic around veins.
										PK	PA			POT	2I						
			104.35	106.78	2.43	mKgW	GRD	MG	MD	GN	XL			ARG	3I						Moderate argillic with patchy phyllic vein envelopes, crosscut by quartz veinlets and a thick dark grey siliceous breccia.
									LT	PK	PA			PHC	2I						
			112.82	114.25	1.43	mKgW	GRD	MG	MD	GN	XL		2I	ARG	2I						Patchy argillic-phyllic vein envelopes that overlap. Crosscut by a black siliceous breccia and moderately gouged quartz veinlets. Pervasive silica flooding leading to quartz eyes.
										PK	GO			PHC	2I						
											PA			POT	2I						
			115.05	116.05	1.00	mKgW	GRD	MG	MD	GN	XL		4I	PRO	3I						Moderate propyllitic granodiorite with strong silica flooding that destroys original textures.
									DK	PK	PA										
			116.05	126.89	10.84	mKgW	GRD	MG	MD	GN	XL		2I	ARG	3I						Patchy argillic-phyllic vein envelopes that overlap. Pervasive silica flooding leading to quartz eyes.
										PK	GO			PHC	3I						
											PA			POT	2I

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS				Photo	DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite		Type	Conc. (%)		
126.89	127.64	0.75				LKqP	FEL	FG	LT	GY	PO			SER	2I			BI	5.0		Narrow quartz feldspar porphyry dyke with 5% black biotite crystals, and 10% large sericite altered quartz-feldspar phenocrysts. Chill margins on both borders are 4-5cm thick and green-tinted.
127.64	130.51	2.87				mKgW	GRD	MG	MD	GN	XL			PRO	2I						Mottled green-pink due to overprinting propyllitic-potassic, with patchy argillic and phyllic from crosscutting quartz veins. Mineralized dyke selvedge (127.64-127.90m) with richly mineralized quartz veins. Also crosscut by a black siliceous breccia.
									LT	PK	PA			POT	1I						
														ARG	2I						
						mKgW	GRD	MG	MD	GN	XL			PHC	1I						Weak-moderate propyllitic granodiorite crosscut by quartz veins with phyllic vein envelopes that grade out into argillic.
130.51	178.21	47.70								PK	PA			PRO	2I						
														ARG	2I						
														PHC	1I						
			131.32	132.14	0.82	mKgW	GRD	MG	LT	GN	XL		2I	ARG	3I						Moderate argillic granodiorite, with patchy silica flooding that obliterates textures.
										PK	PA										
			134.85	136.39	1.54	mKgW	GRD	MG	LT	PK	XL			ARG	4I						Strong argillic granodiorite due to outward gradation of phyllic-argillic veinlet envelopes.
														PHC	2I						
			140.16	141.05	0.89	mKgW	GRD	MG	DK	GN	XL			HEM	3I						Moderate red hematite alteration overprinting propyllitic, producing green-pink mottled colouration.
										RD				PRO	2I						
			142.78	148.08	5.30	mKgW	GRD	MG	MD	GN	XL		3I	PHC	3I						Moderate phyllic overprinting weak propyllitic with moderate silica flooding. Crosscut by quartz veins, black siliceous breccia, and aplite dykes.
									LT	GY	FL			PRO	2I						
			152.53	153.87	1.34	mKgW	GRD	MG	MD	GN	XL			ARG	2I						Weak argillic overprinted by phyllic, crosscut by many (approximately 20) grey-white quartz veinlets.
									LT					PHC	2I						
			164.30	166.68	2.38	mKgW	GRD	MG	MD	GN	XL			ARG	2I						Weak argillic overprinted by phyllic, crosscut by several (approximately 10) mineralized quartz veinlets.
									LT					PHC	2I						
			171.15	174.38	3.23	mKgW	GRD	MG	MD	GN	XL			ARG	3I						Moderate argillic overprinted by weak phyllic, crosscut by mineralized quartz veins.
									LT	GY				PHC	2I						
			175.16	176.81	1.65	mKgW	GRD	MG	MD	GN	XL			ARG	2I						Weak argillic overprinted by weak phyllic, crosscut by mineralized quartz veins.
									LT	GY				PHC	2I						
178.21	181.97	3.76				mKgW	GRD	MG	MD	GN	XL			ARG	2I						Dominantly argillic granodiorite with patchy propyllitic and strongly red hematite-stained veins. Crosscut by frequent low angle green chlorite veinlets. Hosts a short vein zone of quartz veins showing strong epithermal textures.
									LT	RD	PA			PRO	2I						
														HEM	2I						
181.97	184.85	2.88				mKgW	GRD	MG	MD	GN	XL			PRO	3I						Moderate propyllitic granodiorite with weak-moderate gouge and clay alteration. Crosscut by a narrow dyke.
									LT		FT			CLY	3I						
184.85	185.95	1.10				mKgW	GRD	MG	MD	GN	XL			ARG	2I						Alternating patches of propyllitic and argillic granodiorite, crosscut by quartz-chlorite veinlets.

VT	14.57	14.62	75.00		2.00			Banded white-grey quartz veinlets with heavy oxide staining.	
VT	15.90	15.91	65.00			PY	15.00	Dark grey massive quartz veinlet hosting elongate blebs of pyrite and hematite.	
						HE	15.00		
DY	19.53	19.55	75.00					Heavily oxide stained brown-yellow-pink aplite dyke.	
DY	19.66	19.88	80.00					Heavily oxide stained brown-yellow-pink aplite dyke crosscut by two vuggy grey quartz veinlets.	
VN	20.87	20.88	80.00					White-orange massive quartz vein.	
VN	21.49	21.54	60.00					Feathery, discontinuous milky quartz vein.	
GO	23.83	23.90	75.00			LI	20.00	Moderately gouged and oxide stained argillic granodiorite.	
VT	27.67	29.83	70.00		2.00	PY	6.00	Two white quartz-calcite veinlets with dark green borders and central axis. Hosts blebby pyrite and hematite.	
						HE	3.00		
VT	28.66	28.69	80.00		3.00			Three massive white-brown quartz veinlets stained by oxide.	
VN	30.73	30.75	80.00					Vuggy brown-orange oxide stained quartz vein with calcite filled vugs.	
VN	32.94	32.97	80.00			PY	3.00	Weakly banded milky-white semitranslucent quartz vein, with disseminated pyrite and weak oxide staining.	
VN	32.99	33.11	90.00					Weakly gouged and moderately oxide stained throughout the brown quartz vein.	
GO	33.38	33.41	90.00					Strongly gouged quartz vein with orange oxide staining.	
DY	33.41	33.64	10.00					2cm thick pink-orange aplite dyke.	
VT	34.66	34.67	80.00			PY	5.00	White opaque quartz veinlet hosting blebby pyrite.	
FT	35.83	35.97	30.00					Rubbly fault zone.	
VT	36.73	36.74	45.00			PY	15.00	Banded white-grey semitranslucent quartz veinlet hosting elongate pyrite blebs along band contacts.	
VN	38.18	38.21	70.00					White banded-crustiform chalcedony vein.	
VN	39.03	39.04	65.00			PY	10.00	1cm coarse crystalline grey translucent quartz vein with interstitial white calcite. One large calcite bleb hosts ghost bladed pyrite. Hosts interstitial disseminated-blebby pyrite, blackjack sphalerite, galena, and arsenopyrite.	
						SP	6.00		
						GN	6.00		
						AS	2.00		
VT	41.21	41.22	65.00					Grey-white massive quartz veinlet.	
VN	43.37	43.38	75.00			PY	5.00	Grey semitranslucent quartz vein with massive silver-blue hematite, with some radiating crystals and blebby pyrite.	x
						HE	70.00		
VT	44.42	44.45	80.00		2.00	PY	1.00	Banded white-grey quartz veinlets with disseminated pyrite.	
VT	46.22	46.23	55.00			PY	3.00	Dark grey-white semitranslucent quartz veinlet with disseminated pyrite.	
VT	48.06	48.07	50.00			PY	15.00	Banded white quartz veinlet with blebby pyrite.	
BX	51.64	51.70	80.00			PY	8.00	White calcite and gouge brecciate a massive-banded grey quartz-chalcedony vein, hosting disseminated pyrite.	
VT	51.70	51.86	70.00		3.00	PY	10.00	Three grey massive semitranslucent quartz veinlets, some of white are moderate clay altered. The phyllic envelope hosts disseminated pyrite.	
VN	51.86	51.88	75.00			PY	3.00	White-milky vuggy-crustiform chalcedony-carbonate vein.	
VT	54.95	56.09	55.00		3.00			Three white weakly banded quartz veinlets with weak oxide staining.	
VT	56.24	56.25	50.00					Grey-white thinly banded quartz veinlet.

						Type	Conc. (%)		
VN	57.10	57.13	60.00					Banded white-cream quartz vein with large subangular clasts of granodiorite.	
VT	57.65	57.71	90.00		3.00	PY	3.00	Three white-grey thinly banded quartz veinlets with disseminated pyrite.	
VT	58.66	58.67	45.00			PY	6.00	White-grey thinly banded quartz veinlet with disseminated pyrite.	
DY	60.41	60.47	65.00					Pink fine grained aplite dyke.	
VT	61.37	61.50	70.00		4.00	PY	8.00	Four thin, twisting smoky veinlets with disseminated pyrite.	
DY	63.06	63.08	80.00					Pink aplite dyke.	
VT	63.45	64.03	35.00		3.00	PY	4.00	Three weakly banded milky-smoky quartz veinlets with undulatory borders.	
DY	65.32	65.40	70.00		2.00			Two pink aplite dykes, 1.5cm and 3mm thick.	
VT	65.65	66.05	35.00		2.00			White-cream banded chalcedony veinlets.	
VT	66.48	66.52	45.00		2.00			White-cream banded chalcedony veinlets.	
VT	69.73	70.11	65.00		3.00	PY	3.00	Three grey-white thin, undulatory banded quartz veinlets hosting disseminated pyrite.	
VT	75.55	75.56	90.00					Weakly banded white semitranslucent quartz veinlet.	
GO	77.70	77.80	30.00					Weakly gouged propyllitic granodiorite.	
VN	77.80	77.89	30.00			PY	10.00	Thick smoky quartz vein with thin discontinuous bands/lenses of white quartz pyrite is hosted parallel to band borders.	
VT	79.96	79.97	75.00			PY	8.00	Undulatory, vuggy-crustiform white quartz-chalcedony vein hosting disseminated-blebby pyrite and disseminated arsenopyrite adjacent to larger pyrite blebs.	
						AS	3.00		
VN	80.80	80.84	60.00			PY	10.00	Undulating, moderately clay altered smoky-grey quartz vein hosting disseminated pyrite.	
VN	80.90	80.98	60.00			PY	10.00	Opaque massive-comb grey-white quartz vein hosting disseminated-blebby pyrite, galena, and short needles of arsenopyrite. Vein is cracked, with significant clay alteration on cracks.	
						GN	4.00		
						AS	2.00		
VN	80.98	81.05	20.00			PY	20.00	Low angle quartz vein crosscut by previous quartz vein. Translucent grey-smoky massive quartz vein with milky quartz lenses. Hosts blebby pyrite and occasional short needles of arsenopyrite.	
						AS	2.00		
VN	81.24	81.30	40.00			PY	8.00	Grey-white semitranslucent quartz vein that brecciates propyllitic-phyllic granodiorite and is cracked with clay alteration following the cracks. Hosts blebby-disseminated pyrite.	
VT	81.44	82.33	70.00		15.00	PY	5.00	Fifteen white banded quartz veinlets with dark green chlorite borders. Hosts disseminated pyrite.	
VT	93.60	94.70	65.00		16.00	PY	5.00	White-cream quartz veinlets with red hematite staining, hosting disseminated pyrite.	
						HE	10.00		
VT	99.22	99.29	65.00		4.00	PY	8.00	Four white semitranslucent quartz veinlets hosting disseminated-blebby pyrite and chalcopyrite.	
						CP	8.00		
VN	99.58	99.62	80.00			PY	30.00	White-grey weakly banded quartz vein hosting blebby-massive pyrite.	
VN	99.74	99.76	90.00			PY	10.00	Crustiform-thinly banded smoky-grey-white opaque quartz vein with disseminated pyrite.	
VN	100.12	100.16	60.00			PY	15.00	White semitranslucent massive-comb quartz vein with indistinct borders, crosscut by milky-white quartz veinlet with central smoky quartz stringers. Hosts blebby-disseminated pyrite, discontinuous pyrite stringers, blebby-disseminated zoned honey brown sphalerite, disseminated galena, and disseminated-blebby arsenopyrite.	
						SP	3.00		
						GN	2.00		
						AS	6.00		
VN	100.29	100.31	50.00			PY	20.00	Undulatory white-grey semitranslucent quartz vein with indistinct borders, and hosts discontinuous pyrite stringers and disseminated arsenopyrite.	
						AS	8.00		
VT	100.43	100.47	70.00		2.00	PY	15.00	White-cream coarse grained quartz veinlets with interstitial blebby pyrite, honey brown sphalerite, and arsenopyrite.	
						SP	3.00		
						AS	10.00

VN	214.85	215.07	75.00		3.00	PY	20.00	Three weakly gouged-clay altered grey-white banded-massive quartz veins hosting disseminated pyrite and discontinuous pyrite stringers.	

KLAZA

2° Structure Type	From (m)	To (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS		DESCRIPTION	Photo
						Type	Conc. (%)		
VN	215.11	215.40	55.00			PY	20.00	Thick complex quartz vein: Generally translucent and very strongly silicified, with the same features/textures throughout, but seen at a larger scale in the top 9cm of the vein. Vein has a large, irregular (5cm diameter) vug filled by light pink massive-weakly crustiform chalcedony and white-yellow massive calcite. Crosscut by several <2mm thick clear crystalline quartz veinlets, rare white calcite stringers, and two green-white semitranslucent silicified phyllic granodiorite intrusions. More common elongate vugs are lined by thick clear comb quartz and a white-milky quartz border. Mineralization is very strong, and focused in the grey translucent quartz. Sphalerite is honey brown-blackjack with strong metallic luster, and largest blebs are >1cm wide. Sphalerite is concentrated nearer to large pyrite masses. Chalcopyrite is rare, mainly found as small blebs of disseminated near pyrite. Galena is most easily visible on the fracture faces as disseminated-blebby blue-silver crystals. Pyrite is evenly distributed and forms small masses of euhedral-subhedral crystals, as well as densely blebby throughout. Pyrite is commonly found encrusting larger arsenopyrite blebs. Arsenopyrite is found as fine-grained disseminated-dusty throughout the grey translucent quartz. It commonly forms blebs up to 1cm in diameter, and euhedral rhombic crystals (never seen before on this property) are found commonly near large pyrite-sphalerite masses, up to 1.5mm long. Also found in masses of short blades and needles.	x
						SP	10.00		
						CP	2.00		
						GN	8.00		
						AS	20.00		
VN	219.48	220.30	45.00			PY	15.00	Thick complex quartz vein: Generally grey translucent and silicified quartz vein, with clasts of phyllic granodiorite, and crosscut by light grey massive-fine grained quartz intruding veinlets, and undulatory white-milky quartz stringers. Mineralization is strong and shows many habits, but recovery is weakly clay altered and rubbly, so it is sometimes difficult to handle. Sphalerite is honey brown and blebby-massive. Chalcopyrite is rare and disseminated, typically found near higher concentrations of pyrite. Galena is disseminated-blebby throughout, but is found as a vein interstitial t cream massive quartz at 219.79-219.88m. Pyrite is disseminated-blebby-massive through the vein, but is most concentrated in the first 10cm as masses and discontinuous veinlets. Arsenopyrite is commonly found as felted groups of needles, which may also have a component of Jamesonite. It is also disseminated throughout the vein, but most concentrated between 219.61-219.66m, 219.76-219.78m, and 219.90-219.97m. Vein is moderately clay altered between 219.97-220.11m, and grey quartz vein with finely ground pyrite/sulphides is brecciated by white quartz between 220.11-220.20m.	x

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS				Photo	DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Arsenopyrite	Type	Conc. (%)		
0.00	6.84	6.84					OVB			BN											Overburden with cobbles and boulders of grey granodiorite.
										GY											
6.84	17.17	10.33				mKgW	GRD	MG		GY											Grey granodiorite with moderate oxidation along fractures. Interval hosts multiple pyrite veinlets and stringers, ~2-3 per meter.
										OR	PA	3I									
			9.12	9.60	0.48	mKgW	GRD	MG		GN	EN			PHC	4I	2.00					Moderately silicified and strong phyllic envelope hosting disseminated pyrite and hosts a quartz/pyrite veinlet and a pyrite vein.
										GY	EN		3I								
										BL	EN										
			11.90	12.01	0.11	mKgW	GRD	MG	DK	GY			4I			<1					Strongly silicified dark grey granodiorite hosting disseminated pyrite and multiple pyrite veinlets and stringers.
17.17	78.22	61.05				mKgW	GRD	MG		GN				PHC	3I	<1					Moderately phyllic altered granodiorite hosting quartz/pyrite veins, veinlets and stringers. The veins and veinlets have strongly silicified, strong phyllic envelopes around the which hosts disseminated pyrite. Fracture surfaces contain moderate to strong oxidation.
									LT	GY	EN			PHC	4I						
										GY	EN		4I								
										OR	PA	3-4I									
			17.89	18.23	0.34	mKgW	GRD	MG		GN	EN			PHC	4I	1.00					Strongly silicified strong phyllic envelope surrounding a 8cm milky white /semi-massive pyrite vein. Envelope hosts disseminated pyrite and a pyrite veinlet.
										BL	EN										
										GY	EN		4I								
			18.80	18.93	0.13	mKgW	GRD	MG	DK	GN	EN			PHC	4I	1.00					Moderately silicified and strongly phyllic envelope surrounding a quartz vein hosting blebby pyrite.
										GY	EN		3I								
			20.63	20.74	0.11	mKgW	GRD	MG		GN				PHC	4I	1.00					Moderately silicified and strongly phyllic envelope surrounding two 0.1cm pyrite veinlets.
										GY			3I								
			20.74	21.53	0.79	mKgW	GRD	MG		WH				ARG	3-4I						Partially gouge altered moderate to strongly argillic altered granodiorite that has been strongly oxidized. Oxidation obscures rock texture.
										OR		4I									
			22.37	22.67	0.30	mKgW	GRD	MG	DK	GN				PHC	4I	1.00					Moderately silicified and strong phyllic envelope surrounding a quartz/pyrite vein.
										GY			3I								
			23.16	23.71	0.55	mKgW	GRD	MG		WH				ARG	3I						Weakly oxidized and moderately argillic altered granodiorite.
										OR		2I									
			24.65	25.55	0.90	mKgW	GRD	MG	DK	GN				PHC	4I	1.00					Moderately silicified and strongly phyllic envelope around a dark grey quartz and semi-
										GY			3I								
			27.05	28.10	1.05	mKgW	GRD	MG	DK	GN				PHC	4I	3.00					Strongly silicified strong phyllic envelope around a dark grey quartz and semi-massive pyrite vein. Envelope hosts disseminated pyrite and pyrite stringers.
									DK	GY			4I								
										BL											
			28.85	29.06	0.21	mKgW	GRD	MG	DK	GN				PHC	3I	1.00					Strongly silicified moderate phyllic envelope hosting two quartz pyrite veinlets and
									DK	GY			4I								
			29.49	29.71	0.22	mKgW	GRD	MG	DK	GN				PHC	3-4I	1.00					Moderately silicified, moderate to strong phyllic envelope hosting two 1cm quartz/pyrite veins and disseminated pyrite.
										GY			3I								
			30.76	32.01	1.25	mKgW	GRD	MG		WH				ARG	3I						Moderately argillic altered granodiorite with a weak phyllic overprint.

KLAZA

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Arsenopyrite	Type	Conc. (%)	Photo	
									LT	GN				PHC	2I						
			32.01	32.35	0.34	mKgW	GRD	MG		WH				ARG	3I						Moderately argillic altered granodiorite with a weak phyllic overprint that has been moderately oxidized.
									LT	GN				PHC	2I						
										OR			3I								
			32.48	33.86	1.38	mKgW	GRD	MG		GN				PHC	4I						Moderately silicified and strongly phyllic granodiorite with moderate oxidation along fractures. The interval hosts disseminated pyrite, patches of carbonate veining exhibit net texture, smokey quartz veins and pyrite veinlets and stringers.
										BL											
										GY			3I								
										OR		3I									
			38.88	39.22	0.34	mKgW	GRD	MG		WH				ARG	3I						Moderately argillic altered granodiorite with moderate oxidation and a weak phyllic overprint.
									LT	GN				PHC	2I						
										OR		3I									
			39.38	39.52	0.14	LKqP	FEL			GY											Grey/green quartz feldspar porphyry dyke hosting grey quartz and light green clay phenocrysts. The dyke is cross-cut through the middle by a pyrite stringer oriented at 60° TCA.
										GN											
			41.60	43.05	1.45	mKgW	GRD	MG	DK	GN				PRO	3-4I						Moderate to strongly propyllitic altered granodiorite.
										GY											
			44.01	44.13	0.12	mKgW	GRD	MG	DK	GN				PHC	3I						Strongly silicified and moderate phyllic envelope surrounding a quartz pyrite veinlet.
									DK	GY			4I								
			47.68	48.68	1.00	mKgW	GRD	MG		GY											Grey granodiorite hosting a minor phyllic around a quartz/pyrite veinlet.
			50.05	50.44	0.39	mKgW	GRD	MG		GN				PHC	4I	2.00					Strong phyllic altered granodiorite hosting multiple quartz pyrite veinlets and pyrite stringers and disseminated pyrite.
										GY											
										BL

COMMENTS

Experienced drilling difficulties at depth of 61.57m. Redrilled from 39.62m and ended hole at 197.21m. First attempt is referred to as part "A" in logs, while the second (and more accurate) attempt is referred to as part "B". Sections and summaries (after 39.62m) are referenced from part "B".

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS				Photo	DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Arsenopyrite	Type	Conc. (%)		
0.00	2.55	2.55					OVB					5.00									Overburden, mud, intensely oxidized core, and float.
2.55	11.14	8.59				mKgW	GRD	MG	LT	GY		3.00									Oxidized granodiorite. Unaltered granodiorite wit patches of strong oxidization and friable core. Patchy weak limonite staining on surfaces, but generally restricted to fractures. HQ ended and NQ size core started at 9.75m.
11.14	15.48	4.34				mKgW	GRD	MG	MD	OR	PA	3.00		ARG	1.00						Patchy, oxidized granodiorite. Patches of granodiorite with light limonite staining, patches of strong limonite staining with quartz eyes, and one small patch of strong argillic alteration.
15.48	18.60	3.12				mKgW	GRD	MG	MD	OR		3.00		PHC	1.00						Heavily limonite stained granodiorite with patches of light white-blue phyllic and argillic alteration peaking through limonite staining. Intervals of heavy limonite stained granodiorite with quartz-eyes.
														ARG	1.00						
18.60	22.09	3.49				mKgW	GRD	MG	MD	OR		3.00		ARG	4.00						Strong argillic altered granodiorite with heavy limonite staining. Dusty, vibrant orange limonite on fractures. Patches of friable core.
22.09	24.10	2.01				mKgW	GRD	MG	MD	GY	PA	2.00		ARG	3.00						Dominantly unaltered granodiorite with oxidized/limonite stained fractures, few patches of limonite (+goethite) on surfaces. And patches of moderate to strong argillic alteration (argillic patches of moderately to strong limonite stained).
									MD	OR											
24.10	28.95	4.85				LKqP	FEL	FG	DK	GN	PO										Dark-green, fine grained dyke with white phenocrysts up to 5mm in size (generally
			26.64	26.92		mKgW	GRD	MG	LY	GY		3.00		ARG	4.00						Strong argillic altered granodiorite interval within dyke. Limonite stained on
			27.60	28.00		mKgW	GRD	MG	LT	BL		3.00		PHC	3.00						Light blue, veined and altered granodiorite. Phyllic altered (?) with silicification and quartz eyes. Quartz-carbonate veinlets present. 1/4 of interval is heavily limonite stained.
														SIL	3.00						
28.95	29.50					mKgW	GRD	MG	LT	GN		2.00		ARG	4.00						Strong argillic altered granodiorite with potassic overprinting at contact, followed by 18cm phyllic altered/silicified interval (light-green) and ending with limonite stained and argillic alternated granodiorite (strong argillic alteration).
									LT	OR				PHC	1.00						
									LT	WH				SIL	1.00						
29.50	30.56					mKgW	GRD	MG	LT	OR		3.00									Oxidized and friable granodiorite. Unaltered apart from oxidization. Most limonite restricted to fractures, with patches of crumbly and more oxidized granodiorite.
30.56	53.33					mKgW	GRD	MG	LT	GY	MA			PRO	1.00						Unaltered granodiorite with patches of very weak (+ rare moderate) propylitic alteration. Patches of fragmented core.
			32.77	33.96		mKgW	GRD	MG	DK	GN				PRO	3.00						Moderately propylitic altered granodiorite with moderate argillic alteration for at least 1/3 of interval (occurring with propylitic alteration). Not as competent as surrounding rock.
														ARG	3.00						
53.33	57.00					mKgW	GRD	MG	MD	BL-GN				PRO	2.00						Friable and fractures granodiorite. Patches of crumbly core. Shades of blue-green. Darker blue-green intervals occurring with hematite and chlorite staining (especially on fractures). Soft granodiorite at contact with dyke (15cm interval, fault?).
									LT	BL-GN											

KLAZA

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Arsenopyrite	Type	Conc. (%)	Photo	
57.00	61.57						FEL	FG	DK	GN	PO										Same dyke as 24.10 to 28.95 (dark-blue green, porphyritic). Carbonate stringers and veinlets throughout. Cracks and fractures are coasted with dark-purple and red hematite. Abundant hematite filled cracks give an almost brecciated texture from 60.40 to 61.00m.
			57.30	57.62		mKgW	GRD	MG	LT	BL-GN				PRO	2.00						Light blue-green propylitic altered granodiorite. Weak (soft) core. Sharp upper and lower contact with dyke.
																					END OF PART DDH-12-118 PART A.
																					BEGINNING OF PART B (Redrilled, more accurate meterage).
39.62	49.85					mKgW	GRD	MG	LT	GY											Grey unaltered granodiorite with localized hematite and chlorite on some fractures.
49.85	56.23					mKgW	GRD	MG	LT	GY-BL				PRO	2.00						Interval is crumbly with patches of soft clay altered granodiorite. Interval is crumbly with short intervals of competent rock. Light grey (with blue-green tint). Weak propylitic alteration at contact with dyke.
									LT	BL-GN											
56.53	66.30						FEL	FG	DK	GN	PO										Dark green, porphyritic dyke. Blue-green (chlorite rich?) main interval with and hematite stained dark purple sub-interval described below. Carbonate stringers and veinlets spaced spread throughout dyke at various angles.
			57.09	59.44			FEL	FG	DK	PU	PO										Fragmented and friable purple, porphyritic dyke. Heavily hematite stained and altered.
											FR										
			61.55	61.78			GRD	MG	LT	GY				PRO	1.00						Weakly altered granodiorite with quartz-carbonate veinlets. Fragmented.
66.30	110.15					mKgW	GRD	MG	MD	GY				PRO	1.00						Granodiorite with trace propylitic alteration.
			76.40	77.19			FEL	FG	DK	GN	PO										Dark-green, porphyritic dyke with mm-scale phenocrysts. Carbonate stringers present.
			105.35	105.65		mKgW	GRD	MG	MD	GY	EN			PHC	2.00	<1					Weak phyllic alteration enveloping quartz vein with disseminated pyrite.
110.15	125.20					mKgW	GRD	MG	MD	GY				PRO	1.00						Granodiorite with trace propylitic alteration and patches of weak silicification and phyllic alteration.
														PHC	1.00						
														SIL	1.00						
			110.62	112.12		mKgW	GRD	MG	LT	GN	EN			PHC	3.00						Phyllic altered granodiorite with chalcedony, quartz and quartz-carbonate veinlets. Phyllic alteration enveloping veinlets.
														ARG	3.00						
														SIL	2.00						
125.20	131.33					mKgW	GRD	MG	LT	GN				PHC	3.00	<1					Patchy, altered granodiorite. Weak propylitic, moderate to strong argillic, and weak to moderate propylitic alteration. Phyllic alteration envelopes quartz and quartz-carbonate veining.
									MD	GN				PRO	2.00						
														ARG	3.00						
131.33	138.82					mKgW	GRD	MG	MD	GY				PRO	1.00						Unaltered granodiorite with patchy weak propylitic alteration and one 12cm aplite dyke (see secondary structures log).
138.82	158.23					mKgW	GRD	MG	MD	GY-(	PA			PHC	3.00						Patchy, altered granodiorite. Weak (+ minor moderate) propylitic, weak to moderate phyllic, and weak to strong argillic alteration. Phyllic alteration enveloped quartz and carbonate veinlets. Patches of friable core associated with argillic alteration occurring with propylitic alteration. Minor phyllic and potassic overprinting argillic. Phyllic and propylitic more abundant than argillic alteration.

Depth (m)		DESCRIPTION
		Contacts of part "A"
24.10		Granodiorite hangingwall, dark green-porphyritic dyke footwall. Sharp contact at 15 degrees to-core-axis. Carbonate veinlet at contact, which cuts across dyke at 30 and 40 degrees to-core-axis). Slight limonite staining.
26.64		Dark green-porphyritic dyke hangingwall, granodiorite footwall. Abrupt contact at 60 degrees to-core-axis. Granodiorite is altered and weak. Dyke is much weaker at contact than the rest of the dyke.
26.92		Granodiorite hangingwall, dark green-porphyritic dyke footwall. Clay altered gouge at contact at 60 degrees to-core-axis. Granodiorite is argillic altered, dyke is hard/competent with hematite staining.
27.60		Dark green-porphyritic dyke hangingwall, granodiorite footwall. Abrupt contact at 45 degrees to-core-axis. Granodiorite and dyke are limonite stained at contact. Footwall is silicified and hosting blebby pyrite.
28.00		Granodiorite hangingwall, dark green-porphyritic dyke footwall. Dyke is hard and competent with limonite staining on fractures. Granodiorite is silicified and hosting blebby pyrite. Contact at approximately 45 degrees to-core-axis.
28.95		Dark-green-porphyritic dyke hangingwall, granodiorite footwall. Sharp contact at 10 degrees to-core-axis. Granodiorite is competent and argillic altered with potassic overprint. Dyke is competent and unaltered.
57.00		Granodiorite hangingwall, dark-green-porphyritic dyke footwall. Granodiorite is soft and propylitic altered (possible fault). Dyke is highly fragmented, in hard angular pieces.
57.27		Dark-green-porphyritic dyke hangingwall, granodiorite footwall. Hangingwall dyke is fragmented. Granodiorite is soft, crumbly and propylitic altered (not as soft as previous granodiorite contact).
57.58		Granodiorite hangingwall, dark-green-porphyritic dyke footwall. Granodiorite is
		End of part "A"
		Contacts of part "B"
56.53		Granodiorite hangingwall, dark-green-porphyritic dyke footwall. Sharp contact at 53 degrees to-core-axis. Unaltered at contact. Carbonate veinlet proximal to contact, within footwall.

KLAZA

Depth (m)		DESCRIPTION
61.55		Dark-green-porphyritic-dyke hangingwall, granodiorite footwall. Sharp contact at unknown angle (fragmented). Granodiorite weakly altered.
61.78		Fragmented contact. Grey (slightly pink), weakly altered granodiorite hangingwall. Dark-green-porphyritic dyke footwall. No gouge or mineralization at contact.
66.35		Dark-green-porphyritic dyke hangingwall. Granodiorite footwall. Very sharp contact at 30 degrees to-core-axis. Unaltered contact.
76.40		Very sharp contact. Competent, unaltered granodiorite hangingwall. Dark-green-porphyritic dyke footwall. Contact interfingered.
77.19		Very sharp contact with unaltered and competent dark-green-porphyritic dyke (hangingwall) and granodiorite (footwall). Contact slightly interfingered, with general contact angle of 10 degrees to-core-axis.
161.60		Granodiorite hangingwall, quartz-feldspar porphyry dyke footwall. Abrupt contact at 32 degrees to-core-axis. Fault-gouge/soft core on either side of contact (mostly quartz-feldspar-porphyry dyke). Granodiorite is veined proximal to contact (within hangingwall) hosting disseminated to blebby pyrite, arsenopyrite, sphalerite and galena.
165.07		Quartz-feldspar-porphyry dyke hangingwall. Milky quartz vein footwall. Abrupt contact with approximately 1cm of gouge, followed by brecciated for 8cm (quartz and quartz-carbonate clasts set within quartz and dark -aphanitic-sulphide matrix), followed by milky quartz vein hosting pervasive pyrite mineralization.

							Type	Conc. (%)		
									Secondary structures for part "A"	
VT	14.02	14.05	0.03	87.00					Highly limonite stained, crustiform veinlet. 4mm in width. Carbonate(?).	
FT	15.68	15.92	0.24	40.00		2.00			19.5cm and 5cm of limonite stained and clay altered fault gouge at 40 and 60 degrees .	
				60.00						
VT	116.26	116.29	0.03	60.00					Grouped, stringy quartz-carbonate veinlets (1.5cm in width) at 85 degrees .	
VN	17.37	17.65	0.28	15.00					Shallow, limonite stained carbonate vein. 1cm at 10-20 degrees . Truncated (downhole, described below) by developing fault zone.	
VT	17.65	17.74	0.09	75.00					Clay altered, developing fault zone at 75 degrees . 7mm in width.	
VT	17.95	18.20	0.25						Heavily stained, altered and netted quartz-carbonate veinlets OR quartz-carbonate matrix (breccia) with siliceous clasts. Quartz/siliceous clasts hosting disseminated pyrite.	
VN	20.62	20.63	0.01	25.00					Hematite stained, brick-red siliceous breccia vein with <1mm clasts. Limonite stained and stringy carbonate at edges of vein. 1.2cm in width. Difficult to see clasts due to staining.	
VT	22.42	23.81	1.39	50.00		5.00			5 carbonate veinlets at 50, 45, 45, 55 and 55 degrees .	
VT	31.58	31.62	0.04	70.00		2.00	Py	<1	Vitreous quartz and white carbonate veinlets with disseminated pyrite in narrow, strong phyllic and silicified alteration halo. 7mm and 5mm in width at 70 degrees . Offshootoing carbonate veinlet at 45 degrees .	
VN	51.10	51.22	0.12	50.00					1.2cm white-carbonate vein at 50 degrees .	
FT	56.69	57.00	0.31						Very soft, blue-green chlorite rich granodiorite. Fault? At contact with dyke.	
VT	57.98	58.90	0.92			4.00			Stringy white carbonate veinlets. 23, 20, 600 degrees to-core-axis(+ one at unknown angle).	
VT	59.00	59.38	0.38						Netted carbonate veinlets and stringers within cracked/fractures zone (with cracks filled with hematite).	
VT	59.90	60.98	1.08						Netted/brecciating white carbonate veinlets and stringers. Veinlets are breaking-up dyke into angular "clasts". Hematite in cracks with carbonate. 2 occurrences of netted veinlets and stringers (30cm wide and 4cm wide sections).	
									End of part "A"	
									Start of part "B"	
FT	49.82	56.39	6.57						Very friable fault zone. Intervals of clay altered gouge, but generally crumbled and fragmented core.	
GO	52.43	52.82	0.39						Clay altered gouge.	
VN	57.55	57.72	0.17			3.00			Massive veins of white carbonate (1st vein is a band, 2nd looks more like carbonate infilling cracks).	
VT	64.60	64.70	0.10				Py	10.00	Carbonate veinlet with blebby pyrite band at edge. Band of blebby pyrite is at same angle as vein, 40 degrees . Carbonate veinlet is 4mm in width.	
VT	90.31	90.36	0.05						White carbonate veinlet with narrow phyllic alteration halo. Orientated at 55 degrees . 5mm in width.	
DY	92.33	92.97	0.64							
						2.00	Py	<1	Small, pink, aplite dykes. 1.3cm and 2.1cm in width. Orientated at 50 and 60 degrees . First dyke has <1cm inclusion of granodiorite hosting blebby pyrite.	
VT	92.64	92.68	0.04				Py	<1	Carbonate-chlorite veinlets with minor vitreous grey quartz hosting disseminated pyrite. 5mm in width, orientated at 55 degrees .	
VT	98.75	102.84	4.09			9.00			Carbonate veinlets up to 1cm in width (few occur with hematite and chlorite). Orientated at 15 to 45 degrees .	
VT	105.38	105.60	0.22						Vitreous quartz vein, veinlet, 3 stringers and 1 carbonate veinlet (all at same orientation and within phyllic alteration envelope). Orientated at 55 degrees . Vein and veinlet composed of vitreous quartz with some quartz-carbonate and dark-blue fine mineral, and are hosting disseminated and blebby pyrite. Vein is 2.6cm and veinlet is 7mm in width. Carbonate veinlet is 7mm in width.

SUMMARY

From (m)	To (m)	Interval	Unit	Comments
0.00	3.80		OVB	Oxidized overburden with fragments of granodiorite.
3.80	8.10		FEL	Oxidized quartz feldspar porphyry dyke.
8.10	36.25		GRD	Oxidized argillic altered granodiorite, mostly rubble.
36.25	58.60		FEL	Quartz feldspar porphyry dyke with hornblende and biotite phenocrysts.
58.60	63.35		GRD	Silicified, argillic altered granodiorite with patchy phyllic alteration envelopes.
63.35	77.48		GRD	Silicified, propylitic granodiorite with potassic overprin
77.48	104.56		GRD	Phyllic altered granodiorite, hosting a pyrite-bearing siliceous breccia and silicified zones.
104.56	167.88		GRD	Weakly propylitic, strongly silicified granodiorite with potassic overprint.
167.88	172.57		GRD	Propylitic to phyllic alteration envelopes encompassing significantly pyrite mineralized smoky clay altered quartz veinlets and veins.
172.58	283.50		GRD	Unaltered granodiorite, lightly silicified.
283.50	322.7		GRD	Propylitic altered granodiorite with potassic overprint and phyllic and argillic alteration envelopes around veinlets.
322.7	344.15		GRD	Unaltered, silicified granodiorite.
344.15	358.1		GRD	Silicified, propylitic granodiorite, crosscut by aplite dykes.
358.1	377.04		GRD	Unaltered granodiorite with patchy potassic alteration.

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS				Photo	DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Arsenopyrite	Type	Conc. (%)		
0.00	3.80	3.80					OVB			OR	RB	3I									Oxidized rubble, with fragments of granodiorite.
3.80	8.10					LKqP	FEL	FG	DK	OR	FR	5I									Strong to intensely oxidized quartz feldspar porphyry dyke. Feldspar phenocrysts altered to oxidized clay. Extensive pits and cavities.
8.10	36.25					mKgW	GRD	MG	MD	OR	RB	5I		ARG	3I						Intensely oxidized argillic altered granodiorite, altered to sand and rubble throughout much of the interval. Oxidation obscures most textures.
			34.50	36.25		mKgW	GRD	MG	MD	OR	BX	4I									Oxidized breccia, with dark brown-green matrix and extensive quartz phenocrysts. Clasts of granodiorite and porphyry dyke are present. Most textures obscured by oxidation.
									DK	BN											
36.25	58.60					LKqP	FEL	FG	MD	GY	PO	4I	2I								Quartz feldspar porphyry dyke with approximately 10-15% biotite and hornblende phenocrysts. Phenocrysts vary from <1 to 10mm. Strong to intense orange oxidation, with patches of grey unaltered dyke. Pits where phenocrysts have weathered out, near granodiorite contact. Colour zoning near contacts. Grey rounded recrystallized quartz eyes, approximately 10%.
									MD	OR											
			57.55	58.60	1.05	LKqP	FEL	FG	MD	GN	MO										Quartz feldspar porphyry dyke with red-purple and green undulatory striations.
									DK	PU											
58.60	63.35	4.75				mKgW	GRD	MG		WH	PA	2I	3I	ARG	3I						Silicified, argillic altered granodiorite with patchy phyllic alteration, predominantly around quartz-carbonate veinlets and veins. Light potassic overprint. Oxidation on fractures.
									LT	GN				PHC	2I						
														POT	2I						
63.35	64.45	1.10				mKgW	GRD	MG	MD	GY	MA		4I	PRO	2I						Strong to intensely silicified weakly propylitic granodiorite, hosting potassic-altered quartz veins.

KLAZA

DESCRIPTION
Weak phyllic alteration
Oxidized core, calcite-quartz vein
Moderate phyllic alteration
Calcite-quartz veinlets (<8mm) (4 veinlets)
Vein - massive sphalerite with semimassive pyrite, blebby galena
Moderate phyllic altered granodiorite
Pyrite-sphalerite-galena vein (massive sulphide)
Unaltered granodiorite
Unaltered granodiorite
Phyllic alteration with quartz veinlets

2.68	9.75	7.07				mKgW	GRD	MG	MD	GY	FR	4I									HQ casing though unaltered granodiorite. Very rubbly and oxidized.
										OR	RB										
9.75	59.70	49.95				mKgW	GRD	MG	MD	GY	FR	4I		PHC	4I	1.00		LI	10.00		NQ core: Strongly phyllic with patchy argillic, and phyllic vein envelopes. Strongly oxidized until approximately 22.30m, where recovery becomes competent. Strong oxidation results in granodiorite altering to orange clays and extreme rubble, primarily through a long argillic patch. Propyllitic granodiorite hosts disseminated pyrite (trace) throughout, and is crosscut by quartz-calcite and pyrite veinlets and stringers. Moderate-strong oxide appears in argillic patches beyond 22.30m, and is fracture-limited through the interval.
										OR	RB			ARG	2I						
			11.42	21.82	10.40	mKgW	GRD	MG	MD	GY	FR	4I		ARG	3I	3.00		LI	30.00		Moderate argillic granodiorite with phyllic vein envelopes on crosscutting quartz-carbonate-pyrite veinlets. Strongly oxidized, with reduction to clay and extremely rubbly.
										OR	RB			PHC	2I						
			21.82	31.20	9.38	mKgW	GRD	MG	MD	BL	XL	1I		PHC	4I	1.00					Strongly phyllic blue-green-grey granodiorite with oxide-stained fracture faces. Hosts disseminated pyrite and sericite. Crosscut by quartz-pyrite veinlets.
										GN											
			31.20	34.19	2.99	mKgW	GRD	MG	MD	GY		3I		PHC	4I	1.00					Strongly phyllic granodiorite masked by pervasive oxide staining. Granodiorite is pitted

101.81	138.51	36.70				mKgW	GRD	MG	LT	GN	PA			PRO	3I	2.00					Moderately propyllitic granodiorite with patchy-gradational phyllic-argillic vein envelopes. Recovery is weakly rubbly, and granodiorite hosts disseminated pyrite throughout. Granodiorite is crosscut by mineralized quartz-pyrite veins.
									MD	GY	RB			ARG	2I						
														PHC	2I						
			105.77	111.45	5.68	mKgW	GRD	MG	LT	GN				ARG	3I	5.00					Moderate argillic overprinted by weak phyllic, crosscut by mineralized quartz veins hosting disseminated pyrite. Very weakly clay altered throughout.
										GY				PHC	2I						
														CLY	1I						
			112.16	119.72	7.56	mKgW	GRD	MG	MD	GN	XL			PRO	3I						Moderate propyllitic, with weak pervasive hematite staining, giving a mottled green-red colouration.
										RD				HEM	2I						
			119.72	125.93	6.21	mKgW	GRD	MG	LT	GN	RB		3I	PRO	3I	2.00					Moderate propyllitic with moderate-strong silica flooding, due to crosscutting quartz veins. A rubble section is strongly silicified, to the point of becoming a nearly continuous quartz vein. Disseminated-blebby pyrite throughout.
									MD	GY	FL										
			127.32	128.13	0.81	mKgW	GRD	MG	MD	GN	XL			PRO	3I						Moderate propyllitic, with weak pervasive hematite staining, giving a mottled green-red colouration.
										RD				HEM	2I						
			134.87	135.63	0.76	mKgW	GRD	MG	LT	GN	XL			PHC	2I	4.00					Weak phyllic overprinting weak argillic, crosscut by quartz veinlets with well-developed strong phyllic envelopes. Disseminated pyrite throughout.
										PK				ARG	2I						
138.51	140.81	2.30				mKgW	GRD	MG	MD	GN	XL		3I	PRO	2I						Weak propyllitic granodiorite with moderate silica flooding, obliterating some of the original textures. Disseminated pyrite throughout. Crosscut by quartz/pyrite veinlets. Strongly gouged fault zone at the end of the interval.
										GY	FL			CLY	2I						
											GO										
			140.13	140.81	0.68	mKgW	GRD	MG	LT	GN	RB			PRO	2I	1.00					Fault zone through weak propyllitic granodiorite, with gouged border hosting granodiorite clasts and significant rubble. Hosts disseminated pyrite.
										GY	GO			CLY	3I						
140.81	156.98	16.17				mKgW	GRD	MG	MD	GN	XL			PRO	3I			HE	6.00		Moderate propyllitic granodiorite with patchy argillic alteration around grey quartz veinlets/stringers. Red hematite staining/alteration throughout, giving a slightly mottled red-green-white colouration. Also, crosscut by occasional pyrite stringers. Overall, a relatively uninteresting interval, likely a transition between two mineralized phyllic intervals.
									DK	RD	PA			HEM	1I						
										WH				ARG	2I						
156.98	164.47	7.49				mKgW	GRD	MG	MD	GN	XL		2I	ARG	2I	3.00					Dominantly weak argillic, continuous overprinted by weak phyllic granodiorite. Short patches of moderate-strong propyllitic, especially rich in dark green chlorite. Weak silica flooding throughout, resulting in white quartz eyes. Short patches of moderate silica flooding cause destruction of original textures. Disseminated pyrite is found throughout. Crosscutting quartz veinlets also host disseminated pyrite.
									DK	GY	PA			PRO	2I						
														PHC	2I						
			158.73	160.81	2.08	mKgW	GRD	MG	DK	GN	XL		2I	PRO	4I	5.00					Dark green, strongly propyllitic granodiorite, crosscut by two white quartz veins. Disseminated pyrite is hosted throughout.
											FL

164.47	171.91	7.44				mKgW	GRD	MG	LT	GN	XL			ARG	3I						Moderate argillic granodiorite, overprinted by weak phyllic. Patchy propyllitic makes a long dark green section. Granodiorite is crosscut by white quartz veins and veinlets, and a short breccia.
										PK	PA			PHC	2I						
														PRO	2I						
			168.36	169.72	1.36	mKgW	GRD	MG	DK	GN	XL			PRO	4I	5.00					Dark green propyllitic with high concentrations of chlorite crosscut by white quartz veinlets.
171.91	178.06	6.15				mKgW	GRD	MG	MD	GN	XL			PRO	3I			HE	10.00		Moderate propyllitic granodiorite with patchy argillic alteration around grey quartz veinlets/stringers. Red hematite staining/alteration throughout, giving a slightly mottled red-green-white colouration. Also, crosscut by occasional pyrite stringers. Overall, a relatively uninteresting interval, likely a transition between two mineralized phyllic intervals.
									DK	RD	PA			HEM	2I						
														ARG	2I						
178.06	187.52	9.46				mKgW	GRD	MG	MD	GN	XL			PHC	3I	6.00					Dominantly phyllic vein envelopes overprinting weak argillic granodiorite. Quartz veins and smoky quartz breccias are at the centre of the interval, and significant pyrite veinlets are found throughout.
									LT	PK				ARG	2I						
										WH											
			178.06	180.95	2.89	mKgW	GRD	MG	LT	GN	XL			ARG	3I	1.00					Argillic granodiorite overprinted by weak phyllic, crosscut by mineralized quartz veinlets.
										WH				PHC	1I						
			184.58	187.52	2.94	mKgW	GRD	MG	LT	GN	XL			ARG	3I	2.00					Argillic partially overprinted by weak phyllic, crosscut by occasional mineralized quartz veins.
										PK				PHC	1I						
			183.10	183.91	0.81	mKgW	GRD	MG	LT	GY	XL		3I	PHC	4I	8.00					Light grey phyllic envelopes overprinting light grey-white argillic. Crosscut by white quartz veins and prominent pyrite veinlets/veins. Quartz veins produce patchy strong-moderate silica flooding.
											FL			ARG	2I						
187.52	198.36	10.84				mKgW	GRD	MG	MD	GN	XL		2I	PRO	3I	1.00					Moderate propyllitic granodiorite with weak red hematite staining/alteration, giving the rock a mottled green-red appearance. Weak argillic envelopes on fractures, weak silica flooding leading to quartz eye development in patches. Granodiorite hosts disseminated pyrite, frequent fracture pyrite, and is crosscut by quartz-carbonate veins/stringers.
									DK	RD	FR			HEM	2I						
														ARG	1I						
198.36	236.35	37.99				mKgW	GRD	MG	MD	GN	XL		3I	PRO	3I	1.00					Moderate propyllitic granodiorite with weak red hematite staining/alteration, giving the rock a mottled green-red appearance. Weak argillic envelopes on fractures, moderate continuous silica flooding leading to partial obliteration of original granodiorite textures. Lacks argillic envelopes, but has a short argillic-phyllic subinterval. Granodiorite hosts disseminated pyrite, frequent fracture pyrite, and is crosscut by quartz-carbonate veins/stringers.
										RD	FL			HEM	2I						
														ARG	1I						
			230.78	232.59	1.81	mKgW	GRD	MG	LT	GN	XL			ARG	3I						Moderate argillic overprinted by weak phyllic, giving a green-pink mottled colouration. Crosscut by quartz veins/veinlets and pyrite stringers.
										PK				PHC	2I

														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite		Type	Conc. (%)		
236.35	243.73	7.38				mKgW	GRD	MG	LT	GN	XL			PHC	3I	1.00					Thick phyllic vein envelope that grades outward into argillic. Envelope encompasses several prominent quartz-carbonate-chalcedony veins hosting pyrite and other sulphides. Disseminated pyrite is also hosted throughout the phyllic granodiorite.
										GY				ARG	2I						
			242.69	243.50	0.81	mKgW	GRD	MG	LT	WH	XL			ARG	2I						weak argillic with very weak potassic alteration. Part of the outer vein zone envelope.
										PK				POT	1I						
243.73	250.02	6.29				mKgW	GRD	MG	MD	GN	XL		2I	PRO	2I						Weak propyllitic granodiorite with very weak potassic/hematite alteration giving a green-pink mottled colouration. Silica flooding leads to quartz eyes, but is patchy.
										PK	FL			HEM	1I						
														POT	1I						
250.02	258.93	8.91				mKgW	GRD	MG	MD	GY	XL			POT	2I						Unaltered granodiorite with weak potassic alteration.
										PK											
258.93	287.58	28.65				mKgW	GRD	MG	MD	GN	XL		2I	PRO	3I						Moderate propyllitic granodiorite with patchy silica flooding, and patchy phyllic-argillic alteration from crosscutting vein envelopes. Crosscut by quartz-carbonate veins/veinlets, and pyrite veinlets/stringers.
										GY	FL										
											PA										
			262.57	264.33	1.76	mKgW	GRD	MG	MD	GN	XL		3I	PRO	4I	3.00					Strong propyllitic with high concentration of dark green chlorite and moderate silica flooding causing quartz eyes. Crosscut by quartz-carbonate veinlets with narrow phyllic envelopes.
									DK	GY	FL										
			264.33	265.98	1.65	mKgW	GRD	MG	MD	GN	XL		2I	ARG	3I	8.00					Moderate argillic and strong phyllic vein envelopes that overlap and grade outward into argillic. Granodiorite and veins host disseminated-blebby pyrite. Weakly silica flooded, with occasional quartz yes.
										GY	FL			PHC	4I						
										BL											
			270.47	274.79	4.32	mKgW	GRD	MG	MD	GN	XL			PHC	3I						Phyllic overprinted argillic, phyllic is stronger at the outer margins of the subinterval. Centre of the subinterval is more clearly phyllic overprinting argillic and is fractured, with weak clay alteration.
									LT	GY	FR			ARG	3I						
											FL			CLY	2I						
287.58	311.34	23.76				mKgW	GRD	MG	LT	GN	XL			ARG	2I	2.00					Generally weak argillic and phyllic overprinting each other, except for several patches of strong phyllic in vein envelopes. Interval is crosscut by quartz, carbonate, and pyrite veins/veinlets, and a few short gouge sections. Granodiorite hosts disseminated pyrite throughout. Overall colour is green-grey, but is green-pink in rare short patches. Gouge is most common near/in thicker quartz veins or closely spaced quartz veinlets.
										GY	PA			PHC	2I						
			289.01	290.28	1.27	mKgW	GRD	MG	MD	BL	XL		3I	PHC	4I	5.00					Strong phyllic granodiorite near crosscutting quartz veins. Subinterval includes two prominent quartz veins that have been significantly gouged. Disseminated-blebby pyrite is hosted in granodiorite and veins. Moderate silica flooding throughout, obliterating textures.
										GY	FL			ARG	1I						
														CLY	1I						
311.34	317.03	5.69				mKgW	GRD	MG	LT	GN	XL			ARG	4I						Strong argillic, with weak propyllitic overprint of dark green chlorite, giving a mottled green-pink colouration. Crosscut by quartz-carbonate veinlets.
										PK				PRO	2I

														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite		Type	Conc. (%)	Photo	
456.06	464.82	8.76				mKgW	GRD	MG	MD	GN	XL			PRO	3I	3.00					Moderate phyllic-argillic granodiorite due to overlapping vein envelopes. Moderate silica flooding partially obscures granodiorite textures. Crosscut by quartz-pyrite veinlets, and occasional white calcite veinlets. Disseminated pyrite throughout the granodiorite.
										GY	FL			ARG	2I						
											PA			PHC	2I						
			463.16	464.12	0.96	mKgW	GRD	MG	MD	GN	FL		5I	PRO	3I	30.00		EP	15.00		Moderate propyllitic granodiorite that is intensely silica flooded, so all original textures are obliterated. Pyrite and bright green epidote is blebby throughout the semitranslucent flooded granodiorite. Final third of subinterval is totally recrystallized black tourmaline.
									DK	BK								TO	20.00		
464.82	472.69	7.87				mKgW	GRD	MG	MD	GN	XL		3I	PHC	3I	2.00					Moderate phyllic-argillic granodiorite due to overlapping vein envelopes. Moderate silica flooding partially obscures granodiorite textures. Crosscut by quartz-pyrite veinlets, and occasional white calcite veinlets. Disseminated pyrite throughout the granodiorite.
									LT	WH	FL			ARG	2I						
472.69	496.07	23.38				mKgW	GRD	MG	MD	GN	XL		4I	PHC	4I	6.00					Moderate-strong phyllic, with patchy argillic and very weak propyllitic. Hosts a significant vein zone (472.69-481.80m) and a thick rubbly-fault zone (483.72-493.20m). Strongly mineralized quartz veins tend to be strongly silicified, and there is moderate-strong silica flooding throughout. Rare patches of pink potassic alteration.

KLAZA

Hole: KL-DDH-12-121 Logger Name: Teresa Cruz Date: August 26, 2012

Depth (m)		DESCRIPTION
85.68		Moderately gouged 70 degree sharp, undulatory contact between Hanging Wall (HW) phyllic granodiorite and Foot Wall (FW) quartz feldspar porphyry
86.57		Moderately gouged 45 degree sharp, planar contact between HW quartz feldspar porphyry dyke and FW clay altered gouged phyllic granodiorite.
381.06		70 degree sharp planar contact with moderately gouged between HW granodiorite and FW quartz feldspar porphyry dyke. Mineralized dyke selvedge is brecciated with strong pyrite contact.
382.90		Strongly gouged 50 degree undulatory contact between HW quartz feldspar porphyry dyke and FW granodiorite with brecciated mineralized dyke selvedge.
414.95		35 degree blended undulatory contact between HW granodiorite and FW clay altered quartz feldspar porphyry dyke with flow banded chill margin 3 cm thick.
422.23		70 degree sharp undulatory contact between HW quartz feldspar porphyry dyke and FW granodiorite. Weakly mineralized dyke selvedge.
501.19		60 degree sharp contact between HW granodiorite and FW siliceous dyke.
503.65		60 degree sharp contact between HW siliceous dyke and FW granodiorite.

						Type	Conc. (%)		
VT	19.83	23.44	60.00		24.00	PY	10.00	24 white quartz veinlets hosting disseminated-blebby pyrite, within the veinlets or in their narrow, grey, very strong phyllic envelopes.	
VN	20.36	20.38	75.00			PY	20.00	White crystalline quartz vein hosting blebby-massive pyrite at its centre. Orange-stained by oxidation.	
VN	20.54	20.70	70.00		3.00	PY	15.00	3 vuggy-crackles, lightly orange oxide-stained white quartz veinlets. Hosts disseminated-blebby pyrite, with strong grey phyllic envelopes.	
VN	24.22	24.23	75.00			PY	6.00	White weakly banded quartz-calcite vein with weak oxide-staining at band edges and hosting disseminated pyrite.	
VT	24.66	24.81	70.00		2.00	PY	10.00	2 white massive quartz-carbonate veinlets hosting disseminated-blebby pyrite with weak oxide staining.	
VT	24.98	25.08	45.00		5.00	PY	15.00	5 grey translucent quartz veinlets hosting disseminated-blebby pyrite with very strong phyllic envelopes.	
VT	25.30	25.31	35.00			PY	15.00	White-grey semitranslucent irregular quartz veinlet, hosting disseminated-blebby pyrite.	
VT	25.64	28.26	50.00		19.00	PY	20.00	19 white translucent quartz veinlets with grey very strong phyllic envelopes. Veinlets have weak orange oxide staining and hosts blebby pyrite and discontinuous pyrite stringers at their centres.	
VT	26.52	27.11	40.00		2.00			2 oxidized pyrite veinlets, with brown oxide-staining on outer borders and vug development.	
VT	28.78	30.74	70.00		11.00	PY	20.00	11 grey translucent quartz veinlets hosting disseminated-blebby pyrite with very strong phyllic envelopes.	
GO	32.02	32.23	65.00			PY	6.00	Weakly gouged phyllic granodiorite, with pervasive oxide-staining and disseminated-blebby pyrite.	
FT	32.23	33.41	80.00			PY	6.00	Fault zone (possible) with short gouge patches and strong rubble development. Moderate-strong oxidation staining throughout. Hosts disseminated pyrite.	
VT	33.45	33.46	75.00			PY	8.00	White-grey semitranslucent quartz veinlet with weak orange oxide staining and disseminated pyrite.	
VT	33.96	33.97	70.00			PY	40.00	White massive-banded quartz veinlet hosting blebby-massive pyrite.	
ST	34.11	34.22	30.00		2.00	PY	20.00	Two white quartz stringers with disseminated pyrite and weak oxide-staining.	
VT	35.35	36.29	60.00		13.00	PY	10.00	White-grey semitranslucent quartz veinlet with weak orange oxide staining and disseminated pyrite.	
VN	36.21	36.23	75.00					Massive pyrite vein with strong phyllic envelope with <1mm sericite crystals.	
VT	36.94	40.57	80.00		20.00	PY	15.00	20 white irregular quartz veinlets with moderate brown oxide-staining, hosting disseminated pyrite. Veinlet frequency decreases downhole.	
VT	41.39	41.53	60.00		3.00	PY	7.00	3 white massive semitranslucent quartz veinlets approximately 5-7mm thick, hosting disseminated-blebby pyrite.	
VN	44.83	44.95	80.00		3.00	PY	80.00	3 white massive semi translucent quartz veins hosting blebby-massive pyrite, that almost fully replaces quartz.	
VN	44.96	45.00	30.00					Massive pyrite vein, that loses density towards its edges.	
VN	45.17	45.22	90.00			PY	75.00	Vuggy-comb white quartz veinlet, with interstitial white carbonate, adjacent to a 3-4cm thick massive pyrite veinlet with larger crystals at the centre and decreasing crystal density towards edges of vein.	
VT	45.29	47.62	65.00		19.00	PY	20.00	19 white irregular quartz veinlets with moderate brown oxide-staining, hosting disseminated pyrite. Veinlet frequency decreases downhole.	
VN	46.46	46.49	70.00			PY	80.00	3cm thick grey massive semitranslucent quartz vein, with central massive pyrite vein 2.5cm thick.	
VT	47.93	47.94	75.00			PY	15.00	White-grey undulatory-banded quartz veinlet hosting disseminated pyrite, and crystals of grey-blue metallic mineral, soft with silver-blue-purple streak. Most likely galena, but possibly molybdenite.	
						GN	1.00		
VT	48.62	48.64	80.00					Pyrite veinlet with smoky quartz stringers.	
VN	48.95	48.99	80.00			PY	40.00	White cloudy-opaque massive quartz vein with blebby-massive interstitial pyrite.	
ST	49.05	50.42	20.00		8.00	PY	8.00	8 low angle white quartz stringers with distinct 3mm very strong phyllic envelopes, and hosts disseminated pyrite.	
VT	49.29	50.78	80.00		9.00	PY	10.00	9 white irregular quartz veinlets with moderate brown oxide-staining, hosting disseminated pyrite. Veinlet frequency decreases downhole.	
FT	50.90	52.70	60.00			PY	4.00	Rubbly-gouged fault zone crosscut by several quartz veinlets that silica flood the granodiorite. Hosts disseminated-blebby pyrite.	
GO	52.83	52.92	50.00			PY	6.00	Moderately gouged granodiorite crosscut by 3 pyrite-bearing quartz veinlets. Pyrite is disseminated-blebby.	
VT	53.02	53.68	25.00		7.00			7 vuggy, strongly oxidized quartz veinlets. Sulphides removed by oxidation.	
VT	53.80	57.08	75.00		21.00	PY	10.00	Massive white quartz veinlets with weak oxide-staining, hosting disseminated pyrite, within narrow and distinct very strong phyllic envelopes.	
VN	56.28	56.29	45.00					Massive-coarse crystalline pyrite vein.	

KLAZA

2° Structure Type	From (m)	To (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS		DESCRIPTION	Photo
						Type	Conc. (%)		
VT	57.34	57.50	45.00		3.00			A series of 3 massive pyrite veinlets that have been broken to rubble, making exact orientations difficult to determine.	
GO	57.62	57.74	30.00			PY	2.00	Moderately gouged, strongly orange oxide-stained argillic granodiorite hosting disseminated pyrite.	
VT	58.05	60.11	60.00		16.00	PY	15.00	White-grey quartz veinlets hosting disseminated-blebby pyrite.	
VT	58.79	58.80	85.00			PY	6.00	White massive quartz veinlets hosting disseminated-blebby pyrite.	
VN	59.46	59.47	90.00					Discontinuous-undulatory pyrite vein with white quartz stringers.	
VN	60.36	60.38	70.00					Undulatory massive pyrite vein.	
VT	60.46	64.90	50.00		28.00	PY	10.00	Massive white quartz veinlets with weak oxide-staining, hosting disseminated pyrite, within narrow and distinct very strong phyllic envelopes.	
BX	61.57	61.84	80.00			PY	15.00	Smoky quartz vein brecciated by massive white calcite veinlets, with weak-moderate gouge. Hosts disseminated-blebby pyrite throughout. Weak orange oxide staining.	
VN	62.22	62.24	70.00			PY	25.00	White-grey semitranslucent quartz vein with indistinct borders. Hosts disseminated-blebby pyrite and parallel pyrite veinlets.	
VT	63.03	63.04	45.00					Undulatory massive pyrite vein.	
VN	63.19	63.21	75.00			PY	15.00	Grey-white massive weakly clay altered quartz vein hosting disseminated pyrite.	
VN	63.34	63.40	80.00			PY	8.00	Massive white-grey semitranslucent quartz vein hosting disseminated-blebby pyrite.	
VN	64.10	64.24	15.00			PY	10.00	Weakly banded-massive white-grey semitranslucent quartz veins hosting disseminated pyrite. Offset 2.5cm by crosscutting pyrite veinlet.	
VN	65.20	65.24	60.00					Massive pyrite vein that loses crystal density near vein borders.	
VT	65.31	69.70	50.00		29.00	PY	8.00	Massive white quartz veinlets with weak oxide-staining, hosting disseminated pyrite, within narrow and distinct very strong phyllic envelopes.	
VT	66.95	66.97	70.00					Massive pyrite vein with moderate clay alteration.	
VN	68.52	68.54	40.00			PY	6.00	White crustiform-vuggy chalcedony vein with weak oxide-staining with clear massive quartz infilling some vugs, hosting disseminated pyrite.	
VN	69.06	69.20	50.00			PY	40.00	Quartz vein with 3 distinct textures: 3cm vuggy-banded grey-smoky quartz hosting disseminated pyrite, 5cm grey quartz vein brecciated by cream quartz veinlets with interstitial disseminated-massive pyrite and galena, 4cm massive pyrite vein crosscut by grey translucent quartz stringers.	
						GN	10.00		
VT	69.71	69.73	45.00		3.00	PY	15.00	3 white-smoky semi banded quartz veinlets with weak oxide-staining, hosting disseminated-blebby pyrite.	
VT	70.18	79.90	75.00		47.00	PY	20.00	White-grey quartz veinlets with 1cm very strong phyllic envelopes. All veinlets host disseminated-blebby pyrite. Veinlets are at angles greater than 45 degrees, averaging at 75 degrees.	
VN	79.58	79.64	50.00			PY	20.00	White-cream vuggy-crustiform chalcedony-calcite vein hosting disseminated-blebby pyrite.	X
VT	82.34	82.52	60.00		2.00	PY	15.00	White-grey quartz veinlets with 1cm very strong phyllic envelopes. All veinlets host disseminated-blebby pyrite. Veinlets are at angles greater than 45 degrees, averaging at 75 degrees.	
VN	85.18	85.41	30.00			PY	8.00	White-grey massive quartz vein, hosting disseminated-blebby pyrite. Vein is thick with grey quartz near the edges, and white quartz at the central bulk of the vein.	X
VN	85.57	85.61	75.00			PY	75.00	Thick massive white semitranslucent quartz vein hosting blebby-massive pyrite at dyke selvedge.	
GO	86.57	87.68	50.00			PY	7.00	Moderately gouged dyke selvedge crosscut by clay altered quartz veins. Hosts disseminated-blebby pyrite.	
ST	88.17	90.10	70.00		23.00			Fine discontinuous pyrite stringers with narrow grey clay envelopes.	
VN	88.71	88.97	75.00		3.00	PY	25.00	Chaotically banded smoky-grey quartz veins with moderate-weak clay alteration, hosting disseminated-blebby pyrite and discontinuous pyrite veinlets.	
VN	93.53	93.66	35.00		2.00	PY	10.00	2 moderately clay altered white-smoky quartz veins. Hosts disseminated pyrite throughout.	
GO	93.66	94.13	65.00			PY	8.00	Moderate-strongly gouged phyllic granodiorite, hosting disseminated-blebby pyrite. Crosscut by 3 similar quartz veins, detailed in next line.	
VN	93.88	94.12	35.00		3.00	PY	15.00	3 massive-crackled white-grey quartz veins that have been moderately gouged, but still retain their shapes and textures. Hosts disseminated-blebby pyrite throughout, and are crosscut by discontinuous pyrite veinlets.	
VN	94.85	94.90	40.00			PY	4.00	White massive quartz vein hosting disseminated pyrite.	
GO	95.62	95.70	50.00			PY	6.00	Moderately gouged phyllic-argillic granodiorite, crosscut by clay altered grey quartz stringers.	

KLAZA

2° Structure Type	From (m)	To (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS		DESCRIPTION	Photo
						Type	Conc. (%)		
VT	98.18	105.11	45.00		16.00	PY	6.00	White irregularly banded quartz veinlets hosting disseminated pyrite, and without the phyllic envelope typically associated with these veins.	
VT	99.07	105.94	60.00		14.00	PY	15.00	White-grey quartz veinlets with pyrite stringers-veinlets and disseminated-blebby pyrite. Veinlets have well defined strong phyllic envelopes.	
VN	101.36	101.43	75.00			PY	15.00	Massive white quartz vein with central undulating massive grey quartz veinlet, and a dark bronze-clay altered pyrite veinlet (2mm thick).	
VT	102.73	102.74	45.00					Coarse crystalline white quartz-calcite veinlet.	
GO	106.90	107.28	65.00			PY	10.00	Moderately gouged granodiorite crosscut by the strongly clay altered grey quartz-pyrite veins. Disseminated pyrite throughout.	
VT	107.97	111.37	70.00		26.00	PY	10.00	White-grey quartz veinlets with pyrite stringers-veinlets and disseminated-blebby pyrite. Veinlets have well defined strong phyllic envelopes.	
VN	110.52	110.56	90.00			CP	10.00	Massive pyrite vein with blebby chalcopyrite.	
VN	110.78	110.80	45.00			PY	25.00	Grey-white milky quartz vein, hosting blebby pyrite and discontinuous pyrite veinlets.	
VT	118.47	120.10	45.00		4.00	PY	6.00	White irregularly banded quartz veinlets hosting disseminated pyrite, and without the phyllic envelope typically associated with these veins.	
VT	119.13	121.01	70.00		6.00	PY	10.00	White-grey quartz veinlets with pyrite stringers-veinlets and disseminated-blebby pyrite. Veinlets have well defined strong phyllic envelopes.	
VT	121.01	122.08	50.00		5.00	PY	5.00	Grey semitranslucent quartz veinlets with indistinct borders that flood surrounding granodiorite. Hosts disseminated pyrite.	
VN	122.29	124.05	40.00		2.00	PY	4.00	2 thick, massive grey-white semitranslucent quartz veins with disseminated-blebby pyrite and crosscutting pyrite stringers. Some white quartz eyes. One vein is very rubbly.	
VT	126.63	128.36	65.00		2.00	PY	8.00	Grey semitranslucent quartz veinlets with indistinct borders that flood surrounding granodiorite. Hosts disseminated pyrite.	
VN	128.56	128.58	65.00			PY	30.00	White-grey semitranslucent quartz vein with central cream-white crustiform-vuggy chalcedony veinlet. Parallel pyrite veinlet along the downhole border.	
VT	129.25	129.52	45.00		3.00	PY	25.00	White-grey semitranslucent quartz veinlets with well defined phyllic envelopes, with central discontinuous pyrite veinlets and disseminated-blebby pyrite.	
VT	130.79	135.79	45.00		18.00			White massive calcite veinlets.	
VT	130.97	140.13	40.00		29.00		25.00	Grey-white quartz veinlets with discontinuous pyrite veinlets and disseminated pyrite hosted within. Veinlets have narrow, well defined very strong phyllic envelopes.	
GO	140.13	140.46	30.00			PY	6.00	Strongly gouged phyllic granodiorite, with some large (up to 4cm) clasts. Hosts disseminated pyrite.	
FT	140.46	140.81	45.00			PY	6.00	Friable, heavily fractured granodiorite, hosting disseminated pyrite.	
VT	141.03	151.35	35.00		24.00	PY	15.00	White-grey semitranslucent quartz veinlets with well defined phyllic envelopes, with central discontinuous pyrite veinlets and disseminated-blebby pyrite.	
VN	153.42	153.44	20.00			PY	10.00	White translucent quartz vein hosting blebby pyrite.	
ST	154.82	157.33	60.00		26.00	PY	40.00	White quartz stringers hosting disseminated pyrite and parallel pyrite stringers.	
VN	157.39	157.42	50.00					5cm clay altered pyrite vein.	
VN	157.48	157.52	60.00			PY	15.00	White mossy quartz vein, with parallel smoky quartz vein on uphole border. Smoky quartz hosts disseminated-blebby pyrite. White quartz hosts blebby-disseminated pyrite and a series of interstitial blebs of black crystals with a dark grey streak. Possibly tetrahedrite. Also hosts disseminated arsenopyrite.	
						TT	6.00		
						AS	6.00		
VN	158.50	159.63	25.00		3.00	PY	10.00	3 massive-weakly crustiform white quartz veins, hosting disseminated pyrite, and parallel pyrite stringers/veinlets.	
VT	160.31	165.32	45.00		16.00	PY	10.00	White-grey semitranslucent quartz veinlets with well defined phyllic envelopes, with central discontinuous pyrite veinlets and disseminated-blebby pyrite.	
VN	161.64	161.67	30.00			PY	5.00	White semitranslucent, weakly banded quartz vein hosting disseminated pyrite.	
VN	162.42	162.66	30.00			PY	8.00	Grey-white semitranslucent massive-crackled quartz vein, hosting disseminated pyrite.	
VN	163.06	163.17	30.00			PY	10.00	Grey-white semitranslucent massive-crackled quartz vein, hosting disseminated pyrite.

BX	181.08	181.30	45.00			PY	4.00	White massive calcite vein brecciating phyllic granodiorite, in close association with a smoky quartz veinlet that follows the white calcite edges.	
BX	181.61	181.65	65.00			PY	6.00	Green phyllic granodiorite brecciated by white massive calcite.	
VN	181.69	181.71	80.00			PY	4.00	Clay altered white quartz vein hosting disseminated-blebby pyrite.	
BX	181.81	181.84	80.00			PY	3.00	Green phyllic granodiorite brecciated by white massive calcite.	
VT	181.98	182.10	75.00			PY	10.00	Black smoky quartz veinlets brecciating granodiorite at irregular angles, and hosting disseminated-blebby pyrite.	
VN	182.25	182.38	85.00			PY	20.00	Black smoky quartz vein that weakly brecciates grey phyllic granodiorite. Crosscut by pyrite stringers/veinlets. Hosts disseminated-blebby pyrite throughout.	x
VT	182.46	183.75	60.00		29.00			Pyrite veinlets consisting of coarse grained crystals. Many veinlets are discontinuous or irregularly branching at many angles (35-90 degrees).	
VT	183.08	183.09	50.00			PY	15.00	Irregularly bordered smoky quartz veinlet, hosting disseminated-blebby pyrite.	
VN	183.15	183.86	70.00		7.00	PY	20.00	White-grey semitranslucent quartz veins hosting disseminated-massive pyrite, with discontinuous veinlets/veins parallel to quartz veins.	
VT	184.10	185.73	50.00		16.00	PY	10.00	White-grey quartz veinlets hosting disseminated pyrite and discontinuous pyrite stringers, with well defined grey strong phyllic envelopes.	
VN	187.73	188.06	10.00					Low angle, white vuggy-massive calcite vein that slightly brecciates green propyllitic granodiorite.	
GO	191.02	191.28	10.00					Weakly gouged propyllitic-hematite altered granodiorite.	
VN	191.32	191.52	5.00			PY	10.00	Very low angle quartz vein that does not intersect core axis. White-grey semitranslucent quartz vein that bleeds into the host rock. Crosscut by discontinuous red hematite stringers. Hosts disseminated-blebby pyrite. Mossy-blebby epidote at vein edges.	
						EP	10.00		
VN	192.12	192.14	30.00			PY	15.00	White semitranslucent quartz vein with blebby pyrite.	
VN	196.43	196.48	40.00			PY	6.00	Weakly defined white semitranslucent quartz vein with disseminated pyrite.	
VN	197.98	198.00	30.00			PY	20.00	Very low angle quartz vein that does not intersect core axis. White-grey semitranslucent quartz vein that bleeds into the host rock. Crosscut by discontinuous red hematite stringers. Hosts disseminated-blebby pyrite. Mossy-blebby epidote at vein edges.	
						EP	15.00		
VT	199.81	200.05	70.00		2.00	PY	10.00	Two white quartz veinlets with parallel red hematite stringers, hosting disseminated pyrite.	
VT	200.32	200.33	90.00			PY	5.00	White massive calcite veinlet crosscut by red hematite stringers and a pyrite stringer.	
						HE	15.00		
VT	202.77	202.85	85.00		2.00	PY	5.00	Two white quartz-carbonate veinlets with disseminated pyrite and disseminated-mossy hematite and epidote along their borders.

						Type	Conc. (%)		
VT	235.28	235.29	45.00			PY	30.00	White massive quartz-calcite veinlet with an irregular central massive pyrite veinlet.	
VN	236.52	236.57	90.00			PY	15.00	Blended white-grey semitranslucent quartz vein with white calcite. Hosts blebby-disseminated pyrite.	
VN	237.07	237.18	30.00			PY	20.00	Massive white-grey semitranslucent quartz vein with disseminated-blebby pyrite. Crosscut by a 80 degree TCA 4cm white-grey-smoky banded quartz vein hosting disseminated pyrite.	
VT	237.58	237.59	70.00			PY	30.00	White quartz veinlet with blebby pyrite with well developed dark grey phyllic envelope.	
VN	237.67	237.72	85.00			PY	15.00	Thick weakly banded smoky-grey quartz vein with lenses and discontinuous veinlets of white calcite. Hosts disseminated-blebby pyrite.	
GO	278.02	238.75	70.00			PY	6.00	Weakly gouged phyllic granodiorite with disseminated pyrite and quartz veinlets.	
VN	239.12	239.16	70.00			PY	7.00	Grey massive-crackled quartz vein crosscut by many cracks that are filled with white calcite. Hosts disseminated pyrite.	
VN	239.60	239.62	65.00			PY	5.00	Cream crustiform-massive chalcedony-quartz vein hosting disseminated pyrite.	
VT	239.81	239.86	70.00		3.00	PY	3.00	Three white calcite veinlets that split and rejoin each other.	
VN	239.93	240.03	80.00			PY	8.00	Banded grey quartz and cream crustiform chalcedony, that was later brecciated by white massive calcite veinlets. Hosts disseminated-blebby pyrite, and crosscut by pyrite stringers.	x
						CH	40.00		
VN	240.24	240.53	40.00		2.00	PY	6.00	Two identical white massive semitranslucent quartz veins, 1cm and 2cm with thin grey quartz borders and disseminated pyrite.	
VT	240.32	240.33	75.00			PY	30.00	White-grey irregular quartz-pyrite veinlet in a dark grey-green chloritic envelope.	
VT	240.57	240.58	80.00			PY	25.00	White-cream quartz-chalcedony veinlet, with parallel white calcite veinlet and disseminated-blebby pyrite.	
VT	240.69	241.16	40.00		3.00			Three pyrite veinlets with narrow, well-developed grey translucent phyllic envelopes.	
VN	241.84	241.87	60.00			PY	8.00	Cream chalcedony vein with interstitial white calcite, and an adjacent white calcite veinlet. Chalcedony is weakly crustiform, and disseminated pyrite is hosted in its phyllic envelope.	
VN	241.24	241.26	40.00			PY	8.00	White semitranslucent massive quartz vein, hosting disseminated pyrite.	
VN	241.46	241.47	85.00			PY	15.00	Cream chalcedony vein with blebby pyrite and white calcite veinlet.	
VN	241.75	242.03	30.00		2.00	PY	8.00	Two irregular white-cream massive quartz-calcite veins, bordered by dark grey finely ground pyrite <1mm thick.	
VN	242.65	242.67	70.00			PY	20.00	White-grey massive-weakly banded quartz vein hosting white calcite lenses, disseminated-blebby pyrite and pyrite stringers.	
VT	243.54	243.69	60.00		2.00	PY	15.00	Two white-grey banded quartz veinlets with white calcite veinlets, and disseminated-blebby pyrite.	
VT	244.42	244.43	80.00			PY	20.00	White calcite veinlet with dark grey quartz veinlet hosting fine grained pyrite.	
VN	245.71	245.72	80.00			PY	40.00	White massive quartz vein hosting blebby-massive pyrite with dark green blebby chlorite.	
VT	246.60	246.88	75.00		3.00	PY	70.00	Three white massive quartz veinlets hosting blebby-massive pyrite.	
VN	249.53	249.88	30.00		2.00	PY	6.00	Two white semitranslucent massive quartz veins hosting disseminated pyrite.	
VT	253.17	253.20	70.00			PY	15.00	White translucent quartz veinlet hosting disseminated-blebby pyrite in a 2cm phyllic-argillic envelope.	
VT	254.19	254.88	80.00		3.00	PY	10.00	Three white-grey quartz veinlets with central disseminated-blebby pyrite and dark green chlorite borders outside of their phyllic envelopes.	
VT	255.12	255.66	70.00		3.00	PY	8.00	Three white-grey quartz veinlets with central calcite lenses and veinlets. Hosts disseminated pyrite and sericite.	
						SE	2.00		
VN	259.28	259.30	75.00			PY	15.00	White translucent quartz vein with indistinct borders that bled into the surrounding granodiorite. Hosts disseminated-blebby pyrite.	
VT	259.67	264.61	65.00		20.00	PY	15.00	White-grey translucent quartz veinlets with disseminated-blebby pyrite and pyrite stringers.	
VN	262.00	262.08	70.00			PY	50.00	Strongly gouged white-grey quartz vein, now almost fully altered to dark grey clay and finely ground sulphides. Some pyrite remains as larger crystals.	
VT	263.73	263.84	80.00		2.00	PY	15.00	White massive quartz-calcite veinlets with disseminated pyrite and pyrite stringers.	
VN	264.86	264.88	65.00			PY	80.00	Grey semitranslucent quartz vein, hosting blebby-massive pyrite.	
VT	270.48	271.02	50.00		9.00	PY	20.00	White semitranslucent quartz veinlets hosting blebby pyrite.	
VN	271.08	271.25	60.00			PY	40.00	Weakly clay altered grey translucent quartz vein hosting blebby-massive pyrite and white calcite lenses/veinlets. Crosscut by discontinuous pyrite veinlets/stringers.	
GO	271.25	271.38	70.00			PY	8.00	Weakly gouged granodiorite hosting disseminated pyrite.

SUMMARY

From (m)	To (m)	Interval	Unit	Comments
0.00	7.00		OVB	Oxidized overburden.
7.00	16.80		GRD	Argillic altered, oxidized granodiorite.
16.80	176.73		GRD	Unaltered to propylitic granodiorite, with patchy argillic to phyllic alteration envelopes around crosscutting mineralized veins.
176.73	179.93		FEL	Red-brown quartz feldspar porphyry dyke.
179.93	228.72		GRD	Weakly propylitic granodiorite, with argillic to phyllic alteration envelopes around crosscutting mineralized veins.
228.72	234.95		FEL	Tan-brown quartz feldspar porphyry dyke.
234.95	238.40		GRD	Phyllic altered granodiorite, silica-flooded with pyrite mineralized quartz vein.
238.40	249.02		FEL	Tan-grey to dark brown to red-brown-green-white quartz feldspar porphyry dyke.
249.02	297.24		GRD	Weakly propylitic, silicified granodiorite with patchy phyllic envelopes around crosscutting veinlets.
297.24	302.95		GRD	Strongly mineralized phyllic altered granodiorite, hosting massive pyrite, galena, sphalerite, arsenopyrite, and sulphosalts, with blebby chalcopyrite.
302.95	316.08		GRD	Weakly propylitic granodiorite, with argillic to phyllic alteration envelopes around crosscutting mineralized veinlets.

Hole: DDH-KL-12-122 Logger Name: Gareth Wolff

Depth (m)		DESCRIPTION
	176.73	Contact between phyllic altered granodiorite and quartz feldspar porphyry dyke. Sharp contact, at 85 degrees to core axis (TCA). White grading to brown towards dyke. Approximately 7cm of white weakly gougy.
	179.93	Undulatory contact between quartz feldspar porphyry dyke and granodiorite. Irregular, approximately 85 degrees TCA. 11cm of light green to tan gouge.
	228.72	Approximately 70 degrees TCA contact between argillic granodiorite and quartz feldspar porphyry dyke. Approximately 10cm of grey gouge at contact.
	234.95	Approximately 80 degrees TCA contact between quartz feldspar porphyry dyke and argillic to phyllic altered granodiorite. ~5cm of grey gouge at contact.
	238.40	Approximately 55 degrees TCA gougy contact between brecciated granodiorite and tan-grey quartz feldspar porphyry dyke.
	249.02	Contact between dark green-brown quartz feldspar porphyry dyke and argillic granodiorite. Contact obscured by rubble.

0.00	3.05						OVB					4.00									Overburden. Fragmented granodiorite and quartz-feldspar-porphyry dyke. Highly oxidized.
3.05	7.55						FEL		MD	OR	PA	3.00									Oxidized quartz-feldspar-porphyry dyke. Patchy limonite staining with grey, fresher dyke peaking out from under limonite staining.
										BN											
7.55	9.38						GRD		MD	OR		3.00									Heavily limonite stained granodiorite with quartz eyes up to 5mm in width. Patch of friable/crumble granodiorite.
9.38	11.67						GRD		LT	OR	PA	3.00	PHC	3.00							Crumbly, argillic altered granodiorite with patches of phyllic altered (competent) granodiorite. Argillic alteration is dominantly strong, phyllic is moderate.
									LT	GN											
11.67	49.66	37.99				mKgW	GRD	MG	MD	GY-GN		2.00		PRO	2.00						Weak propyllitic altered granodiorite. Limonite staining on most fractures. Weak and friable patches at beginning of interval, grading into more competent core.
														PHC	1.00						
														ARG	1.00						
			21.46	22.76	1.30	mKgW	GRD	MG	LT	GN		2.00		PHC	4.00						Strong phyllic altered granodiorite, hosting disseminated pyrite. Quartz-carbonate
			29.63	30.32	0.69	mKgW	GRD	MG	LT	GN				ARG	3.00						Moderately argillic altered granodiorite with weak phyllic overprinting.
														PHC	2.00						
			35.95	38.23	2.28	mKgW	GRD	MG				2.00		PHC	4.00	<1					Strong phyllic altered granodiorite with patch of strong argillic alteration. Phyllic alteration hosting disseminated pyrite and carbonate veinlets.
														ARG	1.00						
			43.44	46.06	2.62	mKgW	GRD	MG	LT	WH		1.00		ARG	3.00						Moderately argillic altered granodiorite with weak potassic overprinting grading into phyllic overprinting.
														POT	2.00						
														PHC	1.00						
			17.64	48.26	30.62	mKgW	GRD	MG	LT	GN		1.00		PHC	3.00						Moderately argillic altered granodiorite with weak phyllic overprinting.
														PHC	2.00						
49.66	51.15	1.49				mKgW	GRD	MG	LT	GN		1.00		PHC	4.00	<1					Phyllic altered granodiorite in footwall of quartz-feldspar-porphyry dyke. Moderately to strong phyllic alteration with patch of moderate argillic alteration. Milky quartz vein described in secondary structures log.
														ARG	2.00						
51.15	53.87	2.72				LKqP	FEL	FG	MD	GY	PO										Grey-brown quartz-feldspar-porphyry dyke. Carbonate stringers and one vein present. Dominantly white feldspar phenocrysts.
53.87	56.79	2.92				mKgW	GRD	MG	LT	WH		2.00		ARG	3.00						Moderate argillic altered granodiorite with weak phyllic overprinting. Patchy limonite staining.
									LT	GN				PHC	2.00						
56.79	58.60	1.81							LT	OR	PA	3.00		PHC	3.00						Weak, crumbly, argillic and limonite stained granodiorite with fragments of phyllic altered (and limonite stained) granodiorite.
														ARG	3.00						
58.60	58.78	0.18					BXA		DK	GY	BX										
58.78	72.71	13.93				mKgW	GRD	MG	LT	GN		1.00		PHC	4.00	3.00					Strong to intense phyllic altered granodiorite. Light green (strong phyllic) to light blue (siliceous, intensely phyllic altered) colours. Disseminated pyrite throughout. Pyrite stringers, and veining (hosting pyrite) throughout (see secondary structures log). Limonite staining at beginning of interval, grading into no limonite staining. Breccia at end of interval at contact with dyke (white quartz-carbonate matrix, dyke and intensely phyllic altered granodiorite clasts hosting blebby pyrite and sphalerite, clasts 1mm to 2cm in width).

										GY			3I								
			88.72	88.87	0.15	mKgW	GRD	MG		WH				ARG	3I						Moderately argillic altered granodiorite with a moderate potassic overprint.
										PK				POT	3I						
			89.88	90.43	0.55	mKgW	GRD	MG		GN				PHC	3I	1.00					Intensely silicified and moderately phyllic altered granodiorite hosting disseminated pyrite and a sphalerite vein and a grey gouge vein.
										GY			5I								
			91.00	91.30	0.30	mKgW	GRD	MG		GN	EN			PHC	3I						Intensely silicified, moderate phyllic envelope surrounding a grey quartz veinlet hosting blebby pyrite and sphalerite.
										GY	EN		5I								
			91.49	93.00	1.51	mKgW	GRD	MG	DK	GN	PA			PRO	3I						Patchy/mottled complexed propyllitic and phyllic altered granodiorite hosting multiple carbonate stringers and a grey gouge vein. The whole interval is moderately silicified.
									LT	GN	PA			PHC	3I						
										GY											
93.00	96.37	3.37				LKqP	FEL			TN											Partially gouge altered quartz feldspar porphyry dyke.
96.37	142.43	46.06				mKgW	GRD	MG		GN				PHC	3I						Moderately phyllic and moderately silicified granodiorite with small patches of argillic alteration.
										WH	PA			ARG	3I						
			99.00	99.16	0.16	mKgW	GRD	MG		GY			5I					To	3.00		Intensely silicified and moderately phyllic altered granodiorite hosting disseminated black tourmaline.
									DK	GN				PHC	3I						
			99.76	100.72	0.96	mKgW	GRD	MG		GN				PRO	3I						Purple/green intensely silicified granodiorite. Silicification obscures rock textures. May have been propyllitic altered granodiorite with a potassic overprint prior to silicification. Hosts carbonate veining which hosts disseminated to blebby pyrite. Granodiorite is fine grained and contains 1-3mm phenocrysts.
										PU				POT	3I						
										GY			5I								
			101.26	101.82	0.56	mKgW	GRD	MG		GN			4I								Strongly silicified fine grained green granodiorite. Contains 1-5mm clay phenocrysts. May have been phyllic altered before silicification obscured rock texture.
			103.04	104.07	1.03	mKgW	GRD	MG	DK	GY			5I								Intensely silicified dark grey/dark pink granodiorite. May have had a moderately potassic overprint before silicification. Contains multiple carbonate veinlets with small phyllic envelopes.
									DK	PK				POT	3I						
			106.16	108.33	2.17	mKgW	GRD	MG	DK	GN				PRO	3I						Intensely silicified dark grey/dark pink granodiorite. Consists of alternating patches of strongly propyllitic alteration and dark grey/dark purple granodiorite. Dark purple may be due to potassic overprint. Interval is cross-cut by multiple white carbonate stringers.
									DK	PK				POT	3I						
									DK	GY			5I

2° Structure Type	From (m)	To (m)	Interval (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS		DESCRIPTION	Photo
							Type	Conc. (%)		
VT	8.41	8.47		35.00		1.00			White carbonate veinlet. 6mm in width.	
VN	18.54	18.64		30.00		1.00	Py	30.00	Milky quartz vein/band of pervasive blebby pyrite. 1.5cm in width, orientated at 30 degrees tca.	
VN	21.65	21.71		50.00		1.00			White and beige carbonate veins. 1cm in width.	
FT	22.22	22.30		40.00		1.00			1.7cm of limonite stained clay altered fault gouge.	
VN	22.48	22.57	0.09	40.00		1.00	Py	4.00	1cm quartz vein hosting blebby pyrite and sphalerite.	
							Sp	3.00		
VT	27.95	28.05	0.10	32.00		1.00			Milky quartz veinlet. 7mm in width, orientated at 32 degrees tca.	
VN	28.71	28.76	0.05	55.00		1.00	Py	5	Carbonate vein hosting blebby pyrite. 1.2cm in width, orientated at 55 degrees tca.	
VT	36.50	36.61	0.11	35.00		1.00	Py	3.00	Carbonate and vitreous quartz veinlet hosting blebby and disseminated pyrite. Narrow, intense phyllic alteration halo (also hosting disseminated pyrite).. 3mm in width.	
VN	36.92	37.07	0.15	35.00		1.00	Py	15.00	Quartz and quartz-carbonate vein hosting blebby pyrite. 3.1cm in width.	
VT	37.97	38.02	0.05	60.00		1.00	Py	<1	Blue-white quartz-carbonate stringer hosting disseminated pyrite.	
VN	40.29	40.39	0.10	60.00		1.00	Py	2.00	4.5cm vitreous quartz vein (1cm of vein is dark-grey).	
VT	42.16	42.57	0.41	60.00		3.00			Vitreous quartz veins with disseminated pyrite. 1mm, 7mm and 8mm in width.	
VT	45.89	46.32	0.43	60.00		3.00			3 small veinlets of quartz and carbonate with minor disseminated pyrite.	
VN	49.89	49.94	0.05	35.00		1.00			Carbonate vein with splays of stringers. ~1.4cm in width.	
VN	50.11	50.15	0.04	60.00		1.00	Py	1.00	Dark-grey-blue vein (aphanite sulphides and quartz) hosting minor disseminated pyrite. 1.5cm in width.	
VN	51.11	51.31	0.20	45.00		1.00	Py	2.00	Milky quartz vein at 45 degrees tca with ~3% tourmaline and minor disseminated pyrite. 1.9cm in width.	
VN	53.82	53.87	0.05	60.00		1.00			Quartz veining at contact with dyke (altered, difficult to see). 2.9cm in width, orientated at 60 degrees tca.	
GO	53.87	54.18	0.31	60.00		1.00			2.6cm of clay altered fault gouge.	
VN	54.20	54.24	0.04	85.00		1.00			Chalcedony, quartz and carbonate vein. Vuggy texture. Light grey colour. 3.2cm in width.	
VN	56.43	56.48	0.05	30.00		1.00			Clay altered fault gouge. 2.5cm in width, orientated at 30 degrees tca.	
VN	56.81	56.85	0.04	65.00		1.00			Vuggy quartz-carbonate vein.	
GO	58.45	58.65	0.20	85.00		1.00			Fragmented, altered granodiorite. Fault zone. At least 2.4cm of fault gouge.	
BX	58.65	58.84	0.19	55.00		1.00			13cm of breccia with dark-grey siliceous matrix. Clasts of quartz-carbonate hosting disseminated pyrite. Clasts from <1mm to 1.5cm in width. Sub angular to angular clasts. Breccia followed by 7cm of quartz vein with limonite stained cracks (vein hosting disseminated pyrite).	
				70.00						
FT	58.84	58.97	0.13	70.00		1.00			Highly clay altered fault gouge. 11cm in width. White and orange limonite stained gouge, with 1cm of dark-grey sulphide gouge at lower end of interval.	
VT	60.00	60.36	0.36	60.00		3.00	Py	2.00	Vitreous quartz (+white quartz-carbonate) veinlets and stringer hosting disseminated and blebby pyrite. Veinlets orientated at 45, 60 and 60 degrees tca.	
VT	61.78	65.71	3.93			14.00	Py	1.00	~14 vitreous quartz and white carbonate veinlets hosting disseminated to blebby pyrite. 1mm to 4mm in width. Orientated at 40 to 85 degrees tca.	
ST	61.88	65.96	4.08			22.00	Py	1.00	Vitreous quartz (+white quartz-carbonate) stringers hosting disseminated and blebby pyrite. Veinlets orientated at 45, 60 and 60 degrees tca.	
VN	65.19	65.24	0.05	60.00		1.00	Py	1.00	Quartz-carbonate and vitreous quartz vein hosting disseminated pyrite. 2.7cm in width.	
VN	66.29	66.42	0.13	55.00		2.00	Py	10.00	Vitreous quartz veins (1.0 and 1.1cm in width) with thin bands of white quartz-carbonate. Veins hosting disseminated pyrite and orientated at 50 and 60 degrees tca. Narrow, intense phyllic alteration envelope surrounding veins.	
VN	67.15	67.36	0.21	23.00		1.00	Py	1.00	Vitreous white and grey quartz vein hosting minor disseminated pyrite. 2.5cm in width.	
ST	66.96	68.44	1.48	55.00		9.00	Py	2.00	Quartz and quartz-carbonate stringers hosting disseminated pyrite. Orientated at 50 to 60 degrees tca.	
VN	69.36	69.40	0.04			1.00	Py	5.00	1.1cm vitreous quartz (+stringy carbonate) vein hosting blebby pyrite and sphalerite. Intense, narrow, blue phyllic alteration halo hosting abundant disseminated pyrite (halo included in interval).	
							Sp	2.00		
VT	69.65	69.68	0.03	62.00		1.00	Py	15.00	Vitreous quartz vein hosting abundant blebby pyrite. Intense, narrow, blue phyllic alteration halo hosting abundant disseminated pyrite.	
VN	69.95	70.02	0.07	46.00		1.00	Py	2.00	Crustiform, vitreous quartz + white quartz-carbonate vein hosting disseminated to blebby pyrite and sphalerite. Intense phyllic alteration halo/ silicification hosting abundant disseminated pyrite. Vein is 2.2cm in width.	
VN	70.47	70.52	0.05	82.00		2.00	Py	5.00	Vitreous quartz and white quartz veins hosting blebby pyrite with intense, narrow, blue phyllic alteration halo hosting abundant disseminated pyrite. Orientated at 85 and 80 degrees tca. 2.9cm in width.	

KLAZA PROPERTY

2° Structure Type	From (m)	To (m)	Interval (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS		DESCRIPTION	Photo
							Type	Conc. (%)		
ST	71.11	72.59	1.48	55.00		3.00	Py	1.00	Quartz stringers with intense, narrow, blue phyllic alteration halos hosting disseminated pyrite.	
BX	72.70	72.88	0.18	56.00		1.00	Py	<1	Breccia with white and green soft matrix (feldspar and smectite?) with minor carbonate. Green, altered granodiorite clasts with peachy/white silicic dyke clasts. Sub angular clasts. Clasts approximately 1mm to 1.5cm in size. Granodiorite clasts hos blebby sphalerite and pyrite and galena within vitreous quartz. Blue silicification and phyllic alteration selvedge into (upper) granodiorite. Upper contact orientated at 50 degrees tca, lower contact at 62 degrees. 13.6cm true width.	
							Gn	1.00		
							Sp	1.00		
GO	72.88	72.89	0.01	56.00		1.00			1.2cm of white clay altered fault gouge at contact.	
?	82.78	83.16	0.38	40.00		1.00			Bands of limonite staining and faint grey stringers orientated at 40 degrees tca. Approximately 5 bands of limonite staining and 17 stringers.	
BX	82.35	82.42	0.07			1.00			Brecciation at contact with granodiorite. Contact at 55 degrees. Soft, white and green feldspars (+smectite?) matrix which has been partly altered to gouge. 2mm to 2cm clasts of green altered granodiorite. Sub-angular clasts.	
FT	82.42	82.43	0.01	62.00		1.00			<1cm of white/green altered fault gouge at 62 degrees tca.	
FT	82.77	82.89	0.12	65.00		1.00	Py	<1	Developing fault zone or breccia-fault-gouge. White clay altered gouge hosting pieces of altered granodiorite. Granodiorite hosts disseminated pyrite. Zone is 8cm in width.	
BX	86.24	86.35	0.11	80.00		1.00	Py	3.00	Grey breccia with a few phyllic altered granodiorite clasts and tan quartz feldspar porphyry dyke clasts. Dark grey matrix is partially gouge altered and hosts disseminated pyrite.	
GO	86.35	86.53	0.18	80.00		1.00	Py	1.00	Grey gouge altered phyllic altered granodiorite.	
VN	87.54	87.55	0.01	75.00		1.00	Py	1.00	White/tan carbonate vein hosting disseminated pyrite and disseminated sphalerite.	
							Sp	25.00		
VN	88.07	88.09	0.02	60.00		1.00	Py	1.00	White carbonate vein minorly brecciating phyllic altered granodiorite hosting disseminated pyrite and blebby sphalerite.	
							Sp	7.00		
VT	88.11	88.12	0.01	60.00		1.00	Py	95.00	0.2cm pyrite/sphalerite veinlet.	
							Sp	5.00		
VN	90.00	90.01	0.01	55.00		1.00	Py	2.00	Sphalerite vein hosting disseminated pyrite.

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Arsenopyrite	Type	Conc. (%)	Photo	
	4.57	27.75				mKgW	GRD	MG		OR	PA	OXI	4.00					He	5.00		PERVASIVE OXIDATION through patchy argillic - postassic - unaltered granodiorite. Dominant potassic alteration. Argillic zones 20-50 cm. Phyllic 2-50cm as envelopes around quartz-carbonate veinlets. Black stringers (stockwork) at top of hole. Zones of frequent, dense hematitle stringers preesent. Limnite staining on all fractures
									MD	GY		ARG	3.00								
									MD	GR		POT	3.00								
												PHC	3.00								
												PRO	2.00								
			19.13	19.43	0.30	mKgW	GRD	MG	OR		BX										OXIDIZED BRECCIA. Matrix supported, clasts angular <2cm. Mineralogy hidden by oxidation.
			25.91	26.12	0.21																DIKE/XENOLITH? Plagioclase-phyric in black fine grained matrix (non-magnetic). Irregular 'contacts' with propylitic altered hanging wall and potassic altered footwall. 60 degrees TCA (top contact) and 80 degress (bottom contact)
27.75	169.04	141.29				mKgW	GRD	MG	MD	GN	MA			PRO	2.00						PROPYLTIIC AND POTASSIC ALTERATION WITH PHYLLIC ZONES. Patchy interval Dominately weak potassic to propylitic (50/50 %) altered granodiorite with wide phyllic envelopes (metre scale) around veins +/- mineralization (see secondary log). Zones of weak to strong argillic alteration (20-200 cm) common throughout. Local sheeted black stringers at top of interval.
										PK	OA			POT	1.00						
			36.52	36.67	0.15	mKgW	GRD	MG	LT	GN	EN			PHC	3.00						PHYLLIC ENVELOPE around four carbonate veinlets and one carbonate vein. No
			40.43	42.92	2.49	mKgW	GRD	MG	LT	GN	EN			PHC	3.00	5.00	2.00	Sph	5.00		PHYLLIC ENVELOPE with two mineralized veins (see secondary log)
																		Gn	5.00		
			48.76	51.48	2.72	mKgW	GRD	MG	LT	GN	EN			PHC	3.00						PHYLLIC ENVELOPE AND ARGILLIC (underprint) with carbonate veinlets (10 degrees TCA) and four carbonate veins (+chlorite). Two cm gougy vein 30 degrees TCA
														ARG	2.00						
			61.46	65.41	3.95	mKgW	GRD	MG	LT	GN				PHC	3.00						PHYLLIC ZONE associated with local increase in smoky quartz veinletws with calcite and tourmaline (2%). Stringers 80-90 degrees TCA (8 total)
														ARG	1.00						
			81.75	83.37	1.62	mKgW	GRD	MG	LT	GN	EN			PHC	3.00	1.00		Gn	1.00		PHYLLIC ALTERATION associated with white carbonate +/- quartz veinlets hosting trace pyrite and galena. Three veinlets total 6-8mm. 80 degrees TCA
			84.32	84.43	0.11		APL	FG	LT	PK											APLITE DIKE. Pink silicious, fine-grained dike. 70 degrees TCA sharp contact (uphole) and 90 degrees TCA sharp contact (downhole)
			91.53	97.72	6.19	mKgW	GRD	MG	LT	GN	PA			PHC	3.00	1.00					PATCHY PHYLLIC>ARGILLIC alteration zones (30-50 cm) around pink and white carbonate > quartz veinletw, one grey quartz vein zone 50 degrees TCA. Trace pyrite in one stringer
										WH				ARG	2.00						
			104.11	116.02	11.91	mKgW	GRD	MG	LT	GN				PRO	2.00						Increase in argillic 'underprint'. Potassic and propylitic alteration still prominent.
										WH				POT	1.00						
														ARG	2.00						
			109.96	115.20	5.24	mKgW	GRD	MG	LT	GN	PA			PRO	3.00						PHYLLIC ALTERATION dominant with patchy moderate to strong propylitic alteration in zone associated with massive calcit vein. Zone is locally silicified, chlorite stringers present (stockwork(), local vugs not assocated with veining. Netted grey quartz stringers < breccia througout. Vein occurs at bottom of envelope
									MD	GN				PHC	3.00						
														ARG	2.00						
			115.20	118.41	3.21	mKgW	GRD	MG	DK	GN				PRO	4.00						STRONG PROPYLITIC ALTERATION.

			143.33	151.49	8.16	mKgW	GRD	MG	MD	GY	PA		1.00	PRO	1.00						PATCHY PHYLLIC AND ARGILLIC ZONES (20-40 cm) in siliceous potassic and propylitic alteration
									LT	GN				POT	1.00						
														PHC	3.00						
			158.36	158.75	0.39	mKgW	GRD	MG	LT	GN	EN			PHC	3.00						PHYLLIC ENVEOPLE around black sulphide-calicte vein/
			160.82	162.61	1.79	mKgW	GRD	MG	LT	GN				PHC	2.00						QUARTZ VEIN ZONE in phyllic (moderate to strong) alteration with patchy argillic alteration (see secondary log)
			167.72	169.04	1.32	mKgW	GRD	MG	DK	GN	BX			PRO	3.00						BRECCIA ZONE AT DIKE CONTACT. Matrix supported breccia. Large (6-10cm) subangular clasts of propylitic altered GRD in black fine-grained breccia matrix at low angle to core (see contact log)
									LT	GN											
169.04	184.48	15.44				LKqP	FEL	FG	LT	GN	PO										QUARTZ FELDSPAR PORPHYRY DIKE. Grey-green plagioclase phyric (coarse to very coarse grained) in crystalline grey to green groundmass. Light purple for 1m at upper and lower contacts. Plagioclase graine decrease to medium grained.
									LT	BN											
184.48	215.39	30.91				mKgW	GRD	MG													PHYLLIC ALTERATION dominant, propylitic, argillic, and potassic present in cm to m scale zones. General increase in alteration intensity. Mineralized zone(s) present, increase in alteration intesity. Mineralized zones present; increase in veining +/- mineralization zones of patchy argillic alteration most common.
			184.84	189.05	4.21	mKgW	GRD	MG	LT	GN	PA			PHC	3.00						ARGILLIC alteration dominant.with phyllic overprint
										WH				ARG	2.00						
			189.05	191.11	2.06	mKgW	GRD	MG	LT	ON	PA			PHC	3.00						Zone of increasing black sulphide veinlets and gougy core associated with black veinlets in phyllic alteration
			204.50	206.89	2.39	mKgW	GRD	MG	MD	GN	PA			PRO	3.00						Patchy argillic > propylitic alteration. Argillic overprint.
										WH				ARG	3.00						
215.39	219.13	3.74				LKqP	FEL	FG	LT	RD	PO										QUARTZ FELDSPAR PORPHYRY DIKE. Red and grey green coloured.
									LT	GN											
219.13	249.48	30.35				mKgW	GRD	MG	LT	PK	MA			PRO	1.00						WEAK PROPYLITIC TO POTASSIC ALTERED GRANODIORITE. With wide phyllic evelopes associated with quartz veining +/- mineralization. Black fine-grained xenoliths common (6cm)
									LT	GN	PA			POT	1.00						
														PHC	2.00						
			219.13	221.04	1.91	mKgW	GRD	MG	LT	GN	EN			PHC	3.00						PHYLLIC ENVELOPE around vein and breccia (see secondary log). Gougy zone
			226.16	228.62	2.46	mKgW	GRD	MG	LT	GN	EN			PHC	2.00						PHYLLIC ENVELOPE with 50 cm of argillic alteration at top of interval. Two mineralized veins (see secondary log)
										WH				ARG	3.00						
			244.40	245.45	1.05	mKgW	GRD	MG	LT	GN	EN			PHC	2.00						PHYLLIC ENVELOPE around two veins.
			245.45	246.51	1.06	LKqP	FEL	FG		GN	AN					2.00					Fine grained to porphyritic grey green dike, disseminated py throughout phenocryats 'washout'
										GY	PO

0.00	6.10	6.10																			NQ core
0.00	20.42	20.42				LKqP	FEL		MD	GY	PO	5									Quartz feldspar porphyry dyke. Plagioclase phyric (rounded) in red grey crystalline matrix. Looks silicious but is soft. Stronger pervasive oxidation (m scale) zones.stockwork black stringers common throughout.
										OR	PA										
			0.00	3.05	3.05							5									Core is muddy rubble.
			20.42	20.42		LKqP	FEL					5									Oxidized gouge - coarse grained grit in clay fault.
20.42	36.71	16.29				mKgW	GRD	MG	LT	GN	PA	4		PHI	3						Granodiorite - variably phyllic/propylitic altered, moderate pervasive oxidation forms 10-200 cm zones.
										YL				PRO	2						
			20.42	27.22	6.80	mKgW	GRD	MG				3		PHI	3						Patchy phyllic > propylitic alteration. Interval defined by medium-strong pervasive alteration.
														PRO	2						
			27.22	36.71	9.49	mKgW	GRD	MG	MD	GY	PA	4		PRO	3						Propylitic alteration with 1 m zone of argillic alteration and phyllic envelopes around veining (see secondary log). Core locally oxidized (pervasive, moderate).
										WH				ARG	3						
														PHI	5						
36.71	57.73	21.02				LKqP	FEL		LT	BN	PO	3									Quartz feldspar porphyry dyke. Red to grey-green-brown plagioclase phyric (coarse grained - very coarse grained) porphyry dyke. Groundmass crystalline, minor zones of flow banding.
									LT	RD											
			51.57	57.73	6.16																20 cm, local gouge and oxidation. Oxidized fractures and local gritty gouge. Stockwork quartz stringers and veinlets.
57.73	66.33	8.60				LKqP	FEL				MA										Silicious dyke. Chlorite-plagioclase-phyric (medium grained) crystalline felsic dyke. Groundmass soft. Chilled?
66.33	86.44	20.11				mKgW	GRD	MG		WH				PHI	4						Phyllic-argillic-propylitic alteration. Zone of moderate to strong alteration sulphide mineralized veining common and associated with moderate-strong phyllic alteration. Argillic alteration dominant, followed by phyllic, propylitic alteration occurs in 60-80 cm wide zones.
									LT	GN				PRO	3						
														ARG	3						
			66.33	69.14	2.81	mKgW	GRD	MG		WH	PA			ARG	3			Gn	10		Argillic for 1 m, propylitic until the end of interval. One mineralized veinlet.
									DK	GN				PRO	3						
			69.14	73.14	4.00	mKgW	GRD	MG	LT	GN	PA			PHI	3						Phyllic alteration overprinting propylitic alteration (local) in quartz vein zone (see secondary log).
														PRO	4						
			73.14	74.76	1.62	mKgW	GRD	MG		WH	PA			ARG	3						Argillic alteration with phyllic envelopes (10-15 cm) around quartz sulphide veins.
									LT	GN											
			75.76	86.44	10.68		GRTD		DK	GN	PA			ARG	3						Argillic with phyllic and propylitic patches (60-80 cm). Mineralized vein zones present.
									LT	GN	WH			PRO	3						
														PHI	3						
86.44	99.67	13.23				LKqP	FEL		MD	GN	PO										Quartz feldspar porphyry dyke. Green-grey with red patches. Type case with plagioclase. Local gouge zone (6-15 cm). White stringers (no fizz) throughout.
									LT	RD

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS				Photo	DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Arsenopyrite	Type	Conc. (%)		
99.67	124.57	24.90				mKgW	GRD	MG	LT	GN				PHI	4	80					Strong alteration. Meter scale zones of strong phyllic with argillic alteration and propylitic alteration, mineralized vein zones commoon. Zone is patchy light green and dark green. Locally gougey.
									DK	GN				PRO	4						
														ARG	2						
			99.67	103.45	3.78	mKgW	GRD	MG						PHI	3						Phyllic alteration in vein zone. Argillic altered "underprint".
														ARG	2						
			103.45	109.89	6.44	mKgW	GRD	MG	DK	GN	PA			PRO	4						Propylitic alteration with 60 cm phyllic envelopes associated with veining.
									LT	GN				PHI	3						
			109.89	129.57	19.68				LT	GN				PHI	5	3					Phyllic-argillic alteration 80-100 cm zone of each with patchy zones 10 cm in vein zones. Phyllic alteration overprinting. Intense phyllic alteration in main vein zone.
										WH				ARG	1						
124.57	144.08	19.51				mKgW	GRD	MG	DK	GN	MA			PRO	3						Propylitic alteration with phyllic envelopes associated with quartz veining. Carbonate stringers infrequent. Decrease in veining overall.
										PK	EN			PHI	2						
			131.34	131.73	0.39					BK	EN							Bi	75		Secondary biotite? Envelope (plagioclase phyric with black matrix - biotite is present, but this abundant?) around white quartz veinlet.
			132.20	133.20	1.00	mKgW	GRD	MG	LT	GN				PHI	3						Phyllic altered envelope associated with white quartz vein.
144.08	168.21	24.13				mKgW	GRD	MG	LT	GN	MA			PHI	5			Py	2		Zone of phyllic alteration associated with increas in veining frequency. Meter scale zones of moderate propylitic alteration present. Phyllic alteration locally intense in association with larger veins. One large vug (5 cm) with pegmattic calcite crystals. veins commonly associated with grey-black? sulphide/clay? Pyrite stringers present. see secondary log.
									DK	GN				PRO	3						
			151.49	152.49	1.00	mKgW	GRD	MG	DK	GN	MA			PRO	3						Propylitic alteration, decrease in veining.
			152.49	157.75	5.26	mKgW	GRD	MG	LT	GN	PA			PHI	5			Py	3		Phyllic alteration associated with white quartz-carbonate veining and pyrite stringers common.
			157.75	161.33	3.58	mKgW	GRD	MG	DK	GN	MA			PRO	4						Propylitic alteration with one pyrite mineralized white quartz veinlet and associated 50 cm phyllic envelope.
			161.33	168.21	6.88				LT	GN	PA			PHI	5			Py	2		Phyllic alteration. Moderate, locally intense in zones of quartz and pyrite veining. Large veins (see secondary log). Patchy argillic (gouge) alteration common.
									DK	GN				ARG	3						
168.21	172.98	4.77				mKgW	GRD	MG		WH				ARG	3						Argillic alteration with infrequent quartz-carbonate veinlets to veins.
172.98	174.90	1.92				mKgW	GRD	MG	DK	GN				PRO	4						Propylitic alteration, one carbonate stringer.
174.90	175.90	1.00				mKgW	GRD	MG		WH	MA			ARG	3						Argillic alteration/overprint on phyllic alteration.
									LT	GN											
175.90	181.48	5.58				mKgW	GRD	MG	LT	GN	WH			PHI	4						Phyllic alteration, strong/dominant with patchy propylitic (80 cm zones) and argillic (40 cm zones) alteration.
									MD	GN	MA			PRO	4						
														ARG	3						
			179.77	180.79	1.02	mKgW	GRD	MG	DK	GN				PRO	4						Propylitic alteration. Zones of very dark green.
181.48	183.76	2.28				mKgW	GRD	MG		WH	MA			ARG	3						Argillic alteration.
183.76	187.08	3.32				mKgW	GRD	MG	DK	GN				PRO	4						Strong propylitic alteration with local potassic flooding and secondary pyrite veinlets. One patch of argillic alteration (70 cm).

KLAZA

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Arsenopyrite	Type	Conc. (%)	Photo	
187.08	199.43	12.35							LT	GN	PA			PHI	5						Strong phyllic, locally intense with patchy (80-100 cm) zones of strong propylitic alteration. Argillic alteration commonly associated with phyllic alteration. Three large quartz veins with sulphide mineralization present. Disseminated pyrite (coarse grained) and pyrite stringers present in vein zones. grey quartz generally brecciated, one 1.5 cm quartz band is crosscut by white (milky) quartz.
									GY	WH				ARG	3						
														PRO	4						
199.43	200.62	1.19				mKgW	GRD	MG	DK	GN	MA			PRO	4						Propylitic alteration with minor patchy argillic alteration.
200.62	203.94	3.32				mKgW	GRD	MG	LT	GN	GO			PHI	3						Gougey argillic alteration with phyllic overprinting transitioning to strong phyllic alteration at 203 m.
										WH				ARG	4						
			203.00	203.94	0.94	mKgW	GRD	MG	DK	GN	BX			PHI	4						Strong phyllic alteration with local black breccia. Fractures are gougey, green/grey colour.
203.94	219.09	15.15				LKqP	FEL		LT	BN	PO										Quartz feldspar porphyry dyke. Type case.
										GN											
			214.75	216.50	1.75	LKqP	FEL		DK	GN	PO										Quartz feldspar porphyry dyke. Type case. Dark green matrix.
219.09	221.81	2.72				mKgW	GRD	MG	LT	GN				PHI	4						Strong phyllic alteration, core fractured and gougey (30-50 cm zones) argillic alteration in rubbley zones.
									MD	GN				ARG	3						
221.81	225.17	3.36				LKqP	FEL		LT	BN	PO										Quartz feldspar porphyry dyke- plagioclase phenocrysts increase in grain size (coarse grained to very coarse grained). Gouge zones common. Black sulphide veinlets occur in lower half of dyke after "chilled zone" with aphanitic texture (15 cm).
										GN											
225.17	230.51	5.34				mKgW	GRD	MG	LT	GN				PHI	5			Py	2		Strong, locally intense phyllic alteration. Disseminated pyrite throughout.
									LT	GY											
230.51	233.81	3.30				mKgW	GRD	MG	DK	GN				PRO	4						Weak silicified propylitic alteration with chlorite envelopes (4-8 cm) around infrequent quartz-carbonate stringers.
														SIL	1						
233.81	235.53	1.72				mKgW	GRD	MG		WH				ARG	3						Argillic alteration with infrequent quartz-carbonate stringers.
235.53	248.41	12.88				mKgW	GRD	MG	DK	GN				PRO							Weak silicified propylitic alteration with common quartz pyrite, pyrite veinlets.
														SIL							
248.41	256.94	8.53				mKgW	GRD	MG		WH	PA			ARG	4						Patchy strong phyllic-argillic-propylitic alteration. Core locally crumbly. Argillic alteration commonly overprints propylitic alteration. Sulphide mineralized quartz veins present.
									DK	GN				PHI	4						
														PRO	4						
														SIL	1						
256.94	274.7	17.76				mKgW	GRD	MG	DK	GN				PRO	4						Strong propylitic alteration with narrow zones of phyllic alteration associated with carbonate veinlets. Core commonly fractured/crumbly. Several pyrite-quartz veins present.
									LT	GY				PHI	3						
274.7	297.79	23.09				mKgW	GRD	MG	MD	GN	PA			ARG	3						Alternating propylitic-phyllic-argillic alteration. General decrease in alteration intensity. Propylitic alteration dominant.
									LT	GN	WH			PRO	3

KLAZA

Hole: DDH-KL-12-125 Logger Name: 0

Depth (m)		DESCRIPTION
20.42 m	FEL-GRD	Core rubbley and strongly oxidized - this is estimated contact only.
36.71 m	GRD-FEL	Contact oxidized and gougey.
57.73 m	FEL-Silicious dyke	Decrease in plagioclase grain size (very coarse grained to medium grained) and abundance (40 to 20 %), chlorite added, silicious dyke just looks more felsic (lighter colour).
66.33 m	Silicious dyke-GRD	30 degrees TCA. Sharp, irregular contact. Texture from medium grained plagioclase phyric to massive coarse grained brown to liime green.
86.44 m	GRD-FEL	90 degrees TCA. Minor granodiorite brecciation at contact (2 cm). Core has gougey fractures.
99.67 m	FEL-GRD	86 degrees TCA. Dyke is fine-grained (ie chilled) granodiorite is gougey weak brecciation (10 cm). Blebby pyrite present.
204.94 m	GRD-FEL	90 degrees TCA. Sharp, irregular quartz feldspar porphyry dyke porphyritic at contact. Black breccia with sulphide mineralization (40 %) for 24 cm at contact.
219.09 m	FEL-GRD	80 degrees TCA (see secondary log) for texturtes/structures. Contact sharp and planar.
221.81 m	GRD-FEL	45 degrees TCA. Sharp, rounded undulatory, dyke crosscuts massive pyrite mineralized quartz vein.
225.17 m	FEL-GRD	Sharp, gougey on both sides (weakly gougey - core still competent) black sulphide mineralization on granodiorite.

2° Structure Type	From (m)	To (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS Type	MINERALS Conc. (%)	DESCRIPTION	Photo
Ft	20.00	20.42						Fault? Oxidized gouge. Coarse grained gritty clay.	
Bx	24.12	24.20	60.00		1.00	Py	5	Silicified breccia/brecciated quartz vein. Sub angular clasts (6 mm to 1 cm) randomly orientated in grey crystalline and silica hosting blebby pyrite.	
Vt	20.42	36.71	60.00		8/m	Py	1	Quartz-pyrite, quartz-carbonate and pyrite stringers and veinlets common. Pyrite stringers associated with patches of phyllic alteration.	
	26.52		90.00		1.00			White-pink braided calcite vein.	
Vn	32.63	32.80	35.00		3.00	Py	100	Three massive pyrite veins (1 cm) offset (5 mm) by carbonate stringer. Middle vein "branches" from top vein and runs into bottom vein. 75 degrees TCA.	
Vn	33.41	33.77	0.00		4.00	PY	100	Massive coarse grained pyrite vein (2 cm) runs 0 degrees TCA for 15 cm. in footwall, massive coarse grained pyrite vein (1 cm) runs from 90 degrees TCA to 0 degrees TCA. Elbow. In hanging wall is 6 cm grey-smoky quartz vein hosting one band (1 cm) of semi-massive pyrite (20 %) and minor blebby pyrite (6 %).	
						Py	20		
Vn	34.76	35.50	55.00		3.00	Py	80	Three white quartz veins hosting blebby (10 %) to semi massive pyrite (80 %) and local intergrown black jack sphalerite.	
						Sph	10		
Vn,Bx	36.58	36.70				Py	15	White quartz vein (1 cm) and breccia zone (6 cm). Vein hosts blebby pyrite (4 %), breccia zone is silicified, matrix hosts blebby pyrite (15 %) and trace galena (1 %). Intense phyllic alteration.	
						Gn	1		
Vt	67.78		60.00		1.00	Gn	10	Quartz veinlet (6 mm) with blebby galena.	
Vn	69.67	69.83	40.00		2.00	Py	5	Two sheeted quartz veins (1 cm) hosting weak blebby pyrite mineralization.	
Vn	71.55	75.76	70.00		11.00	Py	8	Vein zone. Grey-white quartz veinlets to veins (1 mm - 1.5 cm) are frequent and sheeted and host trace to moderate disseminated pyrite.	
Vn	72.47	72.61	50.00		2.00	Py	35	Grey quartz vein (3 cm) hosting semi-massive pyrite is offset by black carbonate veinlet (1 cm offset) chlorite-carbonate veinlet runs parallel to original vein.	
Vn	76.00	76.01	90.00		1.00	Py	2	Grey quartz-pink carbonate vein (1.2 cm) with trace pyrite.	
Vt	75.76	81.06	65.00					Quartz stringers > veinlets associated with gouge seams.	
Vns	81.76	86.44	70.00		10.00	Py	4	Vein zone. Grey quartz and black sulphide veinlets and veins (3 mm -1.5 cm, 5 cm) with trace to weak pyrite mineralization.	
Vn	89.08	89.24	70.00		3.00	Py	2	Three black sulphide veins 1.2 cm with trace sulphide veins in argillic clayey zone.	
Vn	84.60	84.70	40.00		1.00			Grey quartz-milky white carbonate veining (5 cm) irregular, discontinuous bands. No sulphides.	
Vn	99.67	102.72	70.00		7.00	Py	15	Vein zone. Grey quartz veins and black sulphides (avg 1 cm) and frequent stringers and veinlets. Main vein is 5 cm thick white-grey quartz hosting blebby sphalerite and disseminated to blebby pyrite.

SUMMARY

From (m)	To (m)	Interval	Unit	Comments
0.00	2.90	2.90	OVB	No recovery
2.90	13.16	10.26	GRD	Argillic altered granodiorite.
13.16	40.49	27.33	GRD/FEL	Strong phyllic and argillic altered granodiorite with intermitent quartz feldspar porphyry dykes. Dyke selvages are mineralized. Frequent black stringers in zone.
40.49	141.90	101.41	GRD	dominantly propylitic altered granodiorite.
141.90	190.13	48.23	GRD	Strong phyllic altered granodiorite in zone of increased veining. Quartz veins frequently host pyrite
190.13	247.86	57.73	GRD	Moderate argillic altered granodioirte. Patches of phyllic alteration around veins and veinlets.
247.86	259	11.14	GRD	Strongly altered granodiorite. Netted hematite veins throughout. Frequent veinlets and stringers. Vein intensity increasing downhole.
259	359.3	100.3	FEL	Silicious quartz feldspar porphyry dyke
359.3	401.42	42.12	GRD	Patchy phillic/propylitic/potassic alteration. Intensity fades to bottom of hole.

PROPERTY NAME

Hole: DDH-KL-12-127 Logger Name: 0

Depth (m)		DESCRIPTION
13.16 m	65 degrees TCA	Granodiorite (propylitic-oxidized) contact with quartz feldspar porphyry dyke. Granodiorite is crumbly and has pervasive oxidation. Only the phenocrysts in the dyke are oxidized. Core is competent.
22.89 m	FEL-GRD	weak propylitic alteration. Contact not visible (core fractured) nature of contact unknown.
29.80 m	GRD-FEL	70 degrees TCA. Granodiorite gougey (4 cm). Contact sharp, irregular.
30.91 m	FEL-GRD	55 degrees TCA. Sharp jagged (stepped). Quartz feldspar porphyry dyke decreases in plagioclase to medium grained granodiorite. Propylitic altered. Competent.
31.53 m	GRD-FEL	70 degrees TCA. Sharp, planar.
33.26 m	FEL-GRD	25 degrees TCA. Sharp, irregular. Dyke is jagged, pointy between rounded granodiorite "undules".
35.78, 36.15 m	GRD-FEL-GRD	75 degrees TCA. Sharp contacts, gouge on both sides.
189.67 m	GRD-DK (BRX)	70 degrees TCA. Sharp, planar. Grain size increases away from contact.
259.00 m	GRD-FEL	90 degrees TCA. Not true contact? Top of dyke redrilled. Granodiorite strongly propylitic altered. No brecciation.
260.43 m	FEL-GRD	65 degrees TCA. Sharp planar quartz feldspar porphyry dyke. Chilled (light pink, grain size down) for 8 cm. granodiorite is gougey. No brecciation.
300.1 m	GRD-FEL	60 degrees TCA. Sharp, irregular clasts <8 cm for 20 cm into granodiorite. Dyke is flowbanded.
359.30 m	FEL-GRD	45 degrees TCA. Sharp, slightly irregular, quartz feldspar porphyry dyke flow banded for 60 cm. granodiorite is weakly gougey.

						Type	Conc. (%)		
						As	15.00		
						Py	15.00		
						Sph	10.00		
Vt	178.60	187.07	70.00		1/m			Vein zone - infrequent white quartz-carbonate veinlets; black stringers common (stockwork 2-3/m).	
Bx	184.18	184.23	75.00			To	2.00	Silicious breccia. Rounded clasts (2 cm) of phyllic altered granodiorite in silica matrix (20 %) hosting trace disseminated tourmaline.	
Vn	186.63	186.70	75.00		1.00	Jam	5.00	Massive grey-quartz vein (6 cm) hosting disseminated sphalerite and accicular sulphoslats/ankrite? Infill and strings. Blebby sphalerite and pyrite in pink quartz veinlet in hangingwall and footwall. Black stained gouge zone (9 cm) in footwall.	
						Sph	5.00		
Vt	186.96	187.18			2.00	Sph	85.00	Massive black jack sphalerite veinlets (2 mm, 6 mm). Downhole veinlet widest. Hosts rounded granodiorite clasts (argillic altered). Veinlets are crosscut and offset (5 mm) by white quartz-carbonate veinlets.	
Bx-Vn	189.67	189.85	70.00					Grey green dyke with brecciated phyllic altered granodiorite (3-8 mm, 6 cm). White-pink massive quartz vein (3 cm) overprints breccia, orientated parallel to contacts.	
Vts	190.13	203.18	65.00		1-3/m			White quartz-carbonate veinlets (4 cm) common. Aphanitic red aplite dykes common and range from 1-3 cm. 10 cm aplite dyke crosscut argillic and propylitic alteration.	
Vn	218.80	218.88						Massive white quartz vein (4 cm) with black sulphide smoky quartz band (1 cm) and footwall grey gouge (3 cm).	
Vts	221.13	224.60	60.00		8.00			Grey quartz veins (3 cm) and veinlets. No mineralization. Hematite on vein wall. Host rock brecciated around several veins.	
Vn	214.85		60.00		1.00			White quartz-carbonate vein (1.3 cm).	
Vts	224.60	241.06	50-70					Frequent white quartz-carbonate veinlets, black stringers and smoky quartz stringers. Locally dense (10/m) on average. 3-5/m chlorite stringers occur along core axis.	
St	243.67	247.86			8/m			Black? Hematite? Stringers (stockwork).	
Vt	247.86	252.80						Netted/stockwork grey quartz plus or minus chlorite and hematite veinlets (8 mm). Very dense.	
Dk	252.16		87.00		1.00			Aplite dyke (1 cm) brecciated, crosscut by chlorite-pyrite stringers.	
St	252.10	254.58			7/m			Chlorite-hematite, hematite stringers to veinlets. Two orientations - 0-20 degrees TCA and 30 degrees TCA.	
Vt	254.58	259.00	20.00		4.00			Chlorite stringers to veinlets.	
Vn	257.02	257.08	55.00					Pinkish beige massive quartz veins (crystalline) upper vein (1 cm) has thin black sulphide bands. Lower vein (1.5 cm) is vuggy (1-3 mm).	
Vts	258.31	258.35	60.00		2.00	Py	4.00	Two sheeted grey quartz-black sulphide veinlets (7 mm) hosting weak disseminated pyrite.	
Vts	260.43	300.10	0-90		10/m	Py	10.00	Chlorite-hematite stringers-veinlets frequent (stockwork) and create local crackle breccia. Chlorite veins (1.5 cm) common (40 degrees TCA). Fractures gougey.	
Bx-Vn	260.74	261.50	30.00			Py	45.00	Breccia. Rounded phyllic-argillic altered granodiorite clasts (1-4 cm) and blebby pyrite mineralized quartz clasts (1-8 cm) in gritty dark grey silicious matrix (20 %). Local blebby galena (50 %) and arsenopyrite (3 %) and pyrite (45 %) in quartz clasts (40 cm thick).

PROPERTY NAME

DESCRIPTION
Quartz-feldspar porphyry dike
Grey quartz vein (2/3) with semi-massive arsenopyrite-galena-pyrite-sphalerite; pyrite stringers in oxidized granodiorite (1/3)
Propylitic + potassic altered granodiorite
Black breccia. No mineralization. Clasts - argillic altered grandiorite
Phyllic altered granodiorite
Argillic alteration with phyllic overprint; K-spar present
Weak propylitic alteration - type case
Weak propylitic alteration - type case
Two ankerite-quartz veins (8mm, 1.3cm)
Massive gn-sph-as-py hosted in smokey quartz vein (100% of core)
Phyllic altered granodiorite - type case
Weak propylitic altered granodiorite
Argillic alteration; K-spar rich
Propylitic alteration with argillic overprint

PROPERTY NAME

DESCRIPTION
Patchy argillic - propylitic alteration; chlorite vein (2cm)
Pink quartz-feldspar porphyry dike
Propylitic + phyllic alteration
Quartz-feldspar porphyry dike
Quartz-feldspar porphyry dike
Quartz-feldspar porphyry dike
Quartz-feldspar porphyry dike
Quartz-feldspar porphyry dike
Massive smoky quartz + brecciated grey quartz vein (100% of core)
Weak propylitic alteration - type case
Propylitic alteration with potassic overprint

SUMMARY

From (m)	To (m)	Interval	Unit	Comments
0.00	8.23	8.23	OVB	Overburden, broken propylitic altered granodiorite.
8.23	149.82	141.59	GRD	Strongly altered granodioirte. Zones of strong sericitic
				alteration around vein zones hosting pervasive
				sulphides frequent at top of interval.
149.82	159.80	9.98	FEL	Quartz feldspar porphyry dyke with strong pyrite
				and quartz veins on selvages.
159.80	422.94	263.14	GRD	Advanced argillic altered granodiorite with phyllic
				altered overprinting. Very frequent pyrite stringers
				throughout zone.
422.94	465.90	42.96	VEN/FEL	Strong, complex vein zone on selvage of quartz
				feldspar porphyry dyke. Quartz vein hosts abundant
				semi-massive sulphides. Many veinlets and stringers
				associated with larger veins.
465.9	486.77	20.87	GRD	weakly to unaltered granodiorite.
				EOH at 486.77 m

KLAZA

Hole: KL-DDH-12-128 Logger Name: X. Montague

Depth (m)		DESCRIPTION
149.69 m	25 degrees TCA	Contact consists of brecciated chlorite veinlets, granodiorite and quartz feldspar porphyry dyke. Dark grey gouge also present. Top 2 cm of granodiorite hosts blebby pyrite. Quartz feldspar porphyry dyke is flowbanded or sheared for first 6 cm, then shearing motion is observed in chlorite phenocrysts for 2 m.
149.82 m	25 degrees TCA	Contact consists of brecciated chlorite veinlets, granodiorite and quartz feldspar porphyry dyke. Dark grey gouge also present. Top 2 cm of granodiorite hosts blebby pyrite. Quartz feldspar porphyry dyke is flowbanded or sheared for first 6 cm, then shearing motion is observed in chlorite phenocrysts for 2 m.
159.70 m	45 degrees TCA	Quartz feldspar porphyry dyke is weakly faulted for 4 cm, then a minor brecciated chlorite vein downhole, then sharp contact with phyllic altered granodiorite.
159.80 m	45 degrees TCA	Quartz feldspar porphyry dyke is weakly faulted for 4 cm, then a minor brecciated chlorite vein downhole, then sharp contact with phyllic altered granodiorite.
414.64 m	75 degrees TCA	Granodiorite (uphole) - quartz feldspar porphyry dyke (downhole). Sharp contact, quartz feldspar porphyry is fine grained for 10 cm, chilled margin.
422.94 m	75 degrees TCA	Quartz feldspar porphyry dyke (uphole) - granodiorite (downhole). Sharp contact, bottom 15 cm is fine grained chilled margin.

SUMMARY

From (m)	To (m)	Interval	Unit	Comments
0.00	21.20	21.20	OVB	Rubbled overburden. Granodiorite fragments present
21.20	66.23	45.03	GRD/FEL	Alternating quartz feldspar porphyry dykes and
				moderate to stringly phyllic/argillic/propylitic altered
				granodiorite. Some quartz stringers and veinlets.
66.23	271.91	205.68	GRD	Phyllic and argillic altered granodiorite with abundant
				quartz and pyrite stringers throughout. Rare quartz
				veins hosting semi-massive pyrite and trace sphalerit
271.91	307.72	35.81	GRD/FEL	Alternating granodiorite and quartz feldspar porphyry
				dykes with mineralized selvages. Granodioirte hosts
				frequent quartz veinlets with pyrite and rarely
				sphalerite. Best mineralized interval in hole.
307.72	358.75	51.03	GRD	Largely unaltered or weakly altered (propylitic)
				granodiorite.
				EOH at 358.75 m.

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Arsenopyrite	Type	Conc. (%)	Photo	
0.00	13.72	13.72				mKgW	GRD	MG	MD	BN		5									Overburden. Clay/sand with coarse grained grit and pebbles. Competent core (12-20 cm) is crumbly and has pervasive oxidation. Probably argillic altered.
13.72	18.59	4.87				mKgW	GRD	MG	MD	RD		5									Granodiorite. Local goethite staining and bright red clay.
										BK											
18.59	21.20	2.61				mKgW	GRD	MG	MD	BN		4						Go	70		Overburden. Clay with crumbly grit and compact sand.
																		Li	100		
21.20	28.72	7.52				LKqP	FEL		LT	RD	PA	4									quartz feldspar porphyry dyke. Red stained, crumbly to competent core. Quartz eye, clay altered plagioclase phenocrysts present. Narrow gouge zones present, probably clay alteration. Pervasive oxidation throughout. Gougy fractures. Matrix is crystalline, reddish brown.
									LT	BN	PO										
28.72	30.72	2.00				mKgW	GRD	MG	LT	RD	PA	4						Go	90		Granodiorite with pervasive, strong oxidation. Local goeathite (8 cm) and goethite/limonite staining on fractures.
									LT	BN											
30.72	41.67	10.95				mKgW	GRD	MG	MD	GY	PA	3		PRO	1			PHI	2		Granodiorite, weak propylitic alteration with patchy phyllic and argillic alteration (zones 30-70 cm). Patchy moderately pervasive oxidation (20-50 cm).
									LT	GN								ARG	3		
41.67	49.60	7.93				LKqP	FEL		LT	RB	PO										Quartz feldspar porphyry dyke. Reddish brown. Type case quartz eyes present. Plagioclase crowded. Gougy fractures present.
									LT	BN											
49.60	50.05	0.45				mKgW	GRD	MG	LT	GY	GN			PHI	4						Strong phyllic alteration and argillic alteration zones (20 cm) at quartz feldspar porphyry dyke contact.
										WH	PA			ARG	3						
50.05	66.23	16.18				LKqP	FEL		LT	BN		2									Quartz feldspar porphyry dyke type case. Quartz eyes present. Plagioclase crowded. Narrow zone of red colouration (60 cm). Zones with limonite stained fractures.
									LT	GN											
66.23	69.09	2.86				mKgW	GRD	MG	LT	GN	PA			PHI	4						Grey/greenish silicious propylitic altered with strong phyllic altered overprinting.
									LT	GY				PRO	4						
69.09	77.67	8.58				mKgW	GRD	MG			MA			PRO	2						Granodiorite. Propylitic altered with patchy phyllic alteration (40 cm) around quartz-carbonate veinlets.
77.67	80.71	3.04				mKgW	GRD	MG	LT	GN	EN			PHI	3						Granodiorite. Phyllic alteration associated with veining.
80.71	86.90	6.19				mKgW	GRD	MG	LT	PK	PA			PRO	2						Granodiorite. Propylitic altered with 30-80 cm zones of moderate, locally intense phyllic alteration.
									LT	GN	MA			PHI	4						
86.90	92.41	5.51				mKgW	GRD	MG	LT	GN	PA			PHI	4						Strong phyllic alteration in quartz vein zone.
									LT	GY											
92.41	103.80	11.39				mKgW	GRD	MG	LT	PK	PA			PRO	2						Granodiorite. Propylitic altered with 30-80 cm zones of moderate, locally intense phyllic alteration.
									LT	GN				PHI	3						
103.80	105.77	1.97				mKgW	GRD	MG	LT	GN	PA			PHI	4			Py	2		Strong phyllic alteration associated with quartz vein.
105.77	120.70	14.93				mKgW	GRD	MG	LT	PK	MA			PRO	1			Epi	2		Trace propylitic alteration. Xenoliths of black plagioclase. Porphyry common.
										WH											
120.70	122.44	1.74							LT	GN	PA			PHI	5						Intense phyllic alteration and silica flooding.
									LT	GY				SIL	4

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS				Photo	DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Arsenopyrite	Type	Conc. (%)		
122.44	132.35	9.91				mKgW	GRD	MG	MD	GY	MA		1	PRO	3						Granodiorite, propylitic altered, rare carbonate veinlets. Silicious.
									MD	GN											
132.35	136.37	4.02				mKgW	GRD	MG	LT	GN	PA			PHI	4						Patchy phyllic alteration, moderate, locally strong in association with veining.
136.37	145.70	9.33				mKgW	GRD	MG	MD	GY	MA			PRO	3						Granodiorite. Propylitic alteration with patchy phyllic alteration (30 cm) associated with quartz-carbonate veinlets. Patchy epidote present. Clay alteration on core fractures.
											PA			ARG	1						
145.70	147.79	2.09				mKgW	GRD	MG	LT	GN	EN			PHI	3						Phyllic envelope associated with quartz veinlets.
147.79	161.58	13.79				mKgW	GRD	MG	MA	GY	MA			PRO	3						Propylitic alteration with patchy phyllic alteration associated with vein zones (patches 25-60 cm).
									LT	GN	PA			PHI	4						
161.58	163.67	2.09				mKgW	GRD	MG	LT	GN			1	PHI	3			To	15		Phyllic alteration with narrow patchy argillic alteration (15 cm). Disseminated pyrite on fractures. Disseminated blebby and radial tourmaline present in lower half of interval. Zone is silicious (associated with tourmaline).
																		Py	2		
163.67	177.22	13.55				mKgW	GRD	MG	MD	GY	MA			PRO	3						Propylitic alteration with patchy phyllic alteration (15-90 cm). Epidote present in veinlet selvage. Local pink potassic flooding. Aplite dyke creates rubble breccia 10-30 cm wide.
									LT	GN	PA			PHI	2						
177.22	183.36	6.14				mKgW	GRD	MG	LT	GN	PA			PHI	5			Py	15		Silicious phyllic alteration with zones of strong silica flooding. Local strong coarse grained disseminated pyrite. Phyllic alteration moderately strong.
									LT	GY				SIL	4						
183.36	187.55	4.19				mKgW	GRD	MG	MD	GY			1	PRO	3						Silicious propylitic alteration with minor patchy phyllic altered envelopes. Associated with white quartz carbonate stringers.
187.55	198.46	10.91				mKgW	GRD	MG		WH	PA			ARG	3			PRO	3		Argillic alteration with patchy phyllic and propylitic alteration.
									LT	GN				PHI	3						
198.46	209.55	11.09				mKgW	GRD	MG	MD	GY	MA		1	PRO	3						Propylitic alteration with patchy phyllic alteration associated with vein zones (patches 25-60 cm).
														PHI	3						
209.55	227.69	18.14				mKgW	GRD	MG	LT	GN	PA		2	PHI	3			Py	3		Phyllic altered overprint on propylitic alteration. Zones of propylitic alteration have mottled phyllic alteration. Disseminated pyrite in zones of strong phyllic alteration with silica flooding.
									MD	GN				PRO	4						
227.69	237.17	9.48				mKgW	GRD	MG	DK	GN				PRO	3						Propylitic alteration. Fractured along core axis. Plagioclase is clay altered.
									MD	GY				ARG	1						
237.17	241.40	4.23				mKgW	GRD	MG	LT	GN	PA			PHI	4						Phyllic alteration in zones of grey quartz veinlets. White quartz vein, black stringers.
241.40	244.70	3.30				mKgW	GRD	MG	DK	GN			1	PRO	3						Propylitic alteration. Silicious.
244.70	255.67	10.97				mKgW	GRD	MG	LT	GN	PA			PHI	4						Patchy propylitic alteration with phyllic overprint as distinct envelopes. Mottled alteration in propylitic alteration. Dark green chlorite on fractures.

Hole: DDH-KL-12-129 Logger Name: 0

Depth (m)		DESCRIPTION
28.72 m	FEL-GRD	Core has strong pervasive oxidation. Contact location is approximate. Textures indistinguishable but porphyritic texture 25 cm uphole and massive texture 40 cm downhole from contact.
41.67 m	GRD-FEL	70 degrees TCA. Contact oxidized and clay altered. Contact identified by change in core competency. GRD is harder.
49.60 m	FEL-GRD	50 degrees TCA. Sharp, irregular contact. Fractured along contact. No granodiorite or quartz feldspar porphyry dyke brecciation.
50.05 m	GRD-FEL	30 degrees TCA. Sharp, planar contact. No brecciation or texture change.
66.23 m	FEL-GRD	30 degrees TCA. Sharp undulating contact. Flow banded, soft clay for 15 cm into dyke. Pale green phyllic altered granodiorite for 35 cm into granodiorite.
271.91 m	GRD-FEL	25 degrees TCA. Sharp, irregular contact. Subangular clasts of granodiorite in quartz feldspar porphyry dyke. No prominent texture change.
286.49 m	FEL-GRD	70 degrees TCA. Sharp planar-irregular. No prominent texture change.
300.53 m	GRD-FEL	90 degrees TCA. Brecciated contact. 53 cm of black breccia at contact.
307.72 m	FEL-GRD	90 degrees TCA. 1.3 cm black breccia at contact.

SUMMARY

From (m)	To (m)	Interval	Unit	Comments
0.00	3.96	3.96	OVB	Oxidized rubble, fragments of unaltered granodiorite.
3.96	10.25	6.29	FEL	Quartz feldspar porphyry dyke.
10.25	153.80	143.55	GRD	Silicious argillic and phyllic altered granodiorite. Zone
				of intense alteration associated with strong quartz
				veining hosting semi-massive to disseminated sulphi
153.80	156.38	2.58	FEL	Quartz feldspar porphyry dyke.
156.38	228.68	72.30	GRD	Strongly phyllic and argillic altered granodiorite. Zone
				of sericitic alteration mostly around mineralized
				stringers and veinlets. Disseminated pyrite in some
				areas.
228.68	349.5	120.82	GRD/FEL	Alternating quartz feldspar porphyry dykes and
				strongly altered granodioirte hosting mineralized vein
				and veinlets.
349.5	368.5	19	VEN	Intense phyllic alteration around quartz veins hosting
				galena, sphalerite, pyrite and chalcopyrite.
368.5	383.13	14.63	GRD	Silicious weak to moderately altered granodiorite.
				EOH at 383.13 m

0.00	3.96	3.96					OVB			OR	RB	5									Oxidized rubble, fragments of unaltered granodiorite and oxidized quartz feldspar porphyry dyke.
3.96	10.25	6.29				LKqP	FEL		LT	GY	MO	4									Quartz feldspar porphyry dyke, strongly oxidized. Grey. Clay alteration of phenocrysts. Strongly oxidized carbonate stringers (6/m).
10.25	13.35	3.10				mKgW	GRD	MG	LT	GN	MO	OXI		ARG	2	1		Gn	1		Argillic altered granodiorite, overprinted by phyllic alteration. Moderate to intense quartz vein hosting pyrite and galena. Orange oxidation and gouge on most fractures. Patchy oxidation. Milky carbonate stringers present.
														PHI	4						
13.35	26.95	13.60				mKgW	GRD	MG	MD	GY	PA	2	2	PRO	2	1					Silica flooded, unaltered to moderate propylitic altered granodiorite. Patchy phyllic envelopes around crosscutting pyrite-bearing veinlets. Orange oxidation on alteration fractures. Oxidized carbonate stringers.
														PHI	1						
26.95	47.72	20.77				mKgW	GRD	MG	LT	GN	PA	1	2	ARG	3	1					Argillic altered granodiorite, overprinted by patchy phyllic alteration. Mottled pink overprinting. Phyllic alteration is the strongest around variable quartz/carbonate veinlets.
										WH	MO			PHI	4						
47.72	50.70	2.98				mKgW	GRD	MG	DK	GN	PA		3	PRO	3	1					Silicious, propylitic altered granodiorite grading to argillic and phyllic altered envelopes around pyrite bearing quartz vein with intense phyllic selvages.
									LT	GN											
50.70	60.10	9.40				mKgW	GRD	MG	LT	GN	PA			PHI	4	1					Patchy propylitic alteration overprinting argillic alteration with patches of propylitic alteration. Lightly mineralized quartz veinlets and stringers.
														ARG	3						
														PRO	1						
60.10	80.61	20.51				mKgW	GRD	MG	OR	GN	MA		2	PRO	2	1					Weak to moderate propylitic altered granodiorite with narrow phyllic altered envelopes around weakly mineralized veinlets.
									MD	GY				PHI	1						
80.61	81.78	1.17				mKgW	GRD	MG	VT	GN	EN			PHI	4	1					Phyllic alteration overprinting argillic alteration, strongest phyllic around pyrite mineralized veinlets.
														ARG	2						
81.78	94.78	13.00				mKgW	GRD	MG	DK	GN	MA		2	PRO	3	1					Phyllic alteration overprinting argillic alteration, strongest phyllic around pyrite mineralized veinlets.
														PHI	1						
94.78	96.78	2.00				mKgW	GRD	MG	LT	GN	EN			ARG	3	1					Phyllic alteration overprinting argillic alteration near mineralized veinlets.
														PHI	4						
96.78	110.69	13.91				mKgW	GRD	MG	DK	GN	MA		2	PRO	3	1					Phyllic alteration overprinting argillic alteration near mineralized veinlets.
														PHI	1						
110.69	111.74	1.05				mKgW	GRD	MG	LT	GN			2	PHI	4	1		Gn	1		Phyllic alteration envelopes around galena and pyrite mineralized quartz flooded zone. Swollen argillic alteration at edges.
														ARG	2						
111.74	129.53	17.79				mKgW	GRD	MG	DK	GN	PA		2	PRO	3	1					Silicious, propylitic altered granodiorite with patches of swollen argillic altered zones and patchy propylitic envelopes around weakly pyrite mineralized veins and veinlets. Milky carbonate stringers present.
														PHI	1						
														ARG	1						
129.53	133.38	3.85				mKgW	GRD	MG	LT	GN	EN			ARG	3	1					Argillic altered granodiorite with phyllic altered overprinted envelopes encompassing weakly mineralized quartz veins and veinlets.

KLAZA

Hole: KL-12-130 **Logger Name: G. Wolff**

Depth (m)		DESCRIPTION
10.25 m	70 degrees TCA	Contact between grey quartz feldspar porphyry dyke and phyllic altered granodiorite. 4 cm of grey gouge at contact.
153.80 m		approximate contact between intense phyllic altered, silicious granodiorite and black/dark green quartz feldspar porphyry dyke. Contact obscured by massive pyrite mineralization.
156.38 m		Approximate contact between black/dark green quartz feldspar porphyry dyke and intense phyllic altered granodiorite. Contact obscured by massive pyrite mineralization.
167.25 m	30 degrees TCA	rubbly contact between phyllic altered granodiorite and green quartz feldspar porphyry dyke.
168.95 m	70 degrees TCA	Gougy sharp contact between light green quartz feldspar porphyry dyke and phyllic altered granodiorite.
188.99 m	50 degrees TCA	very sharp contact between phyllic altered granodiorite and dark green mafic dyke.
198.60 m	70 degrees TCA	Undulating contact between dark green mafic dyke and phyllic altered granodiorite.
228.68 m	75 degrees TCA	sharp contact between phyllic altered granodiorite and green quartz feldspar porphyry dyke. Light gouge contact. Rock on either side of contact is moderately
248.64 m		Irregular contact between quartz feldspar porphyry dyke and phyllic altered granodiorite. Contact coated with green gouge.
249.55 m	75 degrees TCA	gouge contact between phyllic altered granodiorite and grey lightly silicious quartz feldspar porphyry dyke.
257.65 m	50 degrees TCA	sharp contact between grey quartz feldspar porphyry dyke and mottled red or green phyllic altered granodiorite. Mottled for 20 cm past contact.
271.82 m	60 degrees TCA	moderately sharp contact between lightly gouged phyllic altered granodiorite and grey/green quartz feldspar porphyry dyke with orange coloured overprinting.

KLAZA

Depth (m)		DESCRIPTION	
280.15 m		60 degrees TCA	Sharp contact between light green quartz feldspar porphyry dyke and light green gougy phyllic altered granodiorite.
288.28 m		70 degrees TCA	Fractured contact between phyllic altered granodiorite and green quartz feldspar porphyry dyke.
302.65 m		30-60 degrees TCA	Swirly contact between silicious brown/green quartz feldspar porphyry dyke and silicious phyllic altered granodiorite. Breccia zone at contact (22 cm wide) with mixing of granodiorite and quartz feldspar porphyry dyke. Disseminated blebby pyrite in breccia.
341.70 m		70 degrees TCA	Contact between smoky pyrite bearing quartz vein with intense phyllic altered selvages and light green quartz feldspar porphyry dyke. Contact offset by black carbonate stringer.
349.50 m		50 degrees TCA	sharp contact between quartz feldspar porphyry dyke and phyllic altered granodiorite. Gouge on contact.
371.47 m		75 degrees TCA	gougy contact between phyllic altered granodiorite with disseminated pyrite and grey/green quartz feldspar porphyry dyke, lightly bleached.
378.37 m			Rubbly contact between quartz feldspar porphyry dyke and lightly silica flooded, phyllic altered granodiorite.

SUMMARY

From (m)	To (m)	Interval	Unit	Comments
0.00	3.70	3.70	OVB	No Recovery
3.70	58.62	54.92	GRD	Largely unaltered granodiorite, some weak argillic
				and/or propylitic altered areas around stringers and
				veinlets.
58.62	181.37	122.75	GRD	Weakly to moderately altered granodiorite, areas of
				quartz/sulphide veinlets strongly phyllic/argillic altered
181.37	249.93	68.56	GRD	Strongly veined granodioirte. String argillic/phyllic
				alteration throughout grading to intense with proximity
				to quartz/sulphide veins. Zones of well mineralized
				quartz veining.
249.93	313.03	63.10	GRD	Largely unaltered or weakly propylitic altered
				granodiorite.

SUMMARY

From (m)	To (m)	Interval	Unit	Comments
1.81	16.67	14.86	OXI	Pervasive extreme oxidation.
16.67	87.90	71.23	GRD	Largely argillic altered granodiorite, zones of weak
				alteration.
87.90	99.58	11.68	FEL	Strongly oxidized and rubbled quartz feldspar
				porphyry dyke with sulphides in quartz veins on
				selvages.
99.58	313.03	213.45	GRD/FEL/	Mafic country rock alternating with quartz feldspar
			COU	porphyry dykes and altered granodiorite. Zones range
				from 10 to 80 m wide. Some areas with intense pyrite
				stringers and disseminated pyrite. Country rock
				is very mafic and generally magnetic.
				EOH @ 313.03 m.

KLAZA

Hole: DDH-KL-12-132 Logger Name: N. Bueckert

Depth (m)	DESCRIPTION	
87.90 m	GRD - FEL	65 degrees TCA. Sharp contact. Oxidized. Appears to be no change in textures in either lithology.
88.7 m	FEL - GRD	contact not observable, core fractured.
93.20 m	GRD - FEL	Core has pervasive alteration, contact suspected (goes from oxidized rubble (phyllic altered granodiorite?) to crumbly, competent core.
99.58 m	FEL - GRD	65 degrees TCA. Sharp contact.
130.48, 130.61 m	GRD - MAF - GRD	60 degrees TCA. Sharp contact. No texture change at contact with either lithology.
150.27 m	GRD - MAF	Core fractured at contact, suspected sharp or gradational for 1 cm.
154.53 m	MAF - GRD	55 degrees TCA. MAF has gougey seams and 40 cm zones of brecciation and white-grey clay alteration (clay alteration might be granodiorite (intense phyllic alteration?)). Granodiorite has oxidized fractures for 30 cm.
150.27, 168.24 m	MAF - GRD - MAF	either contacts or clasts of granodiorite in MAF
168.24 m	MAF - GRD	30 degrees TCA. Sharp contact, no texture change with either lithology.
188.27 m	GRD - FEL	75 degrees TCA. Contact gougey/clay altered.
190.09 m	FEL - MAF	90 degrees TCA. Shard undulating, disseminated pyrite in mafic dyke. Quartz feldspar porphyry dyke has gougey seams (5 cm).
194.39 m	MAF - FEL	55 degrees TCA. Sharp contact. 5 mm grey gouge at contact. MAF has 12 cm zone of silicified breccia. Clasts are round/irregular.
195.28 m	FEL - MAF	88 degrees TCA. Sharp contact. Quartz feldspar porphyry dyke has no plagioclase phenocrysts for 30 cm. MAF - no texture changes.

St	16.67	22.10	0.90		20/m	Py	2.00	Stockwork pyrite stringers (oxidized and weathered) brown staining for 5 mm around stringers.	
St	22.10	37.45	40.00		11/m	Py	2.00	Oxidized pyrite? stringers similar to 16.67 - 22.10 m. oxidized quartz-pyrite veinlets 8 mm present, infrequent (py <15%) blebby.	
Vt	32.45	32.61	50.00		2.00	Py	3.00	Two white quartz veinlets (8 mm; 60, 40 degrees TCA) hosting pyrite mineralization.	
Go	37.23	37.45	90.00		1.00	Sc	10.00	Beige gouge zone (22 cm) with oxidation and scorodite streaks. Gritty granodiorite in gouge.	
St	37.45	38.98	70.00		30/m	Py	2.00	Intense pyrite stringers and veinlets.	
Vn	37.68	37.81	50.00			Py	20.00	Massive white quartz vein (11 cm) hosting semin massive pyrite, discontinuous white quarzt bands present 1/3 to upper vein wall. Black sulphide band (1cm) at upper vein wall.	
						So	10.00		
St-Vt	43.25	50.80	70.00		6/m	Py	2.00	Consistant pyrite stringers and veinlets (oxidized) with grey coloured selvage <1.5 cm.	
Vn	45.51	46.52			3.00	Py	80.00	Three white quartz veins (1, 1.5 cm, 9 mm) hosting disseminated to blebby pyrite (15 - 80%).	
Vn	49.26	49.29	50.00		1.00			Milky white quartz vein (2 cm) discontinuous banded. No sulphide mineralization.	
Vn	56.23	56.38	45.00		1.00	Py	25.00	White quartz vein (1 cm) hosting semi-massive pyrite, 25 cm downhole core is fractured, disseminated coarse grained pyrite in rubble, intense phyllic alteration.	
Vn?	61.65	61.72	45.00		1.00	Py	35.00	Vein? Semi-massive pyrite in dark grey-green zone with distinct orientation but indistinct structure. Just intense phyllic alteration?	
St	50.80	67.00	55.00		6/m	Py	2.00	Pyrite stringers > veinlets. Consistent pyrite typically altered to limonite, dark grey selvage common.	
						Li	2.00		
Vn	64.33	64.45	70.00		2.00	Py	<80	Massive grey quartz vein (3 cm) hosting massive pyrite (<80 %), milky white quartz (3 mm) on each vein wall. Lower vein, crustiform white quartz-carbonate vein (3 cm) hosting trace galena pyrite.	
						Gn	2.00		
Vt	75.25	75.35	80.00		2.00			Smokey quartz vein.	
Vn	80.10	80.20	60.00		2.00			Crumbly core (oxidized and weathered breccia) orientated 60 degrees TCA. Associated white quartz veinlets in zone.	
Vn?	78.36	78.54	75.00		2.00			Two sheeted black stains (1 cm, 3 cm) in oxidized crumbly argillic altered granodiorite.	
Vt	80.20	80.40	85.00		9.00			smoky quartz veinlets.	
St	80.35	87.90	75.00		15.00	Py	2.00	Pyrite stringers and limonite, dark grey selvage 6 mm.	
Bx	87.72	87.81				Py	8.00	Grey breccia? (oxidized) hosting blebby pyrite (8 %).	
Vn	122.42	122.47	45.00		1.00	Sph	10.00	Milky quartz vein hosting semi-massive sphalerite/pyrite and trace galena. Vein 5 cm thick in fractured core.	
						Py	20.00		
						Gn	2.00		
St	88.70	93.20	0-90		30.00	Py	3.00	Pyrite stringers, quartz veinlets at all orientations. Zone oxidized, pyrite altered to limonite.pitted zones (quartz veinlets with weathered out sulphides).	

KLAZA

2° Structure Type	From (m)	To (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS		DESCRIPTION	Photo
						Type	Conc. (%)		
Bx	93.20	93.65						Strong pervasive alteration in zone of gritty crumbly core. Suspected brecciated dyke or granodiorite. dyke contact orientation unknown.	
Vn?	93.65	94.07	70.00		1.00	Li	10.00	Pitted dyke with limonite/scorodite stained fractures. Oxidized quartz-pyrite veins (1.2 cm) hosting disseminated to semi-massive pyrite.	
						So	10.00		
						Py	15.00		
St-Vt	99.58	121.83	60.00		10/m	Py	2.00	Frequent and locally intense quartz/pyrite stringers to veinlets 50-70 degrees TCA. Infrequent low angle white quartz and smokey quartz veinlets (0-30 degrees TCA). Zones (40-60 cm) of dense sheeted pyrite stringers common. White sericite selvages associated with all veining are common.	
Vn	102.00	102.02			1.00	Py	40.00	Pink quartz vein (1.7 cm) with semi-massive pyrite on vein walls. Intensely fractured core, orientation unknown.	
Vn	112.13	113.50	40.00		6.00	Py	20.00	Oxidized veins (4 cm), one smokey quartz veinlet hosts blebby pyrite and intergrown chalcopyrite.	
						Cp	10.00		
Vt-Vn	121.95		60.00		4/m	Py	<25	Grey quartz veinlets (<8 mm) hosting blebby-stringy pyrite (25 %) are common/consistent. Veinlets typically have 1-2 cm quartz-sericite selvage. Pyrite stringers present in 1-2 m zones and typically have chalcedony selvages (4 mm).	
Go	140.27	140.64	45.00		2.00			Two gouge zones (2 cm) grey colour, no mineralization.	
Vn	142.34	142.44	30.00		1.00	Py	30.00	Milky quartz vein (1 cm) hosting blebby pyrite.	
Vn	144.95	145.52	0/30		2.00	Py	25.00	Massive grey quartz (2-3 cm) cuts core axis at 30 degrees then travels o degrees TCA. Hosts blebby pyrite and stringy pyrite (6 mm) along vein walls (25 % Py). Lower vein is milky quartz (6 cm) hosting semi-massive pyrite (80 % Py).	
						Py	80.00		
St-Vt	150.27	168.24	0-90		15/m	Py	40.00	Frequent, locally intense veining. Quartz-pyrite veinlets dominate (grey quartz hosting blebby-stringy pyrite) 50-70 degrees TCA. Frequent pyrite stringers. White quartz veinlets crosscut quartz-pyrite veinlets (0-90 degrees TCA); netted white veinlets (associated with MAF) host trace pyrite and galena.	
						Gn	1.00		
Vn	160.71	160.80	40.00		1.00			Banded white quartz-grey quartz vein (1.7 cm) hosting stringy pyrite (4 mm) to semi-massive pyrite. Grey quartz hosts the pyrite.	
Vn	169.53	169.66	35.00		2.00	Py	25.00	Two grey quartz veins hosting blebby pyrite and stringy pyrite at vein walls. Veins 1.6, 0.8 cm. Eight pyrite stringers in vein walls (hanging wall)	
Vt	168.24	188.27	60.00		10/m	Py	30.00	Frequent and locally intense quartz/pyrite stringers to veinlets 50-70 degrees TCA. Infrequent low angle white quartz and smokey quartz veinlets (0-30 degrees TCA). Zones (40-60 cm) of dense sheeted pyrite stringers common. White sericite selvages associated with all veining are common.	
Vn	171.55	171.62	70.00		1.00	Py	20.00	Massive grey quartz vein (5 cm) with 1 cm semi-massive pyrite band midline.	
Vn	175.75	180.26	60.00		4.00	Py	40.00	Four massive grey quartz veins (1, 4, 1, 6 cm) hosting blebby to semi-massive pyrite (15-40 %).	
Bx	171.84	171.92	80.00		1.00			Silicified black breccia with subangular granodiorite clasts (1 cm) disseminated pyrite throughout (matrix 40 %)	
Vn/Go	188.16	188.27				Py	90.00	Massive pyrite 6 cm in intense phyllic alteration. Doesn't appear to be a vein. Grey gouge hosts disseminated pyrite (5 cm). Core fractured, orientation unknown.	

KLAZA

2° Structure Type	From (m)	To (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS		DESCRIPTION	Photo
						Type	Conc. (%)		
Bx	190.09	190.17	88.00		1.00	Py	8.00	Black breccia - sub-angular granodiorite (5-8 mm); matrix hosts disseminated to blebby pyrite. Matrix is gritty (fine grained).	
Vn	191.26	191.28	90.00		1.00	Py	95.00	White quartz vein hosting massive pyrite.	
Vt	194.06	194.15	25.00		1.00	Cp		Pyrite veinlet with intergrown chalcopyrite.	
						Py			
St-Vt	195.28	199.00	60.00		30.00	Py	3.00	Calcite veinlets, crosscutting pyrite stringers and veinlets (infrequent). 196.64-196.66 m - white quartz-carbonate vein (1 cm) hosting trace pyrite. Blebby pyrite associated with local silica flooding.	
Vn	195.55	195.57	75.00		1.00	Py	95.00	Massive pyrite (2.5 cm) infill? No associated quartz vein.	
St-Vt	199.00	263.30	40-80		20/m	Py	90.00	Frequent, locally intense pyrite stringers, quartz-pyrite stringers to veinlets and pyrite/chalcopyrite veins (see below). Carbonate veinlets (frequent) crosscut all quartz pyrite veining. Infrequent quartz-pyrite veinlets (80 % pyrite) occur at low angle to core axis. quartz-pyrite veinlets typically have dark grey-green envelopes (1 cm).	
Vn	197.48	197.88	85.00		3.00	Py	95.00	Massive pyrite veins (1, 2.5, 1 cm), no quartz associated. Middle vein hosts intergrown chalcopyrite.	
						Cp	8.00		
Vn	206.90	207.00			1.00	Py	8.00	Smokey quartz vein hosting blebby pyrite (8 %). Core fractured in zone. Minor gouge in footwall.	
Vn	207.46	207.55	40.00		1.00	Py	85.00	Massive pyrite zone (6 cm), no quartz associated, intergrown chalcopyrite (8 %).	
						Cp	8.00		
Bx	207.91	207.94	50.00		1.00			Brecciated dyke in silica flooded zone (3 cm).	
Vn	216.96	217.00	55.00		1.00			Massive white comb quartz-carbonate vein (3 cm). No mineralization.	
Vn	218.34	218.54				Gn	35.00	Netted white quartz veinlets hosting blebby (5-8 mm) sphalerite and one intergrown galena-sphalerite band (1 cm) with blebby pyrite (6 %).	
						Sph	20.00		
						Py	6.00		
Vn	219.75	219.76	70.00		1.00	Py	3.00	Crustoform white quartz-carbonate vein (1 cm) hosting weak blebby pyrite (3 %).	
Dk	225.17	225.24	35.00		1.00			Pink with pale green specks - aplite dyke (7 cm).	
Vn	234.27	234.31	30.00		1.00	Py	10.00	Milky white quartz vein hosting blebby pyrite.	
Vn	234.56	234.89	80.00		1.00	Py	95.00	Massive white quartz vein hosting massive pyrite.	
Vn	242.39	242.43	60.00		1.00	Py	5.00	White crustiform quartz-carbonate vein (1.5 cm) hosting weak to strong pyrite.	
Vn	244.00	244.02	70.00		1.00	Py	15.00	Smokey quartz vein hosting blebby pyrite.	
Vn	244.73	244.74	40.00		1.00			Milky quartz vein (1 cm) hosting trace pyrite and black sulphide stringers. Brecciated by massive carbonate vein (1 cm) with same orientation.	
Vn	247.59	247.62	85.00		1.00	Py	4.00	Vuggy smokey quartz vein (3 cm) and crustoform white quartz vein. Hosts weak disseminated pyrite.	
Bx	251.00	251.54	50.00		1.00	Py	5.00	Grey crumbly brecciated mafic dyke, sub-angular clasts (0.5-2.0 cm) in gritty clay altered matrix hosting blebby pyrite. Cataclastic? Zone is in footwall of 1 cm massive white quartz vein.	
Vn	255.59	255.65	35.00		1.00	Py	10.00	Milky white quartz veinlet to vein (2 mm to 2 cm) blowout? Hosting blebby pyrite rimmed by galena. Brecciated dyke in vein, clasts angular.

Pink quartz-carbonate veinlets occur in zone.. dyke is speckled grey-brown for 2 m around this zone.	
Vn-Go	303.59	303.62	65.00		1.00	Py	10.00	Grey gouge-quartz vein (3 cm) hosting blebby pyrite (10 %).	
Vn	308.27	308.28	75.00		1.00	Py	8.00	White quartz-carbonate vein hosting stringy pyrite.	
Bx	308.85	308.91	70.00		1.00	Py	4.00	Grey breccia with distinct orientation. Sub-angular mafic dyke clasts (0.6-2.0 cm) and elongate black sulphide? (fine grained black clasts). Clasts (2 cm) in medium grained grey matrix hosting trace disseminated pyrite mineralization.	
Vt	291.50	313.03	50-70		6/m	Py	3.00	Moderate increase in quartz-pyrite stringers (carbonate veinlets and stringers have same frequency). Quartz-pyrite veinlets commonly host dark green-black mineral (chlorite?). Quartz-pyrite veins (1 cm) infrequent.

SUMMARY

From (m)	To (m)	Interval	Unit	Comments
0.00	8.23	8.23	OVB	Overburden, weak recovery.
8.23	17.60	9.37	FEL	Quartz feldspar porphyry dyke. Oxidized.
17.60	212.15	194.55	GRD	Strongly altered grasnodiorite. Alternating between
				phyllic, argillic and propylitic alteration. Intense altera
				zones around quartz veins and veinlets. Some veins
				well developed hosting massive sulphides.
212.15	262.91	50.76	GRD	Well mineralized zone. Galena, arsenopyrite, pyrite a
				sphalerite all well represented in quartz veins.
				sulphides range from massive to disseminated.
262.91	281.85	18.94	GRD	Weakly altered granodiorite. Propylitic with some
				phyllic altered selvages.
281.85	519.92	238.07	GRD/FEL	Zone alternating between areas of strong to intense
				alteration and quartz feldspar porphyry dykes.
				Frequent massive sulphide veins on dyke selvages.
				Some zones dominated by quartz/sulphide veins and
				intense phyllic alteration.
519.92	550.77	30.85	GRD	Propylitic altered granodiorite grading to unaltered.

PROPERTY NAME

Hole: KL-12-133 **Logger Name: G. Wolff**

Depth (m)	DESCRIPTION
17.60	Gouge/oxidized contact between silicious quartz feldspar porphyry dyke and gougy, phyllic altered granodiorite; gouge for 52 cm after contact, intensity of gouge deceasing with depth from contact.
328.70	75 degree TCA contact between granodiorite with smoky quartz breccia and green gouge. Green quartz feldspar porphyry dyke. Grey gouge covers contact (obscured).
334.30	55 degree TCA contact between green quartz feldspar porphyry dyke and black silica breccia in phyllic granodioirte.
337.23	60 degree TCA. Sharp contact between phyllic altered granodiorite (rubbly) and green quartz feldspar porphyry dyke. 5 mm gouge at contact. 6 cm gouge dyke at contact.
338.43	Granodiorite contact between green quartz feldspar porphyry dyke and brecciated phyllic altered granodiorite. Clasts of breccia in gouge dyke matrix at contact.
353.20	Gradational gougy contact between brecciated phyllic granodiorite and green/brown quartz feldspar porphyry dyke.
354.98	80 degres TCA. Ireegular contact between light green quartz feldspar porphyry dyke and a quartz/massive sulphide vein hosted in phyllic altered granodiorite.
384.27	80 degree TCA. Sharp contact between phyllic altered granodiorite and mafic dyke. 8 cm tan felsic dyke at contact. Dyke grades to mafic with depth.
386.01	80 degree TCA. Contact between mafic dyke and phyllic altered granodiorite. Contact obscured by mineralized quartz veinlets.
420.22	60 degree TCA gradational contact between phyllic granodiorite and silicious quartz feldspar porphyry dyke hosting pyrite and calcite breccia.
423.05	Contact between quartz feldspar porphyry dyke and silicious breccia of phyllic altered granodiorite. Attitude obscured by gouge and rubble.
423.39	30 degrees TCA. Sharp contact between brecciated phyllic altered granodiorite and gougy grey/brown quartz feldspar porphyry dyke.
427.87	30 degrees TCA. Sharp gouge contact between blue/grey quartz feldspar porphyry dyke and phyllic altered granodiorite with brecciated zones.
486.41	Approximate contact between phyllic granodiorite and grey/green quartz feldspar porphyry dyke. Exact contact obscured by rubble.

PROPERTY NAME

Depth (m)	DESCRIPTION
495.10	65 degree TCA. Gradational contact between lightly silicious grey/brown quartz feldspar porphyry dyke and phyllic altered granodiorite. Contact overprinted by quartz veining/silicification.
514.69	Irregular contact between phyllic altered granodiorite and light tan/brown dyke. 45 degrees TCA. Dyke grades to dark green and mafic away from contact.
516.59	Contact between the dark green magnetic mafic dyke and phyllic altered granodiorite.
519.92	65 degres TCA. Sharp contact between phyllic altered granodiorite and dark green magnetic mafic dyke.
521.83	45 degrees TCA. Sharp contact between dark green magnetic mafic dyke and silicious, propylitic altered granodiorite.

SUMMARY

From (m)	To (m)	Interval	Unit	Comments
0.00	12.19	12.19	OVB	Overburden
12.19	143.68	131.49	COU	Country rock, lots of pyrite stringers and blebby pyrite
				rock is largely magnetic.
143.68	155.47	11.79	FEL	Quartz feldspar porphyry dyke
155.47	225.27	69.80	COU	Country rock, Pyrite stringers developing into massiv
				quartz veins hosting massive pyrite and chalcopyrite.
				Nonmagnetic, Lighter colour than previous COU
				intervals.
225.27	226.27	1.00	FEL	Quartz feldspar porphyry dyke
226.27	233.78	7.51	COU	Country Rock, magnetic. No development of pyrite
				stringers and veinlets.
				EOH at 233.78 m.

GENERAL INTERVAL			DETAILED INTERVAL			LITHOLOGY						ALTERATION				MINERALS					DETAILED DESCRIPTION
														Other				Other			
From (m)	To (m)	Interval (m)	From (m)	To (m)	Interval (m)	Unit	Rock Type	Grain Size	Shade	Colour	Texture	Oxidation	Silicification	Type	Intensity	Pyrite	Arsenopyrite	Type	Conc. (%)	Photo	
3.05	48.13	45.08				mKgW	GRD	MG	LT	YL	PA	5.00									Core has intense pervasive oxidation throughout; core is rubble. Bright yellow, orange & red colouration throughout, black stained fractures common. Oxidation obscures textures, host rock unknown but likely granodiorite. Patchy argillic throughout. Phyllic alteration dominant.
									DK	RD	BK										
48.13	60.88	12.75				mKgW	GRD	MG	LT	OR	PA	4.00		ARG	3.00						Core moderately fractured, generally competent. Strong pervasive oxidation throughout. Texture/alteration generally obscured. Patchy argillic alteration identifiable: Gougy breccia zone and goethite altered veins present.
									LT	RD											
60.88	65.59	4.71				mKgW	GRD	MG	LT	GY	PA	4.00		PRO	1.00						Weak propylitic alteration; patchy moderate-strong pervasive alteration. Patchy argillic alteration.
														ARG	3.00						
65.59	92.24	26.65				mKgW	GRD	MG	LT	GY	MA	1.00		PRO	1.00						Weak propylitic alteration with patchy phyllic alteration associated with local increases in quartz veining. Xenoliths (black) present (8-20 cm) infrequently. Fractures oxidized until 72 m.
									LT	GN	PK			PHI	3.00						
92.24	92.80	0.56					MAF		LT	BN	PO										Porphyritic mafic dyke; patchy dark grey-light green crystalline matrix with plagioclase phenocrysts and irregular clasts (10 cm). Phyllic altered granodiorite.
									DK	GY											
92.80	95.44	2.64				mKgW	GRD	MG	LT	GY	MA	1.00		PRO	1.00						Weak propylitic alteration with patchy phyllic alteration associated with local increases in quartz veining. Xenoliths (black) present (8-20 cm) infrequently. Fractures oxidized until 72 m.
									LT	GN	PK			PHI	3.00						
95.44	102.00	6.56				mKgW	GRD	MG	LT	GN	PA			PHI	3.00						Phyllic alteration, patchy light to dark green. Frequent quartz veinging. Mottled porphyryitic texture for 20 cm at top of interval
102.00	106.55	4.55				mKgW	GRD	MG	LT	GY	MA			PRO	1.00						Propylitic altered granodiorite.
									LT	GN	PK										
106.55	112.85	6.30				mKgW	GRD	MG	LT	GN	MA			PHI	3.00						Phyllic alteration associated with quartz/pyrite veining. Alteration strength decreases downhole.
112.85	125.70	12.85				mKgW	GRD	MG	DK	GN	PA			ARG	3.00						Propylitic alteration, infrequent quartz veining with weak phyllic envelope (30-50 cm).
														PRO	2.00						
125.70	129.90	4.20				mKgW	GRD	MG	LT	GN	PA			PHI	3.00						Phyllic alteration with crumbly zones (80 cm) of argillic/propylitic alteration.
									DK	GN				PRO	2.00						
														ARG	3.00						
129.90	142.15	12.25				mKgW	GRD	MG	LT	GN				PRO	2.00						Argillic alteration with mottled green colour from phyllic? Overprinting? Meter scale zones of weak propylitic alteration. Core locally crumbled and rubbly. (zones of strong argillic alteration) 60 cm zone of silicification associated with quartz veining.
										WH				ARG	3.00						
														PHI	2.00						
142.15	165.38	23.23				mKgW	GRD	MG	LT	GY											Trace propylitic alteration with phyllic envelopes around quartz veinlets.
									MD	GN											
165.38	177.55	12.17				mKgW	GRD	MG	LT	GN	PA			PHI	2.00						Patchy argillic>propylitic>phyllic alteration in vein zone. Argillic overprinted zones (1 m) Propylitic patches 20-60 cm. phyllic envelopes associated with quartz veining.

														PRO	2.00						
177.55	207.54	29.99				mKgW	GRD	MG	LT	PK	MA			PRO	1.00						Trace propylitic alteration with infrequent quartz veining and phyllic envelopes (10-40 cm).
										WH				PHI	2.00						
207.54	209.25	1.71				mKgW	GRD	MG	LT	GN	PA			PRO	3.00						Patchy phyllic (51 %) Argillic (49 %) overprinting. Mottled light to dark green colour. Moderate propylitic base alteration.
										WH				ARG	3.00						
														PHI	2.00						
209.25	227.13	17.88				mKgW	GRD	MG	LT	PK	MA			PRO	1.00						Trace propylitic alteration with infrequent quartz veining and phillic envelopes.
										WH											
227.13	235.52	8.39				mKgW	GRD	MG	LT	GN	WH			PRO	2.00						Patchy, dominantly phyllic overprint on propylitic/argillic commonly associated with phyllic alteration.
									DK	GN	PA			PHI	2.00						
														ARG	2.00						
235.52	245.00	9.48				mKgW	GRD	MG	DK	GN	MA			PRO	2.00						General increasing in propylitic alteration strength. Minor phyllic alteration envelopes associated with infrequent veining.
245.00	249.50	4.50				mKgW	GRD	MG	LT	GN	PA			PHI	2.00						Phyllic alteration, minor patchy argillic (2-20 cm) in vein zones.
249.50	303.30	53.80				mKgW	GRD	MG	MD	GN	PA			PRO	2.00						Silicious propylitic alteration with patchy phyllic alteration envelopes in vein zones (15-80 cm).
										PA	MA			PHI	2.00						
303.30	315.71	12.41				mKgW	GRD	MG	MY	GN	PA			PRO	3.00						Zone of crumbly rubbly core. Argillic overprinting on propylitic base. Greensh white clay on fractures, hematite staining common.
														ARG	3.00						
315.71	337.85	22.14				mKgW	GRD	MG	LT	GN	MA			PRO	1.00						Trace propylitic alteration with patchy weak-moderate propylitic alteration associated with increase in silica abundance.
										WH											
337.85	339.22	1.37				mKgW	GRD	MG	LT	GN				PHI	3.00						Phyllic alteration associated with quartz veining.
339.22	344.21	4.99				mKgW	GRD	MG	MD	GN	MA			PRO	2.00						Propylitic alteration. Generally increase in alteration intensity with quartz carbonate veinlets. Gougy scars and crumbly zones common.
344.21	349.89	5.68				mKgW	GRD	MG	LT	GN	PA			PRO	3.00						Phyllic alteration overprints propylitic alteration. Phyllic patchy. Minor argillic overprint. Vein zone.
									DK	GN				PHI	3.00						
349.89	368.39	18.50				mKgW	GRD	MG	LT	PK	MA			PRO	1.00						Propylitic alteration with narrow phyllic envelopes (20 cm average). Crumbly at chlorite vein margins. Infrequent veining: general decreasing alteration.
										WH				PHI	2.00						
368.39	371.13	2.74				mKgW	GRD	MG	LT	GN	PA			PHI	3.00						Phyllic alteration with patchy argillic alteration.
										WH				ARG	3.00						
371.13	376.98	5.85				mKgW	GRD	MG	DK	GN	MA			PRO	4.00						Propylitic alteration, moderate, locally strong (epidote present) - narrow phyllic envelopes around carbonate-chlorite stringers.
														PHI	3.00						
376.98	380.82	3.84				mKgW	GRD	MG	LT	GN	MA			PHI	3.00						Patchy phyllic alteration with patchy argillic and propylitic alteration. Vein zone.
										WH				ARG	3.00						
380.82	387.02	6.20				mKgW	GRD	MG	MD	GN				PRO	2.00						Silicious propylitic alteration.
387.02	393.71	6.69				mKgW	GRD	MG	LT	GN	PA			PHI	3.00						Phyllic alteration dominent. Patchy silica flooding. Propylitic alteration and argillic alteration. Vein zone.
									DK	GN	WH		1.00	ARG	2.00						

PROPERTY NAME

						Type	Conc. (%)		
Bx	312.44	312.56	25.00		1			Silicified black breccia (2.5cm). Subangular granodiorite clasts (1 cm) no sulphides.	
Go	312.56	313.03	25.00					Gouge - probably strong argillic alteration. Gouge is green and white coloured.	
Go	315.54	315.72	35.00		1	He	20.00	Cataclastic, subangular granodiorite clasts in gritty, crumbly matrix. Red hematite staining. Veinlets throughout (zone 13 cm thick). Hematite veinlets in footwall. Intense propylitic alteration for 25 cm downhole.	
Vn	337.85	339.22	75.00		2	Py	10.00	Vein zone. Two medium banded creamy quartz-grey quartz veins (2.5 cm, 4 cm) (bands irregular) hosting disseminated pyrite (10 %). Remaining zone consists of creamy quartz and smokey quartz veinlets which host stringy and disseminated pyrite.	
Vt	337.85	339.22	75.00		4	Py	20.00		
Vn	344.21	349.89	70.00		2	Py	7.00	Vein zone, general increase in vein frequency. Pinkish white crustiform to mineralized carbonate-quartz and grey quartz veins (2 cm, 1 cm) and veinlets hosting blebby pyrite. Blackand white stringers common. Black sulphide stringers variably present in veinlets.	
Vt	344.21	349.89	70.00		11	Py	9.00		
Vn	351.16	351.21	70.00		1			Massive white carbonate and crustiform pink quartz vein (6 cm). No sulphide mineralization. Pink quartz occurs along vein walls (1.2 cm thick). Brecciated pink quartz hosted in carbonate. (ie. Calcite late)	
Vn	359.35	359.37	55.00		1	Py	3.00	Massive milky carbonate vein (2.5 cm) and brecciated and stringy chlorite within carbonate vein. Trace stringy pyrite occurs along upper vein wall. Veinlets (carbonate) proximal to vein.	
Vn	361.80	362.65	25.00		1			Low angle chlorite-calcite vein (2 cm).	
Vn	365.27	365.45	65.00		1	Py	8.00	Irregular banded white quartz-carbonate and smokey quartz vein (4cm) hosting stringy black sulphide and blebby disseminated pyrite. Crumbly gouge (1 cm) is 2 cm above vein in hanging wall.	
Vn	368.39	371.13	70.00		3	Py	4.00	Smokey quartz and white quartz carbonate veins (1 cm) hosting weak blebby pyrite mineralization.	
Vt	373.70	373.74	60.00		2	As	20.00	Two sheeted veinlets in larger vein hanging wall (described below). Upper veinlet; grey quartz veinlet (6 mm) hosting disseminated arsenopyrite>pyrite and blebby sphalerite. Lower veinlet; white quartz veinlet (8 mm) hosting blebby sphalerite and pyrite mineralization (% pyrite, 8 % sphalerite).	
						Py	15.00		
						Sph	20.00		
Vn	373.79	373.86	60.00		1	Py	5.00	Grey quartz vein (6 cm) with crustiform pink quartz (<1 cm) at both vein walls. Brecciated pink quartz abundant in vein. Grey quartz hosts weak disseminated pyrite.	
Vt	377.98	380.32	60.00		12			Milky white quartz-carbonate veinlet and stringers; Three sheeted mineralized milky quartz? Veins. Black sulphide and white quartz and creamy quartz veins at bottom of interval.	
Vts	387.02	393.71	70.00		15			White quartz-carbonate veinlets (13) and veins (3) (1 cm, 4 cm, 6 cm). Largest vein is massive carbonate and brecciated crustiform pink quartz. No sulphide mineralization.	
Vn	403.98	404.05	70.00					Crustiform pink quartz vein (3 cm) and veinlet (6 mm) stringy? Black sulphide? Associated with veining- maybe its own vein? Not hosted in pink quartz.	
Dk	410.15	410.40	25.00		2			Two sheeted aplite dykes.	
Vt	413.05	413.36	70.00		5	Sph	80.00	Pinkish white quartz-carbonate veinlets (1 cm) hosting blebby sphalerite (15 %) to massive sphalerite (80 %). Veinlets are crosscut by massive white quartz vein (1.5 cm).	
Vn	419.27	419.29	90.00		3			Creamy quartz veinlets hosting stringy, black sulphide and brecciated black sulphide clasts (3 mm).	

PROPERTY NAME

2° Structure Type	From (m)	To (m)	Attitude (TCA)	Attitude (TRFE)	Count	MINERALS		DESCRIPTION	Photo
						Type	Conc. (%)		
Vn	427.22	427.24	55.00		1	Py	50.00	White quartz vein (1.8 cm) hosting blebby pyrite. Vein is crosscut by chlorite-carbonate vein (1 cm) (25 degrees TCA)	
Vt	431.67	433.66	70.00		6	Py	25.00	White/pink quartz and grey quartz veinlets and veins (1 cm) (crustiform) and associated black stringers. One massive grey quartz vein (1 cm) hosting semi massive pyrite (25 %) mineralization. One pink quartz vein is vuggy. Strong phyllic alteration. white quarzt stringers common.	
Go	433.66	433.80	85.00		1	Py	3.00	Brecciated phyllic altered granodiorite in grey gouge, disseminated pyrite throughout (2 %), trace blebby pyrite.	
Vn	433.80	435.00	65.00		14	Py	4.00	Frequent beige quartz veinlets, quartz-pyrite stringers and veinlets; Two grey quartz veins (2.5 cm) host blebby pyrite (10 %). Gouge zones commonly occur with veining. Zone is silica flooded (weak). Intense phyllic alteration.	
						Py	10.00		
Bx	435.00	435.20			1	Py	4.00	Grey quartz clasts in breccia (20 cm) in crystaline tan matrix (45 %). Quartz clasts (rounded, 1 cm) generally not mineralized. Several brecciated smokey quartz veins present which host stringy pyrite (4 %) and sphalerite (4 %). Core fractured, breccia orientation unknown.	
						Sph	4.00		
Vt	435.20	435.72			6			Quartz-pyrite veinlets (4 mm) present; core rubbly - orientation/count unknown. Strong phyllic alteration.	
Vn	435.72	436.10	55.00		1	As	35.00	Massive grey quartz vein (40 cm) hosting disseminated to massive intergrown (pyrite-60 %, arsenopyrite-35%, sphalerite-5%, copper-1%). One thick band 5 cm of massive intergrown galena-pyrite-spahalerite (35 %, 20%, 8%). White quartz bands (two 1 cm) host semimassive pyrite (60 %) and banded jamesonite (10 %) and galena (10 %) and sphalerite (10 %). The last 15 cm of the vein downhole are white grey quartz with netted white quartz (milky) stringers. Disseminated-blebby pyrite (5 %) and sphalerite (5 %) occurs through the grey quartz here.
