									PHC	1I		
179.49	183.14	3.65	GRD	MG	Granodiorite with baseline weak propylitic alteration, overprinted by phyllic to argillic vein halos. Patchy rubble development. Strong argillic is often crumbled.							
						MD	GY	PO	SIL	2I		
						MD	GN		PRO	2I		
									ARG	1I		
									POT	1I		
									PHC	1I		
183.14	184.75	1.61	GRD	MG	Mineralized granodiorite with significant veining near quartz feldspar porphyry contact. Cut by quartz veins with arsenopyrite, pyrite, sphalerite, galena, and chalcopyrite.							
						MD	GY		PRO	2I	As	6
									PHC	2I	Sp	4
									ARG	1I	Cp	1
						MD	GN	PO	SIL	2I	Py	10
184.75	185.12	0.37	QFP	FG	Strongly hydrothermally altered quartz feldspar porphyry dyke with flow banding and sharp contacts with mineralization in granodiorite. Light green with medium-coarse altered phenocrysts.							
						LT	GN	FL	HYD	4I		

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
185.12	187.16	2.04	GRD	MG	Mineralized granodiorite with significant veining and clay altered near quartz feldspar porphyry contact. Cut by quartz veins with arsenopyrite, pyrite, sphalerite, chalcopyrite, and galena.							
						LT	GN	PO	CLY	2I	Py	15
						MD	GN		PHC	3I	As	1

											Sp	4
187.16	189.70	2.54	QFP	FG	Quartz feldspar porphyry dyke with two main colours, crosscut by mineralized black breccia. QFP is light green between 187.16-187.88m, mineralized with black breccia at 187.88-188.18m, medium green and crackled from 188.18-188.93m, and dark maroon between 188.93-189.70m.							
						MD	GN		HYD	4I		
						LT	GN					
						DK	MR					
189.70	195.90	6.20	GRD	MG	Crackled granodiorite with weak clay alteration along cracks. Cut by smoky quartz-calcite veins with blebby-disseminated pyrite. Moderate pervasive phyllic with weak patchy argillic. Rubbly and clay altered along end of interval.							
						LT	GN	CR	CLY	2I		
									PHC	3I		
									ARG	2I		
195.90	214.88	18.98	GRD	MG	Dominated by moderate phyllic-argillic overprinting original granodiorite. Rubbly and fractured, with weak-moderate clay on fracture faces. Argillic is often crumbled and potassic overprinted. Patchy weak silica alteration.

144.62	145.88	1.26	VEN	MG	Mineralized vein zone. Main vein (Vein 1, 48cm) is a grey-smokey quartz/tan ankerite vein hosting disseminated to blebby pyrite, sphalerite and disseminated galena. Ankerite hosts disseminated galena and sphalerite. Vein is cross-cut by randomly oriented white carbonate veinlets. Vein 2 (16cm) is a grey to smokey quartz vein hosting disseminated to blebby pyrite and disseminated sphalerite and galena. Ankerite is present and blebby in vein. Vein 3 (8cm) is a grey to smokey quartz vein hosting disseminated to blebby pyrite and sphalerite. Veins 1-2 and 2-3 are separated 15cm and 8cm of strongly silicified and phyllic altered granodiorite hosting disseminated pyrite respectively. Last 35cm of interval are strongly silicified and phyllic altered granodiorite hosting disseminated pyrite.

89.92	198.55	108.63	VOL	FG	Long interval of volcanic parent lithology. Strong pervasive silicification throughout. Clay altered in vein halos. Cut by banded smoky quartz-ankerite-calcite veins with blebby pyrite and sphalerite. Some veins have disseminated arsenopyrite. Vein halos have be >30cm on either side of a single vein.							
						LT	GY		ARG	2I		
						DK	GY		SIL	4I		
198.55	215.11	16.56	POR	FG	Gouged 60 TCA top contact between porphyry stock and volcanic parent. Contact is veined and gouged, hosting disseminated pyrite and trace disseminated galena. Outsized phenocrysts are green-sericite altered. Gouged, veined bottom contact.							
						LT	GN	PO	SIL	2I		
						MD	GN		SER	2I		
215.11	227.08	11.97	VOL	FG	Strongly silicified volcanic parent, with limited argillic in vein halos. Main veining is adjacent to porphyry contact.							
									ARG	1I		
						DK	GY	PO	SIL	4I

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

150.75	151.33	0.58	VEN	--	Grey to smokey vein. Hosts blebby to semi-massive pyrite, disseminated to blebby sphalerite, galena and chalcopyrite and disseminated arsenopyrite and jamesonite. Vein is cross-cut by multiple white carbonate veinlets oriented at 65 degrees TCA. Galena, sphalerite, jamesonite and arsenopyrite are primarily located at the start of the vein, which is more heavily carbonate dominated.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

Hole Name

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
KL-14-170									
	66.96	8.4	HQ	GRD	674.8	424.2	2.75	2.7	Moderately phyllic altered granodiorite. Hosts a 0.1cm carbonate veinlet.
	124.61	9.4	HQ	GRD	806.4	528	2.94	2.9	White carbonate brecciating grey quartz. Hosts disseminated pyrite and sphalerite.
	184.19	13.5	HQ	VEN	1258.4	812.9	3.19	2.8	White carbonate breccia. Large clasts of silicified phyllic altered granodiorite and smokey quartz hosting disseminated pyrite, sphalerite, galena and arsenopyrite.
	185.04	15.5	HQ	VEN	1847.3	1371.3	4.08	3.9	Portion of breccia vein. Semi-banded, semi-massive galena and sphalerite. Hosts disseminate to blebby pyrite and arsenopyrite. Hosted in smokey quartz. Cross-cut by carbonate veinlets. Last 6cm of sample are strongly silicified phyllic altered granodiorite.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
14.40	16.81	2.41	GRD	MG	Moderate argillic altered granodiorite with weak silicification, pervasive moderate oxidation and goethite and limonite bands on fractures surfaces. Quartz- ankerite-calcite stringers and veinlets thoughout.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

261.29	262.13	0.84	VEN	--	BRX vein zone. Vein 1 (60cm, oriented 65 TCA) starts off as grey to smokey quartz hosting semi-massive arsenopyrite/sylvanite(?), blebby to semi-massive sphalerite and blebby pyrite, sphalerite and galena occurs interstitially between the large arsenopyrite/sylvanite(?) blebs and in the quartz. Vein one then transitions to grey/smokey quartz hosting disseminated to blebby pyrite, sphalerite and galena. Arsenopyrite and sphalerite occurs in bands in this section, oriented at ~40 degrees TCA. 6cm of strongly silicified phyllic altered granodiorite hosting disseminated pyrite separate veins 1 and 2. Vein 2 (18cm, oriented at 45 degrees TCA) is tan/yellow ankerite cross-cut by a net of grey quartz/white carbonate veining. Hosts disseminated to blebby pyrite, sphalerite and galena along with disseminated arsenopyrite. Tan ankerite hosts 2 large galena blebs.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

Certificates:	WH14110343, WH14110347

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

Hole Name

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
KL-14-184									
	23.32	19.2	HQ	GRD	1622.3	1007	2.89	2.6	Weak propalytic altered granodiorite with weak pottassic overprint, strongly silicified and weak chloritization. Cut by netted chlorite-calcite veinlets and blebby ankerite.
	33.39	14.1	HQ	GRD	1196	747.2	2.9	2.7	Weak argillic altered granodiorite with moderate silicification. Cut by undulating 0.5 centimeter hemtatite veinlet. Pervasive weak oxidation.
	42.15	7.3	HQ	GRD	609.7	378.2	2.86	2.6	Strongly silicified breccia with moderate oxidation on fractures surfaces and disseminated pyrite.
	147.99	16	HQ	GRD	1395	901.8	2.98	2.8	Moderate propalytic altered granodiorite with moderate silicification. Pervasive blebbs, stringers and veinlets of hematite. Hosting blebby pyrite.
	162.82	12.95	HQ	GRD	1091.2	690.1	2.88	2.7	Smoky quartz silicified breccia with moderate phyllic and trace pottassic clasts.
	163.7	13.4	HQ	GRD	1254.7	838.6	3.2	3.0	Smoky quartz vein with blebby cream coloured calcite, pyrite, honey brown sphalerite and veinlets of galena, arsenopyrite densely disseminated jamesonite.

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
	170.38	18.1	HQ	GRD	1805.2	1212	3.41	3.0	Strong phyllic altered granodiorite with intesne silicification. Hosts blebby and disseminated pyrite and blebby soft acicular tourmaline.
	185.37	8.9	HQ	GRD	731.7	464.5	2.81	2.7	4 centimeter ankerite-calcite-quartz vein with vugs and net textures in moderate phyllic, moderate propalytic altered granodiorite with weak silicification.
	187.52	12.9	HQ	GRD	1106.7	699.6	2.94	2.7	1.7 centimeter smoky - clear quartz vein in strong phyllic, moderate propalytic altered granodiorite with weak silicification and disseminated pyrite.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
4.00	6.10	2.10	GRD	MG	Patchy argillic altered granodiorite around calcite-quartz veinlets. Oxidation is pervasive.							
						MD	BN	RB	OXI	3I		
						LT	WH		ARG	2I		
6.10	10.81	4.71	GRD	MG	Patchy argillic altered granodiorite around calcite-quartz veinlets. Pervasive oxidation. Gouged bottom contact with quartz feldspar porphyry dyke.							
						MD	BN		OXI	4I		
						LT	WH		ARG	3I		
10.81	21.42	10.61	QFP	FG	Medium grey quartz feldspar porphyry dyke with semi-pervasive oxidation from fractures. Cut by calcite veinlets. Phenocrysts are soft. Patchy silicification and pervsive hydrothermal alteration.							
						MD	BN	PO	OXI	2I		
						MD	GY		SIL	1I		
									HYD	4I		
21.42	29.68	8.26	GRD	MG	Granodiorite with patchy propylitic, chloritization, silicification, and potassic alterations. Phyllic-argillic vein halos and fracture-associated. Oxide staniing. Disseminated pyrite in phyllic.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

Hole Name

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
KL-14-186									
	36.57	7.7	HQ	GRD	623.8	387.9	2.77	2.6	Moderate pottassic granodiorite with modera silicification and pervasive moderate silicification. Goethite and limonite on fracture surfaces and calcite-hematite stringers.
	51.53	7.3	HQ	GRD	569.3	351.8	2.67	2.6	Moderate phyllic altered granodiorite with strong silicification and weak oxidation with net textured calcite veinlets and a hematite stringer.
	100.35	12.2	HQ	GRD	1014.9	645.2	2.85	2.8	Strong phyllic altered granodiorite with disseminated pyrite and smoky quartz-calcite stringers with blebby pyrite.
	166.39	11.8	HQ	GRD	1037	659.5	3.01	2.8	Strong phyllic altered granodioriote with propalytic alteration and weak silicification. Cut by smoky quartz calcite with blebby pyrite.
	166.78	10.9	HQ	GRD	1067.2	731.5	3.35	3.2	Ankerite-calcite-quartz vein with pebble sub-angular breccia textures. Hosts blebby pyrite, and blebby cocade honey brown and blackjack sphalerite.
	191.18	10.8	HQ	GRD	956.4	626	3.03	2.9	3 centimeter fine smoky quartz breccia with blebby ankerite, pyrite and sphalerite in strong phyllic altered granodiorite with strong silicification and disseminated pyrite.

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
	191.53	18.5	HQ	GRD	1655	1069.9	3.06	2.8	Strong phyllic alterd granodiorite with strong silicification and disseminated pyrite. Cut by offset milky quartz vein rimmed by blebby pyrite.
	192.17	14.7	HQ	GRD	1296.3	836.6	3.02	2.8	Strong phyllic altered granodiorite with weak propalytic overprint, moderate silicification and disseminated pyrite. Cut by smoky quartz veins and veinlets with blebby pyrite and ankerite and disseminated arsenopyrite.
	198.65	10.4	HQ	GRD	819.2	501.7	2.7	2.6	Moderate argillic altered granodiorite with weak pottassic and moderate phyllic overprint with weak chloritization and moderate hematization. Blebby hematite throughout.
	201.42	14.2	HQ	GRD	1158.5	720.3	2.79	2.6	Weak pottassic altered granodiorite with moderate phyllic, trace chloritic and moderate silicification with calcite stringers.
	219.24	7.2	HQ	VEN	930.7	696.3	4.42	4.0	Massive intergrown galena, honey brown sphalerite, and pyrite. Trace disseminated arsenopyrite near pyrite.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

217.32	218.63	1.31	VEN	--	BRX vein starts of as 17cm of smokey quartz breccia hosting semi-massive pyrite and disseminated to blebby sphalerite and chalcopyrite. Then 7cm of minorly brecciated and veined strongly phyllic and silicified altered granodiorite hosting disseminated pyrite. The rest of the vein is grey-smokey quartz/semi-massive to massive pyrite. Veins hosts disseminated to blebby galena, sphalerite chalcopyrite and arsenopyrite. Quartz is vuggy. Lower portion of the vein hosts white carbonate veinlets (veinlets oriented at 50 TCA). Last 14 of the vein is brecciated by cream ankerite.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

Hole Name

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
KL-14-191									
	19.46	16.2	HQ	GRD	1404.3	881.7	2.97	2.7	Moderate to strong phyllic altered granodiorite with moderate silicification and pervasive moderate oxidation. Cut by ankerite veinlets and stringers. Disseminated pyrite throughout.
	84.02	12.6	HQ	GRD	1148.6	751.7	3.12	2.9	Smoky quartz/ light tan ankerite vein hosting blebby pyrite. Ankerite minorly brecciates smoky quartz.
	92.92	12.7	HQ	GRD	1083	703.6	2.92	2.9	Moderate phyllic altered granodiorite with moderate silicification cut by smoky quartz ankerite veinlets and stringers.
	123.5	10	HQ	GRD	832.1	541.1	2.85	2.9	Moderate phyllic altered granodiorite with moderate silicification. Hosting 2.7 centimeter quartz-calcite-ankerite vein with mossy textures and blebby pyrite and sphalerite.
	138.9	16.1	HQ	GRD	1348.6	877.8	2.87	2.9	Banded quartz, tan ankerite, calcite breccia hosting belbby sphalerite and blebby and disseminated pyrite. Breccia has pebble sized subangular carbonate clasts in quartz matrix.
	160.63	15.3	HQ	GRD	1316.7	820	2.94	2.7	Intensely silicified granodiorite with obliterate phyllic to propalytic alteration and 4 centimeter of aplite dyke. Cut by calcite veinlet.

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
	189.34	16	HQ	GRD	1342.3	840.1	2.87	2.7	Weak argillic altered granodiorite with moderate phyllic overprint and moderate silicification. Cut by Chlorite veinlets and hosting blebby hematite.
	215.91		HQ	QFP	411.9		2.75		Smoky quartz breccia with pebble-cobble rounded clasts in very fine matrix with mineralized clasts of pyrite and sphalerite.
	217.15	6.3	HQ	QFP	506	315	2.75	2.7	Light green silicified quartz feldspar dyke with euhedral blebbs and and veinlet of quartz.
	222	20.3	HQ	GRD	1913.6	1245	3.23	2.9	Smoky quartz-ankerite breccia hosting pyrite, sphalerite, arsenopyrite and jamesonite. Carbonates display net textures.
	222	20.3	HQ	BXA	1913.6	1245	3.23	2.9	Smoky quartz-ankerite breccia hosting pyrite, sphalerite, arsenopyrite and jamesonite. Carbonates display net textures.
	241.51	10.7	HQ	GRD	899.9	566	2.88	2.7	Granodiorite with moderate phyllic, Moderate propalytic and moderate argillic sections and Pervasive moderate silicification. Hosts a smoky quartz-pyrite stringer.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
2.86	4.54	1.68	GRD	MG	Trace to weak potassic/propyllitic altered granodiorite. Moderately fractured. Moderate to strong oxidation along fracture surfaces.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

KL-14-196									
	57.92	14.8	NQ2	VEN	1103.3	805.9	3.51	3.7	Quartz vein with semi-massive banded ankerite and pyrite with blebby galena, sphalerite (honey brown and blackjack), chalcopyrite, pyrite and bladed quartz.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
1.52	28.04	26.52	GRD	MG	Trace to weak propylitic and potassic altered granodiorite with patchy argillic altered granodiorite. Top 5 m of hole is rubbly. Fractures are pervasively oxidized. Weak Calcite and Ankerite veinlets found pervasively. Argillic alteration is defined by feldspar weathering into clay minerals. Argillic altered zones are tan to oxidized. Trace hematite is found locally along fractures. Local sphalerite, Galena, Pyrite quartz veins (trace) occur within the interval.							

28.04	34.03	5.99	GRD	MG	Moderate to strong argillic altered granodiorite locally overprinting weak to moderate propyllitic and phyllic altered granodiorite. Fractures are oxidized. Local quartz-carbonate veins with trace fine grained sulphides (pyrite?) up to 1.5 cm. Minor zones of up to 5 cm clay altered granodiorite.

											Gn	1
58.78	62.40	3.62	GRD	MG	Gouge to strongly phyllic altered granodiorite with disseminated Pyrite. Gouge is found near the quartz-carbonate vein contact and grades into more competent phyllic altered granodiorite over 20 cm. Epidote (medium grained to coarse grained) is found pervasively throughout. Oxide staining is dominantly found along fractures, but also within quartz-carbonate stringers. Pyrite is blebby to disseminated. Weak argillic overprinting is common. Mineralized quartz veins are found intermittently (7 and up to 6 cm) throughout the interval. Lower contact with the dyke is gougy.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
1.52	56.26	54.74	GRD	MG	Trace to weak propylitic and potassic altered granodiorite with patchy argillic altered granodiorite. Top 5 m of hole is rubbly. Fractures are pervasively oxidized. Weak Calcite and Ankerite veinlets found pervasively. Argillic alteration is defined by feldspar weathering into clay minerals. Argillic altered zones are tan to oxidized. Trace hematite is found locally along fractures. Local sphalerite, Galena, Pyrite quartz veins (trace) occur within the interval.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
58.78	62.40	3.62	GRD	MG	Gouge to strongly phyllic altered granodiorite with disseminated Pyrite. Gouge is found near the quartz-carbonate vein contact and grades into more competent phyllic altered granodiorite over 20 cm. Epidote (medium grained to coarse grained) is found pervasively throughout. Oxide staining is dominantly found along fractures, but also within quartz-carbonate stringers. Pyrite is blebby to disseminated. Weak argillic overprinting is common. Mineralized quartz veins are found intermittently (7 and up to 6 cm) throughout the interval. Lower contact with the dyke is gougy.							
						MD	GY		ARG	3I		
						LT	GN	---	PHC	5I	Py	3
62.40	72.24	9.84	QFP	CG	Dominantly medium to light green to tan-orange quartz-feldspar porphyry dyke with minor intermittent maroon quartz-feldspar porphyry. Quartz-feldspar porphyry is cut by quartz and calcite veinlets pervasively through the interval (trace to weak). Quartz veinlets may host trace fine grained blebby Galena and hematite. Local areas with crackle breccia and gouge are found locally. Local crackle brecciated and gouge dyke hosts altered granodiorite with brecciated quartz-vein-like texture with disseminated pyrite.

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
KL-14-199									
	104.26	13.5	HQ	VEN	1361.9	927.8	3.45	3.1	Smoky quartz vein with netter grey quartz veinlets and netted white carbonate veinlets. Hosts banded zoned honey brown sphalerite. Blebby pyrite and disseminated galena.
	141.36	2.7	HQ	GRD	343.8	238.4	4.36	3.3	Banded milky quartz-ankerite vein with bands hosting blebby, ankerite margins and massive intermixed blebby galena, (honey brown and blackjack) sphalerite, ankerite and pyrite.
	141.61	11.9	HQ	GRD	1092.3	714.1	3.14	2.9	Moderate to strong phyllic (strongest approaching vein) altered granodiorite with moderate propalytic overprint and moderate silicification. 2.5 centimeter vein breccia with disseminated arsenopyrite, blebby zoned sphalerite, blebby galena, blebby and disseminated pyrite. Discontinuous net textured pink ankerite (rhodocrosite?) and calcite veinlets throughout.
	193.69	10.6	HQ	GRD	1227.8	887.2	3.96	3.6	Milky, smoky quartz vein with blebby pyrite, honey brown sphalerite and disseminated pyrite, arsenopyrite, galena and honey brown and blackjack sphalerite.

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
	195.9	13.5	HQ	GRD	1294.2	866.2	3.28	3.0	Banded smoky quartz-calcite vein. Hosting blebby pyrite, galena, arsenopyrite, honey brown sphalerite and bladed clacite. 3.7 centimeter vein obliterated strongly silicified, phyllic altered granodiorite with disseminated pyrite.
	252.07	11.2	HQ	GRD	1063.7	704.8	3.25	3.0	Strongly phyllic altered granodiorite with strong silicification and disseminated pyrite hosting smoky quartz vein with blebby (tellerium hosting) galena, (honey brown and blackjack) sphalerite and ankerite with disseminated pyrite.
	284.56	7.9	HQ	GRD	1106	857.5	4.79	4.5	Quartz vein hosting intermixed semi-massive pyrite, (blackjack) sphalerite, glanea with disseminated arsenopyrite and blebby
	284.56	7.9	HQ	VEN	1106	857.5	4.79	4.5	Quartz vein hosting intermixed semi-massive pyrite, (blackjack) sphalerite, glanea with disseminated arsenopyrite and blebby
	308.08	12.1	HQ	BXA	1054.9	669.2	2.98	2.7	Sub-rounded, matrix dominated, moderately silicified smoky quartz breccia with mostly quartz feldspar dyke clasts. Hosting disseminated disseminated pyrite and galena.

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
	320.55	9.9	HQ	GRD	893.9	578.7	3.09	2.8	Strong phyllic altered granodiorite with strong silicification and disseminated pyrite. Hosting 4.2 centimeter smoky quartz breccia with rounded silicified clasts, disseminated pyrite and galena.
	335.37	10.8	HQ	QFP	954.2	615.6	3.02	2.8	Lt grey quartz feldspar dyke with blebby pyrite.
	340.13	11.7	HQ	GRD	1154.9	795.5	3.38	3.2	Strong phyllic altered granodiorite with moderate silicification. Hosting 6.5 centimeter milky quartz vein with banded honey brown sphalerite, arsenopyrite, pyrite and galena and blebby pyrite, cream ankerite, galena, sphalerite and arsenopyrite.
	352.25	16.2	HQ	GRD	1820	1293.3	3.84	3.5	8 centimeter quartz vein with semi-massive to massive blackjack sphalerite with banded arsenopyrite, blebby pyrite, galena, chalcopyrite and disseminated jamesonite. 7 centimeter fine smoky quartz breccia with disseminated pyrite, arsenopyrite and 2.8 centimeter strong phyllic altered granodiorite with strong silicification and disseminated pyrite and arsenopyrite.
	377.49	5.5	HQ	GRD	732	564.3	4.55	4.4	Clear quartz vein with intermixed semi-massive blackjack sphalerite and pyrite

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
1.52	9.46	7.94	GRD	MG	Patchy propylitic and potassic altered granodiorite with oxidation on fractures and pervasive in argillic halos. Some argillic is crumbled-gouged.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

Batch:	131, 133
Certificates:	WH14120945, WH14120947

COMMENTS

The magnetic sensors in the downhole survey tool were faulty, all azimuth and magnetic data is unreliable. Dip values are accurate. New azimuth values were calculated using a regression formula derived from reliable survey readings from other holes.

Hole Name

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
KL-14-208									
	39.64	6.5	HQ	GRD	632.6	439.8	3.33	3.3	Vuggy ankerite vein (oxidized) (0.5 to 1.5 centimeter). Undulating vein bladed creamy ankerite (<1 min) selvedges growing into vugs. Blebby galena, pyrite, honey brown and blackjack sphalerite flank both sides of the vein over 1 centimeter on each side. Strong phyllic altered granodiorite is often found before the ankerite vein and semi-massive galena, sphalerite and pyrite vein.
	69.19		HQ	GRD	476.9		2.73		Strong phyllic altered granodiorite with moderate propalytic overprint and moderate silicification hosting disseminated pyrite. Granodiorite hosting 0.4 centimetere smoky quartz pyrite veinlet. 1.5 centimeter quartz ankerite vein with net and branching textures.
	75.2	11.2	HQ	GRD	1003.5	645.1	3.07	2.8	Smoky quartz-calcite-ankerite contact breccia with banded textures and sub-angular clasts. 4 centimeters of quartz feldspar matrix
	105.92	12.7	HQ	GRD	1090.7	694	2.94	2.8	Intensely silicified quartz-ankerite-calcite vein breccia with some bladed quartz textures. Hosting disseminated pyrite.

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
	129.57	13.4	HQ	GRD	1280.5	836.5	3.27	2.9	5 centimeters smoky quartz vein with pervasive jamesonite, blebby sphalerite (honey brown mostly), pyrite and arsenopyrite. Hosted in strongly silicifed, moderate phyllic altered granodiorite with moderate propalytic overprint.
	129.72	4.7	HQ	GRD	409.2		2.98		Smoky quartz vein with blebby calcite.

						LT	GN		PHC	5I	Py	1
56.75	58.99	2.24	GRD	MG	Milky white to grey quartz vein with intermittent clayey/gougy phyllic altered granodiorite. Interval is rubbly with competent core found mostly near the top and bottom contacts. Bottom 15 centimetres of interval defined by shear/gougy dark grey breccia/vein with blebby pyrite and arsenopyrite. Quartz vein hosts blebby pyrite, arsenopyrite, honey brown and black jack sphalerite and trace galena/chalcopyrite. Phyllic altered granodiorite hosts blebby to disseminated pyrite and arsenopyrite. Shearing textures at 12 degrees to core axis. Weak oxide staining along fractures/gouge.

Phyllic altered granodiorite is weak to mod potassic altered locally. Weak hematite veinlets/veins are mostly within phyllic altered granodiorite. Minor shearing associated with phyllic altered granodiorite and has offset aplite dyke by 3 cm at 15 degrees to core axis. Oxide staining is generally on fractures within carbonate veinlets. Oxide staining on fractures and within carbonate veinlets/veins (8 per metre). Minor aplite dykes only found withing 2 metre interval.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
62.08	154.26	92.18	GRD	MG	Trace to weak propylitic, weak to moderate potassic altered granodiorite with patchy phyllic and argillic altered granodiorite. Phyllic altered granodiorite is variably sheared across the interval and is defined by low angle shears and usually hosts chlorite and hematite. Patchy areas with strong hematite staining/veinlets are found locally. Calcite veinlets are pervasive throughout at 10 per metre. The interval is more potassic altered relative to interval prior to this one and most holes on the property, which suggests close proximity to a fault. Trace pyrite is observed in minor quartz-carbonate veins/veinlets.

						DK	PU		ARG	2I		
154.26	160.58	6.32	GRD	MG	Strong phyllic altered granodiorite with strong hematite overprint. Hematite alteration is brecciated and color overprint of phyllic altered granodiorite. Breccia matrix may be gougy. Breccia is stained dark purple within the matrix with quartz clasts. Relict sericite is observed. Strong hematite and chlorite stringers within more hematite altered granodiorite.

									POT	3I		
160.58	179.34	18.76	GRD	MG	Patchy weak to moderate propylitic and potassic altered granodiorite, strong phyllic altered granodiorite, moderate to strong hematite altered granodiorite (overprinting phyllic altered granodiorite. Strongly phyllic altered granodiorite is weakly potassic altered, while propylitic altered granodiorite is moderately potassic altered. Phyllic altered granodiorite hosts minor gougy shearing and strong chlorite veining. Minor hematite altered intervals with hematite veining/stringers. Calcite veining is pervasive at 8 per metre throughout interval. Trace smokey quartz stringers with trace pyrite.

									PHC	3I		
									ARG	3I		
167.27	173.56	6.29	GRD	MG	Moderate to strong phyllic altered granodiorite with minor rubble/gouge intervals. Patchy argillic altered granodiorite (minor) Smokey quartz and ankerite veins/veinlets pervasive throughout phyllic altered granodiorite. Minor silicified intervals obliterating textures up to 10 centimetres. Irregular banded quartz-ankerite veins at 168 metres. Smokey quartz-carbonate flooding with pyrite, arsenopyrite, sphalerite. Trace variable disseminated pyrite in phyllic altered granodiorite.

167.24	168.40	1.16	GRD	MG	Strongly propylitic altered granodiorite grading into phyllic altered granodiorite over last 20 centimetres. Propylitic altered granodiorite is variably crumbly and argillic altered. Phyllic altered granodiorite is weakly gougy with minor pyrite stringers and black breccia gouge (0.5 cm) at bottom contact with dyke.							
									ARG	2I		
						LT	GN		PRO	3I		
						DK	GN		PHC	3I		
168.40	180.36	11.96	QFP	MG	Fine to medium grained quartz-feldspar porphyry dyke with patchy solidification and net textures. More silicified quartz-feldspar porphyry dyke intervals are lighter green to tan.							
						LT	GN					
						--	MR	PO				
						--	TN					
180.94	190.38	9.44	QFP	FG	Light green to maroon quartz-feldspar porphyry dyke with pervasive calcite veining and minor gougy intervals, Minor soft dark grey veins hosting trace pyrite. Minor dark grey breccia hosting weak blebby pyrite up to 3 centimetres wide with green porphyry clasts up to 0.5 cm. Light green to tan net textured to weakly gouge altered quartz-feldspar porphyry.							
						LT	GN	PO	SIL	3I		
						--	MR					

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
190.38	192.00	1.62	BXA	CG	Medium green to dark green matrix hosting sub-angular clasts ranging from 1 millimetre to 3 centimetres. Clasts comprise quartz-feldspar porphyry, granodiorite, smokey quartz vein and brown to orange clasts. Lower contact is irregular. 10 centimetre medium green to tan dyke (10 centimetres wide) strongly silicified at 50 degrees to core axis. Trace disseminated pyrite.							
						MD	GN	BX	SIL	3I		
						DK	GN					
192.00	193.03	1.03	QFP	FG	Strongly silicified maroon dyke. Moderately pitted. Hematite and chlorite veinlets pervasive at 15 per metre. Upper contact is irregular and grades into irregular banded medium to dark brown and light green bands over 5 centimetres. Lower contact is irregular.							
						--	MR		SIL	5I		
193.03	193.33	0.30	BXA	CG	Medium green to dark green matrix hosting sub-angular clasts ranging from 1 millimetre to 3 centimetres. Clasts comprise quartz-feldspar porphyry, granodiorite, smokey quartz vein and brown to orange clasts. Lower contact is irregular. 10 centimetre medium green to tan dyke (10 centimetres wide) strongly silicified at 50 degrees to core axis. Trace disseminated pyrite.							
						MD	GN		SIL	3I		
						DK	GN					
193.33	209.88	16.55	QFP	FG	Weak to strongly silicified quartz-feldspar porphyry dyke. Fine grained and weakly silicified and bleached. Intermittent zones (generally more bleached and silicified intervals) host hematite stringers. Trace gougy seams. Last 40 centimetres of interval is banded and orange with chlorite and carbonate veinlets pervasive. Pitted textures on surface of core.							
						LT	GY		SIL	4I	Py	0.01
						LT	MR					

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
209.88	210.15	0.27	BXA	CG	Gradational breccia with medium brown to medium orange fine grained quartz-feldspar porphyry dyke clasts within strongly phyllic altered granodiorite. Sub-angular clasts of medium brown to medium orange fine grained quartz-feldspar porphyry dyke ranging from 1 mm to up to 5 centimetres within phyllic altered granodiorite matrix. Minor smokey quartz clasts hosting blebby pyrite.							
						MD	OR					
						MD	BN					
						LT	GN	BX	PHC	4I	Py	0.01
210.15	211.70	1.55	GRD	MG	Strongly phyllic altered granodiorite with dark grey sulphide smearing veins adjacent to approximately 15 centimetre moderate to strong gouge with ankerite veins. Moderate smokey quartz veins/veinlets/nets. Trace pyrite within smokey quartz-carbonate veinlets.							
									PHC	4I		
									POT	4I		
						LT	GN		SIL	3I	Py	0.01
211.70	235.31	23.61	GRD	MG	Trace to weak propylitic and potassic altered granodiorite with pervasive calcite veining at 9 per metre. Minor patches of phyllic altered granodiorite associated with smokey quartz-carbonate veining (hosts trace blebby pyrite). Chlorite stringers found locally and intermittently.

138.91	143.36	4.45	GRD	MG	Trace to weak propylitic and potassic altered granodiorite with minor patchy argillic altered granodiorite. Pervasive calcite veinlets at 9 per metre. Minor intervals (up to 30 centimetres) with moderate potassic and propylitic altered granodiorite. Weakly to moderately silicified granodiorite.							
						MD	GY		POT	2I		
									SIL	3I		
						DK	GY		PRO	2I		
143.36	144.34	0.98	GRD	FG	Strongly silicified hematite vein with envelopes of strongly silicified propylitic (up hole over approximately 15 centimetres) and moderate to strong phyllic and argillic altered granodiorite (Approximately 63 centimetres down hole). Hematite vein is 10 centimetres and is cut by late stage calcite veinlets oriented in random directions. Phyllic altered granodiorite hosts trace disseminated pyrite with smokey-quartz carbonate vein.

						DK	GY		PRO	2I		
170.00	185.54	15.54	GRD	MG	Strongly phyllic altered granodiorite with pervasive quartz-ankerite veins/veinlets with or without pyrite +/-galena. Approximately 20 percent of the interval is weak to moderately gouge altered. Strong net textures, especially in more gouge altered zones. Net textures are light green, gouge and calcareous. Irregular banded Smokey quartz-ankerite veins +/-pyrite and galena. Low angle shearing within more gouge altered zones is common and is associated with blebby/veined hematite with pyrite. Phyllic altered granodiorite is variably mineralized with disseminated pyrite.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
117.96	118.77	0.81	BXA	FG	Barren, complex polyphase quartz carbonate breccia. 118.40-118.63 is a distinct light grey-milky quartz matrix breccia with rounded granodiorite clasts. Clasts (but not matrix) are cut by white silicified calcite veinlets. This sub-breccia has gouged upper border. 117.96-118.40m is more complex, with granodiorite brecciated by light grey massive quartz, then by pink carbonates (rhodochrosite and ankerite), then cut by medium grey massive quartz veins. Finally, these are all cut by white calcite veins/veinlets. 118.70-118.77m is a banded pink-cream rhodochrosite-ankerite vein with discontinuous smoky quartz along its borders. Smoky quartz hosts trade disseminated pyrite.							
						LT	GY	BX	SIL	3I

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
4.11	8.08	3.97	GRD	MG	Rubbly, weakly phyllic altered granodiorite. Oxidized clay alteration seen on rubble surfaces. Weak limonite and goethite weakly on fractures.							
						MD	BN	MA	PHC	3I	Li	1
						LT	BN		CLY	2I	Go	1
8.08	24.92	16.84	GRD	MG	Moderately phyllic altered granodiorite with local argillic patches. Oxidation pervasive and locally altering whole core. Disseminated to blebby pyrite seen locally. Limonite seen on select fractures. Clay stringers seen locally.							
						LT	GN	MA	PHC	4I	Py	1
						LT	TN		ARG	2I	Li	1
									CLY	1I		
24.92	27.38	2.46	GRD	MG	Patchy weak argillic, potassic, propylitic and unaltered granodiorite. Weak clay seen on fracture surfaces. Weak oxidation on fracture surfaces only.							
						MD	GY		PRO	1I		
						LT	GY	MA	ARG	2I		
									CLY	2I		
									POT	1I		
27.38	33.30	5.92	GRD	MG	Unaltered granodiorite with weak oxidation on select fracture surfaces. Small oxidized gouge seams and stringers throughout.							
						MD	GY	MA	CLY	2I		
33.30	42.95	9.65	GRD	MG	Moderately phyllic altered granodiorite with patchy argillic alteration. Oxidation pervasive and altering whole core for most of interval. Disseminated to blebby pyrite. Clay alteration pervasive and on majority of fracture surfaces. Undulatory calcite stringers throughout.							
						LT	GN	MA	PHC	4I

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
	160.21	18.5	HQ	GRD	1867.7	1290.3	3.45	3.2	Two stage vein. Stage 1 is a slow cooling quartz vein hosting disseminated to blebby pyrite and magnetite. Quartz crystals exhibit comb texture and are well formed (up to 2cm in length). Sporadic quartz crystals are colored purple (amethyst?). Vein has brecciated a few phyllic granodiorite clasts. Stage 2, upper 1/3 of the vein is cut by a 5cm cream ankerite vein that hosts concentrated patches of disseminated arsenopyrite and trace amounts of disseminated pyrite. Ankerite infill's vugs between crystals in quartz vein. Ankerite has blebs or clasts(?) of grey quartz.
	184.5	14.5	HQ	GRD	1212.4	771.7	2.86	2.8	Moderately phyllic altered granodiorite hosting irregularly banded quartz/ankerite/chlorite veins up to 1cm.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
1.16	9.50	8.34	OVB	--	Light to medium brown overburden. Sporadic pebble to cobble sized granodiorite clasts. Top 30 cm are dark brown and organic rich.

73.04	73.69	0.65	BXA	--	Multiphase polymictic breccia. Up to two initial breccia phases with grey quartz brecciating propyllitic/silicified granodiorite, argillic granodiorite, light grey to green dyke and smokey quartz/pyrite vein. Clasts are sub-angular to sub-rounded and sand to cobble in size. The third(?) phase is a lighter grey quartz matrix along the upper selvedge with sand to pebble sized clasts of light grey/green dyke, phyllic/argillic granodiorite and smokey quartz/pyrite vein. The final (4th?) stage is a black quartz breccia, that brecciates the contact between phase 2 and 3. has sand to pebble, sub-angular to sub-rounded sized casts of light grey/green dyke, argillic granodiorite, phyllic/propyllitic granodiorite and smokey quartz/pyrite vein. Black quartz matrix hosts trace disseminated pyrite.

Hole Name

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
KL-14-239									
	125.35	11.9	HQ	GRD	907.1	564.5	2.61	2.7	Very strongly silica altered granodiorite with much of the interval with obliterated phyllic and argillic altered granodiorite. Dark grey black vein fragments up to 2 centimetres with fine grained sulphide (pyrite?). Minor smoky quartz-ankerite veins hosting blebby and euhedral pyrite. Blebby pyrite is disseminated throughout. Minor patches of hematite found locally within strongly silicified areas.

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
	239.48	19	HQ	BXA	1700.2	1111.7	3.06	2.9	Dark grey fine grained matrix hosting fine grained sulphides with phyllic altered granodiorite clasts and light grey quartz, calcite and ankerite vein fragments up to 4 centimetres. Clasts are sub-angular. Light grey quartz-calcite and ankerite vein fragments. Quartz-ankerite-calcite veins host blebby pyrite, chalcopyrite, arsenopyrite and honey brown sphalerite. Cubic pyrite found disseminated. Interval is trace to moderately gouge altered, especially for last 10 centimetres of the interval. Areas with dark grey fine grained matrix hosts net textures with late stage calcite infilling them.
	248.85	8.5	HQ	BXA	684.7	429.8	2.76	2.7	Strongly phyllic altered granodiorite hosting blebby disseminated pyrite. A 25 centimetre dark grey fine grained matrix breccia hosting quartz-feldspar porphyry, phyllic altered granodiorite clasts and quartz-carbonate vein fragments (sub-angular). 1 light green gouge seam with chlorite stringers 3 centimetres wide found in center of breccia. Minor calcite seams cut breccia. An approximately 1 centimetre ankerite vein hosts honey brown sphalerite along its selvages.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
22.73	48.76	26.03	GRD	MG	Strongly oxidized and patchy clay altered granodiorite. Competent core found locally (~15% of interval) and comprises variably propylitic, phyllic and argillic altered granodiorite. Argillic altered granodiorite is strongly oxidized, while phyllic altered granodiorite hosts rough textures with weathered clays. Limonite and goethite is common within clay altered granodiorite. Relict hematite veinlets/stringers within granodiorite.

									OXI	5I		
48.76	59.28	10.52	GRD	MG	Trace to weak propylitic altered granodiorite with patchy argillic and phyllic altered granodiorite. Zones with strong chlorite and hematite plus or minus calcite stringers (hematite cuts chlorite). Patchy, irregular oxidized stain withing phyllic altered granodiorite. Pervasive calcite veining. Trace pyrite disseminated within some of the phyllic altered granodiorite.							
						MD	OR		PRO	2I		
						LT	GN		PHC	3I		
						DK	GN		ARG	2I		
						DK	PK					
59.28	61.96	2.68	GRD	MG	Weak phyllic altered granodiorite with patchy oxidized staining hosting very trace disseminated pyrite. Interval is moderately silicified. Last 10 centimetres of interval hosts strong clay altered granodiorite (medium brown) with minor limonite. Minor light grey quartz-carbonate veining. Quartz cuts ankerite.							
						LT	GN		PHC	3I		
									SIL	3I		

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
61.96	68.23	6.27	GRD	MG	Moderate to strong phyllic and argillic altered granodiorite hosting minor weakly gouge altered zones. Moderate hematite-calcite veining and zones with strong silica flooding defined banded light and medium grey quartz. Minor calcite veining with < 1 millimetre comb hematite and specularite along vein selvages. Trace dark brown aplite dyke found locally. Trace pyrite cubes withing ankerite blebs within argillic altered granodiorite (trace).							
						LT	GN		PHC	3I		
									ARG	3I		
									SIL	3I		
68.23	70.49	2.26	GRD	MG	Weak propylitic altered granodiorite with patchy phyllic and argillic altered granodiorite. Propylitic altered granodiorite is dark green with weak potassic alteration. Pervasive calcite veinlets at 7 per metre. Phyllic and argillic altered granodiorite hosts hematite-chlorite plus or minus calcite veins/veinlets at 9 per metre and are up to 3 centimetres wide. Weak blebby/banded pyrite within hematite-chlorite-calcite veins (trace). Minor broken up ankerite veins/veinlets hosting trace blebby pyrite. Minor gouge alteration within phyllic altered granodiorite associated with strong chlorite and ankerite veins.

249.09	252.97	3.88	VOL	FG	Fine grained dark green dyke hosting strong chlorite altered and beige sub-angular clasts. Moderately fractured with minor calcite veinlets at 4 per metre. Last 30 centimetres is bleached along its chilled margins.							
						DK	GN					
252.97	253.71	0.74	GRD	MG	Strongly phyllic altered granodiorite hosting weak disseminated blebby and banded pyrite with minor ankerite fragments. Weak gouge altered intervals found locally. Smoky quartz stringers hosting blebby pyrite.							
						DK	GN		PRO	2I		
						LT	GN		PHC	4I	Py	0.1

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
253.71	288.65	34.94	GRD	MG	Dominantly moderately phyllic altered granodiorite with patchy weak propylitic and argillic altered granodiorite. Phyllic altered granodiorite generally hosts ankerite with or without smoky quartz veins with our without blebby pyrite. Phyllic altered granodiorite is variably gouge altered and zones appear to host fine grained sulphide seams. Propylitic altered granodiorite hosts pervasive calcite veining at 4 per metre and hosts minor hematite-carbonate veins. Entire interval hosts pervasive hematite-chlorite-calcite irregular banded veins at 3 per metre.

unaltered granodiorite.
not sampled.

mainly unaltered granodiorite with moderate oxidation

unaltered granodiorite with moderate to pervasive oxidation and limonite staining on fractures.

quartz-feldspar dyke and a small ~50cm heavily oxidized and fractured zone of granodiorite; both heavily oxidized and limonite stained.

highly fractured and intensly silicified phyllic granodiorite with pervasive gauge and clay on fracture surfaces. local sulphide pitting. segments highly clay altered gauge.

highly clay altered granodiorite. gauge seams throughout. moderate limonite on fracture surfaces.

patchy phyllic altered granodiorite with pervasive oxidized grit on fracture surfaces. limonite and goethite on fractures.

heavily phyllic and silicified granodiorite. pervasive oxidation and limonite on fracture surfaces

unaltered granodiorite with oxidation and limonite on fracture surfaces.

pervasively oxidized granodiorite. limonite staining. small gauge veins throughout.

heavily oxidized gauge with local nuclear blue bleb. quartz grains throughout.

nuclear blue gauge zone bands in oxidized gauge zone. quartz grains throughout. local hematite and limonite staining.

intensly goethite altered granodiorite. very friable. oxidized grit on fractures.

intensly oxidized and locally altered granodiorite pervasive limonite and goethite staining on fracture surfaces. granodiorite is argillic to moderately phyllic altered

Moderately phyllic altered granodiorite with moderate silicification. Pervasive goethite staining on fractures. disseminated pyrite.

phyllic and heavily oxidized granodiorite. pervasive oxidation and clay grit on all fracture surfaces. local limonite and goethite.

heavily clay and phyllic altered granodiorite with oxidized gauge locally limonite and goethite alteration on fractures.

- oxidized to nuclear white gauge. quartz grains throughout.
- nuclear bluish-yellow gauge vein. quartz grains throughout
- oxidized to nuclear white gauge. quartz grains throughout
- block, extremely friable goethite stained granodiorite.
- patchy argillic granodiorite highly fractured and intensly oxidized
- oxidized gauge zone with quartz grains and fractured quartz veins. local bright red hematite alteration
- highly friable intensly silicified and phyllic granodiorite
- oxidized gauge quartz grains locally throughout.
- friable, altered granodiorite with local limonite and hematite alteration clay on fractures
- orange to tan gauge zone. quartz grains locally throughout.
- blocky, friable, heavily altered granodiorite with clay alteration on fractures. pervasive hematite alteration
- gauge to oxidized zone. abundant quartz grains throughout.
- nuclear gauge zone. quartz grains throughout.
- oxidized with quartz grains/veins within white quartz.
- zone with visible pockets granodiorite. pervasive hematite competent blocky granodiorite
- altered granodiorite with clay alteration and local limonite and hematite
- nuclear white/yellow limonite and hematite
- altered phyllic granodiorite. pervasive oxidation and limonite

- patchy altered granodiorite. locally silicified phyllic. pervasive oxidation and limonite staining
- moderately altered granodiorite with local clay seams throughout. pervasive oxidation and limonite
- nuclear gauge zone. quartz grains and fragments of quartz veins throughout.
- alternating nuclear gauge and oxidized gauge. small ~15cm intensly goethite altered granodiorite in middle of zone. quartz grains throughout.

VEIN ZONE
light tan to nuclear blue vein zone. intensly gaugey. colour variation mottled throughout. quartz grains and fractured veins/veinlets seen.

- heavily oxidized grit/gauge zone. local gray quartz bands throughout. quartz grains pervasive.
- highly friable, intensly limonite altered with pervasive gauge throughout. quartz grains locally in gauge.
- nuclear gauge zone and oxidized gauge zone. colour change is patchy and mottled. quartz grains throughout.
- mainly unaltered granodiorite with oxidized grit on fracture surfaces. local limonite staining

mid-red quartz-feldspar porphyry dyke. weakly oxid... and limonite stained. very blocky.

highly altered granodiorite with local argillic a... local clay gauge zones. pervasive limonite and g... all fracture surfaces.

intensly fractured and limonite stained granod... oxidation and limonite and goethite on fractures. ... seams throughout with quartz grains.

light tan to nuclear white gauge vein. quartz grains throughout. competent sections are intensly silicified, phyllic granodiorite.

intensly fractured and limonite stained granodiorite. pervasive oxidation, limonite and goethite on fractures. local clay gauge seams throughout with quartz grains.

VEN ZONE - gaugey vein zone with nuclear vein material

pervasive clay gauge

d granodiorite with ouge seams

tered gauge zone with local segments. quartz grains locally

c altered granodiorite with local grey- g (hematite?). moderate to strong

derately to strongly altered granodiorite. ic and phyllic alteration pervasive and clay on fractures. trace disseminated pyrite in phyllic altered segments.

Highly friable heavily oxidized and and altered granodiorite. Goethite and limonite staining on fractures

intensly argillic altered granodiorite with weak to moderate oxidation. local limonite and goethite.

- weak phyllic altered granodiorite with moderate argillic. nubbly extensive oxidation and limonite/goethite alteration

blocky, mainly unaltered granodiorite with local clay alteration on fractures. moderately limonite + goethite stained.

intensly argillic and oxidized granodiorite. heavy clay alteration limonite and weak hematite on fractures.

moderately argillic altered granodiorite with clay seams throughout. heavy oxidation and limonite. highly fractured.

granodiorite with extensive clay alteration on all fractures. mainly unalt. granodiorite with local argillic. moderate limonite

moderately argillic granodiorite with pervasive clay alteration. local clay gauge zones.

oxidized gauge zone with very intense goethite staining. heavy sericite alteration in bands. very pitted. limonite on fractures.

Majority of interval gauge.
- gaugey clay altered granodiorite segments with smokey qtz veins. local limonite + goethite.

- moderately to intensly clay altered granodiorite. local visible argillic patches. heavily oxidized. limonite and goethite on fractures.
- moderately to intensly clay altered granodiorite with local argillic alteration. moderate limonite on fractures.
- highly goethite altered granodiorite with gauge seams throughout. very intense hematite staining and blebs locally along seams. weak sericite alteration
- gaugey clay zone with quartz veins and veinlets throughout - smokey. limonite and goethite.
- intensly quartz-rich altered granodiorite, gauge seams throughout. limonite + goethite staining. smokey quartz veins and veinlets throughout.
- highly altered granodiorite with pervasive clay alteration on fractures. limonite + goethite throughout.
- intensly argillic altered granodiorite with weak to moderate oxidation. local limonite and goethite.
- highly friable, heavily oxidized and altered granodiorite goethite and limonite staining on fractures.

Heavily oxidized gauge vein at 250/30 intensely silicified, phyllic granodiorite with disseminated pyrite throughout, limonite + goeth. on fractures.

heavily argillic altered granodiorite with local gouge and oxidation throughout.

moderately argillic altered granodiorite. Crumbly and white. oxidation pervasive.

- moderately argillic altered granodiorite limonite and goethite on fractures

Heavily silicified granodiorite with 1-5cm white to orange gouge zones throughout, limonite + goethite on all fractures. ok brown to bluish white in colour.

intensly silicified, phyllic granodiorite disseminated pyrite throughout. silicification destroying and texture

intensly phyllic and silicified granodiorite with 0.5% disseminated pyrite throughout. pyrite stringers (1-3mm) frequent. pervasive limonite and goethite alteration on fracture surfaces.

intensly phyllic and silicified granodiorite with disseminated pyrite throughout with stringers (1-3mm) frequent. weak limonite and goethite on fractures. light blue-green colour

moderately to intensely argillic altered granodiorite with local zones of phyllic alteration pervasive limonite and goethite on fracture surfaces.

silicified phyllic footwall with 2-4% disseminated pyrite, locally tarnished or visible chalcopyrite

pervasive limonite staining

quartz grains seen throughout gouge zone. limonite/hematite/goethite altered vein

white milky quartz veins with intense alteration surrounding. vein approx 20cm true thickness dipping @ 20° TTA. actual orientation of vein 160/SV

heavily silicified granodiorite with disseminated pyrite, strong to intense limonite + hematite altered. local gouge veinlets.

heavily phyllic altered granodiorite with disseminated pyrite (stringers also seen) silicification, pyrite blebs, limonite on fracture surfaces.

heavily argillic altered granodiorite, patchy white staining throughout.

argillic and silicified granodiorite, limonite + goethite on fractures.

moderately argillic altered granodiorite staining

- moderately to strongly argillic altered granodiorite. intensly oxidized with local silicification. quartz grains throughout. pyrite + limonite on fractures).

phyllic altered granodiorite with local argillic. pyrite stringers and disseminated throughout

moderately argillic + phyllic granodiorite. local disseminated pyrite

moderately phyllic and argillic altered granodiorite. minor quartz grains. silicified zones throughout. milky quartz veinlets, small zones of intensly limonite/hematite/goethite alteration - surrounding veinlets.

moderately to intensely clay altered granodiorite - phyllic + silicified. quartz grains seen throughout. 2-3% disseminated pyrite. small limonite + quartz stringers throughout

moderately phyllic altered granodiorite. limonite + goethite on fractures.

moderately phyllic/silicified granodiorite with minor white quartz veins/veinlets. quartz gouge surrounding veins. visible disseminated pyrite in the granodiorite.

moderately phyllic and propylitic granodiorite. disseminated pyrite throughout + locally tarnished. weak oxidized clay on fractures. hematite stringers and blebs throughout.

- heavily silicified, phyllic altered granodiorite with disseminated pyrite, very oxidized and tarnished. goethite + limonite on fractures. local hematite staining on fractures of competent segments.

- phyllic and argillic altered granodiorite. Very crumbly. local oxidized gouge pockets. no visible sulphides. limonite + goethite staining on fractures of competent segments.

Heavily phyllic/silicified granodiorite. Visible quartz grains throughout, disseminated pyrite seen locally. limonite + goethite on fx.

- Footwall of vein. heavily phyllic altered granodiorite with weak propylitic alteration. limonite + goethite on fracture surfaces + oxidized gouge locally. quartz grains + disseminated pyrite locally.

- Gougey nuclear veins in intensly phyllic altered granodiorite. Sulphides seen in vein gouge. disseminated py in more competent granodiorite. Vein heavily oxidized locally.

hanging wall to vein zone. phyllic altered granodiorite with disseminated sulphides (py) throughout. limonite + goethite on all fractures.

- Heavily goethite stained granodiorite. extremely pervasive oxidation and highly fractured.

light tan to orange gougey zone. quartz grains throughout

- quartz-feldspar porphyry dyke. light brown in colour. moderate hematite, limonite, goethite staining. moderate clay on fractures.

heavily limonite goethite, hematite stained quartz-feldspar porphyry dyke. highly fractured. dark red. clay on fractures.

- low angle vein zone with local oxidized quartz-feldspar porphyry dyke dasht throughout.

combination of low angle vein zone, quartz grains throughout. more limonite/goethite/hematite staining than previous interval. minor ore grains seen in intensly limonite/hematite veins. no visible sulphides.

light tan grey to dark grey red gougey vein zone. very banded colour zones. low angle (20°) to trench floor quartz

intensly argillic altered granodiorite with moderate pervasive clay alteration. limonite + goethite on fracture surfaces.

moderately argillic and phyllic granodiorite with local quartz grains throughout. goethite and limonite on fracture surfaces.

Argillic altered granodiorite with patchy quartz grains.

moderately hematite/limonite/goethite altered argillic granodiorite. local silicification + qtz grains throughout. no sulphides.

intensly hematite altered granodiorite. highly fractured. local goethite staining

intensly argillic altered granodiorite. very pervasive oxidation

strongly argillic altered granodiorite with pervasive hematite alteration and clay alteration.

- strongly argillic altered granodiorite.

intensly goethite stained argillic granodiorite. pervasive oxidation throughout. highly fractured.

footwall to gouge vein zone. orange oxide. quartz grains. limonite on more competent fractures

nuclear white gouge vein zone. heavily clay altered with quartz grains throughout. very low angle. Strike of 170° hanging wall to vein zone. heavily clay altered to phyllic granodiorite.

moderately phyllic altered granodiorite. pervasive oxidation and limonite/hematite on fracture surfaces.

- strongly oxidized and phyllic altered granodiorite. local silicified zones throughout. minor argillic limonite/hematite. Moderately to locally intensly phyllic altered granodiorite. local nuclear clay gouge. clay alteration pervasive

moderately phyllic and argillic altered granodiorite.

Moderately oxidized/clay altered granodiorite limonite + goethite on fracture surfaces). phyllic altered

moderately propylitic + phyllic altered granodiorite with disseminated pyrite. pervasive clay alteration on all fracture surfaces)

unaltered granodiorite with pervasive limonite + goethite on all fractures

Heavily clay altered quartz-grain rich gouge zone. bright orange in colour. structure @ 25° to trench. floor colour variations within gouge.

moderately argillic altered granodiorite with local phyllic alteration. intensly clay altered. pervasive oxidation and limonite + goethite on fractures

semi-frozen oxidized hanging wall gouge. qtz grains throughout.

Heavily oxidized hangingwall to vein. tan/brown/orange gouge. quartz grains throughout

Phyllic and local argillic altered granodiorite with moderate to intense goethite staining. pervasive clay alteration on fractures.

- patchy argillic and phyllic altered granodiorite. pervasive goethite staining

Very intensly argillic and clay altered granodiorite. pervasive limonite + goethite staining

- blocky, weakly argillic and phyllic altered granodiorite with local propylitic alteration. intense goethite + limonite on fractures.

- heavily clay altered gouge zone. local spots of lighter, almost nuclear gouge. pervasive limonite/qtz on competent fractures. qtz grains throughout.

+ patchy argillic alteration throughout. moderately phyllic altered granodiorite. intense oxidation - altering whole rock. goethite/limonite on fractures. local clay alteration on fractures.

Heavily argillic, weakly phyllic altered blocky granodiorite. pervasive limonite, hematite, goethite on fractures. local clay alteration.

- Heavily argillic altered blocky granodiorite. pervasive hematite + limonite on fractures.

unaltered, blocky granodiorite. unsampled.

moderately argillic altered granodiorite + pervasive limonite + goethite. local gouge veins/veinlets.

intensly clay altered granodiorite. quartz grains throughout. limonite, goethite on fx

- moderately argillic granodiorite with local hematite/limonite staining) and local phyllic alteration

- intensly clay and argillic altered gouge zone. pervasive limonite + goethite + hematite staining

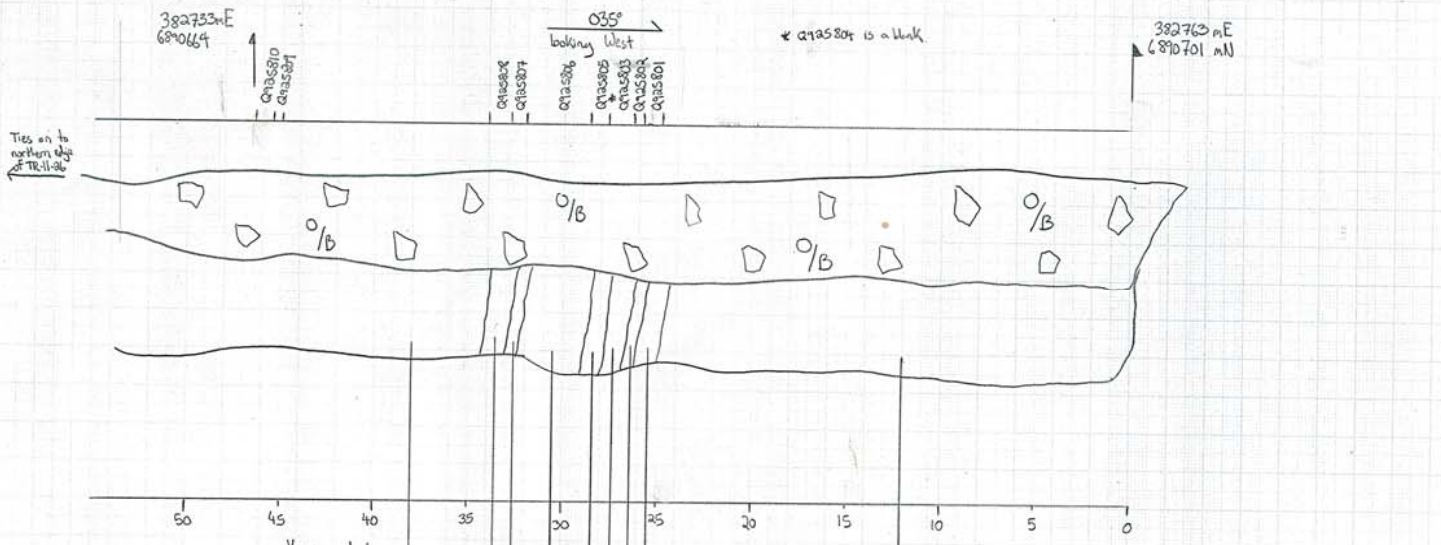
- moderately phyllic and argillic and propylitic granodiorite locally with pervasive limonite and hematite

- Heavily oxidized and hematite stained gouge zone. light tan to orange colour

- nuclear gouge with local oxidized tan/brown gouge throughout. nuclear vein @ 25° to floor. quartz grains throughout.

Heavily argilly and oxidized gouge zone with pervasive hematite staining. quartz grains throughout.

nuclear gouge with local oxidation and tan/brown gouge throughout. main vein @ 25° to trench floor. quartz grains throughout. orientation 160/SV



Very competent, argillic altered granodiorite. Minor hem/specularite on fracture plane 190/64W

Purple-white, highly sheared feldspar porphyry dyke.

Sample oblique to dyke trend.

Hanging wall contact making water (½ gallon/min).

Grey-green-red clay gouge @ footwall contact of feldspar dyke

Footwall contact @ 070/80SE

Green-grey medium-grained granodiorite. Pervasive propylitic alt'n throughout w/ local limonite and phyllic alt'n

Fairly blocky in general

Joints & Fracts @ 232/73°W * → limonite stained carbonate crusts
076/66° S
150/52° S

Blocky, moderately fractured, grey-green phyllic & argillic altered granodiorite

In footwall of feldspar dyke

limonite stained fracts @ 020/85°E

White-grey, medium grained argillic altered granodiorite

Strongly Fractured & pitted, green medium grained, phyllic altered granodiorite within footwall of vein zone

Moderately sheared, grey-brown, medium grained granodiorite hosting two 5 cm wide white clay gouge zones

Vein Zone → UTM @ 382745mE 6890680mN

1.30m chip across two discrete mineralized bands. The most northerly consists of heavily pitted, phyllic altered granodiorite. The second hosts a 5-10cm wide carbonate-qtz vein hosting disseminated sulphides. (stibnite + gyl + sphal).

Entire zone is very rubbly or gougy & goethite stained.

Zone trending @ 155/65° SW

VEIN
OVB
OVB
OVB
Rest of trench in OVB and unmappable.
Weakly argillic altered and propylitic altered granodiorite. local limonite on fracture surfaces.
Heavily oxidized and frozen gouge zone competent granodiorite fragments have limonite on fracture surfaces
Weakly argillic and propylitic altered granodiorite. local limonite on fractures.
Unsampled, unaltered blocky granodiorite.
Weakly argillic altered granodiorite. locally fresh weak oxidation throughout.
Moderately oxidized argillic altered granodiorite. local goethnite and limonite on fracture surfaces.
Intensly goethnite altered granodiorite. locally phillic and argillic. weak oxidation.
Intensly goethnite stained phyllic altered granodiorite. very friable.
Extremely frozen oxidized clay gouge zone. local nuclear white/yellow blebs. local goethnite and hemitite staining throughout.
VEIN ZONE
Intensly oxidized and goethnite altered granodiorite. local arsenopyrite (?) seen in competent fragments Extremely frozen.
Heavily goethnite stained granodiorite. local oxidized gouge blebs throughout.
Oxidized, frozen gouge. local goethnite alteration HW to vein zone.
Frozen, tan to yellow/white gouge vein zone. quartz grains seen throughout
VEIN ZONE
Heavily gouge and clay altered grd. light tan to blue gouge on fracture surfaces. Heavy oxidation
Heavily phyllic altered granodiorite with pervasive oxidation. local bluish-grey gouge seen throughout limonite + goethnite on fractures.
blocky, but heavily phyllic and silicic granodiorite. locally sheared. Goethnite on fracture surfaces and in stringers. oxidation and hemitite staining locally.
Phyllic altered granodiorite with pervasive oxidation. local shear bands throughout and local gougey-white zones. local goethnite and limonite.
Heavily oxidized phyllic altered granodiorite. frozen clay seams locally throughout. Very friable and fractured.
Heavily oxidized and frozen. highly fractured quartz-feldspar-porphyry Goethnite on fractures.
Heavily phyllic altered granodiorite with pervasive oxidation, limonite and goethnite staining very frozen
Intensly goethnite altered clay zone. oxidized clay blebs throughout goethnite.
Extremely clay altered quartz-feldspar porphyry light green in unaltered centre. Pervasive orange gouge surrounding contact into granodiorite. Goethnite on fractures
VEIN ZONE
Nuclear gouge vein very very frozen. quartz grains throughout. some heavily fracture silicified, phyllic altered grd on edges of vein.
Frozen oxidized gouge. light tan in colour.
Heavily oxidized and clay altered silicified phyllic granodiorite. bluish-grey clay alteration on fracture surfaces.
Heavily altered granodiorite with pervasive clay alter. on all fracture surfaces. local bluish-grey clay on fx.
Heavily clay altered gougey granodiorite with local yellowish gouge veins throughout
Heavily altered granodiorite with pervasive clay alteration on all fracture surfaces. local bluish-grey clay on fractures.
Moderately argillic granodiorite. blocky + competent. Goethnite on fractures
phyllic altered granodiorite with pervasive goethnite and oxidation on fracture surfaces
Moderately to Strongly argillic altered granodiorite. Moderate oxidation and goethnite on fracture surfaces.
blocky, phyllic and argillic altered granodiorite. oxidized. local gouge seams throughout. Goethnite on majority of fracture surfaces
intensly argillic altered oxidized granodiorite. locally crumbly. GOE on fracture.
blocky, oxidized phyllic and argillic granodiorite. goethnite on fractures.
intensly oxidized phyllic altered granodiorite. highly friable and fractured. local oxidized gouge seams. Goethnite on fractures.
intensly gouge altered phyllic granodiorite. gouge light blue to tan. moderate oxidation. local goethnite and limonite
Heavily gouge and clay altered granodiorite. Granodiorite mainly highly phyllic altered. local goethnite on fractures. gouge seams throughout
intensly oxidized phyllic altered granodiorite. pervasive clay on all fracture surfaces - mid bluish-grey in colour.
