Introduction

The KAR property consists of 53 claim blocks within a single claim license, located in the Carmacks region of the south central Yukon Territory (Figure 1 and 2). The property was staked in March of 2012 for its gold and base-metal potential, and covers previously identified anomaly showing from the Government survey. This report describes exploration work carried out on the property during 2012.

Location and Access

The KAR property is located in the 115H10 1:50,000 NTS map area, about 58 kilometers southwest of the town of Carmacks in central Yukon Territory. The Klondike Highway passes about 47 kilometres from the eastern boundary of the property (Figure 1). Further access to the property may be obtained by logging roads/quad trails or by helicopter.

Previous Work

This property in the Kirkland Creek area partially overlaps a former porphyry copper prospect held by Noranda Exploration Co. Ltd. Geological, geochemical and IP surveys in 1977 were followed by three diamond drill holes totalling 269 m. Copper values in the drill core were low, and the highest gold value In a 1.5 m split sample was 0.96 g/1 Au. It was subsequently staked as MAG claims (YA96050) in August of 1986 by Kerr Addison. Silverquest Resources Ltd. staked JIMBO claims (YA95699) 3 km to the west in Aug/86. Both claim groups were explored with prospecting and geochemical sampling in 1986-87. During reconnaissance prospecting by Golden Quail Resources Ltd. in 1989 on their NICK claims, one rock and four heavy mineral concentrates were collected. One of the concentrates contained 139 ppb Au (1989 YGS Mineral Exploration Report). North-trending veins were located but no mineralization was noted (YGS MINFILE Macintosh).

The present licence holder conducted literature review in 2011 and decided to conduct follow up work

Geology and Mineralization

The KAR Property is underlain by the Early Jurassic hornblende granodiorites of the Aishihik Suite. These rocks are intruded locally by small plugs of diorite and monzodiorite. Disseminated chalcopyrite, pyrite and minor molybdenite occur along narrow fractures within composite granodiorite porphyry intrusions.

Reference Point 1: N6835481 E400261 (61.640° N; 136.882° W) **Reference Point 2:** N6835481 E404376 (61.641° N; 136.805° W)
Reference Point 3: N6832281 E404376 (61.612° N; 136.803° W) **Reference Point 4:** N6832281 E401175 (61.611° N; 136.864° W)
Reference Point 5: N6834567 E401175 (61.632° N; 136.865° W) **Reference Point 6:** N6834567 E400261 (61.631° N; 136.882° W)

Note: Claim blocks 1500 ft.x1500 ft.; UTM datum: NAD 83; zone 8N

Figure 2. Geographical extent of the KAR property claims southwest of Carmacks, YT.

Current Work Program

Prospecting on the KAR property was conducted in August of 2012. Soil samples were collected on 50-metre spacing grid along topographic highs (ridges and spurs) over most of the property by sampling B horizon at approximately 60 cm depth using augers. A hand-held GPS was used for location control and a total of 280 soil samples were collected. Sample locations are shown on Figures 3 and 4a-e. Samples were sent to ALS Laboratories in North Vancouver, BC where they were screened to 180 microns and analyzed for 50 elements by *aqua regia* digestion with ICP MS finish using the Super Trace element package. A list of sample locations, sample IDs and geochemical results is found in Appendix 1 and assay certificates are in Appendix 2. Personnel and expenditures for the work are listed in appendices 3 and 4.

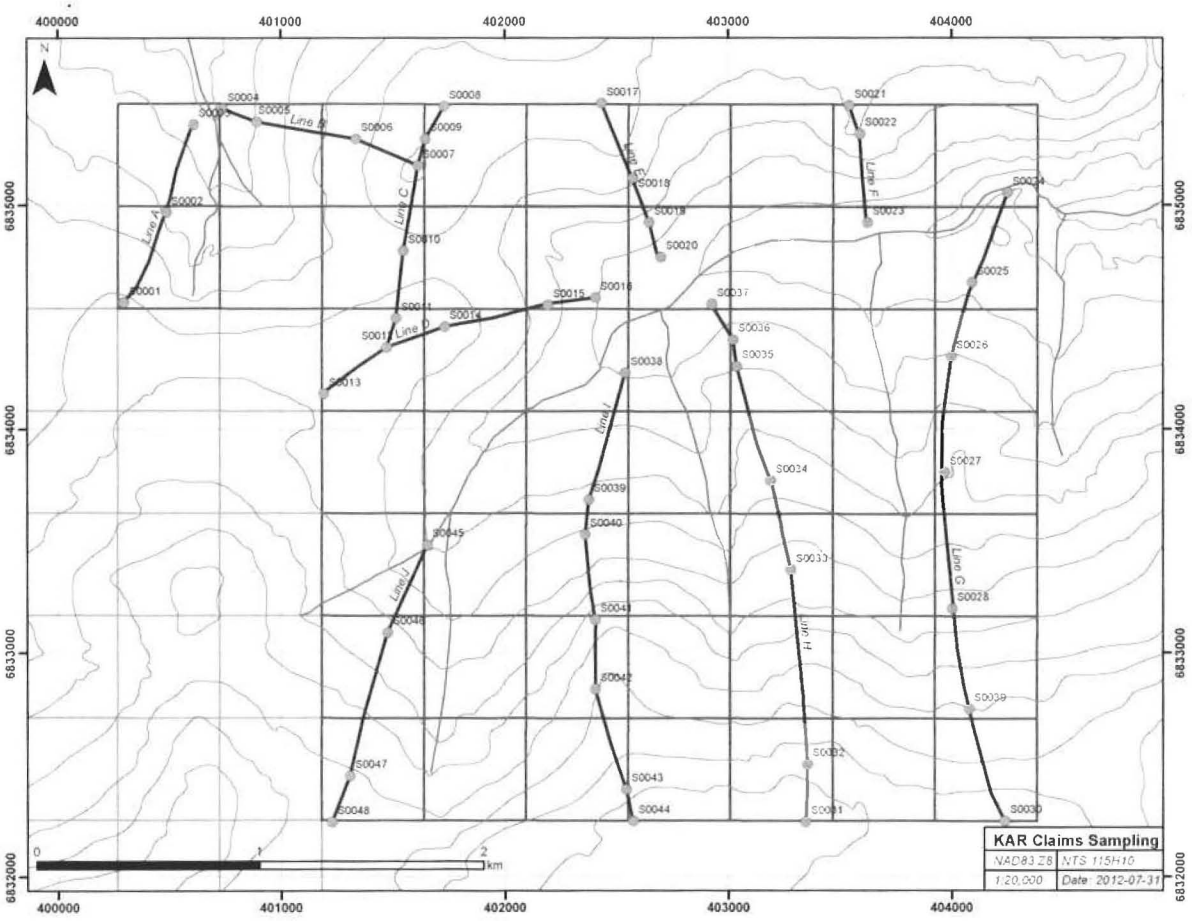

Figure 3. Map of the traverses along which the "ridge and spur"-type of soil sampling was conducted on the KAR property in 2012.

Results

Results of the 2012 soil sampling point to the presence of geochemical anomalies in terms of the following elements: Au, Ag, As, Pb and Zn, particularly along the N-S oriented structures in the southern sector of the KAR property with the values occasionally reaching concentrations of > **200 ppb gold** and **8 ppm silver** (see Figures 4a-e and associated data tables).

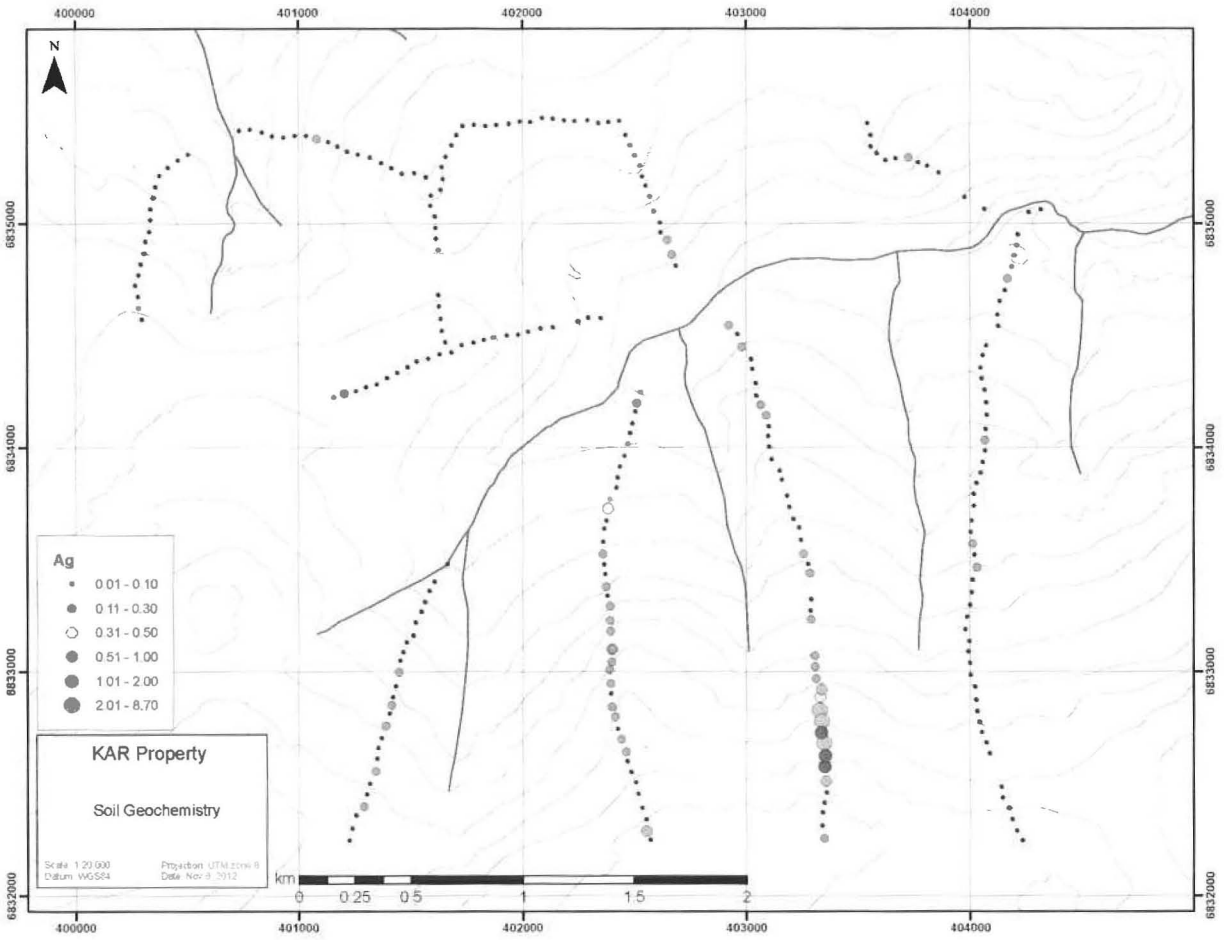

Figure 4a. Soil Ag values plotted along the sampling traverses within the extent of the KAR property.

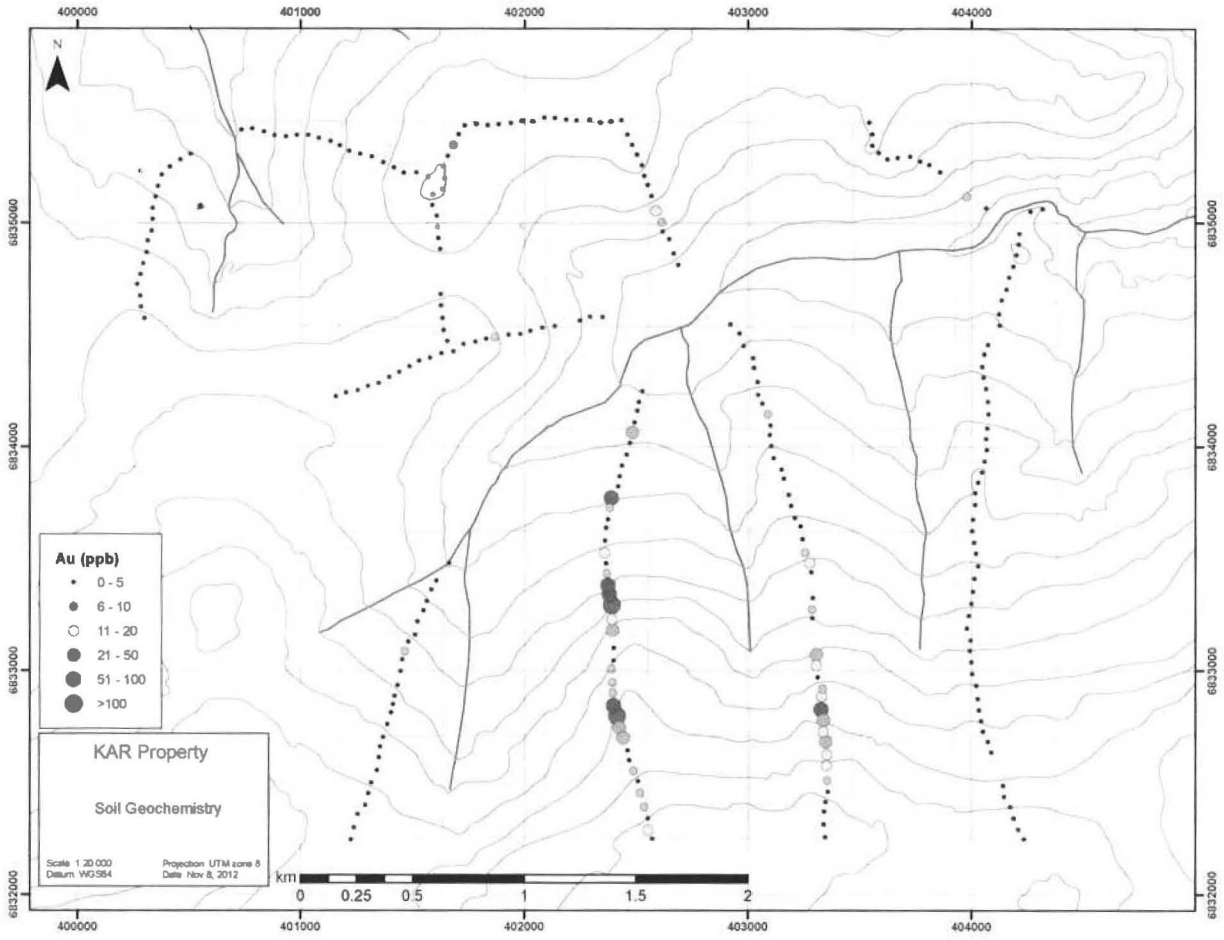

Figure 4b. Soil Au values plotted along the sampling traverses within the extent of the KAR property.

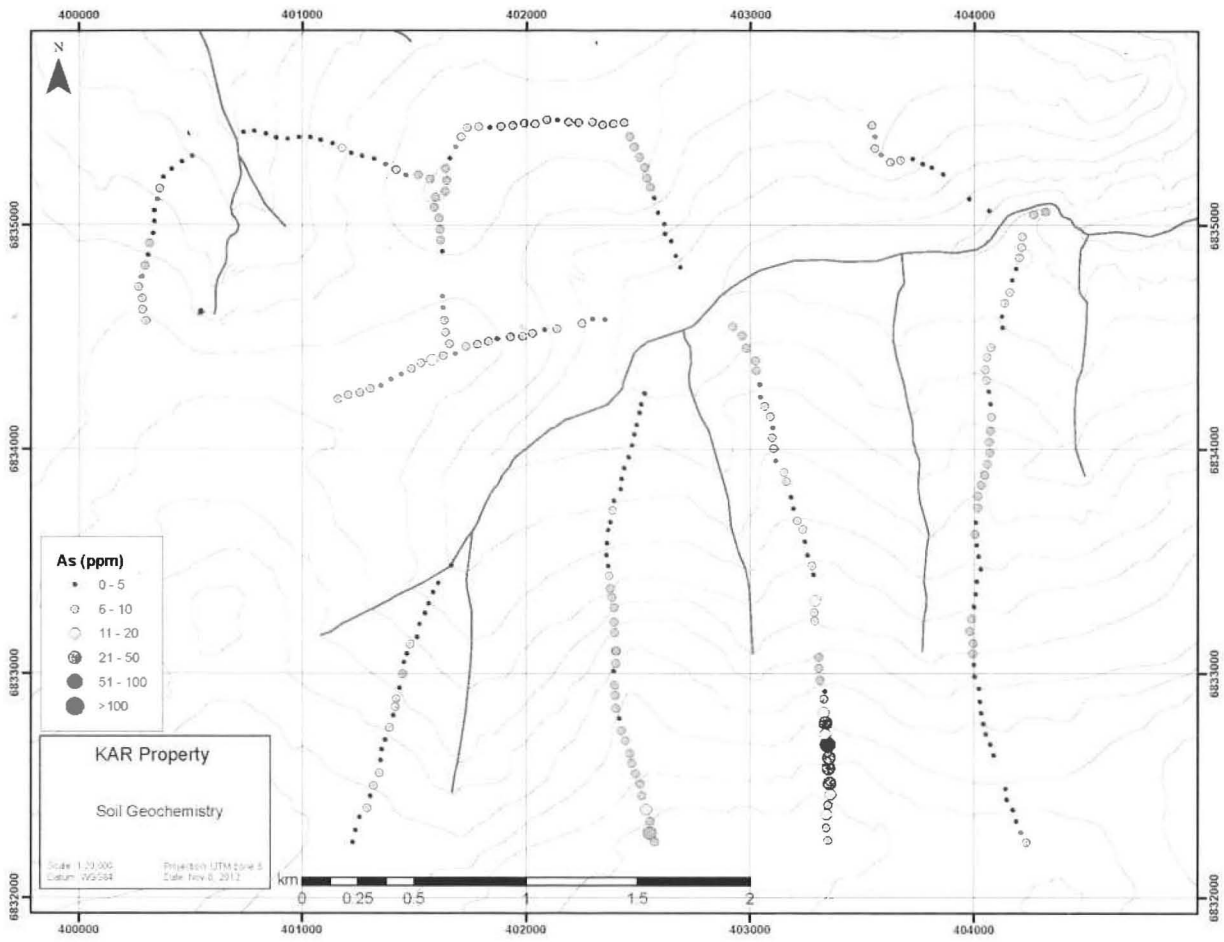

Figure 4c. Soil As values plotted along the sampling traverses within the extent of the KAR property.

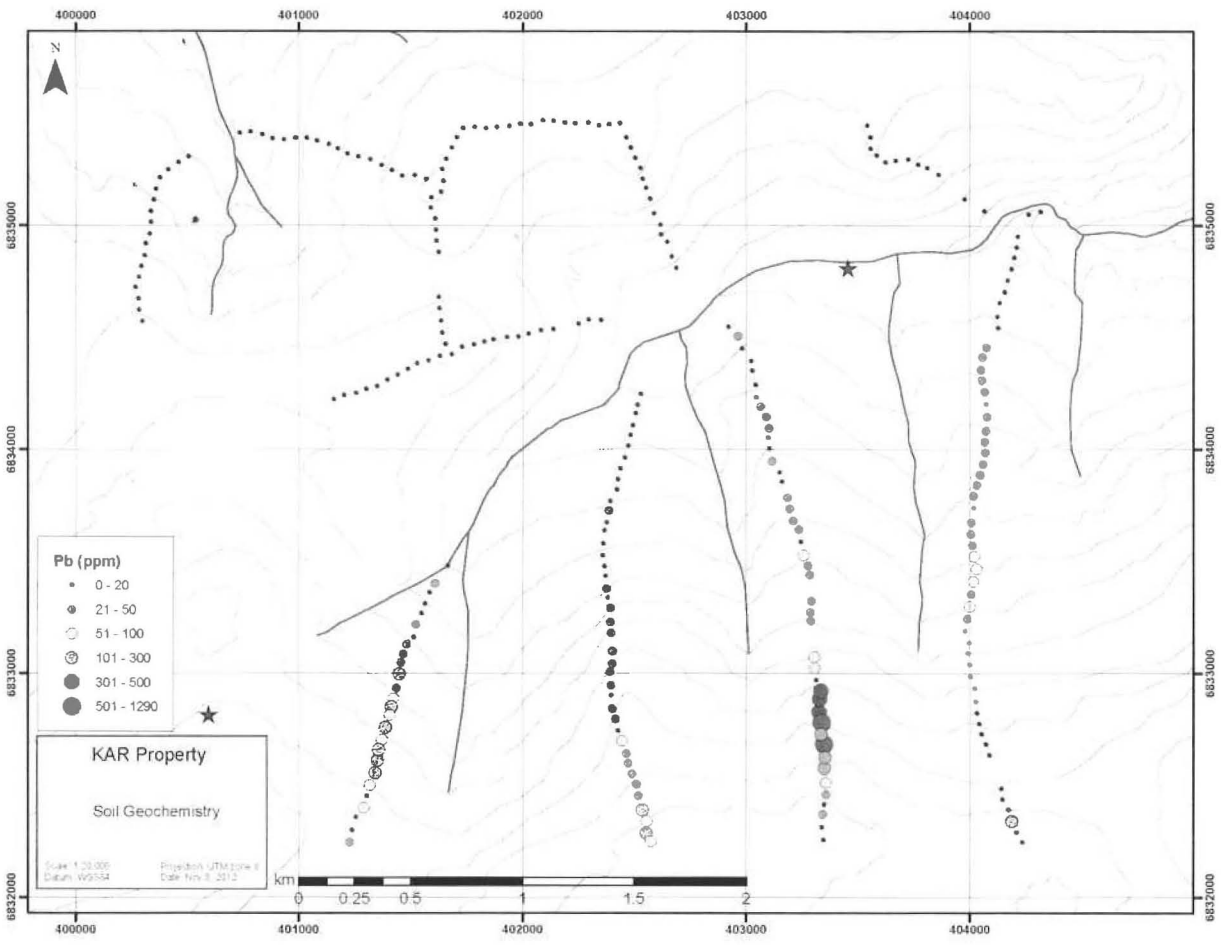

Figure 4d. Soil Pb values plotted along the sampling traverses within the extent of the KAR property.

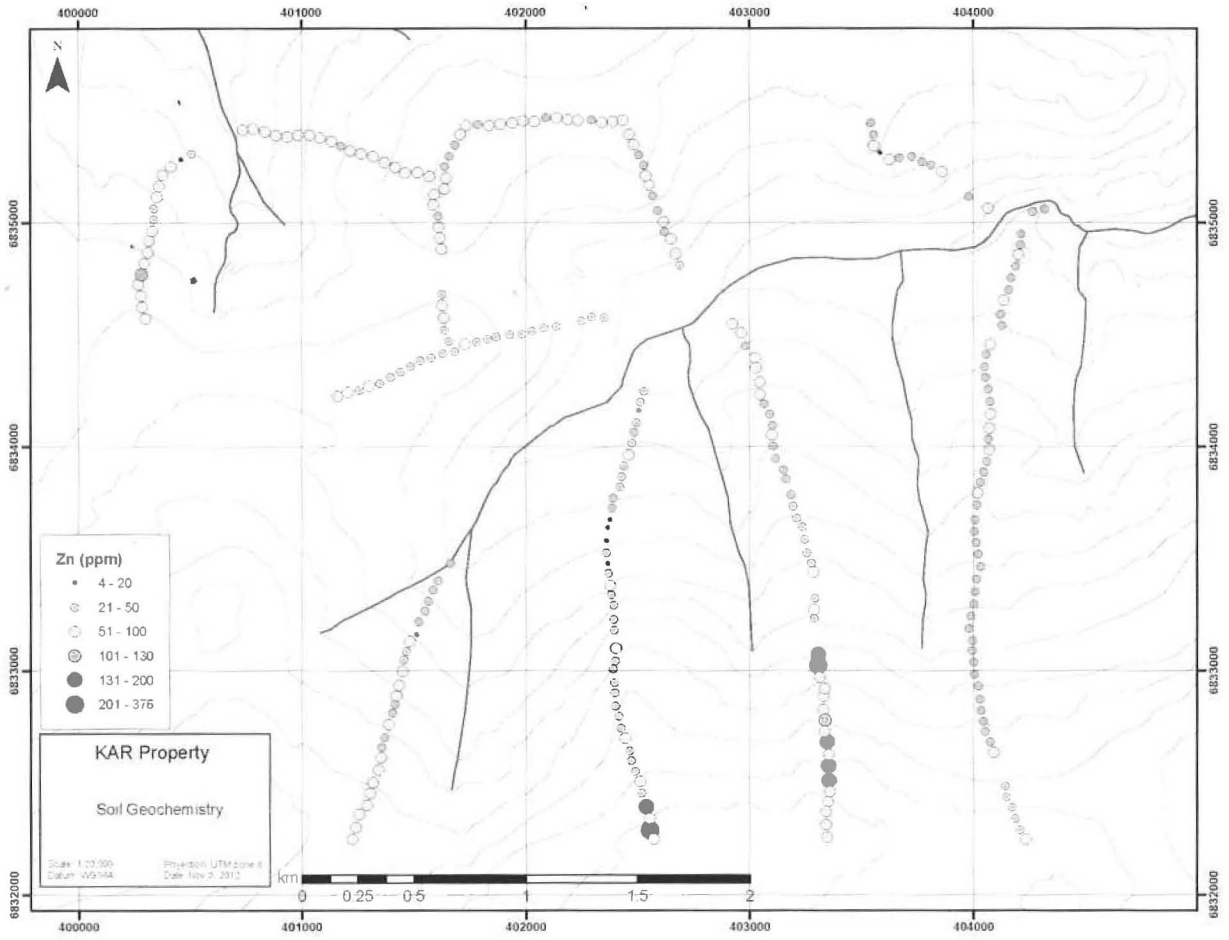

Figure 4e. Soil Zn values plotted along the sampling traverses within the extent of the KAR property.

Conclusions and Recommendations

The soil sampling locally confirms previous geochemical anomalies and indicates the potential for an epithermal-style mineralization in the southern sector of the KAR property. It is recommended that detailed reconnaissance geological mapping in concert with chip sampling be performed to follow up on the soil anomalies. Further soil sampling should be conducted on a 25x25 grid spacing along E-W traverses focusing on the southern segment of the property and further claims should be acquired along the southern boundary of the KAR licence. Trenching and/or diamond drilling may be required, depending on results.

Respectfully,

Aleksandar Miskovic, PhD (APEGBC P.Geo. 36026)

CERTIFICATE WH12195691

Project:

P.O. No.:

This report is for 250 Soil samples submitted to our lab in Whitehorse, YT, Canada on 21- AUG- 2012.

The following have access to data associated with this certificate:

MICKI GORDIC		

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI- 21	Received Sample Weight
LOG- 22	Sample login - Rcd w/o BarCode
SCR- 41	Screen to - 180um and save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au- ST43	Super Trace Au - 25g AR	ICP- MS
ME- MS41	51 anal. aqua regia ICPMS	

To: 0926764 B.C. LTD.
ATTN: MICKI GORDIC
6238 ASHWORTH AVENUE
BURNABY BC V5E 3T7

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.
