INTRODUCTION

The Keg property (the "Property") is situated in south-central Yukon and is wholly owned by Silver Range Resources Ltd. It covers two belts of epigenetic silver rich mineralization, which are located north of the syngenetic sedimentary exhalite deposits of the Anvil District. The Property hosts a bulk tonnage silver-lead-zinc-copper±tin±indium deposit (the "Keg Deposit"), 24 other known mineralization zones and numerous multi-element soil geochemical anomalies.

This report describes an exploration program that was conducted on the Property by Archer, Cathro & Associates (1981) Limited ("Archer Cathro") in summer 2012 on behalf of Silver Range. Field work was performed between May 10 and September 11. It comprised detailed- and regional-scale geochemical sampling, prospecting, geological mapping, trenching, drill pad construction, 15,160.21 m of diamond drilling in 65 holes, 1,104.90 m of reverse circulation percussion drilling in 19 holes and various environmental surveys. In December 2012, metallurgical testwork and an initial resource estimation were completed on the Keg Deposit. The author supervised the 2012 exploration program, and his Statement of Qualifications is located in Appendix I. A Statement of Expenditures related to the program is included in Appendix II.

PROPERTY DESCRIPTION AND LOCATION

The Property is located in the Whitehorse Mining District within south-central Yukon and is centred at latitude 62°35′ north and longitude 133°18′ west on NTS map sheets 105K/06, 07, 08, 10, 11 and 12 (Figure 1).

The Property comprises 4,744 mineral claims that cover an area about 955 km^2. The claims are registered in the name of Archer, Cathro & Associates (1981) Limited, which holds them in trust for Silver Range. Specifics concerning claim registration are tabulated below, while the locations of individual claims are shown on Figure 2.

*Expiry dates include 2012 work expenditures that have been filed for assessment credit but approval is pending until the Mining Recorder officially accepts this report.

ACCESSIBILITY, CLIMATE, LOCAL RESOURCES, INFRASTRUCTURE AND PHYSIOGRAPHY

The Property lies 40 km north of the town of Faro, which is the nearest supply centre. Faro can be reached in all seasons by two wheel drive vehicles using the Yukon highway system from Whitehorse, the territorial capital and main transportation hub. Faro is located 356 km by road from Whitehorse.

Faro formerly serviced the mines and mill of the Anvil District. A heavy duty haulage road and a high voltage power line extend from the town site to the Faro mine and mill site, which are

located 25 km south of the Keg Deposit through low hilly terrain. Electricity for the power line comes from a hydroelectric dam and diesel generators, located in Whitehorse. At present, there is no excess capacity on the Yukon electrical grid, but the Government of Yukon is currently studying the viability of liquefied natural gas fired, electrical generation plants.

Portable electrical generators provide sufficient power for exploration stage programs on the Property. Creeks on the Property provide sufficient water for camp and diamond drilling requirements. The Property has sufficient sites for mining, administrative and camp buildings, potential tailings storage, potential waste disposal and potential processing plants, with no conflicting surface rights.

The majority of supplies and services required for mineral exploration are available in Whitehorse. Many services are also available in Faro including a hotel, a restaurant, limited fuel sales, a first aid station, an all-weather airport, various types of aircraft and an RCMP detachment. There are a number of vacant houses, apartment complexes and commercial buildings in Faro, and many undeveloped lots.

In 2012, access to the property and daily logistical support were provided by an Eurocopter A-Star B3 helicopter, a Bell 206B helicopter and a Hughes 500D helicopter, all based at a seasonal camp on the Property or at the Faro airport. All three helicopters were operated by Trans North Helicopters of Whitehorse, Yukon. Rented lots at the Faro airport served as a logistical staging area and core logging facility. Crews were housed in tents at a 40 person camp located on the Property, in a crew house at Faro or in a hotel at Faro. Most project administration and core processing were done at the camp on the Property.

The Property is situated in the Anvil Range of the Pelly Mountains and is drained by creeks that flow into the Tay River, which ultimately connects to the Pacific Ocean via the Pelly and Yukon Rivers. One creek and one small lake on the Property have been assigned informal names (Ivan Creek and Marijke Lake) for the sake of this report (Figure 3).

The southern part of the property lies on the northern flank of Mount Mye, which is highest peak in the region.

The Property covers an area of mountains, ridges, upland plateaus and valley bottoms. Local elevations on the Property range between 820 m and 2050 m above sea level. Rounded peaks with rare talus slopes and sparse vegetation are typical of many alpine areas, but sharp rocky ridges are common in the Mount Mye area. Broad, well-treed, U-shaped valleys characterize lower elevations. Outcrop is generally limited to ridge crests, steep northern faces and deeply incised creek cuts. Hillsides and many valleys are well drained, but local swampy areas and ponds are present in some low-lying areas and along flat-topped ridges.

Slopes near treeline are vegetated primarily with staghorn moss, thick brush and stunted spruce and poplar trees. The density and size of vegetation gradually increases on lower slopes. Mature spruce forests are only found along creeks or on south-facing slopes. Understory comprises dwarf birch and mountain alder, with a thick layer of sphagnum moss. Due to a combination of

shade, locally poor drainage and a thick insulating blanket of sphagnum moss, permafrost is prevalent on north facing slopes.

Much of the overburden in the region is associated with the most recent Cordilleran ice sheet, the McConnell glaciation, which is believed to have covered south and central Yukon between 26,500 and 10,000 years ago (Yukon Geological Survey, 2010a). Tay River map area was glaciated by ice sheets emanating from the Selwyn and Pelly Mountains and by local glaciers from the Anvil Range. Ice was funneled into Tintina Trench and followed that topographic lineament northwest into central Yukon (Bond, 1999). McConnell deglaciation occurred rapidly when the equilibrium line rose significantly above the 1830 m elevation, resulting in starvation of the ice sheets. During a subsequent re-advance in the Anvil Range, local alpine glaciers did not form (Bond, 2001) and ice advanced outwards from the Tintina Trench and other deep valleys where glaciers had accumulated.

The climate at the Property is typical of northern continental regions with long, cold winters, truncated fall and spring seasons and short, mild summers. Although summers are relatively warm, snowfall can occur in any month at higher elevations. The Property is mostly snow free from late May to late September. According to Environment Canada, summer temperatures in the town of Faro average 18 to 21ºC during the day and 6 to 9ºC at night (Environment Canada, 2010). Winter temperatures average -17 to -10ºC during the daytime. Total annual precipitation over the 1971 to 2000 period averaged 316 mm, with little over two-thirds falling as rain and about 110 cm as snow.

HISTORY

Historical exploration was largely compiled from assessment reports submitted to the Whitehorse Mining Recorder.

Apart from prospecting for placer gold early in the 20th century and reconnaissance-scale mapping done by the Geological Survey of Canada in the 1930s (Johnston, 1936), there was no reported exploration activity in the Faro area until the Canol Road was built during World War II, thus providing better access to the district (Wober, 1967). The first significant discovery in the area was made in 1953, when Prospector Airways identified sedimentary exhalative (Sedex) style, zinc-lead-silver mineralization at the Vangorda Deposit (Figure 1). No further discoveries were made until 1965, when Dynasty Explorations and Cyprus Mining Corp. Ltd. found similar mineralization at the nearby Faro Deposit. This larger deposit stimulated a staking rush and extensive exploration throughout the area by various operators (Cathro, 1967).

Over the next 20 years, exploration resulted in identification of additional Sedex deposits, which define a narrow, northwesterly trending belt (Anvil Belt). Three deposits in this belt have been developed (Vangorda, Faro and Grum), while two others (Grizzly and Swim) are partially delineated. Several exploration programs were conducted northeast of the Anvil Belt in the vicinity of the Property, but they were deemed to be unsuccessful because Sedex-style mineralization was not found.

Between 1965 and 1978, numerous operators worked within the boundaries of the current Property. Although strong geochemical and geophysical anomalies were detected, follow up drilling intersected only fracture-filling and skarn/carbonate replacement style mineralization, which was dismissed because the focus of exploration was on massive sulphide, Sedex deposits. After 1978, work in the area tapered off.

Historical work within the bounds of the Property was concentrated in six main areas (Keg, Owl/Zeno, Archimedes, Marks, Rebel and Cody/Cirque/Snap/Risby areas) that generally yielded positive geochemical and geophysical results. These areas are documented in the Yukon Minfile database. Table I lists the year of work, owner/operator, claim group name, work performed and results for each program by area, while Figure 4 illustrates the relative locations of many of the old claim blocks.

Table 1 – Exploration History of Keg Property (after Deklerk and Traynor, 2005, complete list of references provided below Table 1)

Year of Work (Report #)	Owner/ Operator	Claim Group	Work Performed	Results
KEG AREA				
1965 (Minfile)	Anvil Mining Corporation Ltd.	Ivan	Staked claims following an airborne magnetic (mag) and electromagnetic (EM) survey	n/a
1966 (091262)	Anvil Mining	Ivan	Diamond drilling (464.5 m in 4 holes)	Intersected disseminated Pb-Zn mineralization, but no sulphides of economic significance observed, no assaying done.
1966 (019008)	Yukon Copper Ltd.	Caribou Lake Property (Tara, Dane, Hal & Mark claims)	Staked claims Airborne mag and EM survey Geological mapping Soil sampling	Outlined 3 zones of favourable geophysical and geochemical (Cu-Pb-Zn) response.
1966 (Minfile)	Yukon Copper. -- Northern Empire Mines Ltd.	n/a	Yukon Copper Ltd. reorganized as Northern Empire Mines Ltd.	n/a
1967 (019007)	Northern Empire	Caribou Lake Property (Tara, Dane, Hal & Mark, added Bark claims)	Additional claims staked Line cutting Soil and rock geochemical sampling Geological mapping	Outlined new soil anomalies and better defined known soil anomalies. 4 grab samples yielded between 2.8-4.5% Zn, 0.04-0.18% Cu and 6.2-11 g/t Ag.
1968 (019007)	Northern Empire	Caribou Lake Property (Tara, Dane, Hal, Mark &	Bulldozer trenching	Exposed disseminated to massive pyrrhotite-pyrite-sphalerite±chalcopyrite±galena ±scheelite in bedrock. A 15 x 3 m sulphide lens

		Bark)		averaged 1.25% Zn, 0.05% Cu and 3.4 g/t Ag; and a partially exposed pyrrhotite band returned 2.84% Zn and 0.37% Cu over 2.4 m.
1969 (Minfile)	Inter-Tech Development and Resources Ltd.	Ter	Restaked old Ivan claims as Ter	n/a
1971 (Minfile)	Northern Empire -- Northern Homestake Mines Ltd.	Caribou Lake Property (Hal)	Northern Homestake acquired property from Northern Empire	n/a
1972 (Minfile)	Northern Homestake	Caribou Lake Property (Hal)	Bulldozer trenching	No record of work.
1972 (Minfile)	Ridgemont Mining Corporation (Cyprus Anvil Mining Corporation)	Dana & Irma	Restaked old Ivan & Ter claims as Dana, staked Irma to NW	n/a
1973 (Minfile)	Northern Homestake -- Ridgemont (Cyprus Anvil)	Hal	Ridgemont optioned property from Northern Homestake	n/a
1973 (060933)	Ridgemont (Cyprus Anvil)	Dana	Soil sampling	2750 x 300 m soil anomaly with coincident highly anomalous Zn-Pb-Cu values.
1974 (Minfile)	Ridgemont (Cyprus Anvil)	Hal, added Halo claims	Staked additional claims (Halo) Geological mapping Geochemical surveys Mag, EM and IP surveys	No record of work.
1974 (Minfile)	Ridgemont -- Cyprus Anvil	Dana, Irma, Hal & Halo	Property transferred to Cyrpus Anvil	n/a
1974 (091263)	Cyprus Anvil	Dana, Hal & Halo	Diamond drilling (494 m in 3 holes)	Best intercept yielded 1.24% Zn, 0.46% Pb, 0.14% Cu and 34 g/t Ag over 49 m.
1975 (091264)	Cyprus Anvil	Dana & Halo	Diamond drilling (627 m in 3 holes)	Intersected less extensive but locally higher grade mineralization than 1974 holes. Best intercept yielded 3.52% Zn and 0.13% Cu over 8.0 m.
1975 (090083)	Cyprus Anvil	Irma	Mag & gravity survey	Separate, distinct magnetic and gravity anomalies defined.
1977 (090205)	Cyprus Anvil	Irma	IP survey	Showed presence of large anomalous zone that correlates to 1975 gravity anomaly.
1978 (091265)	Cyprus Anvil	Irma	Diamond drilling (159 m in one hole)	No assays reported.
1990 (092964)	YGC Resources Ltd.	Keg	Staked claims Prospecting Geochemical survey	Subdued Au values obtained.

2010	Strategic Metals Ltd.	Keg	Staked claims Prospecting Geochemical survey IP survey VTEM & mag survey Diamond Drilling (958.27 m in 4 holes)	Best drill intercept returned 50.09 g/t Ag, 1.20% Zn, 0.65% Pb, 0.14% Cu, 217 ppm Sn over 125.70 m. Identified several additional soil anomalies and mineralized zones.
OWL/ZENO AREA				
1969 (060180)	Atlas Exploration Company Ltd.	Owl (Owl area)	Staked claims to cover anomalous geochemical values	n/a
1970 (060180)	Atlas Exploration	Owl (Owl area)	Staked additional claims Line cutting Geological mapping Stream sediment sampling Soil sampling Mag, EM and gravity surveys	Discovered disseminated and fracture-filling Zn-Pb-Cu mineralization & 1525 x 365 m area of coincident anomalous Cu-Pb-Zn values. Identified 3 coincident geophysical targets.
1970 (Minfile)	Atlas Exploration	Hoot (Zeno area)	Staked claims	n/a
1971 (Minfile)	Atlas Exploration	Hoot (Zeno area)	Prospecting Geochemical survey	No results reported.
1983	Getty Canadian Metals, Ltd.	n/a	Regional stream sediment sampling Prospecting	Anomalous stream sediment geochemistry in northwest corner of current Keg property. Discovered Hoot Showing (Zeno area), Getty Showing (100 g/t Ag, 10.78% Zn, 3.27% Pb, 0.38% Cu & 3.4 g/t Au over 10 cm) and Payne Showing (31.2 g/t Ag & 1.57% Pb over 5 cm).
1989 (Minfile)	R. Diment	Splash (Zeno area)	Restaked Hoot claims as Splash	n/a
2010	Strategic Metals Ltd.	Keg	Staked claims Soil sampling (Owl Zone) Prospecting (Owl Zone)	5 sulphide-rich rock samples averaged 500 g/t Ag, 3.52% Zn, 7.72% Pb, 381 ppm Sn. Very strong, coincident, 1400 x 400 m, Ag-Zn-Pb-Cu-Sn soil anomaly.
ARCHIMIDES AREA				
1965 (Minfile)	Anvil Mining	Yeti	Staked claims Established grid for 1966 geophysical survey	n/a
1966 (Minfile)	P. Versluce	MC	Tied MC claims onto Yeti property	No record of work.
1966 (017483)	Anvil Mining	Yeti	Mag & EM survey	Delineated coincident NW striking mag response & EM conductor, likely caused by disseminated pyrrhotite.
1975 (Minfile)	Northern Homestake	Zap & Rog	Restaked part of Yeti property as Zap and Rog	n/a

MARKS AREA				
1965 (Minfile)	Anvil Mining	Zeus	Staked the Zeus claims following an airborne mag and EM survey	n/a
1966 (Minfile)	Anvil Mining	Zeus	Limited soil sampling and ground geophysical surveys	No record of work.
1974 (Minfile)	Ridgemont	Zed & Nor	Restaked Zeus property as Zed (west) and Nor (southeast) claims	n/a
1974 (Minfile)	Ridgemont – Cyprus Anvil	Zed & Nor	Properties transferred to Cyrpus Anvil	n/a
1975 (061482)	Cyprus Anvil	Nor	Linecutting Soil sampling	Outlined 760 x 600 m Pb-Zn soil anomaly. Disseminated to replacement style Pb-Zn mineralization discovered.
2010	Strategic Metals Ltd.	Keg	Soil sampling	Expanded 1975 soil anomaly to 3600 x 700 m (Pb-Zn-Sn±Cu).
REBEL AREA				
1966 (018994)	Giant Yellowknife Mines Ltd.	KD, AC & Jet	Staked claims Ground geophysical survey Soil geochemical survey Geological mapping	Discovered extensive gossan with limonite, galena, sphalerite & chalcopyrite as float. Composite grab sample returned 295 g/t Ag, 8.8% Pb, 1.2% Zn & 0.2% Cu. Geophysical and soil anomalies also identified.
1966 (018984)	Altair Mining Corporation Ltd.	AM	Staked claims	n/a
1967 (018984)	Altair Mining	AM	Geological mapping Soil and silt sampling EM and gravity surveys	Identified Cu-Pb-Zn soil anomaly and coincident EM conductor.
1968 (Minfile & 060715)	Giant Yellowknife – Mercury Exploration Ltd.	KD & AC Zan	Optioned properties from Giant Yellowknife Staked Zan claims Prospecting & soil sampling on Zan	Identified two Pb-Zn soil anomalies on valley floors. No mineralization discovered.
1969 (060177)	Mercury Exploration	AC, MX & Zan	Staked additional claims Gravity survey Geochemical survey	Located sporadic weak gravity anomalies.
1970	Mercury Exploration – Giant Yellowknife	Mount Mye Property (KD, AC, MX)	Claims reverted to Giant Yellowknife	n/a
1970 (Minfile & 060975)	Giant Yellowknife – Kangaroo Exploration Ltd.	Mount Mye Property (KD, AC, MX, Zan)	Optioned claims from Giant Yellowknife Diamond drilling (593.8 m in 3 holes)	Identified Pb-Zn soil anomalies. Drilled soil & geophysical anomalies – no significant mineralization intersected.
1971 (060976)	Kangaroo	Mount Mye Property (KD, AC &	Staked Taf claims Grid soil sampling	1525 x 750 m soil anomaly with values up to 10,600 ppm Zn, 4,800 ppm Pb, 1650 ppm

		MX, Zan, added Taf claims)		Cu & 5.0 ppm Ag.
1972 (060994, 060995)	Kangaroo	Mount Mye Property (KD, AM, AC, MX)	Acquired AM claims? Turam EM survey Gravity survey	Indicated presence of a number of conductors, some exhibiting considerable strike length.
1972 (091245)	Kangaroo	KD	Diamond drilling (564 m in 4 hole)	Only 1 hole was sampled. This hole yielded 2.28% Zn over 61 m.
1973 (091243)	Kangaroo	KD	Diamond drilling (630 m in 3 holes)	Not sampled.
1974 (Minfile)	Ridgemont – Cyprus Anvil	Fat	Re-staked part of Taf claims as Fat claims Turam EM survey	n/a
1976 (Minfile)	Cyprus Anvil	KD, AM, AC, MX	Optioned claims from Kangaroo and Giant Yellowknife	n/a
1976 (090186)	Cyprus Anvil	Parts of Mount Mye Property (including Fat claims)	Mag, EM and gravity surveys	Progress report only – no results reported.
1978 (091244)	Cyprus Anvil – Giant Yellowknife	KD	KD claims reverted to Giant Yellowknife Diamond drilling (609 m in 4 holes)	Not sampled. Visually barren to weakly mineralized.
1978 (091246)	Cyprus Anvil	AM	Diamond drilling (190 m in 1 hole)	Not sampled. Visually barren.
1980 (090753)	Cyprus Anvil	MX	Diamond drilling (481 m in 1 hole)	Not sampled. Visually barren.
1990 (092963)	YGC Resources	Reb	Restaked part of KD property Prospecting	Grab samples yielded elevated values up to 61.2 g/t Ag, >10,000 ppm Pb, 6770 ppm Zn & 1600 ppm Cu.
2000 (Minfile)	R. Hamel	Hot	Restaked Reb property	n/a
2010	Strategic Metals Ltd.	Reb Hot 1	Staked claims Purchased Hot 1 claim Soil sampling Prospecting	Confirmed and extended 1750 x 1100 m, Ag-Zn-Pb-Cu-Sn soil anomaly and secondary Zn-Pb±Cu±Ag soil anomaly. 14 mineralized rock samples averaged 135 g/t Ag, 1.65% Zn, 3.26% Pb, 0.69% Cu & 161 ppm tin.
CODY, CIRQUE, SNAP & RISBY ZONES				
1975 (090127)	Welcome North Mines Ltd.	Raz	Line cutting Geological mapping Geochemical sampling	Identified float with elevated Pb-Zn±Ag±Au values and coincident Pb-Zn-Ag soil anomaly (Snap area).
1977 (090266, 090267,	Welcome North	Raz	EM survey Soil sampling Diamond drilling (247.2	Drill tested conductors identified by EM survey (S of Snap area) – no significant

091251)			m in 2 holes)	mineralization. Identified Pb-Zn soil anomaly.
1982 (Minfile)	Cyprus Anvil/ Metallgesellschaft	Fat (see Rebel)	Geological mapping Geochemical survey	n/a
1986 (062283)	Doron Exploration Inc.	Cody	Restaked Fat property and surrounding area Prospecting Geochemical sampling	Discovered 3 mineralized areas, samples from Cirque area with values up to 12283 g/t Ag & 4.45 g/t Au.
1987 (092617)	Doron Exploration	Cody	Prospecting Hand trenching	Trench samples from Cirque area up to 1208 g/t Ag, 0.15% Zn & 0.14 g/t Au over 3.0 m.
1988 (092896)	Doron Exploration – Lacana Mining Corporation	Cody	Hand and bulldozer trenching Geological mapping Geochemical sampling Geophysical surveying	Cirque area trench samples up to 3565 g/t Ag, 2.32% Pb, 0.80% Zn & 0.215 g/t Au over 0.7 m, but vein widths narrower than expected.
1995 (Minfile)	B. Kreft	Shari Pat	Restaked part of Cody Ridge property	n/a
1997 (Minfile)	P. Risby	JRV	Restaked part of Cody Ridge property	n/a
1998 (093875, 093901)	P. Risby – Western Prospector Group Ltd.	JRV	Staked additional claims Prospecting Geochemical sampling	Samples from Snap area up to 695.0 g/t Ag & 5.53 g/t Au.
1999 (094031)	Western Prospector – Pacific Ridge Exploration Ltd.	JRV	Prospecting Line cutting Geological mapping Soil and rock sampling IP survey Diamond drilling (994.6 m in 9 holes)	Discovered Risby area, with samples up to 2730 g/t Ag & 5.69 g/t Au. Best intercepts from Snap area drilling were 52.3 g/t Ag & 0.21 g/t Au over 3.0 m and 26.8 g/t Ag & 1.50 g/t Au over 7.0 m.
2011	P. Risby – Silver Range Resources Ltd.	JRV	Purchased claims	n/a

Keg Area

Much of the area surrounding the Keg Deposit was initially staked in 1965 as the Ivan claims by Anvil Mining Corporation Ltd., following regional airborne magnetic and electromagnetic (EM) surveys.

In 1966, Anvil Mining completed 464.5 m of diamond drilling in four holes at the centre of the Ivan claim block to follow up 1965 geophysical targets (these holes were drilled in vicinity of Keg East Zone). No thick sections of massive sulphides were intersected and, therefore, none of the core was analyzed. The presence of minor disseminated, blebby and banded pyrite and pyrrhotite with rare galena, sphalerite and chalcopyrite was noted in many intervals in all holes. Several narrower bands (up to 12 cm thick) of semi-massive to massive sulphides were intersected. The Ivan claims were allowed to lapse.

Also in 1966, Yukon Copper Ltd. staked the Caribou Lake property (Tara, Dane and Hal claims) around the Ivan claim block. Yukon Copper conducted soil sampling, geological mapping and airborne magnetic and EM surveys. Later that year, Yukon Copper reorganized as Northern Empire Mines Ltd.

In 1967, Northern Empire carried out soil and rock geochemical sampling, geological mapping and line cutting. Near the end of the 1967 exploration season, Northern Empire began bulldozer trenching on the Hal claims. This trenching program was terminated early due to frozen ground. The following year, the bulldozer trenching was completed. A total of about 15,300 cubic metres of bedrock and frozen overburden was removed from nine trenches. Widespread, weakly disseminated pyrrhotite, chalcopyrite and sphalerite and rare galena were reportedly encountered, but this material was not systematically sampled. Heavily disseminated to massive sulphide mineralization was found in two places. It consists of a pyrrhotite-pyrite-sphalerite assemblage, with lesser amounts of chalcopyrite, galena and scheelite. Four grab samples collected from one location in 1967 yielded between 6.2 and 11 g/t silver, 2.8 and 4.5% zinc, 0.04 and 0.18% copper and 0.34 and 0.68 g/t gold. When better exposed by further bulldozing in 1968, this showing proved to consist of a sulphide lens less than 15 m long and 3 m wide that averaged 3.4 g/t silver, 1.25% zinc and 0.05% copper. At the second location, the upper 2.4 m of a pyrrhotite-rich band was exposed. A chip sample of this mineralization assayed 2.84% zinc, 0.01% lead, 0.37% copper with trace gold and silver across the exposed 2.4 m width.

In 1969, Inter-Tech Development and Resources Ltd. restaked the old Ivan claims as the Ter claims. No work was reported for these claims and they subsequently expired.

In 1971, Northern Homestake Mines Ltd. acquired the Caribou Lake property from Northern Empire.

In 1972, Northern Homestake completed additional bulldozer trenching on the Hal claims, but there is no record of the amount of work performed or results obtained from it. That same year,

Ridgemont Mining Corporation, a subsidiary of Cyprus Anvil Mining Corporation, restaked the old Ivan/Ter claims as the Dana claims. It also staked the Irma claims to the northwest.

In 1973, Ridgemont Mining optioned the Hal claims from Northern Homestake. Ridgemont Mining performed soil sampling on its Dana claims.

In 1974, Ridgemont Mining added the Halo claims to fill a gap between the Hal and Dana claim blocks. It also conducted geochemical surveys, geological mapping and magnetic, EM and induced polarization (IP) surveys on both the Hal and Halo claims. No description of this work nor results obtained from it is available. Later that year, Ridgemont Mining transferred the Dana, Irma, Hal and Halo claims to Cyprus Anvil, which completed 494 m of diamond drilling in three holes on the Hal and Halo claim blocks (within Keg Deposit). These holes intersected variably fractured, mineralized and altered siliceous rocks with narrower, interbedded skarn horizons. Sulphide minerals comprise pyrrhotite with lesser pyrite, sphalerite, chalcopyrite, galena and arsenopyrite. These minerals occur as disseminations, fine to coarse blebs, fracture coatings, matrix in crackle breccias and rarely as bands in the skarn horizons. The core was only sampled intermittently. The best interval of contiguous samples yielded weighted averages of 34.3 g/t silver, 1.25% zinc, 0.47% lead and 0.14% copper over 49.1 m.

In 1975, Cyprus Anvil drilled 627 m in three holes to test along strike and down-dip of the mineralization discovered in its 1974 holes (within Keg Deposit). Less extensive, but locally higher grade mineralization was intersected in the 1975 holes, which were also sampled intermittently. The most significant intersections graded 1.24% zinc over 11.6 m and 0.82% zinc over 24.1 m. Copper and lead values were low in both holes and no silver results were reported. That year, Cyprus Anvil also conducted magnetic and gravity surveys on the Irma claims.

In 1977, Cyprus Anvil followed up the 1975 Irma geophysical work with an IP survey. In 1978, one hole totalling 159 m was drilled to test the geophysical targets. No assays were reported for this hole.

All claims in the area subsequently expired. In 1990, YGC Resources Ltd. staked the Keg claims to cover the most significant historical geochemical and geophysical anomalies, bulldozer trenches and diamond drill holes (Keg Main Deposit). It completed minor prospecting and geochemical sampling. These claims were also allowed to expire without receiving significant work.

Prospector R. Berdahl staked the BP4 claim (west of Keg Deposit) in 2007. No work was filed on this claim by Berdahl.

In 2010, Strategic Metals staked claims, optioned the BP4 claim and subsequently completed prospecting, road building, line cutting, diamond drilling (958.27 m in four holes in the vicinity of the 1974 and 1975 holes) and geochemical, IP, VTEM and magnetic surveys.

The following year, Strategic Metals initiated a comprehensive exploration program on the Keg claims, which was completed by Silver Range after sale of the claims was completed on August 11, 2011 through a plan of arrangement. The combined 2011 program included additional claim

staking, prospecting, geological mapping, line cutting, road building, diamond drilling (16,808.37 m in 51 holes), petrographic studies and geochemical, IP, water quality and wildlife surveys. Results of the work completed by Silver Range and Strategic Metals are discussed later in this report.

The BP4 claim, which is located about 500 m west of Keg Deposit, was not sold to Silver Range along with Strategic Metals' wholly owned Keg claims, because earn-in on the option had not been completed. In fall 2012, Strategic Metals acquired a 100% interest in the BP4 claim, subject to a net smelter return royalty interest.

Owl/Zeno Area

The Owl area is located 7.5 km north-northwest of the Keg Deposit. It was staked in 1969 by Atlas Exploration Company Ltd. to cover anomalous geochemical values from an earlier regional survey.

In 1970, Atlas Exploration staked additional claims and performed stream sediment and soil sampling, geological mapping, line cutting and magnetic, electromagnetic and gravity surveys. The claims were subsequently allowed to lapse.

The Zeno area is situated six kilometres west-northwest of the Owl area. It was staked as the Hoot property in 1970 by Atlas Exploration (no claim sketch is available). In 1971, Atlas Exploration completed prospecting and geochemical sampling in this area, for which no results were reported. The claims expired without further work.

In 1983, Getty Canadian Metals, Ltd. conducted a reconnaissance stream sediment sampling and prospecting program to investigate a 2700 sq. km. area of central Yukon, for stratiform base metal deposits. This area overlapped with the northwestern part of the current Keg property, in the vicinity of the Owl/Zeno area.

In 1989, R. Diment, an independent prospector, restaked the Hoot property as the Splash claims (no claim sketch available). No work was reported and the claims lapsed.

In 2010, Strategic Metals restaked the entire Owl/Zeno area as part of its Keg property. It conducted geochemical sampling and prospecting in the Owl area that summer and completed four diamond drill holes totaling 1165.46 m in 2011. Significant results from this program include 28.13 m grading 11.77 g/t silver, 0.21% lead and 0.23% zinc from hole OWL-11-03.

Archimedes Area

The Archimedes area lies 16 km east-southeast of the Keg Deposit. It was staked as the Yeti property in 1965 by Anvil Mining, which later established a grid for 1966 geophysical surveys.

In 1966, Anvil Mining conducted magnetic and EM surveys on the Yeti property. P. Versluce, an independent prospector tied the MC claims onto the northern side of the Yeti property. Both claim blocks were subsequently allowed to expire.

In 1975, Northern Homestake staked the Zap and Rog claims (no claim sketches are available) over part of the old Yeti property. No work was reported and both claim blocks expired.

Marks Area

The Marks area is located 24 km southeast of the Keg Deposit. It was reportedly staked as the Zeus claims in 1965 by Anvil Mining following regional airborne magnetic and EM surveys. The following year, Anvil Mining conducted limited soil sampling and ground geophysical surveys. These claims subsequently lapsed. No reports or claim sketches are available for the Zeus property.

In 1974, Ridgemont Mining restaked the Zeus claims as the Zed (northwest, no claim sketch) and Nor (southeast) claims. These claims were transferred to Cyprus Anvil.

In 1975, Cyprus Anvil completed line cutting and soil sampling on the Nor claims. No work was performed on the Zed claims. Both claim blocks were allowed to expire.

In 2010, Strategic Metals restaked the Marks area as part of its Keg property. It completed grid and contour soil sampling in the area later that year and in 2011.

Rebel Area

The Rebel area lies 17 km south-southeast of the Keg Deposit. It was first staked as the Mount Mye property (KD and AC claims) in 1966 by Giant Yellowknife Mines Ltd., which then performed soil geochemical sampling, geological mapping and ground geophysical surveys. That same year, Altair Mining Corporation Ltd. staked the AM claims, which adjoined the KD claims to the west.

In 1967, Altair Mining carried out soil and stream sediment sampling, geological mapping and EM and gravity surveys on its AM claims.

In 1968, Giant Yellowknife optioned the KD and AC claims to Mercury Exploration Ltd. The following year, Mercury Exploration staked additional claims (MX) and completed geochemical and gravity surveys.

In 1970, the Mount Mye property (KD, AC and MX claims) reverted to Giant Yellowknife, which then optioned it to Kangaroo Exploration Ltd. That year Kangaroo Exploration completed 593.7 m of diamond drilling in the southwest corner of the property, which overlaps with the northern part of the Cody area (see below).

In 1971, Kangaroo Exploration staked the Taf claims to the east of the KD claim block and performed grid soil sampling. The next year, it acquired the AM claims (no record of how the claims were acquired) and conducted EM and gravity surveys on its Mount Mye property (KD, AC, MX and Taf claims). It also drilled four holes totalling 564 m on the KD claim block. In

1973, Kangaroo Exploration completed an additional 630 m of diamond drilling in three holes in the same area.

In 1974, Ridgemont Mining (Cyprus Anvil) restaked part of the Taf claims as the Fat claims and completed a Turam EM survey.

In 1976, Cyprus Anvil optioned the Mount Mye property from Kangaroo Exploration/Giant Yellowknife. Cyprus Anvil conducted gravity, EM and magnetic surveys that year. No results were reported for this work.

In 1978, the KD claims reverted to Giant Yellowknife, which completed 609 m of diamond drilling in four holes. Cyprus Anvil concurrently drilled 190 m in one hole on its AM claims.

In 1980, Cyprus Anvil drilled 481 m in one hole on the MX claim block.

All claims in the Rebel area subsequently expired. In 1990, YGC Resources Ltd. restaked part of the KD claims as the Reb property and completed minor prospecting. YGC allowed the claims to lapse.

In 2000, R. Hamel, an independent prospector, restaked the Reb property as the Hot claims. No claim sketch is available for these claims and no work was recorded. All but one of the claims later expired.

In 2010, Strategic Metals restaked the area as the Reb claims and purchased the Hot 1 claim from Hamel. It completed geochemical sampling, prospecting and IP surveying. In 2011, Silver Range completed three diamond drill holes totaling 535.49 m. Highlights from this drilling include 6.16 m yielding 155.84 g/t silver, 12.43% lead, 3.08% zinc and 807 ppm tin from hole REB-11-02.

Cody, Snap, Risby and Cirque Area

The Cody, Cirque, Snap and Risby areas lie approximately 28 km south-southeast of the Keg Deposit and 10 km northeast of the Faro, Grum and Vangorda mines of the Anvil Belt. Due to their close proximity to the mines, these areas have a complex exploration history, which is briefly summarized in the following paragraphs.

Parts of the areas were first staked as the Rox claims by Kerr-Addison Mines Limited in 1963 to cover transported gossans and sphalerite-, galena- and arsenopyrite-bearing float (Foster, 1976). Between 1963 and 1974, various parts of the belt were restaked at different times by Anvil Mining, Kangaroo Exploration, Cyprus Anvil, Spartan Explorations Limited, and Action Exploration Ltd. During this period, geological mapping, prospecting, soil sampling and electromagnetic and induced polarization surveys were performed. In 1970, Kangaroo Exploration completed 593.7 m of diamond drilling in three holes to follow up geophysical and geochemical anomalies in a wide valley to the north of Cody Zone (southeast part of historical Mount Mye Property, listed under Rebel area).

In 1975, Welcome North staked the Raz claims within this area to cover what was considered to be a favourable geological environment for Sedex deposits. It carried out geological mapping, geochemical surveying and line cutting.

In 1977, Welcome North completed more extensive geochemical surveying and geological mapping, along with electromagnetic surveying and 247.2 m of diamond drilling in two holes (south of the Snap area). The holes were drilled to test electromagnetic conductors.

In 1982, Cyprus Anvil performed geological mapping and soil geochemical sampling on its Fat claims (part of its Mount Mye Property, see Rebel area).

In 1986, Doron Explorations Inc. staked the Cody Ridge property, which covered the entire area. Cursory prospecting and geochemical sampling were completed.

In 1987, Doron Explorations expanded its property and performed property-wide prospecting and geochemical sampling. It also conducted D6 bulldozer trenching on the lower part of Cirque area.

In 1988, Doron Explorations completed regional- and detailed-scale geological mapping, prospecting, line-cutting (35 line-km), ground magnetometer and VLF-EM surveying, soil geochemical sampling, hand trenching (19 blast trenches in Cirque area) and extensive follow up bulldozer trenching (Cirque area). The claims comprising the Cody Ridge property were allowed to lapse.

According to Yukon Minfile (Deklerk and Traynor, 2005), the Cirque area was restaked in 1995 as the Shari property, but there is no record of any work on these claims and they later expired.

In 1997, P. Risby, an independent prospector, restaked part of the Cody Ridge property as the JRV claims on behalf of Gullen/Risby Family Trust.

In 1998, Gullen/Risby Family Trust optioned the property to Western Prospector Group Ltd., which then staked additional claims and completed prospecting and geochemical sampling.

In 1999, Western Prospector transferred its option to Pacific Ridge Exploration Ltd., which performed prospecting, line cutting, geological mapping, geochemical sampling, IP surveying and diamond drilling (994.6 m in 9 holes). The bulk of this work was completed within the Snap and Risby areas. The holes were drilled in the Snap area to test coincident geophysical and geochemical anomalies.

Exploration on the Snap claims by Silver Range in 2011 included 677.49 m of diamond drilling in three holes. Drilling intersected sheeted fractures within clay altered granite. The best results were from hole SHP-11-02 which included a 2.27 m interval grading 480.42 g/t silver, 0.32% lead and 0.28% zinc within a larger interval that averaged 33.30 g/t silver, 0.14% lead and 0.16% zinc across 50.86 m.

On August 29, 2011 Silver Range purchased the JRV claims from Gullen/Risby Family Trust.

Other Claims in the Area

In 2007, prospector R. Berdahl staked the BP 1 to 6 claims, which are scattered within the Property. Berdahl still owns all of the claims, except BP 4, which is owned by Strategic Metals. The Wag 1 claim was staked in spring 2010 by K. Wagantall. It is located in the southern part of the Rebel area. No assessment work has been filed on any of these claims.

GEOLOGICAL SETTING

Regional Geology

The Property lies immediately north of the Anvil District, which has been the focus of numerous government and industry sponsored studies since the discovery of the Vangorda Deposit in 1953. Regional bedrock geology for Tay River map area (105K) was published at 1:253440 scale by Roddick and Green 1961) and at 1:250000 scale by Gordey and Irwin (1987). More detailed studies by Tempelman-Kluit (1972) at 1:125000 scale and Gordey (1990a and b) at 1:50000 scale were completed following the discovery of more massive sulphide, Sedex deposits in the area. These discoveries also led to extensive detailed mapping by mining and exploration companies. The Yukon Geological Survey (YGS) integrated the results of past government studies and company exploration, along with its own more recent mapping in the Anvil District onto its website (Yukon Geological Survey, 2013), and published a detailed compilation in 2004 (Pigage, 2004). The following geological descriptions are largely summarized from the published data.

The Property is located within Selwyn Basin (Figure 5), a tectonic element comprising deep water clastic rocks, chert and minor carbonate that accumulated along the North American continental margin during Paleozoic time. The basin is bound to the northeast by a carbonate platform (Mackenzie Platform), which formed the near-shore facies of ancient North America (Abbott et al, 1986).

In the area of the Property, Selwyn Basin lies immediately northeast of units belonging to Slide Mountain and Yukon-Tanana Terranes, the most easterly of the allochthonous terranes (Coney et al, 1980). Deformation and metamorphism associated with accretion of the allochthonous terranes was initiated in Jurassic and culminated in Cretaceous (Tempelman-Kluit, 1979). More recently, strike-slip faulting along the Tintina Fault resulted in about 450 km of dextral offset during Early Tertiary time (Roddick, 1967; Murphy and Mortensen, 2003). The Property is located 10 km northeast of the Tintina Fault at its closest point and 40 km at its furthest.

The rocks in the vicinity of the Property comprise various Paleozoic-age strata that have been juxtaposed by a complex series of Jurassic to Cretaceous high angle and thrust faults (Figure 6). Structure in the area is dominated by moderately southwest-dipping or flat-lying strata that are imbricated by several large northwest-trending, northeast directed thrust faults (Yukon Geological Survey, 2010b).

The Paleozoic strata are sandwiched between two major Mid-Cretaceous igneous bodies – the Anvil Batholith to the southwest and the Teddy Caldera to the northeast. The Anvil Batholith

belongs to Selwyn Plutonic Suite, which consists of intermediate (biotite quartz monzonite, granodiorite and minor diorite) to more felsic (biotite±hornblende±muscovite granite, quartz monzonite, granodiorite) compositions. The Teddy Caldera is part of South Fork Volcanics, which comprise biotite-quartz-hornblende-feldspar crystal tuff. Both igneous bodies are elongated parallel to the regional, northwest to southeast structural trend.

The Mid-Cretaceous Orchay Batholith underlies the southeastern edge of the Property. This Batholith belongs to Selwyn Plutonic Suite and is comprised of granodiorite and quartz monzonite.

The youngest igneous event in the area comprises bimodal volcanics and feeder plugs of Early Tertiary age. These bodies are often too small to map at regional-scale. They are assigned to the Ross Volcanics.

A large area between the southeast corner of the Property and the Teddy Caldera is blanketed by unconsolidated Quaternary glacial, glaciofluvial and glaciolacustrine deposits.

All units in the area are described in detail in Table 2.

Table 2 – Lithological Units (*after Gordey, 1990a,b*)

Unit Name	Age	Map Name	Description
Ross Volcanics	Lower Tertiary	lTR2	Rhyolite flows, tuffs, ash-flow tuffs and breccias, locally laminated; small stocks and necks of white weathering, flow-banded, quartz-sanidine porphyry to granite porphyry, locally obsidian bearing; local shale, sandstone and conglomerate.
South Fork Volcanics	Mid-Cretaceous	KSF	Dark brown weathering, locally columnar jointed, massive, densely welded, biotite-quartz-hornblende-feldspar crystal tuff.
Selwyn Suite	Mid-Cretaceous	mK(g,q)S	Plutonic suite of intermediate (g) to more felsic composition (q): g. resistant, blocky, fine to coarse grained equigranular to porphyritic (K-feldspar) biotite quartz monzonite and granodiorite and minor quartz diorite; minor leuco-quartz monzonite and syenite. q. equigranular to porphyritic (K-feldspar) biotite +/- hornblende +/- muscovite granite, quartz monzonite and granodiorite; porphyritic biotite hornblende granite with large smoky grey quartz phenocrysts and locally K-feldspar phenocrysts.
Jones Lake Formation	Middle to Upper Triassic	TrJ	Brown to buff weathering, calcareous fine grained sandstone, argillite and shale; extensive ripple cross-lamination and bioturbation; massive, light grey weathering, fine crystalline, dark grey limestone; minor orange weathering platy limestone.
Mount Christie Formation	Carboniferous to Permian	CPMC	Burrowed, interbedded greenish grey cherty shale and green shale; thin to medium bedded, light grey-green to black chert; black siliceous slate

			and siltstone; minor quartzite, limestone and dolostone; locally abundant, large grey barite nodules.
Tay Formation	Mississippian	MT1	Recessive, dark brown weathering, thin to medium bedded, calcareous, dark grey to brown siltstone and shale, commonly burrowed; thin to thick interbeds of fine crystalline, dark grey limestone; minor quartz arenite.
Earn Group	Devonian and Mississippian	DME(1,2)	Complex assemblage of submarine fan and channel deposits (1) within black siliceous shale and chert (2): 1. thin bedded, laminated slate with thin to thickly interbedded fine to medium grained chert-quartz arenite and wacke; thick members of chert pebble conglomerate; black siliceous siltstone; nodular and bedded barite; rare limestone. 2. silvery blue weathering black shale, argillite, cherty argillite and thin bedded chert; nodular and bedded barite; rare limestone.
Road River Group	Ordovician to Lower Devonian	ODR	Black shale and chert overlain by orange siltstone or buff platy limestone; locally contains beds as old as Middle Cambrian.
Marmot Formation	Cambrian to Silurian	CSM2	Amygdaloidal basaltic flows and breccias; mostly subaqueous; thick, flow-banded rhyolite and felsite, includes breccia and tuff.
Rabbitkettle Formation	Upper Cambrian and Ordovician	COR1	Thin bedded, wavy banded, silty limestone and grey lustrous calcareous phyllite; limestone intraclast breccia and conglomerate; massive to laminated, grey quartzose siltstone and chert and rare black slate; local mafic flows, breccia, and tuff.
Gull Lake Formation	Lower Cambrian	lCG1	Shale, siltstone and mudstone, locally bioturbated, with minor quartz sandstone; rare green-grey chert; local basal limestone and limestone conglomerate; phyllite to quartz-muscovite-biotite schist (+/-garnet +/-sillimanite +/-staurolite +/-andalusite).

Regional metamorphism within Selwyn Basin is typically lower greenschist facies. Contact metamorphism is developed around Cretaceous plutons (Yukon Geological Survey, 2010b). Contact aureoles are up to several kilometres in diameter and produce calc-silicate, pelitic and siliceous hornfels.

GEOLOGY OF SPECIFIC ZONES

Detailed geology of the Keg Main is shown on Figures 7 to 9, while geology in the vicinity of the Owl, Drex/RGS and Rebel zones is illustrated on Figures 10 to 12. A detailed geology map of the five mineralized zones in the southeastern-most part of the property (Hammer, Cody, Cirque, Snap and Risby) was compiled by Doron Explorations in 1988 and is presented on Figure 13 (Robertson and Wallis, 1989 and Blanchflower, 1998 and 1999).

Keg Zone

Mapping in the Keg Zone (which encompasses the Keg Deposit and surrounding areas) has been hampered by the paucity of bedrock exposures.

The Keg Zone is underlain by Upper Cambrian through Permian aged sedimentary rocks that are classified regionally as Rabbitkettle Formation, Earn Group, Tay Formation and Mount Christie Formation. Figure 7 shows detailed plan view geology of the Keg Zone, while Figure 8 (cross-section) and Figure 9 (stratigraphic column) illustrate the relationships between the units.

The oldest exposed rocks in this area have been grouped as Upper Cambrian to Lower Ordovician Rabbitkettle Formation (CORT). Where exposed, they comprise dark grey to grey-brown and sometimes white, laminated to thinly bedded, quartzose siltstone and fine-grained sandstone with minor shale horizons. Buff weathering, fine-grained sandstone is locally interbedded with siltstone. The most northwesterly exposure of this unit contains grey, quartz-rich siltstone with laminations defined by stringers of pyrrhotite.

Devonian to Mississippian Earn Group (DME) in this area consists of grey shales and black, thin bedded chert.

Mississippian Tay Formation (MT) conformably overlies Earn Group and comprises thin to medium beds of grey, silty limestone to calcareous siltstone between dark grey to black, variably quartz-rich siltstone to shale.

The youngest stratified rocks at the Keg Zone belong to Carboniferous to Permian Mount Christie Formation (CPMC), and consist of thin and medium bedded, maroon, black and grey-brown cherts.

A small Mid-Cretaceous Selwyn Suite pluton composed of light grey, medium grained, biotite-hornblende granodiorite with megacrysts of feldspar up to 10 cm long cuts the sedimentary package two kilometres southwest of Keg Deposit. No other intrusive rocks have been observed in the immediate vicinity of the Keg Zone.

A zone of pervasive hydrothermal alteration overprints sections of both Mount Christie Formation and Tay Formation near the Keg Zone. Within this alteration zone, rocks are commonly light grey to light pinkish-grey, massive and very fine grained and host minor veinlets and disseminations of sulphide minerals. The alteration zone is approximately 3000 by 5000 m and is open along strike to the east and the west.

The fine grained nature of the rocks within and around the alteration zone makes mineral identification in hand sample difficult. As a result, Silver Range collected a suite a samples for petrographic analyses in an attempt to better identify primary lithologies and alteration of rocks within the Keg Deposit and in surrounding area. The following descriptions are based on observations made from petrographic examination of 56 samples from both drill core and outcrop using a microscope with both reflected light and refractive light capabilities. All minerals were identified using solely optical properties.

Three main lithologies were recognized in thin section: chert that grades into very fine grained quartz-dominated siltstone (Mount Christie Formation); mildly siliceous mudstone (Tay Formation); and calcareous siltstone made-up of sub-angular quartz clasts cemented with calcite (Tay Formation).

Most samples show an early alteration assemblage comprising sericite±carbonate±silica that affects siliceous and calcareous sedimentary rocks in varying degrees, depending on host rock composition and proximity to structures.

Locally, a hydrothermal alteration assemblage overprints the sericite-carbonate-silica assemblage and can completely obliterate earlier textures. This alteration pattern is visible in hand sample and drill core as widespread bleaching and locally as vein-fill, fracture-fill and skarnification. In thin section, this assemblage comprises varying amounts of diaspora, andalusite, quartz, calcite, chloritoid, chalcedony, cordierite, staurolite, pyrophyllite, dumorierite and clays with rare corundum, plus sulphide minerals, including pyrrhotite, pyrite, sphalerite, chalcopyrite, galena and arsenopyrite. Pyrite-sphalerite-chalcopyrite-calcite± staurolite± andalusite± corundum veins commonly have diaspore selvages. Andalusite veins clearly cross-cut these multi-mineral veins. Chloritoid occurs in vein selvages and as pervasive disseminations throughout altered sections of rock within the Keg Deposit, but it is most abundant in distal parts of the alteration zone.

A later alteration event (possibly retrograde skarnification) comprising large bladed calcite crystals with pyrite and chalcopyrite occurs as clots or small lenses in a few drill core samples from Keg Deposit. These clots overprint hydrothermal alteration described above.

Structural analysis of folded and thrusted areas of the Selwyn Basin depends on a sound understanding of stratigraphy. Fossil ages provided by Gordey (2008) were instrumental in the interpretation presented below. Nearly all of the dated fossil locations provided by Gordey (2008) were visited by mappers working on behalf of Strategic Metals and have allowed for confident identification of most of the units described within the Keg Zone.

Several east-southeast trending thrust faults dip to the south and imbricate stratigraphy in this area. An early thrust fault (Two Pete Thrust) places Rabbitkettle Formation on top of Ordovician to Mississippian stratigraphy (Gordey, 2008). This thrust fault does not appear to daylight near the Keg Zone due to several southeast trending normal faults that drop the stratigraphy down to the south (Figure 8). A more northerly situated thrust fault places Tay Formation over Mount Christie Formation. Locally this fault diverges into two parallel thrust faults: one placing Tay Formation over Mount Christie Formation and the other placing Earn and Road River Groups over Tay Formation.

North of the most northerly thrust fault, Mount Christie Formation chert is tightly folded into cylindrical, metre-scale folds that commonly show a moderately southwest-dipping limb paired with a steep to overturned, southwest- and northeast-dipping limb (Figure 8). These folds are observed on metre and smaller scale throughout a canyon along Ivan Creek and in hill-top outcrops. The folds consistently plunge shallowly to moderately to the east-southeast and are interpreted to be parasitic to a regional antiform-synform pair trending northwest-southeast.

The regional faults and folds described in the previous paragraph are cut by many late, brittle faults that complicate map patterns and drill sections. Some of these features are shown on Figure 7, while others are too small or too poorly understood to include.

The canyon that runs along Ivan Creek provides excellent exposure of several late, brittle fault zones, which are up to five metres in width and contain shattered chert fragments, milled rock and clay. Similar faults, characterized by clasts of quartz cemented by calcite, were observed in outcrop on a south-facing slope east of the canyon. These faults dominantly strike east to southeast and dip moderately to steeply to the south. They are interpreted to be linked to normal faulting in the area.

Fracture and vein orientations in and around the Keg Deposit are broadly grouped into two sets. One set dips very steeply to the west and strikes south-southeast and the other dips sub-vertically north and strikes west. Both sets commonly contain sulphide minerals in veins and fractures. The west striking set features more abundant but finer fractures.

Owl Zone

Owl Zone is situated eight kilometres north-northwest of Keg Deposit. Stratigraphy in the vicinity of Owl Zone comprises Mount Christie Formation chert and siltstone, which are structurally overlain by older Tay Formation limestone and arenite (Figure 8).

Outcrops of Mount Christie Formation black, fine grained, variably carbonaceous, siliceous siltstone (CPMCc) are the lowest exposures on an east-west trending ridge that hosts the Owl Zone. This sub-unit is conformably overlain by a thin package of Mount Christie Formation maroon and grey cherts (CPMCb). Both sub-units have been pervasively altered by silica and sulphide mineralization. The alteration zone is characterized by rusty weathering, light grey-green to grey, laminated to massive, silica-altered rocks, which commonly host veinlets and disseminations of arsenopyrite with rare arsenopyrite-galena veins. Where sulphide veins and disseminations are present, the silicification is most intense and host rocks are altered to light grey or pinkish-grey. The alteration zone comprises much of the mapped area.

Higher elevations on the ridge are characterized by Tay Formation grey, locally fossiliferous limestone and discontinuous bands of grey-brown, very fine grained siliceous rocks (MT1). Thick beds of light grey to white, medium grained arenite (MT2) are regularly exposed within the limestone unit. Rare, grey, fine grained, laminated to thin bedded calcareous siltstone and black, coarse grained, quartz-rich, lithic sandstone were also mapped within Tay Formation.

Based on the YGS regional-scale mapping and interpretations, Tay Formation has been openly folded by a northwest plunging antiform and was thrust faulted over Mount Christie Formation.

All units were cut by late, near vertical faults that strike north-northwest and show offsets of up to 150 m. The movement along these faults is interpreted to be a combination of west-side down dip-slip and sinistral strike-slip motions. Fracture and vein sets are oriented parallel to these faults and are commonly mineralized.

Owl Southwest Zone

The Owl Southwest Zone is located 7.5 km northwest of the Keg Deposit and 2.5 km southwest of the Owl Zone. It is situated within a west-northwest trending thrust panel comprising Tay Formation limestone and arenite overlain by Mount Christie Formation chert and siltstone. To the south, Pervost Formation shale has been thrust atop of this package.

Outcrop at the Owl Southwest Zone comprises Mount Christie Formation chert and siltstone and is restricted to a gentle hill located in the vicinity of the showing and south of it. To the north, a swampy, low-lying saddle represents the surface expression of a thrust fault that separates the Owl and Owl Southwest zones.

Zeno Zone

The Zeno Zone is situated 14 km northwest of the Keg Deposit. It is located within Tay Formation limestone and arenite along the northern margin of a Selwyn Plutonic Suite intrusion. The pluton is approximately 1.5 km by 0.8 km in size. To the northwest, siltstone belonging to the Rabbitkettle Formation is in fault contact with both the pluton and Tay Formation. This contact is poorly exposed low on a hillside. Detailed mapping has not yet been performed on the Zeno Zone

Drex and RGS Zones

Drex and RGS zones lie 10 km east-southeast of the Keg Deposit, within an area that comprises Mount Christie Formation chert and Jones Lake Formation fine grained clastics and limestone (Figure 11).

Mount Christie Formation is divided into two sub-units in this area. The lower sub-unit (CPMCa) is characterized by laminated to thinly bedded, light grey, grey-green and black chert interbedded with dark grey siltstone and shale. The overlying sub-unit (CPMCb) consists of distinct, thin to medium bedded, commonly buff weathering, reddish-brown to maroon chert. In the western part of the map area, a section of Mount Christie Formation stratigraphy has been pervasively silica-altered and variably mineralized. This alteration zone hosts the RGS Zone.

Jones Lake Formation is also locally divided into two sub-units, which lie conformably and structurally against the underlying Mount Christie Formation. Thin bedded, dark grey, calcareous siltstone (TrJb) unconformably overlies CPMCb chert. The other sub-unit comprises thin-bedded, brown, fine grained, sandstone and siltstone with interbedded black argillite and laminated to blocky, grey, silty limestone (TrJa). It is juxtaposed against TrJb siltstone and altered Mount Christie Formation rocks to the south along an inferred fault.

All units in the area are tightly folded into metre-scale cylindrical folds with very shallowly plunging fold hinges that trend west-northwesterly and east-southeasterly. The folds are particularly well developed and exposed in the maroon chert near the contact with Jones Lake Formation.

Mount Christie Formation has been cut by a series of steeply dipping, dominantly northeast-trending structures. These structures are represented by one metre wide pockets of re-cemented fault breccia. The structures post-date folding in the area. Fractures and veins consistently strike north-northeasterly and dip near vertically.

Euclid Zone

Euclid Zone lies 18 km southeast of Keg Deposit. Locally, Road River Group and Prevos Formation shales have been intruded by a Tertiary rhyolite plug. Shale located at the margin of the rhyolite plug has been thermally altered and exhibits a strong cleavage. Well-formed rhyolite columns form tall cliffs along the plug's southern margin.

Vent Zone

The Vent Zone is located 21 km southeast of the Keg Deposit. Volcanic rocks belonging to the Selwyn Plutonic Suite overlie Pervost Formation shale and Portrait Lake Formation shale.

The Vent Zone is located on a flat topped hill that is capped with loosely consolidated felsic volcanic rocks, including bombs ranging from 10 to 50 cm in diameter. No outcrop containing these volcanic rocks has been located; but they appear to be locally derived felsenmeer. A white to light grey ash tuff marks the contact between the Selwyn Plutonic Suite volcanics and underlying Pervost Formation shale, which outcrops on steep flanks of the hill.

Ku Zone

Ku Zone is located at the extreme southeast end of the property, 45 km from the Keg Deposit. The area is underlain by locally deformed quartzite, finer grained clastic rocks and limestone beds belonging to Rabbitkettle Formation, along the northern margin of the Orchay Batholith. Outcrop exposures are largely limited to the recessive linears and creek cuts.

Rebel Zone

Rebel Zone is located 17 km south-southeast of Keg Deposit. It lies entirely within Marmot Formation (Figure 12**).**

Locally, Marmot Formation has been divided into three primary lithologies, which are conformable and interbedded. The lithologies include: 1) orange and brown altered volcanic and volcaniclastic rocks that are cut extensively by orange weathering, iron-carbonate veins (CSM2a); 2) black, strongly carbonaceous shale (CSM2b); and 3) variably deformed, green volcanic breccia interbedded with green, recemented volcaniclastic sandstone, siltstone and tuffaceous rocks and local amygdaloidal basalt flows (CSM2c).
The Marmot Formation package dominantly strikes east-southeasterly and dips shallowly to moderately to the north. Cleavage generally strikes northeasterly and dips to the northwest or southeast. Iron-carbonate veins are mostly oriented to the north-northwest or east-northeast and have variable dips.

Mineralization comprising Rebel Zone is entirely hosted within CSM2c.

Hammer, Cody, Cirque, Snap and Risby Zones

Hammer, Cody, Cirque, Snap and Risby zones are situated about 25 km south-southeast of Keg Deposit. These zones lie mostly within the Anvil Batholith, near its northern contact with Gull Lake Formation (Figure 13).

The area is dominantly underlain by granite, quartz monzonite, granodiorite and minor syenite of Anvil Batholith (Unit 3 *on Figure 13). These rocks are light brown to grey in colour, massive and fine to medium grained. They are composed of anhedral to subhedral feldspar, quartz, biotite and muscovite with minor apatite and magnetite (Blanchflower, 1999).

Several large roof pendants are preserved along ridge tops in the area. These roof pendants contain Gull Lake Formation non-calcareous schist, phyllite and gneiss with lesser carbonaceous phyllite, marble, calc-silicate schist and metabasite (Units 1 and 2). The metasedimentary rocks have been intruded by granitic sills that are coeval with the Anvil Batholith. The sills are parallel to foliation attitudes within the metasedimentary rocks.

Both the roof pendants and Anvil Batholith have been cut by green, fine grained andesite to coarse grained hornblende-plagioclase porphyry dykes (Unit 4), and quartz-feldspar porphyry dykes (Unit 5). These dykes could be Mid-Cretaceous or Early Tertiary in age.

Quaternary alluvium, glacial and glaciofluvial deposits blanket broad valleys in the area.

The Gull Lake Formation sedimentary and lesser volcanic rocks have undergone a high degree of regional deformation and metamorphism. The gneiss and schist reportedly contain staurolite, which is indicative of relatively high metamorphic grade. With the exception of a relatively thin and local band of hornfels, little contact metamorphism has been mapped within the metasedimentary units near the intrusive contact (Blanchflower, 1999).

Anvil Batholith intrusives are generally fresh to poorly altered, except adjacent to or within south-southeasterly and east-northeasterly trending fault zones. The rocks become increasingly more altered near these fault zones, resulting in an apparent zonation from fresh to propylitic, sericitic and, eventually, pervasive argillic alteration facies. Within the most intensely fractured and sheared fault zones, the intrusives become leucocratic (the mafic minerals are altered to quartz and sericite), albitized and locally biotitized. This alteration is likely attributed to silicification and mineralization, since most of the significant mineralization (sheeted quartz-sulphide veins) occurs within sericitically-, or more commonly, argillically-altered granite or granodiorite.

The younger dykes (Units 4 and 5) display chill features near their margins and are usually sheared, silicified and limonitic at surface.

Two dominant sets of moderately to steeply dipping normal regional faults appear to be related to extensional faulting during the intrusion of the Anvil Batholith (Jennings and Jilson, 1986 in

Blanchflower, 1998). The fault sets are oriented at 060 to 070º and 160 to 170º. Foliation and apparent bedding attitudes within the metasedimentary units commonly strike northwesterly and dip shallowly (10 to 30º) to the southwest (Blanchflower, 1999). These attitudes are commonly parallel to contacts with the underlying batholitic rocks. The Anvil Batholith rocks appear to be pervasively well-fractured.

Mineralized zones within the map area are mostly hosted within the Anvil Batholith and are dominantly controlled by the two structural sets.

MINERALIZATION

General

The Property hosts 22 main zones of surface mineralization that lie within two parallel, northwest-trending belts (Figure 14). The Tay Belt is the more northerly of the two and covers a 60 by 5 km area that comprises the Keg Main, Keg East, Keg South, Owl, Owl Southwest, Zeno, Payne, RGS, Drex, Archimedes, Euclid, Marks, Vent, Weld and Ku zones. The Mount Mye Belt is located 15 km south of Tay Belt and 12 km northeast of Sedex deposits comprising the Anvil Belt. The Mount Mye Belt consists of the Rebel, Hammer, Cody, Cirque, Snap, Risby and Orange zones. Eight zones (Keg South, RGS, Archimedes, Euclid, Vent, Weld, Ku and Hammer) were discovered by Silver Range in 2011 and 2012, while the others were identified by previous operators.

In 2012, Silver Range collected 687 rock samples from the 22 mineralized zones and other isolated sites across the Property.

The locations of the 2012 rock samples are plotted on Figure 15. The 2012 results for silver, lead, zinc, copper, tin and/or gold (where analyses are significant and/or available) are shown for each zone on Figures 16 to 39. Results from previous sampling are also presented on these figures. Rock Sample Descriptions are given in Appendix III and Certificates of Analyses are presented in Appendix IV. Table 3 lists the anomalous thresholds and peak values for all rock samples.

Table 3 – Geochemical Data for Rock Samples

Element	Anomalous Thresholds					
	Weak	Moderate	Strong	Very Strong	Historical Peak	2012 Peak
Silver (g/t)	≥ 10 < 20	≥ 20 < 50	≥ 50 < 100	≥ 100	17000	16069
Lead (ppm)	≥ 1000 < 2000	≥ 2000 < 5000	≥ 5000 < 10000	≥ 10000	81.40%	60.29%
Zinc (ppm)	≥ 1000 < 2000	≥ 2000 < 5000	≥ 5000 < 10000	≥ 10000	21.60%	15.15%
Copper (ppm)	≥ 1000 < 2000	≥ 2000 < 5000	≥ 5000 < 10000	≥ 10000	4.06%	3.00%
Tin (ppm)	≥ 50 < 100	≥ 100 < 200	≥ 200 < 500	≥ 500	1.54%	1.09%
Au (g/t)	≥ 0.1 < 0.2	≥ 0.2 < 0.5	≥ 0.5 < 1	≥ 1	15.43	23.40

The sizes of the mineralized zones, their locations relative to Keg Deposit, and the distributions of weak, moderate, strong and very strong values for silver-zinc-lead-copper-tin±gold are listed in Table 4.

Table 4 – Mineralized Zones and Showing Data

Anomaly	Size (m)	Location relative to Keg Deposit (km)	Elements				
			Weak	Mod.	Strong	Very Strong	Accessory
Keg Main & Keg East	1000 x 400	-	Au			Ag, Pb, Zn, Cu, Sn	W, Bi, Sb, Mo, In
Keg South	350 x linear	3.5 S	Cu				
Owl	850 x 300	8 NNW		Cu		Ag, Pb, Zn, Sn, Au	Bi, Sb, In
Owl Southwest	300 x 250	7.8 NW		Zn, Au		Ag, Pb, Sn	Sb, Bi
Zeno	400 x 100	14.5 NW	Zn	Cu, Au		Ag, Pb, Sn	W, Bi, Sb
Getty	Unknown	10 NNW			Cu	Ag, Pb, Zn, Au	
Payne	Unknown	20 NW	Sn			Ag, Pb, Au	Sb, Bi
RGS	1400 x 600	9 ESE		Cu, Au		Ag, Pb, Zn, Sn	W, Bi, Sb, Mo, In
Drex	450 x 100	12 ESE		Au	Cu	Ag, Pb, Zn, Sn	W, Bi, Sb, Mo, In
Archimedes	200 x 50	17.5 ESE		Zn, Au		Ag, Pb, Sn	Sb, In
Euclid	450 x 50	18 SE			Zn	Ag, Pb, Sn, Au	Bi, Sb, Mo
Marks	650 x 300	24.5 SE	Sn	Zn, Cu			W
Vent	175 x 320	21 SE	Zn, Cu			Ag, Pb, Sn, Au	Sb, Bi, Mo
Weld	3300 x 1600	29.5 SE		Au	Zn	Ag, Pb, Cu, Sn	Sb, Bi, Mo

The zones and showings that lie within Tay Belt are generally characterized as mesothermal, fracture-filling and skarn/replacement style mineralization, while those within Mount Mye Belt comprise mesothermal and epithermal mineralization that is mostly hosted in veins and fracture zones. The individual zones and showings within the belts are described in the following paragraphs.

TAY BELT

Keg Main & Keg East Zones

Keg Main Zone comes to surface along the north side of an east-west trending ridge west of Ivan Creek. Keg East Zone is on a lower, parallel ridge east of the creek. Outcrop is rare within the zones – three relatively large, steep, gossanous talus slopes, containing scattered outcrops, are exposed near the centre of the Keg Main Zone, but other exposures are very small and isolated Numerous rock samples taken from the zone yielded weakly to very strongly anomalous results for silver, zinc, lead, copper and tin with scattered weak gold support (Figure 16).

Mineralization has been found in talus and outcrop described above, within bedrock exposed in historical bulldozer trenches about 500 m west of Keg Main Zone and in drill core at both zones. Few rock samples have been collected at surface due to the relative lack of bedrock exposures and difficulty taking representative samples across the broad, weathered talus slopes (Figure 7 shows the location of surface mineralization). Drill core provides more reliable data concerning the types and relative abundances of mineralization and more accurate dimensions and grades of the mineralized zones.

Mineralization within Keg Main Zone is controlled by a combination of structure and stratigraphy within strongly hydrothermally altered and locally skarnified limestone and siltstone of Tay and/or Mount Christie Formations (Figure 7). Intense silicification of these formations makes it difficult to determine which unit is the primary host. The structural control is typified by fracture-fillings, while the stratigraphic control is characterized by disseminations to semi-massive mineralization within calc-silicate altered, limey horizons. Sphalerite, chalcopyrite and galena occur in varying amounts with pyrrhotite, pyrite and arsenopyrite and rare stannite. The sulphide minerals are generally coarse grained. They typically comprise 1 to 10% of the rock, often increasing to between 20 and 50% over metre-scale intervals within skarnified horizons. Some mineral zonation has been observed in the Keg Main Zone, with pyrrhotite and

chalcopyrite dominating the sulphide assemblage in the deeper and western parts of the zone and galena contents increasing in the upper and eastern parts. The western and central parts of the zone are notably depleted of calcium relative to the adjacent wall rocks, but calcite gangue is common in veins within the eastern part. The variations in relative sulphide abundance and gangue minerals are interpreted to indicate the deeper and western parts of the zone are more proximal to the core of the hydrothermal cell and the upper and eastern parts are more distal.

Mineralization at Keg East Zone is generally similar to that observed within the eastern part of the Keg Main Zone and is likely part of the same mineralizing system. Several features, including the presence of calcite gangue, lower pyrrhotite and chalcopyrite contents, and high silver to lead ratios, suggest that Keg East Zone is in a more distal setting than Keg Main Zone.

Keg South Zone

Keg South Zone lies below treeline on a north-facing slope to the east of Ivan Creek. In 2011, three boulders of green metasiltstone with bands and blebs of weak pyrite and rare chalcopyrite were collected from under a thin layer of vegetation. Samples from these boulders returned between 7.58 and 43.5 g/t silver and 0.045 and 0.10% copper. In 2012, a 0.5 m chip sample of a siltstone containing pyrrhotite, minor galena and trace sphalerite was collected from the top of a drainage immediately east of the Keg South Zone. This sample was weakly anomalous for lead (1325 ppm).

Owl Zone

Owl Zone encompasses gossanous talus and bedrock exposed along a cliff band on the north side of a northwest trending ridge. Several samples from this area returned weakly to very strongly anomalous silver, zinc, lead, tin and gold values with moderate copper support (Figure 17).

Atlas Exploration recognized four types of mineralization within this zone (after Brock and Coates, 1970):

1) Sphalerite-galena-chalcopyrite-arsenopyrite-pyrite in veins up to 0.3 m wide in chert. Approximately 15 veins were discovered. They generally trend 030°.
2) Minor disseminated to locally fracture-filling arsenopyrite, pyrite, sphalerite and chalcopyrite in quartzite.
3) Arsenopyrite with lesser galena and chalcopyrite in quartz veined in talus near a granitic plug.
4) Quartz vein with arsenopyrite and stibnite. Stibnite has not been found “in situ.”

The highly fractured, gossanous wallrocks were not considered to be “mineralized” by early workers and were not sampled. Mineralization at Owl Zone is largely hosted in strongly altered chert and quartzite of Mount Christie and Tay formations, in an area where the two units are juxtaposed by a thrust fault.

Atlas Exploration analyzed samples of Types 1 to 3 mineralization, but did not mark exact sample locations on a map. Table 5 lists the historical results from Owl Zone by mineralization type.

Table 5 – Owl Zone Historical Rock Sample Results (Brock and Coates, 1970)

Mineralization Type	Silver (g/t)	Lead (%)	Zinc (%)	Copper (%)
1	601	11.4	0.12	0.32
1	32	Trace	20.2	0.25
1	263	4.0	NR*	NR*
2	2.0	NR*	NR*	NR*
3	57.6	NR*	NR*	1.7
3	542	7.5	0.40	0.14

* Value was not reported.

In 2010, Strategic Metals collected 13 grab and composite samples of weakly disseminated (Type 2), moderately disseminated and fracture-filling (Type 2), and semi-massive to massive vein (Type 1) mineralization from bedrock and talus in the area. In 2011, Silver Range took an additional four Type 1 samples. Six samples of weakly mineralized, disseminated and fracture-hosted arsenopyrite±pyrite in quartzite (Type 2) averaged 0.5 g/t silver, 72.0 ppm zinc, 35.9 ppm lead, 79.5 ppm copper and 27.8 ppm tin. Two moderately mineralized samples of quartzite containing disseminated and fracture-filling arsenopyrite, pyrite, sphalerite and trace galena (Type 2) averaged 18.8 g/t silver, 0.16% zinc, 0.27% lead, 0.01% copper and 23.1 ppm tin. Nine samples of semi-massive to massive arsenopyrite with lesser galena, sphalerite and pyrite in quartz veins within chert (Type 1) averaged 690 g/t silver, 5.01% zinc, 11.3% lead, 0.08% copper and 530 ppm tin. One Type 1 sample from 2010 also yielded 1.20 g/t gold.

In 2012, Silver Range conducted prospecting 750 m south of the historical showing, along a south facing slope. Three additional Type 2 samples and two Type 1 samples were collected from sub-crop in this area. One of these, a chip sample of semi-massive arsenopyrite with lesser galena (Type 1) taken across 0.30 m, yielded 208 g/t silver, 0.702% zinc, 2.83% lead and 0.546 g/t gold. A float sample comprising banded fine grain galena and arsenopyrite (Type 1) collected nearby produced 549 g/t silver, 0.781% zinc and 9.28% lead. One intensely weathered float sample containing sulphide blebs, collected 450 m downhill to the southeast from the chip sample, is believed to be representative of Type 2 mineralization. This yielded 81.7 g/t silver, 0.389% zinc and 1.36% lead.

Owl Southwest Zone

The Owl Southwest Zone covers a gentle northwest trending hill and an adjacent swampy valley. The hill has been glacial scoured and features a few rounded outcrops but little talus. Float samples collected in 2012 from the base of the hill and along the hilltop returned strongly anomalous silver, lead, tin and antimony values.

A total of 32 float and grab samples were collected at the Owl Southwest Zone in 2012. These samples averaged 765 g/t silver, 4.38% lead, 0.038% zinc, 206 ppm tin and 1166 ppm antimony.

Of these samples, eight returned greater than 1000 g/t silver, with a peak of 6920 g/t silver, 4.37% lead, 0.227% zinc, 1970 ppm tin, 12. 35 ppm indium, 8890 ppm tin and 0.349 g/t gold. These peak values came from a float sample uncovered in a trench at the base of the hill (Figure 18), which did not reach bedrock.

A second, small hand trench was dug 65 m to the south-southwest at the crest of the hill, and exposed a 22 cm wide northeast trending semi-massive to massive galena vein within Mount Christe chert. The linear extent of this vein was not determined because it projected beneath deep frozen overburden. A chip sample taken across the 22 cm vein yielded 4770 g/t silver, 26.93% lead, 0.966% zinc, 972 ppm tin, 5370 ppm antimony, 14.85 ppm indium and 0.447 g/t gold.

Zeno Zone

Getty Canadian performed prospecting to the north and west of Owl Zone during its 1983 regional stream sediment survey (Payne, 1983). It discovered several gossans with localized pyrite-, pyrrhotite-, sphalerite- and galena-bearing showings, now referred to as the Zeno Zone, and two other showings.

Zeno Zone lies at the contact between a small granitic plug (mKgS) and Rabbitkettle Formation. Getty Canadian noted sulphide minerals within a large area of rusty weathering, hornfelsed, fine grained clastic rocks; however a chip sample of this material returned subdued results (Payne, 1983).

Strategic Metals revisited this area in 2010, and one of two samples of rusty weathering, pyrite-bearing, siliceous, fine grained clastic rock that were collected returned weakly to moderately elevated values for silver (27.4 g/t), zinc (1280 ppm) and lead (3710 ppm).

Forty-two rock samples were collected by Silver Range in 2012 around the Zeno Zone. These samples averaged 32.41 g/t silver, 0.13% lead, 0.02% zinc, 0.03% copper and 216 ppm tin. Five of them yielded greater than 100 g/t silver, all of which are quartz vein float collected from a 90 m long portion of the intrusive contact. The sample that returned the highest silver value (241 g/t) also yielded 1.115% lead, 0.003% copper and 50.8 ppm tin. Another sample collected 70 m to the west returned 126 g/t silver, 1.495% lead, 0.103% copper and 2530 ppm tin. Both samples are quartz vein float containing arsenopyrite (Figure 19).

Another showing discovered by Getty Canadian (**Getty Showing**), two kilometres north-northwest of Owl Zone, reportedly comprises a set of pyrrhotite-, pyrite-, galena- and sphalerite-bearing, rusty quartz veins (Payne, 1983). These veins are hosted in Tay Formation shale, which is exposed in a creek cut. Two chip samples taken by Getty Canadian yielded 100 g/t silver, 10.78% zinc, 3.27% lead, 0.38% copper, 3.4 g/t gold and 380 ppm antimony over 10 cm, and 111 g/t silver, 14.90% zinc, 4.40% lead and 1.1 g/t gold over 8 cm. Adjacent wallrocks were not sampled.

In 2012, Silver Range conducted a single day of prospecting in the area of the Getty Showing, but was unable to relocate it.

The third Getty Canadian discovery (**Payne Showing)** is located 13 km to the northwest of the Owl Zone. It comprises four quartz veins with disseminated galena, pyrrhotite and pyrite within brecciated chert (COR1). A grab sample from a five centimetre wide vein returned 31.2 g/t silver and 1.57% lead (Payne, 1983). Eight grab samples collected near the Payne Showing by Silver Range in 2012 yielded only two weakly anomalous values for tin, 67.1 ppm and 55.2 ppm. All other elements were not anomalous. A 10 cm chip sample of a semi-massive quartz-arsenopyrite vein produced 129 g/t silver, 2.35% lead and 0.802 g/t gold. An outcrop sample, 275 m to the east, returned 1.415 g/t gold across a 6 cm quartz-arsenopyrite vein (Figure 20).

RGS Zone

RGS Zone was discovered in 2011 by Silver Range, at treeline within a west-draining valley. Mineralization was mostly observed on the southern side of the valley, but one showing was found just north of the creek (Figure 11). Talus is common throughout this zone, but bedrock is limited to small, infrequent cliffs and subcrops.

Mineralization to the south of the creek is primarily hosted within an area of rusty weathering, strongly silicified Mount Christie Formation chert and possibly Jones Lake Formation siltstone (Figure 11). The mineralization consists of rusty weathering chert with fracture-filling pyrite, chalcopyrite, galena, sphalerite and arsenopyrite. The density of mineralized fractures within this area appears to be low; however, the mineralization was observed over a broad area. No samples have been taken of this weakly fractured mineralization.

One area south of the creek contains abundant fragments of well mineralized vein talus, which are concentrated in a 20 m long band. The vein fragments consist of interlaminated arsenopyrite and quartz hosted within chert. Based on observed thicknesses, the fragments indicate a possible vein width of 6 to 14 cm. Four vein samples collected in 2011 from this talus band averaged 126 g/t silver, 0.45% lead, 582 ppm tin and 0.117 g/t gold (Figure 21). Only a single sample, that yielded no significant values, was collected from this site in 2012. Hand trenching failed to expose a bedrock source for this mineralization.

Prospecting in 2012 focussed on another mineralized float train, located 220 m to the northeast, immediately south of the creek. This showing comprises sparse, intensely limonitic cobbles and fragments of quartz-arsenopyrite vein talus, which has been traced for 75 m. No bedrock source has been found. A total of 12 samples were collected by Silver Range from this showing, and they averaged 165 g/t silver, 2.77% lead, 0.72% zinc, 0.15% copper and 402 ppm tin.

In 2011, mineralization was discovered in talus on the north side of the creek, beneath an uprooted tree. Mineralization consisted of galena and lesser sphalerite blebs within pervasively rusty, angular limestone cobbles (Jones Lake Formation). A sample of this material yielded 105 g/t silver, 1.03% lead, 0.33% zinc and 126 ppm tin. No additional work was performed at this showing in 2012.

Drex Zone

The Drex Zone is situated in an east-west trending, deeply incised valley that is cut into an extensive, upland plateau. The zone lies at treeline, in an area with limited outcrop exposure. It is characterized by weakly to very strongly elevated silver, zinc, lead and tin values, with strong copper and moderate gold support.

Mineralization consists of disseminated, blebby, fracture-filling and vein-hosted arsenopyrite with lesser galena, pyrite and sphalerite. Scorodite and limonite are common on weathered surfaces. All mineralization is hosted in light brown to grey, locally strongly bleached chert of Mount Christie Formation. The veins are discontinuous and up to 40 cm wide. They comprise banded to nearly massive arsenopyrite±galena±sphalerite with quartz gangue.

Prior to 2012, twenty-three rock, composite and chip samples were collected from bedrock and talus. Thirteen of the better mineralized samples averaged 211 g/t silver, 2.10% lead, 0.80% zinc, 0.14% copper and 2204 ppm tin. All samples yielded below detection limit (0.2 g/t) gold values except one that returned 0.4 g/t.

In 2012, Silver Range took ten additional samples of vein, shale and chert float from this zone (Figure 22). Of these samples, two comprised quartz-arsenopyrite veins. One returned 221 g/t silver, 2.91% lead, 2.04% zinc, 0.114% copper, 1525 ppm tin and 0.04 g/t gold. The other yielded 176 g/t silver, 1.42% lead, 2.33% zinc, 0.270% copper, 3340 ppm tin and 0.127 g/t gold. The non-vein samples gave low values for all metals.

Archimedes Zone

The Archimedes Zone lies near the crest of a northwest-trending alpine ridge. Outcrop is rare in this zone, but talus in abundant. Mineralization comprises blebby galena-, sphalerite- and limonite-healed fault breccia, within Mount Christie Formation quartzite and limestone talus.

The mineralization was traced intermittently up a 200 m long talus train that led to an area of unmineralized quartzite sub-crop and bedrock at the ridge crest.

In 2012, a total of seventeen mineralized float samples were collected from the talus train and hand trenches dug near the ridge crest (Figure 23). Six of the better mineralized talus float samples averaged 1043 g/t silver, 12.73% lead, 0.13% zinc, 682 ppm tin and 5.5 ppm indium. Most of the trenches did not reach bedrock, but five of the six float samples collected from them yielded greater than 170 g/t silver, averaging 433 g/t silver, 12.10% lead, 0.21% zinc, 674 ppm tin and 17.5 ppm indium. Rusty limestone bedrock with disseminated galena was exposed in the westernmost trench, and a 25 cm chip sample of this material returned 287 g/t silver, 6.35% lead, 0.195% zinc, 644 ppm tin and 13.2 ppm indium.

Euclid Zone

The Euclid Zone lies above treeline on a west-facing slope where abundant talus and scattered outcrop are exposed amongst large patches of grass. The zone comprises yellow and green

stained, bleached shale that lies in close proximity to a rhyolite plug. The shale is locally crackle brecciated and thermally altered along the rhyolite contact, but it does not host visible mineralization. The shale horizon is well exposed over a 500 m strike length.

Fifteen samples were collected in 2012 from the rhyolite plug and adjacent shale (Figures 24 to 26). None of these samples returned anomalous values. A total of twelve float samples comprising rusty weathered chert and shale containing variable amounts of arsenopyrite were collected 390 m northwest of the plug. Seven of these samples returned greater than 23 g/t silver, averaging 155.8 g/t silver, 0.14% lead, 0.03% zinc, 0.214 g/t gold and 464 ppm bismuth.

Prospecting nearby identified two additional showings, located 1150 m north and 1050 m northeast of the plug. A total of eleven float samples and six bedrock samples were collected at the former, within Rabbitkettle Formation siltstone. Two of the float samples returned strongly anomalous silver values (1050 g/t and 692 g/t). The sample that contained 1050 g/t silver and also yielded 2.10% lead, 501 ppm tin, 7970 ppm antimony, 4660 ppm bismuth and 0.224 g/t gold. This samples was composed of quartz-arsenopyrite vein fragments.

Four float samples were collected at the second showing, three of which comprise quartz-arsenopyrite vein fragments. These samples averaged 700.6 g/t silver, 5.18% lead, 0.02% zinc, 1125 ppm antimony and 0.469 g/t gold.

Vent Zone

The Vent Zone was discovered in 2012 while following up a broad multi-element soil anomaly. It is located above treeline on a 575 by 280 m, moss-covered plateau at the summit of a gossanous mountain. Outcrop is limited to cliffs on the steeper slopes surrounding the upland plateau. Mineralization at the Vent Zone comprises: 1) disseminated arsenopyrite within volcaniclastic bombs and boulders that form a felsenmeer cap on the plateau; and 2) quartz-arsenopyrite veins that cut the volcaniclastic and underlying shale found on the adjacent steeper slopes.

Forty-one float samples were collected from the Vent Zone in 2012 (Figure 27), averaging 131.8 g/t silver, 0.51% lead, 0.02% zinc, 0.02% copper, 0.198 g/t gold and 557 ppm antimony. Of these, sixteen returned greater than 100 g/t silver, while only five contained less than 10 g/t. The majority of these samples were collected from a 75 m long float train composed of quartz-arsenopyrite vein fragments and cobbles of brecciated tuff containing disseminated to wispy banded arsenopyrite.

Two trenches were completed at the Vent Zone in 2012 using a heli-portable CanDig excavator operated by 15317 Yukon Ltd. of Whitehorse (Figures 28 and 29). The first trench was designed to test for bulk tonnage potential. It was dug for 198 m across the plateau, parallel to the orientation of the veins. The second trench was oriented perpendicular to the veins and is 80 m long.

Both trenches were located within the volcaniclastic unit. Neither was able to reach consolidated bedrock; however, the material found at the bottom of both trenches is not believed to have been

transported and is considered representative of bedrock. Results from the trench sampling are summarized below.

Table 6 – Vent Trench Sampling – Significant Intervals

Trench	From (m)	To (m)	Interval (m)	Ag (g/t)	Pb (%)	Zn (%)
VENT-1	33.00	60.00	27.00	9.05	0.096	0.014
Incl.	54.00	60.00	6.00	16.42	0.094	0.013
VENT-1	90.00	138.00	48.00	9.84	0.100	0.020
And	126.00	138.00	12.00	17.56	0.098	0.019
VENT-2	6.00	42.00	36.00	15.49	0.141	0.019
Incl.	21.00	42.00	21.00	21.02	0.147	0.017
VENT-2	72.00	80.00	8.00	247.08	1.304	0.023

Topographic constraints prevented VENT-2 from fully evaluating the mineralised veins. The trench stopped in vein material at one end and terrain was too steep at the other end to reach the second float train, where most of the well mineralized samples were taken. Both trenches were backfilled and reclaimed prior to demobilization.

Marks Zone

The Marks Zone comprises several historical showings that were discovered by Ridgemont Mining in 1975. The showings reportedly consist of fine grained, siliciclastic rocks (Rabbitkettle Formation) with minor vein and replacement-style lead-zinc mineralization and more extensive disseminated to layered iron sulphides. Ridgemont Mining did not report any assay results. The showings are located immediately south of Tay River Thrust Fault. They lie at or below treeline, in an area with gently rolling to locally steep topography.

In 2011, Silver Range collected 10 rock samples from the area. These samples primarily consisted of chert with thin bands of fine grained pyrite and pyrrhotite. Most of the samples yielded subdued to weak results. Only two samples returned moderately elevated results. A sample of highly siliceous quartz porphyry(?) with weak limonite yielded 7.49 g/t silver and 0.82% zinc, while a sample of pyrite-rich, dark brown skarn collected from a creek bed returned 0.23% copper. Work completed by Silver Range in 2012 consisted of a single day of mapping. Three rock samples were collected, but they did not produce any significant results.

Weld Zone

The Weld Zone is a collection of four showings within a 3.3 km by 1.6 km area that lies along a north-northwest trending rolling hill marred by a complex system of glacial outwash ravines. The **Weld Main Showing** was discovered within a steep-sided ravine. A total of fourteen float and grab samples were collected in the vicinity of this showing. Of these, eight contained significant mineralization, averaging 180.5 g/t silver, 2.00% lead, 0.19% zinc, 0.19% copper and 162 ppm molybdenum (Figure 30).

Mineralization is hosted within chert and consists of a 1.3 m wide vein-fault that contains abundant weathered mineralized fragments. Galena and anglesite comprise the majority of the visible mineralization at surface. Two hand trenches were dug across this fault zone with one located at the discovery site and the other 17 m along strike to the northeast. Results from these trenches are tabulated below.

Table 7 – Weld Zone – Weld Main Showing Trench Results

Trench	Interval (m)	Ag (g/t)	Pb (%)	Zn (%)	Cu (%)	Mo (ppm)
T-1	3.2	170.8	0.62	0.22	0.20	52.4
Incl.*	1.3	353	0.64	0.34	0.44	77.3
T-2	2.81	9.4	0.22	0.27	0.02	38.9
Incl.*	1.01	13.4	0.31	0.36	0.02	44.7

*interval across vein-fault only

The **Caddy Shack Vein** is located 2.2 km north-northeast of the Weld Main Showing and is defined by an east trending structure within a gossanous, rubbly kill zone at the base of a north-facing slope. It was discovered by prospectors who identified galena fragments within gopher diggings. The showing comprises abundant cobbles and small boulders of strongly weathered, limonitic quartz vein material. Mineralization consists of locally abundant galena and anglesite within quartz filling fractures cutting altered chert.

Thirteen samples of mineralized float were collected, averaging 1278.5 g/t silver 16.56% lead, 0.07% zinc, 0.47% copper, 491 ppm tin and 1229 ppm antimony. Two samples produced anomalous gold values (0.114 g/t and 0.393 g/t). The weakest of the samples yielded (61.9 g/t silver) was collected from a small kill zone located 180 m west of the Caddy Shack Vein.

Hand trenching failed to identify significantly mineralized bedrock. Samples collected from trenches only produced anomalous zinc (including 10 cm grading 0.81%).

The **Northeast Showing**, lies 1.6 km northeast of the Weld Main Showing and consists of two mineralized float occurrences situated 230 m apart. Both occurrences are located in east trending outwash channels at the top of a flat-topped ridge. Mineralization comprises rusty quartz vein with banded arsenopyrite, and intensely altered and limonite pitted cobbles. Six samples were collected at the first occurrence, averaging 222.0 g/t silver, 2.93% lead, 0.25% zinc, 0.16% copper, 0.112 g/t gold and 19.5 ppm molybdenum. At the second occurrence, which is north of the first, six samples averaged 130.5 g/t silver, 1.74% lead, 0.21% zinc, 0.06% copper, 0.007 g/t gold and 70.2 ppm molybdenum. No mineralized bedrock is exposed at either occurrence.

The **Southeast Showing** is located 1.7 km east-southeast of the Weld Main Showing, and comprises isolated mineralized vein fragments found within chert talus. Two samples of vuggy quartz float were collected from this showing. The first sample yielded 21.4 g/t silver, 0.58% lead, 0.02% zinc and 0.04% copper, while the second returned 674 g/t silver, 7.87% lead, 0.14% zinc, 0.34% copper, 55.2 ppm tin and 746 ppm bismuth. No bedrock source has been identified.

Ku Zone

Ku Zone is situated within grass covered, rolling hills that are cut by several deep, west-trending, recessive linears.

A skarnified limestone horizon, containing fine grained galena and sphalerite with minor chalcopyrite is located near the top of an east trending drainage immediately adjacent to granitic rocks of the Orchay Batholith. In 2012, twelve samples were collected from mineralized skarn boulders within a 70 m by 30 m area. These samples graded between 41.1 and 825 g/t silver and averaged 239.1 g/t silver, 2.93% lead, 1.27% zinc, 0.33% copper, 188.8 ppm tin, 440.8 ppm bismuth and 1198.5 ppm tungsten (Figure 31).

Other samples collected in this area produced a wide range of anomalous results, including a sample taken from within the intrusion. This sample returned 1.02% tungsten, 699 ppm bismuth and 0.404 g/t gold.

Scattered vein occurrences, 720 m north of the batholith, are associated with felsic dykes. Quartz vein and breccia float samples containing arsenopyrite, galena and minor chalcopyrite returned silver values ranging from below detection limit to 215 g/t. A total of twenty-one samples were collected in this area, averaging 31.1 g/t silver, 0.19% lead, 0.08% zinc, 0.13% copper and 173.6 ppm tin. Of these, an isolated sample comprising rusty quartz fragments, returned elevated gold (0.490 g/t) but only background values for other metals.

MOUNT MYE BELT

The Mount Mye Belt comprises six mineralized zones. The Rebel Zone is located on a rounded mountain, approximately six kilometres to the north-northeast of the other zones. The rest of the zones are on four sub-parallel, north- to northeast-trending, steep-sided, alpine ridges. The ridges are separated by broad, U-shaped valleys.

Outcrop along the belt is limited to steeper ridges tops and steeper slopes. Rounded ridge crests and moderate to gentle slopes are covered by talus and frost-heaved rock (Blanchflower, 1999), while valley floors are commonly blanketed by varied thicknesses of glacial till and outwash gravels. Pervasive permafrost and thick overburden has hampered exploration within many parts of this belt.

Rebel Zone

The Rebel Zone comprises mineralized float that was discovered in a gossanous, north-facing cirque (Figure 12). The gossan lies above treeline, but is often camouflaged by light grass cover, intense frost boiling and solifluction (Cathro, 1967b). The mineralization includes sphalerite-, galena- and chalcopyrite-bearing, quartz-carbonate stringers, veins and breccia matrix hosted in Marmot Formation volcanics (Carne, 1990). The mineralized material is usually oxidized and leached to boxwork limonite with rare lenses of residual sulphide (Cathro, 1967b). A composite

sample of galena-rich float collected in 1966 reportedly yielded 295 g/t silver, 1.2% zinc, 8.8% lead, 0.2% copper and trace gold.

In 2010, Strategic Metals collected 20 wider-spread and generally more representative grab and composite samples of limonite (with and without sulphides). In 2011, Silver Range collected four additional samples composed of pyrite and limonite with minor residual galena, and limonite-healed breccia with volcanic clasts. Of the 24 samples taken in 2010 and 2011, seventeen returned elevated values for most metals of interest. These 17 samples averaged 176 g/t silver, 2.69% lead, 1.36% zinc, 0.60% copper and 257 ppm tin. No samples were collected from the Rebel Zone in 2012.

Hammer Zone

The Hammer Zone was discovered by Silver Range in 2011 during follow up of a single-point soil anomaly. It lies at the north end of a north-trending, glacially truncated, alpine ridge (Figure 13). The area is underlain by granite and syenite phases of the Anvil Batholith.

Most of the samples collected in 2011 came from three sub-parallel, partially talus filled, recessive linears that trend north-northeasterly across the break-in-slope between over-steepened slopes to the north and felsmeer-covered plateau to the south. The linears average about five metres in width and appear to be the result of differential weathering of mineralized veins and their adjacent altered wallrocks compared to the host granite. The central linear contains a high abundance of vein and breccia float, which was traced along a strike length of 65 m. Mineralized float is rarer in the two adjacent linears. To the south of the break-in-slope, mineralization has been traced intermittently in frost boils developed in glacial till and felsmeer on the upland plateau. North of the ridge, the mineralized linears project under till and fluvial outwash deposits on a broad marshy valley floor.

Mineralization comprises sulphide-bearing, epithermal quartz veins and quartz-healed breccias hosted in granite. Sulphides include pyrite, galena, sphalerite, arsenopyrite and tetrahedrite. Some samples are coated with malachite. In veins, the sulphides occur as fine laminations, disseminations and clots, while in breccias they are found as disseminations in matrices and as semi- to nearly-massive sulphide clasts.

Eight of the better mineralized talus samples collected in 2011 from within the central linear of the Hammer Zone averaged 6353 g/t silver, 4.31% lead, 3.88% zinc, 0.49% copper, 1503 ppm tin and 2.69 g/t gold. A total of 29 samples were collected in 2012. Thirteen of these samples returned greater than 610 g/t silver, averaging 2398 g/t silver, 2.04% lead, 0.74% zinc, 0.16% copper, 370 ppm tin and 0.341 g/t gold. An additional seven of the samples returned silver values greater than the detection limit (100 g/t); however, there was not enough sample for a complete assay (Figure 32).

Significant results from recent and historical rock sampling at the Hammer Zone are listed in Table 8.

Cody Zone

Cody Zone is situated about 1000 m southeast of the Hammer Zone (Figure 13) and was discovered by Doron Explorations in 1988. It comprises manganese stained, barren to variably sulphide-bearing, quartz-rhodochrosite veins found in float within strongly altered granite. The Cody Zone has been divided into four showings: Cody Main Showing, Cody South Showing, Cody East Showing and Cody West Showing. The latter two showings were identified by Silver Range in 2012.

At Cody Main Showing, the sulphide assemblage predominantly consists of galena, sphalerite and arsenopyrite. A limonitic gossan was also reportedly found, but it is not described in detail. Seven samples collected from the Cody Main Zone in 2012 yielded very strongly anomalous values, averaging 5607 g/t silver, 2.24% lead, 0.45% zinc, 0.17% copper, 240 ppm tin and 0.358 g/t gold. Two of these samples produced extremely elevated silver results (16069 g/t and 11424.5 g/t) and moderate lead values (3.68% and 6.78%) (Figure 33).

Cody South Showing lies 850 m south of Cody Main Showing. Lamprophyre dykes and an approximately 200 m by 100 m, oblong syenite body within Anvil Batholith were mapped between the two mineralized areas by Doron Explorations (Figure 13). Cody South Showing comprises three silver-rich historical rock samples collected from float. The historical sample with the best silver value also had very strongly anomalous lead and zinc response. Nine samples were collected from this showing in 2012, along a 250 m trend that runs parallel to the contour of the slope. Most results were relatively subdued. One sample graded 162 g/t silver,

and another sample yielded 0.22% lead and 0.13% zinc with silver greater than the detection limit (100 g/t). The latter contained too little material for a complete assay.

Cody West Showing is located 430 m west-southwest of Cody Main Showing. It is defined by a 140 m long, north-trending float occurrence containing intensely manganese stained epithermal quartz-rhodochrosite vein fragments with moderate fine grained arsenopyrite and galena. Alteration associated with this mineralization is mostly restricted to the vein itself and does not extend far into the host rocks. Fourteen samples were collected from this showing, ten of which yielded greater than 140 g/t silver, averaging 2235 g/t silver, 2.60% lead, 1.77% zinc, 0.05% copper and 236 ppm tin. One of the ten samples returned 23.4 g/t gold, while the remainder averaged 0.169 g/t.

Cody East Showing, located 360 m east of Cody Main Showing occurs within a broad area of altered granite containing sparse, scattered vein float. Vein material is typically manganese stained quartz with little to no visible sulphides. Five of the better mineralized samples averaged 300.6 g/t silver, 0.19% lead, 0.25% zinc, 0.02% copper and 0.34 g/t gold.

The most significant results from recent and historical rock sampling at Cody Zone are listed in Table 9.

Cirque Zone

The Cirque Zone is situated within a small, steep, northeast-facing cirque, which lies at the north end of a north-trending ridge. Abundant talus and patchy outcrop characterize the cirque. Rock specimens and chip samples collected within this zone yielded weakly to very strongly elevated silver, lead, zinc, tin and gold values.

Mineralization was initially discovered in talus at surface and later within bedrock exposed in hand and bulldozer trenches (see Historical Trenching section). Mineralization has been found within an approximately 1000 by 500 m area.

Mineralization at the Cirque Zone is hosted within a variety of vein types, which are largely restricted to brittle fracture zones in granitic rocks (Robertson and Wallis, 1989). The granite is overlain by sub-horizontal schist and gneiss, which behaved more ductilely and inhibited vein formation. The veins may be related to the emplacement of intermediate dykes, which cut both the intrusive and metasedimentary units (Lueck, 1988). There is no evident change in dyke width or orientation from one unit to the other. Robertson and Wallis (1989) thought that although a spatial relationship is evident between the veins and dykes, it is likely a function of two different processes operating on the same local fracture pattern rather than a genetic relationship between the two.

The primary mineralized vein types in this zone include: 1) glassy, milky and sugary textured quartz veins with or without pyrite, galena, sphalerite and arsenopyrite; 2) poorly exposed quartz-chaledony-limonite veins with clay and carbonate alteration; 3) veins with pyrite, galena, sphalerite and arsenopyrite within quartz, chalcedony and rhodochrosite; and 4) massive sulphide veins that consist primarily of galena. Some veins also host minor tetrahedrite-tennantite and proustite-pyrargyrite (“ruby silver” sulphosalt minerals). The sulphide and sulphosalt minerals are highly variable in abundance and grain size (Robertson and Wallis, 1989). The veins are often banded along their margins and brecciated at the centre, which indicates that there were multiple stages of vein filling. The central brecciated vein zones sometimes contain small rounded fragments of granite wall rock rimmed by chalcedony or rhodochrosite. Rhodochrosite also occurs as patches, fragments and open space fillings within the veins or as cross-cutting veinlets. Open spaces within the veins are commonly lined with quartz prisms. Weathered vein surfaces are black due to strong manganese staining. Limonitic and hematitic staining is also locally prevalent. Unmineralized or pyrite- and arsenopyrite-bearing, siliceous veins are common within the zone.

Silver Range collected 21 rock specimen and chip samples from granite-hosted veins within the Cirque Zone in 2012 to confirm the nature and extent of historical samples (Figure 34). Table 10 lists the best results from recent and historical samples (trench sampling results are discussed in the Historical Trenching section).

The veins occur individually, in sets, or as the matrix in breccia zones. They typically occur as less than one centimetre thick fracture infillings within a wider fracture zone. Individual veins measure up to about 0.4 m wide. Breccia zones are tabular to lensoidal and attain widths of greater than four metres, though they usually average about one metre wide (Lueck, 1988). The most common vein strikes are 000°, 050 to 065° and 150 to 170°, all with steep dips (60° to vertical).

Alteration halos within the host granitic rocks are proportional to the density of veins. Weak alteration comprises replacement of feldspar by sericite and growth of arsenopyrite and pyrite (Lueck, 1988). Alteration is stronger around breccia zones, where the rocks are yellow-white, soft and clay-, sericite-, silica- and pyrite-altered.

A few historical samples were also collected from the less abundant quartz veins in the overlying metasedimentary rocks. These veins contain only minor amounts of galena, sphalerite or arsenopyrite, and they returned lower values compared with veins hosted within granite. Table

11 lists the most significant results from historical vein samples collected within the metasedimentary cap rocks.

Table 11 – Cirque Zone Metasedimentary-Hosted Vein Assay Highlights

Year	Type	Ag (g/t)	Pb (%)	Zn (%)	Au (g/t)
1988	Grab, Quartz-sulphide vein	186	1.76	2.86	0.004
1988	Grab, Quartz-sulphide vein	335	0.07	0.07	0.245

In 2012, galena rich, quartz-rhodochrosite vein mineralization was found within a 380 m long north-trending linear, referred to as the **Bench Showing**, which is located 900 m south of the main Cirque showing. Two hand trenches, spaced 47 m apart, were dug across this linear. The first, located near the southern end of the linear, exposed a 0.95 m wide vein grading 153 g/t silver, 4.28% lead, 0.30% zinc, 129.5 ppm tin and 0.134 g/t gold. The second trench, which exposed both vein and altered wallrock, yielded 120.7 g/t silver, 1.75% lead, 0.19% zinc, 45.7 ppm tin and 0.04 g/t silver across 1.74 m.

Snap and Risby Zones

The Snap Zone comprises five showings (Arseno, Dyke, Bubble, Creek and Krist), which are spread over 2500 m along a northeast trending, alpine ridge (Figure 13). The Arseno, Dyke and Bubble showings lie along the ridge crest, while Creek Showing is located on its eastern flank and Krist Showing is on its west side. The Risby Zone is located on a sub-parallel ridge immediately east of the Snap Zone. The ridges are separated by a broad, U-shaped valley that is drained by Ace High Creek. The Risby Zone comprises two main mineralized areas (Risby Main Showing and Risby Northeast Showing), which are situated 1800 m apart along the ridge crest.

Both zones are hosted within Anvil Batholith granite, which is overlain by roof pendants of foliated gneiss in places along the ridge crests. Felsic dykes cut both units in the vicinity of the Dyke and Bubble Showings within the Snap Zone (Figure 13).

Granitic rocks within the zones appear to have undergone at least two periods of localized, post-intrusive hydrothermal alteration, silicification and mineralization (Blanchflower, 1999). The first period comprised mesothermal-style alteration and veining, which was overprinted by a second period of epithermal-style veining. In 2012, Silver Range collected 53 rock samples representing both types of mineralization from the zones.

Most of the mineralization within the zones consists of mesothermal, fracture-controlled quartz-sulphide veins, stringers and infilled tectonic breccias hosted by sericitically to argillically altered granite (Blanchflower, 1999). Individual quartz-sulphide veins vary from a few millimetres to more than 30 cm thick and, depending upon the density of fracturing, may be less than five centimetres to more than two metres apart within the mineralized showings. The veins have generally been described as sheeted structures, rather than vein stockworks. The veins are commonly oriented east-northeasterly and dip 45° to 70° northward. Localized quartz-sulphide vein stockworks are present at the Creek and Krist showings.

Fine grained pyrite, sphalerite and galena with lesser arsenopyrite, chalcopyrite and rare pyrrhotite are the common sulphide minerals associated with the mesothermal sheeted quartz veins. The sulphides occur at the cores or along the selvages of veins. Near surface or within intensely fractured and deeply weathered areas, the sulphide minerals are oxidized to limonite, hematite, goethite, smithsonite and scorodite. Semi-massive sulphide breccias have been identified in float boulders along Ace High Creek. These sulphide breccias contain open-space filling, medium to coarse grained pyrite, sphalerite and arsenopyrite with minor disseminated galena, chalcopyrite and pyrrhotite hosted within quartz and calcite gangue. Based upon rock geochemical results from various showings the best gold and silver values are generally associated with increased arsenopyrite and galena contents (Figures 35 to 37).

Epithermal-style veining overprints the mesothermal mineralization at the Arseno and Risby Main showings and is the dominant type of mineralization at the Dyke and Bubble showings. The epithermal vein mineralization has distinct open-space filling textures including: vugs; crustiform coarse grained quartz-calcite bands; and breccias with quartz, calcite and rhodochrosite enclosing clasts of altered granite. Very fine to fine grained pyrite and sulphosalts are often associated with these high-level, epithermal vein structures. Rhodochrosite is common within dark grey, sulphide-rich, epithermal veins. Rhodochrosite that is oxidized to black manganite has been observed along the western bank of Ace High Creek.

Most historical and recent exploration conducted within Snap Zone focussed on the **Arseno Showing,** which comprises recessive and rusty weathering, fracture-controlled, sulphide-bearing, quartz-carbonate veins hosted within strongly altered granite. The alteration and mineralization are well developed, trend southeasterly across the ridge and have been traced for about 1000 m along strike. On the northwest side of the ridge, the showing consists of extensive sulphide-bearing quartz veins within talus and small rubbly outcrops of altered granite. On the southeast side of the ridge, the showing is mostly grass covered. There appears to be a vertical sulphide zonation within Arseno Showing, with arsenopyrite and pyrite dominating in sheeted quartz veins near the top of the ridge and increasing sphalerite and galena in sheeted vein float downslope towards Ace High Creek. The best results from recent and historical sampling within the Arseno Showing are listed in Table 12.

The **Dyke Showing** lies 500 m northeast of the Arseno Showing. It is characterized by silicified and brecciated quartz-feldspar porphyry dykes that occupy a steeply dipping fault zone within granite. The dykes are cut by a later east-trending fault (Blanchflower, 1999). Dark grey, fracture-controlled, fine grained sulphide mineralization is hosted within the silicified and brecciated dyke and granite. No significant results were obtained from this showing in 2012. Highlight results from 1999 and 2011 sampling are listed in Table 13.

Table 13 – Dyke Showing Rock Assay Highlights

The **Bubble Showing** is located 2000 m northeast along the ridge crest from the Arseno Showing. Granitic rocks in this area were cut by rusty weathering, aphanitic to fine grained quartz-feldspar porphyry dykes, which were subsequently brecciated and silicified (Blanchflower, 1999). Quartz-chalcedony stockwork veins and breccia matrix host very fine grained galena, sphalerite, pyrite and arsenopyrite. The showing was named for the many vugs and miarolitic cavities that are present within the dykes. The best results from 1999, 2011 and 2012 sampling at this showing are listed in Table 14.

Note: Qz – quartz, QFP – quartz-feldspar porphyry, Gn – galena, Sp – sphalerite, Py – pyrite, Cp – chalcopyrite, Cv – covellite, NR – not reported

The **Creek Showing** is located 2500 m northeast of the Arseno Showing, on the east side of the ridge. It comprises gossanous, intensely brecciated and limonite-altered granite exposed within a deeply incised creek. The creek follows a southeasterly trending, three to five metre wide, argillically-altered shear zone (Blanchflower, 1998). This shear zone is cut at regular intervals by a series of vertical shear structures that trend 167°. The intersection points of the structural sets are marked by four to seven metre long, intensely limonitic and/or hematitic breccia zones. Local, narrow fracture-filling veins with pyrite and galena have been found along the core of the southeasterly trending shear structure. This showing was not sampled in 2012. The best historical results from this showing are listed in Table 15.

Table 15 – Creek Showing Rock Assay Highlights

Year	Type	Ag (g/t)	Pb (%)	Zn (%)	Au (g/t)
1988	1 m chip, altered granite with sulphide veinlets	422	1.44	4.87	0.073

1998	0.5 m chip, 5 cm thick massive Gn-Py vein in altered granite	127.0	NR	NR	0.016

Note: Qz – quartz, Gn – galena, Py – pyrite, NR – not reported

The **Krist Showing** lies on the northwest side of the ridge and comprises several small areas of fracture-controlled quartz-calcite-galena-sphalerite-arsenopyrite stockwork veins hosted by weakly to moderately argillized granite (Blanchflower, 1998). The main mineralized stockwork is the most northeasterly of the mineralized areas. It is three to ten metres wide and trends at 058°, parallel to a nearby creek. The stockwork is cut by vertical, north-trending shear structures spaced 0.5 to 2 m apart. These cross-cutting structures host quartz-calcite veins with local galena, sphalerite, pyrite and arsenopyrite (Blanchflower, 1998). The Krist Showing has received cursory sampling by previous operators, but it has never been a primary focus of exploration nor has it been tested systematically. Table 16 lists highlight results from this showing (the 1998 samples have not be plotted on compilation maps due to a lack of reference points on the historical map; however they appear to have been collected in the vicinity of the 1988 sample).

Note: Qz – quartz, Ca – calcite, Gn – galena, Sp – sphalerite, As – arsenopyrite, Py – pyrite, NR – not reported

The **Risby Main Showing** was discovered by P. Risby in 1999. It comprises several quartz-sulphide vein structures that cut fractured and limonitic granite. Two main mineralized, silicified structural trends were observed: 1) sub-parallel to Ace High Creek – east-northeasterly trending (050° to 070°) and moderately dipping (-45° to -60° northward); and 2) within recessive weathering, young fault zones orthogonal to Ace High Creek – southerly trending (160° to 180°) and steeply dipping. Vertical zonation of mineralization, similar to that observed at the Arseno Zone, has been noted at the Risby Zone. The distribution of mineralization varies from very fine to fine grained, wispy colourations at the core or along the selvages of the quartz±carbonate veins at higher elevations to fracture infillings and disseminations with wider sheeted veins at lower elevations. Table 17 lists the best results from 1999, 2011 and 2012 sampling (Figure 38).

Four samples collected from the Risby Main Showing in 2011 averaged 3322 ppm tungsten (between 52.7 and 9970 ppm). The highest tungsten value was obtained from the sample that also yielded 767 g/t silver and 8.82 g/t gold. Samples collected in 2012 did no return any significant tungsten values.

The **Risby Northeast Showing** was discovered and sampled in 1988 by Doron Explorations, which found silver-bearing quartz veins in granite float and subcrop in close proximity to a granite\schist contact. Better silver values were recorded in manganese-deficient veins than in samples with higher manganese values (Robertson and Wallis, 1990). This showing has not been resampled by Silver Range. The most significant 1988 sample results are listed in Table 18.

Table 18 – Risby Northeast Showing Rock Assay Highlights

Year	Type	Ag (g/t)	Pb (%)	Zn (%)	Au (g/t)

1988	Grab, Qz-sulphide vein	470	0.64	0.14	0.149
1988	Grab, Qz-sulphide vein	374	0.43	0.04	0.027

Orange Zone

The Orange Zone was discovered by Doron Explorations in 1988. This zone is located approximately 5.3 km west of the Snap Zone and is marked by a broad east trending rusty terrace, which is traceable for 3 km and flanked by cliffs (Figure 13). Mineralization, which consists of quartz and chalcedony with pyrite and galena, is mostly confined to the prominent orange-red terrace. Sampling in 2012 (Figure 39) was done near the centre of the zone within a quartz vein that is intermittently exposed for 200 m and is locally 2 m wide. Samples collected in 1988 did not yield any significant values. The most significant 2012 sample results are listed in Table 19.

Table 19 – Orange Zone Rock Assay Highlights

Year	Type	Ag (g/t)	Pb (%)	Zn (%)	Au (g/t)
2012	Grab, Qz-Gn vein	675	3.96	0.02	0.007
2012	Grab, Qz-Gn-Py	352	2.51	0.02	<0.005
2012	0.90 m chip, Qz-Gn-Py vein	337	2.03	0.01	<0.005

Note: Qz – quartz, Gn – galena, Py – pyrite

The three samples collected from Orange Zone in 2012 averaged 1051 ppm bismuth (between 779 and 1560 ppm). The highest bismuth value was obtained from the same sample that yielded 675 g/t silver.

SOIL GEOCHEMISTRY

Numerous soil geochemical surveys were completed within areas currently covered by the Property by various operators prior to 2000. In 2010 and 2011, Strategic Metals and Silver Range collected 24,084 grid and contour soil samples to confirm the tenor and extent of previously identified anomalies and to discover new targets. In 2012, Silver Range took an additional 6,223 grid and contour soil samples to follow-up and to expand known anomalies and to test ground that was acquired during the 2012 field season. The effectiveness of soil sampling completed by all operators, including Silver Range, was limited in many areas by thick overburden, poor soil development and pervasive permafrost. Vegetated, north-facing slopes are typically the most affected by permafrost. Sampling methods and details pertaining to analytical techniques are described in Appendix V.

Locations for the 2012 soil samples are presented on Figures 40 to 53, while results for silver, gold, zinc, lead, copper, tin, tungsten, bismuth, antimony and molybdenum are plotted on Figures 54 to 63, respectively. Certificates of Analysis are given in Appendix IV. Anomalous thresholds and peak values for soil samples are listed in Table 20.

Table 20 – Geochemical Data for Soil Samples

Element	Anomalous Thresholds				
	Weak	Moderate	Strong	Very Strong	Peak
Silver (ppm)	≥ 1 < 2	≥ 2 < 5	≥ 5 < 10	≥ 10	3920
Gold (ppb)	≥ 5 < 10	≥ 10 < 20	≥ 20 < 50	≥ 50	1425
Zinc (ppm)	≥ 200 < 500	≥ 500 < 1000	≥ 1000 < 2000	≥ 2000	9400
Lead (ppm)	≥ 100 < 200	≥ 200 < 500	≥ 500 < 1000	≥ 1000	66700
Copper (ppm)	≥ 50 < 100	≥ 100 < 200	≥ 200 < 500	≥ 500	4760

Nineteen primary clusters of coincident, moderately to very strongly anomalous silver-gold-zinc-lead-copper-tin values have been recognized across the property. They are known as Keg Main, Keg East, Keg South, Owl, Owl Southwest, Zeno, RGS, Drex, Archimedes, Euclid, Vent, Weld, Marks, Ku, Rebel, Hammer, Cirque, Snap and Risby Anomalies. All of the primary anomalies are associated with known mineralization. Twenty-three secondary anomalies have also been identified, but most have not yet received detailed prospecting.

Keg South, RGS, Archimedes, Euclid, Ku, Owl Southwest, Vent, Weld and Hammer anomalies and most of the secondary anomalies were discovered by Silver Range in 2011, while the others

were identified by previous operators. Only Keg Main, Keg East, Owl, Owl Southwest, Drex, Weld, Rebel, Hammer, Cirque, Snap and Risby anomalies have been partially drill tested.

As with the mineralized zones and showings, all of the soil anomalies (except XVIII) lie within the Tay and Mount Mye belts. The sizes of the primary anomalies; their locations relative to Keg Main Anomaly; distributions of weak, moderate, strong and very strong values for silver-gold-lead-zinc-copper-tin; and accessory elements are listed in Table 21.

Table 21 – Primary Soil Anomalies

Anomaly	Size (m)	Location Relative to Keg Main (km)	Elements (ppm)				
			Weak	Moderate	Strong	Very Strong*	Accessory
Keg Main	2100 x 2500	-				**Ag**, **Cu**, **Pb**, **Zn**, **Sn**	W, **Bi**, Sb, Mo, **As**
Keg East	1400 x 450	2 E				Ag, Cu, Pb, Zn, Sn	Sb, **Mo**, As
Keg South	800 x 40	3 S		Au	Cu		
Owl	2000 x 2000	7 NNW		Au		**Ag**, **Cu**, **Pb**, Zn, Sn	Bi, Sb, Mo, **As**
Owl Southwest	700 x 650	7.5 NW	Sn	Au, Cu	Zn	**Ag**, Pb	Sb, As

RGS	2600 x 2200	10 ESE				Ag, Au, Cu, Pb, Zn, Sn	W, Bi, Sb, **Mo**, **As**
Drex	1550 x 1100	12 ESE		Au	Cu, Zn	Ag, Pb, **Sn**	Sb, Mo, **As**
Archimedes	1800 x 1800	18 ESE			Au, Zn, Cu	Ag, Pb, Sn	Bi, Sb, Mo, As
Euclid	650 x 1500	18.5 SE	Sn	Pb, Cu	Au	Ag, Zn	**Bi**, Sb, **Mo**, **As**
Marks	3950 x 1950	24 SE		Au	Cu	Ag, Pb, Zn, Sn	B, Bi, Sb, **Mo**, **As**
Ku	1650 x 2400	45 SE			Au, Cu	Ag, Pb, Zn, Sn	W, Bi, Sb, Mo, As
Rebel	2900 x 1450	17 SSE		Sn	Au	Ag, **Cu**, **Zn**	**Sb**, **Mo**
Hammer	1000 x 800	23.5 SSE			Sn	**Ag**, Au, Cu, Pb, Zn	Sb, As
Cirque	2100 x 700	27 SSE	Cu		Zn	Ag, Au, Pb, Sn	**As**, Sb
Snap	2700 x 2500	30 SSE			Cu	**Ag**, **Au**, **Pb**, Zn, Sn	**W**, **Bi**, Sb, Mo, **As**
Risby	1100 x 800	33 SSE	Zn		Au	Ag	W
Weld	3300 x 1200	29.5 SE	Au	Cu	Ag	Pb	Mo, As
Vent	1250 x 900	21 SE		Cu		**Ag**, Au, **Pb**	**Bi**, **Sb**, Mo, **As**

* Bold indicates a high proportion of very strong values present within the anomaly.

Soil anomalies that are particularly high grade or exhibit significant metal zonation are described in more detail in the following paragraphs.

Keg Main and Keg East Anomalies

In 1973, Yukon Copper Ltd. completed grid soil sampling that identified a strong, largely coincident copper±lead±zinc anomaly that extends east to west over the Keg Main Zone. From 2010 to 2012, Strategic Metals and Silver Range re-sampled much of this area to confirm the tenor and extent of the historical anomaly and to obtain multi-element data.

From 2010 to 2012, a total of 1700 grid soil samples were collected at 50 m spacing along north-south oriented lines located 100 m apart within a 5000 by 2000 m grid. Despite limitations due to ground conditions, soil sampling appears to be the most effective surface exploration technique for identifying drill targets, due to the paucity of bedrock exposures.

Keg Main Anomaly is defined by a high concentration of moderately to very strongly elevated values for silver, lead, zinc, copper, tin and indium, while Keg East Anomaly is a smaller, slightly weaker extension of it. Collectively, these anomalies comprise the five kilometre long by one kilometre wide area, which is surrounded by a halo of slightly elevated values for all elements of interest except indium. Results for silver, lead, zinc, copper, tin and indium are illustrated thematically on Figures 64 to 69.

Keg Main and East Anomalies exhibits subtle metal zonation from west to east. Copper is concentrated within the western and central parts of the area, while indium is strongest in the centre and silver, lead, zinc and tin are most abundant in the east and central parts.

RGS Anomaly

RGS Anomaly appears to be zoned from north to south, though this zonation may be exaggerated due to differential sample densities – the northern part of the anomaly was grid sampled, while only three contour lines tested the southern half. Silver, copper, antimony, molybdenum, arsenic and antimony are elevated throughout the anomaly. Lead, zinc, tungsten and bismuth seem to be restricted to the northern half, while gold is stronger in the south.

Marks Anomaly

Elevated lead, zinc, antimony and molybdenum values are present across Marks Anomaly, while silver, tin, tungsten, antimony, bismuth and arsenic are generally restricted to the northwest half. Scattered, elevated gold and copper values lie at the centre of the anomaly. The highest tungsten (160 ppm) value on the Property was obtained from this anomaly.

Ku Anomaly

Ku Anomaly is defined by a soil grid covering a 1.1 km by 2.0 km area with coincident, elevated values for most elements of interest. The southern edge of the soil grid is situated over the contact with the Orchay Batholith. Tungsten and bismuth are both very strongly elevated near

this contact, while very strong silver, lead, copper, antimony, arsenic and molybdenum values are found 800 m north of the contact.

Hammer Anomaly

Although Hammer Anomaly is relatively small compared to many of the other primary anomalies on the property, it has returned by far the highest silver values (peak of 3920 ppm) and second highest gold result (304 ppb).

Snap Anomaly

Snap Anomaly is the most extensive and strongest multi-element anomaly in Mount Mye Belt. High silver, lead, zinc, tin and arsenic values are prevalent throughout the anomaly, while elevated gold, tungsten and molybdenum results are common in the southern half. Strong bismuth values are only obtained in the northern half of the anomaly and copper results are subdued throughout.

Secondary Anomalies

The 23 secondary anomalies vary in extent and intensity. They are considered to be important targets for 2013 exploration. Most of these anomalies received little or no prospecting in 2012. The sizes of the secondary anomalies; their locations compared to Keg Main Anomaly; relative distributions of weak, moderate, strong and very strong values for silver-gold-lead-zinc-copper-tin; and accessory elements are listed in Table 22.

Following prospecting in 2012, three secondary soil anomalies that were identified in 2011 have been redefined as Primary Anomalies. These are Owl Southwest, Vent and Weld, formerly known as VI, XII and XIV respectively. The Payne and Orange Zones remain categorized as secondary soil anomalies because both have only received limited contour soil sampling.

Table 22 – Secondary Soil Anomalies

Anomaly	Size (m)	Location* (km)	Elements (ppm)				
			Weak	Moderate	Strong	Very Strong	Accessory
Payne	1400 x 300	19 NW	Cu, Sn	Au, Pb	Ag		**Sb**, As
II	1400 x 400	17 NW	Au	Cu, Sn	Ag, Pb, Zn		**Sb**, As
III	2600 x 1100	12 NW		Au	Pb	Ag, Cu, Zn, Sn	Sb, Mo, As
IV	1200 x 600	12 NW	Sn	Pb	Ag, Au, **Cu**	Zn	Bi, Sb, Mo, As
V	600 x 250	10 NW		Ag, Au, Pb	**Cu**, Zn, Sn		Sb, Mo, As
VII	1850 x 1050	3 SE	Pb, Sn		Cu, Zn	Ag, Au, Zn	Bi, Sb, Mo

X	1200 x 400	13 ESE		Ag		Au	Mo
XI	800 linear	14 ESE	Au, Pb	Cu	Ag, Zn		Mo
XII	600 linear	20 ESE	Cu		Ag, Au, Sn		
XV	3200 x 950	45 SE	Zn	Ag	Au, Cu, Pb		Sb, Mo, As
XVI	1300 x 350	2.5 SW	Ag, Zn	Cu		Au	As
XVII	3700 x 3300	11 SW	Sn	Au	Cu		W
XVIII	750 x 600	18 SSE	Au, Cu, Sn			Ag, Pb	Sb
IXX	2400 x 1300	11 NW		Pb	Ag, Au, Zn, Sn	Cu	Sb, Mo, As
XX	1300 x600	5 SE		Ag, Au, Cu	Pb	Zn, Sn	Sb, **Mo**
XXI	1100 linear	12 SE	Zn, Cu	Ag	Au		Sb, **Mo**
XXII	2000 x 700	18 SE	Cu			Ag, Au, Zn, Pb, Sn	W, **Bi**, **Sb**, As, Mo
XXIII	1100 x 600	28.5 SSE	Zn		Au, Cu		**W**, Bi, Sb, **Mo**
XXIV	1300 linear	31 SSE	Cu	Zn	Au, Sn	Ag, Pb	W, Bi
XXV	1000 x 600	24 ESE	Cu		Pb	Ag	
Orange	2600 x 1300	29 SSE	Sn	Ag, Zn, Cu	Pb	**Au**	W, **Bi**, Sb, As

*Relative to Keg Main Zone

** Bold indicates a high proportion of very strong values present within the anomaly.

Reconnaissance-scale sampling has also identified several isolated, strong, single-sample anomalies and clusters of weakly to moderately anomalous values in widely scattered parts of the property. These third and fourth order anomalies have not been named but could be significant, especially in areas that are difficult to sample reliably.

HISTORICAL STREAM SEDIMENT GEOCHEMISTRY

Stream sediment samples were collected in different parts of the Property by various operators in 1967, 1970, 1975 and 1983. The Geological Survey of Canada (GSC) completed reconnaissance-scale stream sediment surveys in 1988 on map sheets 105K west and 105L (Friske and Hornbrook, 1989) and in 1989 on map sheet 105K east (Friske et al., 1990). Samples from 105K east were reanalyzed in 2010 (Jackaman, 2011).

Although most stream sediment sampling on the Property returned fairly subdued values for all elements of interest, scattered, strongly elevated values for gold (up to 2445.7 ppb), silver (up to 2.2 ppm), zinc (up to 1712 ppm), lead (up to 107 ppm), copper (up to 399 ppm) and tin (18 ppm) were identified. All of these peak values are located in the vicinity of known mineral occurrences or soil geochemical anomalies. The very high gold value, which was obtained from a creek draining the east side of the ridge where the Ku Zone is located, is particularly noteworthy and has not yet been adequately explained.

GEOPHYSICAL SURVEYS

Between 1966 and 1999, several airborne and ground geophysical surveys (electromagnetic (EM), magnetic, induced polarization (IP) and gravity) were completed within the current bounds of the Property. Data from pre-2010 surveys is not available in digital format and therefore has not been reprocessed. Where plotted data is available, historical magnetic and electromagnetic results generally support more recent data.

In 2010, Strategic Metals' commissioned Geotech Ltd. of Aurora, Ontario to fly a helicopter-borne Z-axis Tipper Electromagnetic (ZTEM) and magnetic survey over much of the Tay Belt and Aurora Geosciences of Whitehorse, Yukon to perform ground IP surveying across parts of Keg Main Zone. In 2011, Aurora Geosciences completed additional ground IP surveying at the Keg Main and Keg East Zones on behalf of Silver Range. Only the 2010 and 2011 geophysical data is discussed in this report.

Condor Consulting, Inc. of Lakewood, Colorado was commissioned to process and analysis of the 2010 and 2011 geophysical data. Results for the entire area of these surveys are shown on Figures 70 and 71. Figures 72 and 73 show the magnetic and ZTEM results, along with locations of the IP survey lines, soil anomalies and diamond drill holes within the Keg Main Zone. Figure 74 illustrates a cross-section of modelled resistivity and conductivity from the IP survey. Geophysical results from both years are briefly summarized in the following paragraphs.

The magnetic response is diverse but generally reflects the regional, northwest-oriented lithological and structural trends. Discrete magnetic highs (Figure 70) are locally coincident with electromagnetic features (Figure 71) in the vicinity of known mineralization (Keg, Main, Drex, Vent and Marks Zones). Condor does not consider the magnetic data to be a useful tool for direct targeting of mineralization; however, because it highlights structural and lithological features, it can be used to identify favourable mineralization traps.

The ZTEM data also shows a variety of responses, which also typically conform to the northwest regional fabric. Northwest-trending axial highs and areas of low response are both present on the Property. The highs likely represent parts of the stratigraphy that are more conductive, while the lows are interpreted as more resistive areas within the mapped units. These lows may represent hydrothermal silicification of the host rocks as seen at Keg Main and RGS zones.

Distinct, discrete conductive features are also present within the survey area and may represent specific geological features such as folds (Keg Main Zone), thrust plates (Drex Zone) and blind intrusions (Drex and Marks zones).

Condor deemed the most significant IP resistivity features within Keg Main Zone to be coincident conductivity and chargeability highs that coincides with mineralization in the western half of the Keg Deposit and in another area about 500 m north of Keg Deposit. The first of these features appears to continue at least 500 m southwest of the deposit, after which is either terminates or plunges to a depth beyond the detection limits of the survey. Scout drilling in the vicinity of the westerly highs intersected thick sections of rock containing abundant pyrrhotite on fractures, while holes that tested the northerly highs cut graphitic stratigraphy.

A secondary feature defined by elevated chargeability and moderate conductivity lies to the south of, and directly below, Keg Deposit. This feature locally coincides with mineralized drill intervals (Figure 74).

HISTORICAL TRENCHING

KEG ZONE

Bulldozer trenching was carried out within and to the south of Keg Main Anomaly by Northern Empire Mines Ltd. in 1967 and 1968 (Cathro, 1968) and by Northern Homestake Mines Ltd. in 1972 (Deklerk and Traynor, 2005). Most of the trenches have sloughed and bedrock exposure is now limited. The following descriptions are taken from the published data.

1967-1968 Bulldozer Trenching

In late 1967 and summer 1968, a D6 bulldozer was used to strip and trench soil geochemical anomalies. A total of about 15,300 cubic metres of bedrock and frozen overburden was moved in nine trenches (Cathro, 1968).

Bedrock consists of white to medium grey, thin bedded and strongly jointed chert with narrow bands of argillite and cherty argillite. The beds strike east and dip gently north. Widespread, weakly disseminated pyrrhotite, chalcopyrite and sphalerite and rare galena were reportedly encountered, but this material was not systematically sampled. Heavily disseminated to massive sulphide mineralization was found in two places, 1100 m north-northwest (Location 1) and 800 m north-northeast (Location 2) of Marijke Lake. It consists of a pyrrhotite-pyrite-sphalerite assemblage, with lesser amounts of chalcopyrite, galena and scheelite.

At Location 1, four grab samples collected in 1967 yielded between 6.2 and 11 g/t silver, 2.8 and 4.5% zinc, 0.04 and 0.18% copper and 0.34 and 0.68 g/t gold (no sampling or analytical techniques were provided). When exposed by further bulldozing in 1968, this showing proved to consist of a sulphide lens less than 15 m long and 3 m wide that averaged 3.4 g/t silver, 1.25% zinc and 0.05% copper.

At Location 2, the upper 2.4 m of a massive pyrrhotite band was exposed. The bottom of the band was covered by overburden, thus its full width was not determined. This mineralization assayed 2.84% zinc, 0.01% lead, 0.37% copper with trace gold and silver across the exposed 2.4 m width.

Terrain difficulties and equipment limitations resulted in the trenches being positioned somewhat randomly relative to the geochemical highs (Cathro, 1968). This reduced the overall effectiveness of the program.

1972 Bulldozer Trenching

Northern Homestake Mines Ltd. conducted additional bulldozer trenching within the same area as the 1968 work (Deklerk and Traynor, 2005), but no report is available for this program.

CIRQUE ZONE

In the late 1980s Doron Explorations carried out hand, blast and mechanized trenching programs at Cirque Zone. The trenching was primarily directed at defining the trends, widths and grades of silver-rich veins that were identified in 1986 (Robertson and Wallis, 1989).

In 1987, Doron Explorations walked a D6 cat from Faro to the lower part of the Cirque Zone. Fifteen trenches were excavated in this area, but the main part of the zone was too steep to be accessed by this machine. In early summer of 1988, Doron Explorations blasted and hand excavated 19 small trenches within the upper part of the zone. Many of these trenches failed to reach bedrock due to permafrost, talus slides and deep overburden. Later that summer, Doron Explorations walked a D8K bulldozer to the zone. The bulldozer completed 800 m of excavation in six trenches. It often had to be assisted by blasting to break up solid bedrock between and within the trenches. In early fall of 1988, Doron Explorations conducted an additional small blasting and hand trenching program (six trenches) within the zone prior to ending the program due to winter conditions. The exact locations of the historical trenches are unknown because the maps have too few reference points.

The best results from these trenching programs are listed in Table 23.

Table 23 – Significant Cirque Zone Historical Trench Sample Results

Year	Type	Ag (g/t)	Pb (%)	Zn (%)	Au (g/t)
1987	Cat – 3 m chip	482	NR	0.10	0.068
1987	Cat – 2 m chip	932	NR	0.19	0.58
1987	Cat – 3 m chip	284	NR	0.15	0.27
1987	Cat – 2 m chip	1208	NR	0.15	0.14
1987	Cat – 1 m chip	926	NR	0.18	0.137
1987	Cat – 1 m chip	666	NR	0.52	0.617
1988	Hand/blast – 2.5 m chip	541	NNR	NNR	NNR
1988	Hand/blast – 1.5 m chip	259	NNR	NNR	NNR
1988	Hand/blast – grab	150	NNR	NNR	NNR
1988	Bulldozer – 0.3 m chip, vein	425	0.09	0.87	0.127
1988	Bulldozer – 0.7 m chip, 0.45 m vein at schist contact	3565	2.32	0.80	0.215
1988	Bulldozer – 0.5 m chip, 2 veins (0.10-0.15 m) in altered granite	550	0.25	0.34	0.740
1988	Bulldozer – 0.5 m chip, 0.2 m vein	589	0.57	0.54	0.615
1988	Bulldozer – 0.3 m chip, quartz vein with galena	396	1.96	0.51	0.410

The remainder of the samples typically yielded less than 343 g/t silver (10 opt) or were narrower than 0.40 m.

Doron Explorations considered the trenching results to be generally disappointing compared to what it expected based on the abundance of mineralized float at surface (Robertson and Wallis, 1989). The veins were narrower and their density was lower than anticipated. It concluded that the vein size and abundance was exaggerated by downhill dispersion from the buried veins, which lie parallel to the slope of the cirque walls. The widths, grades, textures, mineralogy and orientations of individual veins were found to be quite variable over short distances.

HISTORICAL DIAMOND DRILLING

Between 1966 and 1999, a total of 41 drill holes were completed on ground currently covered by the Property; of these, 10 were at Keg Zone, 16 at Rebel Zone, 3 north of Hammer Zone, 9 at Snap Zone, 2 south of Snap Zone and one was drilled about three kilometres to the northwest of Keg Zone. Grades and widths obtained from drilling at Keg Zone were considered to be disappointing because the target was Sedex mineralization like that at the nearby Anvil District deposits. Wide intercepts of fracture-style mineralization and occasional skarn horizons were cut within Keg Zone but grade continuity was not established due to intermittent sampling of the drill core. Results from the drilling at Rebel Zone were generally subdued but some well mineralized intervals were cut in the northern part of the drill area. Although drilling intersected a number of mineralized veins at Snap Zone (Arseno Showing), it did not cut the precious metal rich, arsenopyrite- and galena-bearing sheeted vein mineralization that was observed at surface. Due to the poor quality and/or lack of reference points on most historical maps, only holes in the Snap Zone and north of the Hammer Zones are plotted. Drill hole data are listed in Table 24.

NR – not reported

Results from all historical holes are discussed in the following paragraphs.

Keg Zone

66-V-1 to 66–V-4

In 1966, four holes totalling 464.5 m were drilled immediately east and north of Keg East Zone. No thick sections of massive sulphides were intersected and, therefore, none of the core was analyzed (Adamson, 1966b). The presence of minor disseminated, blebby and banded pyrite and pyrrhotite and rare galena, sphalerite and chalcopyrite was noted in most intervals in all holes. Several bands up to 12 cm thick of semi-massive to massive sulphides were intersected. The host rock comprises locally limey or siliceous, light grey to greenish black argillite with lesser quartzite.

D-74-1 to D-74-3

D-74-1 to D-74-3 lie within the Keg Deposit, at the heart of Keg Main Zone. The host rocks in all three holes primarily comprise light to dark grey, locally greenish siliceous rocks (argillite, chert and quartzite?) with interbedded light to dark green skarn horizons, which consist of diopside and other unspecified calc-silicate minerals (Jilson, 1974). Calcite commonly occurs within coarse blebs, veins and crackle breccias, while thin intervals of marble and shear-hosted serpentinite are rare.

D-74-1 bottomed in a thick horizon of limestone and limey argillite. Sulphide minerals comprise pyrrhotite with lesser sphalerite and minor chalcopyrite, galena and arsenopyrite. These minerals occur as disseminations, fine to coarse blebs, fracture coatings, cement in crackle breccias and rarely as semi-massive bands. Bleaching of the host units is common adjacent to fractures and in association with sulphides. The core, which was sampled intermittently, yielded sporadic, elevated zinc values with rare silver, lead and copper support. The best interval returned 0.37% copper, 1.38% lead, 1.08% zinc and 168 g/t silver over 3.0 m.

D-74-2 generally cut the same mineralization types as D-74-1 (Jilson, 1974), but mineralization is far more abundant in this hole. Fracturing of the host rocks is intense and appears to be the dominant control of both calc-silicate alteration and mineralization. Mineralization is more strongly associated with calc-silicate alteration than with the siliceous units. The hole was continuously sampled between 2.4 and 51.5 m, from which point on it was sampled intermittently. The continuously sampled interval yielded a weighted average of 34.3 g/t silver, 1.25% zinc, 0.47% lead and 0.14% copper over 49.1 m. Below this, several scattered, elevated zinc values with rare copper, lead and silver support were encountered.

D-74-3 has the same mineralogy as the previous two holes. Bleaching of the host rocks is fracture controlled and increases in intensity with depth. The top half of the hole was not sampled; however, a 14.0 m long interval in the bottom half of the hole (between 47.5 and 59.7 m) averaged 1.66% zinc with subdued copper, lead and silver values (Jilson, 1974).

466-75-4 to 466-75-6

In 1975, three holes were drilled to follow up along strike and down-dip of the mineralization discovered in the 1974 holes. These holes also lie within Keg Main Zone. Less extensive, but locally higher grade mineralization was intersected in 1975. Most mineralization comprises heavy disseminations of pyrrhotite and brown sphalerite with minor chalcopyrite in fine grained quartzite and calc-silicate rocks, which are interlayered with barren quartzite and recrystallized and bleached chert (Jilson, 1975). 466-75-4 and -5 were sampled intermittently.

466-75-4 yielded 1.24% zinc over 11.6 m, including 5.48% zinc over 1.1 m, while 466-74-5 returned 0.82% zinc over 24.1 m. Copper and lead values in both holes were subdued. 466-75-6 was drilled to test coincident EM, IP, magnetic and copper-lead-zinc geochemical anomalies. It intersected unmineralized cherty argillite and grit, which both host minor pyrrhotite and sheared graphitic rocks. This hole was not sampled.

78-NA-04

In 1978, 78-NA-04 tested coincident gravity and IP anomalies, which are located three kilometres northwest of Keg Main Zone. It intersected unmineralized, fine to coarse grained greywacke with local chert and graphitic bands (Simpson, 1978a). The greywacke exhibits various textures, including well bedded, massive and brecciated.

Rebel Zone

67-1 to -3

No record of these drill holes, other than references in later assessment reports, could be found. They were reportedly drilled to test EM, gravity and geochemical anomalies that are situated immediately west of Rebel Anomaly. All holes intersected Marmot Formation metavolcanics. Traces of fracture-hosted galena and sphalerite were noted in 67-2, while the others were barren (Carne, 1991).

K-72-4 to -7

K-72-4, -5 and -6 tested geochemical, magnetic-electromagnetic and electromagnetic-gravity anomalies, respectively. K-72-4 and-6 lie within Rebel Anomaly and K-72-5 is located one kilometre west of that anomaly. All of these holes cut locally brecciated Marmot Formation metavolcanics and underlying Rabbitkettle Formation metasediments (Jilson, 1972). The metavolcanics are locally listwaenitized. K-72-4 intersected minor pyrrhotite, sphalerite, chalcopyrite, galena and pyrite in fractures and as disseminations. K-72-5 and-6 were barren. No samples were analyzed from any of these holes.

K-72-7 was drilled within Rebel Anomaly, to test the soil anomaly at depth. It intersected altered and brecciated Marmot Formation metavolcanics with disseminated to fracture-filling sphalerite, pyrite, galena, pyrrhotite and tetrahedrite. The best continuous interval yielded a weighted average of 2.28% zinc, 0.10% copper and 0.10% lead over 69.0 m, including 6.60% zinc, 0.29% copper, 0.41% lead, 36.4 g/t silver and 0.17 g/t gold over 3.0 m (Jilson, 1972).

K-73-8 to -10

K-73-8 tested an electromagnetic anomaly that appears to coincide with the southwest corner of Rebel Anomaly. It intersected brecciated Marmot Formation with minor chalcopyrite, pyrrhotite and sphalerite in fractures and veins. The best interval returned 2.25% zinc over 3.0 m (Carne, 1991).

K-73-9 was drilled 150 m to the east of K-72-7 in order to extend the known mineralized zone. It cut altered Marmot Formation with minor disseminated and fracture-filling sphalerite, pyrrhotite, chalcopyrite and pyrite throughout. An 18.3 m interval yielded a weighted average of 2.2% zinc (Carne, 1991).

K-73-10 was also designed to extend the mineralized zone. It was drilled about 170 m to the southwest of K-72-7. It intersected brecciated Marmot Formation with weak disseminated and fracture-filling sphalerite and galena, but was not sampled (Jilson, 1973).

KD-78-1 to -4

KD-78-1 to -4 were drilled to test geophysical anomalies within Rebel Anomaly, to the south and west of the previous holes (Spence, 1979). None of the drill core was analyzed.

KD-78-1 tested a strong, broad EM conductor. It intersected interbanded volcanics and sediments including some strongly graphitic rocks. Minor pyrite was the only sulphide mineral encountered within the hole.

KD-78-2 tested coincident strong EM conductors. It cut similar rocks and mineralization to those in KD-78-1.

KD-78-3 tested a strong, broad horizontal loop EM anomaly. It cut interbedded volcanics and graphitic sediments, both of which contained minor pyrite.

KD-78-4 tested strong EM conductors. It cut volcanics interlayered with graphitic sediments. Minor vein hosted galena was observed.

78-NA-03

78-NA-03 was drilled at the east edge of XVIII Anomaly to test elevated soil values and a coincident EM anomaly. It intersected non-calcareous, locally chloritic phyllite with rare diorite porphyry dykes. Minor pyrrhotite and sphalerite were reported, but no samples were analyzed (Simpson, 1978b).

80-NAR-1

80-NAR-1 tested a widely spaced, linear geochemical anomaly within the west half of XVIII Anomaly. It cut chlorite±muscovite±biotite phyllite (Hall, 1980). The phyllite is commonly calcareous and is locally interbedded with tuff. Rare marble was observed. No core was analyzed.

North of Hammer Zone

K-70-1 was drilled to test a coincident lead-zinc soil anomaly that reportedly lies on the floor of a broad, U-shaped valley, approximately 1500 m northeast of Hammer Zone. The hole only cut glacially-derived boulders and clay (Turnbull and Simpson, 1970). The thickness of the overburden indicated that the soil anomaly was transported and further drilling was directed toward nearby geophysical anomalies.

K-70-2 was drilled in the same area to test a moderate residual gravity anomaly with coincident, weak IP response. The hole intersected 22.6 m of overburden, then cut grey-green-purple phyllitic quartzite and phyllite and a 7.6 m thick mafic diorite dyke or sill, before bottoming in altered granite. Zones of weakly disseminated pyrite and pyrrhotite were observed, but significant base metal mineralization was absent.

K-70-3 was drilled between the other two holes and was designed to intersect a possible fault zone that offset areas of variable soil geochemistry and geophysical response. After drilling through 89.6 m of overburden, the hole cut green-purple phyllite and phyllitic schist. Between

152.4 and 213.3 m, thin laminations of pyrite and pyrrhotite were present along foliation planes. No significant base metal mineralization was observed.

Snap Zone

Drilling at Arseno Showing was conducted to evaluate coincident soil geochemical and geophysical (chargeability) anomalies that had been identified in an area of little to no bedrock exposure on the southeast side of the ridge (Blanchflower, 1999). Widespread, fracture-controlled, weak to locally strong quartz-pyrite (± sphalerite and lesser galena, chalcopyrite, arsenopyrite and/or pyrrhotite) sheeted veins and local sulphide-bearing breccias were identified within argillically-altered granite over a 1200 m strike length. The silver and gold values were lower than expected, based on prior surface rock geochemical sampling. None of the arsenopyrite- and galena-rich quartz-sulphide vein stockworks and semi-massive mineralization observed in float within Snap Zone were intersected by the diamond drilling. The most significant intervals of quartz-sulphide vein mineralization were intersected by drill holes 99-04 and 99-05, which reportedly returned values of 52.3 g/t silver and 0.21 g/t gold over 3.0 m and 26.8 g/t silver and 1.50 g/t gold over 7.0 m, respectively (Blanchflower, 1999). The drilling did not intersect sufficient sulphide mineralization or other geological evidence to explain the high chargeability anomaly.

South of Snap Zone

77VZ-1 and -2 were drilled 1000 m south and 800 m southwest of Arseno Showing, respectively. They were designed to test coincident magnetic and electromagnetic anomalies within schist. 77VZ-1 did not explain the anomalies, but the results from 77VZ-2 suggest that the anomalies are due to high carbon content and associated disseminated pyrite (up to 4%) within schist between 26.5 and 84.1 m.

RECENT DRILLING

Recent drill programs at the Property included diamond drilling in 2010 and 2011 and diamond and reverse circulation percussion drilling in 2012. During the past three years, 32,926.85 m of diamond drilling drilling and 1,104,90 of reverse circulation percussion drilling have been completed on the Property.

The 2012 drill program at the Property was conducted between June 3 and August 28. A camp located on the Property supported drilling at the Keg Main and Owl Southwest zones, while support for all other drill targets was based out of Faro. Appendix V describes the logging and sampling procedures used during the course of the project.

Drill hole collars were surveyed by Archer Cathro employees using a Trimble SPS882 and SPS852 base and rover Real Time Kinematic (RTK) GPS system. The collars are marked by lengths of drill rod that are cemented into the holes or a log placed into the hole. A metal tag identifying the hole number is affixed to each collar marker. Collar locations and drill orientations for all 2010-2012 drilling are listed in Appendix VI.

Topography along section lines was initially surveyed by chain and compass, but was later resurveyed using the RTK GPS.

Down-hole surveys were conducted using a "Ranger Explorer" magnetic multi-shot tool provided by Ranger Survey Systems. Shots were taken every 50 feet or 15 m in each hole, depending on whether the rods were imperial or metric. The shots recorded azimuth, inclination, temperature, roll angle (gravity and magnetic) plus magnetic intensity, magnetic dip and gravity intensity (for quality assurance). All readings were reviewed and erroneous data was not used when plotting the final hole traces.

Geological and Geotechnical logs for all 2012 drilling can be found in Appendix VII. Sampling methods are discussed in **, while the corresponding Certificates of Analysis are provided in Appendix IV.

Keg Main and Keg East Zones

Diamond drilling at the Keg Main and Keg East Zones conducted by Top Rank Diamond Drilling Ltd. of Ste. Rose du Lac, Manitoba with two heli-portable Multi-Power Discovery II drills using NQ2 equipment. A total 8377.49 m of diamond drilling was completed in 28 holes between June 3 and August 27, 2012. Figure 75 illustrates the locations of all holes drilled at the Keg Main and Keg East Zones from 2010 to 2012, while sections are shown on Figures 76 to 91.

Between 2010 and 2012, a total of 23,014.51 m of exploration and definition drilling in 69 holes was completed at the Keg Main and Keg East Zones, of which 18,376.81 m in 53 holes were used to estimate the Keg Deposit mineral resource. Down hole depths for drill holes within the Keg Main Zone range from 144.00 to 550.77 m, with an average depth of 359.30 m. This drilling was completed at nominal 100 m spacing on an 1100 m long by 300 m wide grid (locally up to 450 m wide) within the main area of interest. All holes were collared at dips of -50° and most of them are on section lines oriented at 340° (north-northwest). Six holes have different azimuth orientations, which range between 300° and 010° (northwest to north-northeast).

Relatively continuous silver-lead-zinc-copper-tin±indium mineralization has been traced along the full 1100 m length of the drill grid, across approximate true widths of 50 to 250 m and to vertical depths of 350 m.

The best grades within both zones are typically from areas where strong fracturing and reactive horizons coincide. The thickest, highest grade mineralization within Keg Main Zone appears to be localized in a fold hinge where axial planar fractures cut silicified and calc-silicate altered Tay and Mount Christie Formation rocks.

The most significant, silver-rich interval obtained from Keg Main Zone to date graded 70.55 g/t silver, 0.54% lead, 0.60% zinc, 0.17% copper, 778 ppm tin and 1.77 ppm indium over 104.70 m from 25.45 to 130.15 m in hole KEG-11-009. The best 2012 interval averaged 63.45 g/t silver, 0.48% lead, 0.43% zinc, 0.09% copper, 448 ppm tin and 0.96 ppm indium over 68.75 m from 6.64 to 75.39 m in hole KEG-12-047. Table 25 lists highlight drill results obtained from Keg Main Zone.

KEG-12-48	277.16	318.35	41.19	48.81	1.04	1.16	0.12	317	4.70

The best interval from Keg East Zone graded 30.81 g/t silver, 0.18% lead, 0.27% zinc, 0.02% copper, 65 ppm tin and 1.01 ppm indium over 70.11 m from 302.36 to 372.47 m in hole KEG-11-014. The best 2012 result averaged 31.89 g/t silver, 0.39% lead, 0.33% zinc, 0.01% copper, 278 ppm tin and 0.51 ppm indium over 13.4 m from 74.00 to 87.40 m in hole KEG-12-059.

Owl Southwest Zone

Diamond drilling at the Owl Southwest Zone was conducted by Top Rank Diamond Drilling Ltd. using NQ2 equipment. Two holes totaling 503.23 m were completed between July 17 and 28. Figure 92 illustrates the locations of all holes drilled at the Owl Southwest Zone, while sections are shown on Figures 93 and 94.

Drilling targeted the down-dip extension of high-grade mineralization exposed by hand trenching. It intersected siliceous siltstone and quartzite overlying intercalated limestone and chert. Hole OSW-12-001 intersected a 9 cm quartz vein near surface, containing abundant galena and arsenopyrite. Narrow bands of skarn mineralization were found near the bottom of hole OSW-12-001; however, sampling yielded no significant results from these intervals. This hole terminated in strongly graphitic argillite that is believed to represent a large thrust fault located within the swampy saddle that separates the Owl Southwest Zone from the Owl Zone.

Hole OSW-12-002 intersected a weak fracture zone near surface at the projected depth of intersection of the target vein. The only significant interval from this hole came from a narrow skarn interval comprising minor galena in fractures and disseminated arsenopyrite within maroon

to green chert toward the bottom of the hole. The graphitic unit encountered in the first hole was not intersected.

The following table highlights drill results from Owl Southwest Zone.

Table 26 – Owl Southwest Zone Drill Assay Highlights

Hole	From (m)	To (m)	Interval (m)	Ag (g/t)	Pb (%)	Zn (%)	Cu (%)	In (ppm)	Sn (ppm)	Au (g/t)

Incl.	198.50	200.00	1.50	432.00	1.16	2.78	0.03	5.260	88	0.048

Weld Zone

Diamond drilling at the Weld Zone was conducted by Beaudoin Diamond Drilling Ltd. of Courtenay, BC with a JKS 3000 drill using BTW equipment. Two holes totaling 159.7 m were completed between July 21 and 25, 2012. Figure 95 illustrates the locations of holes drilled at the Weld Zone, while sections are shown on Figures 96 and 97.

Hole WLD-12-001 is located at the Weld Main Showing and targeted the down-dip extension of a vein fault that yielded very strongly anomalous values for silver and lead from surface samples. Weakly to strongly oxidized siltstone and fault gouge were intersected in the top 65 m of this hole. The remainder was unoxidized siltstone. Two narrow rubbly, clay altered intervals returned the best results. These intervals are listed in the following table.

Table 27 – Weld Zone Drill Assay Highlights

Hole	From (m)	To (m)	Interval (m)	Ag (g/t)	Pb (%)	Zn (%)	Au (g/t)
WLD-12-001	53.00	53.60	0.60	295.00	3.68	3.27	0.019
WLD-12-001	62.80	63.30	0.50	130.00	1.32	1.28	0.108

Hole WLD-12-002 tested beneath mineralized float at the Cady Shack Vein. This hole intersected silicified siltstone with minor pyrrhotite and pyrite. A few narrow, approximately 0.5 cm, veinlets containing minor galena and sphalerite were intersected. This hole did not produce any significant intersections.

Hammer Zone

Diamond drilling at the Hammer Zone was conducted by Platinum Diamond Drilling Inc. of Winnipegosis, MB with a heli-portable Multi-Power Discovery II drill using NQ2 equipment. A total of 3903.64 m was completed in 21 holes between June 9 and August 7, 2012. Figure 98 illustrates the locations of all holes drilled at the Hammer Zone, while cross sections are presented on Figures 99 through 109.

Drilling tested beneath three sub-parallel linear features where mineralized float was discovered, referred to as the East, West and Central Veins. The Central Vein was the primary focus of this drilling, which often meant the other two veins were not targeted or were not intersected at favourable locations. This drilling tested along a total strike length of 630 m to a maximum depth below surface of 200 m (on the Central Vein).

All of the drill holes intersected granite and pegmatite belonging to the Anvil Batholith. Quartz-rhodochrosite veins ranging from 5 mm to 1.3 m in width occur sporadically throughout the holes. The widest of these veins coincide with the down-dip extensions of the surface linear features. Granite immediately adjacent to the veins is hydrothermally altered. This alteration is only developed in close proximity to the veins, rarely extending outwards any further than the width of the corresponding vein.

Where mineralized, these veins comprise semi-massive to massive pyrite-galena-tetrahedrite. The best example of this is hole HAM-12-017, which intersected 0.53 m of massive sulphide grading 4620 g/t (134.75 opt) silver, 8.99% lead and 4.84% zinc. In places, the Central Vein appears to split into two parallel veins separated by up to 30 m of barren granite. This is most evident in holes HAM-12-005, -006 and -009.

The veins are partially to completely oxidized to a depth of 150 m below surface, based mainly on results from the Central Vein. Oxidation appears to be deeper and more intense to the south, where the three sub-parallel veins begin to converge. The best oxide interval came from hole HAM-12-011, which yielded 1590 g/t (46.38 opt) silver, 1.13% lead and 0.47% zinc over 0.70 m.

A list of the most significant oxide and sulphide intersections is provided in the following table.

Table 28 – Hammer Zone Drill Assay Highlights

*SX = sulphide, TR = transition, OX = oxide

The piercement locations along each of the central and west veins are shown on Figures 110 and 111. The best sulphide bearing intersections to date occur between the 1400 m and 1475 m elevations. Below this elevation, pyrite dominates the sulphide assemblage and silver values are more subdued. In order to reach this preferred elevation range along the Central Vein, holes located to the south, at higher elevations, had to be collared further to the west, resulting in very long holes.

Cirque Zone

Diamond drilling at the Cirque Zone was conducted by Beaudoin Diamond Drilling Ltd. using BTW equipment. Four holes totaling 342.28 m were completed between July 26 and 29, 2012. Figure 112 illustrates the locations of all holes drilled at the Cirque Zone, while cross sections are presented on Figures 113 through 116.

Holes CRQ-12-001 through -003 were drilled from an existing clearing at the end of a bulldozer trail and tested beneath historical blast trenches. Weakly oxidized granite containing narrow quartz-carbonate (rhodochrosite) veins was intersected in all three holes. The veins contained trace to minor amounts of fine grained galena, pyrite, sphalerite and chalcopyrite. Overall, mineralization intersected in these holes is weaker than expected and it does not explain the mineralization found at surface. A list of significant drill intersections is provided in the following table.

Table 29 – Cirque Zone Drilling Assay Highlights

Hole	From (m)	To (m)	Interval (m)	Ag (g/t)	Pb (%)	Zn (%)
CRQ-12-001	21.50	22.20	0.70	39.60	0.184	0.061
CRQ-12-002	6.00	6.80	0.80	25.70	0.037	0.041
CRQ-12-003	26.00	30.00	4.00	18.91	0.041	0.024

Hole CRQ-12-004 was located at the Bench Showing and targeted the down dip extension of mineralization uncovered by hand trenching in 2012. This hole intersected granite cross-cut by several quartz veins. The best intersection came from a 0.60 m quartz vein containing fine-grain pyrite and arsenopyrite yielding 12.90 g/t silver, 0.419% lead, 2.260% zinc and >1% arsenic.

Snap Zone

Diamond drilling at the Snap Zone was conducted by Beaudoin Diamond Drilling Ltd. using BTW equipment and by Top Rank Diamond Drilling Ltd. using NQ2 equipment. Seven holes totaling 1665.62 m were completed between July 30 and August 23, 2012. Figure 117 illustrates the locations of all 2011 and 2012 holes drilled at the Snap Zone. All of the holes were drilled on two, parallel section lines (Figures 118 and 119), spaced 230 m apart.

The primary focus of drilling in 2012 was the northern strike extension of mineralization intersected by Silver Range in 2011, on the same section line as an earlier intersection by Pacific Ridge Exploration, which graded 87.7 g/t silver over 8.9 m in hole 99-08 (Blanchflower, 1999). Holes SNP-12-006 thru -007 tested further along strike to the north.

All of the drill holes intersected granite belonging to the Anvil Batholith. A phyllite roof pennant, located at the crest of the hill above the main drill area was cored at the tops of holes SNP-12-009 and 99-08. Quartz veins with well-developed epithermal textures cut the granite.

A thick interval of moderate to intense oxidation was intersected near the centre of both section lines. This oxidized band trends northerly and appears to coincide with a resistivity high outlined by an IP survey conducted by Pacific Ridge Exploration in 1999. These oxidized intervals correspond to broad low grade intersections, while higher grade intersections coincide with mineralized quartz veins. The following table lists some of the significant intersections obtained from drilling at the Snap Zone.

Table 30 – Drill Assay Highlights

Hole	From (m)	To (m)	Interval (m)	Ag (g/t)	Pb (%)	Zn (%)	In (ppm)	Sn (ppm)	Au (g/t)

Risby Zone

Diamond drilling at the Risby Zone was conducted by Beaudoin Diamond Drilling Ltd. using BTW equipment. One hole totaling 208.25 m was completed between August 24 and 28, 2012. Figure 117 illustrates the location of this drill hole, while a cross-section is illustrated on Figure 120. Drilling was designed to test beneath mineralized float exposed along the ridge.

This hole intersected granite cut by quartz veins. Weak to moderate oxidation is present near surface. Barren quartz veins are common; however, some veins contain pyrite, galena and minor sphalerite. Intervals containing these mineralized veins yielded the most significant results. The following table lists the significant results from the Risby Zone holes.

Table 31 – Risby Zone Drill Assay Highlights

Hole	From (m)	To (m)	Interval (m)	Ag (g/t)	Pb (%)	Zn (%)	Au (g/t)

Rebel Zone

The 2012 program at the Rebel Zone was done using a self-propelled, track-mounted reverse circulation (RC) percussion drill, which was contracted from Midnight Sun Drilling Inc. of Whitehorse. The drill was operated by a three person crew on a single, 12 hour per day shift.

A total of 1104.9 m was completed in 19 holes. The first hole was collared on August 9 and the final hole was completed on August 22. The RC crew used an ATV to transport fuel from a central cache to the drill sites.

The drill program was designed to test anomalous tin, silver, copper, indium, lead and zinc geochemistry and mineralization associated with northerly-trending topographic linears. Three section lines were used to establish the general locations of the RC drill holes; however, the actual collar locations were determined by equipment accessibility (Figure 121). Cross sections for these holes are presented in Figures 122 to 130. All holes were drilled with an azimuth of 090° and a dip of -45° except hole RCH-12-10, which was drilled at 270°/-45°. Hole RCH-12-10 scissored hole RCH-12-05 to fully test across a wide topographic linear.

Table 32 lists significant assay intervals from the 2012 program.

MINERAL PROCESSING AND METALLURGICAL TESTING

KEG DEPOSIT

Metallurgical testwork on material from the Keg Deposit was completed at SGS Canada Inc. – Lakefield Research located in Lakefield, Ontario in 2012. Melis Engineering Ltd. (Melis) of Saskatchewan directed and summarized the metallurgical testwork on behalf of Silver Range. Melis' full report is provided in Appendix VIII.

The testwork was completed on six variability composites of drill core, representing distinct zones of the known mineralization, and one overall composite prepared as a blend of the six variability composites. The work encompassed preparation and analyses of test composites, comminution testing, open cycle and lock cycle flotation tests, gravity recovery tests, concentrate analyses and tailings physical and chemical characterization.

Composite Analyses

Key analyses of the test composites are summarized in Table 33.

Table 33 – Test Composites – Assay Head Grades for Key Elements

Composite	Ag (g/t)	Cu (%)	Pb (%)	Zn (%)	In (g/t)	Sn (g/t)
Overall	41.6	0.27	0.31	1.36	11.4	400
A	89.1	0.18	0.62	0.69	1.7	770
B	56.2	0.60	0.30	2.30	15.6	760
C	44.1	0.31	0.34	1.67	13.1	230
D	32.3	0.10	0.27	0.89	8.8	100
E	21.1	0.14	0.15	1.28	19.5	210
F	32.7	0.19	0.28	1.14	9.1	360

The sulphides in the mineralization consist mainly of sphalerite, pyrite, chalcopyrite, pyrrhotite, galena and arsenopyrite. Traces of silver minerals (native silver and silver sulphides) were found, but more detailed examination specific to silver would be required to properly define the mode

of occurrence of silver. The main tin minerals, which are typically fine grained, include stannite and lesser cassiterite.

A gravity recovery test on the overall composite indicated that approximately 15% of the silver and only about 3% of the tin could be recoverable by gravity.

Preliminary grinding tests suggest that the Keg Deposit mineralization is of medium hardness.

Flotation Testwork

A total of 16 open cycle batch flotation tests were completed on the overall composite to identify the flotation characteristics of Keg Deposit mineralization and to quantify optimum flotation parameters for the recovery of copper, lead and zinc to concentrates. Six open cycle batch flotation tests were also completed on the six variability composites, one per composite to assess variability ahead of lock cycle testing.

The flotation conditions and reagent scheme identified for the mineralization were generally as follows:

- Target primary grind P_{80} of 100 µm in the presence of lime to maintain pH 8 to 8.5.
- Copper/lead rougher flotation at pH 9 to 9.5 controlled with lime using Aerophine 3418A as collector and MIBC as frother.
- Regrind of the copper/lead rougher concentrate to a target P_{80} of 20 to 25 µm in the presence of zinc sulphate and sodium cyanide used as zinc depressant, additional lime to maintain an elevated pH and additional 3418A collector.
- Three stages of copper/lead cleaners at pH 10 controlled with lime with further 3418A collector addition and MIBC frother.
- Copper/lead separation on the third copper/lead cleaner concentrate at pH 11 in the presence of sodium cyanide with additional 3418A collector and MIBC frother, followed by one cleaning stage at pH 11 with further addition of sodium cyanide, 3418A collector and MIBC frother to produce an upgraded lead concentrate. The rougher tails from the copper/lead separation float constitute the copper concentrate.
- The copper/lead rougher tails and the copper/lead first cleaner tails, feed to the zinc rougher float, are conditioned at pH 11.8 adjusted with lime in the presence of copper sulphate activator.
- Zinc rougher flotation using Aero 5100 as collector with further lime addition to maintain pH 11.8 and further MIBC frother addition.
- Regrind of the zinc rougher concentrate to a target P_{80} of 15 to 20 µm in the presence of additional copper sulphate activator and additional lime to maintain pH 12.
- The reground zinc rougher concentrate was submitted to four zinc cleaning stages with further additions of lime to maintain pH 12, and further Aero 5100 collector addition. The use of sodium metabisulphite (NaMBS) in the zinc cleaners improved the zinc grade to the final zinc cleaner concentrate.

Results of Lock Cycle Tests

A total of eight lock cycle tests were completed to quantify recoveries and concentrate grades for Keg Main Zone mineralization under conditions approaching steady state. Results are summarized in Table 34.

Notes: 1. Combined silver recovery to lead and copper concentrate
2. Combined indium recovery to zinc and copper concentrate

The results of the lock cycle tests on all test composites show that Keg Deposit mineralization responds very well to typical copper/lead/zinc flotation circuits with excellent recoveries of payable metals and acceptable copper, lead and zinc concentrate grades in copper, lead and zinc concentrates. General comments and observations on the lock cycle results include the following:

- There was generally good agreement between the results of the Overall Composite and the average results of the six variability composites, both with respect to grades and recoveries.
- Zinc concentrate grades of greater than 45% zinc were achievable on composites with head grades greater than 1.0 % zinc. The use of sodium metabisulphite (NaMBS) in the zinc cleaner circuit leads to a higher zinc grade in the zinc concentrate (approaching 50% zinc) without impacting on zinc recovery.
- The lead grade in the lead concentrate, which averaged 65% lead, was independent of the head grade of the composites. Excellent lead concentrate grades were achieved even down to a low head grade of 0.15% lead. The lower lead concentrate grade in the lead concentrate from the last lock cycle test (59.4% lead versus 65.5% lead in the first lock cycle test) was due to an increase in cleaner flotation time in the copper/lead cleaner float, which pulled more weight to the third copper/lead cleaner concentrate and impacted on copper/lead separation.
- Excellent copper grades were obtained in the copper concentrate, averaging 27.2% copper, even for the composites with relatively low copper head grade.
- Zinc recoveries to zinc concentrate averaged 88.6% and were generally over 90% for composites with zinc head grades greater than 1.0% zinc.
- Lead recoveries to lead concentrate averaged 82.4% and were all greater than 80% except for the one composite with a low lead head grade which had a 77.5% lead recovery for a 0.15% lead head grade, still quite acceptable for a low head grade.
- Copper recoveries averaged 69.4% and generally followed copper head grade, ranging from 80.2% recovery for a 0.60% copper head grade to 59.0% for a 0.10% copper head grade.

- Excellent silver recoveries were achieved, averaging 57.2% recovery to lead concentrate assaying an average of 5,816 g/t silver, and 22.7% recovery to copper concentrate assaying an average of 1,458 g/t silver. A minor amount, an average of 8.2%, reported to the zinc concentrate which assayed an average of 136 g/t silver. Silver head grade did not have much impact on overall silver recovery.
- The majority of the recoverable indium reported to the zinc concentrate, averaging 74.3% recovery and assaying an average of 320 g/t indium. A lesser amount, 8.6%, was recovered to the copper concentrate assaying an average of 150 g/t indium. No indium reported to the lead concentrate. Indium head grade did not seem to have an impact on overall indium recovery.
- The average tin grades were 1.99% tin in the copper concentrate, 0.44% tin in the lead concentrate and 0.04% in the zinc concentrate. The majority of the tin, an average of 60%, was not recovered and reported to the final float tails which had an average tails tin assay of 0.025% tin.

Tailings Characterization

Tailings solids analyses and the tailings supernatant aging test results to Day 56 are summarized in Tables 36 and 37. These data can be used in preliminary environmental studies for the project.

A static settling test was completed on the zinc flotation tailings from Test LCT1. This test showed that a thickened tailings density of 69% solids (w/w) could be achieved using a feed pulp density of 10% solids (w/w) and a Magnafloc 10 flocculant dosage of 8 g/t. Allowing for a 25% design factor the thickener unit area was measured at 0.10 m^2/t/day implying that the Keg Main Zone flotation tailings settle relatively well.

Tailings Toxicity Tests

Toxicity tests were completed on the day 56 tailings supernatant using Daphnia Magna and rainbow trout. Results are summarized in Table 38 below. The day 56 tailings supernatant passed both the Daphnia magna test and the rainbow trout test.

Table 38 – Toxicity Tests on Lock Cycle test No. 1 Combined Flotation Tailings Day 56 Supernatant

Time (h)	Specification	% Concentration				
		100	**50**	**25**	**12.5**	6.25
Daphnia Magna (number added -10) 50% Mortality after 48 hours - Pass

REBEL ZONE

Two composites, created from coarse rejects of reverse circulation drill samples, were selected from the Rebel Zone to investigate metal recovery through gravity concentration and a sulphuric acid leach. The sample composites represent different degrees of alteration and were chosen based upon limonite content. Composite A was prepared from samples containing high amounts of limonite, while Composite B contains little limonite. This testwork was completed at SGS Canada Inc. located in Burnaby, British Columbia. The following table lists the head grades for each of the composites. Detailed results from SGS are provided in Appendix IX.

Table 39 – Composite Head Grades

Composite	Ag (g/t)	Pb (%)	Zn (%)	Cu (%)	In (ppm)	Sn (ppm)
A	22.0	0.35	1.05	0.13	24.3	250
B	15.5	026	1.55	0.09	15.7	220

Initial recoveries for tin and silver by gravity methods were 10.2% and 25.8%, respectively, for Composite A and 3.2% and 36.8%, for Composite B. The following table summarizes the recoveries by sulphuric acid leach.

Table 40 – Sulphuric Acid Leach Recoveries

Composite	pH	Ag (%)	Pb (%)	Zn (%)	Cu (%)	In (%)
A	1	0	1	88	51	0
	2.5	0	1	78	23	0
B	1	0	1	57	25	0
	2.5	0	0	57	19	0

Results from this testwork are preliminary in nature and demonstrate that additional techniques would need to be investigated to achieve optimum recoveries.

HAMMER ZONE

Cyanide leach tests for silver were performed on 15 oxidized samples from Hammer Zone drill core coarse rejects with silver values ranging from 253 g/t to 1590 g/t. These tests were performed by ALS Minerals in North Vancouver using method Ag-AA13. Certificates of analysis pertaining to these tests can be found in Appendix IV. Initial test used a one hour leach period. This was increased to two hours in an attempt to boost recoveries. The following table lists the results of these tests.

Table 41 – Results from ALS Minerals Cyanide Leach Tests

	Assay Grade	Ag-AA13 (1 hour)		Ag-AA13 (2 hours)	
Sample	Ag (g/t)	Ag (g/t)	Recovery (%)	Ag (g/t)	Recovery (%)
L845507	1010	545.6	54	551.9	55
L845508	414	188.85	46	191.4	46
L845575	328	100.3	31	NSS	NSS
L845620	980	280.1	29	372	38
L845631	1290	199.95	16	288.1	22
L845660	578	240.7	42	281.6	49
L845754	537	166.55	31	200.1	37
L845776	507	252.8	50	278	55
L845968	1590	236.1	15	263.3	17
L845969	426	142.15	33	184.9	43

L845862	618	112.7	18	112.65	18
L845895	298	9.74	3	9.96	3
L840941	289	59.5	21	60.4	21
L840966	253	152.45	60	151.3	60

Further cyanide leach tests involving other splits of the same 15 samples were completed by Kappes, Cassiday & Associates (KCA) of Reno, Nevada in March 2013. Table 42 summarizes the results of this testwork, while a full report describing the procedures and results is contained in Appendix X.

Table 42 – Results from KCA Cyanide Leach Tests

Sample	Head Grade Ag (g/t)	Recovery (%)	Leach Time (hours)	Consumption\ NaCN (kg/MT)	Addition $Ca(OH)_2$ (kg/MT)
L845507	1040.6	93	120	5.16	2.00
L845508	536.3	56	96	3.34	1.60
L845575	276.0	48	120	1.94	1.20
L845620	759.5	93	120	5.91	0.80
L845631	584.5	84	120	5.22	0.80
L845660	583.1	81	96	5.68	0.80
L845754	515.2	81	120	7.77	0.80
L845776	516.9	57	120	2.61	1.60
L845968	1750.2	27	120	3.52	1.20
L845969	381.6	79	120	3.47	0.80
L845904	592.7	62	120	4.09	0.80
L845862	586.9	29	120	4.39	2.00
L845895	19.2	50	96	1.12	0.40
L840941	382.3	64	96	3.27	0.40
L840966	268.4	90	120	3.35	0.80

The results from the KCA testing showed an increase in recovery with respect to the cyanide leach tests performed by ALS Minerals. The recoveries increased by an average of 290%, and by 104% to 1667% increase for individual samples.

MINERAL RESOURCE ESTIMATE

In fall 2012, an initial mineral resource estimate was completed by Giroux Consultants Ltd. of Vancouver, BC on Keg Deposit. A technical report for this report was filed on December 19, 2012 (Giroux and Melis, 2012). A geological solid defining the extent of known mineralization was used to calculate the resource. Mineralization occurs almost everywhere within this solid; however, much of it is pyrrhotite and not economical. The thickest, highest grade mineralization appears to be localized in a fold hinge where axial planar fractures cut this package (north edge of the deposit, near surface). Of particular interest is a higher grade silver and lead zone that occurs at or near surface on the northern edge of the drill area and is almost entirely fracture controlled. This silver and lead rich zone outcrops in places.

Drill holes were "passed through" this geologic solid with the entry and exit points recorded. Using this information the assays were "back tagged" with a code of MIN if inside the solid and WASTE if outside. Fifty-three holes totalling 18,377 m intersected the mineralized solid.

Statistics for the raw assay data are listed below in Table 43 for the mineralized solid and for the surrounding waste.

Table 43 – Assays within the Mineralized Solid and Waste

	Ag (g/t)	Pb (%)	Zn (%)	Cu (%)	Sn (ppm)	In (ppm)	Cd (ppm)
Within Mineralized Solid (Using 4385 Samples)							
Mean grade	15.66	0.15	0.55	0.09	159.2	4.82	96.49
Standard deviation	46.21	0.52	1.32	0.22	362.7	12.62	189.09
Minimum value	0.01	0.001	0.001	0.001	0.1	0.003	0.01
Maximum value	1230.0	9.3	17.5	4.8	10400	320	1000
Coefficient of variation	2.95	3.58	2.42	2.37	2.28	2.62	1.96
Waste (Using 3684 Samples)							
Mean grade	2.54	0.02	0.06	0.01	52.5	0.26	10.42
Standard deviation	8.95	0.12	0.22	0.03	95.7	1.00	35.63
Minimum value	0.01	0.001	0.001	0.001	0.1	0.003	0.01
Maximum value	158.0	2.9	5.7	1.0	2600	28	801
Coefficient of variation	3.52	4.94	3.44	2.23	1.82	3.92	3.42

To determine if capping was required and if so at what level, the grade distributions for each variable in each domain were examined using lognormal cumulative frequency plots. Silver from Keg Deposit can be divided into six overlapping lognormal populations, as tabulated in Table 44.

Table 44 – Silver Populations within the Mineralized Solid

Population	Mean Ag (g/t)	Percentage of Total Data	Number of Assays
1	1134.0	0.05%	2
2	273.9	1.10%	48
3	51.3	13.63%	598
4	6.9	36.55%	1603
5	0.6	48.49%	2126
6	0.02	0.18%	8

Population 1 representing 0.05% of the total samples was considered erratic outlier material and a value of two standard deviations above the mean of Population 2 was used to cap three assays at 576 g/t silver. A similar procedure was used for the other six elements within the mineralized zone and all seven variables within waste. The cap levels are summarized in Table 45.

Table 45 – Capping Levels for all Variables within the Mineralized Solid and Waste

Domain	Variable	Cap Level	Number Capped
Mineralized Solid	Ag	576 g/t	3
	Pb	10.3%	0
	Zn	18.0%	0
	Cu	2.6%	3
	Sn	5280 ppm	4
	In	122 ppm	3
	Cd	1100 ppm	0
Waste	Ag	64 g/t	16
	Pb	1.3%	7
	Zn	2.4%	7
	Cu	0.3%	7
	Sn	1050 ppm	3
	In	10 ppm	5
	Cd	310 ppm	8

The results of capping are shown in Table 46.

Table 46 – Capped Assays within the Mineralized Solid and Waste

	Ag (g/t)	Pb (%)	Zn (%)	Cu (%)	Sn ppm	In ppm	Cd Ppm
Within Mineralized Solid (Using 4385 Samples)							
Mean Grade	15.40	0.15	0.55	0.09	157.1	4.75	96.49
Standard Deviation	41.42	0.52	1.32	0.20	320.8	11.52	189.09
Minimum Value	0.01	0.001	0.001	0.001	0.1	0.003	0.01
Maximum Value	576.0	9.3	17.5	2.6	5280.0	122	1000

Waste (Using 3684 Samples)							
Mean Grade	2.32	0.02	0.06	0.01	51.8	0.24	9.80
Standard Deviation	6.14	0.09	0.17	0.02	83.0	0.78	26.17
Minimum Value	0.01	0.001	0.001	0.001	0.1	0.003	0.01
Maximum Value	64.0	1.3	2.4	0.3	1050	10	310
Coefficient of Variation	2.65	3.84	2.72	1.76	1.60	3.22	2.67

Composites

Uniform down hole composites, 5 m in length, were produced to honour the mineralized solid. Intervals at the solid boundaries, less than 2.5 m in length, were combined with adjoining samples to produce a uniform support of 5 ± 2.5 m. Composites were also produced for areas outside the mineralized solid in areas considered waste. Unsampled intervals at the tops and

bottoms of holes were set to low values and used to produce the waste composites. Table 47 shows the statistics for both sets of 5 m composites.

Table 47 – Five Metre Composites within the Mineralized Solid and Waste

	Ag (g/t)	Pb (%)	Zn (%)	Cu (%)	Sn ppm	In ppm	Cd Ppm
Within Mineralized Solid (Using 2202 Samples)							
Mean Grade	10.42	0.10	0.36	0.07	124.3	3.15	65.72
Standard Deviation	21.92	0.25	0.66	0.11	204.8	6.21	110.24
Minimum Value	0.01	0.001	0.001	0.001	0.1	0.003	0.01
Maximum Value	273.9	3.3	10.2	1.5	2471.7	57.9	812.2
Coefficient of Variation	2.10	2.59	1.83	1.66	1.65	1.97	1.68
Waste (Using 2394 Samples)							
Mean Grade	1.81	0.02	0.05	0.01	44.2	0.19	7.74
Standard Deviation	3.73	0.04	0.10	0.02	64.9	0.49	15.72
Minimum Value	0.01	0.001	0.001	0.001	0.1	0.003	0.01
Maximum Value	54.0	0.5	1.3	0.2	903.4	6.9	193.3
Coefficient of Variation	2.06	2.54	1.99	1.45	1.47	2.59	2.03

As all variables showed a strongly positive skewed grade distribution, a Pearson correlation matrix was generated for variables within the mineralized zone from log transformed values. The correlation matrix is provided in Table 48.

Table 48 – Pearson Correlation Coefficients

	Ag	Pb	Zn	Cu	Sn	In	Cd
Ag (g/t)	1.0000						
Pb (%)	0.9098	1.0000					
Zn (%)	0.8359	0.7118	1.0000				
Cu (%)	0.6397	0.3743	0.6883	1.0000			
Sn (ppm)	0.8529	0.7525	0.7604	0.5706	1.0000		
In (ppm)	0.7408	0.5662	0.9461	0.7013	0.6733	1.0000	
Cd (ppm)	0.8330	0.6883	0.9891	0.6879	0.7787	0.9468	1.0000

In general, there is reasonable correlation between all variables but there is an excellent correlation (greater than .90) between silver-lead, zinc-indium, zinc-cadmium and indium-cadmium and good correlation (greater than .70) between silver-zinc, silver-tin, silver-indium, silver-cadmium, lead-zinc, lead-tin, zinc-tin, copper-indium and tin-cadmium.

Variography

Pairwise relative semivariograms were used to model each variable within the mineralized solid. The down hole direction was modeled first to establish the nugget effect and sill levels. A geometric anisotropy was identified in all cases with the two longest directions of continuity along strike at azimuth 75^{o} and plunging -15^{o} to the east and down dip at azimuth 345^{o} dipping -

50°. The third direction along azimuth 165° dipping -40° had no sample pairs closer than 50 m so a short range was assumed. The high correlation between variables is reflected in the variography, with all models similar in shape and overall distances. The nugget to sill ratio, a reflection of the sample variability, was quite reasonable ranging from a low of 20% for indium to a high of 37.5% for lead.

For waste material a single isotropic nested model was fit to all variables with the longest range a constant 180 m. The models are summarized below in Table 49.

Table 49 – Semivariogram Parameters

Domain	Variable	C_0	C_1	C_2	Az/Dip	Ranges (m)	Az/Dip	Ranges (m)	Az/Dip	Ranges (m)
Mineralized Solid	Ag	0.24	0.28	0.18	75/-15	35 – 120	345/-50	25 - 100	165/-40	15 - 40
	Pb	0.30	0.34	0.16	75/-15	30 – 120	345/-50	25 - 100	165/-40	15 - 40
	Zn	0.30	0.31	0.20	75/-15	45 – 130	345/-50	25 – 100	165/-40	15 - 40
	Cu	0.15	0.20	0.08	75/-15	25 – 120	345/-50	25 – 100	165/-40	15 - 40
	Sn	0.10	0.30	0.10	75/-15	40 – 120	345/-50	25 – 100	165/-40	15 - 40
	In	0.30	0.35	0.24	75/-15	40 – 120	345/-50	25 – 100	165/-40	15 - 40
	Cd	0.32	0.33	0.24	75/-15	50 – 100	345/-50	25 – 100	165/-40	15 - 40
Waste	Ag	0.25	0.30	0.31	Omni Directional			25 – 180		
	Pb	0.30	0.30	0.30	Omni Directional			25 – 180		
	Zn	0.28	0.30	0.36	Omni Directional			25 – 180		
	Cu	0.14	0.20	0.29	Omni Directional			32 – 180		
	Sn	0.14	0.30	0.26	Omni Directional			26 – 180		
	In	0.30	0.30	0.47	Omni Directional			30 – 180		
	Cd	0.30	0.38	0.32	Omni Directional			25 – 180		

Block Model

A block model with blocks 20 x 20 x 5 m in dimension was built to cover the mineralized solid. Within each block the percentage below surface topography and the percentage within the mineralized solid were recorded. The block model origin is described below.

Lower left corner of model
585800 East Column Size = 20 m 71 Columns
6939540 North Row Size = 20 m 45 Rows

Top of Model
1345 Elevation Level Size = 5 m 119 Levels
No Rotation

Bulk Density

The bulk density for rock at Keg Deposit was established from 907 specific gravity determinations made from pieces of drill core using the weight in air - weight in water

procedure. The results are shown in Appendix * and the results are summarized as a function of rock type in Table 50.

Table 50 – Specific Gravity Determinations Sorted by Rock Type

Rock Type	Number	Minimum	Maximum	Average
ARG	46	2.38	2.87	2.66
CGL	5	2.62	3.64	2.86
CHT	29	2.48	3.51	2.81
CSL	3	2.63	2.92	2.75
FLR	14	2.31	2.74	2.59
ICL	425	1.84	3.59	2.76
LST	50	2.22	3.07	2.71
MET	7	2.49	2.73	2.60
OVB	1			2.68
SLA	2			2.65
SLM	1			2.59
SLT	252	2.29	3.30	2.71
SSS	72	2.33	3.23	2.73
Total	**907**	**1.84**	**3.64**	**2.73**

There is a wide range of specific gravities in most of the rock types and the specific gravity of any given sample is more a function of sulphide content than host rock type. As a result, a specific gravity value was interpolated into each block in the model using the inversed distance squared procedure.

Grade Interpolation

Grades for silver, lead, zinc, copper, tin, indium and cadmium were interpolated into blocks within the mineralized solid using Ordinary Kriging. The kriging exercise was completed in a series of four passes with the search ellipse for each pass determined by the range of the semivariogram in each of the three principal directions. In the first pass the search ellipse dimensions were set to one quarter of the semivariogram range and a minimum of four composites were required to estimate a block. For blocks not estimated in Pass 1 a second pass was completed expanding the search ellipse to half the semivariogram range. Again a minimum of four composites were required to estimate the block. A third pass using the full range and a fourth pass using twice the range completed the kriging exercise. In all cases the maximum number of composites used was set to 12 with a maximum of three composites allowed from any given drill hole. This insured that each block was estimated using a minimum of two drill holes.

For all estimated blocks with some percentage outside the mineralized solid, in waste, a similar exercise was completed using only composites outside the mineralized solid. In this manner the edge dilution was determined for estimated blocks from actual assays.

The search parameters and number of blocks estimated in each pass are shown in Table 50 for silver.

Table 51 – Kriging Search Parameters for Silver

Domain	Pass	Number Estimated	Az/Dip	Dist. (m)	Az/Dip	Dist. (m)	Az/Dip	Dist. (m)
Ag in Mineralized Solid	1	119	75°/-15°	30.0	345°/-50°	25.0	165°/-40°	10.0
	2	1,577	75°/-15°	60.0	345°/-50°	50.0	165°/-40°	20.0
	3	26,736	75°/-15°	120.0	345°/-50°	100.0	165°/-40°	40.0
	4	23,344	75°/-15°	240.0	345°/-50°	200.0	165°/-40°	80.0
Ag in Waste	1	574	Omni Directional			45.0		
	2	4,746	Omni Directional			90.0		
	3	3,196	Omni Directional			180.0		
	4	125	Omni Directional			360.0		

Surface mapping and drill hole interpretation was used to establish the limits of the mineralized solid and hence geologic continuity. Grade continuity can be quantified by semivariogram analysis. By orienting the search ellipse in the directions of maximum continuity, as established by variography, the grade continuity can be utilized to classify the resource.

In more developed properties, blocks estimated in Pass 1 using one quarter of the semivariogram range might be considered measured, while those estimated in Pass 2 using half the range might be indicated. In the case of Keg Deposit, the drill hole spacing is still too coarse to classify any of this mineral resource as measured or indicated. Table 51 shows that only three percent of the blocks were estimated in Passes 1 and 2. As a result, all blocks are considered inferred at this time.

Table 52 shows the mineral resource estimated if one could mine to the limits of the mineralized solid. This mineral resource contains only the mineralized portions of blocks. A silver cut-off grade of 16 g/t is highlighted as a possible open pit cut-off grade, although at this time no economic evaluation has been completed.

Table 52 – Inferred Mineral Resource within Mineralized Solid

Cut-off (Ag g/t)	Tonnes > Cut-off (tonnes)	Grade > Cut-off						
		Ag (g/t)	Pb (%)	Zn (%)	Cu (%)	Sn (ppm)	In (ppm)	Cd (ppm)
10.0	63,970,000	23.63	0.21	0.64	0.12	224.5	5.07	116.09
12.0	54,640,000	25.80	0.22	0.68	0.13	238.5	5.29	123.40
14.0	46,730,000	27.97	0.24	0.72	0.14	252.0	5.50	130.52
16.0	**39,760,000**	**30.25**	**0.26**	**0.77**	**0.15**	**265.7**	**5.77**	**138.06**
18.0	33,900,000	32.55	0.27	0.81	0.16	278.8	6.02	145.24
20.0	29,210,000	34.74	0.29	0.85	0.16	292.5	6.24	151.64

DEPOSIT TYPES

Keg Main Zone comprises a large-scale, low grade, multi-element mineralized system that is being explored as a bulk tonnage target. It is located 25 km north of the former mines of the Anvil District, which comprised concordant and syngenetic Sedex zinc-lead-silver deposits. Keg Main Zone differs from the deposits of the Anvil District because it is predominantly discordant, epigenetic and lower grade. Keg Main Zone has an atypical metal suite and, although it is

believed to be hydrothermal in origin, the deposit is located some distance from the closest known intrusion.

There are no known deposits that are directly analogous to Keg Main Zone. Table 54 lists the average grades of the mineral resources from some significant, multi-element, bulk tonnage deposits in comparison to Keg Main Zone.

Table 54 – Comparison of Keg Main Zone with Multi-Metal, Bulk-Tonnage Deposits

Deposit/ Prospect	Ag (g/t)	Au (g/t)	Zn (%)	Pb (%)	Cu (%)	Sn (ppm)	In (ppm)	Reserve Resource (Mt)	Notes
Keg (Silver Range)	30.25	-	0.77	0.26	0.15	265	5.77	39.76	Inferred[1]

[3] Capstone Mining Corp., 2012
[4] Thompson Creek Metals Company Inc., 2012
[5] Armitage et al, 2011

Keg Main Zone lies in the Northern Cordillera, which hosts numerous low grade, bulk tonnage deposits, including Capstone Mining Corp.'s Minto Mine and Thompson Creek Metals Company Inc.'s Mt. Milligan Deposit. The Minto Mine, located in central Yukon, is a copper-gold-silver open pit mine that commenced production in 2007. Its deposit type is also uncertain, but it has attributes of porphyry copper, magnetite skarn and Iron Oxide Copper Gold (IOCG) deposits. The Mt. Milligan porphyry copper-gold deposit is located in central British Columbia and is under construction as an open pit mine, which is expected to be operating in 2013.

The most similar of the listed deposits in terms of size and grade is Kootenay Silver Inc.'s Promontorio Deposit in northwest Mexico. This deposit comprises a carbonate-rich, diatreme-hosted, polymetallic silver-lead-zinc deposit.
South American Silver Corp.'s Malku Khota deposit in Bolivia appears to be the most analogous to Keg Main Zone in terms of geochemistry and possible genesis. Like Keg Main Zone, early exploration in the Malku Khota area focussed on high grade stratabound sulphide lenses within clastic sedimentary units. These lenses were likely associated with Jurassic and Cretaceous rift development. A later hydrothermal event related to a hypothesized intrusive-hosted gold system brought minor gold with new and redistributed silver, lead, zinc, copper, indium and gallium mineralization into the clastic rocks. The mineralized zone is up to 200 m in true width and is at least four kilometres long.

Keg Main Zone is distinguished from these other bulk tonnage deposits by its uncommonly high tin values.

Hammer Zone comprises narrow, precious metal-rich, sulphide-bearing, quartz veins hosted in granite belonging to the Anvil Batholith, 12 km east of the former Faro Mine. Mineralization is exposed in three deep recessive linear features on the steep hillside. Further uphill, to the south, mineralization is sparse, often only found in frost boils. The Hammer Zone can be characterized as an epithermal vein, some of the most noteworthy examples of which can be found in the Pachuca Real Del Monte district in Mexico.

Lower parts of epithermal veins are typically restricted to a single fault plane that splays out higher in the system to become a broader zone of dispersed fractures (Figure 131). These veins and fractures may not reach the surface, limiting the effectiveness of prospecting. Silver grades within the veins are strongly zoned, the highest occurring near the centre of the system, defining a bonanza zone. In the Purisima-Colon vein system, the bonanza zone is 900 m long by 200 m high, averaging 1.5 kg/t (43.75 opt) silver (Dreier, 2005). Below the bonanza zone, silver values diminish and the vein becomes enriched in base metals. Silver and base metal values quickly become depleted above the bonanza zone. During formation, temperatures were higher near the base of the vein system resulting in enrichment of elements such as tin at the base, giving way to manganese and other low temperature elements towards the top.

A more local analogy for the Hammer Zone is the system of silver-rich veins that comprise the Keno Hill Camp. This camp is the second largest primary silver producer in Canada, with more than 214 million ounces produced since the early 1900s. Table 55 lists several of the similarities between Hammer Zone and Keno Hill Camp (Cathro, 2006)

Table 55 – Comparison of Hammer Zone and Keno Hill Camp

Variable	Hammer Zone	Keno Hill Camp
Wallrocks	Granite	Interlayered quartzite and schist
Primary Ore Minerals	Galena, tetrahedrite	Galena, tetrahedrite
Accessory Metals	Zn, As, Sb, Sn (Au)	Zn, As, Sb, Sn (Au)
Gangue Minerals	Siderite > quartz	Siderite > quartz
Oxidation	Up to 150 m below surface	Up to 100 m below surface
Vein Orientation	Steeply dipping	Steeply dipping

District Size	About 50 km^2	About 80 km^2
Average Grade	752 g/t (22 oz/ton) * up to 4620 g/t (135 oz/ton)	1373 g/t (40 oz/ton) but some exceptional ore shoots exceed 500 oz/ton
Average Ag:Pb Ratio	14 oz Ag/1% Pb*	Usually 3 oz Ag/1% Pb for galena and 6 oz Ag/1% Pb overall
Age	Mid or late(?) Cretaceous	Mid-Cretaceous
Ground Conditions	Homogeneous granite wallrocks could be positive for ground conditions and continuity	Heterogeneous wallrocks often result in poor ground conditions

*based upon 18 mineralized oxide and sulphide vein intersections to date

OTHER STUDIES

Environmental Studies

Environmental monitoring on the Property commenced in 2010 and includes ongoing baseline water quality and wildlife surveys.

The water quality surveys are being performed by J. Gibson Environmental Consulting of Whitehorse. Since August 2010, several sites on the Property have been sampled on a quarterly basis but, as of October 2012, sampling frequency in the vicinity of Keg Main Zone was increased to monthly. The samples are analyzed for routine chemistry, total metals, dissolved metals, total organic carbon, total cyanide and mercury plus field measurements for pH, water temperature and flow volumes. The most recent water quality reports can be found in Appendix XI.

In November 2012, a base station for monitoring climate was set up on the Property, near the Keg Main Zone.

In summer 2011 and winter 2011-2012, wildlife surveys were conducted on the property by Laberge Environmental Services of Whitehorse, Yukon. Additional surveys are planned.

Heritage Studies

In May 2012, Matrix Resources Ltd. began a preliminary heritage resources overview assessment for the Property. Detailed ground follow-up is planned for summer 2013.

Access Route Studies

In November 2012, EBA Engineering Consultants Ltd. was contracted to evaluate potential routes for an all-season access route from the Faro haul road to Keg Main Zone. Results of this evaluation are pending.

INTERPRETATION AND CONCLUSIONS

Keg Main Zone is a bulk-tonnage silver-lead-zinc-copper±tin±indium deposit situated north of the formerly producing zinc-lead-silver mines of the Anvil District. The inferred mineral resource for the Keg Deposit comprises 39,760,000 t grading 30.25 g/t silver, 0.26% lead, 0.77% zinc, 0.15% copper, 265.7 ppm tin, 5.77 ppm indium and 138.06 ppm cadmium. This resource is stated above a 16.0 g/t silver cut-off grade.

The deposit is distinguished from other large base metal showings and deposits elsewhere in Yukon by its uncommonly high silver contents relative to contained base metals and by its enrichments of tin, indium and other relatively rare metals. Metallurgical testwork has demonstrated that flotation processing can effectively recover most of the silver, copper, zinc, lead and indium. Tin recovery is poor.

Keg Deposit is favourably situated in an area where several regional structural elements occur close together. This cluster of large-scale structures likely played an important role in ground preparation for the deposit. The mineralization is hosted in strongly altered and folded siliceous siltstone and chert, which may have been deformed by a buried thrust fault that failed to break through these units. During folding of siliceous siltstone and chert, small-scale fracturing produced permeability in the otherwise relatively impermeable rocks.

In addition to the ground preparation described above other elements probably played roles in the development of mineralization within Keg Deposit. The folded and fractured siliceous siltstone and chert host rocks are interbedded with silty limestone and calcareous siltstone, which are the most reactive rocks in the area. Fluids channeling through the fractured siliceous siltstone and chert likely flowed upwards or laterally into the reactive stratigraphy. A small intrusive plug located approximately two kilometres south of the deposit may have provided a local heat source that powered at the mineralizing hydrothermal cell. Late normal and dip-slip faults crosscut the folded siliceous siltstone and chert and may have acted as deep-seated fluid conduits that localized hydrothermal flow.

A number of other showings elsewhere on the Property, exhibit geochemical signatures that resemble the Keg Main Zone. The Rebel Zone is the most advanced of these other showings and is similarly enriched in silver, lead, zinc, copper, indium and tin. Drilling to date on Rebel Zone has been insufficient to adequately outline and define the mineralization; however, it is believed the potential exists for a significant bulk tonnage deposit.

In addition to the bulk tonnage potential within the Keg Property, numerous high-grade epithermal silver veins have been identified within both the Tay Trend and Mt. Mye Trend. Showings such as Hammer, Cody, Snap and Owl Southwest zones are all strongly enriched in silver, but also contain elevated tin and indium, both of which are uncommon in Yukon. The presence of tin and indium within both the vein and the bulk tonnage targets on the Keg Property suggest that the two styles are related. The high-grade veins may be distal or higher level the expression of bulk tonnage zones.

Exploration conducted to date at Keg Deposit has defined a sizeable mineral resource, and metallurgical testwork has produced encouraging results. The Property is very well situated in regards to infrastructure. Further work at the Keg Main Zone and the other showings on the Keg Property is warranted.

RECOMMENDATIONS

Silver Range should conduct a scoping level economic evaluation of the Keg Deposit and additional diamond drilling designed to better define and expand the mineral resource. Metallurgical testwork and geotechnical, heritage and environmental studies should be continued.

Exploration should also continue to evaluate the other showings and geochemical anomalies on the Property. A number of the showings are drill ready, but many other targets should receive more comprehensive surface exploration before advancing to the drill-stage. Given the large number of showing and anomalies, this work will take several years to complete.

Respectfully submitted,

ARCHER, CATHRO & ASSOCIATES (1981) LIMITED

Geological Mapping carried out by Silver Range Resources Ltd in 2010, 2011 (Mapped area is distinguished by a lack of dashed line hatching)

TERTIARY

Tertiary Volcanics

- Tv — small plugs of light grey weathering, flow banded, rhyolitic quartz sanidine porphyry with rare biotite, flow banded, quartz feldspar porphyry with obsidian and perlite, and flow banded, locally flow laminated, fine-grained, welded and ash flow tuffs.
- Tvj

CRETACEOUS

South Fork

- Kst — light grey weathered, massive, medium to coarse-grained quartz-feldspar dominated crystal tuff

Selwyn Plutonic Suite

- Ksp — light grey to white weathered, biotite +/- hornblende granite with megacrysts of feldspar up to 10cm long.
- mKV

TRIASSIC

Jones Lake Formation

- Trj — grey-brown weathered, thin bedded, calcareous siltstone and sandstone that is sometimes cross bedded and interbedded with silty limestone

CARBONIFEROUS TO PERMIAN

Mount Christie Formation

- CPmc — light grey-brown, black and maroon, thin to medium bedded chert with minor interbeds of grey siltstone; maroon thin bedded siltstone

MISSISSIPPIAN

Tay Formation

- Mt — light grey weathered, medium bedded, silty limestone interbedded with dark grey, variably silty, bioclastic limestone; dark grey, medium to thick bedded, dirty arenite, brown weathered, medium-grained boundstone, brown weathered, thin bedded sandstone with siltstone interbeds
- Mt2
- CMal — light grey, very fine-grained, completely altered rock with veinlets of sulphide comprising dominantly pyrrhotite, pyrite and arsenopyrite

DEVONIAN TO MISSISSIPPIAN

Earn Group

- DMe — undivided Earn Group; mostly DMp and Dp

LOWER MISSISSIPPIAN

Felsic Volcanic Unit

- mKV — light grey weathered, aphanitic, tuffaceous rocks; grey weathered, medium-grained biotite-bearing granitic rock that occurs as rounded bomb-shaped fragments.

UPPER DEVONIAN TO MID-MISSISSIPPIAN

Prevost Formation

- DMp — brown weathered, laminated and thin bedded, recessive shale; black, thin bedded siltstone and rare black chert
- DMp2
- DMp3 — dark grey to black weathered, resistant chert conglomerate with coarse-grained chert arenite and rare black, graphitic shale
- DMp3 — orange and brown weathered, laminated and thin bedded, burrowed, variably dolomitic, siltstone and fine-grained sandstone; minor, grey, thick bedded to massive, fine to medium-grained, diagenetically viscous arenite (yellow polygons on map)

LOWER DEVONIAN TO UPPER DEVONIAN

Portrait Lake Formation

- Dp — gun-blue weathered, black, recessive shale, siltstone and rare chert

ORDOVICIAN TO SILURIAN

Road River Group

- OSrv — light grey to orange weathered, grey fresh, fine-grained, mildly calcareous siltstone to silicified siltstone with wavy laminations and cm-scale circular blobs of sulphide; black, thin bedded siltstone

CAMBRIAN TO ORDOVICIAN

Rabbitkettle Formation

- COrh — green and purple striped, calc-silicate rock with rare layers of dark green, sometimes amygdaloidal mafic volcanic (?) rock up to one meter thick
- COrt
- COrh2 — dark grey and grey-brown, laminated and thin-bedded, quartzose siltstone with minor shale horizons; buff weathered, dark grey, laminated, fine-grained sandstone and siltstone; laminations may be defined by magnetite (COrt) white and grey (stripe), laminated and thin bedded quartzose siltstone

- bedding
- cleavage, foliation
- late foliation, less than cm-spaced fracture set
- fold axis
- fracture
- fault plane
- thrust fault plane
- fold axis; synform
- fold axis; antiform
- defined contact
- approximate contact
- inferred contact
- thrust fault; teeth on hanging wall side
- normal fault; teeth on hanging wall side
- fault; movement unknown
- mapping limit
- cross section line (A – A')

REFERENCE: Gordey, S.P. and Makepeace, A.J. (compilers) 2001: Bedrock Geology, Yukon Territory; Geological Survey of Canada, Open File 3754 and Exploration and Geological Services Division, Yukon India and Northern Affairs Canada, Open File 2001-1, scale 1:1 000 000.

Modified from Yukon Regional Geology Gordey and Makepeace (2001) (Map area is distinguished by dashed line hatching)

QUATERNARY

- G — unconsolidated glacial, glaciofluvial and glaciolacustrine deposits; fluviatile silt, sand, and gravel, and local volcanic ash, in part with cover of soil and organic deposits

LOWER TERTIARY

Ross

- Rb — locally amygdaloidal, dark grey-green olivine basalt rocks and Ross, farther removed, scattered occurrences of rhyolitic lave and dikes

MID-CRETACEOUS

South Fork

- Kst — dark brown weathering, locally columnar jointed, massive, densely welded, biotite-quartz-hornblende-feldspar tuff

Selwyn Suite

- mKS — plutonic suite of intermediate to felsic composition and rarely syenitic; equivalent felsic dykes

MIDDLE TO UPPER TRIASSIC

Jones Lake

- TrJ — brown to buff weathering, calcareous fine-grained sandstone, argillite and shale; extensive ripple cross-lamination and bioturbation; massive, light grey weathering, fine-crystalline, dark grey limestone; minor orange weathering platey limestone

CARBONIFEROUS TO PERMIAN

Mount Christie

- CPmc — burrowed, interbedded greenish grey cherty shale and green shale; thin to medium bedded, light grey-green to black chert; black siliceous slate and siltstone; minor quartzite, limestone and dolostone; locally abundant, large grey barite nodules

MISSISSIPPIAN

Tay

- Mt — mixed, generally fine clastic and carbonate assemblage with locally thick regionally mappable carbonate horizons

DEVONIAN AND MISSISSIPPIAN

Earn Group

- DMe — complex assemblage of submarine fan and channel deposits from siliciclastic mudstone and chert-arenite including separated small occurrences of felsic volcanic rocks

Prevost

- DMp — thin bedded, laminated slate with thin to thickly interbedded fine to medium-grained chert-quartz arenite and wacke; thick members of chert pebble conglomerate; black siliceous siltstone; nodular and bedded barite; rare limestone

Portrait Lake

- Dp — silvery blue weathering black shale, argillite, cherty argillite and thin bedded chert; nodular and bedded barite; rare limestone

SILURIAN TO MIDDLE DEVONIAN

McEvoy

- DSm — buff, platy siltstone overlain by carbonate and quartzite

ORDOVICIAN TO SILURIAN

Road River Group

- OSr — black shale and chert overlain by orange siltstone or buff platy limestone; locally contains beds as old as Middle Cambrian

CAMBRIAN TO ORDOVICIAN

Marmot

- CSm — lower Paleozoic mostly mafic volcanics, in locally thick accumulations but also of common occurence as undifferentiated thin scattered members within other units

CAMBRIAN TO SILURIAN

Rabbitkettle Formation

- COr — basinal limestone that may locally include older and younger basinal pelitic strata undivided

LOWER CAMBRIAN

Gull Lake

- ICg — dominantly fine clastic assemblage with local volcanic units

UPPER PROTEROZOIC TO LOWER CAMBRIAN

Hyland Group

- PCh — consists upwards of coarse turbiditic clastics, limestone and fine clastics typified by maroon and green shale

KEG PROPERTY

0 250 500 1000 m

FILE: .../2012

DATE:JULY 2013

Thin bedded, light grey-brown, black and maroon chert. Approximate thickness of unit near the Property is approximately 250 m (note: thickness is very approximate due to intense folding of unit in this area).

Medium bedded, light grey weathered, dark grey silty limestone and calcareous siltstone interbedded with dark grey to black siltstone which can be quartz rich. Maximum thickness of unit at the Property approximately 275 m.

Thin and medium bedded, black chert and siltstone with rare, medium-grained arkosic sandstone. Maximum thickness near the Property approximately 180 m.

Laminated to thin bedded, dark-grey, white and grey-brown quartzose siltstone with minor shale horizons; laminated, buff weathered, dark grey fine-grained sandstone and siltstone with laminations being defined by pyrrhotite west of Keg Main zone. Minimum thickness of unit near the Property is approximately 300m.

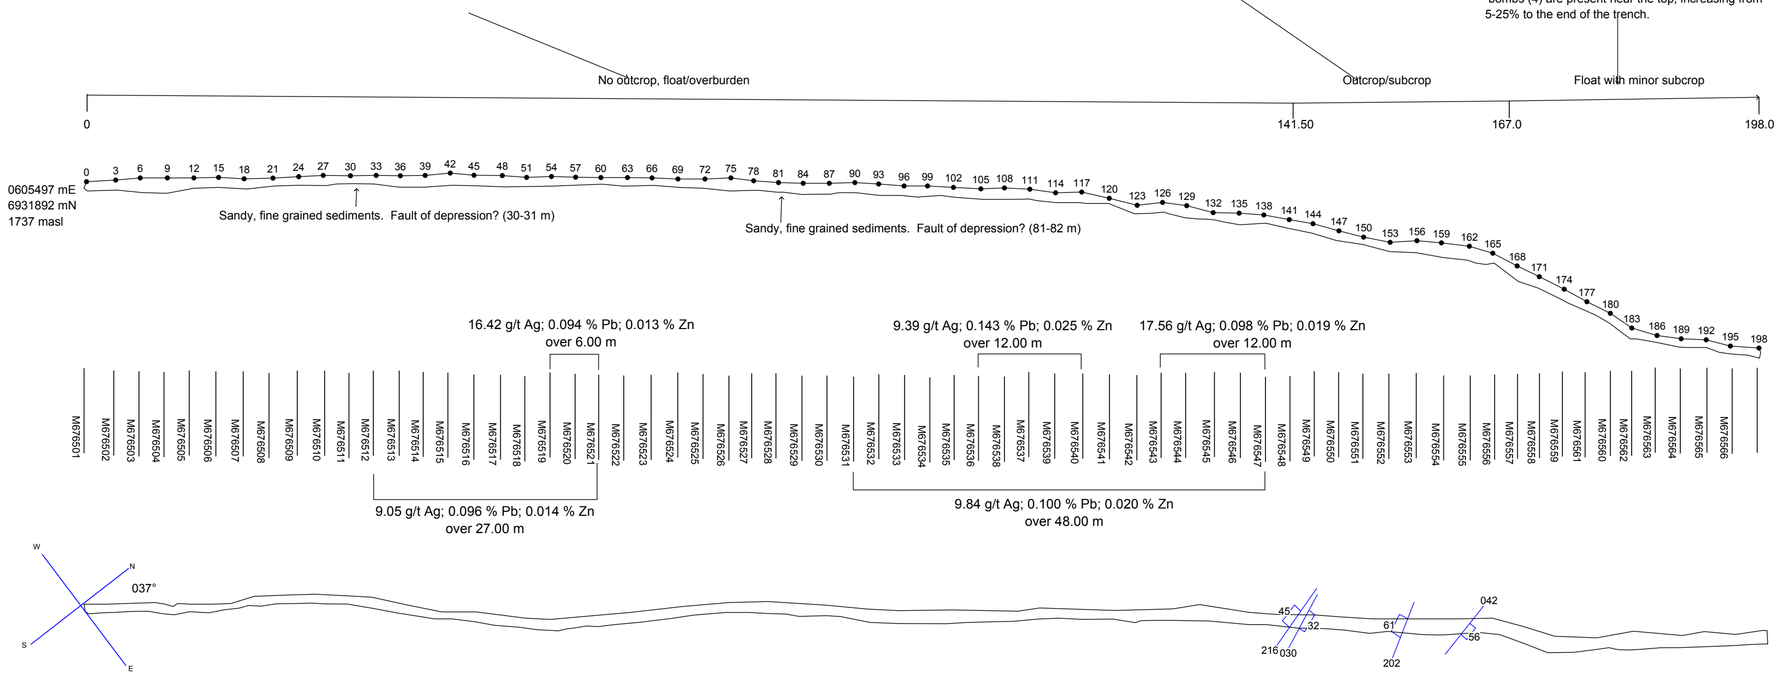
Looking NW



Interval consists of angular-subangular rubble with some large, rounded floatstones. Rocks are moderately to highly oxidized. Float lithology consists of:

1. Grey to dark brown, sometimes maroon chert. No veins/veinlets or mineralization seen within, roughly 30-40% of interval
2. Dark grey, fine grained vesicular pyroclast. No veins/veinlets or mineralization seen iwthin, roughly 155 of interval
3. Volcanic bombs – dark grey, siliceous, arsenopyrite-rich. Most have fair-strong amounts of interstutual arsenopyrite. Bombs range from 5-40 cm in diameter.

From 0-33 m, 15% bombs while from 33-141 m, roughly 40% of intervanl consists o bombs. Bombs are more prevalent near the top.

Interval consists of: (1), as described, making up 95% and; (3), as described, making up 55. Volcanic bombs (2) are only present in the top 20-30 cm.

Interval consists of: (1), as described, 30-60% of interval; (2), as described, 15-20% and; (3), as described. Volcanic bombs (4) are present near the top, increasing from 5-25% to the end of the trench.

APPENDIX I

STATEMENT OF QUALIFICATIONS

STATEMENT OF QUALIFICATIONS

I, Matthew R. Dumala, geological engineer, with business addresses in Vancouver, British Columbia and Whitehorse, Yukon Territory and residential address in Burnaby, British Columbia, do hereby certify that:

1. I graduated from the University of British Columbia in 2002 with a B.A.Sc in Geological Engineering, Option l, mineral and fuel exploration.

2. I registered as a Professional Engineer in the Province of British Columbia on November 14, 2008 (License Number 32783).

3. From 2003 to present, I have been actively engaged in mineral exploration in the Yukon Territory.

4. I have personally participated in the fieldwork reported herein.

Matthew R. Dumala, P.Eng.

APPENDIX II

STATEMENT OF EXPENDITURES

Statement of Expenditures
Keg – Group 1
Keg 1-11, 20-31, 40-105, 110-267, 364-375, 450-493,
676-681, 1173-1332, 1339-1349, 1585-1804 Mineral Claims
February 13, 2013

Contract Diamond Drilling

ROCK SAMPLE DESCRIPTIONS

Rock Sample Descriptions

Project: Keg Zone: Page ___ of ___

Sample #	Grid East	E	Grid North	N	Type		Sample kept		Geochem Results	
676112	UTM: 581826	E	UTM: 6946236	N	Sample Width:	10 cm	Photo taken:	yes	Ag	ppm
Sampler:	Elevation: 1340	m			Dimension:	10x5m			Au	ppm
D. Coolidge	Comments:									ppm
Date:										ppm
6/18/2012	Cherty, weakly siliceous siltstone. Green-brown to biege weathering. From a 10x5m weak "kill zone" trending NW. Cross cutting fractures: F1 140/70; F2 216/76. 1cm clear qtz vnlts, 1-2% diss Py; trace chalcopyrite. Weak manganese on fractures.									ppm

Sample #	Grid East	E	Grid North	N	Type		Sample kept		Geochem Results	
676113	UTM: 581816	E	UTM: 6946234	N	Sample Width:	cm	Photo taken	no	Ag	ppm
Sampler:	Elevation:	m			Dimension:	2x 3 m				ppm
D. Coolidge										ppm
Date:										ppm
6/18/2012	Bleached-buff-rusty-orange weatherd cherty siltstone. 0.5-1% fig pyrite in siliceous fracture filled veinlets. Weak manganese.									ppm

Sample #	Grid East	E	Grid North	N	Type		Sample kept		Geochem Results	
676114	UTM: 581669	E	UTM: 6946267	N	Sample Width:	20x15x10cm cm	Photo taken	yes	Ag	ppm
Sampler:	Elevation: 1355	m			Dimension:					ppm
D. Coolidge	Comments:									ppm
Date:										ppm
6/18/2012	From anomalous soil site # ZZ11557. Weakly fractured, siliceous light grey to clear, sugary textured quartzite. No visible sulphides or oxides. Located at margin of tree covered swampy area; perma frost depth 15cm below moss.									ppm

Sample #	Grid East	E	Grid North	N	Type		Sample kept		Geochem Results	
676115	UTM: 581673	E	UTM: 6946247	N	Sample Width:	10 cm	Photo taken	no	Ag	ppm
Sampler:	Elevation:	m			Dimension:	10x20 cm				ppm
D. Coolidge	Comments:									ppm
Date:										ppm
6/18/2012	Light grey to clear, sugary textured quartzite. Rusty orange limonite on fractures, weak manganese on fractures. Weak fracture fill limonite and silica on weathered face. Weak light green scorodite?									ppm

Sample #	Grid East	E	Grid North	N	Type		Sample kept		Geochem Results	
676116	UTM: 581692	E	UTM: 6946246	N	Sample Width:	10 cm	Photo taken	no	Ag	ppm
Sampler:	Elevation:	m			Dimension:	30x30cm				ppm
D. Coolidge	Comments:									ppm
Date:										ppm
6/19/2012	Taken 20m east of 676115. Siliceous siltstone At or near the contact with quartzite. 3% vfg pyrite disseminated (?) and on fracture faces. Yellow-orange limonite on fractures, weakly foliated. Taken from two blocky 20cm3 pieces of subcrop.									ppm

Sample #	Grid East	E	Grid North	N	Type		Sample kept		Geochem Results	
676117	UTM: 581694	E	UTM: 6946244	N	Sample Width:	0.5cm cm	Photo taken	yes	Ag	ppm
Sampler:	Elevation: 1345	m			Dimension:	10x15cm				ppm
D. Coolidge	Comments:									ppm
Date:										ppm
6/19/2012	Semi massive medium grained galena and smithsonite coating on weathered fracture face of dark grey-black siliceous siltstone. Attitude of fracture with galena ~ 322/66. Taken from a 30 x 40 cm exposed blocky tulus or subcrop on a NE facing rill / bench. Mineralization is limitted to fracture face.									ppm

Rock Sample Descriptions

Project: Keg Zone: Page ___ of ___

Sample #	Grid East	E	Grid North	N	Type		Sample kept	yes	Geochem Results	
676118	UTM:	581694 E	UTM:	6942246 N	Sample Width:	10 cm	Photo taken:	no	Ag	ppm
Sampler:	Elevation:	1347 m			Dimension:	10x20cm				ppm
D. Coolidge	Comments:									ppm
Date:	From siliceous subcrop at contact zone with siltstone and quartzite. Siliceous, light grey-white with orange-yellow-green limonite. Drusy to vuggy textured silica veinlets with a trace fine grained silver colored sulphide. Taken 0.3m lower and west of previous sample.									ppm
6/19/2012										ppm

Sample #	Grid East	E	Grid North	N	Type		Sample kept	yes	Geochem Results	
676119	UTM:	581669 E	UTM:	6946247 N	Sample Width:	10 cm	Photo taken	no	Ag	ppm
Sampler:	Elevation:	1342 m			Dimension:					ppm
D. Coolidge										ppm
Date:	Siliceous light grey siltstone with sparse siliceous vugs and hairline veinlets. Orange-yellow limonite on fractures (340/90) Trace to 0.5% vfg pyrite, blebs and disseminated.									ppm
6/19/2012										ppm

Sample #	Grid East	E	Grid North	N	Type	Chip	Sample kept	yes	Geochem Results	
676120	UTM:	581669 E	UTM:	6946258 N	Sample Width:	100 cm	Photo taken	no	Ag	ppm
Sampler:	Elevation:	1341 m			Dimension:					ppm
D. Coolidge	Comments:									ppm
Date:	Sampled from a light grey, sugary textured quartzite with weak orange-yellow limonite on fractures. Fine grained drusy quartz on some fracture faces. Joint set 350/ 90. No sulphides were observed.									ppm
6/19/2012										ppm

Sample #	Grid East	E	Grid North	N	Type	Chip	Sample kept	yes	Geochem Results	
676121	UTM:	581670 E	UTM:	6946255 N	Sample Width:	100 cm	Photo taken		Ag	ppm
Sampler:	Elevation:	1341 m			Dimension:					ppm
D. Coolidge										ppm
Date:										ppm
6/19/2012	Taken on line immediately east of previous sample. Quartzite with weak orange- yellow limonite on fractures.									ppm

Sample #	Grid East	E	Grid North	N	Type	chip	Sample kept	yes	Geochem Results	
676122	UTM:	581671 E	UTM:	6946256 N	Sample Width:	75 cm	Photo taken		Ag	ppm
Sampler:	Elevation:	1341 m			Dimension:					ppm
D. Coolidge	Comments:									ppm
Date:	Eastern most sample on chip line; ends at outcrop limit of light grey quartzite outcrop above anomalous soil sample ZZ11557. Brown-yellow limonite on fractures.									ppm
6/19/2012										ppm

Sample #	Grid East	E	Grid North	N	Type		Sample kept	yes	Geochem Results	
676123	UTM:	598701 E	UTM:	6937856 N	Sample Width:	Grab cm	Photo taken	no	Ag	ppm
Sampler:	Elevation:	1305 m			Dimension:	0.5x .25m				ppm
D. Coolidge	Comments:									ppm
Date:										ppm
6/20/2012	Foliated dark black shale. Fine grained pyrite;, arsenopyrite? Occurs on 1mm siliceous stringers discordant to bedding.									ppm

Taken from sulphide vein in "Trench-2". Contains 30% fine grained scorodite crystals and up 70% arsenopyrite. Weathered surface of vein is rust-orange. Surrounding material proximal to vein is also red-orange in colour and forms a distinctive marker in soil when trenching. Wall rock to vein is shattered, strongly fractured grey to dark grey chert. Attitude of sulphide vein is 035/75 SE.

Sampled from the SW end of "Trench-1". Massive sulphide vein material. Vein consists of rubbly fist size pieces of massive sulphide consisting of arseonpyrite, galena, and scorodite. Resembles a sulphide breccia (?) and contains minute vugs and cavities in some sections. Weathered surface is extremely rough, hackly and vuggy with brown to white oxide coatings.

Sample #	Grid East	E	Grid North	N	Type:		Sample kept	yes	Geochem Results	
676128	UTM:	581679 E	UTM:	6946258 N	Sample Width:	cm	Photo taken	no	Ag	ppm

From a 10 x 12 cm nodule or augen at waters edge in the nose of a fold. Weak silica and moderate calcite alteration in dark grey, thinly bedded to fissile shale. Contains 3% medium grained pyrite in clear to white silica. Tight folding and deformation was observed in the 25 (L) x 3 (H) m shale exposure located on the south bank of the creek.

Quartz-carbonate altered siltstone/ shale at transition to fissile shale immediately west of sample location. From a 4 x 2 m exposure on the north bank of the creek. Sampled material contains quartz-carb veinlets that range in size from 0.1 mm to 0.5 cm and are discontinuous or augen shaped. Material is more massive and weakly siliceous then the thinly bedded fissile shale 1m west along this exposure. No sulphides were observed.

T[illegible] a pieces of q[illegible]artz vein float [illegible]ith a strong [illegible]ella[illegible] limonite [illegible]eathard stain and pitted s[illegible]rface. Yella[illegible] bite, gra[illegible] colored on fresh s[illegible]rface.

Geochem Results: Ag ppm

Rock Sample Descriptions

Project: Keg Zone:

Date: 7/8/2012

Two pieces of quartz vein float with a strong yellow limonite weathered stain and pitted surface. Yellow-white- grey colored on fresh surface. Vuggy to box worked to frothy texture. Grey quartz sections are stripe like or elongated and contain 1%vfg galena, 2% vfg disseminated dark sulphide. Located 16m down slope (west) of previous sample.

Geochem Results: ppm / ppm

Sample #: 676199 | Sampler: D. Coolidge | Date: 7/9/2012

Grid East: E | Grid North: N | Type: float | Sample kept: yes

UTM: 601393 E | UTM: 6912450 N | Sample Width: 5 cm | Photo taken: yes

Elevation: 1465 m | Dimension: 10 x 5 x 8 cm

Comments: Weathered orange-red limonite stain. Extremely siliceous rock, light grey, fine grained, with weak yellow limonite. Fresh fractured faces are "peppered" with 10-12% vfg blebs of galena and "sooty" looking pyrite disseminated and in clusters. Some vugs and cavities are present. From an eroding section of the NW creek bank and well above the high water mark.

Geochem Results: Ag ppm / ppm / ppm / ppm / ppm / ppm

Sample #: 676200 | Sampler: D. Coolidge | Date: 7/9/2012

Grid East: E | Grid North: N | Type: float | Sample kept: yes

UTM: 601321 E | UTM: 6912345 N | Sample Width: 25 cm | Photo taken: yes

Elevation: m | Dimension: 35 x 25 x 30 cm

Comments: Large angular boulder, partially buried in SE bank of creek. Pitted orange-yellow-manganese weathered surface. A 10 x 8 x 6 cm piece is missing and possibly sampled before (sampled sections also weakly oxidized). Appear to be a quartz eye, feldspar porphyry with light green tint: sericite alteration? Contain 1% disseminated vfg to blebby silver colored sulphide.

Geochem Results: Ag ppm / ppm / ppm / ppm / ppm / ppm

Sample #: 676251 | Sampler: D. Coolidge | Date: 7/9/2012

Grid East: E | Grid North: N | Type: float | Sample kept: yes

UTM: 601179 E | UTM: 6912228 N | Sample Width: 6 cm | Photo taken: yes

Elevation: 1481 m | Dimension: 15 x 10 x 6cm

Comments: and very fine grained quartz eyes. Strongly mineralized with 15% sulphides ranging from disseminated, to clustered to 0.5 cm sized clast comprised of vfg brassy pyrite. Sulphides can be further broken into 10% dull grey very fined grained: marcasite?? and 2% vfg galena. 3% vfg dark silvery colored sulphide. Rock is not magnetic. Isolated piece on NW side of creek. Old blue flagging present at this site (90's era??)

Geochem Results: Ag ppm / ppm / ppm / ppm / ppm / ppm

Sample #: 676252 | Sampler: D. Coolidge | Date: 7/9/2012

Grid East: E | Grid North: N | Type: float | Sample kept: yes

UTM: 601012 E | UTM: 6912109 N | Sample Width: 10 x 5 x 4 cm cm | Photo taken: yes

Elevation: 1490 m | Dimension:

Comments: Intense red-orange-gossanous weathered surface. Essentially a sulphide vein with scant amounts of quartz. 20% medium to coarse grained galena, 10% arsenopyrite, 5% dull grey vfg marcasite (?) and weak scorodite. Strong, pervasive orange to light orange limonite. Appears to have been previously sampled (?), old orange flag at site. Distinguished by strong gossan weathering. From the SE bank of the creek, resting on a large boulder.

Geochem Results: Ag ppm / ppm / ppm / ppm / ppm / ppm

Sample #: 676253 | Sampler: D. Coolidge | Date: 7/9/2012

Grid East: E | Grid North: N | Type: float | Sample kept: yes

UTM: 600900 E | UTM: 6912022 N | Sample Width: 5 cm | Photo taken: yes

Elevation: m | Dimension: 5 x 10 x 8 cm

Comments: Orange limonite stain, white, massive, siliceous quartz with grey linear sections. Contains 4% disseminated to vfg clustered arsenopyrite (?), weak scorodite and possibly vfg galena (?) or other silvery looking sulphide. Small rectangular block from an in active side splay of the creek trending west 250 degrees. Mineralization makes up grey sections of quartz vein.

Rock Sample Descriptions

Project: Keg Zone: Page ___ of ___

Sampler: Noah
Elevation: m
Comments:
Date: August 2nd
Dimension: -

Sample was dug up under soil sample CC156145. Sample has radiating fibrous crystals (wollastonite?) with the appearance and feel of chlorite.

Geochem Results: Ag ppm

Sample #: M676768

Grid East E Grid North N Type: Grab Sample kept Yes
UTM: 591703 E UTM: 6911713 N Sample Width: 50 cm Photo taken No
Sampler: Noah
Elevation: m
Dimension: 50cm x 40cm
Comments:
Date: August 3rd

Taken from an oxidized linear running at 100°. Rock is an oxidized granite, with the entire rock (biotite excluded) being altered to a dark orange.

Geochem Results: Ag ppm

Sample #: M676769

Grid East E Grid North N Type: Float Sample kept Yes
UTM: 591713 E UTM: 6911700 N Sample Width: cm Photo taken No
Sampler: Noah
Elevation: m
Dimension:
Comments:
Date: August 3rd

Granite. Pervasively oxidized to a light yellow/orange (minor phyllite alteration?). Weathers to a dark orange on surface.

Geochem Results: Ag ppm

Sample #: M676770

Grid East E Grid North N Type: Chip Sample kept Yes
UTM: 592363 E UTM: 6911186 N Sample Width: 50 cm Photo taken No
Sampler: Noah
Elevation: m
Dimension: 1m X 15m
Comments:
Date: August 3rd

Pegmatitic dyke. Large crystals of plagioclase (75%), quartz (10%), and biotite (15%).

Geochem Results: Ag ppm

Sample #: M676771

Grid East E Grid North N Type: Chip Sample kept Yes
UTM: 592533 E UTM: 6911062 N Sample Width: 100 cm Photo taken No
Sampler: Noah
Elevation: m
Dimension: 1m X 10m
Comments:
Date: August 3rd

Pegmatitic dyke (same composition as M676770). Contact is oriented at 205/23NW.

Geochem Results: Ag ppm

Sample #: M676772

Grid East E Grid North N Type: Chip Sample kept Yes
UTM: 592680 E UTM: 6911116 N Sample Width: 100 cm Photo taken Yes
Sampler: Noah
Elevation: m
Dimension: 2m x 10m
Comments:
Date: August 3rd

Pegmatitic dyke with more quartz that M676771 and M676770. Contacts are oriented at 172/66E.

Geochem Results: Ag ppm

M676407	UTM:	598052	E	UTM:	6915728	N	Sample Width:	0.30	Zone:	Cirque	Ag	ppm
Sampler:	Elevation:	1920	m				Dimension:				Au	ppm
E.Balon	Comments:	Qz-Cb VN 16cm width + altd granitic hostrock (4cm on HW, 10cm on FW). Sp + Gn at selvages, minor Py + As. Dup of historic sample #71771.										ppm
Date:												ppm
15-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	OC cntn Chip			Geochem Results	
M676408	UTM:	598052	E	UTM:	6915738	N	Sample Width:	0.45	Zone:	Cirque	Ag	ppm
Sampler:	Elevation:	1914	m				Dimension:				Au	ppm
E.Balon	Comments:	QVN - 25 cm, plus highly SIL granite FW - 20cm. Dissems, wisps, thin seams As-Py-Tt(?) + minor Gn. On same VN zone as historic sample # 71770.										ppm
Date:												ppm
15-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	OC cntn Chip			Geochem Results	
M676409	UTM:	598147	E	UTM:	6915669	N	Sample Width:	0.70	Zone:	Cirque	Ag	ppm
Sampler:	Elevation:	1897	m				Dimension:				Au	ppm
E.Balon	Comments:	Qz-Ch VN (63cm) & altd granite wallrock (3-4cm both sides). Locally abund Gn-Tt(?)-As-Sp + minor pyrargyrite. Vicinity of historic sample #71773.										ppm
Date:												ppm
15-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Float Grab			Geochem Results	
M676410	UTM:	598064	E	UTM:	6915727	N	Sample Width:	0.00	Zone:	Cirque	Ag	ppm
Sampler:	Elevation:	1924	m				Dimension:				Au	ppm
E.Balon	Comments:	Drusy Qz-Cb VN pcs 11-17cm widths. Abund Mn, 3-5% dissem sulfides locally as Py-As-Gn-Sp. Approx 9m ESE from Sample M676407.										ppm
Date:												ppm
16-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Float Grab			Geochem Results	
M676411	UTM:	598209	E	UTM:	6915581	N	Sample Width:	0.00	Zone:	Cirque	Ag	ppm
Sampler:	Elevation:	1897	m				Dimension:				Au	ppm
E.Balon	Comments:	Qz-Ak BXA VN w/ dissem Py-As-Gn-Sp about 1% overall. Strong Mn staining.										ppm
Date:												ppm
16-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Float Grab			Geochem Results	
M676412	UTM:	600947	E	UTM:	6914553	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1965	m				Dimension:				Au	ppm
E.Balon	Comments:	QVN -ang/subang pcs to 11.5cm width. Pale grey massive glassy Qz, limonitic fracs, trace Mb.										ppm
Date:												ppm
18-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Float Grab			Geochem Results	
M676413	UTM:	600932	E	UTM:	6914566	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1974	m				Dimension:				Au	ppm
E.Balon	Comments:	Ch-QVN fgmnts, rusty weathered, internal dk grey patches w/ suspected finely dissem sulfides. Strong As odour. Trace Gn.										ppm
Date:												ppm
18-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Float Grab			Geochem Results	
M676414	UTM:	600929	E	UTM:	6914566	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1970	m				Dimension:				Au	ppm
E.Balon	Comments:	Strongly SIL-SER-SAU granite w/ pale grey glassy QVNs to 6cm width. Vein partings w/ dissem Gn & yel-white powdery secondary min.										ppm
Date:												ppm
18-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Rubble Grab			Geochem Results	
M676415	UTM:	600887	E	UTM:	6914577	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1978	m				Dimension:				Au	ppm
E.Balon	Comments:	QVN & SIL-SER granitic wallrock. Massive & coarse xtln glassy Qz w/ Se, trace dissem Gn. Apparent greisen type. 20m long rubble train trending 050 Az.										ppm
Date:												ppm
18-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Rubble Grab			Geochem Results	
M676416	UTM:	600762	E	UTM:	6914383	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1933	m				Dimension:				Au	ppm
E.Balon	Comments:	Dk rusty weathered pale grn Ch + vuggy QVN w/ intervening SIL-SER-SAU granitic hostrock. Looks like greisen type alteration/veining.										ppm
Date:												ppm
18-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	OC cntn Chip			Geochem Results	
M676417	UTM:	598120	E	UTM:	6915774	N	Sample Width:	0.25	Zone:	Cirque	Ag	ppm
Sampler:	Elevation:	1869	m				Dimension:				Au	ppm
E.Balon	Comments:	Qz-Cb (Ak-Si-Rh) VN w/ masses of coarse Gn, approx 30% by volume. Contiguous w/ & to W of M676418. On same VN as historic sample #71888.										ppm
Date:												ppm
19-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	OC cntn Chip			Geochem Results	
M676418	UTM:	598121	E	UTM:	6915774	N	Sample Width:	0.32	Zone:	Cirque	Ag	ppm
Sampler:	Elevation:	1869	m				Dimension:				Au	ppm
E.Balon	Comments:	Mid-section of VN zone, contiguous w/ M676417 & 419. White dense Qz w/ only ~2% Gn + Py, plus about 1/3 of sample length is altd granitic hostrock.										ppm
Date:												ppm
19-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	OC cntn Chip			Geochem Results	
M676419	UTM:	598122	E	UTM:	6915774	N	Sample Width:	0.33	Zone:	Cirque	Ag	ppm
Sampler:	Elevation:	1869	m				Dimension:				Au	ppm
E.Balon	Comments:	Qz-Ch-Cb BXA w/ 3-5% sulfides, mainly as Gn-As. Contiguous w/ & to E of M676418. Zone attitude 340/~85 ENE.										ppm
Date:												ppm
19-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	OC cntn Chip			Geochem Results	
M676420	UTM:	598124	E	UTM:	6915755	N	Sample Width:	0.40	Zone:	Cirque	Ag	ppm
Sampler:	Elevation:	1872	m				Dimension:				Au	ppm
E.Balon	Comments:	Qz-Ch-Cb BXA VN w/ 5-7% dissem sulfides as As-Py-Gn, abund Mn-Ak, lesser Rh. N-S strike/dip vertical to ~85 E. Probable dup of part of historic sample #71889.										ppm
Date:												ppm
19-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Rubble Grab			Geochem Results	
M676421	UTM:	600744	E	UTM:	6914316	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1927	m				Dimension:				Au	ppm
E.Balon	Comments:	Pale grey to grn Ch VN fgmnts up to 15cm thickness, sparse dissem Py + other dk grey-blk metallics, trace Cp. 1-1.5m wide rubble train trending 110-290 Az.										ppm
Date:												ppm
20-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Rubble Grab			Geochem Results	
M676422	UTM:	600743	E	UTM:	6914315	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1927	m				Dimension:				Au	ppm
E.Balon	Comments:	Gossan mtrl. Strongly altd, partly decomposed and Li-cemented granitic hostrock to VN(s) sampled under M676421.										ppm
Date:												ppm
20-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Rubble Grab			Geochem Results	
M676423	UTM:	600752	E	UTM:	6914309	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1929	m				Dimension:				Au	ppm
E.Balon	Comments:	Ch-vuggy Qz VN mtrl & LIM-SIL granite hostrock. Composite of several pcs over 6.0 x 0.5m. Subparallel train to that sampled under M676421-22.										ppm
Date:												ppm
20-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Talus Chip			Geochem Results	
M676424	UTM:	600705	E	UTM:	6914326	N	Sample Width:	0.25	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1915	m				Dimension:				Au	ppm
E.Balon	Comments:	Pale grey-grn Ch-Qz VN w/ trace dissem sulfides as Py + oxidized Gn (?). Large angular, tabular bldr. Sampled across true VN thickness.										ppm
Date:												ppm
20-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Float Grab			Geochem Results	
M676425	UTM:	600829	E	UTM:	6914200	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1913	m				Dimension:				Au	ppm
E.Balon	Comments:	Dk rusty weathered vuggy Ch-Qz w/ 1-2% sulfides as Py, trace Cp + other dk metallic min. Composite of several pcs up to 5cm widths. Nearby Sample MK11-521.										ppm
Date:												ppm
20-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Rubble Grab			Geochem Results	
M676426	UTM:	600654	E	UTM:	6914040	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1928	m				Dimension:				Au	ppm
E.Balon	Comments:	Vuggy QVN mtrl & altd (greisened) granitic hostrock. Med-dk grey Qz w/ finely dissem Py & Gn-Sp (?), trace Cp. Selected chips from several pcs.										ppm
Date:												ppm
20-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Rubble Grab			Geochem Results	
M676427	UTM:	600652	E	UTM:	6914040	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1926	m				Dimension:				Au	ppm
E.Balon	Comments:	Dk grey vuggy Qz w/ estimated >5% dissem sulfides, mainly Py (clots up to 7mm diam.), lesser blk metallics - suspected Sp + Gn.										ppm
Date:												ppm
21-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Rubble Grab			Geochem Results	
M676428	UTM:	600676	E	UTM:	6914010	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1919	m				Dimension:				Au	ppm
E.Balon	Comments:	As per M676427, except from larger tabular VN pcs - up to 12cm true width (TW). Also more abundant sulfides, 7-10% locally as Py-Sp-Gn-Cp & Cv.										ppm
Date:												ppm
21-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Float Grab			Geochem Results	
M676429	UTM:	600650	E	UTM:	6914021	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1926	m				Dimension:				Au	ppm
E.Balon	Comments:	Massive grey to pale grn Ch w/ sparse dissem Py & isolated blebs Sp (?) in sharp angular cavities. Float to SW side of mineralized rubble trend ident by Samples M676426-28.										ppm
Date:												ppm
21-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Float Grab			Geochem Results	
M676430	UTM:	600674	E	UTM:	6914026	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1923	m				Dimension:				Au	ppm
E.Balon	Comments:	Angular QVN fgmnt - 12cm TW. Glassy (mesothermal) type Qz w/ sparse dissem Py-Gn. Rusty sfc & fracs w/ Li, Mn.										ppm
Date:												ppm
21-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Float Grab			Geochem Results	
M676431	UTM:	600661	E	UTM:	6914087	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1910	m				Dimension:				Au	ppm
E.Balon	Comments:	Same type of VN & style of min as that in M676427-28, but w/ more abund sulfides estimated at 10-15+ % as Sp-Gn-Py-minor Cp & Cv. Tabular pcs to 10cm width.										ppm
Date:												ppm
21-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Float Grab			Geochem Results	
M676432	UTM:	600622	E	UTM:	6914134	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1889	m				Dimension:				Au	ppm
E.Balon	Comments:	Angular talus fgmnt 16cm width. Aplite (?) in contact w/ glassy, massive to coarse xtln QVN. Limonitic & darker (chocolate brn) oxide in fracs & cavities.										ppm
Date:												ppm
21-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Float Grab			Geochem Results	
M676433	UTM:	600644	E	UTM:	6914132	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1891	m				Dimension:				Au	ppm
E.Balon	Comments:	White, tan, semi-clear massive to coarse xtln (mesothermal type) QVN w/ Li in fracs & cavities. Sparse dissem Gn. Chips from ang talus pc ~20cm width.										ppm
Date:												ppm
22-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Float Grab			Geochem Results	
M676434	UTM:	600648	E	UTM:	6914131	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1889	m				Dimension:				Au	ppm
E.Balon	Comments:	Dk rusty weathered grey epithermal type Qz-Ch BXA VN, w/ about 2% visible sulfides as Py-Gn-Sp(?).										ppm
Date:												ppm
22-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Float Grab			Geochem Results	
M676435	UTM:	600502	E	UTM:	6914352	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1804	m				Dimension:				Au	ppm
E.Balon	Comments:	Pale grn-grey Ch-Qz w/ ~1% sulfides as As-Py-Gn, trace Sp(?). Sparse clots w/ strongly dissem As. Chips from ang tabular VN fgmnt 12 x 20 x 30 cm.										ppm
Date:												ppm
22-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Float Grab			Geochem Results	
M676436	UTM:	600515	E	UTM:	6914364	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1812	m				Dimension:				Au	ppm
E.Balon	Comments:	Glassy QVN w/ inclusions of SIL-SER granitic hostrock. Scattered blebs of As, Gn. Chips from tabular pc of 12cm width.										ppm
Date:												ppm
22-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	OC cntn Chip			Geochem Results	
M676437	UTM:	598953	E	UTM:	6915247	N	Sample Width:	0.25	Zone:	Cirque	Ag	ppm
Sampler:	Elevation:	1531	m				Dimension:				Au	ppm
E.Balon	Comments:	Altd granite hostrock w/ several narrow (1-1.5cm) QVNs carrying dissem As-Py-Gn. Hanging wall (HW) sample, contiguous to W of M676438.										ppm
Date:												ppm
23-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	OC cntn Chip			Geochem Results	
M676438	UTM:	598954	E	UTM:	6915247	N	Sample Width:	0.65	Zone:	Cirque	Ag	ppm
Sampler:	Elevation:	1531	m				Dimension:				Au	ppm
E.Balon	Comments:	Highly oxidized Qz-Ch-Cb VN w/ locally abund weathered Gn-Py-As-Sp(?). Zone attitude due N-S/dip ~50-60 W. Contiguous w/ M676437 & 439.										ppm
Date:												ppm
23-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	OC cntn Chip			Geochem Results	
M676439	UTM:	598955	E	UTM:	6915247	N	Sample Width:	0.45	Zone:	Cirque	Ag	ppm
Sampler:	Elevation:	1531	m				Dimension:				Au	ppm
E.Balon	Comments:	Dk rusty yel-orange clayey FW gouge (10cm) plus altd granite (35cm) w/ abund Fe-Mn oxides. Footwall sample, contiguous to E of M676438.										ppm
Date:												ppm
23-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Subcrop Grab			Geochem Results	
M676440	UTM:	598951	E	UTM:	6915295	N	Sample Width:	0.00	Zone:	Cirque	Ag	ppm
Sampler:	Elevation:	1540	m				Dimension:				Au	ppm
E.Balon	Comments:	Qz-Ch VN mtrl containing 40-50% Gn as coarse clots, abund Li, some Mn. Northerly strike extension of VN sampled under M676438.										ppm
Date:												ppm
23-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Rubble Grab			Geochem Results	
M676441	UTM:	598628	E	UTM:	6915734	N	Sample Width:	0.00	Zone:	Cirque	Ag	ppm
Sampler:	Elevation:	1653	m				Dimension:				Au	ppm
E.Balon	Comments:	Grey Qz-Cb VN w/ estimated 10-15% sulfides as As-Py-Sp-Gn. Abund Mn on weathered sfcs. Apparent select "higrade" pile from historic blast trench.										ppm
Date:												ppm
24-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Float Grab			Geochem Results	
M676442	UTM:	596070	E	UTM:	6917692	N	Sample Width:	0.00	Zone:	Cody	Ag	ppm
Sampler:	Elevation:	1795	m				Dimension:				Au	ppm
E.Balon	Comments:	Glassy coarse xtln QVN w/ rusty cavities, dissem blebs Gn <1%. Ang tabular pc 4-8cm in thickness.										ppm
Date:												ppm
25-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Rubble Grab			Geochem Results	
M676443	UTM:	596061	E	UTM:	6917721	N	Sample Width:	0.00	Zone:	Cody	Ag	ppm
Sampler:	Elevation:	1777	m				Dimension:				Au	ppm
E.Balon	Comments:	Rusty weathered pale grey QVN plus highly SIL granitic wallrock w/ dissem blebs Gn-Py-Cp & Mc, <1% sulfides overall. Nest of large ang talus fgmnts 15-40cm thickness.										ppm
Date:												ppm
25-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Float Grab			Geochem Results	
M676444	UTM:	595970	E	UTM:	6917548	N	Sample Width:	0.00	Zone:	Cody	Ag	ppm
Sampler:	Elevation:	1786	m				Dimension:				Au	ppm
E.Balon	Comments:	Massive & clear xtln Qz w/ abund Mn, strongly dissem Sp + Gn. Platy, 2-cm thick VN fgmnt.										ppm
Date:												ppm
25-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Float Grab			Geochem Results	
M676445	UTM:	595977	E	UTM:	6917476	N	Sample Width:	0.00	Zone:	Cody	Ag	ppm
Sampler:	Elevation:	1798	m				Dimension:				Au	ppm
E.Balon	Comments:	LIM-SER altd granite w/ 2cm QVN carrying abund Py, minor Sp-Gn. Chips from several fist-sized pcs.										ppm
Date:												ppm
25-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Float Grab			Geochem Results	
M676446	UTM:	595985	E	UTM:	6917461	N	Sample Width:	0.00	Zone:	Cody	Ag	ppm
Sampler:	Elevation:	1796	m				Dimension:				Au	ppm
E.Balon	Comments:	Rusty weathered Li-cemented shattered Qz-Ch VN mtrl w/ sparse clots fine gr Py, minor Gn. Chips from ang fgmnt 20 x 20 x 34 cm.										ppm
Date:												ppm
25-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Rubble Grab			Geochem Results	
M676447	UTM:	596378	E	UTM:	6917652	N	Sample Width:	0.00	Zone:	Cody	Ag	ppm
Sampler:	Elevation:	1807	m				Dimension:				Au	ppm
E.Balon	Comments:	QVN, massive & xtln pale grey-grn Qz w/ drusy cavities, some darker grey Ch bands w/ clots of Py-As. Select chips from several pcs, up to 30cm TW.										ppm
Date:												ppm
25-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Rubble Grab			Geochem Results	
M676448	UTM:	596383	E	UTM:	6917650	N	Sample Width:	0.00	Zone:	Cody	Ag	ppm
Sampler:	Elevation:	1815	m				Dimension:				Au	ppm
E.Balon	Comments:	As per M676447, but w/ more sulfides as Py-As-minor Sp-Gn. Chips from ang pcs to 14cm width. Rubble train likely from subparallel VN to that sampled in M676447.										ppm
Date:												ppm
25-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Rubble Grab			Geochem Results	
M676449	UTM:	601258	E	UTM:	6914844	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1982	m				Dimension:				Au	ppm
E.Balon	Comments:	Bullish white to glassy QVN w/ abund masses of dk radiating lath-textured mineral, possibly wolframite (?). Broken outcrop, VN width ~0.5m, trending 095/dip mod to N.										ppm
Date:												ppm
26-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Rubble Grab			Geochem Results	
M676450	UTM:	601234	E	UTM:	6914834	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1982	m				Dimension:				Au	ppm
E.Balon	Comments:	Ch-QVN pcs along 10 x 1m strip. Pale grey vuggy Qz w/ ~2% dissem Gn-Sp-Py. Individual VN fgmnts to 5.5cm width. Some attached altd granite.										ppm
Date:												ppm
26-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Rubble Grab			Geochem Results	
M676451	UTM:	601256	E	UTM:	6914802	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1966	m				Dimension:				Au	ppm
E.Balon	Comments:	Pale grey-grn Ch-Qz VN w/ abund cavities, some dk grey to blk patches w/ 1-3% dissem Py-Gn-As-Sp(?). Composite chips from several pcs to 9cm TW.										ppm
Date:												ppm
26-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Rubble Grab			Geochem Results	
M676452	UTM:	601249	E	UTM:	6914809	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1973	m				Dimension:				Au	ppm
E.Balon	Comments:	Dk rusty weathered Ch VN, internal dk grey patches w/ abund fine dissem sulfides. Noted Py, Gn. Composite chips from 10 pcs. Rubble train strikes ~130-310 Az.										ppm
Date:												ppm
26-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Float Grab			Geochem Results	
M676453	UTM:	601085	E	UTM:	6914880	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1926	m				Dimension:				Au	ppm
E.Balon	Comments:	Qz-Ch VN + altd granite hostrock fgmnt 14 x 23 x 26 cm. Massive coarse gr Qz w/ grey Ch bands containing finely dissem Py-As-Gn-Sp(?).										ppm
Date:												ppm
26-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Float Chip			Geochem Results	
M676454	UTM:	601059	E	UTM:	6914860	N	Sample Width:	0.22	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1929	m				Dimension:				Au	ppm
E.Balon	Comments:	Massive pale grey QVN w/ weakly dissem Py-As-Gn-Sp(?). More sulfides in 1-1.5 cm selvage band along one side. Chip across 22 x 40 x 54 cm ang slab.										ppm
Date:												ppm
26-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Rubble Grab			Geochem Results	
M676455	UTM:	600969	E	UTM:	6914012	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1868	m				Dimension:				Au	ppm
E.Balon	Comments:	Chips from 14 cm wide, tabular pc dense ferricrete. Fe oxide-cemented leached shattered QVN & altd granitic mtrl.										ppm
Date:												ppm
27-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Rubble Grab			Geochem Results	
M676456	UTM:	600990	E	UTM:	6913994	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1861	m				Dimension:				Au	ppm
E.Balon	Comments:	Composite chips from several ang pcs QVN + altd granite hostrock 5-14cm in thickness. Pale grey semi-chalcedonic Qz w/ LIM fracs, drusy cavities. No visible sulfides.										ppm
Date:												ppm
27-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Rubble Grab			Geochem Results	
M676457	UTM:	600991	E	UTM:	6913989	N	Sample Width:	0.00	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1849	m				Dimension:				Au	ppm
E.Balon	Comments:	Massive coarse-gr semi-glassy QVN fgmnt - 14cm width. SER partings assoc w/ drusy x-cutting later stage clear Qz stringers.										ppm
Date:												ppm
27-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	OC cntn Chip			Geochem Results	
M676458	UTM:	599993	E	UTM:	6915462	N	Sample Width:	0.65	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1427	m				Dimension:				Au	ppm
E.Balon	Comments:	Qz-Ch BXA VN w/ estimated 20-25% sulfides by volume, mainly as Gn-Sp, minor Py-Cp. Strongly oxidized w/ abund surficial & cavity-fill Li. Strike 345/dip steep (80-85) ENE.										ppm
Date:												ppm
28-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	OC cntn Chip			Geochem Results	
M676459	UTM:	599994	E	UTM:	6915462	N	Sample Width:	0.27	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1427	m				Dimension:				Au	ppm
E.Balon	Comments:	HW sample, contiguous to E of M676458. Fe/Mn-SER-SAU altd granite w/ 2-3cm Ch VN carrying dissem blebs Gn, Tt(?).										ppm
Date:												ppm
28-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	OC cntn Chip			Geochem Results	
M676460	UTM:	599988	E	UTM:	6915472	N	Sample Width:	0.15	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1436	m				Dimension:				Au	ppm
E.Balon	Comments:	Qz-Ch VN w/ estimated 50% combined sulfides mainly as fine-gr Gn-Sp, blebby Cp. Minor inclusions altd granite. On same VN zone along strike from M676458.										ppm
Date:												ppm
28-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	OC cntn Chip			Geochem Results	
M676461	UTM:	599986	E	UTM:	6915474	N	Sample Width:	0.58	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1436	m				Dimension:				Au	ppm
E.Balon	Comments:	On same VN along strike from M676460. Sample line cut across two sections totaling 34cm of massive Gn-Sp, minor Cp, w/ intervening altd granite.										ppm
Date:												ppm
28-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	OC cntn Chip			Geochem Results	
M676462	UTM:	599967	E	UTM:	6915463	N	Sample Width:	0.30	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1423	m				Dimension:				Au	ppm
E.Balon	Comments:	Qz-Ch VN w/ ~10 cm of altd granite hostrock, mainly on HW side. Strongly oxidized w/ relict blebby Gn. More As than Gn from mid-pt to FW. Zone strike 045/dip 70-75 SE.										ppm
Date:												ppm
28-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	OC cntn Chip			Geochem Results	
M676463	UTM:	599969	E	UTM:	6915468	N	Sample Width:	0.25	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1428	m				Dimension:				Au	ppm
E.Balon	Comments:	On same zone along strike from M676462. Seven (7) cm wide section of massive Gn-As-Sp-Py flanked by strongly altd granite w/ dissem sulfides & mm-scale Qz stringers.										ppm
Date:												ppm
28-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	OC cntn Chip			Geochem Results	
M676464	UTM:	599975	E	UTM:	6915474	N	Sample Width:	0.15	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1426	m				Dimension:				Au	ppm
E.Balon	Comments:	On same zone along strike from M676463. Five (5) cm wide section of submassive As-Gn-Sp-minor Cp from HW, then 10cm of altd granite w/ dissem sulfides & Qz stingers to FW.										ppm
Date:												ppm
28-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	OC cntn Chip			Geochem Results	
M676465	UTM:	599995	E	UTM:	6915488	N	Sample Width:	0.35	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1434	m				Dimension:				Au	ppm
E.Balon	Comments:	Partly rusty weathered white massive QVN w/ weakly dissem oxidized sulfides at the selvages. Surficial yel-grn staining. Zone strike 040-045/dip ~85 SE.										ppm
Date:												ppm
28-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	OC cntn Chip			Geochem Results	
M676466	UTM:	599979	E	UTM:	6915460	N	Sample Width:	0.26	Zone:	Snap	Ag	ppm
Sampler:	Elevation:	1413	m				Dimension:				Au	ppm
E.Balon	Comments:	On same 'white' QVN along strike to SW from M676465. Mod dissem sulfides (Gn, As, possibly Sp, Tt) for 5cm in from HW, otherwise apparently barren. 5-6cm altd granite incl. Att 045/~75 SE.										ppm
Date:												ppm
28-Jul-12												ppm

Rock Sample Descriptions **Project:** Keg Zone:

Sample #:	Grid East		E	Grid North		N	Type:	T-1 west wall chip: 1.2 m		Geochem Results	
K191751	UTM:	581647	E	UTM:	6946203	N	Sample Width:		Zone: Owl W.	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	grey chert with rusty fracture surfaces									ppm
Date:											ppm
3-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	T-1 vein chip: 0.22 m		Geochem Results	
K191752	UTM:	581647	E	UTM:	6946203	N	Sample Width:		Zone: Owl W.	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	massive sulphide: galena and arsenopyrite									ppm
Date:											ppm
3-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	T-1 east wall chip: 0.90 m		Geochem Results	
K191753	UTM:	581647	E	UTM:	6946203	N	Sample Width:		Zone: Owl W.	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	grey chert with rusty fracture surfaces									ppm
Date:											ppm
3-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float composite		Geochem Results	
K191754	UTM:	581638	E	UTM:	6946195	N	Sample Width:		Zone: Owl W.	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	small quartz vein chips with arsenopyrite and lesser galena. Several pieces up to egg sized 13 m sw of vein exposure.									ppm
Date:											ppm
4-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
K191755	UTM:	583678	E	UTM:	6946847	N	Sample Width:		Zone:	Owl W.	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	pervasively rusty chert boulder with thin ferricrete crusts. 1 only in area of complete veg cover.										ppm
Date:												ppm
5-Jun-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	North wall chip: 0.20 m			Geochem Results	
K191756	UTM:	583815	E	UTM:	6946771	N	Sample Width:		Zone:	Owl S.	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	pervasively rusty chert with thin seams of weathered aspy										ppm
Date:												ppm
5-Jun-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	Vein chip: 0.30 m			Geochem Results	
K191757	UTM:	583815	E	UTM:	6946771	N	Sample Width:		Zone:	Owl S.	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Aspy in qz matrix. Up to 70% asypy.										ppm
Date:												ppm
5-Jun-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	South wall + veinlets chip: 1.0 m			Geochem Results	
K191758	UTM:	583815	E	UTM:	6946771	N	Sample Width:		Zone:	Owl S.	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Pervasively rusty chert with seams of aspy up to 5 cm thick										ppm
Date:												ppm
5-Jun-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float composite			Geochem Results	
K191759	UTM:	583815	E	UTM:	6946771	N	Sample Width:		Zone:	Owl S.	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Rusty chert chips from exposures near vein. Represents broad area host-rock grade.										ppm
Date:												ppm
5-Jun-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	sub-crop		Geochem Results	
K191760	UTM:	583815	E	UTM:	6946771	N	Sample Width:		Zone: Owl S.	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Banded fine grained gn and aspy with minor qz. 10 cm flat width float fragment on strike but ~7m east of chip sample.									ppm
Date:											ppm
5-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float / sub-crop		Geochem Results	
K191761	UTM:	583925	E	UTM:	6946287	N	Sample Width:		Zone: Owl W.	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Intensely rusty altered rock with bands and pockets of deeply weathered sulphide (aspy + sph?). Protruding from ravelling soil face in area of total veg cover.									ppm
Date:											ppm
5-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	T-2: near source float		Geochem Results	
K191762	UTM:	581669	E	UTM:	6946260	N	Sample Width:		Zone: Owl W.	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Deeply weathered sulphide with strong sc staining from 2 cm seam on excavated boulder.									ppm
Date:											ppm
6-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	T-2: near source float		Geochem Results	
K191763	UTM:	581669	E	UTM:	6946260	N	Sample Width:		Zone: Owl W.	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Deeply weathered, cavity filled gn + aspy. Gourd sized fragment.									ppm
Date:											ppm
6-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	T-2: near source float		Geochem Results	
K191764	UTM:	581669	E	UTM:	6946260	N	Sample Width:		Zone: Owl W.	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Numerous small fragments of "dry-bone" with sc staining									ppm
Date:											ppm
6-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	Trench talus composite: 1.2 m		Geochem Results	
K191765	UTM:	581950	E	UTM:	6946107	N	Sample Width:		Zone: Owl W.	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Intensely rusty chert talus.									ppm
Date:											ppm
6-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	Trench talus composite: 2.0 m		Geochem Results	
K191766	UTM:	581950	E	UTM:	6946107	N	Sample Width:		Zone: Owl W.	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Moderately rusty chert talus.									ppm
Date:											ppm
6-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	T-2: near source float		Geochem Results	
K191767	UTM:	581669	E	UTM:	6946260	N	Sample Width:		Zone: Owl W.	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Chert with large fractures filled with dry-bone, weathered gn remains in some cavities, and sc staining.									ppm
Date:											ppm
6-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191768	UTM:	581647	E	UTM:	6946258	N	Sample Width:		Zone: Owl W.	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Chert boulder with intensely weathered sulphide on multiple fracture surfaces. Sulphide thickness up to 2 cm. Boulder protruding from moss on hillside. 1 only exposed here.									ppm
Date:											ppm
6-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	small diameter float (frost boil)		Geochem Results	
K191769	UTM:	596250	E	UTM:	6917658	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Qz fragment with Li seams, boxwork, and mng stains.									ppm
Date:											ppm
7-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	small diameter float (frost boil)		Geochem Results	
K191770	UTM:	595767	E	UTM:	6917016	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Qz fragment with Li seams, boxwork, and mng stains.									ppm
Date:											ppm
8-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float cobble		Geochem Results	
K191771	UTM:	596069	E	UTM:	6917494	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Chalcedonic qz with strong rust on fractures. No visible mzn.									ppm
Date:											ppm
8-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191772	UTM:	596360	E	UTM:	6917802	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Qz with Li cavities and 5-10% py. 1 golf-ball sized fragment with other rusty material spalling from top of N striking recessive gully.									ppm
Date:											ppm
8-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float cobble		Geochem Results	
K191773	UTM:	596327	E	UTM:	6917887	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Qz cobble with strong rust weathering and <=3% fine grey sulphide. 1 only 15 cm diam at head of N striking recessive gully.									ppm
Date:											ppm
8-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
K191774	UTM:	595552	E	UTM:	6918304	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Mng stained massive galena, golfball sized fragment, 1 only.									ppm
Date:											ppm
8-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
K191775	UTM:	595595	E	UTM:	6918327	N	Sample Width:		Zone:	Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Deeply weathered mng stained qz bx with abundant cavities, Li, gn clasts (10-15%), lesser sph, mild sc stains. ~10 cobbles + 10 gravels in float train.										ppm
Date:												ppm
8-Jun-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float cobble			Geochem Results	
K191776	UTM:	595581	E	UTM:	6918326	N	Sample Width:		Zone:	Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Float train with approx 1 pail full of material, paralell to K191775, with same material.										ppm
Date:												ppm
8-Jun-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	vein float boulder - 18cm TW			Geochem Results	
K191777	UTM:	595577	E	UTM:	6918328	N	Sample Width:		Zone:	Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	2 qz bx boulders with with large weathered out sulphide clasts and strong staining. 2 boulders together with flat sided widths of 15-18 cm.										ppm
Date:												ppm
8-Jun-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	small diameter float (frost boil)			Geochem Results	
K191778	UTM:	595517	E	UTM:	6918225	N	Sample Width:		Zone:	Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	mng stained gn.										ppm
Date:												ppm
9-Jun-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	small diameter float (frost boil)			Geochem Results	
K191779	UTM:	595537	E	UTM:	6918219	N	Sample Width:		Zone:	Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	mng stained Li boxwork.										ppm
Date:												ppm
9-Jun-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	small diameter float (frost boil)		Geochem Results	
K191780	UTM:	595528	E	UTM:	6918221	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Li + geothite with thin mng partings									ppm
Date:											ppm
9-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	small diameter float (frost boil)		Geochem Results	
K191781	UTM:	595514	E	UTM:	6918211	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	mng stained Li with fine weathered sulphide.									ppm
Date:											ppm
9-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	small diameter float (frost boil)		Geochem Results	
K191782	UTM:	595514	E	UTM:	6918211	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	mng stained Li + qz.									ppm
Date:											ppm
9-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	small diameter float (frost boil)		Geochem Results	
K191783	UTM:	595524	E	UTM:	6918211	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	mng stained Li.									ppm
Date:											ppm
9-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	small diameter float (frost boil)		Geochem Results	
K191784	UTM:	595529	E	UTM:	6918215	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	mng stained qz with Li boxwork and weathered gn.									ppm
Date:											ppm
9-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	small diameter float (frost boil)		Geochem Results	
K191785	UTM:	595539	E	UTM:	6918198	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	mng stained qz & Li with boxwork and abundant gn/anglesite.									ppm
Date:											ppm
9-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	small diameter float (frost boil)		Geochem Results	
K191786	UTM:	595606	E	UTM:	6918197	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	mng stained Li with weathered gn and trace sc in cavities									ppm
Date:											ppm
9-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	small diameter float (frost boil)		Geochem Results	
K191787	UTM:	595572	E	UTM:	6918178	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	mng qz + Li boxwork with gn.									ppm
Date:											ppm
9-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	small diameter float (frost boil)		Geochem Results	
K191788	UTM:	595516	E	UTM:	6918173	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	mng stained qz + Li.									ppm
Date:											ppm
9-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	small diameter float (frost boil)		Geochem Results	
K191789	UTM:	595517	E	UTM:	6918164	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	rusty qz boxwork with trace sc (?)									ppm
Date:											ppm
9-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	small diameter float (frost boil)		Geochem Results	
K191790	UTM:	595516	E	UTM:	6918162	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	mng stained qz with boxwork and Li.									ppm
Date:											ppm
9-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	small diameter float (frost boil)		Geochem Results	
K191791	UTM:	595514	E	UTM:	6918154	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	mng stained Li with weathered gn.									ppm
Date:											ppm
9-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	small diameter float (frost boil)		Geochem Results	
K191792	UTM:	595526	E	UTM:	6918133	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	mng stained qz boxwork with Li and trace py.									ppm
Date:											ppm
9-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	small diameter float (frost boil)		Geochem Results	
K191793	UTM:	595540	E	UTM:	6918136	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	qz boxwork with strong Li stains.									ppm
Date:											ppm
9-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	small diameter float (frost boil)		Geochem Results	
K191794	UTM:	595483	E	UTM:	6918060	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	pervasively manganese stained pebble.									ppm
Date:											ppm
9-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	small diameter float (frost boil)		Geochem Results	
K191795	UTM:	595431	E	UTM:	6918045	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	qz boxwork with trace Li inside.									ppm
Date:											ppm
9-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float (felsenmeer)		Geochem Results	
K191796	UTM:	595565	E	UTM:	6918008	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	qz bx with mng stains.									ppm
Date:											ppm
9-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191797	UTM:	595540	E	UTM:	6918250	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	mng stained qz with minor Li and trace blackjack sph. 2 pieces - 1 fist sized and 1 golfball sized in west of three recessive structures.									ppm
Date:											ppm
10-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	small diameter float (frost boil)		Geochem Results	
K191798	UTM:	595539	E	UTM:	6918147	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	mng stained qz boxwork with trace gn.									ppm
Date:											ppm
10-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	small diameter float (frost boil)		Geochem Results	
K191799	UTM:	595658	E	UTM:	6918074	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	chalcedonic qz very fine disseminated grey colouring (sulphide?)									ppm
Date:											ppm
10-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	small diameter float (frost boil)		Geochem Results	
K191800	UTM:	595602	E	UTM:	6917990	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	mng stained pervasively rusty granite chip.									ppm
Date:											ppm
10-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	small diameter float (frost boil)		Geochem Results	
K191801	UTM:	595787	E	UTM:	6918002	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	qz with mng seams and dark Li stains.									ppm
Date:											ppm
10-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float (felsenmeer)		Geochem Results	
K191802	UTM:	595961	E	UTM:	6917533	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Thickly mng coated slabs of fine grained massive aspy, 2 - 4 cm flat side thickness, 4 pieces plate sized within large granite boulders.									ppm
Date:											ppm
10-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float / flt gouge		Geochem Results	
K191803	UTM:	596605	E	UTM:	6917232	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	composite of vuggy mng stained chips within sandy gouge.									ppm
Date:											ppm
10-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	small diameter float (frost boil)		Geochem Results	
K191804	UTM:	596201	E	UTM:	6917667	N	Sample Width:		Zone: Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Qz fragments with mng staining									ppm
Date:											ppm
7-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float cobble			Geochem Results	
K191805	UTM:	595593	E	UTM:	6918333	N	Sample Width:		Zone:	Hammer	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Mng stained Li + qz with gn.										ppm
Date:												ppm
8-Jun-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float			Geochem Results	
K191806	UTM:	625568	E	UTM:	6918004	N	Sample Width:		Zone:	Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	fault bx with green siltstone clasts and seams of ferricrete.										ppm
Date:												ppm
12-Jun-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float composite			Geochem Results	
K191807	UTM:	625571	E	UTM:	6918006	N	Sample Width:		Zone:	Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Porous Li + geothite chips up to 4 cm diameter from 10 X 5 m rusty exposed soil patch.										ppm
Date:												ppm
12-Jun-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float			Geochem Results	
K191808	UTM:	625589	E	UTM:	6918010	N	Sample Width:		Zone:	Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Pervasively Fe altered cobble.										ppm
Date:												ppm
12-Jun-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	talus float			Geochem Results	
K191809	UTM:	625651	E	UTM:	6917979	N	Sample Width:		Zone:	Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Intensely altered cobbles (rock type unk) with strong Li + sc stains with weathered fine grained aspy. 5+ cobbles with 8 - 10 cm diameters.										ppm
Date:												ppm
12-Jun-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191810	UTM:	625669	E	UTM:	6917995	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	30 cm diameter felsic dyke boulder with ~10% fine grey sulphide, strong mal stains, weak Li stains. 1 only, very near source.									ppm
Date:											ppm
12-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191811	UTM:	625669	E	UTM:	6917995	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Medium grained qz with up 20% aspy, strong sc. 7 X 15 cm cobble, low abundance.									ppm
Date:											ppm
12-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191812	UTM:	625669	E	UTM:	6917995	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Li and sc stained qz with up 20% aspy, very weathered. 5 X 15 cm, low abundance.									ppm
Date:											ppm
12-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191813	UTM:	625652	E	UTM:	6917840	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	rusty siltstone chips with Li seams and small cavities. From 1X1m rusty patch.									ppm
Date:											ppm
13-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191814	UTM:	625879	E	UTM:	6917867	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Small fragments of siltstone fault bx with Li beside quartz boulders.									ppm
Date:											ppm
13-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float (talus)			Geochem Results	
K191815	UTM:	626035	E	UTM:	6917854	N	Sample Width:		Zone:	Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Rusty qz chips with fine cavities from rusty talus zone ~10 m wide. Low abundance.										ppm
Date:												ppm
13-Jun-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	bedrock grab			Geochem Results	
K191816	UTM:	625836	E	UTM:	6917918	N	Sample Width:		Zone:	Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Porous Li seams in bedrock near anomalous soil sample. Low abundance.										ppm
Date:												ppm
13-Jun-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float			Geochem Results	
K191817	UTM:	625836	E	UTM:	6917918	N	Sample Width:		Zone:	Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Qz with fine grey sulphide (<3%) and pervasive yellow staining. Float cobble found above Li seam (K191816)										ppm
Date:												ppm
13-Jun-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	bedrock grab			Geochem Results	
K191818	UTM:	625791	E	UTM:	6917931	N	Sample Width:		Zone:	Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	1X1 m pale BR nodule with very intense Fe + greenish alteration.										ppm
Date:												ppm
13-Jun-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
K191819	UTM:	626006	E	UTM:	6917049	N	Sample Width:		Zone:	Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Mafic intrusive with very strong green staining on fractures (sc or epidote/chlorite?)										ppm
Date:												ppm
5-Jun-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191820	UTM:	625768	E	UTM:	6917920	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Pervasivley limonitic material with thick green coatings and fine grey inclusions (sulphide?). Abundance: few									ppm
Date:											ppm
13-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191821	UTM:	625768	E	UTM:	6917920	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Hornfelsed siltstone with thin vuggy sc stained qz on one face. 1 only.									ppm
Date:											ppm
13-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191822	UTM:	625768	E	UTM:	6917920	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	hornfelsed siltstone with vuggy residue and mal on 1 face. Small fragment, 1 only.									ppm
Date:											ppm
13-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
K191823	UTM:	625408	E	UTM:	6917242	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	hornfelsed siltstone with 3 cm white qz vein and a thin seam of green crust (sc?) at foot of slope.									ppm
Date:											ppm
15-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191824	UTM:	625520	E	UTM:	6917179	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Mineralized skarn sub-crop - typical high grade: altered LST with fne grained gn, lesser aspy and black jack sph. Sulphide trace to abundant in 20-30 large clustered boulders within 7 X 4 m area. Veg and partial exposure of felsenmeer.									ppm
Date:											ppm
15-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float composite: 0.75 m		Geochem Results	
K191825	UTM:	625520	E	UTM:	6917179	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Mafic dyke/ sill material adjacent to skarn. Intensely weathered, possible sulphides.									ppm
Date:											ppm
15-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float composite: 0.90 m		Geochem Results	
K191826	UTM:	625520	E	UTM:	6917179	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Mineralized skarn fragments.									ppm
Date:											ppm
15-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191827	UTM:	625520	E	UTM:	6917179	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Mineralized skarn composite chipped from a 0.5 m boulder.									ppm
Date:											ppm
15-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191828	UTM:	625522	E	UTM:	6917179	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Porous Li with strong mal stains from directly above skarn boulders. Cobble 15 X 8 X 8 cm, 1 only.									ppm
Date:											ppm
15-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
K191829	UTM:	625524	E	UTM:	6917141	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Small Li fragment									ppm
Date:											ppm
15-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float composite: 1.2 m		Geochem Results	
K191830	UTM:	625531	E	UTM:	6917070	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Intensely weathered green rock with strong pervasive staining: Li, mng + mal. Limited exposure.									ppm
Date:											ppm
15-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
K191831	UTM:	625595	E	UTM:	6917195	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	pervasively rusty mafic sill float with trace greenish vugs									ppm
Date:											ppm
15-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	Kill-zone, 2-axis composite: 3.4 x 2.2 m		Geochem Results	
K191832	UTM:	625767	E	UTM:	6917088	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Rusty kill zone with greenish rusty fine fragments. 2-axis chip (3.4 m X 2.2 m) across kill patch.									ppm
Date:											ppm
15-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191833	UTM:	625776	E	UTM:	6917080	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Rusty kill patch 1 X 5.5 m, north striking.									ppm
Date:											ppm
15-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	Kill-zone composite: 7.5 m		Geochem Results	
K191834	UTM:	625753	E	UTM:	6916984	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Extremely bright orange gravel + soil kill zone surrounding large mafic sill outcrop.									ppm
Date:											ppm
15-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	Chip: 1.0 m		Geochem Results	
K191835	UTM:	625753	E	UTM:	6916984	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Mafic sill with fine sulphide ~5 %									ppm
Date:											ppm
15-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	Trench talus composite: 2.70 m		Geochem Results	
K191836	UTM:	625520	E	UTM:	6917179	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Talus material from base of trench.									ppm
Date:											ppm
15-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	Grab - check REP		Geochem Results	
K191837	UTM:	625520	E	UTM:	6917179	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Check REP (Mineralized skarn grab)									ppm
Date:											ppm
15-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191838	UTM:	612548	E	UTM:	6926094	N	Sample Width:		Zone: XIV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Vuggy, limonitic seams on chert boulders within 15 m wide deep linear channel.									ppm
Date:											ppm
17-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191839	UTM:	612542	E	UTM:	6926093	N	Sample Width:		Zone: XIV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Qz vein cobble with trace sulphide. 2 cm flat width. 1 only in between boulders.									ppm
Date:											ppm
17-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191840	UTM:	612546	E	UTM:	6926093	N	Sample Width:		Zone: XIV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Soft ferricrete cobble with grey inclusions. Low abundance between boulders.									ppm
Date:											ppm
17-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191841	UTM:	612546	E	UTM:	6926093	N	Sample Width:		Zone: XIV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Pervasively rusty boxwork. Low abundance between boulders.									ppm
Date:											ppm
17-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191842	UTM:	612546	E	UTM:	6926093	N	Sample Width:		Zone: XIV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Pervasivley rusty cobble with vuggy edges. Low abundance between boulders.									ppm
Date:											ppm
17-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191843	UTM:	612548	E	UTM:	6926094	N	Sample Width:		Zone: XIV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Pervasively Li stained cobble with bx, vugs and trace mal stains. 1 only within 1 X 2 m rusty patch.									ppm
Date:											ppm
17-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191844	UTM:	612091	E	UTM:	6926340	N	Sample Width:		Zone: XIV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Chert boulder with 1 edge pervasively rusty and soft. 1 only.									ppm
Date:											ppm
18-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191845	UTM:	612743	E	UTM:	6925894	N	Sample Width:		Zone: XIV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Several small, pervasively rusty chips found within small rusty soil patch in large recessive channel.									ppm
Date:											ppm
18-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191846	UTM:	612743	E	UTM:	6925894	N	Sample Width:		Zone: XIV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Intensely altered fault rock cobble with ~50% + aspy. Flat width of mineralized section 5 cm. Excavated from rusty soil patch (probably talus fines)									ppm
Date:											ppm
18-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191847	UTM:	612743	E	UTM:	6925894	N	Sample Width:		Zone: XIV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Qz vein cobble with ~30% aspy and abundant dry bone. 8 cm flat width. 4 pieces total found in small excavation of rusty soil patch ~0.5 m diam. (same as K191845-847)									ppm
Date:											ppm
18-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
K191848	UTM:	612183	E	UTM:	6926130	N	Sample Width:		Zone: XIV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	3 small fragments of soft Li found in bare soil patch on slope above anomalous soil samples.									ppm
Date:											ppm
18-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191849	UTM:	611430	E	UTM:	6924869	N	Sample Width:		Zone: XIV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Intensely altered cr-bx boulder with abundant weathered aspy. Found within gossanous talus slide.									ppm
Date:											ppm
19-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191850	UTM:	611430	E	UTM:	6924869	N	Sample Width:		Zone: XIV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Qz cr-bx with strong sc staining from boulder within gossanous talus slide.									ppm
Date:											ppm
19-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	T-1 West wallrock chip: 0.90 m		Geochem Results	
K191851	UTM:	611430	E	UTM:	6924869	N	Sample Width:		Zone: XIV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Intensely silicified siltstone with rust and sc stains on fractures.									ppm
Date:											ppm
19-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	T-1 Vein chip: 1.3 m		Geochem Results	
K191852	UTM:	611430	E	UTM:	6924869	N	Sample Width:		Zone: XIV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Mineralized fault gouge zone: clay to small boulders. Most coarse framents are mineralized, but intensely weathered. Abundant aspy, abundant pitted Li with strong sc stains, 20 cm of vein appears to be intact, but hard to tell.									ppm
Date:											ppm
19-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	T-1 East wallrock chip: 1.0 m		Geochem Results	
K191853	UTM:	611430	E	UTM:	6924869	N	Sample Width:		Zone: XIV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Intensely silicified siltstone with rust and sc stains on fractures, + 10 cm wide white qz vein.									ppm
Date:											ppm
19-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	T-2 west wallrock chip: 1.0 m		Geochem Results	
K191854	UTM:	611440	E	UTM:	6924879	N	Sample Width:		Zone: XIV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Silicified siltstone.									ppm
Date:											ppm
20-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	T-2 vein chip: 0.23 m		Geochem Results	
K191855	UTM:	611440	E	UTM:	6924879	N	Sample Width:		Zone: XIV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Fine grained qz with abundant disseminated asypy, strong mng stains.									ppm
Date:											ppm
20-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	T-2 vein chip: 0.78 m		Geochem Results	
K191856	UTM:	611440	E	UTM:	6924879	N	Sample Width:		Zone: XIV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Intensely weathered and variable vein material: silica rich and ca rich sections, abundant Li, sc, seams of aspy weathered to grey, soft, trace gn locally.									ppm
Date:											ppm
20-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	T-2 east wallrock chip: 0.8 m		Geochem Results	
K191857	UTM:	611440	E	UTM:	6924879	N	Sample Width:		Zone: XIV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Intensely silicified siltstone with strong Li and sc stains.									ppm
Date:											ppm
20-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	bedrock discrete grab		Geochem Results	
K191858	UTM:	611386	E	UTM:	6924763	N	Sample Width:		Zone: XIV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Thick Li patches on rock face near small qz vein exposure. (see Rosie's samples for qz chip)									ppm
Date:											ppm
20-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float composite		Geochem Results	
K191859	UTM:	611433	E	UTM:	6924868	N	Sample Width:		Zone: XIV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Pervasively rusty chips and soft Li pieces from 2 ft wide kill zone. 3 m to the east of T-1.									ppm
Date:											ppm
20-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	grab from trench		Geochem Results	
K191860	UTM:	611430	E	UTM:	6924869	N	Sample Width:		Zone: XIV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Intensely weathered vein cobble.									ppm
Date:											ppm
19-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
K191861	UTM:	604221	E	UTM:	6933364	N	Sample Width:		Zone: Arch	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	vuggy Li. 8-10 egg sized fragments scattered on kill-zone rusty slope 10 X 10 m wide.									ppm
Date:											ppm
21-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
K191862	UTM:	604191	E	UTM:	6933412	N	Sample Width:		Zone: Arch	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	15 X 10 X 5 cm piece of goethite + Li on large talus slope of altered siliceous siltstone.									ppm
Date:											ppm
21-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191863	UTM:	603152	E	UTM:	6934688	N	Sample Width:		Zone: Arch	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Qz vein with vuggy Li, galena blebs weathered to anglesite. Host white quartzite felsenmeer exposed roughly 8X12 m zone with abundant geothite, and altered qtzt vein wallrock with vuggy surfaces, often containing blebbly galena, anglesite and cerrusite (?).									ppm
Date:											ppm
21-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	talus float composite		Geochem Results	
K191864	UTM:	604020	E	UTM:	6933842	N	Sample Width:		Zone: Arch	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Composite of Li and rusty fault rocks from 7 X 10 m rusty zone									ppm
Date:											ppm
21-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	Trench: near source float		Geochem Results	
K191865	UTM:	603149	E	UTM:	6934684	N	Sample Width:		Zone: Arch	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Vuggy quartz vein material from surface of large qzt boulder (64 X 25 X 34 cm), zones of gn in blebs, often weathered to anglesite and cerrusite.									ppm
Date:											ppm
21-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	Trench: near source float		Geochem Results	
K191866	UTM:	603149	E	UTM:	6934684	N	Sample Width:		Zone: Arch	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Altered quartzite adjacent to galena bearing vein material. Very rusty, with grey discolouration inside. Wallrock only.									ppm
Date:											ppm
21-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
K191867	UTM:	603560	E	UTM:	6934493	N	Sample Width:		Zone: Arch	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Limonitic fault bx fragments from 2X2 m rusty soil patch.									ppm
Date:											ppm
22-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
K191868	UTM:	603094	E	UTM:	6934674	N	Sample Width:		Zone: Arch	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Small, pervasively rusty limestone fragment with whispy dark metallic minerial, probably weathered galena									ppm
Date:											ppm
22-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191869	UTM:	603106	E	UTM:	6934649	N	Sample Width:		Zone: Arch	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Rusty limestone fragments with trace galena sourcing from thin (<30 cm) limestone bed between siltstone and qtzt beds. 049/90									ppm
Date:											ppm
22-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	bedrock chip 0.25 m		Geochem Results	
K191870	UTM:	603094	E	UTM:	6934674	N	Sample Width:		Zone: Arch	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Pervasively rusty limestone bed ~12 cm with locally abundant small galena crystals evenly distributed. Chip sample includes rusty siltstone bracketing limestone. 065/85									ppm
Date:											ppm
22-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191871	UTM:	603135	E	UTM:	6934701	N	Sample Width:		Zone: Arch	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Goethite with small gn bleb. Fist sized fragment, 8-10 pieces within rusty zone including rusty limestone, and unaltered qtzt float.									ppm
Date:											ppm
22-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
K191872	UTM:	603159	E	UTM:	6934779	N	Sample Width:		Zone: Arch	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Rusty, vuggy limestone fragment with possible weathered galena. 1 only.									ppm
Date:											ppm
22-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191873	UTM:	603150	E	UTM:	6934937	N	Sample Width:		Zone: Arch	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Sample description lost: probably a grab sample from the trench									ppm
Date:											ppm
23-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	Trench: near source float		Geochem Results	
K191874	UTM:	603149	E	UTM:	6934684	N	Sample Width:		Zone: Arch	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Altered qzt with large goethitic cavities stained black, a few well weathered galena blebs. Some cerrusite crystals in cavities.									ppm
Date:											ppm
21-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	Trench: near source float		Geochem Results	
K191875	UTM:	603149	E	UTM:	6934684	N	Sample Width:		Zone: Arch	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Goethite and Li with anglesite and cerrusite. Cobble. Abundance: few									ppm
Date:											ppm
21-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	Trench: near source float		Geochem Results	
K191876	UTM:	603149	E	UTM:	6934684	N	Sample Width:		Zone: Arch	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Goethite with little or no residual mineralization left in cavities. This sample plus last two represent similar material but in 3 stages of decomposition.									ppm
Date:											ppm
21-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	Talus float		Geochem Results	
K191877	UTM:	603219	E	UTM:	6934869	N	Sample Width:		Zone: Arch	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Limonitic float from 3 x 3 m rusty talus patch.									ppm
Date:											ppm
24-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	Float		Geochem Results	
K191878	UTM:	603160	E	UTM:	6934999	N	Sample Width:		Zone: Arch	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Boulder in creek within anomalous soil zone: silicified black shale with particularly strong yellow/green staining on abundant fractures.									ppm
Date:											ppm
24-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	Trench talus composite: 1.5 m		Geochem Results	
K191879	UTM:	603150	E	UTM:	6934937	N	Sample Width:		Zone: Arch	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Location of anomalous soil sample CC155717. Shallow trench exposed silicified black shale talus with abundant fractures re-healed with white/yellow/greenish residue. This is the only material within the trench.									ppm
Date:											ppm
24-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	Talus float		Geochem Results	
K191880	UTM:	603154	E	UTM:	6934899	N	Sample Width:		Zone: Arch	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Limonitic fault bx within talus patch containing mostly black shale with moderate yellow staining. 1 only.									ppm
Date:											ppm
24-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	Talus float		Geochem Results	
K191881	UTM:	602949	E	UTM:	6934941	N	Sample Width:		Zone: Arch	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Small pit dug at location of anomalous soil sample (CC155721). 1 cobble of black shale with intense silicification + yellow fracture fill found directly against soil auger hole.									ppm
Date:											ppm
24-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	Talus float		Geochem Results	
K191882	UTM:	603100	E	UTM:	6934942	N	Sample Width:		Zone: Arch	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Location of anomalous soil sample CC155718. Material excavated is well fractured black shale with yellow/green fractures. Sample taken of piece with very strong yellow fracture coatings.									ppm
Date:											ppm
24-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191883	UTM:	605673	E	UTM:	6932013	N	Sample Width:		Zone: XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Grainy qz bx with aspy + gn 5-10%, numerous cobbles and boulders up to 30 cm diam within 2 X 4 m patch.									ppm
Date:											ppm
27-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191884	UTM:	605673	E	UTM:	6932013	N	Sample Width:		Zone: XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Grainy qz bx with aspy + gn 5-10%, numerous cobbles and boulders up to 30 cm diam within 2 X 4 m patch.									ppm
Date:											ppm
27-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191885	UTM:	605673	E	UTM:	6932013	N	Sample Width:		Zone: XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Host siliceous tuff with weak mineralization. Abundant.									ppm
Date:											ppm
27-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191886	UTM:	605626	E	UTM:	6932030	N	Sample Width:		Zone: XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Very abundant coarsely grainy silica boulders and cobbles, sub-angular to sub-rounded. Probably sub-marine pyro-blastic. Intense rust weathering and abundant disseminated pyrite. The composition of these boulders is uniform across a wide area.									ppm
Date:											ppm
27-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191887	UTM:	605617	E	UTM:	6932032	N	Sample Width:		Zone: XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Semi-massive aspy, fist sized, 1 only.									ppm
Date:											ppm
27-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191888	UTM:	605583	E	UTM:	6932012	N	Sample Width:		Zone: XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Intensely pitted, pumicey, pale rock (?) with bands and blebs of aspy. 2 fist sized 1 gourd sized in kill zone patch 3X3 m.									ppm
Date:											ppm
27-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191889	UTM:	605585	E	UTM:	6932001	N	Sample Width:		Zone: XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Pitted pale blue-green stained rock with fine aspy in whisps and bands. Abundant gravel to fist sized pieces within frost boil patches 3X3 m area.									ppm
Date:											ppm
27-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float			Geochem Results	
K191890	UTM:	605535	E	UTM:	6931933	N	Sample Width:		Zone:	XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Pitted pale blue-green stained rock with fine aspy in whisps and bands. Est. 1 pail full gravel to fist sized pieces within 2X5m frost boil / kill zone patch.										ppm
Date:												ppm
27-Jun-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	talus float			Geochem Results	
K191891	UTM:	605756	E	UTM:	6932198	N	Sample Width:		Zone:	XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Pervasively yellow stained white quartzite with few fine cavities on one face. Moderate abundance of similar material on steep talus slope.										ppm
Date:												ppm
27-Jun-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	talus float			Geochem Results	
K191892	UTM:	605678	E	UTM:	6932132	N	Sample Width:		Zone:	XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Black shale, strongly silicified with intense yellow stains and coatings on pervasive healed fractures. Abundant material near contact with overlying tuff unit.										ppm
Date:												ppm
27-Jun-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	talus float			Geochem Results	
K191893	UTM:	605680	E	UTM:	6932120	N	Sample Width:		Zone:	XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Silicified shale crackle-breccia with strong yellow staining.										ppm
Date:												ppm
27-Jun-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float			Geochem Results	
K191894	UTM:	605658	E	UTM:	6932061	N	Sample Width:		Zone:	XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Intensely weathered sulphide, probably gn + aspy. 8 fragments found up to fist sized within 5X2m area on felsenmeer slope.										ppm
Date:												ppm
27-Jun-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	talus float		Geochem Results	
K191895	UTM:	605489	E	UTM:	6932056	N	Sample Width:		Zone: XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Thick banded aspy with shale on walls. Two large pieces, the larger being 20X20X8cm.									ppm
Date:											ppm
28-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	talus float		Geochem Results	
K191896	UTM:	605503	E	UTM:	6932041	N	Sample Width:		Zone: XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Pitted, cavity filled Li with whispy fine sulphide and green staining. 6 fist sized fragments in a ~7m long train.									ppm
Date:											ppm
28-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	talus float		Geochem Results	
K191897	UTM:	605503	E	UTM:	6932040	N	Sample Width:		Zone: XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Pale, soft porous rock with whispy quartz, bands of sc, Li, and white residue.									ppm
Date:											ppm
28-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	talus float		Geochem Results	
K191898	UTM:	605523	E	UTM:	6932025	N	Sample Width:		Zone: XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Pale, tuffaceous rock with whispy banded aspy + gn partly weathered to anglesite (sulph <10%). 1 piece only.									ppm
Date:											ppm
28-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191899	UTM:	605655	E	UTM:	6932053	N	Sample Width:		Zone: XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Grey siliceous tuff with bands up to 3cm of sc stained dry-bone (weathered out sulphide). 2 pieces, 10 m apart.									ppm
Date:											ppm
28-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
K191900	UTM:	603107	E	UTM:	6932864	N	Sample Width:		Zone: Euclid NE	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Strongly rust weathering siliceous siltstone in 5X5m near source patch.									ppm
Date:											ppm
30-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840501	UTM:	603087	E	UTM:	6932874	N	Sample Width:		Zone: Euclid NE	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Quartz/aspy vein material, intensely weathered. 15+ fragments walnut to egg sized within rusty bare patches down 8m stretch of slope. Numerous fragments of yellowed grey shale wallrock. Float train disappears under thin vegetation. Apparent strike ~56 deg.									ppm
Date:											ppm
30-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	bedrock discrete grab		Geochem Results	
L840502	UTM:	603029	E	UTM:	6932962	N	Sample Width:		Zone: Euclid NE	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Rusty weathering quartz rich dyke with fine disseminated pyrite. 1x1 m exposed, 252/90. About 15 m across slope from Pb-Sb anomalous soil sample CC151402									ppm
Date:											ppm
30-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	bedrock discrete grab		Geochem Results	
L840503	UTM:	603043	E	UTM:	6932901	N	Sample Width:		Zone: Euclid NE	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Isolated 3 cm seam within ~8m wide bull quartz vein containing weak, aspy in fine fractures and cavities.									ppm
Date:											ppm
30-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840504	UTM:	603061	E	UTM:	6932892	N	Sample Width:		Zone: Euclid NE	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Abundant quartz/aspy vein material in very near source float within 2X4m rusty talus/sub-crop patch. Aspy is banded within qz, varying 30-70%. ~14 fragments fist size up to 30X15X10cm (sample is of largest fragment). Several more pieces in bare patch 7 m SW (8 egg sized pieces)									ppm
Date:											ppm
30-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840505	UTM:	605387	E	UTM:	6931733	N	Sample Width:		Zone: XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Limonitic fault breccia cobbles. Numerous within bare soil patch on slope.									ppm
Date:											ppm
30-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840506	UTM:	605817	E	UTM:	6931851	N	Sample Width:		Zone: XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Intensely weathered semi-massive to massive aspy. ~15 pieces egg to gourd sized over 10m in float train in near source talus. 3-4 cm flat width.									ppm
Date:											ppm
30-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840507	UTM:	605740	E	UTM:	6931959	N	Sample Width:		Zone: XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Blue/green stained chalky rock, pitted.									ppm
Date:											ppm
30-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840508	UTM:	605668	E	UTM:	6932063	N	Sample Width:		Zone: XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Mineralized wallrock fragment 26X16X10cm. Siliceous tuff with strong sc staining and grey weathered sulphide in few cavities. Moderate abundance near vein float.									ppm
Date:											ppm
30-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float composite		Geochem Results	
L840509	UTM:	605627	E	UTM:	6932010	N	Sample Width:		Zone: XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Pervasively blue/green stained tuffaceous rock, intensely pitted, trace remnants of galena crystals and anglesite. ~30 pieces up to 10 cm diam.									ppm
Date:											ppm
29-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840510	UTM:	605631	E	UTM:	6932021	N	Sample Width:		Zone: XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Strongly pitted pale blue/green quartz with banded aspy and flecks of py. 10 pieces up to 15X12X6cm (sample is of largest piece)									ppm
Date:											ppm
29-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840511	UTM:	605661	E	UTM:	6932055	N	Sample Width:		Zone: XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Intensely weathered semi-massive to massive aspy. ~30 pieces egg to fist sized over 4 m.									ppm
Date:											ppm
29-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float composite of vein material		Geochem Results	
L840512	UTM:	605672	E	UTM:	6932062	N	Sample Width:		Zone: XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Strongly sc stained dry-bone with tuffaceous wallrock attached. Abundant aspy and possible empty gn cavities. 30 pieces fist to gourd sized, 15 boulders (including strongly mineralized wallrock)									ppm
Date:											ppm
28-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float wallrock		Geochem Results	
L840513	UTM:	605672	E	UTM:	6932062	N	Sample Width:		Zone: XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Mineralized wallrock fragment 45X25X15cm. Tuff with weathered sulphide in blebs and fractures.									ppm
Date:											ppm
28-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840514	UTM:	605685	E	UTM:	6932078	N	Sample Width:		Zone: XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Sc stained dry-bone and aspy in blebs and bands within tuffaceous float. 38 pieces fist to gourd sized, 30-40% aspy, with several pieces massive aspy.									ppm
Date:											ppm
28-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840515	UTM:	605695	E	UTM:	6932101	N	Sample Width:		Zone: XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Silicified and intensely yellow and green stained shale. High abundance within 4X10m steep talus zone immediately below crest, and contact with pyroclastics.									ppm
Date:											ppm
29-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840516	UTM:	605695	E	UTM:	6932101	N	Sample Width:		Zone: XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Abundant massive aspy vein fragments 3-6cm thick within 4X10m zone of intensely yellow and green stained shale. ~10 pieces 3-6 cm vein width, very near source (slope crest and patchy outcrop a few m up slope).									ppm
Date:											ppm
29-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840517	UTM:	605644	E	UTM:	6932049	N	Sample Width:		Zone: XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	27 pieces weathered sulphide vein material, fist to gourd sized within 4m, up 90% aspy. One larger piece 20X17X9cm (sampled)									ppm
Date:											ppm
29-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840518	UTM:	605652	E	UTM:	6932055	N	Sample Width:		Zone: XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	30 pieces weathered sulphide vein material, average fist sized with several larger fragments of massive aspy up to 18X18X9cm.									ppm
Date:											ppm
29-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840519	UTM:	605652	E	UTM:	6932055	N	Sample Width:		Zone: XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Fine graned quartz with fine disseminated sulphide and seams of sc coated cavities. Sample represents lower grade vein material.									ppm
Date:											ppm
29-Jun-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float			Geochem Results	
L840520	UTM:	605477	E	UTM:	6931956	N	Sample Width:		Zone:	XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Pervasively weathered, cavity filled sulphide with abundant sc pods and possible gn (very heavy). 4 pieces fist to gourd sized.										ppm
Date:												ppm
28-Jun-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	talus float			Geochem Results	
L840521	UTM:	602445	E	UTM:	6932131	N	Sample Width:		Zone:	Euclid	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Rusty weathering grey, calcareous mafic dyke float with trace disseminated sulphide and weathered, friable green mineral (sc?).										ppm
Date:												ppm
1-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	talus float			Geochem Results	
L840522	UTM:	602522	E	UTM:	6932095	N	Sample Width:		Zone:	Euclid	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Intensely silica altered chert with abundant empty pyrite cubes, and blebs of rotted grey material (sulphide?). 2 only found within gossanous talus slope above anomalous soils sample(Ag-Pb).										ppm
Date:												ppm
1-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	talus float			Geochem Results	
L840523	UTM:	602528	E	UTM:	6932121	N	Sample Width:		Zone:	Euclid	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Grey chert crackle breccia with yellow alteration. Locally common on large gossanous talus slope.										ppm
Date:												ppm
1-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	talus float			Geochem Results	
L840524	UTM:	602535	E	UTM:	6932131	N	Sample Width:		Zone:	Euclid	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Chert float with very strong yellow coatings and fine disseminated cavities.										ppm
Date:												ppm
1-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	talus float		Geochem Results	
L840525	UTM:	602552	E	UTM:	6932142	N	Sample Width:		Zone: Euclid	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Bright yellow altered float (rock type?) with thick coatings, abundant cavities and possible trace anglesite. Not common.									ppm
Date:											ppm
1-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	bedrock discrete grab		Geochem Results	
L840526	UTM:	602616	E	UTM:	6931841	N	Sample Width:		Zone: Euclid	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Fault shattered, pervasively green and yellow stained shale. Fault feature in bedrock o.c. (120/70) of shale unit sampled last year lower on slope.									ppm
Date:											ppm
1-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	bedrock discrete grab		Geochem Results	
L840527	UTM:	602622	E	UTM:	6931842	N	Sample Width:		Zone: Euclid	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Fault shattered, pervasively green and yellow stained shale. 10 cm section right up against fault surface, more intensely altered than surrounding material.									ppm
Date:											ppm
1-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
L840528	UTM:	603184	E	UTM:	6932882	N	Sample Width:		Zone: Euclid NE	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Grainy qz vein with <5% py + trace gn. 1 float frag found, 6cm TW. Several other rusty boulders found nearby: qz with py only, chert with FDS (fine diss sulph). Thin veg slope over patch sub-crop and talus.									ppm
Date:											ppm
2-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	talus float grab		Geochem Results	
L840529	UTM:	603184	E	UTM:	6932850	N	Sample Width:		Zone: Euclid NE	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Grainy qz vein talus with pervasive yellow alteration. Few small pieces found in rusty talus patch ~10X10m.									ppm
Date:											ppm
2-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	talus float grab		Geochem Results	
L840530	UTM:	603079	E	UTM:	6932882	N	Sample Width:		Zone: Euclid NE	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Grainy qz with fine diss grey sulph, and soft white mineral with fine radial crystals. 1 only 15cm diam, but found near several cobbles of Fe altered chert.									ppm
Date:											ppm
3-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	bedrock chip 0.02m		Geochem Results	
L840531	UTM:	603087	E	UTM:	6932888	N	Sample Width:		Zone: Euclid NE	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Qz + aspy vein in BR. Max width 24cm over 3m OC. This sample represents 2cm thickness of aspy >50%.									ppm
Date:											ppm
3-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	bedrock chip 0.22m		Geochem Results	
L840532	UTM:	603087	E	UTM:	6932888	N	Sample Width:		Zone: Euclid NE	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Qz + aspy vein in BR. Max width 24cm over 3m OC. This sample represents 22cm of qz with weak diss sulph with chert wallrock inclusions.									ppm
Date:											ppm
3-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float composite		Geochem Results	
L840533	UTM:	603146	E	UTM:	6932889	N	Sample Width:		Zone: Euclid NE	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	3 small fragments of weathered qz vein with fine diss grey sulph.									ppm
Date:											ppm
3-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
L840534	UTM:	603157	E	UTM:	6932881	N	Sample Width:		Zone: Euclid NE	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Intensely rusty weathering chert boulder with abundant fine diss sulph (5-50%). Moderately abundant.									ppm
Date:											ppm
3-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float			Geochem Results	
L840535	UTM:	605662	E	UTM:	6932269	N	Sample Width:		Zone:	XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Grey + white qzt with strong yellow and green staining on fractures. Very abundant material.										ppm
Date:												ppm
3-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	talus near source float			Geochem Results	
L840536	UTM:	605424	E	UTM:	6932256	N	Sample Width:		Zone:	XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Massive sulphide boulders (aspy 85%, py 10%, gn 5%) up to 15cm TW, within prominent gossanous talus patch (4X15m) of rusty pyroclastics. 4 boulders + 15 cobbles.										ppm
Date:												ppm
3-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	talus near source float			Geochem Results	
L840537	UTM:	605424	E	UTM:	6932256	N	Sample Width:		Zone:	XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Pumicey, cavity filled weathered vein material with Li and sc staining. Moderately abundant within gossanous patch.										ppm
Date:												ppm
3-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	talus near source float			Geochem Results	
L840538	UTM:	605424	E	UTM:	6932256	N	Sample Width:		Zone:	XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Chalcedonic qz with abundant Li coated cavities, and grey whispy colouring inside qz (sulph?). Numerous.										ppm
Date:												ppm
3-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float			Geochem Results	
L840539	UTM:	605679	E	UTM:	6932257	N	Sample Width:		Zone:	XIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Abundant ferricrete fault bx within qzt boulders. Anomalous soil sample CC158849 was taken within rusty fines of ferricrete. Max ferricrete boulder size 1.5X2m.										ppm
Date:												ppm
3-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	trench talus grab		Geochem Results	
L840540	UTM:	581949	E	UTM:	6946110	N	Sample Width:		Zone: Owl SW	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Few chips of silicified shale with strong yellow/green alteration, within predominantly rusty chert talus.									ppm
Date:											ppm
8-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	trench float composite: 2.9 m		Geochem Results	
L840541	UTM:	581949	E	UTM:	6946110	N	Sample Width:		Zone: Owl SW	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Continuation of trench from K191765 for 2.9m south: Intensely rusty chert talus with rare pieces of silicified shale with yellow/green alteration.									ppm
Date:											ppm
8-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	trench talus grab		Geochem Results	
L840542	UTM:	581220	E	UTM:	6946330	N	Sample Width:		Zone: Owl SW	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Intensely yellowed quartz vein fragments 2-3 cm width, with Li and few vugs. Found within rusty horizon in soil profile of trench dug at location of anomalous 2012 soil sample (DD018377, 33.8 g/t Ag).									ppm
Date:											ppm
9-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	trench talus composite		Geochem Results	
L840543	UTM:	581626	E	UTM:	6946257	N	Sample Width:		Zone: Owl SW	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Composite of numerous small fragments of intensely altered chert (yellow/green alteration) from discrete zone within shallow trench.									ppm
Date:											ppm
9-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	trench talus composite		Geochem Results	
L840544	UTM:	581626	E	UTM:	6946257	N	Sample Width:		Zone: Owl SW	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Few small fragments of qz vein with weathered sulphide, Li, and few small cavities, found in discrete zone within trench.									ppm
Date:											ppm
9-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	trench talus composite		Geochem Results	
L840545	UTM:	581630	E	UTM:	6946256	N	Sample Width:		Zone: Owl SW	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Numerous fist sized fragments of intensely altered chert found in discrete zone within shallow trench.									ppm
Date:											ppm
9-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	trench talus composite		Geochem Results	
L840546	UTM:	581633	E	UTM:	6946255	N	Sample Width:		Zone: Owl SW	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Numerous fragments of intensely yellowed quartz vein (1.5cm width) with thin seams of possible rotted sulphide, and intensely altered chert fragments.									ppm
Date:											ppm
9-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	trench talus grab		Geochem Results	
L840547	UTM:	581639	E	UTM:	6946252	N	Sample Width:		Zone: Owl SW	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Intensely altered chert fragments, numerous found in discrete zone within shallow trench.									ppm
Date:											ppm
9-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float grab		Geochem Results	
L840551	UTM:	625501	E	UTM:	6917128	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	qz vein with green meta-sed containing fine grained gn. Few cobbles found within meta-sed felsenmeer									ppm
Date:											ppm
12-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	composite chip from single large boulder		Geochem Results	
L840552	UTM:	625518	E	UTM:	6917184	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Mineralized (gn+sph) skarn boulder within trench - appears to be higher grade than others.									ppm
Date:											ppm
12-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float grab		Geochem Results	
L840553	UTM:	625494	E	UTM:	6917165	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Abundant mineralized skarn boulders within 3X10m area (green, marblized LST with banded and disseminated gn + sph)									ppm
Date:											ppm
12-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float grab		Geochem Results	
L840554	UTM:	625496	E	UTM:	6917164	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Top of skarn boulder patch -two large cobbles of pervasively rusty material with strong azurite and malchite staining									ppm
Date:											ppm
12-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float grab		Geochem Results	
L840555	UTM:	625468	E	UTM:	6917180	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Third area of abundant skarn boulders, but with apparently weaker mineralization. Few cobbles moderately mineralized, and many skarnified, but unmineralized.									ppm
Date:											ppm
12-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float grab		Geochem Results	
L840556	UTM:	625463	E	UTM:	6917157	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Abundant skarn boulders. Few cobbles moderately mineralized, and many are skarnified but unmineralized.									ppm
Date:											ppm
12-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float grab		Geochem Results	
L840557	UTM:	625492	E	UTM:	6917154	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	skarn boulder, abundant gn and sph.									ppm
Date:											ppm
12-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float grab		Geochem Results	
L840558	UTM:	625959	E	UTM:	6917108	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Rusty weathering light green rock (epidote?) with strong Li and mmg staining.									ppm
Date:											ppm
12-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float grab		Geochem Results	
L840559	UTM:	625732	E	UTM:	6917124	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Very rusty weathering pale green meta-sed with flecks of py and pyhr (<5%). Few near source cobbles.									ppm
Date:											ppm
12-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float selective grab		Geochem Results	
L840560	UTM:	625707	E	UTM:	6917156	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Selective sampled from 1.5 m wide rusty zone in meta-sed: discrete lenses of sc and mal stained material within several fragments									ppm
Date:											ppm
12-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float selective composite		Geochem Results	
L840561	UTM:	625513	E	UTM:	6917212	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Intensely rusty weathering dark to mid-green mafic dyke with local pods of mzn: fine pyrhotite, mal stains, sc crusts (?). Three meter wide area. Sample is composite of fragments with observed mineralization.									ppm
Date:											ppm
13-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
L840562	UTM:	625514	E	UTM:	6917964	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	White qz with dark grey wispy wallrock inclusions, fine grey sulphide <5%, py, trace chalco, mild green/yellow stains. One only in solifluction lobe surrounded by vegetation.									ppm
Date:											ppm
13-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
L840563	UTM:	625581	E	UTM:	6919297	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Several cobbles of pervasively dark rusty, intensely altered rock with moderately abundant medium crystaline gn, abundant anglesite, and an acicular, fibrous looking mineral. Strong efforvessence locally. Dug up from soil sample with anomalous Pb. No o.c. in area - deep organics and vegetation.									ppm
Date:											ppm
14-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
L840564	UTM:	625183	E	UTM:	6919999	N	Sample Width:		Zone: Ku	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Two cobbles of intensely Fe altered rock with fine blebby sulphide 10-20%, and weathered grey material in cavities. Found within frost boil on flat ridge. Nearby bedrock is andesitic dyke.									ppm
Date:											ppm
14-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	talus composite: 1.8m		Geochem Results	
L840565	UTM:	611365	E	UTM:	6924822	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Rusty chert talus, silicified. Near source.									ppm
Date:											ppm
15-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	talus composite: 0.7m gouge		Geochem Results	
L840566	UTM:	611365	E	UTM:	6924822	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Fault gouge. Bleached light green, and rusty.									ppm
Date:											ppm
15-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	talus composite: 0.9m		Geochem Results	
L840567	UTM:	611365	E	UTM:	6924822	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Rusty chert talus, silicified, Li & mng staining. Near source.									ppm
Date:											ppm
15-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float grab		Geochem Results	
L840568	UTM:	612740	E	UTM:	6925848	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Shallow trench near anom soil CC157444: several <fist sized pervasively limonitic float rocks									ppm
Date:											ppm
16-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float grab		Geochem Results	
L840569	UTM:	612760	E	UTM:	6925873	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Pale green float vein material. Intensely vuggy and pitted, trace fine grey sulphide, and empty gn cavities. 3 large cobbles and egg to fist sized fragments at foot of short slope. Snowpatch directly above in inferred source area.									ppm
Date:											ppm
16-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float grab		Geochem Results	
L840570	UTM:	612760	E	UTM:	6925873	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Pale green float vein material. Intensely vuggy and pitted, trace fine grey sulphide, and empty gn cavities. 3 large cobbles and egg to fist sized fragments at foot of short slope. Snowpatch directly above in inferred source area.									ppm
Date:											ppm
16-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	bedrock chip: 0.8m		Geochem Results	
L840571	UTM:	612609	E	UTM:	6925870	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Pale grey/green clay altered soft fault rock with pods of intense Li, trace mal staining.									ppm
Date:											ppm
16-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	bedrock chip: 1.10m		Geochem Results	
L840572	UTM:	612609	E	UTM:	6925870	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Pervasively Li altered soft fault rock.									ppm
Date:											ppm
16-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	bedrock chip: 0.9m		Geochem Results	
L840573	UTM:	612609	E	UTM:	6925870	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Rusty chert chips									ppm
Date:											ppm
16-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	composite chip from single float boulder		Geochem Results	
L840574	UTM:	611703	E	UTM:	6927091	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Quartz vein boulder 75X34X25cm: pervasively rusty with yellow, orange and red rust, common blebs of galena, rotted grey galena and anglesite.									ppm
Date:											ppm
17-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float grab composite		Geochem Results	
L840575	UTM:	611667	E	UTM:	6927096	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Semi-massive galena largely weathered to anglesite, strong green coatings and layers within rock. Numerous fragments (~30) walnut to fist sized from gopher-hole diggings.									ppm
Date:											ppm
16-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840576	UTM:	611716	E	UTM:	6927093	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Weathered vein material, fist sized, intense yellow staining.									ppm
Date:											ppm
17-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source grab		Geochem Results	
L840577	UTM:	611450	E	UTM:	6924888	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Few fragments of limonitic material coming up from trench ~20 NE of vein exposure at trench-2. Trench not completed, but appears to be on top of vein.									ppm
Date:											ppm
15-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	composite chip from single float boulder		Geochem Results	
L840578	UTM:	611703	E	UTM:	6927091	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Quartz vein boulder 30X20X15cm: pervasively rusty with yellow, orange and red rust, common blebs of galena, rotted grey galena and anglesite, intense fine crackle texture.									ppm
Date:											ppm
17-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	composite chip from single float boulder		Geochem Results	
L840579	UTM:	611703	E	UTM:	6927091	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Quartz vein boulder 50X40X27cm: pervasive dark red and orange rust, abundant vugs and blebby galena, soft grey clasts: wallrock inclusions or weathered gn?									ppm
Date:											ppm
17-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	composite chip from single float boulder		Geochem Results	
L840580	UTM:	611703	E	UTM:	6927091	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Quartz vein boulder 40X40X32cm: vuggy, blebby galena, local yellow and green staining.									ppm
Date:											ppm
17-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	composite chip from single float boulder		Geochem Results	
L840581	UTM:	611703	E	UTM:	6927091	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Quartz vein boulder 65X45X50cm: vuggy, blebby galena, local yellow and green staining.									ppm
Date:											ppm
17-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840582	UTM:	611716	E	UTM:	6927093	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Semi-massive galena, one gourd sized fragment + several smaller pieces.									ppm
Date:											ppm
17-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	Float composite across 4.3 m		Geochem Results	
L840583	UTM:	611716	E	UTM:	6927093	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Rusty chert chips + vein material with mostly weathered out sulphide.									ppm
Date:											ppm
17-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	Float composite across 1.1 m		Geochem Results	
L840584	UTM:	611716	E	UTM:	6927093	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Rusty chert chips + vein material with mostly weathered out sulphide.									ppm
Date:											ppm
17-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
L840585	UTM:	611523	E	UTM:	6927086	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Pervasively limonitc fault bx found in 1X3m kill zone roughly along strike of vein.									ppm
Date:											ppm
17-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	bedrock chip: 1.0m		Geochem Results	
L840586	UTM:	611699	E	UTM:	6927092	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Rusty chert wallrock.									ppm
Date:											ppm
17-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	bedrock chip: 0.1m		Geochem Results	
L840587	UTM:	611699	E	UTM:	6927092	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Rusty fine fault gouge.									ppm
Date:											ppm
17-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	bedrock chip: 2.0m		Geochem Results	
L840588	UTM:	611699	E	UTM:	6927092	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Rusty chert, few seams of pervasively Fe altered rock.									ppm
Date:											ppm
17-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840589	UTM:	611716	E	UTM:	6927093	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Semi-massive galena with clasts of wallrock, and halos of strong lime/yellow staining. One only like this.									ppm
Date:											ppm
17-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float grab		Geochem Results	
L840590	UTM:	612297	E	UTM:	6927177	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Few pervasively Fe altered fault rocks within small rusty patch in N/S striking recessive channel.									ppm
Date:											ppm
18-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840591	UTM:	611716	E	UTM:	6927093	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Vuggy qz with abundant blebby gn + ang, intense Li and very intense bright yellow residue. 4 pieces fist sized.									ppm
Date:											ppm
17-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
L840592	UTM:	625968	E	UTM:	6921375	N	Sample Width:		Zone: XV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	White quartz vein with few small vugs, Li and tope crusts within vugs (ang or smi??). One only gourd sized frag within bouldery siltstone/quartzite felsenmeer. This exposure extends the length of the Zn Pb anomaly (3 samples).									ppm
Date:											ppm
19-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	bedrock grab		Geochem Results	
L840593	UTM:	626418	E	UTM:	6920215	N	Sample Width:		Zone: XV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Pervasively rusty LST within wide recessive channel. No visible mzn. Very small BR outcrop on knob in centre of RL.									ppm
Date:											ppm
19-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
L840594	UTM:	626572	E	UTM:	6919776	N	Sample Width:		Zone: XV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Pervasively altered LST cobble (silicified) with strong Li, mng, trace mal. One only on bouldery thin-veg slope.									ppm
Date:											ppm
19-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
L840595	UTM:	626573	E	UTM:	6919754	N	Sample Width:		Zone: XV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Fine grained qz vein with fine sulphide: gn, aspy, py, strong sc. Altered wallrock attached, including gn &Li. Local, strong efforvessence. Skarn boulders observed nearby.									ppm
Date:											ppm
19-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
L840596	UTM:	626639	E	UTM:	6919710	N	Sample Width:		Zone: XV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Lime green fine grained marblized LST, tr fine rusty seams. Two cobbles found on steep LST talus/felsenmeer slope. Strong efforvessence.									ppm
Date:											ppm
19-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
L840597	UTM:	613027	E	UTM:	6924175	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Medium grained quartz vein fragment with few vugs, Li & yellow coatings, fine grey colouring within qz. One plate sized fragment (~4cm TW) within 20X10m bouldery chert slope on small knob.									ppm
Date:											ppm
20-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
L840598	UTM:	612996	E	UTM:	6924151	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Vuggy quartz with with abundant powdery yellow residue within vugs. One fist sized fragment at foot of bouldery chert slope.									ppm
Date:											ppm
20-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
L840599	UTM:	612623	E	UTM:	6925862	N	Sample Width:		Zone: Weld (XIV)	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Intensely altered limonitic rock, pale, strong mng stains, few vugs. Few large cobbles poking through thin veg.									ppm
Date:											ppm
20-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	Float grab from shallow trench		Geochem Results	
L840600	UTM:	625575	E	UTM:	6919300	N	Sample Width:		Zone: XV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Qz vein and altered LST wallrock, abundant gn, ang, py, and dark Li, abundant bladed, radial mineral. One pail full of ~fist sized fragments dug up from trench. Talus mixed with deep organics. Abundant limestone/marblized limestone with rusty fractures also found within trench.									ppm
Date:											ppm
21-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	Float grab from shallow trench		Geochem Results	
L840601	UTM:	625575	E	UTM:	6919300	N	Sample Width:		Zone: XV	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Pale green medium crystaline intrusive with abundant medium py, intense rust weathering. <fist sized fragment, one only.									ppm
Date:											ppm
21-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	T-1 Chip: 0.1m (gouge)		Geochem Results	
L840602	UTM:	598955	E	UTM:	6915246	N	Sample Width:		Zone: Cirque	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Bright rusty sandy granitic gouge.									ppm
Date:											ppm
23-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	T-1 Chip: 0.95m (vein)		Geochem Results	
L840603	UTM:	598955	E	UTM:	6915246	N	Sample Width:		Zone: Cirque	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Limonitic weathered quartz vein with abundant empty cavities, locally abundant galena often partly weathered to anglesite									ppm
Date:											ppm
23-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	T-1 Chip: 0.1m (gouge)		Geochem Results	
L840604	UTM:	598955	E	UTM:	6915246	N	Sample Width:		Zone: Cirque	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Bright rusty sandy granitic gouge.									ppm
Date:											ppm
23-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	T-1 Chip: 0.80m (footwall)		Geochem Results	
L840605	UTM:	598955	E	UTM:	6915246	N	Sample Width:		Zone: Cirque	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Footwall granite with intense, pervasive manganese staining and few minor qz veinlets. Rock is pitch black and friable.									ppm
Date:											ppm
23-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840606	UTM:	598956	E	UTM:	6915269	N	Sample Width:		Zone: Cirque	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Quartz vein breccia with galena crystals in cavities. Few pieces under vegetation, surrounded by abundant mng stained granite pieces									ppm
Date:											ppm
23-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840607	UTM:	598955	E	UTM:	6915287	N	Sample Width:		Zone: Cirque	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Few fragments of weathered vein material <egg sized.									ppm
Date:											ppm
23-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	T-2 Chip: 0.55m (footwall)		Geochem Results	
L840608	UTM:	598951	E	UTM:	6915293	N	Sample Width:		Zone: Cirque	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Footwall granite with intense, pervasive manganese staining. Rock is pitch black and friable.									ppm
Date:											ppm
24-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	T-2 Chip: 0.30m (footwall)		Geochem Results	
L840609	UTM:	598951	E	UTM:	6915293	N	Sample Width:		Zone: Cirque	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Intensely altered, silicified granite with pervasive limonite and manganese staining, spotty galena.									ppm
Date:											ppm
24-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	T-2 Chip: 0.11m (vein)		Geochem Results	
L840610	UTM:	598951	E	UTM:	6915293	N	Sample Width:		Zone: Cirque	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Weathered quartz vein with locally abundant galena, strong Li and manganese coatings, local sc stains. Galena is present in seams or as late fracture fillings.									ppm
Date:											ppm
24-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	T-2 Chip: 0.23m (vein + wallrock inclusions)		Geochem Results	
L840611	UTM:	598951	E	UTM:	6915293	N	Sample Width:		Zone: Cirque	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Mixed quartz vein and altered granitic host, local galena, local sc stains.									ppm
Date:											ppm
24-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	T-2 Chip: 0.30m (gouge)		Geochem Results	
L840612	UTM:	598951	E	UTM:	6915293	N	Sample Width:		Zone: Cirque	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Bright rusty sandy granitic gouge.									ppm
Date:											ppm
24-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	T-2 Chip: 0.80m (hanging wall)		Geochem Results	
L840613	UTM:	598951	E	UTM:	6915293	N	Sample Width:		Zone: Cirque	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Intensely altered granite with pervasive Li staining, some spotty manganese, few quartz stringer veinlets with variable weak to strong mineralization.									ppm
Date:											ppm
24-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
L840614	UTM:	598635	E	UTM:	6915746	N	Sample Width:		Zone: Cirque	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Fine quartz and rhodochrosite breccia with fine aspy, py, gn, sph. Sulphides =<5%. Within historical float showing with abundant mng stained fragments within 3 m wide steep, rocky slough (or possible blast trench)									ppm
Date:											ppm
24-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
L840615	UTM:	595989	E	UTM:	6917646	N	Sample Width:		Zone: Cody	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Manganese coated fine grained quartz cobble with abundant very fine aspy, gn and lesser sph. 8 cm TW, 1 only within granite felsenmeer and solifluction.									ppm
Date:											ppm
25-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
L840616	UTM:	596011	E	UTM:	6917695	N	Sample Width:		Zone: Cody	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Large slab of mng coated fine grained quartz with fine disseminated aspy and lesser blackjack sph. 11 cm TW, one only found at foot of short slope in felsenmeer.									ppm
Date:											ppm
25-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
L840617	UTM:	595965	E	UTM:	6917562	N	Sample Width:		Zone: Cody	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Intensely manganese stained slab of fine to medium quartz, completely grey with fine sulphide, trace black-jack sph. 25X21X7 cm (7cm TW). 1 only.									ppm
Date:											ppm
25-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840618	UTM:	595977	E	UTM:	6917521	N	Sample Width:		Zone:	Cody	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Intensely manganese stained slab of fine to medium quartz, completely grey with fine sulphide: aspy, gn, sph. 70X40X10 cm (10cm TW). Found within flesenmeer/solifluction with several other large vein pieces: four boulders + numerous cobbles and small chips.										ppm
Date:												ppm
25-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840619	UTM:	595977	E	UTM:	6917521	N	Sample Width:		Zone:	Cody	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Drusy fine grained quartz with <10% aspy in fine needles, some rhodochrosite. Found within flesenmeer/solifluction with several other large vein pieces: four boulders + numerous cobbles and small chips.										ppm
Date:												ppm
25-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840620	UTM:	595966	E	UTM:	6917521	N	Sample Width:		Zone:	Cody	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Intensely manganese stained slab of fine to medium quartz, completely grey with fine sulphide: aspy, gn, sph. 15X15X7 cm (7cm TW). Found in solifluction lobes with very abundant mng stained vein fragments: 5 pieces 5-7 cm TW, numerous small platey fragments.										ppm
Date:												ppm
25-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float composite			Geochem Results	
L840621	UTM:	595966	E	UTM:	6917521	N	Sample Width:		Zone:	Cody	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Composite sample: small chips taken from 16 different vein slabs within a 4X4 m area.										ppm
Date:												ppm
25-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float			Geochem Results	
L840622	UTM:	596384	E	UTM:	6917648	N	Sample Width:		Zone:	Cody	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Quartz vein fragment with very fine grey sulphide <10%, mild sc stains. 6 cm TW, few within abundant mng stained granite.										ppm
Date:												ppm
25-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840623	UTM:	596386	E	UTM:	6917649	N	Sample Width:		Zone: Cody	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Abundant near source mineralized quartz vein float. Fine grained, strong fine disseminated sulphide in matrix, abundant small vugs, moderate sc stains. Pieces 10-15 cm TW, 12 pieces closely spaced in rim of steep, north facing erosional chute.									ppm
Date:											ppm
25-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840624	UTM:	596364	E	UTM:	6917781	N	Sample Width:		Zone: Cody	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Few small vein fragments up to 5 cm TW with trace gn in grainy orange quartz. Found narrow north facing gully along with abundant mng stained granite pieces.									ppm
Date:											ppm
26-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	Bedrock chip: 0.15m (vein TW)		Geochem Results	
L840625	UTM:	596371	E	UTM:	6917791	N	Sample Width:		Zone: Cody	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Grainy quartz with <5% fine disseminated py & aspy exposed on west wall of steep, narrow north facing gully. Historical flagging present.									ppm
Date:											ppm
26-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840626	UTM:	600948	E	UTM:	6914027	N	Sample Width:		Zone: Bubble	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Ferricrete breccia boulders. Two 35 cm TW with abundant smaller following trend of similar material on low angled slope.									ppm
Date:											ppm
27-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840627	UTM:	600908	E	UTM:	6914044	N	Sample Width:		Zone: Bubble	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Pervasively limonitic material - may be granite with all feldspar relaced with Li. Composite of abundant similar material up to 20cm TW, directly adjacent to qfp dyke.									ppm
Date:											ppm
27-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840628	UTM:	600920	E	UTM:	6914038	N	Sample Width:		Zone: Bubble	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	1 m wide zone of porous ferricrete running parallel to qfp dyke (~105 deg)									ppm
Date:											ppm
27-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	2.6 m continuous float composite across interpreted stri		Geochem Results	
L840629	UTM:	600927	E	UTM:	6914037	N	Sample Width:		Zone: Bubble	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Rusty sand, altered granite chips, ferricrete chips.									ppm
Date:											ppm
27-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	2.9 m continuous float composite across interpreted stri		Geochem Results	
L840630	UTM:	600927	E	UTM:	6914037	N	Sample Width:		Zone: Bubble	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Ferricrete and geothite cobbles.									ppm
Date:											ppm
27-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	2.9 m continuous float composite across interpreted stri		Geochem Results	
L840631	UTM:	600927	E	UTM:	6914037	N	Sample Width:		Zone: Bubble	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Rusty sand and altered granite, rusty quartz vein chips, ferricrete chips.									ppm
Date:											ppm
27-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840632	UTM:	600957	E	UTM:	6914011	N	Sample Width:		Zone: Bubble	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Ferricrete boulder 40 cm TW in parallel band which appears to splay from other band. (L840626)									ppm
Date:											ppm
27-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source vein float, 23 cm TW		Geochem Results	
L840633	UTM:	600179	E	UTM:	6915144	N	Sample Width:		Zone: Lower Bubble	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Grainy quartz with local, weak galena in fine fractures. Composite of chips from across 23 cm TW.									ppm
Date:											ppm
27-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	Bedrock chip: 1.05 m (vein 052/90)		Geochem Results	
L840634	UTM:	600179	E	UTM:	6915144	N	Sample Width:		Zone: Lower Bubble	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Medium grained quartz vein with rare, fine galena and pyrite.									ppm
Date:											ppm
27-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	Bedrock chip: 1.05 m (vein + host) (contiguous with L840		Geochem Results	
L840635	UTM:	600179	E	UTM:	6915144	N	Sample Width:		Zone: Lower Bubble	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Altered granite interfingered with quartz veins containing rare, fine galena and pyrite.									ppm
Date:											ppm
27-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
L840636	UTM:	602726	E	UTM:	6932823	N	Sample Width:		Zone: Euclid NE	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Pervasively rusty, grainy textured angular cobble in soil near moderately anomalous soil sample in vegetated area.									ppm
Date:											ppm
28-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
L840637	UTM:	602726	E	UTM:	6932823	N	Sample Width:		Zone: Euclid NE	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Pervasively rusty quartz vein cobble, 4 cm TW, in soil near moderately anomalous soil sample in vegetated area									ppm
Date:											ppm
28-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840638	UTM:	602815	E	UTM:	6932800	N	Sample Width:		Zone:	Euclid NE	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Large float cobble of intensely, pervasively rusty, fine-clast fault breccia, dark red and orange rust. 1 only in shaley exposed soil patch within mostly vegetaed area. Follows strike of reccessive linear (295)										ppm
Date:												ppm
28-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840639	UTM:	602800	E	UTM:	6934000	N	Sample Width:		Zone:	Archimedes W	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Few walnut sized chips of pervasively rusty rock dug from anomalous soil sample location (CC142385)										ppm
Date:												ppm
28-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840640	UTM:	602055	E	UTM:	6932400	N	Sample Width:		Zone:	Archimedes W	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Numerous pervasivley rusty cobbles within shallow trench ~20 m upslope from anomalous soil sample (CC142385). Sample is of qz vein with vuggy Li, 10cm TW.										ppm
Date:												ppm
28-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840641	UTM:	602560	E	UTM:	6933990	N	Sample Width:		Zone:	Archimedes W	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	White quartz vein cobble with light rust and thin seams of Li. 1 only in hole dug in organics at anomalous soil sample.										ppm
Date:												ppm
28-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	bedrock discrete grab			Geochem Results	
L840642	UTM:	602356	E	UTM:	6933295	N	Sample Width:		Zone:	Archimedes W	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Thick yellow, lime green, and pale blue botryoidal precipitate on hanging wall of thin vein in cliff of grey siliceous siltstone containing fine diss py.										ppm
Date:												ppm
28-Jul-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	bedrock chip: 0.11 m (vein 215/90)		Geochem Results	
L840643	UTM:	602356	E	UTM:	6933295	N	Sample Width:		Zone: Archimedes W	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Vein material: quartz with fine disseminated sulphide and friable limonite.									ppm
Date:											ppm
28-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
L840644	UTM:	602383	E	UTM:	6932255	N	Sample Width:		Zone: Euclid	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Massive aspy fragment 4cm TW in steep talus slide within abundant rusty altered talus.									ppm
Date:											ppm
31-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840651	UTM:	591780	E	UTM:	6939228	N	Sample Width:		Zone: VIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Moderately rusty, bleached LST in 4X4 m kill zone. Large Ca crystals.									ppm
Date:											ppm
1-Aug-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	bedrock grab		Geochem Results	
L840652	UTM:	591277	E	UTM:	6939741	N	Sample Width:		Zone: VIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Massive aspy from rusty chert outcrop containing aspy veinlets with varying orientations. 10X5 zone surrounded by intensely bleached siliceous rock.									ppm
Date:											ppm
1-Aug-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	bedrock grab		Geochem Results	
L840653	UTM:	591277	E	UTM:	6939744	N	Sample Width:		Zone: VIII	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Massive aspy from rusty chert outcrop containing aspy veinlets with varying orientations. 10X5 zone surrounded by intensely bleached siliceous rock.									ppm
Date:											ppm
1-Aug-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840654	UTM:	595590	E	UTM:	6938934	N	Sample Width:		Zone:	RGS	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Weathered aspy, 1 egg sized fragment on steep talus slope.										ppm
Date:												ppm
1-Aug-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840655	UTM:	595597	E	UTM:	6938923	N	Sample Width:		Zone:	RGS	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Pervasively rusty, crumbly cobble with fine x-gn vugs with anglesite and few gn remains. 10 cm TW, 1 only on steep talus.										ppm
Date:												ppm
1-Aug-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840656	UTM:	595595	E	UTM:	6938914	N	Sample Width:		Zone:	RGS	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Aspy + qz vein float: 3 cm band of massive medium crystaline aspy, 3cm band of qz with weak aspy. 1 only on steep talus slope.										ppm
Date:												ppm
1-Aug-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840657	UTM:	595583	E	UTM:	6938910	N	Sample Width:		Zone:	RGS	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Pervasively rusty siliceous grainy bedded rock with fine bands of galena. Non calcareous. 2 cm TW, 2 found together on steep talus slope.										ppm
Date:												ppm
1-Aug-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840658	UTM:	595589	E	UTM:	6938907	N	Sample Width:		Zone:	RGS	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Pervasively rusty cr-bx of grainy siliceous rock with abundant x-gn cavities with anglesite both as fracture fill and in thin bands following bedding. 2 gourd sized fragments on steep talus slope.										ppm
Date:												ppm
1-Aug-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840659	UTM:	595588	E	UTM:	6938879	N	Sample Width:		Zone:	RGS	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Skarn fragment with large Ca crystals and local black jack sph and py. 4 cm TW, 1 only, but other altered rocks nearby, on steep talus slope.										ppm
Date:												ppm
1-Aug-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840660	UTM:	595585	E	UTM:	6938892	N	Sample Width:		Zone:	RGS	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Massive aspy with lesser gn. Saucer sized piece, 2 cm TW, one only on steep talus slope.										ppm
Date:												ppm
1-Aug-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840661	UTM:	595576	E	UTM:	6938884	N	Sample Width:		Zone:	RGS	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Massive aspy, 1 cm TW, 2 pieces on steep talus.										ppm
Date:												ppm
1-Aug-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840662	UTM:	595586	E	UTM:	6938874	N	Sample Width:		Zone:	RGS	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Medium crystaline massive sulphide: aspy, gn, bj-sph, py. Two cobbles on steep talus, 7 cm TW										ppm
Date:												ppm
1-Aug-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840663	UTM:	595564	E	UTM:	6938865	N	Sample Width:		Zone:	RGS	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Crumbly limonite with aspy & gn, two cobbles 7 cm TW found on steep talus slope.										ppm
Date:												ppm
1-Aug-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840664	UTM:	602399	E	UTM:	6932260	N	Sample Width:		Zone: Euclid	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Massive aspy float 5 cm TW from source of float train: 3.2 m wide altered talus zone inbetween two BR knobs of rusty black siltstone. Approximate vein strike: 075									ppm
Date:											ppm
31-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840665	UTM:	602399	E	UTM:	6932260	N	Sample Width:		Zone: Euclid	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Intensely altered, bleached wallrock cr-bx with abundant tan residue found within 3.2 m wide altered talus zone inbetween two BR knobs of rusty black siltstone.									ppm
Date:											ppm
31-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840666	UTM:	602402	E	UTM:	6932261	N	Sample Width:		Zone: Euclid	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Intensely altered, bleached wallrock cr-bx with abundant tan residue.									ppm
Date:											ppm
31-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840667	UTM:	602414	E	UTM:	6932264	N	Sample Width:		Zone: Euclid	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Altered wallrock with thin (2-3cm) qz + aspy veinlets at highest appearance of altered material.									ppm
Date:											ppm
31-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840668	UTM:	602387	E	UTM:	6932257	N	Sample Width:		Zone: Euclid	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Massive aspy float fragment 5 cm TW within aspy / altered rock float train.									ppm
Date:											ppm
31-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840670	UTM:	603626	E	UTM:	6932431	N	Sample Width:		Zone: Euclid NE area	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Abundant massive aspy found in near source float in bare area on hilltop. 6 cobbles +25 egg to fist sized pieces.									ppm
Date:											ppm
31-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
L840671	UTM:	603622	E	UTM:	6934217	N	Sample Width:		Zone: Archimedes area	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Limonite, moderately abundant, found near anomalous soil sample									ppm
Date:											ppm
31-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
L840672	UTM:	603622	E	UTM:	6934217	N	Sample Width:		Zone: Archimedes area	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Qz / Li bx, moderately abundant, found near anomalous soil sample.									ppm
Date:											ppm
31-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840673	UTM:	603521	E	UTM:	6932455	N	Sample Width:		Zone: Euclid NE area	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	1 walnut sized fragment of qz vein cr-bx with pervasive yellow and green residue and possible weathered grey sulphide, found within grey shale felsenmeer.									ppm
Date:											ppm
31-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840674	UTM:	603537	E	UTM:	6932465	N	Sample Width:		Zone: Euclid NE area	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	1 walnut sized fragment of qz vein material with strong sc stains, 1 cm TW, found within grey shale felsenmeer.									ppm
Date:											ppm
31-Jul-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
L840675	UTM:	577906	E	UTM:	6948321	N	Sample Width:		Zone: anomaly V	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Pervasively limonitic fault bx with clasts weathered out, found within 4X4m kill zone on moderate slope, soil:ZZ94382 is gouge material from same feature									ppm
Date:											ppm
19-Aug-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
L840677	UTM:	596822	E	UTM:	6917627	N	Sample Width:		Zone: Cody	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	quartz vein boulders and mng stained qz-bx with Li filled cavities, no observed mineralization, moderately abundant									ppm
Date:											ppm
22-Aug-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
L840678	UTM:	596818	E	UTM:	6917642	N	Sample Width:		Zone: Cody	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Drusy, siliceous cobbles, intensely cavity filled, light weight, local Li in cavities, local strong mng staining, high abundance.									ppm
Date:											ppm
22-Aug-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
L840679	UTM:	596822	E	UTM:	6917686	N	Sample Width:		Zone: Cody	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	mng stained drusy chalcedonic qz with abundant angular cavities, moderately abundant within rusty talus patch 5X20m on steep slope									ppm
Date:											ppm
22-Aug-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float		Geochem Results	
L840680	UTM:	596828	E	UTM:	6917699	N	Sample Width:		Zone: Cody	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	mng stained pitted qz+Li, very abundant within 3X5m patch with rusty soil, within larger rusty talus patch (L840679)									ppm
Date:											ppm
22-Aug-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840681	UTM:	596699	E	UTM:	6917761	N	Sample Width:		Zone:	Cody	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	rusty weathering qz vn with trace aspy, 2 cm TW, low abundance, scattered below cliffs										ppm
Date:												ppm
22-Aug-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840682	UTM:	596699	E	UTM:	6917761	N	Sample Width:		Zone:	Cody	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	mng stained qz vn with trace py, trace sph. 2 cm TW, moderately abundant.										ppm
Date:												ppm
22-Aug-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840683	UTM:	596665	E	UTM:	6917769	N	Sample Width:		Zone:	Cody	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	chalcedonic qz with strong mng stains, trace fine grey sulphide. 5 cm TW, not common.										ppm
Date:												ppm
22-Aug-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840684	UTM:	596399	E	UTM:	6917696	N	Sample Width:		Zone:	Cody	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	fine grained qz with internal grey colouring, abundant fine grey sulphide and fine aspy needles, heavy, pitted. 3 cm TW, one only like this, but found within alt, mng stained granite talus zone in steep recessive chute.										ppm
Date:												ppm
22-Aug-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840685	UTM:	596378	E	UTM:	6917677	N	Sample Width:		Zone:	Cody	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Two small float slabs of fine dark grey qz with abundant fine grey sulphide and very strong mng stains. Similar to material from "Mango vein"										ppm
Date:												ppm
22-Aug-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840686	UTM:	596369	E	UTM:	6917671	N	Sample Width:		Zone:	Cody	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Banded qz and rhodochrosite. Qz contains very abundant fine grey sulphide. Few cobbles, 5 cm TW, within steep recessive chute with previously sampled veins.										ppm
Date:												ppm
22-Aug-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840687	UTM:	596364	E	UTM:	6917600	N	Sample Width:		Zone:	Cody	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Fine qz boulder, internal grey (probable fine grey sulphide), light yellow and green stains. Several boulders up to 20cm TW under alpine matt veg on plateau, on strike with Cody historical vein.										ppm
Date:												ppm
22-Aug-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840688	UTM:	596352	E	UTM:	6917579	N	Sample Width:		Zone:	Cody	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Single small cobble of rusty qz + Li vein fragment in frost boil.										ppm
Date:												ppm
22-Aug-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840689	UTM:	596585	E	UTM:	6917575	N	Sample Width:		Zone:	Cody	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Pervasively mng stained, intensely drusy qz. Few small boulders within granite felsenmeer. 15 cm TW.										ppm
Date:												ppm
22-Aug-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840690	UTM:	596585	E	UTM:	6917575	N	Sample Width:		Zone:	Cody	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Fine grey quartz with <5% fine disseminated sulphide, some drusy cavities and x-sulphide cavities, moderate mng staining, 9cm TW										ppm
Date:												ppm
22-Aug-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	float			Geochem Results	
L840691	UTM:	597216	E	UTM:	6917383	N	Sample Width:		Zone:	Cody	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Few vuggy vein fragments with mng, qz, and Li. 2-4 cm TW, found on vegetated slope.										ppm
Date:												ppm
22-Aug-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float			Geochem Results	
L840692	UTM:	594508	E	UTM:	6912902	N	Sample Width:		Zone:	Vat	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	white quartz with blebby galena <5%. Large exposed vein on ridge crest										ppm
Date:												ppm
22-Aug-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	bedrock discrete sample			Geochem Results	
L840693	UTM:	594509	E	UTM:	6912903	N	Sample Width:		Zone:	Vat	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	White quartz with weak blebby galena and py (<5%) from thick white qz vein (up to 2m TW) exposed in bedrock, 250/72. Sample is of best material. Most of vein is barren.										ppm
Date:												ppm
23-Aug-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	bedrock chip: 0.90 m			Geochem Results	
L840694	UTM:	594509	E	UTM:	6912903	N	Sample Width:		Zone:	Vat	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	White quartz vein, rarely with weak blebby galena and pyrite (<5%). Chip sample across small section of vein with best mineralization.										ppm
Date:												ppm
23-Aug-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float			Geochem Results	
M676302	UTM:	602242	E	UTM:	6912108	N	Sample Width:		Zone:	Risby NE	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Chalcedonic qz with variable grey/green internal discolouration. Fragments up to 18cm TW in near source float within rhodochrosite/qz vein/fault structure ~3.5 m wide. Vein strikes at 057 deg and is exposed in two successive buttress-saddles 200 m appart.										ppm
Date:												ppm
27-Aug-12												ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
M676303	UTM:	602234	E	UTM:	6912110	N	Sample Width:		Zone: Risby NE	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Fine quartz with abundant fine grey sulphide, fragments up to 10cm TW. Part of the vein/fault structure described in M676302.									ppm
Date:											ppm
27-Aug-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
M676304	UTM:	602355	E	UTM:	6912191	N	Sample Width:		Zone: Risby NE	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Fine quartz with abundant fine grey sulphide, fine aspy needles, abundant near source fragments up to 12 cm TW. Within vein/fault structure striking 057deg.									ppm
Date:											ppm
27-Aug-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
M676305	UTM:	602355	E	UTM:	6912191	N	Sample Width:		Zone: Risby NE	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Intensely silicified granite and fine grey qz, common blebs of weathered grey sulphide. Near source fragments 24 cm TW.									ppm
Date:											ppm
27-Aug-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	bedrock discrete grab		Geochem Results	
M676306	UTM:	602355	E	UTM:	6912191	N	Sample Width:		Zone: Risby NE	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Qz vein with abundant fine aspy, 4cm TW in bedrock. Within larger vein/fault exposure.									ppm
Date:											ppm
27-Aug-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float		Geochem Results	
M676307	UTM:	602415	E	UTM:	6912220	N	Sample Width:		Zone: Risby NE	Ag	ppm
Sampler:	Elevation:		m				Dimension:			Au	ppm
M.Kammerer	Comments:	Qz vein fragment with fine grey sulphide, 8cm TW, few found spalling down from buttress saddle.									ppm
Date:											ppm
27-Aug-12											ppm

Sample #:	Grid East		E	Grid North		N	Type:	near source float			Geochem Results	
M676308	UTM:	597697	E	UTM:	6915626	N	Sample Width:		Zone:	Risby NE	Ag	ppm
Sampler:	Elevation:		m				Dimension:				Au	ppm
M.Kammerer	Comments:	Chalcedonic qz vein with moderate to abundant fine grey sulphide, few fragments up to 9 cm TW mixed with altered granite. Within steep recessive chute with abundant rusty granite chips and gougey sand.										ppm
Date:												ppm
28-Aug-12												ppm

CERTIFICATE WH12131219

Project: Keg-Main-Group 1

P.O. No.: Batch 2

This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 12-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF
ME-MS61	48 element four acid ICP-MS	

To: **SILVER RANGE RESOURCES LTD.**

CERTIFICATE WH12131510

Project: Keg-Main-Group 1

P.O. No.: Batch 3

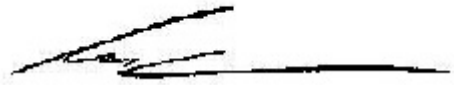
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 12-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF
ME-MS61	48 element four acid ICP-MS	
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE

To: **SILVER RANGE RESOURCES LTD.**

CERTIFICATE WH12131511

Project: Keg-Main-Group 1

P.O. No.: Batch 5

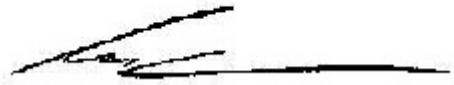
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 12-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
ME-MS61	48 element four acid ICP-MS	
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE

CERTIFICATE WH12131516

Project: Keg-Fly-Hammer Zone

P.O. No.:

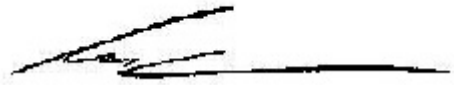
This report is for 37 Rock samples submitted to our lab in Whitehorse, YT, Canada on 12-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Au-GRA22	Au 50 g FA-GRAV finish	WST-SIM
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF
ME-MS61	48 element four acid ICP-MS	
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
Ag-GRA21	Ag 30g FA-GRAV finish	WST-SIM

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

***** See Appendix Page for comments regarding this certificate *****

Signature: 

Colin Ramshaw, Vancouver Laboratory Manager

Comments: Gold assays on samples K191775 and K191777 are reported by fire assay gravimetric method due to high silver content in samples that may cause incomplete gold dissolution in aqua-regia solution.

Comments: Gold assays on samples K191775 and K191777 are reported by fire assay gravimetric method due to high silver content in samples that may cause incomplete gold dissolution in aqua-regia solution.

CERTIFICATE WH12131517

Project: Keg-Fly-Hammer Zone

P.O. No.:

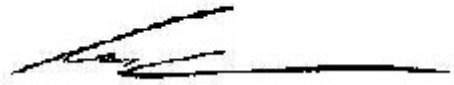
This report is for 67 Soil samples submitted to our lab in Whitehorse, YT, Canada on 12-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	HEATHER SMITH

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41	Screen to -180um and save both



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-MS41	51 anal. aqua regia ICPMS

CERTIFICATE WH12131518

Project: Keg-Fly-Owl SW

P.O. No.: Claim Group 2

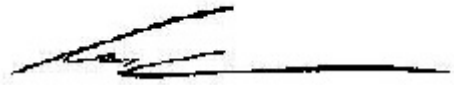
This report is for 18 Rock samples submitted to our lab in Whitehorse, YT, Canada on 12-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF
ME-MS61	48 element four acid ICP-MS	
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Ag-GRA21	Ag 30g FA-GRAV finish	WST-SIM
Pb-VOL70	Pb by Titration

CERTIFICATE OF ANALYSIS WH12131519

Method	CERTIFICATE COMMENTS
ALL METHODS	NSS is non-sufficient sample.
ME-MS41	Interference: Ca>10% on ICP-MS As, ICP-AES results shown.
ME-MS41	Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g).

CERTIFICATE WH12133975

Project: Keg-Main-Group 1

P.O. No.: Batch 4

This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 14-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF
ME-MS61	48 element four acid ICP-MS	
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE

CERTIFICATE WH12134652

Project: Euclid-Group 2

P.O. No.:

This report is for 11 Rock samples submitted to our lab in Whitehorse, YT, Canada on 15-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70%<2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85%<75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-MS81	38 element fusion ICP-MS	ICP-MS
Au-AA23	Au 30g FA-AA finish	AAS

To: **SILVER RANGE RESOURCES LTD.**
ATTN: JOAN MARIACHER

CERTIFICATE WH12138330

Project: Keg-Hammer

P.O. No.: Batch 1

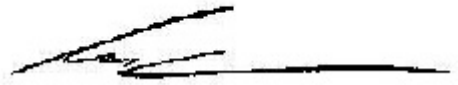
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 17-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Au-GRA22	Au 50 g FA-GRAV finish	WST-SIM
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF
ME-MS61	48 element four acid ICP-MS	
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
Ag-GRA21	Ag 30g FA-GRAV finish	WST-SIM

Comments: Gold assay on sample L845506 is reported by fire assay gravimetric method due to high silver content in the sample that may cause incomplete gold dissolution in aqua-regia solution.

CERTIFICATE WH12138331

Project: Keg-Main-Group 1

P.O. No.: Batch 6

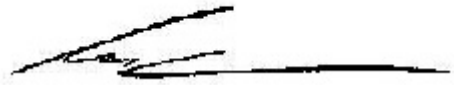
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 17-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF
ME-MS61	48 element four acid ICP-MS

CERTIFICATE WH12138332

Project: Keg-Main-Group 1

P.O. No.: Batch 7

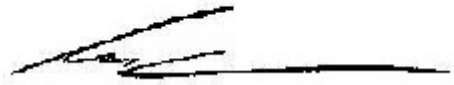
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 17-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF
ME-MS61	48 element four acid ICP-MS	
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE

CERTIFICATE WH12138333

Project: Keg-Main-Group 1

P.O. No.: Batch 8

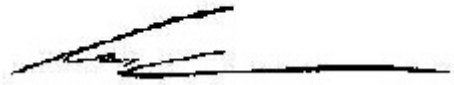
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 17-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF
ME-MS61	48 element four acid ICP-MS	
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE

CERTIFICATE WH12138799

Project: Keg-Hammer

P.O. No.: Batch 2

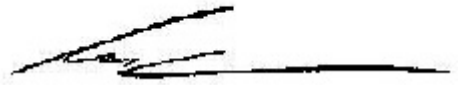
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 19-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Au-GRA22	Au 50 g FA-GRAV finish	WST-SIM
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF
ME-MS61	48 element four acid ICP-MS	
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
Ag-GRA21	Ag 30g FA-GRAV finish	WST-SIM

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

***** See Appendix Page for comments regarding this certificate *****

Signature: 

Colin Ramshaw, Vancouver Laboratory Manager

Comments: Gold assay result for sample L845546 is obtained by fire assay gravimetric offline due to high Ag content in the sample that might have caused incomplete Au dissolution in aqua regia solution.

Comments: Gold assay result for sample L845546 is obtained by fire assay gravimetric offline due to high Ag content in the sample that might have caused incomplete Au dissolution in aqua regia solution.

CERTIFICATE WH12138940

Project: Keg-Main-Group 1

P.O. No.: Batch 9

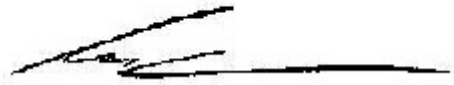
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 19-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF
ME-MS61	48 element four acid ICP-MS	
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE

CERTIFICATE WH12138941

Project: Keg-Fly-Ku Zone

P.O. No.: Claim Group 7

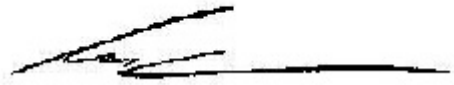
This report is for 40 Rock samples submitted to our lab in Whitehorse, YT, Canada on 19-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
SPL-22Y	Split Sample - Boyd Rotary Splitter
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF
ME-MS61	48 element four acid ICP-MS	
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
Cu-OG62	Ore Grade Cu - Four Acid	VARIABLE
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
W-XRF05	Trace Level W XRF Analysis	XRF

CERTIFICATE WH12140458

Project: Keg-Main-Group 1

P.O. No.: Batch 10

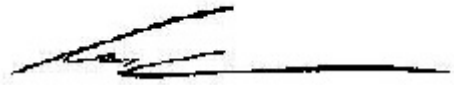
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 21-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
Au-AA24	Au 50g FA AA finish	AAS
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF

CERTIFICATE WH12147483

Project: Keg-Main-Group 1

P.O. No.: Batch 11

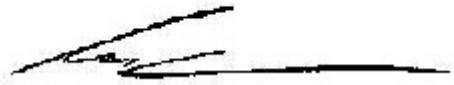
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 26-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF
ME-MS61	48 element four acid ICP-MS	
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE

CERTIFICATE WH12147484

Project: Keg-Main-Group 1

P.O. No.: Batch 12

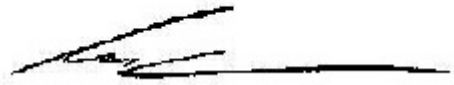
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 26-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF
ME-MS61	48 element four acid ICP-MS	
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE

To: **SILVER RANGE RESOURCES LTD.**

CERTIFICATE WH12147485

Project: Keg-Main-Group 1

P.O. No.: Batch 13

This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 26-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF
ME-MS61	48 element four acid ICP-MS

CERTIFICATE WH12147486

Project: Keg-Main-Group 1

P.O. No.: Batch 14

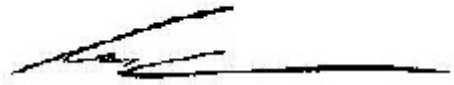
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 26-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF
ME-MS61	48 element four acid ICP-MS	
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE

CERTIFICATE WH12147487

Project: Keg-Main-Group 1

P.O. No.: Batch 15

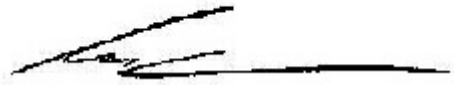
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 26-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF
ME-MS61	48 element four acid ICP-MS	
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE

CERTIFICATE WH12147488

Project: Keg-Main-Group 1

P.O. No.: Batch 16

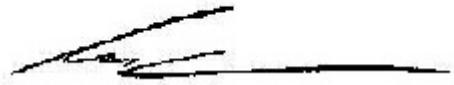
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 26-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF
ME-MS61	48 element four acid ICP-MS

CERTIFICATE WH12147489

Project: Hammer-Keg

P.O. No.: Batch 3

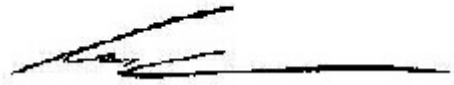
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 26-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-22Y	Split Sample - Boyd Rotary Splitter
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF
ME-MS61	48 element four acid ICP-MS	
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
Ag-GRA21	Ag 30g FA-GRAV finish	WST-SIM

CERTIFICATE WH12147780

Project: Hammer-Keg

P.O. No.: Batch 4

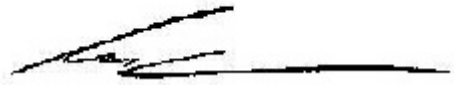
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 26-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-22Y	Split Sample - Boyd Rotary Splitter
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF
ME-MS61	48 element four acid ICP-MS	
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
Ag-GRA21	Ag 30g FA-GRAV finish	WST-SIM

CERTIFICATE WH12147781

Project: Hammer-Keg

P.O. No.: Batch 5

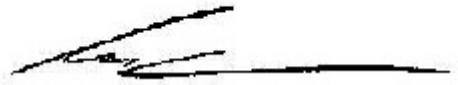
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 26-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Au-GRA22	Au 50 g FA-GRAV finish	WST-SIM
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF
ME-MS61	48 element four acid ICP-MS	
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
Ag-GRA21	Ag 30g FA-GRAV finish	WST-SIM

Project: Keg (Drex-Group 3)

P.O. No.:

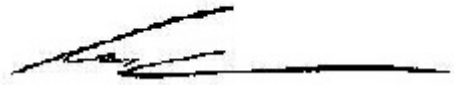
This report is for 14 Rock samples submitted to our lab in Whitehorse, YT, Canada on 26-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-22Y	Split Sample - Boyd Rotary Splitter
PUL-31	Pulverize split to 85%<75 um



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Au-AA23	Au 30g FA-AA finish	AAS

Project: Keg (Owl-Group 6)

P.O. No.:

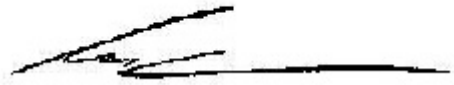
This report is for 15 Rock samples submitted to our lab in Whitehorse, YT, Canada on 26-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
PUL-QC	Pulverizing QC Test
SPL-22Y	Split Sample - Boyd Rotary Splitter
PUL-31	Pulverize split to 85%<75 um



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
Ag-GRA21	Ag 30g FA-GRAV finish	WST-SIM
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Pb-VOL70	Pb by Titration	
Au-AA23	Au 30g FA-AA finish	AAS
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF

To: **SILVER RANGE RESOURCES LTD.**
ATTN: JOAN MARIACHER
C/O ARCHER, CATHRO & ASSOCIATES (1981) LIMITED
1016-510 W HASTINGS ST
VANCOUVER BC V6B 1L8

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

Project: Keg-XIV-Claim Groups 3 and 7

P.O. No.:

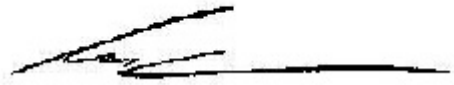
This report is for 33 Rock samples submitted to our lab in Whitehorse, YT, Canada on 26-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-22Y	Split Sample - Boyd Rotary Splitter
PUL-31	Pulverize split to 85%<75 um



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
ME-MS61	48 element four acid ICP-MS	
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF

CERTIFICATE WH12147785

Project: Keg-DREX-Group 3

P.O. No.:

This report is for 2 Soil samples submitted to our lab in Whitehorse, YT, Canada on 26-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41	Screen to -180um and save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-MS41	51 anal. aqua regia ICPMS

CERTIFICATE WH12150911

Project: Keg-Main-Group 1

P.O. No.: Batch 18

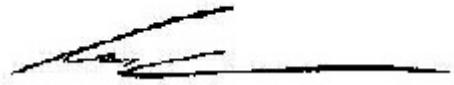
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 28-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF
ME-MS61	48 element four acid ICP-MS

CERTIFICATE WH12150912

Project: Keg-Main-Group 1

P.O. No.: Batch 19

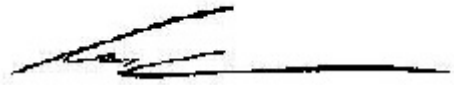
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 28-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF
ME-MS61	48 element four acid ICP-MS	
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE

CERTIFICATE WH12150913

Project: Keg- Main- Group 1

P.O. No.: Batch 20

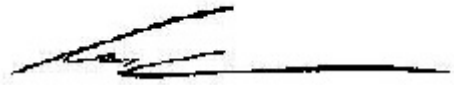
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 28- JUN- 2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI- 21	Received Sample Weight
LOG- 22	Sample login - Rcd w/o BarCode
CRU- 31	Fine crushing - 70%< 2mm
CRU- QC	Crushing QC Test
SPL- 21	Split sample - riffle splitter
PUL- QC	Pulverizing QC Test
PUL- 31	Pulverize split to 85%< 75 um
LOG- 22d	Sample login - Rcd w/o BarCode dup
SPL- 21d	Split sample - duplicate
PUL- 31d	Pulverize Split - duplicate
LOG- 23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au- AA24	Au 50g FA AA finish	AAS
Sn- XRF05	Sn- Trace Level XRF Analysis	XRF
ME- MS61	48 element four acid ICP- MS	

To: **SILVER RANGE RESOURCES LTD.**

CERTIFICATE WH12150914

Project: Hammer-Keg

P.O. No.: Batch 6

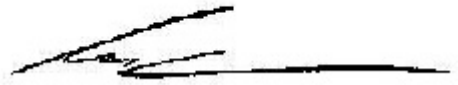
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 28-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-22Y	Split Sample - Boyd Rotary Splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Au-GRA22	Au 50 g FA-GRAV finish	WST-SIM
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF
ME-MS61	48 element four acid ICP-MS	
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
Ag-GRA21	Ag 30g FA-GRAV finish	WST-SIM

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

***** See Appendix Page for comments regarding this certificate *****

Signature: 

Colin Ramshaw, Vancouver Laboratory Manager

Comments: Gold assay on sample L845701 is reported by fire assay gravimetric method due to high silver content in the sample that may cause incomplete gold dissolution in aqua-regia solution.

CERTIFICATE WH12150915

Project: Keg-Claim Group 3-Archimedes

P.O. No.:

This report is for 31 Rock samples submitted to our lab in Whitehorse, YT, Canada on 28-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-22Y	Split Sample - Boyd Rotary Splitter
PUL-31	Pulverize split to 85%<75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
ME-MS61	48 element four acid ICP-MS	
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Ag-GRA21	Ag 30g FA-GRAV finish	WST-SIM
Pb-VOL70	Pb by Titration	
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF

CERTIFICATE WH12150917

Project: Keg-Claim Group 3-Archimedes

P.O. No.:

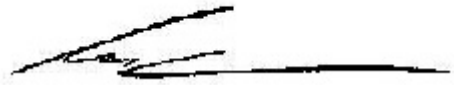
This report is for 156 Soil samples submitted to our lab in Whitehorse, YT, Canada on 28-JUN-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41	Screen to -180um and save both



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-MS41	51 anal. aqua regia ICPMS	

To: **SILVER RANGE RESOURCES LTD.**

CERTIFICATE OF ANALYSIS WH12150917

Method	CERTIFICATE COMMENTS
ALL METHODS	NSS is non-sufficient sample.
ME-MS41	Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g).

CERTIFICATE WH12152625

Project: Keg (Main - Group 1)

P.O. No.: Batch 21

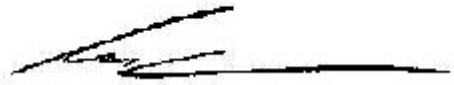
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 3-JUL-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
Au-AA24	Au 50g FA AA finish	AAS
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF

To: **SILVER RANGE RESOURCES LTD.**

CERTIFICATE WH12152626

Project: Keg (Main - Group 1)

P.O. No.: Batch 22

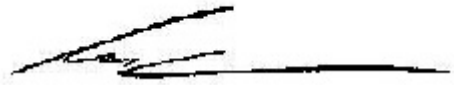
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 3-JUL-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-22Y	Split Sample - Boyd Rotary Splitter
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
Au-AA24	Au 50g FA AA finish	AAS
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF

CERTIFICATE WH12152627

Project: Keg-Main-Group 1

P.O. No.: Batch 23

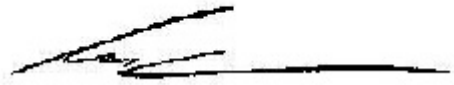
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 3-JUL-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-22Y	Split Sample - Boyd Rotary Splitter
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
Au-AA24	Au 50g FA AA finish	AAS
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF

To: **SILVER RANGE RESOURCES LTD.**

CERTIFICATE WH12152628

Project: Keg-Main-Group 1

P.O. No.: Batch 24

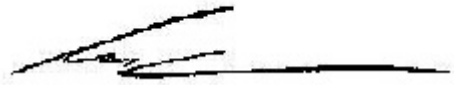
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 3-JUL-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
Au-AA24	Au 50g FA AA finish	AAS
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF

CERTIFICATE WH12152629

Project: Keg-Main-Group 1

P.O. No.: Batch 25

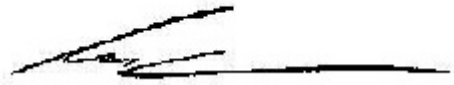
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 3-JUL-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
Au-AA24	Au 50g FA AA finish	AAS
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF

CERTIFICATE WH12153600

Project: Keg (Main - Group 1)

P.O. No.: Batch 26

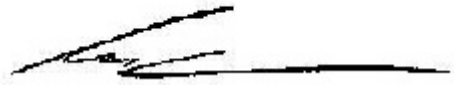
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 3-JUL-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
Au-AA24	Au 50g FA AA finish	AAS
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF

CERTIFICATE WH12153601

Project: Hammer - Keg

P.O. No.: Batch 7

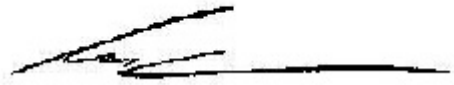
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 3-JUL-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
Ag-GRA21	Ag 30g FA-GRAV finish	WST-SIM
Au-AA24	Au 50g FA AA finish	AAS
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF

CERTIFICATE WH12153602

Project: Hammer - Keg

P.O. No.: Batch 8

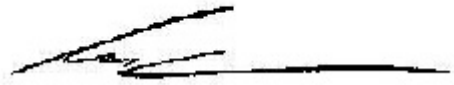
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 3-JUL-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
Ag-GRA21	Ag 30g FA-GRAV finish	WST-SIM
Au-AA24	Au 50g FA AA finish	AAS
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF

CERTIFICATE WH12153603

Project: Keg-Group 2

P.O. No.:

This report is for 12 Rock samples submitted to our lab in Whitehorse, YT, Canada on 3-JUL-2012.

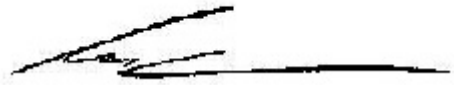
The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um

ANALYTICAL PROCEDURES



ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
Au-AA23	Au 30g FA-AA finish	AAS

To: **SILVER RANGE RESOURCES LTD.**
ATTN: JOAN MARIACHER

CERTIFICATE WH12153605

Project: Keg-Zeno-Group 6

P.O. No.:

This report is for 28 Rock samples submitted to our lab in Whitehorse, YT, Canada on 3-JUL-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
W-XRF05	Trace Level W XRF Analysis	XRF
Au-AA23	Au 30g FA-AA finish	AAS
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF

To: **SILVER RANGE RESOURCES LTD.**
ATTN: JOAN MARIACHER
C/O ARCHER, CATHRO & ASSOCIATES (1981) LIMITED
1016-510 W HASTINGS ST
VANCOUVER BC V6B 1L8

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE WH12153698

Project: Re-assays from WH12133975

P.O. No.: Batch 4

This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 4-JUL-2012.

The following have access to data associated with this certificate:

JOAN MARIACHER		

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
FND-02	Find Sample for Addn Analysis

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES

To: **SILVER RANGE RESOURCES LTD.**

CERTIFICATE WH12153699

Project: Re-assays from WH12131510

P.O. No.: Batch 3

This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 4-JUL-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
FND-02	Find Sample for Addn Analysis

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES

To: **SILVER RANGE RESOURCES LTD.**
ATTN: JOAN MARIACHER
C/O ARCHER, CATHRO & ASSOCIATES (1981) LIMITED
1016-510 W HASTINGS ST
VANCOUVER BC V6B 1L8

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE WH12154560

Project: Re-assays from WH12131218

P.O. No.: Batch 1

This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 4-JUL-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
FND-02	Find Sample for Addn Analysis

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES

To: **SILVER RANGE RESOURCES LTD.**
ATTN: JOAN MARIACHER

CERTIFICATE WH12154941

Project: Keg-Main-Group 1

P.O. No.: Batch 27

This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 5-JUL-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF
ME-MS61	48 element four acid ICP-MS	
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE

CERTIFICATE WH12154942

Project: Keg-Main-Group 1

P.O. No.: Batch 28

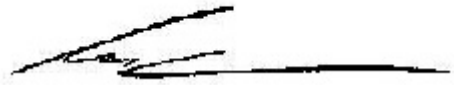
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 5-JUL-2012.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70%<2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85%<75 um
LOG-22d	Sample login - Rcd w/o BarCode dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate
LOG-23	Pulp Login - Rcvd with Barcode



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Sn-XRF05	Sn-Trace Level XRF Analysis	XRF
ME-MS61	48 element four acid ICP-MS	
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE

To: **SILVER RANGE RESOURCES LTD.**
ATTN: JOAN MARIACHER
