CERTIFICATE VA16127985

Project: Klaza

P.O. No.: Batch 94

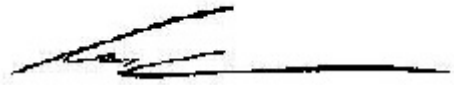
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 5-AUG-2016.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-32	Fine Crushing 90% <2mm
SPL-21	Split sample - riffle splitter
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
PUL-35a	Pulv 1 kg split to 95%<106 um
BAG-01	Bulk Master for Storage
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-35ad	Pulv 1 kg split to 95%<106 um DUP



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE

CERTIFICATE VA16127986

Project: Klaza

P.O. No.: Batch 96

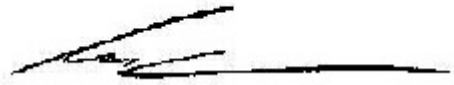
This report is for 35 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 5-AUG-2016.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-32	Fine Crushing 90% <2mm
SPL-21	Split sample - riffle splitter
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
PUL-35a	Pulv 1 kg split to 95%<106 um
BAG-01	Bulk Master for Storage
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-35ad	Pulv 1 kg split to 95%<106 um DUP



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
As-OG62	Ore Grade As - Four Acid	VARIABLE

CERTIFICATE VA16127989

Project: Klaza

P.O. No.: Batch 99

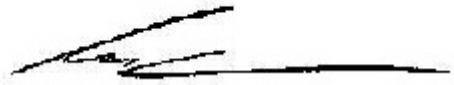
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 5-AUG-2016.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-32	Fine Crushing 90% <2mm
SPL-21	Split sample - riffle splitter
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
PUL-35a	Pulv 1 kg split to 95%<106 um
BAG-01	Bulk Master for Storage
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-35ad	Pulv 1 kg split to 95%<106 um DUP



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE

CERTIFICATE VA16127990

Project: Klaza

P.O. No.: Batch 100

This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 5-AUG-2016.

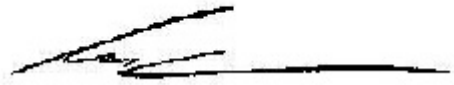
The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-32	Fine Crushing 90% <2mm
SPL-21	Split sample - riffle splitter
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
PUL-35a	Pulv 1 kg split to 95%<106 um
BAG-01	Bulk Master for Storage
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-35ad	Pulv 1 kg split to 95%<106 um DUP

ANALYTICAL PROCEDURES



ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE

CERTIFICATE VA16129499

Project: Klaza

P.O. No.: Batch 92

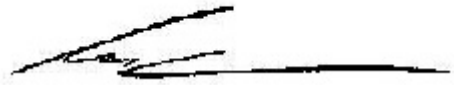
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 8-AUG-2016.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-32	Fine Crushing 90% <2mm
SPL-21	Split sample - riffle splitter
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
PUL-35a	Pulv 1 kg split to 95%<106 um
BAG-01	Bulk Master for Storage
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-35ad	Pulv 1 kg split to 95%<106 um DUP



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Au-GRA22	Au 50 g FA-GRAV finish	WST-SIM
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Cu-OG62	Ore Grade Cu - Four Acid	VARIABLE
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
As-OG62	Ore Grade As - Four Acid	VARIABLE

CERTIFICATE VA16129508

Project: Klaza

P.O. No.: Batch 95

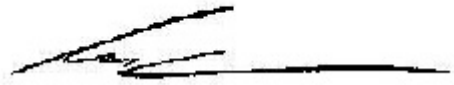
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 8-AUG-2016.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-32	Fine Crushing 90% <2mm
SPL-21	Split sample - riffle splitter
LOG-23	Pulp Login - Rcvd with Barcode
PUL-QC	Pulverizing QC Test
PUL-35a	Pulv 1 kg split to 95%<106 um
BAG-01	Bulk Master for Storage
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-35ad	Pulv 1 kg split to 95%<106 um DUP



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE

CERTIFICATE VA16129511

Project: Klaza

P.O. No.: Batch 97

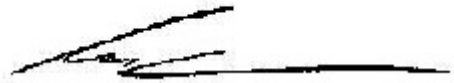
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 8-AUG-2016.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-32	Fine Crushing 90% <2mm
SPL-21	Split sample - riffle splitter
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
PUL-35a	Pulv 1 kg split to 95%<106 um
BAG-01	Bulk Master for Storage
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-35ad	Pulv 1 kg split to 95%<106 um DUP



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	

To: **ROCKHAVEN RESOURCES LTD.**
ATTN: JOAN MARIACHER

CERTIFICATE VA16129512

Project: Klaza

P.O. No.: Batch 98

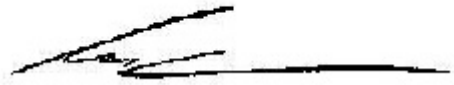
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 8-AUG-2016.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-32	Fine Crushing 90% <2mm
SPL-21	Split sample - riffle splitter
LOG-23	Pulp Login - Rcvd with Barcode
PUL-QC	Pulverizing QC Test
PUL-35a	Pulv 1 kg split to 95%<106 um
BAG-01	Bulk Master for Storage
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-35ad	Pulv 1 kg split to 95%<106 um DUP



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE

CERTIFICATE VA16129513

Project: Klaza

P.O. No.: Batch 101

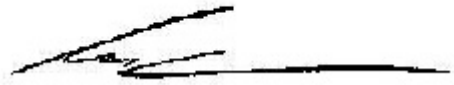
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 8-AUG-2016.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-32	Fine Crushing 90% <2mm
SPL-21	Split sample - riffle splitter
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
PUL-35a	Pulv 1 kg split to 95%<106 um
BAG-01	Bulk Master for Storage
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-35ad	Pulv 1 kg split to 95%<106 um DUP



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE

CERTIFICATE VA16129515

Project: Klaza

P.O. No.: Batch 102

This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 8-AUG-2016.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-32	Fine Crushing 90% <2mm
SPL-21	Split sample - riffle splitter
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
PUL-35a	Pulv 1 kg split to 95%<106 um
BAG-01	Bulk Master for Storage
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-35ad	Pulv 1 kg split to 95%<106 um DUP

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE

CERTIFICATE VA16129519

Project: Klaza

P.O. No.: Batch 103

This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 8-AUG-2016.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-32	Fine Crushing 90% <2mm
SPL-21	Split sample - riffle splitter
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
PUL-35a	Pulv 1 kg split to 95%<106 um
BAG-01	Bulk Master for Storage

CERTIFICATE VA16129520

Project: Klaza

P.O. No.: Batch 104

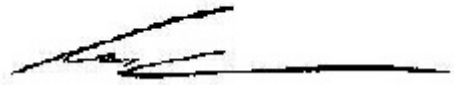
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 8-AUG-2016.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-32	Fine Crushing 90% <2mm
SPL-21	Split sample - riffle splitter
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
PUL-35a	Pulv 1 kg split to 95%<106 um
BAG-01	Bulk Master for Storage
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-35ad	Pulv 1 kg split to 95%<106 um DUP



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE

CERTIFICATE VA16129521

Project: Klaza

P.O. No.: Batch 105

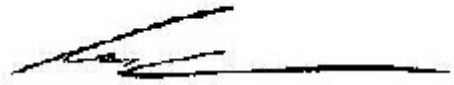
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 8-AUG-2016.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-32	Fine Crushing 90% <2mm
SPL-21	Split sample - riffle splitter
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
PUL-35a	Pulv 1 kg split to 95%<106 um
BAG-01	Bulk Master for Storage
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-35ad	Pulv 1 kg split to 95%<106 um DUP



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE

CERTIFICATE VA16129523

Project: Klaza

P.O. No.: Batch 106

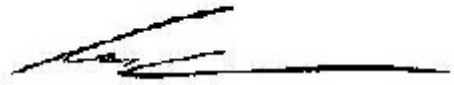
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 8-AUG-2016.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-32	Fine Crushing 90% <2mm
SPL-21	Split sample - riffle splitter
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
PUL-35a	Pulv 1 kg split to 95%<106 um
BAG-01	Bulk Master for Storage
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-35ad	Pulv 1 kg split to 95%<106 um DUP



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
As-OG62	Ore Grade As - Four Acid	VARIABLE

CERTIFICATE VA16129526

Project: Klaza

P.O. No.: Batch 107

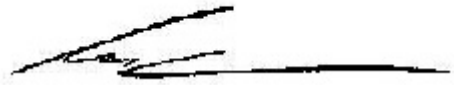
This report is for 36 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 8-AUG-2016.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-32	Fine Crushing 90% <2mm
SPL-21	Split sample - riffle splitter
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
PUL-35a	Pulv 1 kg split to 95%<106 um
BAG-01	Bulk Master for Storage
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-35ad	Pulv 1 kg split to 95%<106 um DUP



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE

CERTIFICATE VA16129527

Project: Klaza

P.O. No.: Batch 108

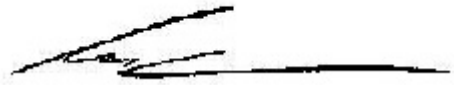
This report is for 7 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 8-AUG-2016.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-32	Fine Crushing 90% <2mm
SPL-21	Split sample - riffle splitter
PUL-35a	Pulv 1 kg split to 95%<106 um
BAG-01	Bulk Master for Storage



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
As-OG62	Ore Grade As - Four Acid	VARIABLE

To: **ROCKHAVEN RESOURCES LTD.**
ATTN: JOAN MARIACHER

CERTIFICATE WH16135089

Project: Klaza

P.O. No.: Trench 88

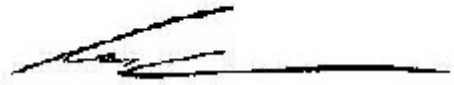
This report is for 14 Rock samples submitted to our lab in Whitehorse, YT, Canada on 16-AUG-2016.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
PUL-31	Pulverize split to 85% <75 um



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	

To: **ROCKHAVEN RESOURCES LTD.**

CERTIFICATE WH16135091

Project: Klaza

P.O. No.: Trench 89

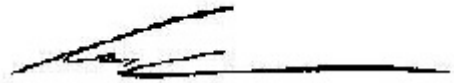
This report is for 36 Rock samples submitted to our lab in Whitehorse, YT, Canada on 16-AUG-2016.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85% <75 um



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS

CERTIFICATE WH16135094

Project: Klaza

P.O. No.: Trench 86

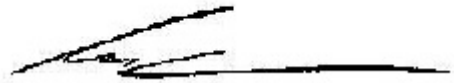
This report is for 21 Rock samples submitted to our lab in Whitehorse, YT, Canada on 16-AUG-2016.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85% <75 um



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE

To: **ROCKHAVEN RESOURCES LTD.**
ATTN: JOAN MARIACHER

CERTIFICATE WH16135096

Project: Klaza

P.O. No.: Trench 90

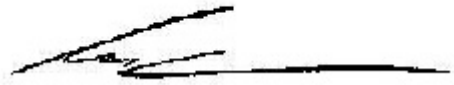
This report is for 15 Rock samples submitted to our lab in Whitehorse, YT, Canada on 16-AUG-2016.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85% <75 um



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE

To: **ROCKHAVEN RESOURCES LTD.**
ATTN: JOAN MARIACHER
C/O ARCHER, CATHRO AND ASSOCIATES (1981) LIMITED
1016 - 510 W HASTINGS STREET
VANCOUVER BC V6B 1L8

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE WH16135097

Project: Klaza

P.O. No.: Trench 87

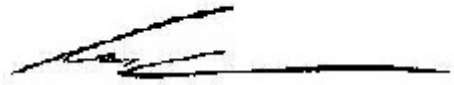
This report is for 13 Rock samples submitted to our lab in Whitehorse, YT, Canada on 16-AUG-2016.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
LOG-23	Pulp Login - Rcvd with Barcode
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85% <75 um



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	

To: **ROCKHAVEN RESOURCES LTD.**
ATTN: JOAN MARIACHER
C/O ARCHER, CATHRO AND ASSOCIATES (1981) LIMITED
1016 - 510 W HASTINGS STREET
VANCOUVER BC V6B 1L8

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE WH16135116

Project: Klaza

This report is for 193 Soil samples submitted to our lab in Whitehorse, YT, Canada on 16-AUG-2016.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41	Screen to -180um and save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	

To: **ROCKHAVEN RESOURCES LTD.**
ATTN: JOAN MARIACHER

CERTIFICATE WH16142304

Project: Klaza

P.O. No.: HTR-16-05

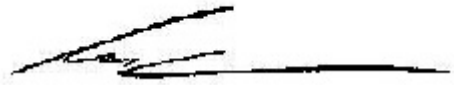
This report is for 21 Rock samples submitted to our lab in Whitehorse, YT, Canada on 26-AUG-2016.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85% <75 um



ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Au-GRA22	Au 50 g FA-GRAV finish	WST-SIM
Ag-OG62	Ore Grade Ag - Four Acid	VARIABLE
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Cu-OG62	Ore Grade Cu - Four Acid	VARIABLE
Pb-OG62	Ore Grade Pb - Four Acid	VARIABLE
Pb-VOL70	Pb by Titration	
ME-XRF10	Fusion XRF - Ore Grade	XRF
OA-GRA06	LOI for ME-XRF06	WST-SIM
Ba-XRF10	Fusion XRF - Ba Ore Grade	XRF

CERTIFICATE WH16144495

Project: Klaza

This report is for 71 Soil samples submitted to our lab in Whitehorse, YT, Canada on 29-AUG-2016.

The following have access to data associated with this certificate:

MATT DUMALA	JOAN MARIACHER	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41	Screen to -180um and save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	

To: **ROCKHAVEN RESOURCES LTD.**
ATTN: JOAN MARIACHER

Finalized Date: 23-SEP-2016
Account: ROCKHA

CERTIFICATE OF ANALYSIS WH16144495

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

Applies to Method: REE's may not be totally soluble in this method.
ME-MS61

LABORATORY ADDRESSES

Applies to Method: Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

COMMENTS

EOH at 143.86 m (box 27) due to sand infilling of Drill hole and loss of Reflex Tool (downhole survey). Box 28,29 are cave and sand infill with repeat footages due to sand layer moving up DDH. Photos for record, but not teched or logged due to lack of data and duplicate footages causing database errors. No Downhole Survey due to hole condition.

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
63.49	63.85	VN	37	40	NUL	1	Weakly phyllic argillic altered granodiorite with moderate weathering. Contains a concentrated pyrite stringer ~2cm long.			
								Py	3	BL
73.04	73.25	VN	37	50	NUL	1	Smokey quartz vein (1.5cm) with disseminated pyrite stringers emanating from small micro fractures surrounding the vein. Proximal to a moderately pervasive chlorite halo along the smokey quartz selvedges that envelopes blebs of rhodochrosite and smokey quartz. Trace to minor amounts of hematite stain present. Light brecciation along both smokey quartz vein and chloritized halo.			
								Py	1	BN
								Rh	2	BL
								He	1	BN
77.40	77.50	VN	37	60	NUL	1	Fractures smokey quartz vein (4.5cm) with hematite staining along fracture/joint faces.			
								He	2	---
78.42	78.61	VN	37	45	NUL	1	Chlorite vein ~2cm flooded by blebby quartz carbonate veins. Slight net and brecciated texture with no mineralization present.			
								Cl	10	BN
81.38	81.89	VN	37	40	NUL	3	Moderately phyllic altered granodiorite with brecciated smokey quartz vein across ~24cm. Smokey quartz vein contains pervasive bull quartz/carbonate blebs, as well as blebs and stringers of pyrite/arsenopyrite/galena proximal to blebs and stringers of sphalerite. Two quartz/pyrite veinlets (~1cm) found in two 13cm intervals below initial brecciated vein.

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
93.60	93.83	VN	37	45	NUL	1	Weakly potassic/propylitic altered granodiorite crosscut by two quartz/smokey quartz veins (6cm apart). The first vein is a quartz/carbonate vein (6cm) containing pervasive blebs of chlorite. This vein is surrounded by a small chlorite halo (1cm) and hosts disseminated to slightly blebby hematite/pyrite along the lower selvege. The second vein is a smokey quartz vein with no mineralization that pervasively crosscuts propylitic/potassic altered granodiorite in a netted texture.			
								Py	1	DI
								He	1	BL
								He	1	DI
								Py	1	BL
93.94	94.06	VN	37	45	NUL	1	Quartz/carbonate vein (4cm) cross cutting weakly potassic/propylitic altered granodiorite and black hematite veinlets following the selvedges of the vein			
								He	4	BL
128.43	128.96	VN	37	30	NUL	2	The first vein is a small smokey quartz vein (1cm) that displays disseminated arsenopyrite, pyrite, and honey sphalerite. The second veinlet is a disseminated smokey quartz/pyrite vein that has been obilterated by heavy gouge alteration.			
								Py	2	DI
								Sp	1	DI
								As	1	DI

KL-16-297									
	83.61	19	NQ2	GRD	994.3	621.2	2.46	2.7	Trace to weakly propyllitic and potassic altered granodiorite.
	128.25	23	NQ2	GRD	1264.1	817.4	2.59	2.8	Pearl Vein: Polymetallic smokey quartz vein breccia. Smokey quartz brecciates granule to cobble sized clasts of silicified phyllic granodiorite and grey quartz vein. Hosts disseminated to blebby arsenopyrite, galena, blackjack sphalerite and pyrite.
	132.62	7.5	NQ2	GRD	415.7	281.3	2.61	3.1	Pearl Vein: Polymetallic vein with central carbonate band. Blebby honey brown sphalerite, pyrite, arsenopyrite, and interstitial galena. Galena is interstitial to honey brown sphalerite. Pyrite and arsenopyrite are intergrown. Mineralization tends to cluster along vein margins, with white carbonate and ankerite along the center. The vein is bordered by gouge.
	137	12.65	NQ2	QFP	681.5	427.1	2.54	2.7	Medium grey to light grey quartz feldspar porphyry dyke. Hosts sporadic white calcite veins at various orientation.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
5.10	10.77	5.67	GRD	MG	Rubbly moderate to strongly unaltered granodiorite with patchy weak to moderate argillic alteration. Oxidation obscures rock textures.

10.77	19.46	8.69	GRD	MG	Silicified moderate phyllic alteration envelope hosting a quartz/carbonate/pyrite vein breccia, a quartz/pyrite vein a weakly mineralized gouge zone, multiple pyrite stringers and disseminated pyrite. Phyllic alteration transitions do moderate argillic alteration distally from veining and mineralization. Moderate oxidation along fracture surfaces and strong oxidation in areas of stronger mineralization.

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
12.18	12.49	BX	34	-	NUL	1	Rubbly, fractured weakly phyllic/argillic altered granodiorite that has undergone brecciation. Fractures are moderately to strongly oxidized, and disseminated to slight blebs of pyrite can be found.			
								Py	1	BL
								Py	1	DI
15.05	15.20	VN	37	45	NUL	1	Weakly phyllic/argillic altered granodiorite that contains a strongly oxidized zone hosting semi-massive to blebby pyrite in a pervasive quartz vein (~10cm).			
								Py	5	MA
								Py	2	BL
18.10	18.30	GO	34	-	NUL	1	Weakly phyllic/propylitic altered granodiorite with highly oxidized fractures containing a zone of severely oxidized phyllic/propylitic granodiorite (~10cm). The severely oxidized zone and immediate surrounding altered granodiorite hosts trace disseminated pyrite.			
								Py	1	DI
24.26	24.43	GO	34	-	NUL	1	intensely gouge altered argillic granodiorite with weak to moderate oxidation. Gouge contains disseminated to blebby pyrite.]			
								Py	3	DI
								Py	1	BL
34.90	35.00	ST		65	NUL	1	Argillic phyllic altered granodiorite with slight oxidation containing an fracture filled pyrite stringer.			
								Py	3	DI
41.55	41.41	VN	37	85	NUL	1	Weakly phyllic to propylitic altered granodiorite with an oxidized slightly gouge altered quartz vein containing black stringers of ground pyrite and slightly blebby to disseminated pyrite. Pyrite stringers eminate from the vein into a phyllic propylitic altered halo.			
								Py	2	DI
								Py	1	BL

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
49.50	49.64	VN	37	75	NUL	1	Weak phyllic to weak/moderate argillic altered granodiorite with weak to moderate oxidation. Zone is weakly gouge altered with brecciation occurring. Hosts black breccia, pyrite.			
								Py	1	DI
58.22	58.38	VN	37	45	NUL	1	weakly argillic/phyllic altered granodiorite that has seen weak oxidation. Oxidized quartz/carbonate vein (4cm) hosting disseminated to blebby pyrite, disseminated black to honey sphalerite and disseminated galena cross cuts zone.			
								Py	1	BL
								Py	2	DI
								Sp	1	DI
								Gn	1	DI
59.56	59.35	VT	37	75	NUL	2	two smokey quartz veinlets (0.5,0.7cm) intersecting weakly phyllic/argillic altered granodiorite. Veinlets contain disseminated pyrite/arsenopyrite stringers throughout, with arsenopyrite and pyrite also present disseminated through ~13cm of argillic/phyllic altered granodiorite around main veinlet.			
								Py	6	DI
								As	4	DI
59.94	59.85	VN	37	60	NUL	1	Weak phyllic to argillic granodiorite that has an oxidized gouge altered vein of semi massive pyrite leading to disseminated pyrite throughout a slightly oxidized argillic halo.			
								Py	5	DI
								Py	35	MA
66.83	68.49	DY	37	60	NUL	2	Aplite dyke crosscutting trace potassic/phyllic altered granodiorite. Aplite intersects granodiorite in two sections (2cm, 20cm) over 1.7m			
74.64	74.68	DY	37	40	NUL	1	Aplite dyke cross cutting weakly argillic/phyllic altered granodiorite.			

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
89.17	89.98	VN	37	45	NUL	1	Trace to weak argillic altered granodiorite with weak to slightly moderate phyllic overprinting and weak to moderate silicification. This vein zone is an interconnected net texture of quartz/ankerite flooding over a 70cm interval. This interval hosts disseminated/blebby/semi-massive pyrite in association with disseminated to blebby sphalerite (both honey brown and blackjack) throughout the entire flooded zone, along with disseminated to semi-blebby arsenopyrite found within a single quartz zone.			
								Sp	2	DI
								Py	1	DI
								As	0.5	BL
								As	1	DI
								Py	1	BL
								Py	2	MA
90.07	90.13	VN	37	50	NUL	1	smoky quartz / carbonate vein zone found within weak argillic altered granodiorite with weak phyllic overprinting. This vein hosts disseminated pyrite and sphalerite found in stringers proximal to the smokey quartz injection.			
93.12	93.33	VN	37	70	NUL	3	Weaklty phyllic altered granodiorite overprinting argillic alteration that intersects three small veins. The first vein is a small quartz carbonate vein (3cm) hosting minor disseminated to blebby pyrite. Followed by a 1.5cm quartz/carbonate vein hosting blackjack sphalerite and tan ankerite. Small sphalerite stringers feed from the vein that contain trace disseminated pyrite. This vein is followed by a small quartz/ankerite veinlet with disseminated pyrite and sphalerite.			
								Py	2	DI
								Sp	3	DI
101.20	101.27	VN	37	40	NUL	1	Weakly propylitic/potassic altered granodiorite that intersects a quartz vein (1cm) that hosts minor disseminated pyrite.			
								Py	1	DI
105.91	105.94	VT	37	60	NUL	1	Weakly phyllic argillic altered granodiorite hosting a quartz vein (1cm) that contains trace to minor disseminated pyrite, and hematite.			
								Py	1	DI

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
								He	1	DI
111.46	111.73	VN	37	85	NUL	1	Moderately phyllic/propylitic altered granodiorite which hosts two veins. The first vein is a quartz vein (~2cm) which hosts minor disseminated to slightly blebby pyrite, while the second is a 2cm quartz/carbonate vein that hosts blebby sphalerite (honey brown and blackjack), disseminated to blebby pyrite, and disseminated galena.			
								Gn	0.5	DI
								Py	1	BL
								Py	2	DI
								Sp	5	BL
126.26	126.27	VB	37	80	NUL	1	Smokey quartz vein breccia hosting disseminated pyrite.			
								Py	1	DI
126.48	126.51	VN	37	70	NUL	1	Smokey quartz vein breccia. Hosts granule to pebble sized clasts of phyllic altered granodiorite and grey quartz vein. Quartz hosts disseminated to blebby pyrite.			
								Py	3	BL
127.32	127.48	VB	37	50	NUL	1	Stringers, veinlets and veins of black breccia veining brecciate phyllic altered granodiorite. Hosts disseminated to blebby pyrite.			
127.89	127.97	VN	37	75	NUL	1	Smokey quartz vein breccia. Hosts granule to pebble sized clasts of phyllic altered granodiorite and grey quartz vein. Quartz hosts disseminated to blebby pyrite.			
								Py	5	BL
128.11	128.40	PL		80	NUL	1	Pearl Vein: Polymetallic smokey quartz vein breccia. Smokey quartz brecciates granule to cobble sized clasts of silicified phyllic granodiorite and grey quartz vein. Hosts disseminated to blebby arsenopyrite, galena, blackjack sphalerite and pyrite.			
								Py	10	BL
								Sp	2	BL
								As	2	BL
								Gn	1	DI
128.49	128.50	VN	37	80	NUL	1	Dark grey gouge seam hosting disseminated pyrite.			
								Py	1	DI

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
128.62	128.70	VB	37	80	NUL	1	Smokey quartz vein breccia. Hosts granule to pebble sized clasts of phyllic altered granodiorite and grey quartz vein. Quartz hosts disseminated to blebby pyrite.			
								Py	1	DI
129.60	127.69	VB	37	50	NUL	1	Smokey quartz vein breccia. Hosts granule to pebble sized clasts of phyllic altered granodiorite and grey quartz vein. Quartz hosts disseminated to blebby pyrite.			
								Py	3	DI
130.16	130.20	VB	37	80	NUL	1	Smokey quartz vein breccia. Hosts granule to pebble sized clasts of phyllic altered granodiorite. Quartz hosts disseminated to blebby pyrite.			
								Py	3	BL
132.63	132.69	GO	34	60	NUL	1	Gouge seam with clasts of mineralized vein. Vein fragments contain pyrite and arsenopyrite.			
								Py	0.5	BL
								As	0.5	BL
132.72	133.17	BX	34	70	NUL	2	Smoky quartz breccia with pebbble-granule angular clasts of granodiorite. Some clasts host blebby pyrite, honey brown sphalerite, and trace galena.			
								Gn	0.1	BL
								Py	0.5	BL
								Sp	0.1	BL
132.75	132.78	PL		70	NUL	1	Pearl Vein: Polymetallic vein with central carbonate band. Blebby honey brown sphalerite, pyrite, arsenopyrite, and interstitial galena. Galena is interstitial to honey brown sphalerite. Pyrite and arsenopyrite are intergrown. Mineralization tends to cluster along vein margins, with white carbonate and ankerite along the center. The vein is bordered by gouge.			
								Sp	10	BL
								Gn	0.1	IN
								As	2	BL
								Py	10	MA

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
133.27	133.39	BX	34	70	NUL	1	Lighter quartz-matrix breccia with sub-angular strongly altered phyllic granodiorite clasts. Clasts have partially obliterated primary textures and are silicified by matrix infill.			
134.07	135.07	BX	34	60	NUL	6	Series of 6 smoky quartz breccias of 3-10cm in width. Dark smoky quartz matrix tends to show a fine banding, unlike deeper similar breccias. Breccia matrix contains very fine disseminated pyrite.			
								Py	1	DI
136.43	136.44	VB	37	75	NUL	1	Black breccia vein with pebble sized clasts of phyllic granodiorite and granule sized clasts of quartz/pyrite vein.			
								Py	1	DI
141.22	143.93	BX	34	60	NUL	5	Series of 1-5cm wide smoky quartz breccias with fine disseminated pyrite and clasts of sub-angular propylitic granodiorite.			
								Py	0.5	DI
147.74	147.78	VN	37	30	NUL	1	Magnetite vein with blebby-fine pyrite and dark green chloritic halos.			
								Py	3	BL
								Mg	75	MA
150.22	150.29	BX	34	65	NUL	1	Black breccia with dark smoky quartz breccia and pyrite-rich angular clasts of propylytic granodiorite. There is some blebby sphalerite where pyrite is heavily concentrated.			
								Sp	0.5	BL
								Py	2	BL
154.15	154.18	DY	37	40	NUL	1	Pink aplite dyke with weak chloritic overprinting.

55.53	55.00	VN	37	60	NUL	1	Grey quartz vein hosting disseminated to blebby pyirte.			
								Py	10	DI
57.67	57.70	VN	37	60	NUL	1	Grey quartz/white carbonate vein hosting disseminated to blebby pyrite.			
								Py	75	DI
59.08	59.31	VB	37	60	NUL	1	Oxidized vuggy smokey quartz vein breccia hosting disseminated to blebby pyrite. Has granule to pebble sized clasts of grey quartz and white carbonate.			
								Py	10	BL
60.83	60.84	VT	37	60	NUL	1	Grey quartz veinlet hosting blebby pyrite.			
								Py	20	BL
61.25	61.28	GO	34	-	NUL	1	Broken up oxidized gouge zone hosting disseminated pyrite.			
								Py	10	DI
68.40	69.30	VN	37	40	NUL	1	Grey to milky white quartz vein hosting disseminated to blebby pyrite. Veins is broken up and has weak oxidation along fracture surfaces.			
								Py	5	BL
70.53	70.71	BN		50	NUL	1	Band or flood of intensely silicified granodiorite hosting disseminated pyrite and pyrite stringers.			

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
								Py	5	DI
70.53	72.56	ST		70	NUL	14	Fourteen quartz/pyrite stringers.			
								Py	50	DI
75.54	75.74	VT	37	80	NUL	2	Weakly argillic altered granodiorite with moderate phyllic overprinting that hosts two quartz/carbonate veinlets over 13cm. Hosts disseminated to blebby pyrite with oxidation present along fractures.			
								Py	2.5	DI
								Py	1.5	BL
75.91	76.18	VN	37	-	NUL	1	Phyllic overprinted altered granodiorite with a flooded quartz zone displaying moderate to strong silicification. Quartz flooded zone hosts disseminated and blebs of pyrite, with no other textures due to silicification.			
								Py	1	BL
								Py	1	DI
79.97	79.99	VN	37	70	NUL	1	Moderately silicified zone of flooded quartz containing a smoky quartz vein. Vein dominantly displays semi-massive pyrite with oxidation along fractures. Joint runs parallel to vein.			
								Py	30	MA
82.20	82.25	VT	37	80	NUL	1	Smoky quartz carbonate veinlet (0.80cm) enveloped by a zone of slightly quartz flooded granodiorite. Hosts disseminated blackjack/honey brown sphalerite, disseminated to semi-blebby pyrite, and disseminated arsenopyrite along the outer selveges of the veinlet.			
								Py	1	BL
								Py	2	DI
								Sp	1	DI
								As	2	DI
82.22	82.24	VN	37	70	NUL	1	Grey quartz vein hosting disseminated pyrite crosscut by white carbonate veinlets hosting disseminated honey brown sphalerite.			
								Py	5	DI
								Sp	2	DI
83.24	83.31	GO	34	-	NUL	1	Grey/orange oxidized gouge seam.			

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
83.52	83.74	GO	34	-	NUL	1	Significantly gouge altered oxidized mineralized vein zone(?). Gouge alteration has destroyed most rock textures. Hosts disseminated pyrite.			
								Py	10	DI
83.91	84.04	GO	34	-	NUL	1	Significantly gouge altered oxidized mineralized vein zone(?). Gouge alteration has destroyed most rock textures. Hosts disseminated pyrite.			
								Py	5	DI
84.73	85.97	VT	37	80	NUL	7	Seven 0.5-0.9cm quartz/pyrite +/- carbonate veins.			
86.07	86.58	VT	37	60	NUL	5	Five 0.3cm quartz/pyrite veinlets.			
								Py	30	DI
89.22	89.94	VT	37	80	NUL	4	Four 0.3cm quartz/pyrite veinlets.			
91.27	91.30	BN		50	NUL	1	Band of strong Silicification cut by a fine net of white carbonate stringers. Host disseminated pyrite.			
								Py	1	DI
94.85	94.86	VT	37	50	NUL	1	0.8cm intermixed grey quartz/white carbonated and tan ankerite veinlet. Hosts disseminated pyrite.			
								Py	5	DI
97.93	93.97	ST		70	NUL	2	Two pyrite stringers.			
								Py	100	DI
102.97	102.98	VT	37	70	NUL	1	Tan ankerite veinlet.			
108.17	105.18	VN	37	50	NUL	1	Grey quartz vein hosting disseminated pyrite and blebby epidote.			
								Py	2	DI
								Ep	10	BL
108.57	109.76	VN	37	70	NUL	4	Four 1cm grey quartz veins hosting disseminated to blebby pyrite.			
								Py	25	BL
111.12	111.19	VN	37	65	NUL	1	Grey to smokey quartz vein hosting disseminated to blebby pyrite.			
								Py	25	BL
113.64	113.94	VT	37	30	NUL	2	Two 0.3 quartz/pyrite veinlets.

COMMENTS

Last 27 runs of KL-16-299 were completed using Metric Drill rods. Data for box log, magnetics, density, general lithology, and secondary structures have been adjusted, but Geotech is unable to be adjusted due to large margins of error that would result in recovery and RQD.

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
KL-16-299									
	78.19	11	HQ	GRD	971.4	615.3	2.83	2.7	Weakly chlorite altered granodiorite. Interval is moderately silicified due to quartz flooding present within entire zone.
	118.56	13	HQ	GRD	1149.5	722.2	2.84	2.7	Granodiorite that has undergone intense chlorite alteration and hematization (Christmas tree texture). Moderate to strong quartz flooding throughout.
	165	6	HQ	GRD	640.6	408.2	3.43	2.8	Dark smoky quartz vein 14cm long found within moderately phyllic altered granodiorite. Vein resembles a flooded quartz zone, with the main smoky quartz vein being accompanied by lesser smoky quartz mineralization along the lower selvedge extending another 8cm. Vein zone hosts blebby and disseminated pyrite, disseminated sphalerite around pyrite mineralizatoin, and arsenopyrite (?). Tan ankerite also accompanies sulfide mineralization, creating a breccia-like texture.
	178.93	8	HQ	GRD	700.5	439	2.81	2.7	Flooded quartz vein zone enveloped by . Quartz vein hosts trace hematization, as well as small veinlets of hematite (magnetite?) and pyrite in semi-blebs.

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
	195.38	11	HQ	GRD	968.2	610.1	2.82	2.7	Intensely chloritized granodiorite with intense pervasive hematization. A flooded quartz vein within this interval brecciates the chloritized/hemitized granodiorite, leaving an interconnected net texture of quartz, hematite, and chlorite.
	261.93	18	HQ	POR	1250	726.4	2.23	2.4	Purple/Green quartz feldspar porphyry with weak chloritization.
	280.14	14	HQ	GRD	1191.4	746.6	2.73	2.7	Weakly potassic to trace propylitic altered granodiortie
	370.07	11	HQ	QFP	988.8	610.3	2.88	2.6	quartz feldspar porphyry dyke with bands of brown and green QFP dyke transitioning into the brown-green QFP dyke intertonguing patches of quartz breccia. No mineralization present
	470.55	12	HQ	GRD	1112.1	702.7	2.97	2.7	Smokey quartz veins and veinlets found within moderately phyllic altered granodiorite. Veins crosscut granodiorte in a net texture, and are interconnected along the entire interval. Hosts disseminated blebby honey brown sphalerite. Veins slighly brecciate phyllic granodiorite.
	501.04	15.5	HQ	QFP	1242.8	758.4	2.57	2.6	Silicic tan quartz feldspar porphyry dyke.

509.10	526.90	17.80	GRD	MG	Altered granodiorite with multiple alteration types. Large intervals of moderate propylitic/weak potassic altered granodiorite with patches of trace propylitic/potassic altered granodiorite occur (very trace alteration). Weak to slightly moderate chloritization with hematite overprinting occurs. Alteration contains sporadic patches of heavily quartz flooded granodiorite that displays unaltered granodiorite to weak phyllic/propylitic alteration. Quartz flooding completely replaces rock textures in patches along interval.

550.75	558.69	7.94	QFP	--	Green/light red quartz feldspar porphyry dyke.							
						LT	RD					
						LT	GN	PO				
558.69	563.87	5.18	GRD	MG	Moderately argillic altered granodiorite with patchy weak to strong chloritic/hematized overprinting. Overprinted alterations get progressively stonger with depth until the end of the interval. Contains patches of weak to moderate propylitic/weak potassic altered granodiorite.

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
63.14	63.16	VN	37	-	NUL	1	Quartz/carbonate vein (2cm) hosting trace disseminated pyrite. Found within heavily gouge altered granodiorite fault zone.			
								Py	0.1	DI
67.63	67.74	VN	37	50	NUL	1	Barren quartz/carbonate flooded vein zone. No mineralization present.			
156.72	156.75	VN	37	55	NUL	1	Quartz/carbonate vein (1.5cm) hosting trace disseminated pyrite, hematite, and chlorite along its outer selvedges.			
								Py	1	DI
164.80	164.83	VN	37	60	NUL	1	Dark smoky quartz vein up to 3 cm wide (pinches out to 2cm in the middle of the vein) within a zone of moderate phyllic/chloritic altered granodiorite. This vein hosts disseminated pyrite, disseminated blebs of sphalerite, and blebs of disseminated sylvanite (?displays metallic scratch, ~2 softness, non cubic cleavage?). Sylvanite in this vein is found In sporadic blebs throughout, both proximal to other sulfide mineralization and independent of pyrite and sphalerite mineralization.			
								Sy	1	BL
								Sp	1.5	BL
								Py	1	DI
165.03	165.25	VN	37	na	NUL	1	Dark smoky quartz vein 14cm long found within moderately phyllic altered granodiorite. Vein resembles a flooded quartz zone, with the main smoky quartz vein being accompanied by lesser smoky quartz mineralization along the lower selvedge extending another 8cm. Vein zone hosts blebby and disseminated pyrite, disseminated sphalerite around pyrite mineralizatoin, and arsenopyrite (?). Tan ankerite also accompanies sulfide mineralization, creating a breccia-like texture.

								He	80	BL
393.73	394.56	VN	37	35	NUL	3	3 chlorite veinlets. Display slight net texture.			
								Cl	3	MA
405.93	405.97	VN	37	50	NUL	1	4cm quartz carbonate vein hosting disseminated pyrite along its lower selvedge. Upper selvedge of vein has blebby specular hematite, chlorite stringers, and hematization overprinting a portion of the quartz vein.			
								Cl	1	BL
								He	12	BL
423.07	423.21	VN	37	20	NUL	1	Steeply dipping 5cm vein of quartz carbonate. Contains chlorite infill along the selvedges of the vein, and sporadically throughout.			
431.39	431.43	VN	37	40	NUL	1	Quartz vein hosting moderate hematite and epidote along the outer selvedges.			
455.33	455.77	GO	34	25	NUL	1	propylitic altered granodiorite displaying weak gouge alteration. Displays quartz flooding and is highly fractured with chlorite healed fractures.			

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
469.63	470.01	BV		-	NUL	1	Strongly phyllic altered granodiorite containing a quartz flooded sulfide vein zone. This vein zone hosts an abundance of tan ankerite, blebby to semi-massive zoned honey brown sphalerite, blebby galena, blebby to disseminated pyrite, and an abundance of a massive black sulfide material. The mass of black sulfide material is found in almost all cases to be enveloped by tan ankerite, and is found proximal to the vast majority of zoned honey brown sphalerite. Fine grained sulfides such as pyrite (and possibly arsenopyrite?) can be observed within the black structures and seem to follow zoning patterns. Based on the proximity to ankerite and honey sphalerite, zoning patterns within the structures, apparent overprinting by fine grained sulfide minerals, and the grain shape resemblance to sphalerite, it is possible that the black mass of sulfides is zoned honey brown sphalerite that has undergone replacement by fine grained sulfides such as pyrite (and arsenopyrite?). Vein zone pinches out with depth as it extends parallel down the host granodiorite. Ankerite in the vein zone envelopes the zoned honey brown sphalerite and massive patches of black sulfides. An interstitial matrix of smoky quartz, carbonates, and occasional granodiorite clasts found in the background matrix between sulfide grains.

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
KL-16-300									
	7.28	14	NQ2	GRD	813.7	508.4	2.74	2.7	Moderate to intense pervasive oxidation heavily obscures rock textures and colors. Appears the primarily moderate argillic alteration with patches of weak to moderate phyllic alteration and less oxidized unaltered granodiorite. Interval is rubbly and quite broken up. Goethite staining along approximately 10% of fracture surfaces.
	37.75	11	NQ2	GRD	794.8	550.2	3.4	3.3	Strongly oxidized grey quartz vein hosting blebby to semi-massive pyrite.
	43.7	22	NQ2	GRD	1179.6	744.1	2.52	2.7	Primarily unaltered granodiorite with minor patches of weak phyllic alteration. Moderate oxidation on and around fracture surfaces.
	104.57	17	NQ2	GRD	1000.4	653.5	2.77	2.9	Grey to smokey quartz vein breccia. Has granule to pebble sized clast of white carbonate and phyllic granodiorite. Hosts disseminated to blebby pyrite.

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
	129.47	22	NQ2	GRD	1288.1	824.9	2.76	2.8	Multiphase breccia hosting. Phase 1 is a barren quartz phase, followed Phase 2 quartz/pyrite which is in turn brecciate by Phase 3 white-tan carbonate with sphalerite and galena. Phase 4 of smokey quartz and pyrite brecciates all other phases. Phase 5 is minor brecciation and infill by white calcite. Breccia hosts disseminated to blebby pyrite, honey brown sphalerite and galena. Sphalerite is zoned.
	185.5	18.5	NQ2	GRD	1092.2	719.5	2.78	2.9	Grey quartz vein partially brecciated by white carbonate. Hosts disseminated to blebby pyrite and sphalerite.
	258.6	11.2	NQ2	GRD	705.8	486.4	2.97	3.2	Smokey quartz minorly brecciating a grey quartz/white carbonate vein. Hosts disseminated to blebby pyrite and trace disseminated honey brown sphalerite, chalcopyrite and galena.
	259.1	14.8	NQ2	GRD	832.4	511.6	2.65	2.6	Silicified moderate to strongly phyllic altered granodiorite hosting disseminated pyrite, two pyrite stringers and a 0.3cm quartz vein hosting blebby pyrite and disseminated chalcopyrite.

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
	263.2	15.4	NQ2	GRD	932.9	597.7	2.85	2.8	5cm of smokey quartz vein breccia with granule to pebble sized clasts of grey quartz and light tan ankerite. Hosts disseminated pyrite and chalcopyrite. ~10cm of silicified moderate phyllic oxidation hosting disseminated pyrite and two quartz/pyrite stringers.
	299.46	22.3	NQ2	GRD	1273	826.4	2.69	2.9	Strongly phyllic altered granodiorite hosting disseminated pyrite and a banded grey quartz and white carbonate vein hosting disseminated to blebby pyrite.
	312.87	17	NQ2	GRD	938.6	613.5	2.6	2.9	White carbonate brecciating grey quartz and is in turn brecciated by smokey quartz. Breccia hosts disseminated to blebby pyrite and galena. Hosted in strong phyllic granodiorite hosting disseminated pyrite.
	313.5	13.5	NQ2	GRD	703.9	453.4	2.46	2.8	Grey quartz brecciating phyllic granodiorite. Hosts disseminated to blebby pyrite and chalcopyrite. Pebble to cobble sized clasts.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
5.10	32.05	26.95	GRD	MG	Moderate to intense pervasive oxidation heavily obscures rock textures and colors. Appears the primarily moderate argillic alteration with patches of weak to moderate phyllic alteration and less oxidized unaltered granodiorite. Interval is rubbly and quite broken up. Goethite staining along approximately 10% of fracture surfaces.

KL-16-301									
	21.8	19.2	NQ2	VOL	995.5	618.8	2.44	2.6	Dark grey quartz feldspar porphyry with oxidized joints/fractures containing trace pyrite.
	60.26	19	NQ2	QFP	1051.9	657.4	2.61	2.7	Grey green altered quartz feldspar porphyry.
	77.05	24.3	NQ2	GRD	1231.6	782.3	2.39	2.7	Moderately phyllic altered granodiorite containing numerous smokey quartz/pyrite stringers.
	85.38	17.7	NQ2	GRD	1007	651.5	2.68	2.8	Weak to moderately phyllic altered granodiorie containing a quartz/smokey quartz/carbonate vein with slight brecciation hosting disseminated to blebby pyrite and galena.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
1.86	29.63	27.77	VOL	VF	Medium to dark grey volcanic porphyry. Patchy moderate oxidation throughout with moderate to strong oxidation along fracture surfaces. Minor light grey (phyllic?) envelopes around sporadic quartz/carbonate +/- pyrite veinlets. Hosts disseminated pyrite throughout and an abundance of heavily oxidized pyrite stringers. Interval is very broken up and rubbly.							
						MD	GY	PA	OXI	3I	Py	1

						DK	GY		OXI	4I		
29.63	39.79	10.16	VEN	VF	Pervasively strong to intensely oxidized medium to dark grey volcanic porphyry. Oxidations obscures almost all rock textures. Hosts disseminated pyrite throughout and heavily oxidized pyrite stringers. Interval is very broken up and rubbly.							
								RB	OXI	4I	Py	0.1
									OXI	5I		
39.79	46.14	6.35	VOL	VF	Light to medium grey/green volcanic porphyry. Patchy moderate to strong oxidation with strong oxidation along fracture surfaces. Light grey/green Phyllic(?) envelopes around the abundance of pyrite stringers throughout the interval. Also hosts disseminated pyrite. Volcanics are much more competent than previous intervals.							
						MD	GN		OXI	4I

46.14	49.07	2.93	VOL	VF	Light to medium grey/green volcanic porphyry. Patchy moderate to strong pervasive oxidation throughout with moderate to strong oxidation along fracture surfaces. Light grey/green (phyllic?) envelopes around an abundance of pyrite stringers. Hosts disseminated pyrite throughout. Contact with quartz feldspar porphyry dyke is gouge altered, intensely oxidized and mineralized.

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
KL-16-303									
	215.87	16.5	NQ2	GRD	1138.9	802	3.25	3.4	Weak to moderate argillic/phyllic altered granodiorite. Rock carries a 6cm quartz/carbonate vein that hosts massive pyrite, chalcopyrite, and blebby arsenopyrite. Upper selvedge of vein has a quartz/carbonate vein along it.
	218.63	15.5	NQ2	GRD	879.5	582.6	2.67	3.0	Weakly phyllic altered granodiorite carrying a 1.5cm quartz vein that hosts a large amount of blebby pyrite. Disseminated arsenopyrite is found along the selvedges of the pyrite vein.
	227.69	16.6	NQ2	GRD	969.2	641.6	2.75	3.0	Smokey quartz vein (~1cm), enveloped by weak smokey quartz breccia halo. Surrounded by a weak to moderately quartz flooding. Vein hosts semi-massive blebby pyrite and blebby arsenopyrite, and surrounding halo hosts disseminated pyrite.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
0.00	5.18	5.18	OVB	MG	Overburden.							
						MD	BN					
5.18	24.63	19.45	GRD	MG	Extremely rubbly, strongly pervasively oxidized, granodiorite. Appears to be weak to moderately phyllic altered with patchy argillic alteration. Oxidation obscures most rock textures making it difficult to determine.							
						DK	OR		PHC	3I		
						MD	OR	RB	OXI	4I		
						MD	BN		PHC	2I		
						MD	GY		ARG	3I		
24.63	60.20	35.57	GRD	MG	Patchy moderately oxidized, weak to moderately silicified moderate to strongly phyllic altered granodiorite. Hosts disseminated pyrite throughout, multiple zones of pyrite stringers and gouge. Interval has large rubbly patches. Core competency increases with depth. Oxidation obscures some rock textures.							
						LT	GY	PA	PHC	3I	Py	1
						MD	GN		OXI	3I		
						LT	GN					
						MD	OR					
60.20	111.21	51.01	GRD	MG	Alternating patches of moderate to strongly phyllic altered granodiorite. Occasional minor argillic/potassic alteration patches throughout. Hosts disseminated pyrite and an abundance of quartz/pyrite veins, veinlets and stringers. Moderate oxidation along fracture surfaces.

93.80	93.94	GO	34	-	NUL	1	Oxidized gouge zone.			

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
93.94	94.50	BX	34	-	NUL	1	Grey to dark grey quartz minorly brecciating phyllic granodiorite. Pebble to cobble sized clasts. Breccia is minorly cut by white carbonate. Hosts disseminated tp blebby pyrite.			
								Py	3	BL
95.09	95.12	VN	37	75	NUL	1	Smoky quartz vein hosting disseminated pyrite. Quartz is minorly brecciated by white carbonate.			
								Py	3	DI
95.93	96.00	BX	34	-	NUL	1	White carbonate brecciating phyllic granodiorite.			
98.82	104.48	VN	37	20	NUL	6	6 shallow dipping quartz veins and veinlets (ranging from 1cm to 0.2cm). Quartz veins and veinlets host blebby pyrite throughout.			
								Py	60	BL
100.10	100.19	BX	34	-	NUL	1	Weakly brecciated smokey quartz/carbonate/phyllic altered granodiorite. Hosts trace disseminated pyrite along smokey quartz breccia.			
								Py	0.1	DI
106.49	106.62	VN	37	10	NUL	1	Two shallow dipping quartz (10*TCA) veins hosting blebby to disseminated pyrite. Slight gouge alteratoin present in second vein.			
								Py	5	BL
								Py	5	DI
108.28	108.31	VT	37	20	NUL	1	shallow dipping quartz vein hosting blebby pyrite throughout. Vein ends at a smokey quartz veinlet that runs perpendicular to core.			
								Py	80	BL
109.27	109.70	VT	37	10	NUL	1	Shallow dipping quartz veinlet crosscutting moderately phyllic altered granodiorite. Vein hosts disseminated to slightly blebby pyrite, and small pyrite stringers eminate from the veinlet.			
								Py	1	DI
								Py	1	BL
109.92	110.07	ST		40	NUL	2	Two pyrite stringers at 40 and 60*TCA that intersect eachother within a moderately argillic altered granodiorite with waek overprinting. Quartz stringers host blebby pyrite. (~0.2cm each).			

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
								Py	70	BL
112.26	112.71	VN	37	10	NUL	1	Quartz vein crosscutting weakly argillic/potassic altered granodiorite that has been weakly oxidized. Quartz vein hosts disseminated blebs of pyrite.			
								Py	2	BL
114.70	114.91	VB	37	-	NUL	1	Quartz flooded granodiorite that has been brecciated by carbonate veining. Breccia vein hosts disseminated pyrite. Breccia is moderaetly oxidized.			
								Py	1	DI

						DK	BK		OXI	2I		

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
51.85	52.98	1.13	VOL	FG	Light grey/green moderate sericite alteration envelope hosting disseminated to blebby pyrite. Envelope has rubbly patches.							
						LT	GN	RB				
						LT	GY	EN	SER	3I	Py	2
52.98	56.54	3.56	VOL	FG	Black fine grained volcanic (Mount Nansen). Weak to moderate oxidization along fracture surfaces.							
						MD	OR		OXI	3I		
						DK	BK		OXI	2I		
56.54	57.48	0.94	VOL	FG	Light grey/green sericite(??) alteration envelope around three 1-3cm polymetallic quartz/carbonate/sulphide veins. Envelope also host multiple minor quartz/carbonate veins. Weak to moderate oxidation along fracture surfaces.							
						LT	GY	EN	SER	3I		
						LT	GN		OXI	3I		
									OXI	2I		
57.48	69.00	11.52	VOL	FG	Black fine grained volcanic (Mount Nansen). Weak to moderate oxidization along fracture surfaces.							
						MD	OR		OXI	3I		
						DK	BK		OXI	2I		
69.00	70.91	1.91	VOL	FG	Light grey to light green advanced argillic(?) alteration envelope surrounding a few minor quartz/carbonate/sulphide veins and veinlets.							
						LT	GY	EN	ARG	3I		
70.91	75.32	4.41	VOL	FG	Black fine grained volcanic (Mount Nansen). Weak to moderate oxidization along fracture surfaces.							
						MD	OR		OXI	3I		
						DK	BK		OXI	2I		
75.32	80.03	4.71	VOL	FG	Black fine grained Mount Nansen volcanics. Occasional weak to trace oxidation along fracture surfaces. ~1 white carbonate vein per 3 meters.							
						MD	OR		OXI	3I		
						DK	BK		OXI	2I		
80.03	80.68	0.65	VOL	FG	Appears to be a silicified sericite (grey) envelope surrounding a polymetallic quartz/carbonate/sulphide vein breccia. Sericite alteration transitions to advanced argillic (light grey) alteration distally from veining.							
						MD	GY					

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
						LT	GY	EN				
80.68	85.53	4.85	VOL	FG	Black fine grained Mount Nansen volcanics. Occasional weak to trace oxidation along fracture surfaces. ~1 white carbonate vein per 3 meters.							
						MD	OR		OXI	3I		
						DK	BK		OXI	2I		
85.53	86.12	0.59	VOL	FG	Oxidized, partially gouge altered and very rubbly quartz/carbonate breccia hosting pyrite in a minor sericite/argillic alteration envelope.							
						MD	GY	EN	SER	3I		
						MD	OR		OXI	3I		
						LT	GY	RB	ARG	3I	Py	1
86.12	91.13	5.01	VOL	FG	Black fine grained Mount Nansen volcanics. Occasional weak to trace oxidation along fracture surfaces. ~1 white carbonate vein per 3 meters.							
						MD	OR		OXI	3I		
						DK	BK		OXI	2I		
91.13	91.55	0.42	VOL	FG	Oxidized light grey argillic alteration envelope around a banded quartz/carbonate vein.							
						MD	OR		ARG	3I		
						LT	GY	EN	OXI	3I		
91.55	93.77	2.22	VOL	FG	Black fine grained Mount Nansen volcanics. Occasional weak to trace oxidation along fracture surfaces. ~1 white carbonate vein per 3 meters.							
						MD	OR		OXI	3I		
						DK	BK		OXI	2I		
93.77	94.50	0.73	VOL	FG	Oxidized light grey argillic alteration envelope around two 1-2cm irregularly banded quartz/carbonate veins							
						MD	OR	EN	ARG	3I		
						LT	GY		OXI	3I		
94.50	102.70	8.20	VOL	FG	Black fine grained Mount Nansen volcanics. Moderate oxidation along fracture surfaces. ~1 white carbonate vein per 3 meters.							
						MD	OR		OXI	3I		
						DK	BK		OXI	2I		
102.70	104.81	2.11	VOL	FG	Oxidized, gouge altered and rubbly zone of patchy advanced argillic alteration. Hosts large grey quartz/white carbonate vein at the end of the interval.							
						MD	OR	PA	ARG	3I		
						MD	GY					
						LT	GY	RB	OXI	3I		

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
104.81	106.50	1.69	VOL	FG	Black fine grained Mount Nansen volcanics. Occasional weak to trace oxidation along fracture surfaces. ~1 white carbonate vein per 3 meters.							
						MD	OR		OXI	3I		
						DK	BK		OXI	2I		
106.50	107.31	0.81	VOL	FG	Light grey advanced argillic alteration halo at upper dyke contact. Minor amounts of sericite alteration. Hosts a 3cm banded polymetallic quartz/carbonate/sulphide vein.							
						MD	GY		SER	2I		
						LT	GY		ARG	3I		
107.31	129.29	21.98	QFP	FG	Light grey/green to medium grey/green quartz feldspar porphyry dyke. Color darkens gradually with depth. Trace to weak oxidation along fractures.							
						MD	GY					
						MD	GN					
						LT	GY	PO	OXI	2I		
						LT	GN

KL-16-307									
	17.37	12	HQ	GRD	1001.3	628.9	2.68	2.7	A mottled and patchy zone of weakly silicified granodiorite. Interval displayspervasive goethite and limonite mineralization throughout. Patches of prophylitic/argillic altered granodiorite remain that are relatively unoxidized. Hosts unmineralized quartz stringers that display oxidation.
	40.28	17.5	HQ	GRD	1514.5	969.7	2.78	2.8	Propylitic/phyllic altered granodiorite hosting major carbonate veining in a net texture.
	41.31	19	HQ	GRD	1600	1023	2.7	2.8	Propylitic/phyllic altered granodiorite hosting quartz veining, brecciation, and major carbonate vein intrusion.
	49.18	14	HQ	QFP	1086.8	656.7	2.49	2.5	Highly oxidized smokey quartz vein hosting disseminated pyrite. Vein found within silicified quartz feldspar porphyry dyke that has undergone silicification.

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
	58.87	13	HQ	GRD	1219.5	789.8	3.01	2.8	Multiphase quartz carbonate vein. Vein consists of a smokey quartz vein enveloping and brecciating a zoned carbonate vein. The upper selvedge of this vein zone consists of a smokey quartz breccia that contains cabonate, galena, and sphalerite clasts. This leads into smokey quartz that has banded chalcedoney along both ends of the pulse. The smokey quartz/chalcedoney banding brecciates the the carbonate veining. Blebby pyrite, galena, and sphalerite are found along the lower selvedge of the vein, distal to smokey quartz/carbonate brecciation.
	75.39	5	HQ	GRD	641.9	503.2	4.12	4.6	BYG Vein found within argillic/phyllic altered granodiorite. Vein hosts massive galena, and zoned black to honey brown sphalerite, along with blebby arseno pyrite and pyrite. Quartz carbonate and carbonate stringers are founnd throughout vein and along the upper selvedge of the zone.

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
	108.24	15	HQ	GRD	1331.2	878	2.85	2.9	Part of a 20cm multiphase quartz/smokey quartz vein. An 8cm Smokey quartz within the entire vein zone hosts semi-massive blebby zoned honey brown sphalerite, and blebby galena, arsenopyrite, pyrite. The upper selvedge of the vein zone is highly gouge altered and brecciated smokey quartz, leading into bands of smokey quartz, phyllic granodiorite, and quartz that weakly brecciate eachother in upper selvedge of the main mineralized injection. This zone is weakly mineralized, but hosts disseminated pyrite and galena throughout the breccia.
	109.11	20	HQ	GRD	1801	1169.3	2.89	2.9	5cm quartz vein crosscutting moderate to strongly phyllic altered granodiorite. Vein hosts blebby pyrite, galena, honey brown sphalerite, arsenopyrite, and chalcopyrite.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
0.50	3.81	3.31	OVB	--	Heavily oxidized and weathered overburden. Contains mix of organic materials (soils) as well as heavily broken down grandorite.

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
12.58	12.63	VN	37	80	NUL	1	Quartz/carbonate vein found within a halo of propylitic/argillic altered granodiorite. Quartz carbonate vein hosts disseminated blebby pyrite and galena, as well as brown sphalerite found within quartz that is proximal to ankerite (carbonate). Ankerite veining displays net textures, as well as multiple quartz brecciations (quartz clasts ranging from sand to pebble size found within carbonate veining).			
								Gn	2	BL
								Py	1	BL
								Sp	0.5	BL
13.04	13.05	VT	37	60	NUL	1	Quartz carbonate veinlet (0.6cm) cross cutting argillic/propylitic altered granodiorite. Veinlet hosts minor disseminated galena. Vein is situated near the upper selvedge of a small quartz feldspar porphyry dyke (2.5cm away)			
								Gn	1	DI
13.07	13.14	DY	37	70	NUL	1	Light green quartz feldspar porphyry dyke. Dyke displays moderate oxidation within micro cracks of the dyke.			
16.02	16.08	VN	37	85	NUL	2	two oxidized quartz/carbonate veins. First vein is a 1cm quartz/carbonate vein hosting blebby galena along its upper selvedge and disseminated to blebby pyrite along its lower selvedge. The second vein is a 1cm vein of predominantly carbonate, hosting blebby pyrite. Both veins have goethite stringers emanating from veins. Veins are separated by 2.5cm of phyllic altered granodiorite.			
								Gn	4	BL
								Py	2	BL
17.29	17.49	BX	34	-	NUL	1	A mottled and patchy zone of weakly silicified granodiorite. Interval displays pervasive goethite and limonite mineralization throughout. Patches of prophylitic/argillic altered granodiorite remain that are relatively unoxidized. Hosts unmineralized quartz stringers that display oxidation.			
								Li	5	IN
								Go	50	IN

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
27.49	27.50	VT	37	85	NUL	1	Oxidized white quartz veinlet hosting minor disseminated pyrite, and sphalerite. Veinlet found within a moderately phyllic altered granodiorite halo.			
								Py	1	DI
								Sp	1	DI
37.70	37.93	VT	37	50	NUL	3	Three quartz carbonate veinlets cross cutting highly oxidied argillic/phyllic granodiorite. Veinlets host disseaminted pyrite and sphalerite.			
								Sp	1	DI
								Py	1	DI
39.15	39.22	YV		70	NUL	1	6.5cm quartz vein cross cutting weak to moderately phyllic altered granodiorite. Quartz vein has been almost entirely replaced and hosts massive galena, massive black to honey brown sphalerite (slightly zoned), and an abundance of disseminated to blebby pyrite. Carbonate veinlets and stringers are found running nearly perpendicular to mineralization, and weakly brecciate sphalerite, galena and pyrite mineralization in the immediate proximity to the veinlets and stringers.			
								Py	5	BL
								Sp	25	MA
								Gn	60	MA
39.43	41.51	BN		-	NUL	1	Large interval of Phyllic/propylitic altered granodiorite with massive carbonate veins, veinlets, and stringers interconnecting in a net texture over entire interval. Net of carbonate veins is due to multiphase precipitation, observed by multiple carbonate veins and veinlets forming pervasively over top of previous carbonate vein injections. Within this interval, multipe quartz vein injections also appear. These veins have blebby sphalerite (black and honey brown), galena, and pyrite in association with the general area of the veins. This mineralization also overlaps with carbonate veining so it is difficult to distinguish a true association, but larger mineralization occurs in areas of both quartz and carbonate injection than carbonate veining on its own.			
								Gn	1	BL
								Sp	1	BL

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
								Py	1	DI
39.71	39.73	BX	34	75	NUL	1	Smokey quartz breccia containing clasts of quartz, and phylilc altered granodiorite. Trace disseminated pyrite found throughout.			
								Py	0.1	DI
41.30	41.37	BX	34	75	NUL	1	Fine grained smokey quartz breccia. Has blebs of galena, and disseminated pyrite throughout. Clasts include quartz and phyllic altered granodiorite, and range in size from sand to pebble.			
								Py	1	DI
								Gn	1	BL
48.64	48.95	VN	37	50	NUL	1	Large 30 cm flooded quartz vein that has pervasively replaced host oxidized argillic altered granodiorite. Vein is weakly brecciated along its lower selvedge by carbonate veining. Flooded quartz vein hosts a 2cm vein of blebby pyrite. Vein has undergone oxidation and has slight pitting.			
								Py	5	BL
49.18	49.25	VN	37	45	NUL	1	Highly oxidized smokey quartz vein hosting disseminated pyrite.			
								Py	3	DI
49.64	49.96	VN	37	-	NUL	1	Quartz vein hosting disseminated pyrite. Found within an interval of highly oxidized argillic granodiorite. Upper selvedge displays slight gouge alteration due to it lying on the edge of a joint.			
								Py	1	DI
56.46	56.50	VN	37	45	NUL	1	Moderately phyllic altered granodiorite carrying a quartz carbonate vein. Vein hosts blebby galena, and blebby zoned honey brown sphalerite proximal to vein.			
								Gn	25	BL
								Sp	5	BL
57.63	59.56	VT	37	50	NUL	5	5 quartz carbonate veinlets hosting disseminated to sphalerite, pyrite, hematite.			
								Py	1	DI
								Sp	1	DI
								Gn	1	DI

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
58.67	58.69	VN	37	65	NUL	1	1cm quartz carbonate vein crosscutting moderate propylitic/phyllic altered granodiorite. Vein hosts disseminated to blebby honey brown sphalerite, galena and pyrite, with trace moderate oxidation occuring around sulfide grains. Vein inersects another quartz carbonate vein at 70*TCA aong its upper selvedge which hosts disseminated to blebby honey brown sphalerite, pyrite, and minor galena			
								Py	10	BL
								Gn	20	BL
								Sp	10	BL
58.87	58.96	VN	37	65	NUL	1	Multiphase quartz carbonate vein. Vein consists of a smokey quartz vein enveloping and brecciating a zoned carbonate vein. The upper selvedge of this vein zone consists of a smokey quartz breccia that contains cabonate, galena, and sphalerite clasts. This leads into smokey quartz that has banded chalcedoney along both ends of the pulse. The smokey quartz/chalcedoney banding brecciates the the carbonate veining. Blebby pyrite, galena, and sphalerite are found along the lower selvedge of the vein, distal to smokey quartz/carbonate brecciation.			
								Ch	5	BN
								Sp	2	BL
								Gn	3	BL
								Py	4	BL
59.04	59.06	VN	37	60	NUL	1	Small quartz carbonate veinlet cross cutting moderately propylitic/phyllic altered granodiorite. A banded smokey quartz/chalcedony veinlet runs directly along the upper selvedge and is enveloped by the original quartz carbonate veinlet, and eventually transects the vein along a micro fault. Smokey quartz veinlet is weakly brecciated, carrying small sand sized clasts of carboante material. No present mineralization.			
64.84	69.75	VT	37	60	NUL	6	6 quartz carbonate ranging from 0.2 to 0.6cm cross cutting argillic to weak to moderately argillic/phyllic altered granodiorite. Veinlets host disseminated to slightly blebby galena, brown sphalerite, and pyrite.

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
11.36	17.06	VN	37	10	NUL	1	Argillic/phyllic altered granodiorite with a 6m quartz vein zone intersecting at 7-10 *TCA. Quartz vein displays strong oxidation in patches, which has begun to pit out both sulfide mineralization and fractures and joints. Flooded quartz zone contains crosscutting veinlets and stringers of quartz and carbonate. Vein zone carries sporadic mineralization, as well as smokey quartz brecciation. Quartz vein zone contains patches of phyllic granodiorite that have no been entirely replaced by quartz, but are patchy with flooded quartz. Disseminated to disseminated blebs of pyrite can be found throughout, in concentractions along quartz/carbonate veining that overprints the initial quartz vein stage. Minor blebs of galena can be found along the lower selvedge of the vein, distal to a gradational quartz feldspar porphyry dyke contact.			
								Gn	1	BL
								Py	2	BL
12.34	13.37	VN	37	10	NUL	1	Oxidation along massive quartz vein structure. Oxidation and weathering have created a pitted texture along the length of this interval along joint and fracture planes, as well as areas of past mineralization. Sulfides have been noticeably weathered and rotted away, leaving behind pitted cubic and mineral shapes. Minor blebby pyrite remains.			
								Py	3	BL
14.45	14.72	VB	37	-	NUL	1	Black smokey quartz pervasively brecciating quartz vein. Breccia contains small pebble sized quartz clasts, and hosts blebby pyrite. Fractures eminating from breccia have smokey quartz and pyrite mineralization persent. Patchy carbonate injection overprints and weakly brecciates a portion of the main breccia.			
								Py	7	BL
15.36	15.52	VN	37	15	NUL	1	Shallow dipping quartz carbonate vein intruding main quartz vein. Hosts diseminated pyrite throughout.			
								Py	10	DI

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
17.06	17.17	DY	37	-	NUL	1	Dyke contact with weak gouge alteration. Hosts minor blebs of galena. Along contact with massive quartz vein..			
								Gn	1	BL
25.07	25.54	GO	34	-	NUL	1	Moderately gouge altered granodiorite with the remnants of a quartz vein present.			
30.04	30.18	VN	37	15	NUL	1	Weakly argillic/phyllic altered granodiorite carrying a quartz vein. Vein hosts blebby pyrite.			
31.42	31.64	VN	37	10	NUL	1	Quartz vein cross cutting weak argillic/phyllic altered granodiorite. Vein hosts blebby pyrite, and disseminated tourmaline.			
								To	0.5	BL
								Py	3	BL
47.68	47.85	VN	37	-	NUL	1	Quartz flooded granodiorite hosting blebby pyrite and tourmaline			
								To	5	BL
								Py	3	BL
59.75	60.05	VN	37	-	NUL	1	Strongly gouge altered quartz vein. Hosts dissminated pyrite and tourmaline throughout. Trace oxidation present along upper selvedge.			
								Py	1	DI
								To	1	DI
60.50	61.27	DY	37	-	NUL	1	Strongly gouge altered quartz feldspar dyke conact. Carries broken down quartz veins with no present mineralization.			
61.96	62.16	VB	37	-	NUL	1	Smokey quartz pervasively intruding brown silicified quartz feldspar porphyry dyke. Smokey quartz is weakly brecciated, but moderately gouge altered so clasts and textures are difficult to confidently identify. Veinlet eminates from smokey quartz.			
69.75	73.80	VB	37	40	NUL	10	Severely faulted and gouge altered granodiorite displaying trace phyllic alteration. Gouge altered granodiorite contains 10 broken down smokey quartz veins, veinlets, and stringers at ~40*TCA. Smokey quartz veins host trace disseminated to slightly blebby galena, sphalerite, and pyrite

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
6.83	7.13	VB	37	30	NUL	1	Smokey quartz carbonate breccia vein cross cutting highly oxidized and weathered granodiorite. Smokey quartz brecciates carbonate clasts, moderately oxidized argillic/phyllic granodiorite, and clay clasts. Minor disseminated pyrite is found throughout. Carbonate vein injections are seen along the upper selvedge of the breccia.			
								Py	1	DI
8.89	9.17	GO	34	-	NUL	1	Severely gouge altered granodiorite. Can be squished when touched, and is almost entirely broken down to near rubble. No mineralization present			
9.19	9.53	VB	37	50	NUL	1	Smokey quartz breccia pervasively brecciating moderately phyllic altered granodiorite. Black smokey quartz breccia hosts carbonate veins crosscutting at 55* TCA. Breccia envelopes clasts of moderate to strongly phyllic altered granodiorite, carbonates, and quartz grains. Quartz veins sporadically crosscut smokey quartz breccia, and host blebby galena, sphalerite, and pyrite.

KL-16-311									
	22.65	10.5	NQ2	GRD	590.9	375.9	2.65	2.8	Two 3.5cm quartz (both smokey quartz and white quartz) carbonate/black breccia veins seperated by 3cm of phyllic altered granodiorite. Upper black breccia quartz vein is found in close proximity to moderately gouge altered phyllic granodiorite along its upper selvedge. Vein also displays trace to weak brecciation, and hosts trace disseminated pyrite. The second vein is a white quartz/carbonate/black breccia vein hosting blebby pyrite, galena, and zoned honey brown sphalerite. Black breccia vein is brecciating a phase of smokey quartz, which is found along the lower selvedge of the remaining white quartz vein. Breccia contains white quartz, carbonate, and phyllic granodiorite clasts along with disseminated pyrite and galena.
	29.54	22	NQ2	GRD	1233.2	814.3	2.64	2.9	Black breccia/quartz vein. Black breccia brecciates smokey quartz and propylitic altered granodiorite, with clasts ranging from sand to cobble sized. Breccia hosts disseminated pyrite. Found within propylitic granodiorite.

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
	39.71	12	NQ2	GRD	666.1	426.7	2.61	2.8	Quartz flooded argillic/propylitic granodioriet hosting both black breccia and a small quartz vein. Quartz vein is found directly along the lower selvedge of a light green quartz feldspar porphyry dyke, hosting blebby galena, zoned honey brown sphalerite, and pyrite. Proximal to the vein, a black breccia is found with clasts of propylitic granodiorite, quartz, carbonate, and pyrite.
	54.51	23.5	NQ2	GRD	1296.7	830.9	2.6	2.8	propylitic altered granodiorite being crosscut by both smokey quartz, and black breccia. Black breccia is found with clasts of propylitic granodiorite, quartz, yellow carbonate, and minor disseminated pyrite. This breccia is flooded by a quartz vein, carrying blebby pyrite.
	67.95	8	NQ2	GRD	538.5	368.5	3.17	3.2	Quartz carbonate vein found within argillic/phyllic altered granodiorite. Vein hosts blebby galena, and honey brown sphalerite. Tan ankerite is found in stringers surrounding the vein, along with minor disseminated pyrite. Found in weakly silica flooded propylitic altered granodiorite.

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
	71.11	9	NQ2	GRD	856	658.7	4.48	4.3	11cm Klaza Vein. Weak to moderate argillic/phyllic altered granodiorite carrying a significant polymetallic vein. Quartz vein hosts massive pyrite, sphalerite (blackjack, and honey brown), and galena.

39.62	47.85	8.23	GRD	MG	Weak to moderately argillic altered granodiorite with weak to moderate propylitic overprinting. Contains an interval of weakly propylitic altered granodiorite. Argillic/propylitic granodiorite hosts quartz carbonate veins bearing sulfides throughout. Along the outer edge of previous dyke contact, quartz brecciation occurs.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
47.85	57.47	9.62	GRD	MG	Unaltered granodiorite to trace propylitic/potassic altered granodiorite. Interval contains a halo that transitons between argillic, propylitic and phyllic granodiorite. Within this halo a quartz/smokey quartz breccia vein is found, along with sulfide stringers and veinlets. Unaltered granodiorite carries sporadic dark magnetic xenoliths.

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
9.07	9.45	BX	34	-	NUL	1	Structure that resembles a heavily oxidized and weathered breccia. Breccia carries clasts ranging from pebble to cobble in size, and hosts disseminated pyrite throughout.			
								Py	3	DI
19.82	20.04	VB	37	60	NUL	1	Moderate to strongly silicified propylitic granodiorite hosting two quartz/carbonate veins. Breccia vein carries two main mineralized quartz carbonate veins at 60*TCA, which hosts blebby zoned honey brown sphalerite. Between two veins and along the upper selvedge of the initial vein, flooded quartz brecciates tan carbonate, blebby sphalerite and galena, and argillic granodiorite clasts.			
								Py	2	DI
								Gn	0.5	DI
								Sp	9	BL
22.57	22.59	VT	37	85	NUL	1	Smokey quatz/black breccia veinlet alongside gouge altered phyllic granodiorite (found along lower selvedge). Veinlets host disseminated pyrite.			
								Py	0.5	DI
22.65	22.75	VN	37	65	NUL	2	Two 3.5cm quartz (both smokey quartz and white quartz) carbonate/black breccia veins seperated by 3cm of phyllic altered granodiorite. Upper black breccia quartz vein is found in close proximity to moderately gouge altered phyllic granodiorite along its upper selvedge. Vein also displays trace to weak brecciation, and hosts trace disseminated pyrite. The second vein is a white quartz/carbonate/black breccia vein hosting blebby pyrite, galena, and zoned honey brown sphalerite. Black breccia vein is brecciating a phase of smokey quartz, which is found along the lower selvedge of the remaining white quartz vein. Breccia contains white quartz, carbonate, and phyllic granodiorite clasts along with disseminated pyrite and galena.			
								Py	3	DI
								Gn	1	DI

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
								Sp	1	BL
27.52	27.70	BX	34	60	NUL	3	Three black breccia veins (1, 1, 5cm) crosscutting weakly argillic altered granodiorite with weak to moderate overprinting. Veins brecciate surrounding phyllic granodiorite, and also contain clasts of quartz, argillic granodiorite grains, and blebby pyrite. Clast sizes range from sand to cobble.			
27.74	28.00	BX	34	70	NUL	1	Argillic/phyllic altered granodiorite carrying a black breccia vein. Vein brecciates smokey quartz, phyllic granodiorite, tan carbonate, and minor white quartz. Breccia hosts trace disseminated pyrite throughout			
								Py	1	DI
29.62	29.67	BX	34	65	NUL	1	Black breccia/quartz vein. Black breccia brecciates smokey quartz and propylitic altered granodiorite, with clasts ranging from sand to cobble sized. Breccia hosts disseminated pyrite.			
								Py	5	DI
29.98	30.03	BV		80	NUL	1	Quartz flooded propylitic altered granodiorite. Vein hosts blebby galena, arsenopyrite, disseminated pyrite. Vein displays net texture between sulfide grains. Vein zone is found along the upper selvedge of a light green quartz feldspar porphyry contact.			
								Py	3	DI
								As	12	BL
								Gn	15	BL
39.73	39.85	BV		65	NUL	2	Quartz flooded argillic/propylitic granodiorite hosting both black breccia and a small quartz vein. Quartz vein is found directly along the lower selvedge of a light green quartz feldspar porphyry dyke, hosting blebby galena, zoned honey brown sphalerite, and pyrite. Proximal to the vein, a black breccia is found with clasts of propylitic granodiorite, quartz, carbonate, and pyrite.			
								Py	3	DI

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
18.71	19.17	VN	37	55	NUL	1	Highly silicified and quartz flooded zone of argillic altered granodiorite. Zone is moderately oxidized, with sporadic weak gouge alteration. Minor goethite present.			
								Go	1	DI
32.25	32.61	VN	37	15	NUL	1	1-3cm shallow carbonate vein. Vein crosscuts phyllic granodiorite. Displays very vuggy texture along the length of the vein, which displays moderate to strong oxidation within. This vein increases in width to 3cm along the lower selvedge of the vein, and hosts disseminated to blebby pyrite, and galena throughout.			
								Gn	2	BL
								Py	8	DI
34.70	34.72	VN	37	85	NUL	1	2cm Smokey quartz vein crosscutting silicified and quartz flooded phyllic granodiorite. Vein hosts disseminated pyrite, aresenopyrite, and honey brown sphalerite.			
								Sp	3	DI
								Py	4	DI
								As	3	DI
34.74	34.86	VN	37	50	NUL	2	12cm quartz flooded phyllic granodiorite zone hosting a flooded quartz carbonate vein . Vein is spatially disseminated, and hosts blebby pyrite, honey brown to black sphalerite, and galena.			
								Sp	5	BL
								Gn	4	BL
								Py	9	BL
36.47	36.68	VN	37	10	NUL	1	Shallow dipping 1cm gouge altered vein carrying disseminated pyrite.			
44.58	44.62	VN	37	70	NUL	1	4cm Quartz vein found along lower selvedge of quartz feldspar porphyry dyke contact. Vein hosts disseminated pyrite, and galena.			
								Gn	0.1	DI
								Py	1	DI
46.08	46.15	VN	37	85	NUL	1	7cm Banded quartz/smokey quartz/carbonate vein crosscutting phyllic altered granodiorite. Vein hosts disseminated pyrite, and sphalerite.			

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
								Py	1	DI
								Sp	0.5	DI
52.66	52.84	BX	34	65	NUL	1	8cm Black breccia found crosscutting brown quartz feldspar porphyry dyke. Breccia has carbonate veinlets along both selvedges of the black breccia. Hosts clasts of pyrite mineralized quartz, carboante, and phyllic grandiorite. Blebby sphalerite found along carbonate veins of upper breccia selvedge.			
								Py	1	DI
								Sp	2	BL
53.43	53.57	BX	34	70	NUL	1	14cm Black breccia crosscutting brown quartz feldspar porphyry dyke. Carries clasts of carbonate, quartz, argillic/propylitic granodiorite, and disseminated pyrite.			
								Py	1	DI
55.37	55.52	BV		80	NUL	1	4.5cm Black breccia crosscutting argillic/phyllic granodiorite. Black breccia is distal to 9cm of brecciated quartz veining, which hosts blebby zoned honey brown sphalerite, pyrite. Quartz vein on upper selvedge of black breccia found hosting blebby sphalerite, and dissemianted pyrite and galena.			
								Gn	1	DI
								Py	3	DI
								Sp	6	BL
55.45	55.72	BV		-	NUL	1	5cm black breccia carrying quartz, carbonate, and granodiorite clasts. Breccia is found along the upper selvedge of a flooded quartz zone that carries an 11cm smokey quarz vein. Vein hosts disseminated pyrite.			
								Py	3	DI
55.76	55.79	VN	37	65	NUL	1	4cm quartz vein hosting blebby galena, honey brown sphalerite, and pyrite.			
								Sp	20	BL
								Gn	20	BL
								Py	7	BL
55.85	55.91	VN	37	50	NUL	1	6cm quartz vein crosscutting gouge altered phylolic granodiorite. Vein hosts semi massive blebby galena, blebby honey brown and blackjack sphalerite, and blebby pyrite. Found alongside gouge altered granodiorite along upper selvedge. \

Hole Name

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
KL-16-315									
	75.15	13.1	HQ	GRD	1305.8	1000	3.2	4.3	Grey to dark grey quartz vein hosting disseminated to blebby pyrite and disseminated arsenopyrite. Vein is brecciated minorly by cream carbonate.
	83.88	8.5	HQ	GRD	916.5	650	3.46	3.4	10 cm massive sphalerite vein hosting blebby galena and pyrite stringers. Semi massive to blebby arsenopyrite also present. Honey brown sphalerite.
	158.96	12	HQ	GRD	1342.2	951.8	3.59	3.4	Massive pyrite vein. Crackled texture hosting trace blebby chalcopyrite.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
3.60	17.00	13.40	GRD	MG	Pervasively oxidize, gouge altered and rubbly moderate phyllic altered granodiorite with patchy argillic alteration. Goethite staining along some fracture surfaces. Hosts multiple quartz/carbonate/sulphide veins.							
						MD	OR	RB	OXI	4I	Py	0.1
						LT	GN	PA	PHC	3I		
						LT	OR	FR	OXI	3I	Go	0.1
									ARG	3I		
17.00	34.30	17.30	GRD	MG	Moderate phyllic altered granodiorite with moderate oxidation along fracture surfaces. Has patchy weak argillic alteration. Hosts multiple polymetallic quartz/carbonate/sulphide veins and disseminated pyrite. Vein frequency and oxidation both decrease with depth.							
						MD	OR		OXI	3I		
						LT	GN	FR	PHC	3I	Py	0.1
34.30	38.44	4.14	GRD	MG	Possible fault zone of significantly gouge altered and rubbly moderately phyllic altered granodiorite. Hosts disseminated pyrite. Patchy pervasive oxidation throughout.							
						MD	OR					
						LT	GY	RB	PHC	3I	Py	0.1
						LT	GN	PA	OXI	3I		
38.44	46.27	7.83	GRD	MG	Possible fault zone. Fractured and rubbly weakly propyllitic and potassic altered granodiorite with multiple patches of weak argillic and partial gouge alteration. Granodiorite is not competent for the majority of the interval.							
						MD	GY	PA	ARG	2I		
						MD	PK	FR	POT	2I		
						DK	GN	RB	PRO	2I		
46.27	51.25	4.98	GRD	MG	Weakly silicified weakly propyllitic and potassic altered granodiorite altered granodiorite.							
						MD	PK		SIL	2I		
						MD	GY		PRO	2I		
						DK	GN		POT	2I		
51.25	54.10	2.85	GRD	MG	Interval starts off as ~70cm of strongly potassic altered granodiorite that transitions into a moderate phyllic envelope surrounding two polymetallic quartz/carbonate/sulphide veins.							

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
						MD	GN		POT	4I		
						MD	PK					
						LT	GN	EN	PHC	3I		
54.10	74.42	20.32	GRD	MG	Weakly silicified weakly propyllitic and potassic altered granodiorite altered granodiorite.

KL-16-316									
	105	15.5	HQ	GRD	1305.1	837.5	2.7	2.8	20cm black breccia crosscutting argillic/propylitic granodiorite. Breccia carries sand to large cobble sized clasts of quartz, propylitic/potassic altered granodiorite, chlorite, carbonate, and disseminated to blebby pyrite.
	106.32	15.5	HQ	GRD	1390.8	890.1	2.88	2.8	Part one of a 38cm breccia vein zone. Major brecciation occurs along the upper zone of the vein, carrying cobble sized clasts of argillic to propylitic granodiorite. Transitions quartz/carbonate veining that hosts blebby brown sphalerite, disseminated galena, and disseminated to blebby pyrite. Brecciation still occurs distal to this venining, but in smaller sand to pebble sized clasts. Vein zone then transitions into a zone of quartz flooded ranodiorite, which carries a main vein of semi-massive to blebby pyrite, and disseminated pyrite throughout. Vein zone found within 14cm of upper quartz feldspar porphyry dyke.

	127.08	16	HQ	GRD	1521.2	1006.2	3.05	3.0	Smokey quartz/carbonate vein hosting semi-massive blebs of honey brown sphalerite (slight zoning apparent), disseminated galena, and disseminated to slightly blebby pyrite. Found within propylitic altered granodiorite. Piece also contains smokey quartz/carbonate/black breccia vein carrying clasts of propylitic granodiorite, quartz, and carbonte clasts ranging from sand to cobble in size. Quartz/carbonate veining occurs along upper selvedge of vein, with large blebby pyrite found distal to carbonate and quartz veining.

100.00	101.48	VT	37	70	NUL	5	5 quartz to quartz carbonate veinlets ranging from 1 to 0.3cm in size hosting disseminated pyrite, and occasional minor blebby sphalerite. Attitude ranges between 65-80*TCA			
								Py	8	DI
								Sp	1	BL
100.00	103.00	VN	37	65	NUL	1	3cm quartz carbonate vein hosting disseminated pyrite, and disseminated sphalerite.			
								Sp	3	DI
								Py	8	DI
101.24	101.39	VN	37	60	NUL	1	14.5cm smokey quartz vein crosscutting phyllic altered granodiorite. Vein weakly brecciates granodiorite, carrying pebble to cobble sized clasts in its matrix, as well as white quartz, and disseminated pyrite. At 101.34m, white quartz vein intrudes smokey quartz vein, hosting blebby pyrite, and zoned honey brown sphalerite.			
								Py	7	BL
								Sp	4	BL
								Py	2	DI
104.04	104.13	BX	34	70	NUL	1	Black breccia crosscutting phyllic granodiorite. Carries sand to small pebble sized clasts.			
105.00	105.20	BX	34	85	NUL	1	20cm black breccia crosscutting argillic/propylitic granodiorite. Breccia carries sand to large cobble sized clasts of quartz, propylitic/potassic altered granodiorite, chlorite, carbonate, and disseminated to blebby pyrite.			
								Py	0.1	BL
								Py	2	DI
106.17	106.19	VN	37	75	NUL	1	2cm black breccia vein carrying small sand sized clasts of granodiorite matrix.			

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
106.39	106.77	BV		75	NUL	1	38cm breccia vein zone. Major brecciation occurs along the upper zone of the vein, carrying cobble sized clasts of argillic to propylitic granodiorite. Transitions quartz/carbonate veining that hosts blebby brown sphalerite, disseminated galena, and disseminated to blebby pyrite. Brecciation still occurs distal to this venining, but in smaller sand to pebble sized clasts. Vein zone then transitions into a zone of quartz flooded ranodiorite, which carries a main vein of semi-massive to blebby pyrite, and disseminated pyrite throughout. Vein zone found within 14cm of upper quartz feldspar porphyry dyke.

								Sp	4	BL
								Sp	1	DI
108.08	108.14	VN	37	85	NUL	1	6.5cm quartz vein hosting massive galena, ansd blebby pyrite. Mineralization occurs proximal to veining. Found within weakly gouge altered and quartz flooded phyllic to propylitic granodiorite along the lower selvedge of a quartz feldspar porphyry dyke.			
								Py	15	BL
								Gn	75	MA
108.29	108.34	VN	37	-	NUL	1	Flooded quartz vein hosting blebby galena, and disseminated galena.			
								Py	40	BL
								Gn	2	DI
108.63	108.74	VN	37	85	NUL	1	11cm Smokey quartz to quartz vein. Vein hosts disseminated to blebby pyrite throughout, with minor amounts of disseminated sphalerite.			
								Sp	2	DI
								Py	25	BL
110.20	110.21	VN	37	70	NUL	1	Barren 1cm smokey quartz/carbonate vein within argillic to weakly phyllic granodiorite.			
110.69	110.72	BX	34	50	NUL	1	Black breccia crosscutting argillic to propylitic granodiorite. Carries clasts of blebby pyrite, and host granodiorite.			
								Py	3	BL

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
110.87	110.92	VN	37	80	NUL	1	Net texture carboante veining with no visible mineralization			
113.91	114.01	VN	37	80	NUL	1	Quartz flooded granodiorite hosting a 10cm quartz carbonate vein. Vein hosts blebby pyrite dispersed throughout, disseminated brown sphalerite, and disseminated to blebby galena.			
115.61	115.71	VN	37	75	NUL	1	Weakly silicified argillic granodiorite carrying a 10cm smokey quartz vein breccia. Smokey quartz brecciates both quartz and argillic and clay clasts. Disseminated to blebby pyrite found throughout.			
								Py	2	BL
								Py	2	DI
118.43	118.50	BX	34	-	NUL	1	Black breccia crosscutting argillic/phyllic altered granodiorite. Breccia carries clasts of quartz, carbonate, chlorite, and granodiorite in roughly pebble to cobble size.			
120.32	120.72	BX	34	60	NUL	1	Black breccia zone crosscutting propylitic altered granodiorite. Carries clasts of carbonate, granodiorite, chlorite, and pyrite ranging from sand to cobble size.			
								Py	1	DI
126.71	126.97	BX	34	80	NUL	1	Black breccia carrying large clasts of propylitic granodiorite hostind disseminated pyrite, carbonate, and argillic granodiorite.			
								Py	1	DI
127.08	127.10	VN	37	60	NUL	1	Smokey quartz/carbonate vein hosting semi-massive blebs of honey brown sphalerite (slight zoning apparent), disseminated galena, and disseminated to slightly blebby pyrite. Found within propylitic altered granodiorite.			
								Py	2	BL
								Gn	1	DI
								Sp	85	MA
								Py	1	DI
127.13	127.26	VB	37	80	NUL	1	Smokey quartz/carbonate/black breccia vein carrying clasts of propylitic granodiorite, quartz, and carbonte clasts ranging from sand to cobble in size. Quartz/carbonate veining occurs along upper selvedge of vein, with large blebby pyrite found distal to carbonate and quartz veining.			

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
								Py	30	BL
128.37	128.60	VN	37	-	NUL	2	Moderate to strongly gouge altered vein zone within argillic/trace phyllic granodiorite. Gouge altered smokey quartz veins host trace disseminated pyrite.			
136.18	136.45	VN	37	15	NUL	1	Shallow dipping clay altered vein zone carrying disseminated pyrite.			
								Py	4	DI
138.30	138.41	VN	37	-	NUL	1	Highly fractured quartz carbonate vein hosting blebby pyrite, honey brown sphalerite. Interval is highly gouge altered and found within argillic granoiorite with weak phyllic overprinting.			
								Py	25	BL
								Sp	15	BL
139.39	140.00	VN	37	5	NUL	1	Extremely shallow angle gouge altered quartz vein hosting disseminted pyrite throughout. Interval is severely gouge altered.			
								Py	6	DI
156.14	156.17	VN	37	75	NUL	1	3cm quartz carbonate vein with no mineralization			
157.29	157.40	VN	37	70	NUL	2	Smokey quartz veins hosting blebby pyrite.			
								Py	20	BL
161.58	161.67	VN	37	80	NUL	1	9cm quartz vein with a band of smokey quartz in the centre. Hosts blebby pyrite throughout.			
								Py	12	BL
163.40	163.46	VN	37	50	NUL	1	6cm banded smokey quartz/quartz carbonate vein hosting disseminated pyrite along its upper selvedges.			
								Py	4	DI
167.14	167.18	VT	37	85	NUL	1	0.5cm quartz carbonate vein hosting disseminated pyrite.			
								Py	8	DI

KL-16-317									
	18.25	22	HQ	GRD	1926	1235.9	2.81	2.8	Piece is part of the Central Klaza Vein Zone. 1.53m vein zone carrying numerous significant smokey quartz, smokey quartz/carbonate, and carbonate veins. Vein zone is carried by phyllic to argillic/phyllic altered granodiorite. Mineralization of vein zone includes blebby pyrite, brown to honey brown sphalerite (zoned), galena, disseminated arsenopyrite, and disseminated jamesonite.
	21.81	12	HQ	GRD	1257.6	873.5	3.36	3.3	Piece is part of the Central Klaza Vein Zone. This oxidized zone of smokey quartz/carbonate hosts goethite mineralization, as well as disseminated pyrite and sphalerite from before oxidation began. Smokey quartz hosting massive pyrite, galena, sphalerite, and blebby arsenopyrite. Vein displays interstitial carbonate veining. Severe oxidation (red colour) occurs along fractures.
	88.5	16	HQ	GRD	1308.7	848.3	2.62	2.8	Smokey quartz breccia vein hosting blebby galena, sphalerite, and semi massive blebby pyrite.

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
	93.72	16.5	HQ	GRD	1438	908.6	2.8	2.7	Argillic phyllic altered granodiorite with minor quartz veining and disseminated pyrite
	109.82	14.5	HQ	GRD	1174.8	733.2	2.6	2.7	Argillic propylitic altered granodiorite with trace potassic alteration.
	126.57	17	HQ	GRD	1824.9	1284.3	3.44	3.4	6cm polymetallic quartz vein hosting blebby sphalerite, galena, pyrite, and arsenopyrite. Found in lightly silica flooded propylitic altered granodiorite.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
3.37	14.32	10.95	GRD	MG	Unaltered to trace propylitic/potassic altered granodiorite with patchy zones of oxidation and weathering. Granodiorite zone carries a phyllic/propylitic halo within zone (no mineralized veins within).

14.92	14.95	VN	37	50	NUL	1	3cm smokey quartz vein hosting disseminated pyrite. Small pyrite stringer found in close proximity to vein			
								Py	8	DI
17.79	19.32	CV		55	NUL	18	Central Klaza Vein Zone. 1.53m vein zone carrying numerous significant smokey quartz, smokey quartz/carbonate, andn carbonate veins. Vein zone is carried by phyllic to argillic/phyllic altered granodiorite. From 19.00m to 19.32m vein zone displays weak to moderate pervasive oxidation. Mineralization of vein zone includes blebby pyrite, brown to honey brown sphalerite (zoned), galena, disseminated arsenopyrite, and disseminated jamesonite.

								Gn	2	BL
								As	1	DI
								Sp	5	BL
								Py	8	BL
20.46	22.04	CV	4	55	NUL	4	Central Klaza Vein Zone. Vein zone begins as clay altered granodiorite displaying scoridite alteration (yellow textures throughout). Clay zone transitions into a 37cm smokey quartz zone hosting massive galena, sphalerite, and pyrite throughout. Massive smokey quartz vein is interrupted by a highly fractured zone of smokey quartz/carbonate displaying spectacular oxidation. This oxidized zone of smokey quartz/carbonate hosts goethite mineralization, as well as disseminated pyrite and sphalerite from before oxidation began. For the rest of the interval, the massive smokey quartz interval continues, hosting massive pyrite, galena, sphalerite, and blebby arsenopyrite. Vein displays interstitial carbonate veining towards the end of the vein zone. Severe oxidation (red colour) occurs along fractures throughout.

KL-16-318									
	17.64	16	HQ	GRD	1413.6	910.6	2.83	2.8	Oxidized argillic to propylitic granodiorite hosting the beginning of a massive quartz/carbonate vein. Hosts blebby pyryte, galena, sphalerite.
	17.81	8	HQ	GRD	956.4	702	3.84	3.8	Small vein zone hosting massive arsenopyrite, sphalerite, galena, pyrite, and jamesonite.
	24.55	21.5	HQ	GRD	2237.4	1582.4	3.34	3.4	Vein zone hosting massive blebby arsenopyrite, blebby galena, sphalerite, and pyrite. Oxidized granodiorite is seen in small portion of vein.
	31.67	14.5	HQ	GRD	1075	678.8	2.38	2.7	7cm banded carbonate vein. Carbonate bands with propylitic/oxidized granodiorite. Contains intermittent quartz and is weakly brecciated in a small zone.
	61	12.5	HQ	GRD	1098.7	690.2	2.82	2.7	Phillic propylitic halo with carbonate vein
	66.81	17	HQ	GRD	1440.3	930.1	2.72	2.8	Moderately silicified phyllic granodiorite carry8ing a quartz/carbonate vein zone. Vein zone consists of multiple smaller veins. Gouge is present along lower selvedge. Hosts dissemianted pyrite.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
5.00	18.74	13.74	GRD	MG	Argillic to propylitic altered granodiorite with patches of phyllic alteration. Zone displays perasive to patchy oxidation throughout. Multiple zone of significant alteration found within interval.

6.78	7.00	VN	37	60	NUL	1	22cm oxidized quartz carbonate vein. Vein hosts blebby to dissemianted galena, pyrite, and disseminated arsenopyrite. Carboante in vein displays net like texture. Found within a moderately oxidized granodiorite zone.			
9.20	9.50	BX	34	60	NUL	1	2cm Black breccia vein carrying sand sized clasts of quartz, carbonate, and surrounding oxodized host granodiorite.			
12.43	12.46	VB	37	65	NUL	1	Black breccia to smokey quartz vein with carbonate intrusions along the upper selvedge. Disseminated pyrite found throughout.			
								Py	4	DI
16.14	16.17	BX	34	65	NUL	1	Black breccia brecciating propylitic to phyllic altered host granodiorite.			
17.80	17.92	CV		65	NUL	1	22cm quartz/smokey quartz vein crosscutting phyllic akltered granodiorite. Vein hosts massive disseminated arsenopyrite, massive blebby sphalerite (honey brown and black), blebby pyrite, blebby galena, and disseminated jamesonite throughout entire vein. White quartz is found along the upper selvedge, displaying protruding fingers that intrude into the vein zone. Vein zone hosts a highly oxidized fracture that carries patchy scoridite.

23.84	24.04	VB	37	-	NUL	1	highly fractured and gouged breccia that has undergone strong silicification. Found along dyke contact.			
24.20	24.76	CV		70	NUL	1	56cm Klaza vein zone (lower and central?). Quartz/carbonate vein is found in close proximity to contact of quartz feldspar porphyry dyke. Vein hosts massive galena, pyrite, sphalerite, and arsenopyrite throughout, along with disseminated jamesonite. Middle of vein zone shows weak carbonate/smokey quartz/granodiorite brecciation (small 7cm zone). Fractures and joints are heavily oxidized, displaying patchy scorodite.

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
11.00	12.21	GO	34	-	NUL	1	Highly fractured and gouge granodiorite. Contains patches of weak oxidation, and hosts disseminated pyrite in broken down quartz veins.			
								Py	2	DI
12.47	12.56	GO	34	-	NUL	1	Gouged and rubbly smokey quartz vein with weak oxidation. Disseminated pyrite is visible within rubble.			
								Py	1	DI
18.45	18.82	GO	34	-	NUL	1	Severely gouge altered granodiorite carrying a broken down quartz vein hosting disseminated pyrite. Slight oxidation present.			
								Py	3	DI
33.64	33.75	GO	34	-	NUL	1	Gouged and fractured smokey quartz vein found within phyllic granodiorite. Broken down vein hosts blebby sphalerite, galena, and disseminated pyrite (seen in fragments of vein that have not undergone gouge alteration and breakdown). Located along lower footwall of quartz feldspar porphyry dyke.			
								Py	1	DI
								Sp	3	BL
								Gn	3	BL
41.27	41.29	VN	37	80	NUL	1	2cm Smokey quartz/carbonate vein with no mineralization. Carbonate displays zoning with quartz found proximal to veining, and smokey quartz veining occurring along the lower carbonate selvedge vein.			
42.30	42.74	GO	34	-	NUL	1	Gouged zone of argillic/phyllic granodiorite carrying a broken down quartz vein that hosts disseminated pyrite.			
								Py	1	DI
46.76	46.82	GO	34	-	NUL	1	Gouged zone of argillic/phyllic granodiorite carrying a broken down quartz vein that hosts disseminated pyrite.			
								Py	1	DI

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
48.23	48.42	VB	37	75	NUL	1	Gouged siliceous phyllic granodiorite carrying a breccia vein zone. 4.5cm weakly gouged breccia carrying quartz/carbonate/granodiorite clasts, and blebby pyrite, galena, and disseminated pyrite. Breccia is immediately followed by a 3.5cm quartz vein found along the lower selvedge of the breccia. Vein hosts blebby pyrite, sphalerite, and disseminated galena proximal to veining. Vein breccia surrounded by gouge			
								Sp	2	BL
								Gn	3	BL
								Py	4	BL
50.38	50.61	VN	37	-	NUL	3	moderately Siliceous argillic/phyllic vein zone that has been weakly gouged. Carries 3 main quartz veins, each carrying blebby pyrite, sphalerite. Found along upper selvedge of quartz feldspar porphyry dyke along contact.			
								Sp	4	BL
								Py	8	BL
57.00	57.80	VB	37	70	NUL	3	Black breccia found within quartz feldspar porphyry continuing past contact that transitions into smokey quartz veins with weak brecciation throughout. Veins are sporadic, but segregated into 3 main zones within the 80cm vein zone. Found within siliceous argillic/phyllic granodiorite. Veins host blebby to disseminated pyrite, blebby galena, blebby sphalerite.			
								Py	5	BL
								Py	1	DI
								Sp	3	BL
								Gn	3	BL
59.00	59.07	BX	34	85	NUL	1	Black breccia vein crosscutting strong phyllic granodiorite. Carries clasts of quartz, host granodiorite, and disseminated to blebby pyrite.			
								Py	1	DI
								Py	1	BL
60.26	63.59	VN	37	60	NUL	5	Phyllic granodiorite hosting multiple quartz/smokey quartz veins. Veins host disseminted to blebby pyrite, and sporadic blebby arsenoyrite, sphalerite, and galena.			
								Py	18	BL

	40.17	16.7	HQ	GRD	1276	844.8	2.45	3.0	quartz/smokey quartz vein found within argillic/phyllic granodiorite. Vein hosts blebby pyrite, and minor disseminated sphalerite.
	62	20	HQ	GRD	1673.2	1051	2.68	2.7	Black breccia in phyllic granodiorite
	92.57	14	HQ	GRD	1164	740	2.67	2.8	Strongly propylitic altered granodiorite along the contact of a quartz feldspar porphyry dyke.
	121.08	16	HQ	GRD	1321.3	829.1	2.65	2.7	Phyllic/propylitic granodiorite with smokey quartz veinlets
	135.95	12	HQ	GRD	1068.6	686	2.86	2.8	flooded quartz breccia vein. Vein hosts blebby and disseminated pyrite, sphalerite, and galena. Vein zone displays foliated-like textures of elongated granodiorite, quartz, and carbonate grains throughout, oriented roughly between 30-40*TCA. Interval contains clasts of quartz, phyllic/propylitic granodiorite, carbonate, and sulfides.

81.55	81.76	VN	37	80	NUL	2	Two 3.5cm quartz veins found within argillic/propylitic granodiorite that has been enveloped by light green quartz feldspar porphyry dyke. Veins are seperated by 13cm of weakly gouged granodiorite. The first vein hosts blebby pyrite and disseminated tourmaline, while the second vein (which is much more gouged) hosts dissemintaed pyrite.

82.18	82.36	VN	37	-	NUL	1	gouged quartz flooded granodiorite hosting disseminated pyrite throughout. Found along lower contact of quartz feldspar porphyry dyke			
								Py	2	DI
89.70	90.12	VN	37	80	NUL	1	Significant polymetallic breccia/smokey quartz vein crosscutting argillic/phyllic altered granodiorite. Found in close proximity to footwall of red quartz feldspar porphyry dyke, after a gouge altered contact. Vein zone starts as a smokey quartz brecciating quartz, granodiorite, blebby pyrite, and then transitions into a quartz vein hosting semi-massive pyrite, blebby arsenopyrite, galena, pyrite, dissemianted sphalerite, jamesonite, and sporadic blebs of chalcopyrite.

87.04	92.60	5.56	QFP	FG	Light green to brown quartz feldspar porpyry dyke. Displays potassic overprinting along lower selvedge of dyke. Weak gouge present, along with carbonate stringers.							
						LT	BR	PA				
						LT	RD	PA				
						LT	GN	PO	POT	2I		
92.60	118.09	25.49	GRD	MG	Granodiorite displaying alternating intervals of moderate to strongly phyllic, propyllitic, argillic/phyllic, argillic/propylitic altered granodiorite. Interval has small patches of moderate to strongly potassic altered granodiorite within argillic/phyllic zones. Zone begins along a dyke contact, and displays gouge alteration throughout the first 50cm. Throughout the entire interval, quartz and carbonate veins to veinlets are present, carrying sulfide mineralization. Tourmaline is disseminated throughout, and found in blebs within and outside of veins. Concentration of quartz veins distal to dyke contact.

Hole Name

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
KL-16-324									
	13.89	12	HQ	SIL	1034.8	673.8	2.77	2.9	Oxidized siliceous dyke carrying a quartz vein that hosts disseminated pyrite.
	45.57	20.5	HQ	SIL	1627.8	1011.3	2.55	2.6	Massive milky and smokey quartz breccia with frequent calcite veins cutting breccia. Breccia is hosted in siliceous dyke.
	47.16	22	HQ	SIL	1747	1099.3	2.55	2.7	milky and smokey quartz breccia with frequent calcite veins cutting breccia. Breccia hosts blebby disseminated pyrite. Breccia is hosted in siliceous dyke.
	73	23.5	HQ	VOL	1967.1	1254.2	2.69	2.8	Medium gray volcanics with mottled black grains of biotite.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
2.13	6.58	4.45	SIL	FG	Very rubbly oxidized siliceous dyke. Hosting vein zones.							
						LT	GY					
						LT	OR					
						DK	OR					
6.58	10.28	3.70	VOL	FG	black, very oxidized and rubbly unaltered to lightly altered volcanic unit.							
						LT	OR		OXI	5I		
						DK	OR					
						DK	BK					
10.28	18.57	8.29	SIL	FG	Very rubbly oxidized siliceous dyke. Hosting vein zones.							
						LT	GY					
						LT	OR		OXI	4I		
						DK	OR					
18.57	20.72	2.15	VOL	FG	Black volcanic unit. Strongly oxidized fractures. Largely unaltered. Crosscut by frequent limonite veinlets.							
						LT	OR					
						DK	BK					
20.72	36.66	15.94	SIL	FG	Rubbly, argillic and phyllic altered siliceous dyke crosscut by frequent carbonate veins. Minor sulphide veins also present.							
						LT	OR		OXI	1I		
						LT	GN		ARG	2I		
						LT	GY		PHC	2I		
36.66	43.85	7.19	VOL	FG	Largely unaltered black to dark grey volcanic unit.							
						DK	BK					
						DK	GY					
43.85	52.10	8.25	SIL	FG	Siliceous dyke hosting many calcite and other carbonate veins. Veins frequently develop into vein breccias up to 5 cm wide. Dyke is strongly argillic altered.							
						LT	WH		ARG	4I		
						LT	GY					
52.10	117.35	65.25	VOL	FG	Largely unaltered or very lightly propylitic altered dark volcanic unit. Progresses to a chilled margin texture in areas. Unit hosts carbonate on fractures and very little mineralization.

KL-16-325									
	19.31	18	HQ	GRD	1730.5	1136.7	3.08	2.9	9cm smokey quartz carbonate vein found within a propylitic/phyllic granodiorite halo. Carbonate brecciates smokey quartz, which hosts disseminated to blebby pyrite, disseminated galena, sphalerite, and possible arsenopyrite (?). Weak oxidation staining found throughout breccia vein.
	21.45	19	HQ	GRD	1560.7	970.5	2.64	2.6	Propylitic granodiorite with oxidation along fractures.
	48.31	13	HQ	GRD	1185.9	785.3	2.93	3.0	Quartz carbonate vein found within argillic/phyllic granodiorite. Blebby to disseminated pyrite, disseminated galena, and disseminated to blebby sphalerite are found within quarttz veining, with zoned carbonate veining found along the upper quartz selvedge. Brecciation is also seen, along the upper selvedge of the carbonate veining by black breccia (roughly 2cm).
	99.04	22	HQ	GRD	2206.3	1503.6	3.22	3.1	13cm milky quartz/smokey quartz carbonate vein found within argillic/propylitic altered granodiorite. Vein hosts blebby to disseminated pyrite throughout. Carbonate veining brecciates quartz.

Hole Name	From (m)	Length (m)	Core Size	Rock Type	Weight in Air (g)	Weight in Water (g)	Density (g/cm3)	Specific Gravity	Comments
	129.86	17	HQ	VEN	1886.1	1341.6	3.56	3.5	Part of 1.47m vein zone found within phyllic to propylitic altered granodiorite. Vein zone displays patchy weak oxidation along both joint and fracture planes, as well as within sporadic stringers. Zone dominantly consists of milky quartz veining with intermittent smokey quartz and carbonate pulses throughout (smokey quartz veining occurs in a net texture within milky quartz veins). Patches of phyllic/propylitic granodiorite up to 5cm long between veins. Zone hosts blebby pyrite, chalcopyrite, sphalerite, disseminated galena, arsenopyrite, and possibly fine grained disseminated jamesonite (needle like, fine grained, silver. Might be arsenopyrite).

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.

88.83	92.58	3.75	VEN	--	Large 3.75m vein zone (Lower Klaza Splay?). Vein zone is a series of smokey quartz/carbonate breccia veins found within argillic/propylitic to argillic/phyllic granodiorite. Zone is consists dominantly of smokey quartz carbonate veins throughout, with small patches (up to 6cm) of granodiorite between that host stringers and disseminated mineralization. Hosts blebby to disseminated pyrite, blebby sphalerite, blebby galena, blebby to disseminated arsenopyrite, and possible fine grained disseminated jamesonite. Multiple phases are displayed, with quartz veining intruded by smokey quartz, which is in turn all brecciated by carbonate veining. Occasional vug texture found within carbonate.

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
5.33	5.44	VN	37	55	NUL	2	Two 2cm quartz veins hosting disseminated pyrite and possible jasper (red, quartz like). Found within argillic/propylitic granodiorite that is oxidized.			
								Py	1	DI
12.65	13.08	VN	37	-	NUL	1	Intensely oxidized argillic granodiorite with a weakl to moderately quartz flooded vein zone. Zone displays almost red oxidation, and carries a vein of blebby pyrite (could potentially be other minerals, but oxidation makes identification difficult).			
								Py	5	BL
19.31	19.40	VB	37	65	NUL	1	9cm smokey quartz carbonate vein found within a propylitic/phyllic granodiorite halo. Carbonate brecciates smokey quartz, which hosts disseminated to blebby pyrite, disseminated galena, sphalerite, and possible arsenopyrite (?). Weak oxidation staining found throughout breccia vein.			
								Py	15	BL
								Sp	5	DI
								As	0.1	DI
								Gn	1	DI
23.44	24.41	VT	37	-	NUL	9	Propylitic granodiorite carrying 9 small oxidized quartz veinlets that host disseminted pyrite throughout.			
								Py	30	DI
45.76	45.81	VN	37	85	NUL	1	5cm milky quartz vein found within quartz flooded phyllic granodiorite. Vein hosts disseminated to blebby pyrite and sphalerite.			
								Py	8	BL
								Sp	6	DI
48.32	48.39	VN	37	70	NUL	1	Quartz carbonate vein found within argillic/phyllic granodiorite. Blebby to disseminated pyrite, disseminated galena, and disseminated to blebby sphalerite are found within quarttz veining, with zoned carbonate veining found along the upper quartz selvedge. Brecciation is also seen, along the upper selvedge of the carbonate veining by black breccia (roughly 2cm).

COMMENTS

This hole contained native copper at 36.50m. An early zone was intercepted at 47.53-53.32m flanking a porphyry dyke.

20.56	38.57	18.01	GRD	MG	Unaltered granodiorite with oxidation found along fractured and joint planes. Small sporadic halos of phyllic alteration found within hosting sulfide mineralized quartz carbonate veins.							
								FR			Py	1
											Gn	1
						LT	GN	PA	PHC	2I	Py	1
38.57	44.19	5.62	GRD	MG	Weak to moderate phyllic to weak propylitic altered granodiorite. Interval contais patches of unaltered and moderately argillic altered patches throughout. Zone ends along a red quartz feldspar porphyry dyke contact, with two quartz/carbonate veins present in close proximity to contact.

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
10.56	10.93	VN	37	25	NUL	1	Heavily oxidized 12cm quartz vein. Vein has dark red oxidized granodiorite along its upper selvedge for 15cm. Quartz vein hosts blebby tourmaline.			
								To	2	BL
12.59	12.65	VN	37	60	NUL	1	Vuggy and oxidized 5cm quartz carbonate vein within oxidized phyllic altered granodiorite.			
18.90	18.94	VN	37	75	NUL	1	Propylitic to phyllic altered granodiorite hosting gouged smokey quartz.			
27.01	27.07	VN	37	80	NUL	1	6cm quartz carbonate vein within weakly propylitic altered granodiorite. Vein hosts blebby to disseminated pyrite, sphalerite.			
								Sp	6	BL
								Py	2	DI
								Py	7	BL
28.31	28.38	VN	37	85	NUL	1	Banded 7 cm quartz carbonate vein (banding occurs between carbonate and quartz injections) found within phyllic to propylitic altered granodiorite. Vein hosts disseminated to blebby pyrite, zoned honey brown sphalerite, disseminated galena, and disseminated arsenopyrite.			
								As	2	DI
								Py	5	DI
								Gn	3	DI
								Py	3	BL
								Sp	4	BL
43.98	44.19	VN	37	80	NUL	2	Weakly argillic granodiorite with weak phyllic overprinting carrying two quartz carbonate veins. First vein is a 6cm quartz carbonate vein hosting dissemianted to blebby pyrite, and blebby sphalerite. The second vein is a 3cm quartz carbonate vein hosting blebby pyrite and sphalerite with carbonate brecciating quartz vein and sulfides. Second vein is found along the contact of light brown quartz feldspar porphyry dyke.

KL-16-328									
	71	15.5	NQ2	GRD	942.2	615.8	2.86	2.9	Smoky quartz breccia containing clasts of phyllic granodiorite. Phyllic granodiorite contains disseminated pyrite. Smoky quartz matrix hosts blebby pyrite, honey brown sphalerite, and galena.
	96.11	13.5	NQ2	QFP	771.2	493	2.69	2.8	Dark green propylitic quartz feldspar porphyry dyke
	117.34	15	NQ2	VEN	844.6	545	2.65	2.8	Polymetallic, polyphase smoky quartz breccia. Initial stage of white quartz-carbonate veining hosting blebby pyrite. Second phase of grey massive quartz with blebby pyrite. Third phase of smoky quartz hosting blebby honey brown sphalerite, galena, and arsenopyrite.
	155.14	13	NQ2	GRD	800.5	509.6	2.9	2.8	Section of the Stroshein vein zone. Phyllic granodiorite cut by netted quartz-carbonate veining with disseminated pyrite throughout groundmass and blebby pyrite in veining.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
1.90	21.25	19.35	GRD	MG	Generally fresh granodiorite with patches of propylitic, potassic, and argillic alteration. Argillic alteration tends to be around heavily fractured sections. Oxidization is semi-pervasive until 12.5m, where it becomes limited to fractures and minor faults. Faults tend to be strongly oxidized with a gouge component. Granodiorite is occasionally cut by quartz-pyrite veining.

62.36	63.57	1.21	VEN	MG	Highly fractured and gouged vein zone that is broken down and rubbly. Zone consists of moderately quartz flooded phyllic to propylitic granodiorite hosting numerous zones of quartz veining. Vein zone hosts disseminated to blebby pyrite. Gouge and fractures are oxidized.

68.56	71.80	3.24	GRD	MG	Quartz flooded weakly phyllic altered granodiorite with patchy oxidation. Interval is highly fractured and gouged sporadically throughout. Mineralized zone found within.							
						LT	GN	PA	PHC	2I	Py	1
						LT	GY	FR	SIL	3I		
						LT	OR	RB	OXI	2I		
71.80	74.47	2.67	VEN	MG	Quartz/smokey quartz carbonate breccia vein zone. Zone is highly fractured and contains rubbly patches. Vein hosts disseminated to massive pyrite, blebby chalcopyrite, sphalerite, and disseminated galena. Zone alternated between gouged and highly fractured zone to breccia veins where carbonate brecciates both smokey quartz and quartz through multiphase injection.

36.90	37.06	BV		85	NUL	1	16cm quartz/smokey quartz breccia vein found proximal to gouged dyke contact. Breccia vein hosts blebby pyrite, sphalerite along the lower selvedge of the vein. Carbonate brecciates both milky and smokey quartz, and is found throughout.			
								Sp	8	BL
								Py	12	BL
58.25	58.32	VN	37	85	NUL	1	7cm quartz/smokey quartz vein hosting disseminated pyrite throughout.			
								Py	7	DI
58.61	58.65	VN	37	75	NUL	1	4cm quartz/smokey quartz/carbonate vein crosscutting phyllic altered granodiorite. No mineralization present.			
59.23	59.31	VN	37	30	NUL	1	~8cm quartz vein crosscutting phyllic altered granodiorite. Smokey quartz veining with minor disseminated pyrite is found proximal to quartz vein (~1cm wide) Vein is approximated due to highly fractured upper selvedge.			
								Py	1	DI
62.36	63.29	VN	37	-	NUL	1	93cm fractured and rubbly vein zone hosting disseminated to blebby pyrite. Throughout.			
								Py	10	DI
								Py	3	BL
69.22	69.32	VN	37	75	NUL	1	Argillic/propylitic granodiorite with oxidation hosting a 10cm gouge altered smokey quartz vein that hosts disseminate pyrite.			
								Py	1	DI
72.58	73.38	VN	37	60	NUL	1	80cm quartz/smokey quartz carbonate breccia vein zone. Zone is highly fractured and contains rubbly patches at the start of the veins one, transitioning to a partially gouged breccia vein. Vein is a multiphase zone, where quartz and smokey quartz are found together, both hosting sulfide, followed by carbonate veining that brecciates the entire zone. Hosts blebby pyrite, sphalerite, and disseminated galena.			
								Gn	3	DI
								Py	20	BL

65.55	81.41	15.86	QFP	FG	Light brown quartz feldspar porphyry dyke transitioning to medium brown dyke with numerous carbonate stringers throughout. Brown dyke displays a patches of light brown quartz feldspar porphyry dyke, eventually solely becoming grey dyke. This dyke finally transitions into a medium grey colour with prominent carbonate veinlets throughout both. Oxidation present along fractures and joints throughout.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
94.78	97.48	2.70	VEN	MG	Strong phyllic altered granodiorite with patches of moderate to strong phyllic overprinting argillic granodiorite. Interval carries numerous quartz, quartz carbonate, and carbonate veins throughout that are nearly continuous, separated only by small intervals of phyllic or argillic/phyllic granodiorite. Vein zone hosts disseminated to blebby pyrite, arsenopyirte, and disseminated sphalerite.Vein zone displays sporadiec brecciation by both carbonate veining and smokey quartz.

KL-16-333									
	78.58	14	NQ2	GRD	856.6	555.5	2.88	2.8	Vuggy crustiform quartz carbonate rhodocrosite vein with minor blebby pyrite in lower selvedge, hosted in granodiorite.
	127.91	17	NQ2	QFP	1030.6	671.9	2.85	2.9	Moderate hydrothermally altered light green quartz feldspar porphyry dyke with minor pyrite veinlets

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
1.68	38.71	37.03	GRD	MG	Intensely fractured argillic-propylitic-phyllic altered granodiorite with moderate-strong oxide on fracture surfaces. Alteration is related to thin crosscutting quartz-pyrite veinlets and quartz-carbonate veinlets. Some rubbly sections are strongly phyllic granodiorite with crumbled massive pyrite. There are fragments of weathered sulphide-bearing veining with goethite.							
						MD	BN	RB	PHC	3I	Py	1

1.68	38.71	37.03	GRD	MG	Intensely fractured argillic-propylitic-phyllic altered granodiorite with moderate-strong oxide on fracture surfaces. Alteration is related to thin crosscutting quartz-pyrite veinlets and quartz-carbonate veinlets. Some rubbly sections are strongly phyllic granodiorite with crumbled massive pyrite. There are fragments of weathered sulphide-bearing veining with goethite.							
						MD	BN	RB	PHC	3I	Py	1

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
8.30	14.33	VN	37	-	NUL	4	Series of intensely fractured, strongly oxidized sulphide veins. Some show goethite and scorodite.			
								Go	1	MA
								So	0.5	MA
22.50	24.50	VN	37	-	NUL	1	Intensely fractured phyllic granodiorite cut by an unknown number of massive pyrite veins. Recovery is too crumbled to tell.			
								Py	5	MA
31.90	35.35	VN	37	-	NUL	3	Intensely fractured, strong oxidized, partially gouged massive pyrite veins.			
								Py	5	MA
38.71	49.85	VN	37	30	NUL	65	Thin pyrite veinlets.			
								Py	5	BL
49.85	51.68	FT	42	25	NUL	2	Pairs of clay gouged, fractured, pervasively oxidized faults with pyrite veining.			
								Py	5	MA
51.68	53.43	VN	37	10	NUL	2	Massive quartz-carbonate veins with blebby pyrite and fracture-limited oxide staining.			
								Py	2	BL
57.00	58.08	VN	37	15	NUL	1	Massive white quartz vein with epidote and chlorite along its margins. Hosts blebby pyrite.			
								Py	2	BL
61.81	64.00	VT	37	90	NUL	18	Irregularly banded veins/veinlets of white-cream quartz-carbonate and smoky quartz hosting blebby pyrite. White quartz-carbonate often shows crustiform textures.			
								Py	5	BL
67.73	67.84	VN	37	25	NUL	1	Massive white quartz vein hosting fine disseminated pyrite.			
								Py	1	DI
70.51	72.50	VT	37	40	NUL	21	Massive white quartz-pyrite veinlets with strong phyllic halos.			
								Py	15	MA
73.41	73.76	BX	34	60	NUL	2	Smoky quartz and white quartz-carbonate vein breccia hosting blebby pyrite.			
								Py	15	BL

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
75.15	78.18	VT	37	30	NUL	15	Thin massive quartz-pyrite veinlets with strong phyllic halos.			
								Py	15	BL
79.22	79.80	VN	37	60	NUL	3	Three massive white quartz-pyrite veins 2-4 cm wide.			
								Py	20	BL
79.53	79.68	VN	37	70	NUL	1	Crustiform, somewhat vuggy, white-cream-tan quartz-carbonate veins hosting blebby pyrite and honey brown sphalerite.			
								Py	4	BL
								Sp	1	BL
82.02	83.23	VN	37	40	NUL	4	Veins with bands of massive quartz and thinly banded white quartz-carbonate hosting blebby pyrite.			
								Py	5	BL
84.36	84.39	VN	37	90	NUL	1	Irregularly banded white-smoky quartz-carbonate vein hosting blebby pyrite.			
								Py	6	BL
85.35	85.40	VN	37	90	NUL	1	Irregularly banded white massive quartz vein with semi-pervasive oxide staining along fractures.			
								Py	3	BL
85.56	86.51	VN	37	25	NUL	2	Crumbled massive quartz-pyrite veins.			
								Py	15	MA
87.29	88.70	VN	37	20	NUL	1	Massive white quartz vein hosting blebby pyrite.			
								Py	10	BL
90.89	91.00	VN	37	15	NUL	1	Massive white quartz vein with hematite and chlorite along its margins. Hosts blebby pyrite.			
								Py	2	BL
91.15	96.00	VT	37	30	NUL	23	Quartz-pyrite veinlets with strong phyllic halos.			
								Py	5	BL
96.00	96.76	VN	37	70	NUL	2	Banded quartz-carbonate-pyrite veins with crustiform/colloform white quartz-carbonate and bands of massive pyrite. One vein shows 1 cm ghost bladed pyrie and interstitial honey brown sphalerite.			
								Py	10	MA
								Sp	1	BL

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
52.44	52.68	VN	37	70	NUL	1	Phyllic to propylitic altered granodiorite carrying a vein zone of three significant sulfide bearing quartz veins. The first vein is a 14cm quartz vein hosting massive pyrite, blebby sphalerite, blebby arsenopyrite, and disseminated galena. This is followed by a 6.5cm smokey quartz/carbonate vein carrying disseminated pyrite, and finally a 12cm quartz vein hosting blebby pyrite, galena, and minor disseminated sphalerite. All three veins are separated by granodiorite that has undergone quartz flooding and carries both minor carbonate/quartz veinlets and disseminated pyrite.			
								Py	10	MA
								Gn	6	BL
								Sp	6	BL
								As	2	DI
								Py	12	BL
55.72	55.77	VN	37	85	NUL	1	5cm quartz vein hosting blebby sphalerite, galena, and pyrite along the upper selvedge, and blebby arsenopyrite along the lower selvedge of the quartz vein. Found within phyllic altered granodiorite			
								As	7	BL
								Sp	15	BL
								Py	2	BL
								Gn	5	BL
68.37	68.46	VN	37	75	NUL	1	9cm quartz vein hosting massive sphalerite, blebby chalcopyrite, blebby pyrite, disseminated to blebby arsenopyrite, and blebby galena. Vein found within phyllic altered granodiorite. ?Similar in mineralization style to BYG veining?			
								Cp	2	BL
								Py	10	BL
								Gn	15	BL
								Sp	60	MA
								As	5	DI
71.60	71.65	VN	37	60	NUL	1	5cm quarttz vein hosting blebby sphalerite, galena, pyrite, and arsenopyrite. Found within phyllic/propylitic halo.			
								Py	5	BL
								As	2	BL
								Gn	4	BL

* Represents the sample length. True widths are estimated to be approximately 80-90% of the interval.

APPENDIX VII

BASELINE WATER QUALITY AND WEATHER DATA

ROCK HAVEN RESOURCES LTD KLAZA PROPERTY

2016 WEATHER DATA

Final Report

J. Gibson Env. Consulting *Whitehorse Yukon*

An Onset Hobo weather station was installed and launched June 22, 2013 at the Klaza Property. The weather station has operated continuously from June 2013 to January 2, 2016.

The weather station is located at the Klaza camp atop a rounded hill with no vegetation greater than 0.3 meters in height.

The station measures the following parameters with instruments mounted on a 3 meter mast:

1. Wind Speed
2. Wind Gusts
3. Wind Direction
4. Solar Radiation
5. Relative Humidity
6. Temperature (maximum, minimum)
7. Rainfall Precipitation

Data recovery for Solar Radiation and rainfall precipitation were affected by sensor problems.

The weather data is listed as:

Parameter	**Data Recovery (%)**
Wind Speed – Average Daily	100 %
Wind Gusts – Average Daily	100
Wind Direction – Average Daily	100
Solar Radiation – Mean Daily	28
Relative Humidity – Daily Mean	100
Temperature – Daily Maximum	100
Daily Mean	100
Daily Minimum	100
Rain Fall Precipitation – Daily Total	35

Snowfall precipitation data is available from the Yukon Government's Snow Bulletin for the Mount Nansen Snow Course. Data will be summarized in a later report.

Rock Haven Resources. Klaza Project. Daily Max Air Temperature (Degrees Celsius) 2016.

Rock Haven Resources Ltd.

Klaza Property

Baseline Water Quality / Hydrology Survey

January, 2016

J.Gibson Env. Consulting ***Whitehorse, Yukon***

Klaza Property January 2016

Rock Haven Resources Ltd. requested a baseline water quality / hydrology survey be conducted on the surface waters draining the area of the KLAZA Claims.

The KLAZA Claims are located on tributaries to the Nansen Creek and the Klaza River approx. 75 kilometers east of Carmacks.

All surface waters are tributaries to the Klaza River and the Yukon River.

All sites were accessed by helicopter on January 2, 2016.

The baseline survey consisted of water quality samples for routine chemistry, total metals, dissolved metals, total organic carbon and total cyanide with field measurements for pH, water temperature and flow volumes.

Groundwater monitoring wells developed in November 2015 were located, accessible data loggers downloaded and standing water levels obtained. No samples were taken of groundwater wells this survey.
,
The ONSET / HOBO weather station was downloaded January 2, 2016.

Sample Locations

Ten potential water quality sample sites were identified for the KLAZA Claims in March 2012.
An additional site was added in July, 2014; Station KZ-11 is located at the effluent discharge point of the "China Creek' placer operation prior to entering the Klaza River.

Groundwater Monitoring wells developed in 2015 are also listed.

Surface water sites are on the attached location map.

The Mt Nansen and upper Klaza River are historic placer mining areas.

Main stem Nansen Creek and tributaries as well as Klaza River tributaries have been equipment mined over the past 3 decades.

An abandoned hard rock gold mine is located approximately 5 kilometers to the east of the Klaza Property.

In January 2016 placer operators on EF Nansen and China Creek were not in operation.

Sample Parameters

All stations with surface water flow were sampled for total metals, dissolved metals, routine chemistry, total organic carbon, total cyanide and total mercury.

Dissolved metals samples were filtered onsite using disposable 60 ml syringes and 0.45 micron filters. New syringes and filters were used for each station.

Total and dissolved metal samples were preserved with nitric acid immediately after sampling.

Total Organic Carbon samples were preserved with HCL immediately after sampling.

Total cyanide samples were preserved with sodium hydroxide immediately after sampling.

There were no Quality Control samples taken this survey.

Ground water monitoring wells were not sampled. Wells were located, standing water levels were measured and data loggers were downloaded at MW15-01. Well MW15-05 had a logger installed but was frozen in and could not be downloaded.

Thermistor string measurements were taken at GTC15-01.

All samples were stored in coolers, kept at 4 Celsius and shipped by air cargo to the Exova Canada Inc. laboratory in Surrey B.C. for analysis within recommended holding times.

Field measurements for pH and conductivity were taken with an Oakton PCS TestR 35, water temperatures with a digital thermometer.

Stream flow volumes were measured with a Price Velocity meter and cross sectional area.

Analysis Results

Laboratory analysis and field measurement results are listed in the following tables:

Table 1. KLAZA Stations Routine Chemistry – laboratory analysis and field Measurements. January 2016.

Table 2. KLAZA Stations Total Metals ICP–MS laboratory analysis results. January 2016.

Table 3. KLAZA Stations Dissolved Metals ICP–MS laboratory analysis results. January 2016.

5	16.77	17.34
6	16.76	16.88
7	16.62	16.93
8	16.56	16.67
9	16.39	16.48
10	16.27	16.32

Note: Thermistor readings require conversion by EBA / Tetra Tech

As a guide for reviewing site water quality, the Maximum Acceptable Concentration (MAC) according to ***Canadian Drinking Water Quality*** are listed along with the Aquatic Guidelines for the protection of aquatic life in water with a pH of > 6.5 according to ***CCME – Canadian Water Quality Guidelines.***

All water quality ***Guideline*** concentrations are based on total metal values.

Laboratory Analytical Reports are attached in Appendix 1.

Data Summaries for each station are on the attached disc.

Discussion

Hydrology

January 2016 stream flow in Klaza Property channels had volumes similar to January 2014 and February 2015. Station KZ#3 had higher measured volumes than the two previous winter low flow measurements.

Stations KZ#1, KZ#2, KZ#6, KZ#10 and KZ#11 were dry, consistent with past winter surveys.

Stations KZ#4 and KZ#7 were heavily glaciated and were not sampled. The diversion channel on upper East Fork Nansen (KZ#8) was completely full of glacial ice to an estimated 3 meter depth. The KZ#8 sample was taken of flows on the left / east limit which during mining operations is the effluent channel.

Table 4 is a summary of flow measurements 2012 -2016. January 2 flow volume calculations are attached in Appendix 2.

Laboratory Analytical Results

Parameters that equal or exceed either ***Drinking Water or Aquatic Guidelines*** are highlighted in yellow in Tables 1 and 2.

Stations KZ-1, KZ-2, KZ-6, KZ-10 and KZ-11 were dry channels and not sampled.

Stations KZ-4 and KZ-7 had heavy glacial ice and were not sampled.

Station KZ-3 exceeds the ***Drinking Water Guidelines*** for iron and the ***Aquatic Guidelines*** for iron and nitrite.

Stations KZ-5 exceeds the ***Aquatic Guidelines*** for nitrite.

Station KZ-8 exceeds the ***Aquatic Guidelines*** for nitrite.

Station KZ-9 exceeds the ***Aquatic Guidelines*** for nitrite.

All stations sampled reported total cyanide at less than laboratory detection limits (0.002 mg/L).
All stations sampled reported total mercury at less than detection limit (0.00001 mg/L).

As a result of placer activity on China Creek (effluent at KZ-11), sediment loading in the Klaza River downstream had increase significantly, in May 2015 an estimated 40% of original stream bed rocks and cobbles were visible and in August 2015 the original stream bed was reduced to an estimated 20%. In January 2016 a large percentage of the sediment had been "flushed" with an estimated 80% of the original stream bed material being visible.

Quality Control

No Quality Control samples were taken this survey.

Onset Weather Station

The **Onset / Hobo** weather station installed near camp on June, 2013 was downloaded on January 2, 2016. All parameter sensors with exception of solar radiation were operating.

The 2015 final weather data report for period January 1 to December 31 is attached.

Rock Haven Resources Ltd.

Klaza Property

Baseline Water Quality / Hydrology Survey

May, 2016

J.Gibson Env. Consulting *Whitehorse, Yukon*

Klaza Property May 2016

Rock Haven Resources Ltd. requested baseline water quality / hydrology surveys be conducted quarterly on the surface waters draining the area of the KLAZA Claims.

The KLAZA Claims are located on tributaries to the Nansen Creek and the Klaza River approx. 75 kilometers east of Carmacks.

All surface waters are tributaries to the Klaza River and the Yukon River.

All sites were accessed by ATV on May 12th and 13th, 2016.

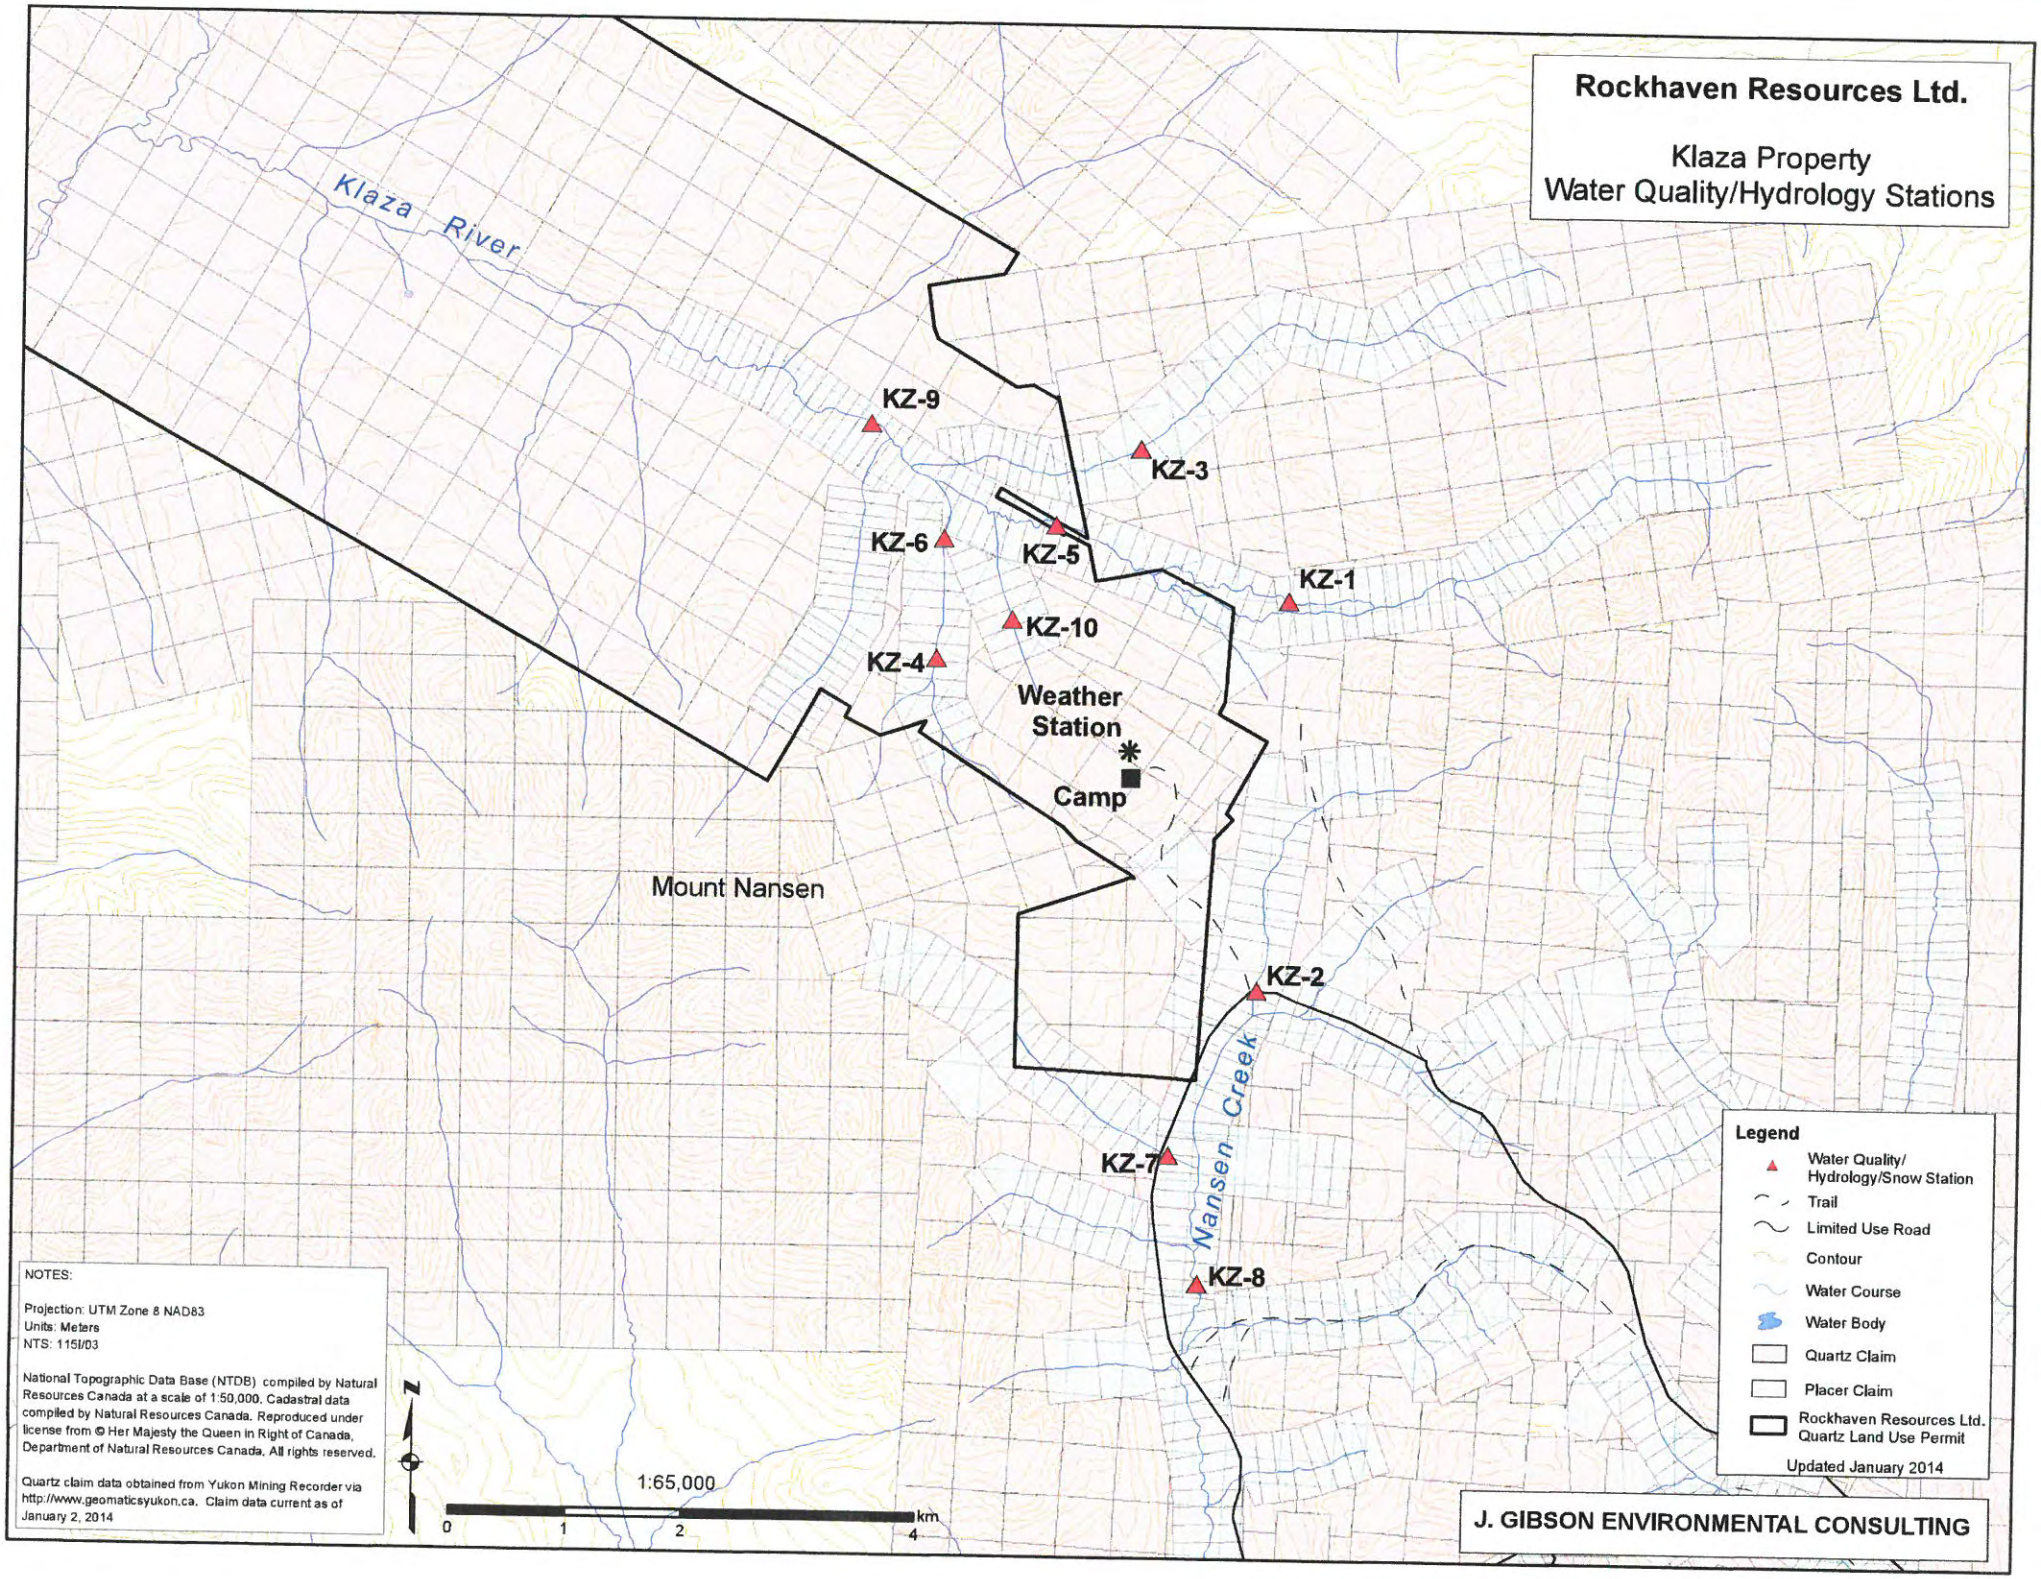
The surface water baseline survey consisted of water quality samples for routine chemistry, total metals, dissolved metals, total organic carbon and total cyanide with field measurements for pH, water temperature and flow volumes.

Groundwater monitoring of wells developed in November 2015 consisted of locating the wells in January for standing water levels, purging and sampling wells with sufficient standing water in May, 2016. Wells were sampled for routine chemistry, total and dissolved metals, total Kjeldahl nitrogen, ionic balance and acidity.

The ONSET / HOBO weather station was downloaded May 13, 2016 and the solar radiation sensor changed.

Sample Locations

Ten potential water quality sample sites were identified for the KLAZA Claims in March 2012.
An additional site was added in July, 2014; Station KZ-11 is located at the effluent discharge point of the "China Creek' placer operation prior to entering the Klaza River.



Groundwater Monitoring wells developed in 2015 are also listed.

Surface water sites are on the attached location map.

The Mt Nansen and upper Klaza River are historic placer mining areas.

Main stem Nansen Creek and tributaries as well as Klaza River tributaries have been equipment mined over the past 3 decades.

An abandoned hard rock gold mine is located approximately 5 kilometers to the east of the Klaza Property.

Sample Parameters

All surface and groundwater wells stations were sampled for total metals, dissolved metals, routine chemistry. Surface waters had the addition of total organic carbon, total cyanide and total mercury; with groundwater having total Kjeldahl nitrogen, acidity and ionic balance added.

Dissolved metals samples were filtered onsite using disposable 60 ml syringes and 0.45 micron filters. New syringes and filters were used for each station.

Total and dissolved metal samples were preserved with nitric acid immediately after sampling.

Total Organic Carbon samples were preserved with HCL immediately after sampling.

Total cyanide samples were preserved with sodium hydroxide immediately after sampling.

Surface water Quality Control samples were taken at Station KZ-6 on this survey.

Ground water monitoring wells were located, standing water levels were measured and samples taken of the two wells with unfrozen / sufficient standing water, Well MW15-05D and Well MW15-02S. All other wells were dry or remained frozen.

The data loggers in Wells MW15-01 and MW15-05 were not download this survey, MW15-05 as it remains frozen.

Thermistor string measurements were taken at GTC15-01.

All samples were stored in coolers, kept at 4 Celsius and shipped by air cargo to the Exova Canada Inc. laboratory in Surrey B.C. for analysis within recommended holding times.

Field measurements for pH and conductivity were taken with an Oakton PCS TestR 35, water temperatures with a digital thermometer.

Stream flow volumes were measured with a Price Velocity meter and cross sectional area.

Analysis Results

Laboratory analysis and field measurement results are listed in the following tables:

Surface Waters

Table 1. KLAZA Stations Routine Chemistry – laboratory analysis and field Measurements. May 2016.

Table 2. KLAZA Stations Total Metals ICP–MS laboratory analysis results. May 2016.

Table 3. KLAZA Stations Dissolved Metals ICP–MS laboratory analysis results. May 2016.

Table 4. Flow Volume Measurement Summary 2012 – 2016

Table 5. Quality Control Analysis results for Station KZ-6, May 2016

Groundwater Wells

Table 6. Ground water well standing water levels 2016.

Table 7. Thermistor String Measurements 2016

Table 8. Ground water well Routine Chemistry – laboratory analysis and field Measurements. May 2016.

Table 9. Ground water well Total Metals ICP–MS laboratory analysis results. May 2016.

Table 10. Ground water well Dissolved Metals ICP–MS laboratory analysis results. May 2016.

As a guide for reviewing site water quality, the Maximum Acceptable Concentration (MAC) according to ***Canadian Drinking Water Quality*** are listed along with the Aquatic Guidelines for the protection of aquatic life in water with a pH of > 6.5 according to ***CCME – Canadian Water Quality Guidelines.***

All water quality ***Guideline*** concentrations are based on total metal values.

Laboratory Analytical Reports are attached in Appendix 1.

Data Summaries for each surface water station are on the attached disc.

Groundwater Data summaries will be generated when there are three data sets.

Discussion

Hydrology

May 2016 stream flow in Klaza Property channels had volumes reflecting the lower end of freshet. Volumes at most sites were higher than those measured since April 2013.

Station KZ#7 retained some glacial ice.
The diversion channel on upper East Fork Nansen (KZ#8) has been redirected from the right limit to the left limit resulting in a high percentage of flows transiting recently mined areas and setting ponds.
The KZ#8 sample was taken of flows on the left / east limit which during prior years mining operations was the effluent channel. Sample flows were high in sediment.

Table 4 is a summary of flow measurements 2012 -2016. May 12/13, 2016 flow volume calculations are attached in Appendix 2.

Laboratory Analytical Results

Surface Waters

Parameters that equal or exceed either ***Drinking Water or Aquatic Guidelines*** are highlighted in yellow in Tables 1 and 2. All Guideline metals values are Totals.

All Stations had surface water flow and were sampled with the exception of KZ-11. Station KZ-11 is the effluent discharge channel for the placer operation on China Creek. This operation was not sluicing during the survey, therefore no sample was taken.

Stations KZ-1, 2, 5, 9 and 10 meet all ***Drinking Water Guidelines*** and ***Aquatic Guidelines***.

Station KZ-3 exceeds the ***Drinking Water Guidelines*** and the ***Aquatic Guidelines*** for pH.

Stations KZ-4, KZ-6 and KZ-7 exceed the ***Drinking Water Guidelines*** for iron and manganese and the ***Aquatic Guidelines*** for iron.

Station KZ-8 exceeds the ***Drinking Water Guidelines*** for iron, manganese and arsenic; and ***Aquatic Guidelines*** for chromium, copper, lead, selenium, silver and zinc.

All stations sampled reported total cyanide at less than laboratory detection limits (0.002 mg/L).
All stations sampled reported total mercury at less than detection limit (0.00001 mg/L).

Quality Control

Quality Control samples were taken at Station KZ-6. Results are listed in Table 5.

Groundwater Wells

Groundwater wells MW15-01D and MW15-02S were the only wells not dry or frozen in May.
Well MW15-01S and MW15-02D were dry, the remainder of the wells were frozen.
Analysis results and field measurements are listed in Tables 8, 9, and 10.

Thermistor string reading were taken at Well GTC15-01. Results for January and May 2016 are listed in Table 7. Site readings require conversion by EBA / Tetra Tech.

Onset Weather Station

The **Onset / Hobo** weather station installed near camp on June, 2013 was downloaded on May 13, 2016 and the solar radiation sensor was changed.

APPENDIX 1

Notes To Clients:

- An appropriately preserved sample was not received for total phosphorus analysis of samples 1137891-12 and -13. Analysis was performed on unpreserved sample.
- Sample 1137891-8; 5411708 Reduction of analytical volume was necessary for Trace Metals analysis due to matrix effects in sample #1137891-8. Detection limits are adjusted accordingly.
- Sample 1137891-8; 5411708 Reduction of analytical volume was necessary for TP due to matrix effects in sample 1137891-8. Detection limits are adjusted accordingly.
- Sample 1137891-12; 5411712 Reduction of analytical volume was necessary for anions analysis due to matrix effects in sample # 1137891-12. Detection limits are adjusted accordingly.
- Sample 1137891-13; 5411713 Reduction of analytical volume was necessary for Trace Metals analysis due to matrix effects in sample #1137891-13 for Zn. Detection limits are adjusted accordingly.

Ammonium-N in Water	APHA	* Automated Phenate Method, 4500-NH3 G	19-May-16	Exova Edmonton
Anions (Routine) by Ion Chromatography	APHA	* Ion Chromatography with Chemical Suppression of Eluent Cond., 4110 B	19-May-16	Exova Edmonton
Anions by IEC in water (Surrey)	APHA	* Ion Chromatography with Chemical Suppression of Eluent Cond., 4110 B	17-May-16	Exova Surrey
Carbon Organic (Dissolved) in water (DOC)	APHA	High-Temperature Combustion Method, 5310 B	19-May-16	Exova Edmonton
Carbon Organic (Total) in water (TOC)	APHA	High-Temperature Combustion Method, 5310 B	18-May-16	Exova Edmonton
Cyanide (Total) in water	US EPA	* US EPA method, 335.3	20-May-16	Exova Edmonton
Filtration of water for dissolved analysis	APHA	* Filtration for Dissolved and Suspended Metals / Total Organic Carbon, 3030 B / 5310 A	18-May-16	Exova Edmonton
Mercury Low Level (Total) in water (Surrey)	EPA	* Mercury in Water by Cold Vapor Atomic Fluorescence Spectrometry, 245.7	20-May-16	Exova Surrey
Metals SemiTrace (Dissolved) in water (Surrey)	US EPA	* Metals & Trace Elements by ICP-AES, 6010C	16-May-16	Exova Surrey
Metals SemiTrace (Total) in Water (Surrey)	US EPA	* Metals & Trace Elements by ICP-AES, 6010C	16-May-16	Exova Surrey
Orthophosphate-P in Water	APHA	* Automated Ascorbic Acid Reduction Method, 4500-P F	18-May-16	Exova Edmonton
Phosphorus - total by Smartchem (Surrey)	APHA	* Persulfate digestion method, 4500-P B5	17-May-16	Exova Surrey
Phosphorus - Total in Water	APHA	* Automated Ascorbic Acid Reduction Method, 4500-P F	18-May-16	Exova Edmonton
Solids Dissolved (Total, Fixed and Volatile) - Surrey	APHA	* Total Dissolved Solids Dried at 180 C, 2540 C	17-May-16	Exova Surrey
Solids Suspended (Total, Fixed and Volatile) - Surrey	APHA	* Total Suspended Solids Dried at 103-105'C, 2540 D	17-May-16	Exova Surrey
Total and Kjeldahl Nitrogen (Total) in Water	ISO	* Water Quality - Determination of nitrogen, ISO/TR 11905-2	18-May-16	Exova Edmonton
Trace Metals (dissolved) in Water (Surrey)	US EPA	* Determination of Trace Elements in Waters and Wastes by ICP-MS, 200.8	16-May-16	Exova Surrey
Trace Metals (dissolved) in Water (Surrey)	US EPA	* Metals & Trace Elements by ICP-AES, 6010C	16-May-16	Exova Surrey
Trace Metals (Total) in Water (Surrey)	US EPA	* Determination of Trace Elements in Waters and Wastes by ICP-MS, 200.8	16-May-16	Exova Surrey

Comments:

- An appropriately preserved sample was not received for total phosphorus analysis of samples 1137891-12 and -13. Analysis was performed on unpreserved sample.
- Sample 1137891-8; 5411708 Reduction of analytical volume was necessary for Trace Metals analysis due to matrix effects in sample #1137891-8. Detection limits are adjusted accordingly.
- Sample 1137891-8; 5411708 Reduction of analytical volume was necessary for TP due to matrix effects in sample 1137891-8. Detection limits are adjusted accordingly.
- Sample 1137891-12; 5411712 Reduction of analytical volume was necessary for anions analysis due to matrix effects in sample # 1137891-12. Detection limits are adjusted accordingly.
- Sample 1137891-13; 5411713 Reduction of analytical volume was necessary for Trace Metals analysis due to matrix effects in sample #1137891-13 for Zn. Detection limits are adjusted accordingly.

Please direct any inquiries regarding this report to our Client Services group.
Results relate only to samples as submitted.

ED 120-02

May 15, 2016

TO: Exova in Surrey

RE: COC# 0049876

Analysis parameters

Analysis parameters would not all fit on COC so include a list:

Routine Chem = Acidity, T.Alk, Hard T, pH, EC, TDS, DOC, OH, ion Balance

Major ions = K, Na, Mg, HC03, C03, S04, F, Cl

Nutrients= NH3, N03, N02, 0-P04, P

Sample volume is 1 X 500 ml R.CHEM and 1x 250 ml NUT

Hope volume is enough, analysis list not my list but given to me by engineering outfit – sorry for any confusion.

Analysis detection limits to < CCME Guidelines Drinking Water

Rock Haven Resources Ltd.

Klaza Property

Baseline Water Quality / Hydrology Survey

September, 2016

J.Gibson Env. Consulting *Whitehorse, Yukon*

Rock Haven Resources Ltd. requested baseline water quality / hydrology surveys be conducted quarterly on the surface waters draining the area of the KLAZA Claims. Ground water wells were drilled in November 2015 with quarterly monitoring scheduled in conjunction with surface water monitoring.

The KLAZA Claims are located on tributaries to the Nansen Creek and the Klaza River approx. 75 kilometers east of Carmacks.

The Mt Nansen and upper Klaza River are historic placer mining areas.

Main stem Nansen Creek and tributaries as well as Klaza River tributaries have been equipment mined over the past 3 decades.

An abandoned hard rock gold mine is located approximately 5 kilometers to the east of the Klaza Property.

In September 2016 placer operators on EF Nansen and China Creek were active and sluicing.

All surface waters are tributaries to the Klaza River and the Yukon River.

All sites were accessed by truck or ATV on September 18, 19 and 20, 2016.

Monitoring

The surface water baseline survey consisted of water quality samples for routine chemistry, total metals, dissolved metals, total organic carbon and total cyanide with field measurements for pH, water temperature and flow volumes.

Sediment samples at the upstream (KZ-1) and downstream (KZ-9) Klaza River stations were done in September.

Groundwater monitoring consisted of measurements for standing water levels, purging and sampling wells with sufficient standing water. Wells were sampled for routine chemistry, total and dissolved metals, total Kjeldahl nitrogen, ionic balance and acidity.

Groundwater data loggers were downloaded along with thermistor string readings.

The ONSET / HOBO weather station logger was downloaded.

An attempt was made to download vibrating wire piezometers but encountered soft ware problems.

Sample Locations

Ten potential water quality sample sites were identified for the KLAZA Claims in March 2012.
An additional site was added in July, 2014; Station KZ-11 is located at the effluent discharge point of the "China Creek' placer operation prior to entering the Klaza River.

Groundwater Monitoring wells developed in 2015 are also listed.

Surface water sites are on the attached location map.

KLAZA Claim sample station designations and coordinates are:

Station #	LAT/LONG Coordinates	
Surface Waters		
KLAZA-1	62.132	137.216
KLAZA-2	62.101	137.218
KLAZA-3	62.143	137.242

Sample Parameters

All surface and groundwater wells stations were sampled for total metals, dissolved metals, routine chemistry. Surface waters had the addition of total organic carbon, total cyanide and total mercury; with groundwater having total Kjeldahl nitrogen, acidity and ionic balance added.

Dissolved metals samples were filtered onsite using disposable 60 ml syringes and 0.45 micron filters. New syringes and filters were used for each station.

Total and dissolved metal samples were preserved with nitric acid immediately after sampling.

Total Organic Carbon samples were preserved with HCL immediately after sampling.

Total cyanide samples were preserved with sodium hydroxide immediately after sampling.

All samples were stored in coolers, kept at 4 Celsius and shipped by air cargo to the Exova Canada Inc. laboratory in Surrey B.C. for analysis within recommended holding times.

Field measurements for pH and conductivity were taken with an Oakton PCS TestR 35, water temperatures with a digital thermometer.

Stream flow volumes were measured with a Price Velocity meter and cross sectional area.

Surface water Quality Control samples were taken at Station KZ-9 (lower Klaza River) this survey.

Ground water monitoring wells were located, standing water levels were measured and samples taken of the three wells that were unfrozen and had sufficient standing water, Wells MW15-02S, MW15-03S and Well MW15-04S.

Well MW15-01D had standing water but could not get water to surface.

All other wells were dry or remained frozen.

The data loggers in Well MW15-01 were download this survey. Data from September 2015 to December 2016 will be submitted after the next survey.

The data logger in MW15-05 remains frozen. The well has been frozen the past three surveys; January, May and September 2016.

Thermistor string measurements were taken at GTC15-01.

Analysis Results

Laboratory analysis and field measurement results are listed in the following tables:

Surface Waters

Table1. KLAZA Stations Routine Chemistry – laboratory analysis and field measurements. September 2016.

Table2. KLAZA Stations Total Metals ICP–MS laboratory analysis results. September 2016.

Table3. KLAZA Stations Dissolved Metals ICP–MS laboratory analysis results. September 2016.

Table4. Flow Volume Measurement Summary 2012 – 2016

Table5. Quality Control Analysis results for Station KZ-9, September 2016

Table6. Surface Station Sediment sample analysis results. September 2016.

Groundwater Wells

Table7. Ground water wells standing water levels 2016.

Table8. Ground water Routine Chemistry – laboratory analysis and field measurements. September 2016.

Table9. Ground water Total Metals ICP–MS laboratory analysis results. September 2016.

Table10. Ground water Dissolved Metals ICP–MS laboratory analysis results. September 2016.

Table11. Thermistor String Measurements 2016

As a guide for reviewing site water quality, the Maximum Acceptable Concentration (MAC) according to ***Canadian Drinking Water Quality*** are listed along with the Aquatic Guidelines for the protection of aquatic life in water with a pH of > 6.5 according to ***CCME – Canadian Water Quality Guidelines.***

All water quality ***Guideline*** concentrations are based on total metal values.

Laboratory Analytical Reports are attached in Appendix 1.

Data Summaries for each surface water station are on the attached disc.

Groundwater Data summaries will be generated when there are three data sets.

Discussion

Hydrology

September 2016 stream flow in Klaza Property channels had volumes reflecting pre freeze up. Volumes at most sites were substantially lower than those measured in August 2015. All channel had surface water flow.

The diversion channel on upper East Fork Nansen (KZ#8) has been returned to the right limit. The left limit continues as an effluent channel through recently mined areas and settling ponds. Flows were split approximately 50/50 between right and left limit channels.

The KZ- 8 sample was taken of flows on the right / west limit channel.

Station KZ-11 is the effluent channel for the placer operation on "China Creek". The operation was sluicing at the time of sampling. Extensive stripping has been done on lower China Creek – from the access road west to Station KZ-6 and north to within 10 meters of the Klaza River channel. The newly stripped area is estimated at greater than 20 acres.

Table 4 is a summary of flow measurements 2012 -2016. September, 2016 flow volume calculations are attached in Appendix 2.

5	16.77	17.34	16.87	16.88
6	16.76	16.88	16.87	16.87
7	16.62	16.93	16.76	16.76
8	16.56	16.67	16.66	16.66
9	16.39	16.48	16.45	16.45
10	16.27	16.32	16.31	16.31

Note: Thermistor readings require conversion by EBA / Tetra Tech

Laboratory Analytical Results

Surface Waters

Parameters that equal or exceed either ***Drinking Water or Aquatic Guidelines*** are highlighted in yellow in Tables 1 and 2. All Guideline metals values are Totals.

All Stations had surface water flow and were sampled.

Stations KZ-1, 2, 3, 5, and 7 meet all ***Drinking Water Guidelines*** and ***Aquatic Guidelines***.

Station KZ-4 exceeds the ***Drinking Water Guidelines*** for manganese.

Stations KZ-6 exceeds the ***Drinking Water Guidelines*** for iron and manganese and the ***Aquatic Guidelines*** for iron.

Station KZ-8 and **KZ-10** exceed the ***Drinking Water Guidelines*** and ***Aquatic Guidelines*** for iron.
Stations KZ-11 (placer effluent) and **KZ-9** (Klaza River downstream) exceed both Guidelines for parameters iron, manganese, arsenic, copper, lead and zinc. **Station KZ-11** also exceeds guidelines for cadmium, chromium, selenium and silver.
Station KZ-9 had a high sediment load with high turbidity.

All stations sampled reported total cyanide at less than laboratory detection limits (0.002 mg/L).
All stations sampled (KZ-1, 8 and 9) reported total mercury at less than detection limit (0.00001 mg/L).

Quality Control

Quality Control samples were taken at Station KZ-9. Results are listed in Table 5. There was a high degree of variation between samples – likely due to the high sediment load.

Groundwater Wells

Groundwater wells MW15-01D, MW15-02S, MW15-03S and MW15-04S were the only wells not dry or frozen in September.
Wells MW15-01S and MW15-02D were dry; the other wells were frozen.
Analysis results and field measurements are listed in Tables 6, 7, 8 and 9.
Laboratory analytical results are compared to Drinking Water Quality Guidelines.

Well MW15-02S exceeded Guidelines for pH, iron, manganese and cadmium.

Well MW15-03S exceeded Guidelines for iron and manganese.

Well MW15-04S exceeded Guidelines for iron.

Thermistor

Thermistor string readings were taken at Well GTC15-01. Results for January, May and September 2016 are listed in Table 10. Site readings require conversion.

Vibrating Wire Piezometers

The three vibrating wire piezometers were located but attempts to download data were unsuccessful – likely due to a soft ware problem.

Onset Weather Station

The **Onset / Hobo** weather station installed near camp on June, 2013 was downloaded on September 19, 2016.
A 2016 weather data report will be issued at the end of 2016.

Notes To Clients:

- Reduction of analytical volume was necessary for Total Suspended Solids analysis due to matrix effects in 1162096, sample 12. Detection limits are adjusted accordingly.
- Reduction of analytical volume was necessary for Total Suspended Solids analysis due to limited sample volume for lot 1162096, samples 1 through 11. Detection limits are adjusted accordingly.
- Reduction of analytical volume was necessary for Trace Metals analysis to bring results within the analytical range for samples #1162096-9, 10, and 12. Detection limits are adjusted accordingly.
- Sample 1162096-12; 5515840 Reduction of analytical volume was necessary for TP to bring results within the analytical range for sample 1162096-12. Detection limits are adjusted accordingly.

Analyte	**Units**	**Results**	**Results**	**Results**	Nominal Detection Limit
Inorganic Nonmetallic Parameters					
Organic Carbon Total Nonpurgeable	mg/L	3.9	2.4	4.5	0.5
Cyanide Total	mg/L	<0.002	<0.002	<0.002	0.002
Ammonia - N	mg/L	<0.01	<0.01	0.01	0.01
Phosphorus Total	mg/L	0.003	0.006	0.006	0.003
Metals Total					
Calcium Total	mg/L	18.2	7.80	19.4	0.01
Magnesium Total	mg/L	3.88	1.95	4.18	0.02
Potassium Total	mg/L	0.4	0.4	0.5	0.04
Silicon Total	mg/L	6.25	4.97	6.27	0.005
Sulfur Total	mg/L	3.9	1.5	3.5	0.02
Sodium Total	mg/L	2.45	1.84	2.59	0.1
Titanium Total	mg/L	0.004	0.002	0.004	0.002
Physical and Aggregate Properties					
Solids Total Suspended	mg/L	5	<4	<4	2
Solids Total Dissolved	mg/L	90	54	110	5
Routine Water					
pH - Holding Time		Exceeded	Exceeded	Exceeded	
pH at 25 °C		7.39	6.97	7.36	
Electrical Conductivity	µS/cm at 25 C	122	58	132	1
Calcium Dissolved	mg/L	17.4	7.5	18.8	0.01
Magnesium Dissolved	mg/L	3.6	1.8	3.9	0.02
Potassium Dissolved	mg/L	0.4	0.4	0.5	0.04
Silicon Dissolved	mg/L	5.76	4.60	5.78	0.005
Sodium Dissolved	mg/L	2.2	1.6	2.2	0.1
Sulfur Dissolved	mg/L	3.6	1.4	3.3	0.02
Bicarbonate	mg/L	61	34	67	5
Carbonate	mg/L	<6	<6	<6	6
Hydroxide	mg/L	<5	<5	<5	5
P-Alkalinity as CaCO3	mg/L	<5	<5	<5	5
T-Alkalinity as CaCO3	mg/L	50	28	55	5
Chloride Dissolved	mg/L	0.13	0.13	0.14	0.05
Nitrate - N Dissolved	mg/L	0.01	0.04	<0.01	0.01
Nitrite - N Dissolved	mg/L	<0.01	<0.01	<0.01	0.01
Sulfate (SO4) Dissolved	mg/L	8.8	3.2	7.8	0.5
Hardness as CaCO3 (dissolved)	mg/L	58	26	63	5
Hardness Total	mg CaCO3/L	61.3	27.5	65.7	1

Comments:

- Reduction of analytical volume was necessary for Trace Metals analysis to bring results within the analytical range for samples #1162078-1 and 2. Detection limits are adjusted accordingly.

Please direct any inquiries regarding this report to our Client Services group.
Results relate only to samples as submitted.
The test report shall not be reproduced except in full, without the written approval of the laboratory.
