INTRODUCTION

The Eureka property is located in the Dawson Range Gold Belt (DRGB) of western Yukon and covers gold-bearing, vein- and breccia-style mineralization. The DRGB is a district of major porphyry and vein occurrences, including Western Copper and Gold Corporation's Casino deposit, Rockhaven Resources Ltd.'s Klaza deposit, Kinross Gold Corporation's Golden Saddle deposit and Kaminak Gold Corporation's Coffee deposit. The Eureka property is wholly owned by Strategic Metals Ltd.

This report describes prospecting and geochemical sampling conducted between July 29 and August 8, 2015 by Archer, Cathro & Associates (1981) Limited on behalf of Strategic Metals. The author's Statement of Qualifications is located in Appendix I. A Statement of Expenditures appears in Appendix II.

PROPERTY LOCATION, CLAIM DATA AND ACCESS

The Eureka property consists of 349 contiguous mineral claims, which are located in west-central Yukon at latitude 63°32' north and longitude 138°52' west (Figure 1). The property covers an area of approximately 7200 ha (72 km²). The claims are registered with the Dawson Mining Recorder in the name of Strategic Metals. Specifics concerning claim registration are tabulated below, while the locations of individual claims are shown on Figure 2.

<u>Claim Name</u>	<u>Grant Number</u>	<u>Expiry Date*</u>
Eureka 1-56	YC12951-YC13006	February 15, 2028
57-60	YC13701-YC13704	February 15, 2028
73-84	YC13717-YC13728	February 15, 2028
97-112	YC13741-YC13756	February 15, 2028
121-182	YC13765-YC13826	February 15, 2028

390-411	YD08040-YD08061	February 15, 2027

* Expiry dates include 2015 work that has been filed for assessment credit but not yet accepted.

The Eureka property lies approximately 370 km northwest of Whitehorse and 65 km south of Dawson City, the nearest supply centre. The property is accessed via the Hunker Creek-South Klondike road system, which leaves the Klondike Highway about 20 km east of Dawson City. The 90 km distance from the highway to the property is normally suitable for two-wheel drive vehicles during the summer and fall. Access to various parts of the property is provided by a network of four-wheel drive roads and bulldozer trails that are maintained by local placer miners.

HISTORY AND PREVIOUS WORK

Black Hills and Eureka creeks, which drain the Eureka property, have been explored for placer gold since the Klondike gold rush of 1898. Extensive mining has been conducted using shafts and ground sluicing from the late 1890s until the early 1940s and modern, open-cut mining methods since 1959. Reported gold production on Black Hills and Eureka creeks from 1978 to 2005 is 92,476 and 60,195 ounces of gold, respectively (LeBarge, 2007). Total production numbers are much higher, but early data is not available and recent information has not been compiled.

Figure 3 illustrates the significant historical workings on the property including main roads and trails, named showings, and 2010-2011 of the drill collar locations.

Hard rock exploration done in the area prior to 1988 is poorly documented. In 1988, Dawson Eldorado Mines Ltd. and Wealth Resources Ltd. staked the Reka claims to cover the headwaters of Eureka Creek, where a Geological Survey of Canada (GSC) stream sediment sample returned 89 ppb gold. Dawson Eldorado Mines and Wealth Resources performed geological mapping and soil sampling along the ridge system separating upper Eureka Creek from Childs Gulch, a tributary of Black Hills Creek. This work identified three north-trending zones where gold occurs in rocks and soils – the Allen, Childs and Wealth showings (van Angeren, 1988). Despite encouraging results, the Reka claims were allowed to lapse.

In 1992, the area was restaked as the Clara claims by Wealth Resources and Pacific Mariner Exploration Ltd. Minor soil sampling and ground-based Very Low Frequency Electromagnetic (VLF-EM) geophysical surveys were carried out between 1992 and 1994, in the vicinity of the previously identified showings. In 1994, bulldozer trenching was conducted across gold-in-soil anomalies and VLF-EM conductors (Deklerk and Traynor, 2005).

In late 1998, Archer Cathro conducted a comprehensive study of the placer gold from Eureka Creek and Childs Gulch. Gold recovered from the upper reaches of both creeks is described as a mixture of angular, coarse and fine grains with the average grain size decreasing and the fineness increasing downstream. Some grains were reported to contain inclusions of dark quartz while others were attached to larger white quartz fragments. Based on these observations, the study concluded that the bedrock sources for the placer gold lie within the Eureka Creek and Childs Gulch drainages.

In 1999, Nordac Resources Ltd. (now Strategic Metals) staked 72 Eureka claims and a number of adjoining Armenius claims in order to cover the potential sources of placer gold identified in Archer Cathro's study. Later that spring, Nordac Resources formed the Eureka Joint Venture with Expatriate Resources Ltd. and staked an additional 314 claims in the study area.

During the summer of 1999, Eureka Joint Venture collected 499 soil samples from the Eureka project area in conjunction with limited prospecting. Soil sampling identified an area of strongly anomalous gold geochemistry in the area drained by upper Eureka Creek. A sample of limonitic breccia float with remnant pyrite, collected from the Allen Showing, returned 15 g/t gold, 25.5 g/t silver, 3510 ppm arsenic and 23 ppm molybdenum (Wengyznowski, 2000). Following this

HISTORICAL WORKINGS

EUREKA PROPERTY

FILE: ../Figures/F3-Historical_Workings.wor

DATE: APRIL 2016

work, all claims comprising the Armenius property and some of the Eureka claims were allowed to lapse.

In February 2002, Viceroy Resource Corporation optioned the Eureka property and completed three reverse circulation (RC) percussion drill holes at the Allan Showing and one hole at the Wealth Showing. Drilling at the Wealth Showing confirmed the down-dip continuity of the mineralized breccia exposed in trenches, yielding 0.66 g/t gold over an eight metre true width. However, the three drill holes designed to test the down-dip continuity of the Allen Showing failed to return significant results, and the option agreement was subsequently terminated (Diment, 2002).

In January 2003, Expatriate Resources transferred its interest in the Eureka property to StrataGold Corporation, as part of a corporate reorganization.

In spring 2006, Strategic Metals and StrataGold signed an agreement that allowed Strategic Metals to earn a 100% interest in the property by funding the 2006 exploration program. This program comprised minor prospecting, 1151 m of excavator trenching and 823 m of RC percussion drilling in ten holes (Wengzynowski, 2006). Trenches dug across the Wealth Showing exposed quartz breccia in an area of pervasive clay alteration. Trench T1 exposed several narrow breccia zones that averaged 0.539 g/t gold over 20 m, while Trench T2 exposed intervals that graded 1.055 g/t gold and 18.9 g/t silver over 2 m and 0.747 g/t gold over 10 m. Trenching at the Childs Showing traced a two to five metre wide zone of breccia over 500 m and returned 0.722 g/t gold over 4 m. A parallel zone of breccia assayed 0.481 g/t gold over a true width of 5.5 m (Wengzynowski, 2006).

The 2006 drilling tested beneath trench exposures and geochemical anomalies at the Wealth Showing. Significant results included intervals that yielded 0.592 g/t gold over 18.3 m, 2.34 g/t gold over 3.05 m and 1.13 g/t gold over 6.1 m (Wengzynowski, 2006).

Anfield Ventures Inc. optioned the property in 2007, and the following year it conducted property-wide helicopter-borne Versatile Time Domain Electromagnetic (VTEM) and magnetometer surveys. These surveys identified a magnetic break separating two contrasting fields of magnetic intensity, which corresponds with a prominent linear topographic feature (Gregory, 2009). This feature was interpreted as the surface trace of a major fault and approximately parallels the trend of the mineralized breccia zones at the Wealth and Childs showings. Anfield dropped its option in spring 2009.

In 2009, Strategic Metals completed 4200 m of excavator trenching in 18 trenches plus additional soil geochemical sampling and prospecting. The most significant trenching results were obtained from the area of the Wealth Showing. Trench TR-09-01 exposed six subparallel bands containing blue-grey gouge, quartz breccia and quartz vein material. Chip samples collected across one of the bands averaged 0.97 g/t gold over 17.9 metres, including 2.56 g/t gold over 3 m. Another band in the same trench returned 0.45 g/t gold over 16.6 m (Smith, 2009).

The soil geochemical survey collected 3609 soil samples from a 50 by 100 m grid in the central part of the property. This work identified widespread gold-in-soil anomalies (up to 762 ppb)

with subordinate arsenic and antimony response along the northwest-trending topographic feature (Smith, 2009).

In 2010, Golden Predator Royalty & Development Corp. (now Golden Predator Mining Corp.), optioned the Eureka property and completed 2961 m of RC percussion drilling in 27 holes at the Wealth and Childs showings. Drilling at the Wealth Showing targeted a possible north-south extension of the mineralized breccia systems that were exposed by trenching in 2006. Significant results included intervals of 0.677 g/t gold over 3.04 m, 2.440 g/t gold over 1.53 m and 1.38 g/t gold over 3.05 m. Holes at the Childs Showing were designed to follow-up anomalous trenching and drilling results from previous programs. The best results were 6.620 g/t and 1.190 g/t gold, both over 1.52 m intervals (O'Brien, 2012).

In 2011, Golden Predator conducted 1188 m of diamond drilling in eight holes. The program was designed to test the Childs and Allen showings and a soil geochemical anomaly north of the Wealth Showing. The most significant result was 9.99 g/t gold over 1.51 m from hole EU11-029, which targeted the geochemical anomaly (O'Brien, 2012). Golden Predator subsequently terminated the option.

GEOMORPHOLOGY

The Eureka property is located in the northern Dawson Range, an incised penoplane that escaped Pleistocene glaciation. Topography in the area is characterized by gently rounded hills and "V" shaped, dendritic valleys. Creeks draining the property are tributaries of the Indian and Stewart rivers, which lie within the Yukon River watershed.

The property is located below treeline, and elevations range from 560 m above sea level (asl) in valley bottoms to 1300 m asl along the ridge separating Eureka Creek from Black Hills Creek. Vegetation is characterized by mature poplar stands along the lower creek valleys and stunted black spruce, willow, dwarf birch and juniper at higher elevations. In 2004, much of the property was engulfed by a forest fire that burned most of the vegetation.

The climate in the vicinity of the Eureka property is typical of northern continental regions with long, cold winters, truncated fall and spring seasons and short, mild summers. Although summers are relatively mild, snowfall can occur in any month. The property is mostly snow free from early mid-May to late October.

REGIONAL GEOLOGY

The Eureka property is located in Yukon-Tanana terrane, the easternmost and largest of the pericratonic terranes accreted to the northwestern margin of ancestral North America (Figure 3). It consists of Late Devonian to Middle Permian continental margin sediments, island arc volcanics and coeval intrusions that record the evolution of a continental arc and back-arc system built upon a pre-Late Devonian metasedimentary basement. This sequence was metamorphosed during accretion in Permo-Triassic time and subsequently cut by the Tintina Fault, a large transcurrent structure that produced 450 km of dextral offset during the Eocene (Colpron et. al, 2005; Nelson and Colpron, 2007). The Tintina Fault is located 50 km northwest of the property,

TECTONIC SETTING

EURKEA PROPERTY

FILE: 2015

DATE: APRIL 2016

where it forms the boundary between YTT to the southwest and ancestral North America to the northeast.

In 1996, Indian and Northern Affairs Canada published a geological map of the northern Stewart River Area, Klondike and Sixtymile Districts (including parts of 115O/15, 16) at 1:50,000 scale (Mortensen, 1996). In 2005, the Geological Survey of Canada (GSC) published an updated 1:250,000 scale compilation of the Stewart River Area, which includes the area of the Eureka property (Gordey and Ryan, 2005). Geological unit names were updated in 2015 by the Yukon Geological Survey (YGS) (Yukon Geological Survey, 2015). Figure 4 illustrates the updated regional geology and Table I summarizes the lithological units.

Table I– Regional Lithological Units (*after Yukon Geological Survey, 2015*)

Map Suite	Age	Map Unit	Description
Ross Suite	Eocene to Paleocene	ITR2	Smokey quartz and K-feldspar phyric rhyolite to rhyodacite stocks and dykes, and possible rare flows.
Carmacks Group	Upper Cretaceous	uKC3	Rhyodacite and dacite, commonly biotite and hornblende phyric, dominated by lesser andesite and basalt; minor rhyolite.
Tantalus Formation	Lower Cretaceous	IKIR	Clast-supported pebble to cobble conglomerate with clasts of vein quartz and foliated quartzite.
Minto Suite	Lower Jurassic to Upper Triassic	LTrEJgbM	Foliated to unfoliated metagabbro (locally garnet-bearing); diabase, metabasite.
Sulphur Creek Suite	Permian	PgS	Mainly K-feldspar augen orthogneiss, exhibits various states of strain including porphyroclastic straight gneiss; commonly associated with K-feldspar rich granitic orthogneiss.
Sulphur Creek Suite	Permian	PqS	Orthogneiss derived from quartz monzonite; refers to highly strained, mafic-poor Sulphur Creek orthogneiss,
Simpson Range Plutonic Suite	Mississippian	MgSR	Mainly tonalitic or mafic to intermediate orthogneiss, generally grey, banded to layered, commonly veined; commonly interlayered with amphibolite schist and gneiss, biotite and/or hornblende bearing.
Finlayson Assemblage	Upper Devonian to Mississippian	DMF	Biorite-hornblende+/-plagioclase+/-quartz mafic schist; generally associated with amphibolite; main locality on Thistle Mountain.

Snowcap Assemblage	Neoproterozoic to Upper Devonian	PDS2	Marble (metacarbonate) derived from pure to impure limestone; associated with calc-silicate schist derived from calcareous metapelite.
Snowcap Assemblage	Neoproterozoic to Upper Devonian	PDS1	Undivided metasedimentary rocks dominated by metapsammite, semipelite and metapelite; commonly quartz-garnet-biotite-muscovite schist possibly derived from siliceous siltstone; commonly finely interlayered with garnet metapelite; commonly contains members of micaceous quartzite; rare conglomerate; grades locally to paragneiss.

Basement rocks in the area of the Eureka property belong to the Snowcap (PDS) and Finlayson (DMF) assemblages, which are cut by meta-plutonic rocks of the Simpson Range (MgSR) and Sulphur Creek (PqS and PgS) suites, and meta-gabbroic sills of the Minto Suite (LTrEJgbM). Post-accretionary, Upper Cretaceous Carmacks Group (uKC3) basaltic andesites and fluvial chert-pebble conglomerates and quartzites of the Tantalus Formation (IKIR) overlie the metamorphic rocks. The youngest unit observed in the area of the Eureka property consists of Eocene to Paleocene Ross Suite (ITR2) subvolcanic rhyolite to rhyodacite porphyry.

Three phases of deformation are recognized within the YTT. The deformation occurred during and following accretion of YTT to ancestral North America, spanning Mid-Permian to Cretaceous time. The first phase is characterized by a penetrative foliation that trends northwest, dips gently to the northeast and is sub-parallel to the attitude of bedding. The second phase exhibits a tight crenulation cleavage, small-scale isoclinal folding, kink banding and warping. This phase is associated with regional thrust faulting and coincident emplacement of serpentinite along the fault planes. The final phase of deformation is coeval with the emplacement of Cretaceous intrusive bodies and resulted in broad, low amplitude folding that masks and overprints the earlier foliation. Steeply dipping faults are developed adjacent to some Cretaceous intrusions, but displacement along them is believed to be minor (Mortensen, 1990).

PROPERTY GEOLOGY

No property-scale geological mapping has been performed by Strategic Metals or any of the previous owners on the Eureka property. Systematic mapping is encumbered by a lack of bedrock exposures, which are generally confined to ridge crests, placer excavations and roadcuts. The property geology described below is based on the regional mapping by the GSC and YGS, and a few observations made by exploration geologists who have worked on various parts of the property at different times.

The property is mostly underlain by Snowcap assemblage quartzite with interbedded quartz±muscovite±biotite schist and phyllite (PDS1), which exhibits well-developed foliation that dips 10° to 35° west. Tight parasitic folding in this unit was noted by Diment (2002). Two north to northwest trending horizons of marble (PDS2) have been observed in the southwestern part of the property where they form buff weathering cliffs.

Eureka Creek and Childs Gulch form a north-trending topographic linear that is interpreted to represent the surface trace of a northwest dipping thrust fault. Breccia zones exposed on the west side of the linear, (the hanging wall of the thrust,) are orientated approximately parallel to the linear.

REGIONAL MINERALIZATION

The general geological setting of the Eureka property resembles that of the White Gold and Coffee projects, which lie 53 km 78 km south of the Eureka claims, respectively. The Coffee project, which is under development by Kaminak Gold Corporation, hosts nineteen significant areas of gold mineralization, with twelve areas comprising the main mineralized zones: the Supremo, Latte, Double Double, Kona, Americano, Americano West, Espresso, Macchiato, Cappuccino, Sugar, Sumatra and Arabica.

The Kona, Americano, Americano West and Espresso Zones are hosted within Cretaceous granite that has been described as equigranular and non-magnetic, with a primary composition of plagioclase, potassium feldspar, quartz, biotite and hornblende. Alteration comprises sericite and clay adjacent to mineralized structures. Gold is hosted in near-vertical brittle structures, associated with andesite to dacite dykes (Makarenko et. al., 2014).

Most of Coffee's other zones (Supremo, Latte, Double Double, Cappuccino, Macchiato, Sumatra and Arabica) consists of gold-bearing breccia structures within metamorphic rocks of the Snowcap Assemblage and Sulphur Creek Suite. These gold-bearing breccias are both hydrothermal and tectonic in origin. In some zones, breccias overprint older ductile strain fabrics consistent with a reactivated shear zone environment (Makarenko et. al., 2014).

The gold mineralization on the Coffee property can generally be characterized by two distinct styles. The highest grades (5 to 60 g/t gold) are associated with hydrothermal breccias exhibiting evidence for several episodes of brecciation. The lower grade gold mineralization (2 to 10 g/t) is associated with pervasive hydrothermal alteration, which is characterized by an overall removal of potassium and aluminum with the addition of sulphur and silica. Pyrite is the main sulphide mineral, while pathfinder elements include arsenic and antimony (Makarenko et. al., 2014).

In 2014, Kaminak published a NI-43-101 mineral resource estimate for the Coffee project, using data from 961 core and reverse circulation (RC) boreholes from the Supremo, Latte, Double Double and Kona zones (Sim and Kappes, 2014). In fall 2015, Kaminak reported an updated resource based on additional infill drilling. The 2015 resource statement is reported at three cut-off grades: 0.3 g/t for the oxide and upper transition zones; 0.4 g/t for the middle transition zone; and 1.0 g/t for the lower transition and sulphide zone. The three grades reflect the greater depths and differing metallurgical characteristics for the sulphide material. Combined, the updated mineral resource estimate consists of an indicated resource of 63.7 Mt, grading 1.45 g/t gold, and an inferred resource of 52.4 Mt, grading 1.31 g/t gold (Smith, 2015).

Kinross Gold Corporation's White Gold project comprises the Golden Saddle and the Arc deposits, which are both hosted in a series of stacked thrust sheets comprising Snowcap Assemblage, Finlayson Assemblage and Sulphur Creek Suite rocks.

At the Golden Saddle, gold mineralization is associated with pyrite in lode and stockwork quartz veins, quartz vein breccias and zones of pervasive silicification. Alteration minerals include quartz, sericite and ankerite with minor albite and clay minerals. At the Arc, mineralization consists of arsenopyrite, pyrrhotite and graphite with minor pyrite and sphalerite, in breccias and fracture-controlled veinlets (Bailey, 2013).

In 2010, Underworld Resources Ltd., (the operator prior to Kinross,) published a NI-43-101 mineral resource estimate for the White Gold project using data from 96 diamond drill holes from the Golden Saddle and Arc areas. The 2010 resource statement for the Golden Saddle deposit is reported separately for portions designated for open pit extraction and portions designated for underground extraction. The open pit portion consists of an indicated resource of 9.665 Mt grading 3.19 g/t gold and an inferred resource of 4.104 Mt grading 2.33 g/t gold. The Arc zone is designated solely for open pit extraction and consists of an inferred resource of 4.369 Mt grading 1.21 g/t gold (Weiershäuser et al., 2010).

PROPERTY MINERALIZATION

The Eureka property hosts two main types of gold mineralization: 1) auriferous quartz breccias and gouge zones that are found along low angle shear and fault structures; and, 2) massive quartz veins with elevated but sub-economic concentrations of gold.

Quartz breccias on the property consist of autoclastic, subangular to well rounded, limonitic quartz clasts cemented in a matrix of rock flour. Mineralization consists of pitted clots of limonite found in quartz fragments and along fractures, with rare remnant pyrite. The geochemistry of the breccias is generally characterized by positive correlations between gold, silver, arsenic, molybdenum and lead, with near background values for antimony and bismuth.

Veins comprise clear to white, strongly fractured quartz with rusty weathering vugs and pits along fractures. Mineralization within the veins consists of remnant disseminated pyrite, galena, chalcopyrite and arsenopyrite, in decreasing order of abundance. Some specimens exhibit crackle brecciation, but they are distinguished from the milled breccias by the strong angularity of the fragments and the absence of a rock flour matrix.

Prospecting, trenching and drilling on the Eureka property have identified five named showings: the Happy, Allen, Wealth, Childs and Ball. Descriptions of the showings are provided in the following paragraphs.

The **Happy Showing** is located at the toe of a north-trending ridge and lies within a 500 by 700 m gold and arsenic soil anomaly. In 2011, a diamond drill hole targeting the soil anomaly and a northwest-trending fault returned 9.99 g/t gold over 1.5 m from an intercept that is associated with a narrow zone of graphitic, healed fault breccia (O'Brien, 2012).

The **Allen Showing** lies one kilometre southeast of the Happy Showing and is exposed in a single, deep trench cut along a north-trending ridge. The showing consists of clay-altered breccia zone that is two to five metres wide and trends approximately north to northwest. Rock

samples yielded up to 15 g/t gold, but chip sampling in the trench returned only 0.44 g/t gold over four metres (Wengzynowski, 2000). In 2002, Viceroy Resources conducted a small RC drilling program on the Eureka property, which included three drill holes targeting the Allen Showing, and in 2011 Golden Predator completed one diamond drill hole at the showing. The diamond drill hole intersected numerous small gouge zones, as well as minor local brecciation, but none of the four holes yielded significant results for gold or other metals of interest (Diment, 2002; O'Brien, 2012).

The **Wealth Showing** is located 1.3 km southwest of the Allen Showing, within a 600 by 250 m area of strongly anomalous gold-in-soil values. Eight trenches excavated across the showing between 1999 and 2009 exposed north-trending quartz breccias with clay alteration halos. Significant results from this work include chip samples yielding 0.54 g/t gold over 20 m, 0.97 g/t gold over 17.9 m, 0.75 g/t gold over 10 m and 1.06 g/t gold over 2 m (Deklerk and Traynor, 2005; Wengzynowski, 2006; and Smith, 2009). In 2006, Strategic Metals completed 10 RC drill holes along three section lines that spanned the core of the gold-in-soil anomaly. Elevated gold values were encountered from intervals in all 10 holes, with highlights including: 0.592 g/t gold over 18.3 m and 1.38 g/t gold over 3.05 m (Wengzynowski, 2006). In 2010, Golden Predator completed another 23 RC drill holes at the Wealth Showing. The most significant results from this work were from two holes spaced 100 m apart that were designed to test quartz veins and breccias exposed in 2009 excavator trenches. Those holes returned 2.44 g/t gold over 1.53 m and 1.93 g/t gold over 1.52 m along the same stratigraphic horizon (Bourne and Marino, 2010).

Preliminary cyanide leach bottle-roll tests of course reject material from chip samples taken from trenches at the Wealth Showing yielded the following results in a 24 hour period (Smith, 2009).

Table II – Results of Cyanide Leach Test

Gold Head Grade (g/t)	Gold from Cyanide Recovery (g/t)
0.32	0.33
0.59	0.57
1.16	0.9
2.76	2.72

The **Childs Showing** lies 2.7 km south of the Wealth Showing and comprises gold-bearing breccia zones exposed in three excavator trenches. Chip samples collected from the trenches yielded 0.722 g/t gold over a true width of 4 m and 0.481 g/t gold over a true width 5.5 m (Wengzynowski, 2006). In 2010, Golden Predator completed four RC drill holes at the Childs Showing, which were designed to intersect the down-dip extension of the gold-bearing breccias exposed in trenches. All four holes returned significant gold grades, including 6.62 g/t gold over 1.52 m and 1.19 g/t gold over 1.52 m (Bourne and Marino, 2010).

The **Ball Showing** is located 2.2 km southeast of the Childs Showing and comprises a gold-rich quartz vein that was exposed in bedrock by placer mining. A chip sample across the vein assayed 9.8 g/t gold over 0.6 m. In 2011, five short diamond drill holes totalling 385.07 m were

attempted in the area around the Ball Showing, but most were abandoned due to difficult ground conditions and none appears to have reached the vein (O'Brien, 2012).

In 2015, Strategic Metals collected a total of 49 rock samples from the property. The 2015 rock sample locations are plotted on Figure 5, along with the locations of trenches and diamond drill holes. Rock Sample Descriptions and Certificates of Analysis for the 2015 samples are provided in Appendices III and IV, respectively.

Rock geochemical sample sites on the property were marked with orange flagging tape labelled with the sample number. The location of each sample was determined using a handheld GPS unit. Rock sample preparation and multi-element analyses were carried out at ALS Minerals' laboratories in Whitehorse, YT and North Vancouver, BC, respectively. Each sample was dried, fine crushed to better than 70% passing 2 mm and then a 250 g split was pulverized to better than 85% passing 75 microns. The fine fraction was analyzed for 51 elements using an aqua regia digestion followed by inductively coupled plasma combined with mass spectroscopy and atomic emission spectroscopy (ME-MS41). An additional 30 g charge was further analyzed for gold by fire assay followed by inductively coupled plasma-atomic emissions spectroscopy (Au-ICP21).

A rock sample collected along a northeast trending ridge, located 2.2 km west of the Wealth Showing, returned 0.98 g/t gold and 6.4 g/t silver. It comprised silicified and partially clay-altered quartz breccia, with vuggy quartz clasts and a limonite-goethite matrix. Another rock sample, collected 2.1 km southeast of the Childs Showing and consisting of milky white quartz hosting disseminated pyrite, assayed 0.905 g/t gold and 11.8 g/t silver. The sample with the best silver response was a 2 cm wide quartz veinlet collected from a 1.3 m wide complex of sheeted quartz veinlets that cut a feldspar augen gneiss. This sample contained sparse disseminated pyrite and returned 58.9 g/t silver and 0.701 g/t gold. Table II below lists the significant gold, silver and arsenic results from the 2015 samples.

Table III – Significant 2015 Rock Sample Results

Sample ID	Sample Type	Gold (g/t)	Silver (g/t)	Arsenic (ppm)
Q017544	Specimen	0.984	6.4	609
Q017517	Specimen	0.905	11.8	102
Q017514	Outcrop	0.701	56.9	37
Q017546	Specimen	0.622	7.2	69
Q017528	Specimen	0.498	11.8	20
Q017541	Specimen	0.219	23.1	86
Q017540	Specimen	0.106	21.5	12

SOIL GEOCHEMISTRY

In 2009, Strategic Metals collected 3609 soil samples from a 6.1 by 3.1 km grid in the central part of the property, a smaller 2.2 by 0.8 km grid in the northwestern part of the property and along the length of an access road. This work identified numerous clusters of moderately to very

strongly anomalous gold values that encompass smaller and poorly correlated clusters of elevated arsenic.

In 2015, Strategic Metals collected another 822 soil samples in order to expand coverage east of the main grid. The 2015 sample locations are shown on Figure 7, while results from all programs for gold, copper, lead, zinc, molybdenum, arsenic and antimony are illustrated thematically on Figures 8 to 14, respectively. Certificates of Analysis for the 2015 samples are provided in Appendix IV.

The 2015 soil sample locations were recorded using hand-held GPS units. Sample sites are marked by aluminum tags inscribed with the sample numbers and affixed to 0.5 m wooden lath that were driven into the ground. Soil samples were collected from 5 to 75 cm deep holes dug by hand-held auger. They were placed into individually pre-numbered Kraft paper bags. The soil samples were sent to ALS Minerals in Whitehorse, where they were dried and screened to -180 microns. The fine fractions were then shipped to ALS Minerals in North Vancouver where they were analysed for 35 elements using the inductively coupled plasma-atomic emission spectroscopy technique (ME-ICP41). An additional 30 g charge was further analysed for gold by fire assay with inductively coupled plasma-atomic emissions spectroscopy finish (Au-ICP21). Anomalous thresholds and peak values for the metals of interest are listed in Table III.

Table IV – Threshold and Peak Values for Soil Samples

Element	Anomalous Thresholds				
	Weak	Moderate	Strong	Very Strong	Peak
Gold (ppb)	$\geq 10 < 20$	$\geq 20 < 50$	$\geq 50 < 100$	≥ 100	762
Copper (ppm)	$\geq 50 < 100$	$\geq 100 < 200$	≥ 200		497*
Lead (ppm)	$\geq 20 < 50$	$\geq 50 < 100$	$\geq 100 < 200$	≥ 200	394
Nickel (ppm)	$\geq 50 < 100$	$\geq 100 < 200$	$\geq 200 < 500$	≥ 500	681*
Arsenic (ppm)	$\geq 20 < 50$	$\geq 50 < 100$	$\geq 100 < 200$	≥ 200	615*
Antimony (ppm)	$\geq 5 < 10$	$\geq 10 < 20$	$\geq 20 < 50$	≥ 50	1780

* 2015 soil sample

Three large, multi-element soil geochemical anomalies have been outlined on the Eureka property, and are labelled A to C. These anomalies are discussed in the following paragraphs. Many scattered high values occur outside of the main anomalies.

Anomaly A is a 5.8 by 0.8 km northerly elongate belt along a system of ridges in the centre of the property. It encompasses the Childs, Wealth and Allen showings, and is characterized by a weakly to very strongly anomalous gold response with poorly correlated clusters of strongly anomalous lead, arsenic and antimony values.

Anomaly B is located 100 m east of Anomaly A and comprises a 970 by 790 m cluster of weakly to strongly anomalous gold values with sporadic strongly anomalous lead support.

Anomaly C lies 150 m southeast of Anomaly B and covers an area of 1.25 by 0.73 km, on the footwall side of the inferred thrust fault. It encompasses strongly to very strongly anomalous nickel values with strongly anomalous copper and arsenic support. Gold values are low within the anomaly.

DISCUSSION AND CONCLUSIONS

The Eureka property lies within the Dawson Range Gold Belt, a district containing a number of advanced porphyry and vein occurrences, including the nearby Coffee and Golden Saddle Deposits.

Drilling and trenching have identified widespread gold-bearing vein and breccia-style mineralization on the property, which has been intensely oxidized and probably leached by surface weathering. Some of the mineralization resembles descriptions of gold-rich material intersected in drill holes at the nearby Coffee property. RC drilling on the property indicates that the depth of oxidation extends 100 m or more below surface. The relatively shallow dips of the mineralized shear and breccia zones, coupled with their favourable orientation relative to topography, suggests a target amenable to open pit mining. Preliminary cyanide leach tests have demonstrated good gold recoveries from strongly weathered rock collected on the property.

Further work on the Eureka property is warranted. It should consist of: additional soil sampling to expand the grid coverage; excavator trenching to identify new zones of mineralization; and, reverse circulation (RC) or percussion rotary air blast (RAB) drilling to test known mineralized zones at depth and along strike. Priority should be given to establishing the general limits of mineralization, as well as identifying higher grade cores within the broad lower grade shells. Depth of oxidation should be established along with the characteristics of unoxidized mineralization. Particular attention should be given to structure and timing of mineralization relative to various deformation events.

Respectfully submitted,

ARCHER, CATHRO & ASSOCIATES (1981) LIMITED

APPENDIX I
STATEMENT QUALIFICATIONS

STATEMENT OF QUALIFICATIONS

I, Jack Morton, with business addresses in Whitehorse, Yukon Territory and Vancouver, British Columbia and residential address in Vancouver, British Columbia, hereby certify that:

1. I graduated from Simon Fraser University in 2013 with a B.Sc. in Earth Science.
2. From 2007 to present, I have been actively engaged in mineral exploration in Yukon Territory, British Columbia, and Northwest Territories
3. I am a Geoscientist in Training (G.I.T.) with the Association of Professional Engineers and Geoscientists of British Columbia.
4. I supervised the field program and have interpreted all data resulting from this work.

J. Morton, B.Sc., GIT

APPENDIX III
ROCK SAMPLE DESCRIPTIONS

Rock Sample Descriptions		Property: Eurkea		
Sample Number:	Q017504	UTM:	605716 mE	Nad83, Zone 7
Elevation:	1109 m	UTM:	7046276 mN	
Comments:	Location:Childs Gulch; float of rusty 0.2 - 0.5 cm quartz veins perpendicular to foliation in micaceous quartzite with some limonite fracture fillings at 70° to quartz veins			
Sample Number:	Q017505	UTM:	605722 mE	Nad83, Zone 7
Elevation:	1106 m	UTM:	7046269 mN	
Comments:	Location:Childs Gulch; float of quartz-sericite±pyrite altered metasedimentary rock with fine silvery mineral (Mn or hematite specs?) and cross cutting limonite and Mn fracture fillings and quartz veinlets, some oxidized pyrite			
Sample Number:	Q017506	UTM:	606158 mE	Nad83, Zone 7
Elevation:	991 m	UTM:	7045948 mN	
Comments:	Location:Childs Gulch; float of weak quartzite breccia to strongly silicified and weakly brecciated quartzite with cross cutting vuggy white quartz-silicification; interstitial vugs, some rusty, limonite and Mn oxidized zones with weathered out pyrite cubes			
Sample Number:	Q017507	UTM:	606846 mE	Nad83, Zone 7
Elevation:	819 m	UTM:	7045512 mN	
Comments:	Location:Childs Gulch; float/subcrop of feldspar augen gneiss (orthogneiss), moderate to strongly silicified, sericite altered with few mm wide sheeted quartz veinlets with cubic pyrite and pyrite-limonite veinlets perpendicular and 70° to foliation			
Sample Number:	Q017508	UTM:	606888 mE	Nad83, Zone 7
Elevation:	815 m	UTM:	7045522 mN	
Comments:	Location:Childs Gulch; outcrop of orthogneiss with up to 3 cm wide sheeted veins at N/85E to 85W, some with pyrite, pyrite-limonite fracture fillings parallel to veins, some Mn on fractures, joints at 300/85NE			
Sample Number:	Q017509	UTM:	606105 mE	Nad83, Zone 7
Elevation:	1090 m	UTM:	7046585 mN	
Comments:	Location:the Divide; float of Mn and limonite stained micaceous quartzite with boxwork after pyrite, bit brecciated,As smell?			

Rock Sample Descriptions		Property: Eurkea		
Sample Number:	Q017510	UTM:	605973 mE	Nad83, Zone 7
Elevation:	1100 m	UTM:	7046616 mN	
Comments:	Location:the Divide; quartz breccia float on cat trail, with white quartz matrix - some drusy vugs, matrix supported, with angular clasts of graphitic quartzite, cut by limonite fracture fillings, some clay-limonite altered clasts; As smell?			
Sample Number:	Q017511	UTM:	607948 mE	Nad83, Zone 7
Elevation:	875 m	UTM:	7046442 mN	
Comments:	Location:Childs Gulch; brecciated quartzite with limonite vugs and limonite on cross cutting fractures, minor arsenopyrite? and scorodite?			
Sample Number:	Q017512	UTM:	607102 mE	Nad83, Zone 7
Elevation:	870 m	UTM:	7046345 mN	
Comments:	Location:the Divide; brecciated and silicified-sericite altered quartzite with limonite and Mn stained rock flour, some fine limonite fracture fillings, some boxwork after pyrite			
Sample Number:	Q017513	UTM:	607258 mE	Nad83, Zone 7
Elevation:	783 m	UTM:	7044908 mN	
Comments:	Location:Childs Gulch; 7 cm quartz float with pitted weathered surface, some clay altered clasts (max 1 cm), some oxidized pyrite cubes and hmatite and limonite stained vugs			
Sample Number:	Q017514	UTM:	607198 mE	Nad83, Zone 7
Elevation:	735 m	UTM:	7044563 mN	
Comments:	Location:Childs Gulch; outcrop along creek with 1-2 cm, pyritic white quartz vein, (some cubic pyrite) trending N/88E-90 in decomposed feldspar augen gneiss; series of similar sheeted veins over 1.3m			
Sample Number:	Q017515	UTM:	607329 mE	Nad83, Zone 7
Elevation:	709 m	UTM:	7043890 mN	
Comments:	Location:Childs Gulch; float/subcrop of weak chloritic biotite-quartz-feldspar augen gneiss (orthogneiss), with few cm wide sheeted quartz appear to be perpendicular to foliation			

Rock Sample Descriptions		Property: Eurkea		
Sample Number:	Q017516	UTM:	607327 mE	Nad83, Zone 7
Elevation:	719 m	UTM:	7043901 mN	
Comments: Location:Childs Gulch; rusty weathering grey quartz veins with no visible sulphide, in clay-limonite-sericite altered decomposed rock (orthogneiss?) possible trend N/60E				
Sample Number:	Q017517	UTM:	607316 mE	Nad83, Zone 7
Elevation:	720 m	UTM:	7043984 mN	
Comments: Location:Childs Gulch; 10 cm, angular milky white quartz float in creek with 4% shiny pyrite as aggregates to 1 cm, and some cubic pyrite and in fine grey stringers at varios angles				
Sample Number:	Q017518	UTM:	607314 mE	Nad83, Zone 7
Elevation:	725 m	UTM:	7044119 mN	
Comments: Location:Childs Gulch; rusty, clay altered feldspar augen gneiss in E bank of creek with 6 sheeted quartz veinlets up to 1 cm				
Sample Number:	Q017519	UTM:	607225 mE	Nad83, Zone 7
Elevation:	732 m	UTM:	7044476 mN	
Comments: Location:Childs Gulch; orange rusty quartz-sericite altered feldspar augen gneiss				
Sample Number:	Q017520	UTM:	607950 mE	Nad83, Zone 7
Elevation:	m	UTM:	7045877 mN	
Comments: Location:Childs Gulch; float of graphitic fault breccia with graphitic matrix, matrix supported, smooth fault plane, no slickensides, most few mm to 1 cm clasts of quartz, some clay altered				
Sample Number:	Q017521	UTM:	604829 mE	Nad83, Zone 7
Elevation:	1054 m	UTM:	7044759 mN	
Comments: Location: Black Hills; float/subcrop of brecciated quartzite with quartz-limonite fracture fillings, boxwork after pyrite

Elevation:	745 m	UTM:	7042882 mN	
Comments: Location: Black Hills; float along graded road of brecciated, blue-grey silicified micaceous quartzite, limonite fracture fillings, in area of orange weathering bleached biotite-quartz-feldspar schist				
Sample Number:	Q017527	UTM:	607259 mE	Nad83, Zone 7
Elevation:	713 m	UTM:	7043894 mN	
Comments: Location: Childs Gulch; clay altered feldspar augen gneiss with rusty sheeted quartz veins 1-4 cm wide (4-5 in interval)				
Sample Number:	Q017528	UTM:	607258 mE	Nad83, Zone 7
Elevation:	713 m	UTM:	7043894 mN	
Comments: Location: Childs Gulch; brittle quartz-sericite-altered decomposed augen? gneiss with up to 10 cm wide sheeted quartz veins, ±brecciated, with <1% galena, trend N/70W; about				

Rock Sample Descriptions		Property: Eurkea		
Sample Number:	Q017529	UTM:	607086 mE	Nad83, Zone 7
Elevation:	776 m	UTM:	7044662 mN	
Comments:	Location:Childs Gulch; float of coarse grained orthogneiss with some feldspar augens, but mainly quartz, with cross cutting limonite - quartz (some drusy) fracture fillings with hard grey sulphide mineral at 90° to foliation			
Sample Number:	Q017530	UTM:	606493 mE	Nad83, Zone 7
Elevation:	599 m	UTM:	7052023 mN	
Comments:	Location:left fork Eureka; heavy pieces of Mn and goethite, oxidized layer coating brecciated quartzite, some graphitic - "false bedrock" - enriched			
Sample Number:	Q017531	UTM:	605797 mE	Nad83, Zone 7
Elevation:	725 m	UTM:	7048586 mN	
Comments:	Location:left fork Eureka; quartzite float along cat trail with Mn, limonite fracture fillings along and cross cutting foliation at 90°			
Sample Number:	Q017532	UTM:	605827 mE	Nad83, Zone 7
Elevation:	733 m	UTM:	7048456 mN	
Comments:	Location:left fork Eureka; brecciated quartzite float along cat trail with Mn, limonite fracture fillings			
Sample Number:	Q017533	UTM:	605827 mE	Nad83, Zone 7
Elevation:	733 m	UTM:	7048456 mN	
Comments:	Location:left fork Eureka; float along cat trail of brecciated quartz with limonite-Mn lined vugs and fracture fillings			
Sample Number:	Q017534	UTM:	606442 mE	Nad83, Zone 7
Elevation:	663 m	UTM:	7049982 mN	
Comments:	Location:left fork Eureka; float along along cat trail along NW flowing tributary of rusty quartz vein with limonite-Mn fracture fillings, weakly brecciated			

Rock Sample Descriptions		Property: Eurkea		
Sample Number:	Q017535	UTM:	606401 mE	Nad83, Zone 7
Elevation:	654 m	UTM:	7049999 mN	
Comments: Location:left fork Eureka; float along NW flowing tributary of graphitic quartzite breccia with graphitic quartzite clasts and some angular quartz clasts in graphitic-limonitic $\pm$ silicified				
Sample Number:	Q017536	UTM:	606400 mE	Nad83, Zone 7
Elevation:	654 m	UTM:	7050000 mN	
Comments: Location:left fork Eureka; float along NW flowing tributary of brecciated quartz (strongly silicified) - sericite altered unit with minor clay altered feldspar? to few mm, Mn-limonitic fracture fillings and vugs				
Sample Number:	Q017537	UTM:	604354 mE	Nad83, Zone 7
Elevation:	638 m	UTM:	7052204 mN	
Comments: Location:Troys pit; brecciated quartzite with some limonite and Mn rock flour cement				
Sample Number:	Q017538	UTM:	604354 mE	Nad83, Zone 7
Elevation:	638 m	UTM:	7052204 mN	
Comments: Location:Troys pit; rusty broken quartzite below grey gouge				
Sample Number:	Q017539	UTM:	604354 mE	Nad83, Zone 7
Elevation:	638 m	UTM:	7052204 mN	
Comments: Location:Troys pit; grey and limonitic fault gouge above broken quartzite				
Sample Number:	Q017540	UTM:	607298 mE	Nad83, Zone 7
Elevation:	719 m	UTM:	7044054 mN	
Comments: Location:Childs Gulch; 2 cm quartz vein float along creek with minor drusy vugs, and 2-3% sulphide (pyrite>>galena>sphalerite? looks like veins from sheeted vein sets				

Rock Sample Descriptions		Property: Eurkea		
Sample Number:	Q017541	UTM:	607288 mE	Nad83, Zone 7
Elevation:	713 m	UTM:	7044113 mN	
Comments: Location:Childs Gulch; 25 cm milky white quartz vein block as float along creek with fine shiny pyrite as aggregates to 2 cm and in grey stringers, some galena rimming pyrite				
Sample Number:	Q017542	UTM:	607278 mE	Nad83, Zone 7
Elevation:	731 m	UTM:	7044236 mN	
Comments: Location:Childs Gulch; 15 cm quartz vein as float along creek with graphitic partings and fine disseminated pyrite and in grey stringers				
Sample Number:	Q017543	UTM:	607279 mE	Nad83, Zone 7
Elevation:	726 m	UTM:	7044253 mN	
Comments: Location:Childs Gulch; brecciated quartz with limonite and Mn fracture fillings and vugs cutting highly silicified-sericite altered host?				
Sample Number:	Q017544	UTM:	606851 mE	Nad83, Zone 7
Elevation:	1056 m	UTM:	7047105 mN	
Comments: Location:the Divide; local float of silicified quartzite breccia with some clay altered clasts; limonite, goethite in matrix and as fracture fillings, some grey quartz clasts with crystalline vugs				
Sample Number:	Q017545	UTM:	606851 mE	Nad83, Zone 7
Elevation:	1056 m	UTM:	7047107 mN	
Comments: Location:the Divide; local float of quartzite breccia with quartzite and some clay altered clasts to 1 cm; limonite, goethite matrix and as fracture fillings, some quartz clasts				
Sample Number:	Q017546	UTM:	607149 mE	Nad83, Zone 7
Elevation:	1052 m	UTM:	7047180 mN	
Comments: Location:the Divide; local float of jarosite and limonite stained quartz veins, some drusy, brecciated and vuggy, with minor oxidized cubic pyrite and boxwork, sericite altered wallrock				

Rock Sample Descriptions		Property: Eurkea		
Sample Number:	Q017547	UTM:	607516 mE	Nad83, Zone 7
Elevation:	1129 m	UTM:	7047539 mN	
Comments: Location:the Divide; float boulders up to 1m of brecciated quartzite with Mn, limonite weathered surface and as fracture fillings				
Sample Number:	Q017548	UTM:	606539 mE	Nad83, Zone 7
Elevation:	909 m	UTM:	7049058 mN	
Comments: Location:left fork Eureka; brecciated quartzite in outcrop with some quartz clasts, limonite and Mn fracture fillings and locally as cement				
Sample Number:	Q017549	UTM:	606198 mE	Nad83, Zone 7
Elevation:	748 m	UTM:	7049554 mN	
Comments: Location:left fork Eureka; local float of brecciated quartz and quartzite with limonite and Mn fracture fillings				
Sample Number:	Q017550	UTM:	606484 mE	Nad83, Zone 7
Elevation:	670 m	UTM:	7049940 mN	
Comments: Location:left fork Eureka; clay altered breccia with Mn and limonite cement and fracture fillings, some brecciated quartzite				
Sample Number:	Q934556	UTM:	607522 mE	Nad83, Zone 7
Elevation:	664 m	UTM:	7041451 mN	
Comments: Location:Southeast ; bleached, clay altered, limonite weathering quartzite with minor few mm wide quartz veinlets perpendicular to foliation, at 100/88N if in place				
Sample Number:	Q934557	UTM:	607522 mE	Nad83, Zone 7
Elevation:	664 m	UTM:	7041451 mN	
Comments: Location:Southeast ; orange limonite weathered brecciated quartzite with fine crushed rock flour cement, some limonite in vugs and on fractures				

Rock Sample DescriptionsProperty: Eurkea

Sample Number: Q934558 UTM: 604019 mE Nad83, Zone 7

Elevation: 875 m UTM: 7044363 mN

Comments: Location:upper Black Hills; quartz veined, some with oxidized cubic pyrite, silicified and brecciated quartzite with limonite and Mn fracture fillings and vugs

Sample Number: Q934559 UTM: 604026 mE Nad83, Zone 7

Elevation: 881 m UTM: 7044372 mN

Comments: Location:upper Black Hills; brecciated quartzite with cross cutting quartz veinlets, silicification, limonite and Mn fracture fillings, patchy sericite alteration

CERTIFICATE WH15120474

Project: EUREKA

This report is for 47 Rock samples submitted to our lab in Whitehorse, YT, Canada on 11-AUG-2015.

The following have access to data associated with this certificate:

HEATHER BURRELL

JOAN MARIACHER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
BAG-06	Double Bagging Coarse Rejects
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES

CERTIFICATE WH15120475

Project: EUREKA

This report is for 200 Soil samples submitted to our lab in Whitehorse, YT, Canada on 11-AUG-2015.

The following have access to data associated with this certificate:

HEATHER BURRELL

JOAN MARIACHER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI - 21	Received Sample Weight
LOG - 22	Sample login - Rcd w/o BarCode
SCR - 41	Screen to -180um and save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE WH15120478

Project: EUREKA

This report is for 135 Soil samples submitted to our lab in Whitehorse, YT, Canada on 11-AUG-2015.

The following have access to data associated with this certificate:

HEATHER BURRELL

JOAN MARIACHER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI - 21	Received Sample Weight
LOG - 22	Sample login - Rcd w/o BarCode
SCR - 41	Screen to -180um and save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

To: **STRATEGIC METALS LTD.**

CERTIFICATE WH15120480

Project: EUREKA

This report is for 145 Soil samples submitted to our lab in Whitehorse, YT, Canada on 11-AUG-2015.

The following have access to data associated with this certificate:

HEATHER BURRELL

JOAN MARIACHER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI - 21	Received Sample Weight
LOG - 22	Sample login - Rcd w/o BarCode
SCR - 41	Screen to -180um and save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

To: **STRATEGIC METALS LTD.**
ATTN: JOAN MARIACHER
C/O ARCHER, CATHRO & ASSOCIATES (1981) LIMITED
1016 - 510 W HASTINGS ST
VANCOUVER BC V6B 1L8

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE WH15120481

Project: EUREKA

This report is for 178 Soil samples submitted to our lab in Whitehorse, YT, Canada on 11-AUG-2015.

The following have access to data associated with this certificate:

HEATHER BURRELL

JOAN MARIACHER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI - 21	Received Sample Weight
LOG - 22	Sample login - Rcd w/o BarCode
SCR - 41	Screen to -180um and save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE WH15120488

Project: EUREKA

This report is for 165 Soil samples submitted to our lab in Whitehorse, YT, Canada on 11-AUG-2015.

The following have access to data associated with this certificate:

HEATHER BURRELL

JOAN MARIACHER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI - 21	Received Sample Weight
LOG - 22	Sample login - Rcd w/o BarCode
SCR - 41	Screen to -180um and save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE WH15121068

Project: EUREKA

This report is for 4 Rock samples submitted to our lab in Whitehorse, YT, Canada on 12-AUG-2015.

The following have access to data associated with this certificate:

HEATHER BURRELL

JOAN MARIACHER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI - 21	Received Sample Weight
LOG - 21	Sample logging - ClientBarCode
CRU - QC	Crushing QC Test
PUL - QC	Pulverizing QC Test
CRU - 31	Fine crushing - 70% <2mm
SPL - 21	Split sample - riffle splitter
PUL - 31	Pulverize split to 85% <75 um
BAG - 06	Double Bagging Coarse Rejects

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
ME - ICP41	35 Element Aqua Regia ICP - AES	ICP - AES
Au - ICP21	Au 30g FA ICP - AES Finish	ICP - AES
