

2013 CL Property Rock Sample Descriptions

Date	Sample	Sample_Number	Easting	Northing	Sampler	Description
09-Jul-13	Rock1	E5636560	391387	7191735	TK	Grey, weakly lineated limestone (?), fine grained with <1% disseminated 1-2mm pyrite grains as well as larger, rounded gobs of pyrite up to 15mm (comprising 1-2% of rock), with rusty surrounding staining. Found in boulder field, angular rock suspected not to have travelled far.
11-Jul-13	Rock2	E5636561	386398	7194823	TK	Brecciated boulder found in debris field, rounded, pale green shards 5-20mm, somewhat rusty, in off-white fine grain matrix, containing up to 2% pyrite, disseminated. May not be local.
11-Jul-13	Rock3	E5636562	392921	7193390	TK	Slightly rounded limestone (?), grey-rusty and fine grained, containing up to 30% pyrite, which appears as a nearly globular mass, 50x20mm with surrounding rusty staining.
11-Jul-13	Rock4	E5636563	392871	7193392	TK	As above, but only 5% pyrite in subangular, single 10x15mm clast. More angular and less weathered, presumed more local.
