

Lithology Legend

- Q Quaternary unconsolidated glacial silt, sand, gravel
- PChn4 Grey, brown black shale with locally intercalated siltstone thin section. Carbonate, clay alteration.
- PChn3 Purple, brown, yellow shale with intercalated thin banded siltstone. Clay and carbonate alteration.
- PChn2 Calcareous sandstone, siltstone intercalated with fine siltstone. Clay and carbonate alteration.
- PChn1 Laminated shale grey to pale in color. Clay and carbonate alteration.
- PChn Undivided Nachilla Formation grey shale maroon shale, intercalated with fine sandstone, siltstone and limestone units.
- Sst clast in till
- Limenite Sst clast in till
- kalinite alteration, interpreted from soil, outcrops.
- Carbonate alteration zone with locally see limestone
- Observed thrust fault
- Bedding strike, dipping orientation and dipping angle
- Near verticle bedding

Geochem Legend

- 0.15
- Rock sample location and Ag Value in ppm
- AHR_Rock_Mars_NE_2016 by Ag_ppm
- 1 to 2.89 (1)
- 0.15 to 0.3 (3)
- 0.1 to 0.15 (3)
- 0.02 to 0.1 (19)
